These Impenian Lords returned into India, 1586. as Valignames writeth, and were much endangered by a tempest. Their returne into lapor is fignified by the Letters of Michael to the 20 Archbishop of Ebora, testifying their arrivall the one and twentieth of July, 1590, at Nangalach with the faid Valignanus; and by the Letter of Don Sancins, Sonne and Succeffour to Bartholonew Prince of Onsur to Pope Xifts the fifth, with thankes for the wood of the Croffe, and Popes prefents the Sword fent his Father which should be kept among it his principal I lewels. Protafine also the King of Arima wrote to the Great and most boly Pope Kiftus or Sixtus in this manner.

On the fixteenth of the fixth Moone, which was the one and twentieth of Inly, 1690. heere arrived the Father Viftour of the Societie of Ielius, with Cingina Don Michael my kinf-man, Don Mancius, and other companions which I had fent to Rome to put their heads under your Holueffe feet. Whole comming did as much reloyce me, as if a thouland Autumnes had comme so me, and ten thouland yeares had beene added to my life. Don Michael related with what bonour and famour bee was enter tayned of 20 your Holmesse, of King Philip, and other Catholike Princes, for which I rander those thankes which Pen and Paper cannot express. He delinered me Letters also which your Holinesse vonchsafed mee, fanour ably rachoning mee amongst the Christian Kings. Hee brought me also part of the boly Wood of Papallfanours. the true (roffe, a Hat, and a Sword, which your Holimeffe is wont to fend to Christian Kings and Prin- with livle coff ces. Which fanour and studies are such, and so esteemed of mue, that I have determined to conservate buying much them to evernall moment, and to place them amongst my chiefe Treasseres, and the Ornaments and  $M_{O-}$  (Secure, naments of my posservice. And this bonaux conserved on more is such, that greater cannot be in this life, and it redounds unto a justice good life. I had determined (according to the order prescribed of your H. Pompe ptein his Listers, and as the fanour, and so great benefits bestowed on mee deserted) to have received the scribed. faid Prefeats with all the celebratic and pumpe that might be in my Kingdome: but the Father Piftour 40 found mee that reflect was to be had of the syramic and great haired wherewith Quibaccockons the Lord of all Iapon, perfocusath the Fathers and Christians thefe shree yeares together; and this featt to be deferred till be returneth from Meaco, whither hee is going in Embassage from the Vice-roy of India to Quabacondono, erc. The ninth yeare of the Era salled Tenscio, the tenth of the eighth Moone, which is the two and twentisth of September, An. 1 590.

At your Highnesse feet,

Arimano, Sciurino, Daibu Don Protasins.

This Quahacondono (as L. Froes writeth) was now growne the greatest Monarch that ever Secondone Lapon had, having alcended thereunto from a bale efface, which was (as hee hath divers times laponian Kinga 50 with his owne mouth confessed) to cut wood, and to carrie it to the Market to sell for his daily and Rites my food. Nobsurange his Predecessor had growne to great height, such as many ages had not there Nationange. seene. In Frenoiama eight hundred yteres before, a King of Iapon had builded 3800. Temples, with houses adjoyned for the Bonzie, which employed themselves in the studie of the Lawes and Sects: for whose quietnesse he removed the Husbandmen, and builded them two itreets, allowing to their maintenance about the third part of the Cultomes (or Rents) of the Vomen Kingdome. Thus became it a fountaine of their superflitions. In time those Temples disperfed in fixteene Vallies were leftened to 800, and the Boszies discipline, and studies melted into pleasures, hardned into Armes, and ranged into robberies, so that they fired Mosco with great ilaughter, and oppoled Nobunauga: who having destroyed the Militarie Bonze (called Icoxos) 60 and taken away their Caftles, intraded Frenoisma, professing he feared not their Gods. On the Frenoisma. top of a Hill was the Temple of Quanto, to whom prayers and pilgrimages were made for health, wealth, and long life; and yeerely folemnities and Playes with huge pompe and cost were made in his honour (to which the Gibon feast at Meaco succeeded) with frequency of men,

The Benzin Popith Cor;us Christi Player Shau. lings.

324

deuices of work men, and such order, that it may appeare that Satan there imitates the anniuerlary inlemnitie of Corpus Christi amongst vs. Thither the Bonzi had gotten , but it , and they, and their streets were destroyed, and foure hundred Temples with their furniture burned, At Faculanem allowere a thouland houses of the Bonzi by themselves, besides Monasteries, like ty lefaites which he destroyed. Xinguea the King of Cainochum had forced his Father to exile, and imprifoned his elder Brother, and then seized on the Kingdome: after which he shaued his beard and haire, and became a Bonzo, and would needs repaire Frenoiama, and stiling himselfe, Chiefe in the house of the Kings and of Religious, gathered an Armie. Nabunanga wrote to him , cailing himfelic, Tamer of Denils, and enemie of Setts. Hee proceeded first against the Bonzs with their terrours; and after would needs himielfe be worthipped, but eighteene dayes after in a confpi-10 racy of his owne against him, he was slaine, and his dispersed. Quabacondono succeeded, and in greatnesse of attempts and ambition exceeded.

Faxiba made Quabacondono. Quabacu fignihes, the Chift of treasure.

This Quabacondono is a title which Faxiba assumed, and is as much, as Treasurer. These titles are given by the Vo, or Dairi, descended of the ancient Kings, and now enjoying a strange Em-Coff. Turrismus, pire, which is to give titles of honour, (for which all great men haue their Factors with him) and is esteemed as a God, not suffered to tread on the ground (that were deposition) nor often feene, and gets much treasure out of those Tules, which he so often changeth, that the King of Bungo was by the lesuites observed foure and thirty times to have altered his appellations. There The 3. chiefe is a high Priest, who with Papall power authorizeth Sects, confirmeth and confecrateth the men in lapon. Tundi or Bilhops which are nominated by the Kings, and enjoyeth Royall reuenues. The 2000-10 ene is the third person, and hath power over Judgements and Warres. But the Lords of Tenfa, that is, such as haue power to get into their hands Meace, and the Region adioyning, are really Agreeter then chiefe Lords, and command the State, though in seeming ceremonie (as the Tarker to their Mufti, and more manifestly the Soldans of Egypt to their Califus) they yeeld a feeming fubiection ; the Dairs not daring to crosse them.

Meacathe chiefe Citie of lapon.

Priest and

Duineue.

Corai.

Organtinus

Faviba Cicugendono obtayned that title of Cnabacondono (Dono is a generall title of honour) the next to the Dairs, and having subjected lapon, minded to conquer China, by the way of Corai. The King of Corai fent his Embaffadour to him with three hundred attendants in vaine, he minding to fend and place in those new Conquests all the suspected Princes of lapan, and to eternize his owne name, being exceeding vain-glorious. He tookefrom the Bonza their Lands: 30 and after that, making ditches round about Meace, hee forced them all to dwell together neere the faid dirches: which reducing their difcrepant Sects to an unformed Chaos together, made many of them for lake their protession. Hee emoyed every foot of Land in lapon, gave, or removed, or depriued Kings at pleasure, tooke away all Armes from the Ruftikes; forbad all contentions and fights upon paine of death, if any guilty hereof fied, punishing the kindred, or fernants, or neighbours, cruafying them. He administred instice very severely without partiality, or pardoning any man : and had almost put to death the Meacon Bonzi for their Concubines if the Gouernour of Meaco had not interposed and undertaken their amendment. Hee neversuffered the Souldiers to be idle, but vied them in warres or buildings. The Vice-roy fent him an Embaffage and Prefents; the foure Inomian Lords which had beene in Europe attending Valigna. 40 nus the Embassadour. Quabacondono would needs heare these Iaponians play European Mulicke, which they had there learned : and made great shewes of kindnesse to them all, and fent this Letter with Presents to the Vice-roy.

Duis tulerit the ricular

Sir, I have received Letters which your Lordship from so remote Regions sent mee, in opening and reading whereof I seemed to see the length of the leagues by land and sea. This Kingdome of lapon as you wrote, contagneth abone fixtie Stares or Inrisactions, in which before have beene ereat disorders and warres, no peace nor quiet. For many wicked men, Traitors to their Countrey confirred to denye obedience to their . King, a thing which from my youth hath vexed me. And long fince I bethought met of a course to subject this People, and to pacifie the whole Kingdome: and layed for a foundation three vertues, towit, Gentlenesse and affabilitie of freech in connersing with men ; Prindence in considerate 50 sudging of things, and egregious fortitude and courage of minde : by the aide whereof I have subduct all this Nation, and have brought all the Kingdomer into this forms of one Empire, wicked men being extinit, and morke-men which labour in the fields promoted. And I have for referred prace and quietnesse to these Kingdomes, and in few yeeres have so settled and stabished the Monarchie of Japon, that it is now like a great Rocke which cannot be removed. Whence it is come to paffe that in all foure paris of the Kingdome they have a King eminent in much wisedome; and the King likewise hath all of them obedient. And in this order I have declared and exercised the power of a good Captaine, to whom these Kingdomes are subject; by taking away the wicked, and rooting out all Robbers by sea and land. So the china invasion. people, families, and all places of the Kingdome entoy maruellous quiet. I have also determined to invade the Kingdome of China, and in few dayes I will take ship and doubt not of victorie. When I shall 60 possesses to your Lordship may more easily communicate with mee in all things.

Now concerning the Fathers, \* I apon is the Kingdome of Chamis, whom wee hold to be the same with Scin, which is the beginning of all things. This Scin is the substance and the very being of al The lessits. things; and all things are one and the same with Scin, and into Scin are resolved. Who in Sama is

called Iutto, and in Tescincu Buppo. Further, in the observation of the Lames of this Chamis confifleth all the Politicall government of lapon, which being neglected, there is no difference betweet Lords and Subjects: if it be kept, the union and concord is perfected which ought to bee twint the Father and Sonne, the Husband and wife. Therefore the whole, both internall and externall government of Men and Kingdomes is placed in the confernation of this unson and policie. Now the Fathers formerly have en. Christian Reli-Kingdomes is placed in the conjensation of tous round and printer, even to the tocasis we are instructed. Sin always tredities Kingdomes to preach another Law for the saming of men; but because we are instructed. Sin always to be Detail and and fettled in the Lawes of Chamis, we desire no other Law: for the discripties of Lawes and opini- his accused for ons are hurtfull and preindiciall to the Kingdome. Wherefore I commanded the Fathers to depart out a State-differof Iapon, and have forbidden them to preach their Law, nor will I that becreafter they preach any ber. 10 new Law in this Kingdome. Although thefe things be fo, get I greatly defire that a stable communi. Issuites bani-

Leaswoong very some you to you a greasing aspire tous a passe communit. spire cation may remay be betwick to 1; for fe this Kingdame shall bee free from Theeses, by Land and Sea, thed. And I give leave to all Merchants which bring merchandle, to sell them all without let. I desire your Lordship to approve the same. I received all the gifts which you sens out of those Southerne parts, as it is written in your Letters. I likewise fend some others out of shefe Kingdomes, with a memoriall of the gifts, and the names of them which have given. The Legate will declare the rest, wherefore I will bee no longer. Dated 20. yeere of Tenfci, 25. of the fenenth Moone,

In the end was the Scale and Subscription. It was written in a leafe eight palmes long, foure broad, painted with golden Flowers, and put in a red filke bagge wrought with Gold and filuer; and that inclosed after the lapon manner in a Boxe, which for the price and workman-20 thip was to admirable, that the subtiltie and excellence of the worke might amaze all Euro. lapenian note-

peans. Within it was coursed and without, with Vrosci (made of Gold beaten into pow-minship. der) diftinguished with Flowers of Gold and Siluer, so inserted in the Vrosci that none could different the conjunction, but he which knew the making of the Boxe. It had also Roses, and gold Chaines to tye the Boxe; which Boxe was put into another Bag, and that into another Boxe very artificiall. The gifts were Armours, Armes, and other things very precious.

He assembled his Lords about this China Warre, which durst not expresse any other opinion, Preparation hee having protested, that hee would not heare his Sonne distande him, if he were aline againe, for invasion of and if any should hinder him, it should cost him his life. Thus for some moneths space nothing Corai. might be teene elfe, but prouision for Ships, Armes, Municions, and necessaries for the Warre.

30 Hee made a Catalogue of all his Lords, exempting none from the expedition, and fetting every one his number of followers. To Augustine a Christian Lord hee gaue the fauour of first impression into Coras, other Lords staying still at Suscima eighteene lagues distant. Coras is ad. Coras descrisoyning to the Continent of China at one ead, divided by a great River from China, and tribu-bed: fee my tarie to the King of China; it is in length about an hundred leagues, and fixtie broad : the people China Mig. whilke the Chimois in language and bodily strength, but following their lawes, customes, and gopernement. They are better Archers then arany other weapons: and not comparable to the I asonians, except in hipping, wherein they and the Chinois exceed. Yet at this time they were destitute of that defence, and Augustine gaue them a great ouerthrow. Before Quabacondono would goe, he made his Brothers Sonne by the Dairi to be entituled Quabacondono, as 1115 Heire 40 and Successour , concenting himselfe with the title of Taicofama, that is, Great Lord. All the

Japonian Princes were commanded to be present at the translation, to give him obedience; to whom the Dami gaue the Fortrest of Meaco, and the Palaces of Quabacondono, making him Lord of Tenfa. But his Vncle held the Iway of all in his owne hands, and after having a \* Sonne \* This is that of his own, cause I this his Nephew with some others to crosse himselfe (that is, to cut his breast Fresama of acroffe, his bowels falling out, and some one of those which died with him, cutting off his head, whom you read in the property of the head of of Augustine with a Fleet of eight hundred sayles entred Corai, and tooke two Fortresses, the Sain, and Ma-Coraiens being driven from the walls by the laponders Gunnes, vinknowne to the other, and fue fler tooks, dethousand of them slayne. This wanne him great credite with Taice Jama, who promited him printed by Oge-

much, yet performed little. Hee defeated also an Armie of twenty thouland, and after another fooland. 10 of fourescore thousand, and the King fleeing into China tooke the Meace, or Royall Citie of Consi, Taicefams fent him a Horse, and a Sword, the honour that Nabanangs was wont after any great Victorie to doe to him. The Cornians feeing their King with his troops in fafety, fled with their prouitions into Woods and Hills, and would not thence bee brought by any promifes. The Japonian polleffed of the Fortreffes wanted men to till the ground, and therefore mult needes want necessaries: the wayes also were by the Coraians upon all occasions assaulted. There are two hundred thousand laponians at this present in Corai, and Augustine is in the extreme borders adioyning to China, leparated notwithstanding by a River three leagues Wide Kuner broad, abounding in thips, and the shores fortified with multitudes of men, so that the suc- betwitt China

60 Frees in his Epifile, 1595, writeth that there were then an hundred and ninety lefuites in Ia- 190, ichite. pon and China: that Taicofama not fucceeding in his Coraian expedition, returned to Meaco, and quarrelled the new Quabacondono out of his life, who with nue others at Taicos command executed themselues after the Iaponian manner. Augustine meane while gnieauoured an Embaffage to bee fent from the King of China, who thinking himfelfe Lord of the World, tent to

Taicofama, that it was an vnmeet thing that He, whose industrie and valour had subdued threefeore and fixe Kingdomes of Japon to his Empire, should permit the Dairi a private man, and Subject to the King of lapon to hold his former place of dignitie. And if hee would deprine chint Embath him thereof, hee promifed to fend him a Crowne, and the title of King, and by the fame Legates to treate further about the Iaponians forfaking Coras. Two Embassadours were fent from Pequin to Augustine to Corai: who presently sent word to Taice, the Embassadours abiding with him, because of the solemne entertaynment which Taico intended for the renowne of his name to all posteritie. The Nobles exhaust in the former expedition were yet now en-Huge Palace, forced to new braueries and expences. Hee caufed at Ozacea a Hall to bee creeked, with a thoufand Tatami (very elegant Mats) the timber cofly, and gilding incredible. Yet by store of 10 raynes a great part thereof fell downe, which hee intended foone to repaire, having an hundred thousand men at worke there both night and day in great miferie, flanding with their feet in the water. If any runne away they are killed. Before this Hall hee erecled a Theatre for Comedies, exceeding stately and costly with artificiall paintings of Vrusci. Hee repaired the Tower of Ozaca seuen stories high. The gilded Plates or Tiles, the Bridge called, The Bridge of Paradife, the new Citie of Fusermo which he builded, and other his immane expenses (the Offerings to his Idoll of Fame, ) I cmit. Hee caused his little Sonne to goe with great State to Sandai to the Dairi, that is, to bow his head thrice before him downe to the Mats, who entertayned him with a folemne feast, with great lubilee in alteration of names and titles of honour to the Nobles. Taico had settled peace thorow all lapon from Warres, from Robbers by land, and from

Rouers by fea, which before continually infested all with Piracies (one of which Noximan-

forced a great part of the Coast to yeerely tribute vnto him, to bee freed from his Robberies)

onely the Dairs had higher title: and a Crowne and Scepter seemed wanting to his realitie of

Regalitie and Soueraigntie already possessed. And now whiles hee intended to exceed himselfe in his entertaynment of the Embassadours , one of them hating this long detention or impri-

their King-China Prefents

forment in Corai, fled; which newes Augustine sent to both Courts. From China the Legacy was renewed, the Delinquents kindred punished. Meane while the two and twentieth of July, 1,96, at Meaco it rayned ashes, wherewith the houses, hills, and trees were coursed as with 30 snow, and a great myft accompanied it. At the same time at Ozaca and Sacoia it rayned sands. At Meaco after the showre of ashes came another of haires, long and white like the heavy haires of an old womans head, but fofter, and not fo fmelling when cast into the fire. In the Northerne Kingdomes of lechu, lechingo , Scimano , and Nora, the land and houses were coured with them. A Comet appeared in August : on the thirtieth whereof followed an Earthquake as a warning to a greater on the fourth of September, which threw downe Taices magnincent Hall with a thousand Tatames, in which hee had purposed to entertayne the China Legates; and the Tower of seuen lofts, and another Tower, and almost all the buildings of the Fortreffe, and the Store-houses, which were very large, and stored with Corne, and halfe the houses of Ozaca, all in halfe an houre, fixe hundred people being buried in the ruines. It made 40 a noise like Thunder, and like the waves beating on the shoare. The Earth opened in many places. A great new Temple and a Monastery fell downe, and the same day in which the lesinie had heard a Bonzs in the same Temple inuiting to call vpon Amids, and much depredicating his mercies. The next day at Meaco was a noise greater then of the greatest Cannons that ever were . heard, dreadfull to man and beast, and wee faid the Letanies on our knees, but scarfely could keepe on our knees for the Earth-quake, Others forsooke their houses, lamented their dead (fine hundred being ouerwhelmed; and fifteene or twenty Temples) called on their Amida: \* laponies poli- and some ranne to Fuscisso ( Taicos new Citie for him and his Nobles) whereof the best part was cy to keepe all ruined, and much harme happened in many other places. Taices Palace at Fujemo fell downe, bout the Court and oppressed seventy women, himselfe escaped into the Kitchin vntouched: and the relations 50 for fecuritie; of that Earth-quake would yeeld a booke alone. Taico yet would feeme to dominere ouer Nafeliome fuffe- ture, and leuell a very huge Hill with the Valley, to erect new Palaces. And because hee could not entertayne at Fuscimo the China Embassadours, he receiued them at Ozaca. The solemne state and pompe I omit. They had audience the twentieth of October.

The Kings Letter was written in a plate of Gold very great and ponderous, inclosed in a golden Coffer, wherein also was the Vest, and royall Crowne for Tuico, and in another was a Crown for Mandocorasama his Wife with title of Queene. Hee fent also twenty Vests of Quingui with title and dignity of China for twenty Lords (the first of which was Augustine) by him named, and as many for those whom Taco should name. In the Epitle of the King were these words, \* chia an berb Finatabi cioscen vocasu cotonacare, that is, Thou shalt not returne againe into Cotat, and if thou re- 60 ved in warme remarks to jeen vocajs commerc, that is, 1000 juns, words importing their visibiling to the Chinais, water in all tarness, toy dignitic shall no longer advantage thee, words importing their visibiling to the Chinais. The Embaffadour and Taico were equal in fitting on the Tatamis; the chiefe Lords of lapon ments in Ispon were prefent 3 and after the tafte of their " Chia, Taico received the Epithe or golden plate, and layd it on his head, and the Vests, going in to put them on. At his returne the Chinois adored

### ð. III.

RVCCERIVS enters againe into China with RICIVS, and is forced backe to Amacao; thence fent for againe by the Vice-roy. Sande and Almeida are fent to them, and enter the Countrey as farre as Cequion, and returne to Sciauchin.

FRT is a cultome in China, that of all Charters granted by the Magistrates a copie is kept in the Registrie, and the execution, or what hath therein beene done, subscribed at the end. The fucceeding Vice-roy finding the copie of that Charter granted to the Island at their departure, without fuch subscription (because nothing had beene done therein) wrote to Canton, to the Aisao; he (which then was ablent) to the Ansam or Hiem-xan, the Gouernour of the Citie, and he being ignorant thereof, to the Port-gouernours at Amacao. They went to the Bishop, and by him were sent to our Colledge where they were shewed the sealed Charter: but there being then Melebior Carnerus Pattiarch of Ethiopia (which expedition was Sup.L.T. in finis diffolued ) Capralis, Gomez , Pafins, and other principall Isfutes, it was thought fit , that it should not be delivered to the Souldiers, but carried by two lefunes to the Airao: and Raggerins with Recuss were therein employed, the China Captaines also consenting that they should

goe to Anfan, thence by the Ci-bien or Governour, to be fent to Canton. This Ci-bien when they Ci-bien a Go-40 came thither would have fent it and not them, which they refused, whereupon he grew angry, we nour of a cast it on the ground, and commanded them to returne backe; faying, that a deposed Vice. Hieror Citic. royes grant could no way benefit them. They went to their Inne, and there consulted to goe without his leave, deceiuing a Ship-mafter with fight of the faid Charter, who tooke them into his thip; but terrified by others, cast them out againe with their goods. At this time came a meflage to the (i-bien of his Fathers death, whereupon (according to the China Custome) he loft his office and returned home during his three yeeres mourning. They by this occasion, and a weightier cause, (money giuen to the Successour) and the Notaries subtiltie in a feeming teruice to the Common-wealth, were fent in manner as prisoners to Canton, as strangers found there,

The Assa notwithstanding gaue them kinde entertayment. They petitioned, shewing, that states the states of they were Kelgious were which had possed on many Seas allured by the same of China, there to shead enton. their dayes: and defired nothing but a small piece of ground to raise thereon a little house to the Lord of Heauen, and they would be further burthen some to none, but procure linelihood of their owne mens benenotence. They mentioned nothing of Christian Religion, left it might cause suspicion, and bee a let to them; the Chinois thinking too well of themselves, that strangers should teach them any thing, which they have not already more complete in their owne Bookes. Rebellions have alio begunne under colour of new Sects. The Assao or high Admirall commended their defires, but faid, it belonged to higher Magistrates, and could onely bee granted by the Ciai-yuen (the ciai-yuen or Visitour of the Prouince) or the Vice-roy. They defired that hee would at least let them itay Chain, Proving there in the Palace of the King of Sions Legates, till the Portugals Mart came, and in meane ciall Vificour.

60 time they would trye what they could doe with the Vifitour or Vice-roy. This hee granted. but the same day repeated, professing that he feared the Visitor (if out of Mart-time he should finde ft angers there) whose censure is dreadfull to every Magistrate. He therefore commanded them presently to packe for Amacao. They were comne backe to Angan, and found things in worse case then before. For at the gates of the Citie they found an Edict set up by Co the

# 228 Temple and Statue eretted to Governours. Ichites house and Images. LI B. IL

new Vice-roy, blaming the China Interpreters which had put into the heads of Stranger-priefs Money brings to learne the China language and Characters, and to defire some place for to credit a facred and prinare house, threatning those interpreters if they perfitted. In this dispayre of proceeding, the identified the first adjoint of they had not been a weeke gone, when from Scissquin, the feate of the Vice-roy, one of his guard came to Issaecs and brought the Casia, (so they call the Gouernour of that Prouince) his Letters Patents by the Vice-royes authoritie, inuiting the Fathers to Scianguin, there to receive a piece of ground for a Church and dwelling house. The cause hereof was an offer made by the Fathers (when they were lent away from Scianchin, by the deposed Vice-roy to Canton) of a fumme of money to any which should procure of the New Vice-roy license for their returne. One of the meanest Souldiers in name of Interpreter to the Societie had put ypa Petition to the Vice-roy, who fent it to the Gouernour of the Region called Guam-puon, of Cequion Province) to bee dispatched, who gave the former Letters Patents to the Souldier, which brought them himselse to Macao. They with great ioy, as seeing the Diuine hand herein, made ready for the iourney, which the former expenses and late Ship-wrackes (especially of the lapon Ship in the Viga bounties He Lenquieco, which alone hath most of the wealth of the Citie in it) made difficult; but Gafter Viegas charitably bestowed the expense, seconded also by others. Thus full of hope they let fayle, and in Canton, both now and when before they were difmif-

fed from Scianguin, they found Spaniards. Then, a Ship which from the Philippinas was bound

ties of that Iurisdiction, a Tower (whereof one floore was now rayled, to which they intended 10.

to adde nine others aboue it) in a pleasant place by the Rivers side, a myle and more from the

Citie, the Suburbes continuing further then it. In the same place they set foorth a Temple, and

therein erected a Statue to the Gouernour, whose fixe yeeres gouernment had well deserved of

the learned, and of the vulgar. A piece of that field in which the flourishing Tower (to they called

it) was building, they defired, which hee liked well, and promifed to further them with the

Vice-roy. The lesuites at their former departure, had left an Altar with one Cin Nice, who had

placed the same in a connenient place, for want of Images inscribing aboue, it Thien Chu in Cu-

bicall letters, that is, To the Lord of Heauen. Hee made also thereunto divers Incenses, and at fet

times veelded divine honors before it; which much rejoyced the Fathers, feeing that there was one found which inuoked the true God. And this mangage them entertaynment, till they had 40

received the Vice-royes answer, approving their request; and the next day the Governour set

foorth a plot of ground for them with straight caution to observe the Lawes of China, and to ad-

mit no Strangers companions to dwell with them; which they promifed. Much was the con-

course and admiration of people, much the wonder at their triangle Glasse, the Image of our La-

die, a wrought Handkerchiffe, with which they presented the Governour; but hee returned all

afterward, fearefull of Bribe-imputation. Much trouble arose about that place, and another was

affigned them, where they began to build and were forced to pawne their precious triangle

Glaffe, to fit it for their vie; they obtayned also an ample Charter from the Vice-roy, and two

Patents from the Gouernour which protected them from wrongs

their purpose, which hee doubted not to procure of the Vice-roy for them.

Friars in China, for New Spaine, was wracked at the Ile Nan-tau, on the Canton coast; the men which escaped were kept in durance : And now, seuen or eight Franciscan Friars, which had gone from the same 10

Iefuites build a meane, after greater,

Images weg-

In these beginnings they made little mention of the Gospell, but imployed their spare time 50 in learning the Language and Characters, by a Holy life feeking to infinuate themselves into the peoples good liking. Their habite was like the modestest of the Chinois, a long Gowne with large sleeues: Their house had two Cells, and betwixe them a Hall with an Altar in the midst, D. wanting to on which they fet the Image of the Bleffed Virgin, carrying her Sonne. They called their God, Thien-cui, Lord of Heauen; for the Chinois want the D. which caused that they could not give any name more fit: and this name continueth to this day, although they vie others also, as Highest Ruler of all, First beginning of all, and the like. The blessed Virgin is called the Great Mother of God. This Image on the Altar, all which visited them both Magistrates, Students, Priests, and common people, did religiously worship, kneeling and (after their rice) knocking lightly the ground with their fore-heads. They admired the excellencie of the Picture and colours 60 without ceasing. But when it began to bee rumoured, that they worshipped a Woman for God, they tooke away that Picture and substituted the Image of Christ. After this, they painted the ten Commandements in the China language, which many approued. Some brought them Incense for holy vies, and some bestowed their Almes; others also Oyle for the Lampe which burCHAP.5.S.3. Their Honor, iealousie, calumnie, Mathematicks. China ignorance, 329

ned before the Altar; and the Fathers commended their Law, as agreeing to the light of Nature. nes perfore the raises, and a specified, was a poore dileased man cast foorth by his parents, whom they First Baptisme instructed, and a little before his death baptifed. The reliefe which they bestowed on him before, caused a rumour amongst the vulgar, that those Strangers knew by the mans complexion, Fancies of the that hee had a precious stone in his head, the cause of all that benificence. The Chinois much ad, vulgar, mired the Bookes, of which the Fathers had ftore, the artificiall binding, gilding, coft, goodlinesse of the Print, and their studiousnesse in the China bookes; and received with great applause a Booke of Christian learning which they printed. Yea, the Gouernour after the China rite

would needs doe them publike honour, which is done by fending a goodly Table with Cubitall Tables of ho-It letters in praile of them, with the Magistrates name, and the date inscribed in lesse letters. Two nour, of these with great pompe hee sent unto them, the one to bee set ouer the entrance with inscription, The boule of the flowre of Dinine men; the other to bee placed in the Hall, inscribed, The boly Nation of the West : which wanne them great reputation, this Magistrate being much reputed for learning and vertue.

Our wants caused Ruggeriss to intreat leave to goe to Amecao for supply, which hee obtayned with a faire Ship and thirtie Rowers. The Gouernour requested also, that a Clocke might bee made for him. But the pouertie of the Amacaons, their Ship not being come from lapon, and the Colledge enjoying no Rents, caused him to send the workman to Scianguin, to make it there ; which hee tooke in good part. Now the Chinois are a people suspicious of Strangers, especially

20 those ruder parts of the Province of Canton, and much muttered at the Portugals Commerce, fay- Chimsin Hefing, they made all things dearer, and the profit came but to few. They gaue an odious appella- pirall. tion to the Portugals, calling them Denils. To this, Fame had added a fourte, reporting that Portugals caltheir famous Tower was the worke of Strangers (which had no ground be added a fourte, reporting that Ied Deuils. their famous Tower was the worke of Strangers, (which had no ground but that their house was building at the fame time) and the Flourishing Tower, was stilled the Strangers Tower. They there- Tender du ficefore in Ruggerius absence offered great abuses by throwing stones, being angrie that they kept ple. their house shut, which they would have had made an Idoll Temple, alway open to all. One boy in throwing stones, was taken by the femant and brought in, but at others request soone difmiffed. Hereupon two neighbours conspired, to set a fellow on worke to accuse these strangers for seducing Children, as they had done this youth his brother, (so they agreed) and kept Conspiracies 30 him three dayes, with intene to fell him for a Slaue at Amacae. The two neighbours offered to bee witnesses hereof. The accusation was put vp in pittifull manner, and the Gouernour much moued, the Father fetched into Court by an Officer, before hee could have leafure to write his

aniwer. The Interpreter had filled his sleenes with stones, which hee powred out in Court as witnesses of their abuses. The Judge smelt the businesse, and by examination of the Tower work. False accuses man which had feene it, found out the knauerie, and rewarded it with terrible whipping; and trucky rewarded.

Reim his skill in the Mathematickes which hee had learned, being an Auditor of Clavina at Mathematicks Rome, was no small helpe to them. They had a Cosmographicall Map in European Characters, and Map of Anney was no much map to be the learned beheld with great pleasure, much desiring to see it in the world, in the characters, little knowing, as little hanney to doe with the rest of the world. They had trouddien to Gonell. Maps pretending a Description of the world, but prefented onely their fifteene Provinces, with the Sea and a few Ilands, and the names of fuch Kingdomes as they had heard of, all which Kingdomes scarcely equalled one Province of China. They now wondred much to see themselves Chinasi ignoftraightned in an Easterne corner of the world, and Reciss at the Gouernours request, published range the it in Chinacharacters: and inferted, as hee faw cause, the rites of the world and the Christian world. holies. They have a conceit, that the Heavens are round, the Earth square, and their Empire to Richards Map. bee seated in the midft thereof ; hee therefore so proisceed his Description, that he presented China in the midft. They that before thought baiely of all other men, as if elfe-where were no The world v.

King, nor Republike, nor Bookes, began to be better conceited of Europeans, and to bee betGotoell, 30 ter prepared for the feed of the Golpell : and might hereby also leffe feare European forces Golpell. foremote from them. This worke hee often reuised and corrected, till it came at last both to the two Royall Cities, and to the Kings house. The workeman at the same time finished the Clocke, and both were together presented to the Gouernour, who at his owne cost published the Map, and soone after restored the Clocke, because hee had none which knew how

The Ship comming from Lapon, Ruggerius well relected returned, whereby the house was fi- Euggerstaurn. nished, their debts payed, and the building with stories, the disposition of the windowes, furniture, faire fituation on the River with goodly prospect, and European rarities, brought many, e-

Ben great Magistrates, to behold it. Riesus proceeded to make Spheares of Brasse and Iron; hee 60 Ben great Magnitrates, to behold it. Rieum proceeded to make appeares of spanie and flow in the Printed alfo Globes, and made Sunne-dyals, which hee gaue to the Magnifrates. And by his le-Chures on these subjects, he got reputation of the best Astrologer in the world, they esteeming others by them selves. The Governour was about this time advanced to a higher Dignitie, called Limiter Ruler Line fi-law, having the rule of two or three Regions and all the Townes therein, nor remocuing of two or three from Sciences at a day the found of the remoculing of two or three from Sciences and as the / biness are superfictions chierces of Appures. In concentral that, Distinstructures are superficient chierces of Appures. Moilin.

prooued the luckier man by this familiaritie with our men, which hee fignified when they came to him, with a prefent to gratulate thefe honours. In the Philippinas the newes of the lefaites successe caused the Gouernour to fend the Treasurer Iobn Baptista Romanus to Amacao, with Father Alfonso Sancins 2 Spanish Lesuite, with a Watch

and other presents and letters to the lefaites, to progure an Ambassage from the King of Spaine to China. The lestites had with petitioning brought the bulinesse to good forwardnesse, when ictiofone Crowner, with they received contrary mandates from Amacao, it being likely to prooue the destruction of that our feraration Citie, if the Spaniards with their plentic of Silver from Perm and New Spaine, should have trade offlace. Apply in China; neither did this belong to the Spaniards, but to the Portugals, according to the Comthis to the position betwixt the two Kings made by Alexander the fixth: and at though they are both sub- to the Ex-lift and ich now to one Crowne, yet their printledges remayne diffinct without confusion. Thus both the Magistrate adusted, and their superiour the Rector prohibited them to proceed. Yet the former working was not cealed by Silence, till the Amasaon Magistrates laboured with divere hereby you fee reasons to disert the Ambassage. Capralis the Rector was desirous to see their house, and they procured the Linftans leave, fo that hee came thither, viewed all, and Baptifed both the youngfecular affaires man before mentioned which kept the Altar, and a learned man which read the China Bookes to the Fathers, this called Paul, the other Iohn, the first China Converts. Valignamus made Prouinciall of India, hearing of this successe, fent thither Father Edward Sande, and Father Antonie Almeida: and obtained of the Vice-roy Edward Menefe, an annual flipend for this mission. They

At the same time it seasonably hapned, that Linsitan was commanded from the Court, to procure of the Strangers at Amacao, certaine goodly feathers for the King. He furnished a faire thip F.Edw: Sande. and fent Ruggerius thither, and brought with him Father Edward Sande, who went to falute Linsitan, and gaue him no meane gift of our Commodities to procure abode, whereof nothing so pleased him as a triangle Glasse. Hee gives him leane to stay, on condition that they admit m other companion. In Linstians place had succeeded another of Cequion Province, a great friend of the Fathers, who being to goe to Pequin about some affayres of his Office enery third yeers. was featled at our house (where the Magistrates were often solemnly entertayned) and then of fered to carrie one of ours with him in his journey, at least as farre as Cegnion his owne Coun-Antonie Almei- trey. They willing to erect some new seate, least some disaster might in a moment strip them 20 de, License for easily of one and all, agreed that Ruggerine and Sande should goe, and received license for entring the Prouinces of Cequian and Huquan, and places adjoyning. This was the Mart time whither Ruggerius went, and found Almeida come thither with the Portugals. Thither also a Brother of Lustau was gone with much Merchandise of Silke, (the most whereof is made in the Cequian Prouince) which the Portugals bought at his price by the Fathers intreatie, who therefore tooke the Fathers, his brothers friends, to his Citie in Cequian, called Scianbin, (a name somewhat neere the other, but in China a little difference producth great) the natiue place of both

the Gouernours. The Chinois haue a custome to be called by many names, and no man calls them by their proper name, (but themselves in naming or writing themselves, or sometimes their superiours) with- 40 lesuites change out injurie: they taking a greater name, which others give them for more honour. Now the Fathers had yet assumed no other name, but their servants called them by their proper name, a thing among it the Chinois reputed barbarous. They therfore (to become all things to all to winne all to Christ) then followed that rathion, and euer fince at their first entrance assume a new Name. Their Iourney is thus written by Almeida. On the elementh of the Kalends of December, 1585, wee departed from Canton. The third day the

ter to Ed. Sarde. Ship happened to bee on fire, some imputing that unluckinesse to us: but without much harme it was quenched. Whiles wee fayled through the Canton Pronince, wee feldome came in fight and never went ont of the Ship till wee came to Moylimpor. I can therefore relate nothing of that Province, but that there were very many Cities, and Townes very frequent, and steepe high Mountaines, betwint which that 50 Riner lideth to dissers tralts of the Pronince stored with waters, Wares and Shipping. Euery where we beheld sumptssom e-Adisces deducated to the worship of Deuils, and of Ships almost insinite multisude, and of water-Fowle innumerable store, and berds of Goats feeding by the Woods, to the fenenth of the Ides of December. Then wee arrived at Moilim a Citie, neere which is the beginning of that River, whose course being swift, wee were drawne by ropes and rowed with Oares against it. Into this sitie wee Should bardly have found admission, the passage being by a Bridge with two Iron chaynes, opened onely and that at the will of the Gonernour. But our Conductor baning acquaintance with the Liniteu, wee had The Linft aus present entrance, hardly able to passe for the multitude of Ships, there wayting. Wee were there wellentertayned, and on Sunday and Munday Sayd Masse. On Tuesday wee went to a Citic eight miles distant, Another river, there regaining the commoditie of another River. All that way was paved with stones; in which we passe 63 a Mountaine, on the top whereof was an arch with an inscription of his name, who had facilitated that way, otherwise difficult. The weather was unseasonable, rainie and cold perhaps because the whole way in manner was Mountainous. I doe not remember that ever I faw way fo frequented, not then when Merand populous. chants refore to publike Faires : for all the Merchandise from Nanquin, and the places advoying are

brought hither. Also the Merchants which inhabit the remotest Cities in that way, on both sides had Partners for the conneying of their Wares, very fitly; for our Conductor had nothing to doe but to deliner one hundred and fiftie Packes of Wares with other provisions for the way, to his Hoast, which all bee should Seats and Potbundred and styles saves by react the fe Partners also provide Horses for the Sermants and Seats ters in the find in his Inne in the next Towne. These Partners also provide Horses for the Sermants and Seats high-wayer, for the Masters to be carried in by two Porters defended from the Raine by Sumbretos, or Shadowes which they carrie in their binds. When bee had paffed halfe the way, wee changed our Seats and Porters. and had others to the Inne; to these nothing is due but some small gratuitie, the Hoast beeing paid for all: and a Seat is at as easie a rate here, as a Horse in our Countrey, with great commoditie and frequencie of Times. In the Enening we came to the Towne Faquen, and flaid there two dayes, such concourfe Faquen. 10 of Citizens comming to fee vis that we were almost ouer-whelmed, and were glad to get a ship board on

Friday. On Saturday we failed downe the streame, fifteene dayes continuing our courfe, in which wee hired three Barkes, in one of which we only were carried. On both Bankes many and farre Townes walled about present themselves tathe view of Passengers, seeming as bigge as Canton, which made mee me- Great Cities disate of the facilitie of conseying the Gofpell in thefe parts, we making all this way with as great tran- thicke, quilitie of bodie and minde, that wee might in the flip pray or studie and doe other things as commo-

On the fixteenth of the Kalends of Ianuary, we came to a most frequent Citie far greater then Canton, where the Tutan or Vice-roy of the Province Chianfi resideth. It is high walled divided into three Metropolitan parts, a Riner flowing thorow with a Bridge of Barkes, toyning two parts of the Citie. On this Bridge and customes are paid, but our Conduct being the Lancitau. Brother passed without search. And although 30 we search to be examined by the Magistrate, yet no man troubled us, they being not so inquisitine in on

ther parts as in Canton Promince, about strangers : yea, they entertayne them more honourably enery. where then your Worship at Xuchin. About halfe a mile from this Bridge another River toyneth with this, which runneth by the other side of the Citie, and makes the third part of the Citie. I wished the Fathers a Colledge in this place both for the fertilise of the sople and holfomnesse of the Aire. Having promided necessaries for the rest of our lowrney in this Citic, were went aboard and in the space of sixe or seuen dayes going downe the streame, we beheld on beth sides very goodly Woods, and many Pales of wood on the Bankes necessary for those cold Regions, and bolding on our course passed by seven Cities, or more. famons for greatnesse and Merchandise : and on Christmas Euen came to the greatest Citie of all 30 Chianii, where wee staid that night for that Solemnists. But hee which then was horne exercised our patience with a grieuous North-wind, whereby the River water (otherwise cleere) was so troubled that on Christmas day wee could not drinke it. For the Rivers course is North-ward, which therefore by a Allthis way is

False Brethren and others accusations detected, they are expelled Sciauchin : erect a 30 Seat at Xauceum. Monasterie of Nanhoa and other things of note in those parts. They alter their babit ; Voyage to Nanquin ; the Lake, Riners , Idols and other Ravities .

sale leins cals that Citie where they relided Scianbin, and faith, it is a principall Citie, though not the Metropolican of the Prouince, noble in commerce, in scituation (in the midft of a fresh water Lake) in wits and learned men. They baptized there Linginus Father of a fresh water Lake) in wits and learned men. They baptized there Linginus Father of a fresh water Lake in with a state of the and two or three Infants, which then dying they thrust into Heauen at vinwares. Sixtus the Pope granted a great Indulgence to the Societie, to further the Laponian and Chinefe businesse: 40 and Agnaviva the Generall fent them three Watches and an artificiall Clock, which was great, yet mooued by wheeles without waights, and strucke also the quarters to the great admiration of the Chinois. Others fent Pictures, one the worke of Gafpar Costins who first taught the Ispenians and Chinois the European Painting to the great good of both Churches, But the Kinfmen of Limitians feeing fuch flocking to the Fathers grew suspicious of danger, and caused them to bee recalled, and Linfitan also to be estranged from them. Also one Tansao-hu a great acquaintance of Linftan, with purpole to get somewhat from the Fathers, questioned Ruggerins why heehad not feene Mount Vu-tan in the Province of Hu-quam, a famous refort of Pilgrimes; who answe-Puter a now place haunted red that hee durft not without the Magistrates leave: I will procure it, faith hee, and did so. In by Pilgrimes. the way Ruggerius went to the Mother Citie of Quamofi, where hee vilited one of the Royall 10 bloud, not knowing that fuch have nothing to doe with the State, and was not admitted, but bidden first to goe to the Vice-roy, to whom he went and had no injury, nor yet wonted humanitie, but was bidden to profecute his Pilgrimage and not to flay there. Limitan hearing of this, fought to shift his hands of them, and with much adoe they obtayned that two might beepermitted to stay in their house.

New Connert,

Coellins firft

teacher to

Another danger happened by one Martin 2 new Conuert which had made two other Conafalle Knaue. uerts beleeue that the Fathers could by a certaine herbe turne Quick-filuer into filuer, and by that meanes maintayned themselves. Now the Chinois being exceedingly affected to that Alchymisticall vanitie, these gaue money to buy a Wife, and other costs to that false brother who vndertooke to learne of Father Ruggerim and to teach the other two that Science. And having got. 60 ten what he could of them, he also borrowed the Triangle Glaffe of the Fathers, with which hee ranne away. The Gouernour one day defiring to fee it, they told him who had ftolne it, and he fent an Officer which found him out and brought him bound. Hee , to bee reuenged of the Fathers, accused one of them of Adultery; and the Husband of the pretended Adulteresse (partner

### CHAP.5. S.4. Dieth of whipping. Strange Honours, Icluites fernice.

in the Conspiracie) put wp a Petition against Ruggerius, who vpon inquisition was found at the time named to have beene in Onam-fi, two moneths journey thence. The Acculer hoped to get some-what, being poore, to stop his mouth, which they refused vtterly, and hee for feare fled, together with his Wife. The Father was judicially cleered, and Martin in his presence received Martin whitetwentie cruell stripes, and condemned to the Gallies, was sent to Linsian who had first com- ped to death. mitted him to confirme the fentence; who added fixtie stripes more, and being beggered and cast inbonds he was forfaken of all his Friends, and (the Fathers meane-while releeuing him) dyed within few dayes of the wounds. He which had gotten the Gliffe from Martin, another Con-uert, came and restored it to them, lest it might breed him danger being found with him.

Linftian was preferred to a higher dignitie in the Prouince of Hu-quam. To him the Citie Manner of ho-10 had crected a Temple, and on the Altar had let his Statue; before the Altar a great Harth for nouring good burning incense: Candlestickes were also magnificently placed; and at his departure the whole Magistrates. Citie there visited him, and after their rite , palled off his old Boots (Bootes are the ensignes of Magistracy) and put on new, putting the old in a Chist, and locking them up to bee reserved for a monument of his worth. Ruggerius went to Amacao, and Matthew got leave for Father Edward the Superiour to returne to Scianquin. The new Converts which had loft their moneys by Martins death, deuised new tumults against the Fathers; the River (which is a mile broad) ouerflowing, damnified the houses of the Citie, whence grew occasions of new abuses to Ours. The Vilitour endeauoured to procure Legation from the Pope to China, and Ruggerius was fent to Europe on that businesse, which tooke little effect by the death of divers Popes; hee spending & goeth into 20 the rest of his life at Salerne in the Kingdome of Naples.

Ricins was alone a good while, till Almeida came to him. His Clocke, by the Diall to the eyes, and by selfe-striking to the eares, caused no little wonder. But a new calumnie much endangered them made to the Ciai-yuen. For certaine old men of Canton, which are honoured for that in their whole liues they neuer haue accused any, nor beene accused of any, enjoying therefore a Primited and veerely feast out of the publike treasure, a peculiar Vest, and divers other immunities, put vp a old men, Petition, admonishing of the danger of the Amacaons, and especially those Spies which had Their elegant builded houses of divers stories, and every day proceed with new arts, giving money toward Petition is the building of Scianquin Tower to get entrance into that Citie, fayling to and fro without im- whole in Ricing, pediment, dangerous to the State. This is that which our Bookes fore-tell, Tee base fowen thornes this place. 30 and nettles on a gentle foot, yee have brought in Serpents and Dragons into your boufes. That of Ama-tao is lice a fore on the bands or feet easily circed as leafure, but this of Sciauquin, an viber fixing on the breait and bear timely to be remedied, &c. The Visitour reputed a seuere man committed it to

the Haitu, and at last it came to the Gouernour of Sciauchin, who then being at Pequin to performe the customary trienniall vistation to the King, Phan his colleague (our friend, then Lieutenant) affifted vs with his Counfell, and they gave their Glasse to the new Linsitan, who ended the quarrell with the Vifitour, as being a falie calumnie, The two Marts prouided them of exhibitions and European Presents from Canton, and their Clocke, Mathematike Instruments, Geographicall Maps, Pictures, and Bookes, with Musicall 40 Instruments, had procured them much visitation, and much estimation of Europe, and some fruit thereof in Connersions. Neither was this Station unprofitable to Amacao, helping their af- 1estite metit faires with the Magistrates, in businesses with the Vice-roy, in cases of shipwrackes, in redu-their cabibi-

eing fugitive slaves. It happened at that time the Vice-roy dying , his Successour would not tion by service through superstition enter his Palace till hee had pulled it quite downe and built it anew at to the state. the Kings charge. Meanewhile spending his time in Canton Province, he was made against vs and banished vs. But the Magistrates being our friends, and order comne then from Pequin to Issuites banis buy Scarlets of the Portugals, F. Mat. Ricius was employed, and got their good liking, but not fied. leaue by any meanes of the Vice-roy to stay at Sciauchin. Yea, hee forced vpon the Governour the execution of his Mandate to packe them away, offering money for the house, which they refuled to take, faying, a house built for Gods service might not be sold, and it were ill merchan-

50 dife to take fixtie pieces of Gold for fixe hundred which it had coft them. Isfuites house When they came at Canton the Admirall was absent, and whiles they waited for him the coll societies ice-roy sent a Barke for them to senum and then a senum and the collection of Gold, which Vice-roy fent a Barke for them to returne, and then permitted them to chinfe any other place of in Ching is a residence. Ricius chole Nanhium in the Prouince of Quiansi (or Quamsi, or Chiansi ) which hee great tumine, refuled not, but wished them first to trye at Nanhoa, or at Xauceum, commending them to the Nanhour. Affiliant of the Gouernour thereof, then present, and gaue Ricius a bundle of bookes of his \*\* Auctum. owne acts in token of good will, who thanked him with his fore-head to the ground, after their fashion. They departed from Scianchin on the Assumption day, 1,89. They came to the place called Sancem, or Three-waters, where the Rivers of Xauceum from the North falls into a great River : there they wie to change ships, to have others fixted in other fashion to sayle against the

60 streame. In eight dayes sayling to the North, they came to the place where the Gouernours feruant stayed for them to bring them to the Temple or Monasters of Nanbon, part of which Neglina Monasters of Which Neglina Monasters of Nanbon, part of Nanb the Vice-roy had given them if they liked it. This Monasterie they found in a goodly Plane, stone of 1000 engironed with pleasant Hills, enriched with hand-fet fruit bearing trees, watered with a Morris

profitethuttle.

1.Tim.4.8.

Pilgrimage.

334

piety of the Ancestrie, Lords of that ground ) had their abode, The originall thereof was a man which lived about eight hundred yeeres since, called Lass. who is reported to have flourished in great reputation of holinesse, by reason of his austere course of life; with a chaine girded to his bare flesh, wonted to life Rice, and to beate it lightly after their manner, as much as serued for the daily food of a thousand Monasteries. With that chaine Budily extraite his flesh putrified, so that wormes bred therein : of which if any happened to fall to the ground. he placed it there againe, laying, Hait thou nothing to ease? why heest thou runne away? There is his carkaile preferred and that famous Templebuilt to his worthip, to which is concourse of 10 Pilgrimes out of all the Kingdome, euery-where he and all his being much reputed. These Minifters of the Deuill are divided into twelve Stations, each having his Superiours, and over all an Abbot. When the Father came thither fent by the Vice-roy, they supposed hee had come to be their Abbot and to reforme their abuses; for they not only had their Concubines and Bastards. but robbed by the high-wayes. Now all the Idoll Priests are as subject to the Mag istrates as o. ther men; perhaps because their Learned esteeme not Idols, nor account these their Priests. Yet with China diffirmulation they gaue the Fathers faire entertainment with much pretended joy,

China hypo-

Monftreus Idolatry. Bels,

Lufus Shrine.

The bodie also of their Saint, Lufu, was shewed, all dining with that their China bituminous Vernish (so vulgarly thought, and preserved with incredible veneration, though many deny it to be his bodie:) In the midit of the Temple is an eminent place to which they accend by neate steps, in which hang about fifty Lampes, but not all burning except on let dayes. The Chinois maruelled at the Fathers doing no worship, a thing vivally performed by those Chinois, which otherwise repose no confidence in those Idols. They both agreed; the Chineis Monkes to bee rid of their feare, and the Fathers to goe to the Citie. At their departure, Father Almeida went by water, and F. Matthew by Land with the Go- 30

uernours Servant, the Abbot bearing him companie. He there told the Magistrate that he liked

not of the Temple, because the men had an ill report as vniate Neighbours, and hee worthipped

patieth by Nauhium on the East, the other running out of the Province of Vquam on the West.

But the Citie wals and Houses are builded in the midit of the field, but they are forced by the

ftraitnesse to build also on the other-side the River, joyned with a Bridge on Barkes. It contay-

neth flue thousand Housholds is fertile but vnholsome, the third or fourth part of the Inhabi-

tants being ficke of a Tertian from October to December, which takes away many, and leaues

a pale Impression on the rest. Strangers also are no lesse arreited by it, when they come thither

covered they had a Charter from the Vice-roy to build their House in ground belonging to the

Monasterie. Thither the Visitor sent them Sebastian Fernandus and Francis Martinez which

had beene trayned up in the Schoole of Amacao, the first Probationers in China. They to avoid

expense, built this House of one Storie after the China manner : and sooneliked better of this

on businesse. And the lesuites had almost lost themselves in this new purchase, where being re- 50

and officiously offered all at their Service, making them also a Solemne Feast, and then shewing

them the chiefe places of their Monastery. They were full of great Idols of Brasse and other

Steeples and Bels of Metall caft, one such as they had never seene in Europe to their remem-

Metals, and of wood gilded. In one Station were told fine hundred. There were also many to

Folly of Selfe- one God, and not Idols. This amazed the Gouernour, perswaded before, that there was in the pleasing.

World no other Law nor Characters then theirs, till Father Matthew pulled forth his Prayerbooke. The Abbot also testified that hee had worshipped none of the Idols, no not Lusen leke. At laft, the Gonernoor was perswaded by him, that that of Idol-worship was a later Sectamongit them; yea, the Abbot affirmed, that they deferred no worship, but that former Magiitraces had observed that without Idols the vulgar would not keepe Religion, and therefore set up thefe to be worthipped. They vilited all the Citie Magistra'es which wied them with more courtesse then those of Sciauchin. They went also to another Temple or Monasterie called 40 Quambias, on the other Westerne side of the River, and carried their goods thither till they were prouided of a House. The Citie Xancenm is feated betwixt two Nauigable Rivers which here met: the one which

Icinits new

then their former Residence. Chiutaife (the sonne of one of the second ranke of Magistrates called Sciansciu, a man fa-Chimage (the tolline of olders and Author mous, as being the first named of the three hundred Doctors made enerythird years, and Author of Learned Workes) had spent his Patrimony after his Fathers death with Proggalitie and experiments of Alchymie : and now was forced to shift, with his Wife and Seruants wandering thorow the Kingdome to his Fathers Friends, and becomming a Sollicitor for other men to the 60 Magistrates of his acquaintance. Hee having obtayned of the Vice-roy a Roome in that Monasterie became Neighbour to the Fathers; and one day with set Pompe (after the China cuitome) and precious Gifts came to Father Matthew, and chose him for his Malter. It was not fate for the Father to refuse (though he requited his gifts, left he should seeme to have beene brought this

thei by conetouinesse) and first taught him Arithmeticke. For that which the Chinois haue is with a Linnen Instrument whereon Beads are put by wires, and shifted hither and thither to china Arithreckon their numbers : certayne, but subject to Error, and unprofitable to high Sciences. He read meticke. to him alfo the Sphere of Clauins, and the first Booke of Enclides Elements, and taught him to make Sun-dials of many forts, and Geometricall Rules to measure Altitudes. He being of subtile wir, committed these things to writing in elegant stile, and shewed them to Magistrates of his Acquaintance, fo procuring great opinion and admiration to the lefuits. His wit and exceeding industry brought him to great skill, that hee made Spheres, Astrolabes, Quadrants, Compasses, Dials and other like, very artificially, and some of filter : withall so setting forth his Master 10 and the European Learning, that it proued of no small consequence. By his meanes the Fathers had acquaintance with Pimpithan a Military Commander, with the Gouernours of the Citie and divers other Magistrates. Almeida fell sicke and was sent to Macae, to see if Physicke

might recourt him, and there dyed. Recins fet forth a goodly Image hitherto vnseene, on the Altar adorned with Waxe Lights, An Image sens which brought fuch concourse to fee it, that their enuious Neighbours stoned the House and Ser- from New uants by night : whereat Chintaife offended acquainted the Gouernour, which had before fet his Spaine, Decree ouer their doore prohibiting all wrongs. He called the Street Gouernours (as Conftables with vs) and was likely there to have foourged them, pretending their ignorance, and putting chaines about their neckes after the fashion, sent them to seeke out the wrong doers, and Scuere Inflice. ting channes about their heavy fearing to anger their Parents, durift not name them, till he Free, de Parise commanded to whip the one and fend the other to Prison, whereupon they named two, whose punishment with much intreatie of the Father was pardoned. Father Francis de Petris, was lent Vice-roy de-(by the Magistrates License obtayned) to succeed in Almedau place. The Vice-roy was then prined, preferred by his Friends procurement and Bribes to a higher place, but the Provincial Pifter had so complained of his wrongs, that by the way hee was acquainted that hee was deprined of all Office, and fined at forty thousand pieces of Gold to the King. Besides, a filthy Vicer brake out of him, and soone after he miserably dyed. Thus did God punish his pride, which to erect a Temple to himselfe at Sciauchin, had deprined the Iesuits of their Houle. The fame at Sciauchin was that the Issuits were expelled for refusing to teach the Vice-roy the Arte of Al-

One Cosunbon a Merchant of the Citie Taicho in Chiansis, abode in Nanhium, and had some for-Taiche. tie persons in his Family, a very Superstitious Idol-worshipper, in whose service hee macerated his whole life in that China abstinence from Flesh, Fish, Egges, and Milke, liuing only of Pulse, china absti-Rice, Herbs, and certaine Cakes, industrious for his faluation in another life, but not fatisfied nence, with any of the Chima Sects. He had learned by Chimaifo of the Ieluits, and came to Xanceum and acquainting Father Ricius with his purpose, he was instructed and baptized loseph. He stayed with them a moneth, and after Ricius went to Nanhium to him, and preached and baptized ten Nanhium. with them a monetin, and arter norms were to the Governour was made acquainted, who others. Theeses by night affailing their House, the Governour was made acquainted, who

would have them indited by the Fathers (which they did very sparingly, whereas the Chine 40 manner is to adde excefficely) and he put them to torture; and forced them to confesse one whose Their sentence Hat or head covering falling off had bewrayed him, he condemned in Capital sentence; the other to be fent to the Gallies, or amongst the Kings Slaues : which sentence was to passe to Superiour Gouernours, and so to Scienchin, and Father Ricins must goe thither about it, which happened well for the new Connerts which had for the most part growne wild. From thence he went to Amacao to speake with the Victor, and returned to Scianchin, where the Parents of the theeues procured him their Aduocate which should have beene the Plaintiffe. Amongst the China Magistrates is one which hath his name of Pardoning punishments: Hee is sent in the Name of the Queene Mother, into each Prouince one. Their Office is to visit Prilons, to exempt the smaller Queenes par-

offenders and to mitigate Sentences; for which the Magistrates hold them in great esteem. But doner. SO hee would not faccour these men, though the Father intreated. The Proxincial Visitor only remayned, who alone doth laft of all reuse the Sentences, and they despaired that hee would reuoke the judgement of seuen or eight Magistrates. Hereupon they conspired fiftie of them conjoyning in an implous Sacrifice in a certayne Temple to expell ours from Xauceum. But none of the Magistrates of the Citie subscribing (except one, who did it, to offend the Fathers greatell friend) they better bethought themselves, and intreated Ricins to be their Intercessor; whereby the Visitor was perswaded to pronounce them Dicers and not Theenes, and to exchange their Rivers. fentence into twentie stripes apiece. For the name of Theeues would have beene an ignominious Theft ignoral. brand to them and to their Kindred for euer. Yet would they have renewed their acculation to nious.

the Visitor, but he would not heare them. About that time the Prefident of the Court of Rites at Pequin Prefi-60 Pequin, passed that way towards Hamam his Natiue Countrie, who hearing of Ours (which he dent. did not to the Vificers) vifited them with gifts, and spent a whole day with them, premiting at his returne to carry Father Matthew to Pequin with him to correct their Kalendars.

In November 1594. Father Francis de Petris dyed, and Father Lazariu Catanem succeeded, Ricins bethought him of another course: for howsbeuer they had shaken off the name of Bonzi.

336

vet because they shaued their beards like the Portugall Priests, and cut their hayre, and lined single, had their Temple and fet prayers, they could not free themselues of that infamous title which made them vnfit for greater Defignes. Hee aduited the Vifitor, that by this meanes they Ethnik prieffs were accounted as the Idoll Priefts, and that it were fitter to let their hayre and beards grow, and to weare the habite of the Learned men, each of them having a garment of Silke to vilit the Magistrates, without which they might on equall tearmer amongst the Chinois, conferre with them: also that it was fit to remoue their residence from this vnw hollome ayre of Xaucenne, or to divide it. To all these the Visitor yeelded, undertaking to acquaint the Generall of the Order and the Pope. For how locuer for vertue and learning (wanting to their Bonzi) the Magistrates and the Pope. For nowaccast to Cours, yet the vulgar held them in that vulgar respect; nois had alway thewed countenance to Ours, yet the vulgar held them in that vulgar respect; nois had alway thewed countenance to Ours, yet the vulgar held them in that vulgar respect; nois had always the vulgar respectively. ther might the Magistrates breake their custome, to give them equall entertaynment. Nor did they now beare themselves for Learned men of China, but for European Learned, imitating the

Iefuites alter

Sciles

The next yeere, 1595, the Chiefe Iudge of the Councell of Warre, by the Chinoic celled Scilais which is farre aboue the dignitie of Vice-roy, (who before had after divers Dignities betaken himselfe to a private life) vpon occasion of the musion of Corai, was by the King of China (which fent in defence thereof an Armie of eightie thousand) called backe to the Royall Citie. Hee had a Sonne of twentie yeeres old, who for griefe that he had loft the first degree of their Students, loft his wits. Hee fent a Captayne for the Fathers, thinking they could recourt his Sonne which he had with him, and gaue them fuch entertaynment, that the Magistrates were 14 Mount Muiim amazed. He caused a Charter to bee given to Ricius for going to Nangau, chiefe Citie in Chian or Moilin: Sac where hee hoped to doe good on his Sonne. He passed Mount Moilin, which lyeth betwixt the two Prouinces and the two Riuers, a dayes journey, and the most notable thorow-fare in the whole Kingdome. For at the foot thereof to the South, the River of Nanchina becomes nauigable, which runneth into Canton and the South Sea. On the other fide of the Hill at the Citie Naugan, arifeth another great River, which visiteth the Provinces of Chianf and Nanquin, and many Cities before hee enters the Sea Eastward. Thus what comes from forraine Kingdomss

to Canton, is this way conveyed to the in-land Kingdomes, as also from those hither: Horses

and feates, or Chayres for carriage on mens shoulders, Beafts for carriage and Porters, being al-

most innumerable enery day, yet all in good order. The Mountayne is common to both Progin-

with Trees, paued with stones, frequenc with Hostries, as secure by night as by day, bothby

the guards of Souldiers, and frequencie of Trauellers : neither are their ouer-flowings

by raynes. On the Hill top is a neate Temple, and therein a Garrison, both Prouinces thence

offered to the view. Naughan tignifieth the Somberne Inne. Hee went in one of the Presi-

dents Ships, till hee came to the Citte Cancer; by the way often entring into his owne Ship

and discoursing with him of European affayres, Sciences, and Religion. But so many visite-

ces, which are diffunguished by a Gate erected among the stonie precipices. All the way is set 30

is 18.ftreames. It feemes fo

tions for Magistrates hindred all dealing with his Sonne in this journey, so that by his Father it In this Citie Cancen, refiderha Vice-roy greater then the Vice-roy of that Prouince, they 40 call him the Vice-roy of foure Prounces, Chianfi, Fuchien, Canton and Vquam: not that all those Prouinces are subject to him, but because hee governeth two adjoyning Regions, or lesse Provinces out of each of them. The cause of appointing this Vice-roy extraordinarie was, the multitude of Theeues in those parts, which bordering on so many Prounces, could not easily by ordinarie course of Iustice bee apprehended; whence two Regions out of each were committed to one, who by Militarie forces repressed those infolences, And because the militarie Magistrates are fubiect to that Councell of Warre at Pequin, the Prefident was heere received with greater State : aboue three thouland men were fent to meete him a league off, with their Captaynes, Colours and Armes, many with Hand-gunnes mixed, shooting off as he passed, making a faire show on both fides the River, which there is not very large. When hee was come into the Citie, the 10 Vice-roy with other Magistrates visited him with Gifts, Provisions, Banquets; and some companies were fet to guard the Ships : which was also done every where, such is the China veneration of such Magistrates by their inferiours. Heere was a Bridge of Boates, opened but once a day for Ships passage which have payd their customes.

After they were past this Citie, another Ruer addes it selfe to this, whence they come into a place called Sciepathau, about thirtie miles long, in which are many Rockes differred, on which the impetuous force of the water caufeth many ship-wrackes goods lost, and men drowned; and requireth expert Ship-men; a strange thing to see a River full of shelves and sharperockes, in the Lying vanities midft of the continent. In the entrance of this dangerous paffage is an Idoll Temple, wherein the passengers denoutly commend the fafetie of their fortunes to thele vanities, which Scalan al- 60 to heere did in vaine : for although with multitude and industrie of Saylers his Ship auoyded the Rockes, yet was that broken in which his Wife and Children were carryed, though they efcaped drowning, by reason of her high building, every one getting vp into the highest decke, which lifted up it felfe aboue those shallower waters. They cryed pittifully, and Father Mat-

them having then gotten a Boate for himfelfe came first and received them, going himfelfe into another leffe, which went before to conduct the way. Scilar fent for another Ship prefently to Cancen. Father Matthew was taken into another Ship of burthen, which was in a guit ouerthrowne, Iohn Barradas his boy was drowned, and hee hardly recoursed : the Commodities by dvuing were gotten againe, though much burt by the water. They came to a noble and populous Citie called Chiengan, where the winde by night was fo violent, that it dispersed all the

CHAP. 5.S.4. Nancian and Nan quin. Huiunfins Tale and Temple.

Fleet, which hardly elcaped wracke.

Scilan terrified with this disaftrous passige by water, purposed to goe by land to Pequin, which Kings Posse is done at the Kings coft; in certayn places there being Horses, Lighters, Porters, proutions ready provided. Now thinking to fend backe Ricius to Xanceins, least some might accuse him in a time of warre for bringing Strangers to the Court ; hee shewed some the wonders of his triangle

Glaffe, which hee was willing to give the President if hee knew he should hold on with The Glassee. him in the lourney. They acquainted their Lord, and hee gave him license to goe to Nan- fleemed a quin, and to enter those two Prouinces of Cequion or Cechien, and Nanchin or Nanguin, Hee great levell, was carryed thither with two of Scilans feruants, still having Souldiers from all places to guard Nancion Mehim, they thinking that fome of his Sonnes were there carryed. When hee came to that tropolises Mother Citie (for before hee seldome went foorth, to preuent all lets) which is in twen tie Chiange. nine degrees, to the Northermost part of the Prouince, hee made shew of himselfe as one of Scilent houshold feruants: and not knowing whither to goe to deliuer his Letters, hee first 20 went into a Temple of note, which beares name of the Iron Piller. For they fable that one This seemes us

Huminfin, had some hundreds of yeeres agoe, brought perfect Silver out of Quick-filler, and had agree with delivered this Citie from a huge Dragon, whom hee over-whelmed in the ground, and ty- Para Muchied to that Iron Pillar, and then flew with his whole house, Mice and all, into Heauen. The parem for page building of this Temple is worthy the view, against which are perpetual! Faires, in which nothing is lacking to bee fold. The Priests are those which they call Thanfu, which let their havre and beards grow. When hee entred that Temple, much concourse of people came about him to fee a Stranger, a strange fight there, yea, reputed holy, for they had thought that the fame of that Idoll, had brought him thither from farre Countries. But when hee did no worship thereto, hee was admonished to doe that which the greatest Magistrates refused not a then threatned, after they would force him, till one of the Ship fayd, hee worshipped no Idols, But feeing the multitude ftill flocking about him, he returned to the Ship, and fignified that hee came with the President, whom every man knew. The servants visited their Masters friends, and

received gifts of some, especially of the Vice-royes Physician,

Scarcely had they fayled out of the chiefe Citie, when they meete with a Lake admirable Admirable for the greatnesse and other things : on all the bankes as farre as a man can see, are innume- Labersee the rable Townes, Caffles, Villages, great Houses; thence they may passe into Fucbien, and thence new Map. to the Sea Eastward. Amongst other Townes there is one Citic called Nancan, at the foot of to the bea Eurovaiu, minoight of the first and the first and the first and f himfelfe with afflicking his bodie. Those Houses are fayd to bee as many, as are dayes in the himselfe with afflicking his bodie. Those Houses are fayd to bee as many, as are dayes in the himself with a fair than the himself with the himself with a fair than the himself with the 40 yeere : and they tell as a miracle, that the Sunne shining cleere round about, that Hill is alway courred with Clouds and mysts; so that that Hill (so neere) cannot bee scene out of the in Page 162 or Lake. The course of the River is to Nangain, but in that breadth the streame hath small force, somelike place and eafily may with the winde bee fayled any way. After you are out of the Lake, a great Riuerout of Vquam Prouince, runneth thither and therein loseth his name and waters. For the greatnesse, it is thence-forward called Tamfa, which signifieth, the Son of the Sea, being in many places two or three myles broad, dangerous also for tempelts like his Father, and they say Riner Tanys or the waters are fo whirled therein, that swimming can little profit those which fall thereinto. The Chinois fayle it with great feare, and are there often wracked. Great Ships fayle youd the Lake, therein, and happely our Ships (not the greatest of all) and our Galleyes might fayle hitherto so from the Sea. Many other Rivers pay their tributes to it. They fayle it not by night, but betake themselues to some Port, which they may readily doe also in a storme. To this

Lake the Spring-tydes at Change and Full come, at other times not observable : at Nonquan enery day, but it is fresh water. When hee was come to Nanquin the Presidents servants

Nanquin described; RICIVS expelled thence, hee setleth at Nancian, thence goeth to Nanquin againe, and to Pequin ; description of it, the way thither, the Kings Palace, and of Suceu, and Hamcen

(which Fola cails Quin(ay) defembed. It was then greater, ay being warres toge. ther have diminished it : perhans allo that Lake decaying and diving vp; or not rebuilt after the Tarters expelled.

Citie wall two

Garrison

Milerable

Anquin or Nanchim by the Portugals is called Lanchin ; for they head of it by the Inhabitants of the Protince Fuchian or Fuguian, which vie L for N. It is called also Intienfu, because the Gouernour of the Region there refideth. This is that Citie, which in the Chinois opinion excelleth all Civies of the world, both in great celle and goodlineffe : neither may many be compared to it. For it is full of very great Palacis, Temples, Towers,

ter, as come Bridges, which all yet are exceeded by those of the same kinde in Europe. It excellent also in the noyante temperature of the ayre, fertilenesse of the soyle, goodnesse of wits, gentlenesse a manners elegance of speech, multitude of inhabitants of every ranke, of People, and Learnes, and Magistrates: game on precupants and the same with those of Pequin, in number and dignitie, however by the abfence of the King, that equalitie is made vn-equall. And so in all the Kingdome of China, and the bordering Kingdomes, it is commonly (all things confidered) judged the fift or chiefe Citie. 20 It is compassed with three Walls; the first, that of the Kings Palace exceeding stately. That is also compassed with a three-fold wall, in manner of a Tower, with ditches filled with water, It hath foure or fine Italian myles in circuit. And I dare boldly fay, that no King any where hath a more excellent Palace (not if you weigh particulars together, but) comparing all things. The second wall encompassed the Palace, and the principals part of the Citie, opened with twelue Gates, which are fortified with Iron plates, and Ordnance planted ouer against them within the Citie. This second Wall comprehendeth eighteene Italian myles compasse. The third Wall and ettermost is not enery where continued, but where need is, Art hath added supplyment to Natures fortification.

The circuit thereof can hardly bee knowne. The Inhabitants fay, that two Horse-men in a 30 dayes journey whole dayes tiding, having gone out of the same Gate, met together at night: whence the prodigious quantitie may bee observed, especially the forme of the Citie being Circular, and therefore most capable. Although within the walls are great spaces of Mountaynes, Lakes, Groves, Gardens, yet the greatest part is very frequently inhabited. The garrison Souldiers (which one would not beleeve, had not eye-witnesses confirmed it) which keepe the Citie alone, are agrees, 15 mine fortie thousand. The Pole is eleuated 32 degrees, and so it is seated in manner in the midth of the Kingdome, from North to South. The River runneth by it at the West, exceedingly both enriching and beautifying it. Nor doth it onely passe by, but is in many places brought into the Citie by Channels (whereby greater veffels may enter the Citie) being enlarged by Art. In times past it was called the chiefe Citie of the Kingdome, and may feeme to have beene anci-40 ently more glorious.

Riches went a-land in the Suburbe, which is without the three Walls, and is so large and frequently inhabited, that it may feeme another great Citie. There a Physician of the Vice-toy of Schiauchin knew him, and hee vilited the Vice-royes sonne, and by his meanes grew acquainted with others. When he went into the Citie, hee vied to bee carryed in a close Chayre, to preuent noueltie, and for more authoritie, and because the length of the way to friends houses often required it. There hee thinking to fixe a residence, learned of one Sciutagin 2 Magistrate of his former acquaintance, to whom hee had before given a Globe and an Houre-glaffe, receiving promifes of much kindnesse. To him he went full of hope and not emptie handed: but hee being both miferably couctous, and ambitiously hunting after new places, was offen-10 ded with his presence (hee pretending that he came to see him) sent for his Hoast, and threatned him terribly, causing him to ship away his new Ghest; having also agreed with the Notarie of his Court to give enidence against him, as a troublesome and dangerous man formerly expelled from Scianchin. Thus against the streame both of his affection and the River, is Rieiss forced (loath to displease Magistrates) to returne to Chiansi Province. In the way fall of thoughts, hee had a vision (as the Storie fayth) in which God appeared to him, and promise to bee propitious in both the Cities Royall to him.

In Nancian the chiefe Citie of Chianfi hee abode. This is as great in circuit, but not in Merchandife as Canton, and though none of those portentuous great Cities, yet is it famous tor the number of Learned men, which thence are advanced to divers parts: the people are thriftie and Faftfromfleth, contented with little, and many of them observe that first aforesayd. Of the Learned men there fin egges, and is also a Societie, in which on set dayes the more learned doe Lecture or discourse couching vertues in very modest manner. The Physician aforesayd, famous for his Art and well respected by

### CHAP.S.S.S. Ricius bis Booke of Friendship. Princes of the Blond Royall.

the Vice-roy, was visited by him. Hee now vsed his Silken vest and Cap vsed by the Learned. fomewhat like but higher, then that which Priests in Spaine weare, (for he had learned to keepe flate and not to deject himselfe too much) and carryed two servants with him in long garments made of Callico, and his gestatorie Chayre: without which pompe a man cannot bee taken for a Learned man, the poorest Students vsing them, and otherwise contemned. The Physician enter- Many of the tayned him kindly and after inuited him to a Feast, where were many Students, and some of the Royall bloud Royall bloud (of which that Citie hath very great store) which were glad of his acquaintance; at Nancian, and when he had once mentioned his flaying there; the Phylician was to eager in defire thereof. that he feyned that the President Scilan had written to him, to procure him residence there, be- chinalying is 10 cause in the former abode he had not his health. The Chinois esteeme such lyes to bee wisedome, prudence

Hee soone got credit among st them by Mathematicall lectures and instruments, and by his artificiall memorie especially. For the Chinois about all others commit whole bookes to memorie Ricius his artic with vn wearyed paynes, and in the first yeeres of their studies doe nothing else. He repeated the ficial memorie most confused and independent Characters in order, yea, backwards as well as forward, Many defired to learne it, and tome hee entertayned. Phylicians being of no great authoritie, he fought to infinuate into fauour of the Magistrates; but a certayne Student had counselled him to neglect their license, and thereupon enquirie being made by the Vice-roy, this his friend and landlord very friend-like, would needs throw him fuddenly out of doores, and hee was forced by Forumefriend force to defend himfelfe. But the Vice-roy having received a Libell from him, teffifying who he 20 was, greatly rejoyced ( having heard of him ) and when hee came to his Court, arose from the

Tribunall to meete him, would not suffer him to kneele, and gave him good viage and magnificent Titles, inuiting him also to reside there. Whose affections were after kindled into a greater flame by his Physicians, magnifying his Mathematickes, Memorative, Bookes, three square Glasse and other nouelties. The Vice-roy would have him make him a Dyall, and teach his Sonnes, but for that admirable Glaffe, hee would by no kinfle force accept the gift.

And whereas time out of minde many of the Royall bloud are there, two of them having the chiengen and tytle of Kings, Chiengan, and Longan, fent their principall Scruants or Courtiers, to invite Fa- Longan, Kings ther Marthew to the Palace, which is fitting to Royali Maiestie, both for Greatnesse, magnifi- titular,

cence of Building, pleasure of Gardens, and other furniture of houshold and attendance. Chien-30 gan first inuited and entertayned him, attyred with a Royall vesture and Diadem: Father Matthew gave him a Dyall with the Signes of the Zodiacke, and a Globe with China characters, and other European commodities; which hee recompenced with Silkes, weight of Silver, and divers viands. Nothing gaue him such content as two Bookes of Japon paper, smooth and hard bound in European manner : one contayning Maps and other Mathematicall representations, with an explication in their Language; the other was a tractate of Friendling, wherein Dialogue-wife Richus his Chius (as Cicero in his Letins) hee bringeth in the King, questioning what the men of Europe thought Bocks of Friendship, and set downe the sentences of Philosophere: Doctors and other Authors as friendship, of Friendship, and fet downe the sentences of Philosophers; Doctors, and other Authors; a worke to this day read there with great applause and admiration, Printed in divers Provinces. Chiengan continued his friendship and left it as a legacie to his Sonne, who yied when the Father

40 visited him, to pay the Porters, and to give money to his servants, a token with them of great Token of welwelcome. The Societie also of Learned men grew acquainted with him, and the chiefe of them, come, hearing him complayne of multitude of visitors, wished him to command his Servants to say hee was not at home: which officious lye heaffirming to bee by our Law vnlawfull, bred in him and the rest much wonder.

In the meane while at Xanceo they fullayned abules, and Seballian Fernandus was vied igno- Caulis. miniously by the calumnies of their quarrelsome neighbours, and sentence of a partiall Judge, which caused two Servants to bee whipped vaheard, and Fernesidus to stand as in a Pillorie, with Pillorie board, his head in a board au ell and halfe square, therein a hole fitted for the necke, to bee opened and thut; fo that a man cannot put his hand to his mouth; and this for footh for beating the Bachellors. 50 This was written as the cause of his punishment. Hee afterwards sought the lesistes fauour, a-

shamed of his fact, inuited them, and set up an Edict for their safetie. Fernandus was sent herevpon to Riem, and Catanem continued alone without any Father, till the yeere 1597. and fell ficke : then going to Amasao (Father lobn Aroccia was fent in his place ) hee returned with Fa- droccia and ther Nicholas Longobard a Sucilian. Father Matthew was appointed superious of the China million by the Viltor Valignanus, without subjection to the Rector of Amacao. To him precious watches were fent, and Images with other things, which might further their China proceedings, the Portugals of Amacao continuing their liberalitie herein. Father Matthew minding to trie all meanes to peerce to the Court, aslayed Chiengan in vaine,

who feared to raife any suspicion of himselfe. Hearing therefore that Guan (which had as you 60 heard) visited the house of Xaucee, in his way to Hainan, was thence called by the King to Nanquin to bee President of the first Councell, called Li Pu, that is, the Councell of Magistrates : in his The Council way at Nancies they vifited him with a prefent, (in which nothing to pleated him as the trigone Glasse) and tooke opportunitie to signifie to him, their defire of presenting the King with Maidhaire. some European rarities. Hee approued thereof and fayd, they should not onely goe with him to

Such coniectures as this Pinto of this

Nanquin, but to Pequin also; whither within one moneth of his comming hee was to goe. Ricing with Cataneus attend him (leaving two of the company at Nancian) with two brethrenos the company, Seb. Fernandus, and Emanuel Pererius, of China parentage in Amacao: who of their God-fathers take vivally both Christian name and Sir-name, ving also their China names in dealing with Chinose. They fet foorth from Nancian on Midlummer day, 1598. and when they were come to Nanguin they found all full of feare, by reason of the Iaponian Warre in Cerai, so that none durit give vs encertaynment, grieuous Proclamations having lately forbidden to receiue men any way suspicious, by occasion of Iaponian Spyes taken. Euen the President himselfe, feared to bee author in so troublesome time of bringing Strangers: and Ricius when he visited him, vied his Gestatorie seate. They gaue eight pieces of Gold to a cunning Clerketo in China brings write their Petition (fo deare doe Learned men there prize their labour) which when they game the Chancellour (which fends Petitions from Nanquin to the King) hee would not meddle with it, but put it off to the President, that hee should carrie them with him to Pequin. He being to bee there to gratulate the King at his Birth day, in name of the fixe Tribunals or Counfels, fent his goodsby water and the lessites with them, but went himselfe by land. When this Prefident came to Nanguin, other Magistrates vifited him with prefents after the

manner, and one the Vice-roy of that Prouince with a Map of Richa his invention, concealing the name of the Author in a new impression ; which hee shewed to Ricius, who soone knew and challenged his owne. This the President intimated, that the Author was going with him to Pequin. Hee presently fends the Captayne of the Souldiers, to defire the President that he might to haue fight of a man whom hee so mich admired; sending withall a Chayre, and Porters with Horses also. For the Vice-roy of Nanquin resideth not in Nanquin, because in that High Court are higher Magistrates, which would seeme to eclipse his Greatnesse. So Catanens went with the Ship, Ricius to the Vice-roy, whom hee falled with European gifts. He flayed with him ten dayes, so great desire he had to conferre with him. And when hee shewed him the Image of Christ, he would not take view of it there, but would first ascend to a neate Chappell which he had on the top of his House, therein after the rites of their Learned, to worship Heaven; with three doores to it, from the South, East, and West : about it round was a Gallerie distinguished and cancelled. There he caused an Altar to bee erected, and thereon Wax-lights and Incense to be fired; and then the Image being fet thereon, hee came in his most sumptuous attire and did worship foure times, after their accustomed rites : after which hee would not stand before it but besides it, to take view, which liee did a good space. After him, his familie did likewise : and euery day they reiterated the fame, one also being appointed to keepe perpetuall O dours burning before it. Hee brought other Magistrates also to see the same : and when he might not detayne the Father longer, he fent him away with great weight of Siluer, which came fitting to their necessitie. Hee gaue aduise also touching their designe, and rold them of that frustrate successe which followed. He went with him to the River, and fent one with him till he had overtaken his companion. The Chinois call that River langu-chian, Chian fignifying the greatest River ; Qther Rivers they call Cho.

That River of Nanquin which I called (Yamfu or) Ianfu, the some of the Sea, goeth North- 40 ward to Nanquin, and then returning fomewhat Southward, runneth into the Sea with great force; fortie myles from which it palleth by Nanquin. And that from hence to Pequin there might bee pallage by Rivers, the Kings of China have derived a large Channell from this to another River, called the Tellow River, tuch being the colour of that troubled water. This is the ofee the Map. ther famous River of that Kingdome, in greatnesse and note, which ariseth without the Kingdome to the West, out of the Hill Cunlun, conjectured \* to bee the same whence Ganges artieth, or one neere to it. Where it first breakes foorth, it maketh a Lake which they call of the Confellations : thence it pierceth into the borders of China in Scienfe, the most Westerly Prouince, Lake feeme ill and goeth out againe out of the Northerne walls into the Tartars Countries; after which it returneth to the South, and that Prouince whence it had come, and washeth another Prouince na- 10 grounded.

Lake of Confiel. med Scians, and another named Honan: then turneth into the East and entreth the Easterne Ocean, not farre from the Sonne of the Sea. This River against their lawes for Strangers, entreth China from Barbarous Regions, and as in reuenge of their malice to Strangers, often ouer-floweth great part of the Kingdome, and shifteth his Channell being full of Sands which it mooueth. . Certayne Off cers or Magistrates designed doe sacrifice thereto, or to the Spirit of it (for they see Spirits ouer divers things) with many rites: and they fayne that it cleeres the troubled waters, but once in one thousand yeeres, whence it is prouerbiall of a fild-feene thing, When the yellow Riwer Shall bee cleered. They that sayle therein, must therefore keepe the water many dayes till it fetleth, the third part prouing myre and fand. Before the ingresse and egresse of this River, are Channels which give passage to Ships that carry prouision to Peguin. Those Ships are sayd to 19000. Ships of bee ten thouland, fent onely out of five Provinces, Chanfe, Ceebian, Nanchin, Vanam, and Scianthe Kingstor tum. For thele Prouinces pay their yearly tribute in Rice and Corne, the other ten in Silver-Sue Provinces Belides thele, there paffe innumerable Ships of Magistrates and of private Merchan's : but prinate men are forbidden to goe out of the Hianfu into those lefte Rivers (those onely passe which

shwell within fach Rivers to the North) left the multitude of Ships should hinder the passage, or bee able to doe harme to Pequin. Yet is there such store of Ships not withstanding, that they are forced to stay sometimes divers dayes, one hindring another, especially at some seasons when water is fearce, for remedie whereof, they have tockes and flood-gates, which opened make way from one to another of them, with great labour and tedious language. The croffenesse of winder and labours of drawing with ropes, I need not mention. Some thips are overwhelmed at the o- Cranes to pening of those lockes. They have woodden Engines on the bankes to draw the ships of Magi. draw thips strates, at the Kings coft, against the streame all the way. And in fitting this River to Naniga. Tempestions trates, at the same years years the feare of the Sea and Pyrats; have made them take this course leas and Pyrats; have made them take this course leas on that In rather then that by Sea.

CHAP. S. S. Way to Pequin by River, Carriages, Cofts, Townes, Locks, Co.

In all this way, many Cities most worthy note appeare, of the Prouinces Naugain, Scian- Fine, tum, Pequin, and belides the Cities there are fo many Townes, Villages, Houses on the banker, that all the way may be fayd to bee inhabited; fo that the Saylers no where want to furnish themselues with Corne, Rice, Fish, Flesh, Fruits, Hearbs, Wine and the like, at a very cheape rate. By the same River, Wood, Timber, Boards, Pillars ( for the Chinose make reckoning Timbers for onely of those of wood) are carryed for the Kings workes : especially, then when the Kings the Kings builonely of those of wood) are carryen for the raining works.

Palace had beene on fire, which confirmed two parts of three thereof. In all the Iourney, ours Two thirds of found great rankes of Timber-trees tyed together, and of other wood, which many thou- the Kings fands of men drew with huge toyle, and fearcely could get forwards fine or fixe myles in a day, house burnt by 20 and from the Prouince Sufemen, which is furthest from the Court, such Timber-trees were in Lightning, going up, two or fometimes three yeers space : whence enery pillar made of them prodigiously arose each to three thousand pieces of Gold : and of those Timber-rankes they encountred one. feeming longer then the reft, which was efteemed to reach two myles in length. The Bricks alfo (which the Chinois preferre before Stone) for the Kings Palace, were carryed this way fifteen Bricks preferhundred myles, and many Ships had no other wie, fo many as might feeme fufficient, not for a red to mone; Palace but a great Citie. Out of the Southerne Provinces, are yearely fent those things which in the more barren Provinces of Poquin are wanting ; as Fruits, Fish, Rice, Silkes, Cloathes and other things : and a day is fet them, at which if they bee not there, they incurre grieuous penalties. Of the Ships called Horfer, the Kings Eunuches have command. By this River Swifter falge 30 they layle almost onely when the Riners swell over their bankes, peraduenture by the melting called Herfet, of the Snowes from the Hills whence they fpring. By the heate in that lourney of a moneth, Heat and colds and fometimes two moneths, the viands which they carrie, are often corrupted before they come to Pequin, for which cause they coole them with Ice, and in all those wayes much Ice is preserved for that purpose, and distributed to the passengers, and so all things age carried fresh

The Eunuches of those Ships, fell emptie roomes to the Passengers for their gayne : for the Chinois thinke it aglory to fend that which goeth to the King in many thips, & not to give them their full lading, which is also profitable for that sterilitie of Pegain, Merchants by these conuenient fraights making nothing to want there where nothing growes. Ours hared a roome in 40 like manner for their eafe. By reason of the great heat they all fell licke, yet by Gods helpe recouered. When they were to passe out of the River, in the Province of Scientime, they met with a there. Which runnes out neere Pegain, to the Tower Tienfin. Another River Hand-made River, which runnes out neere Pegain, to the Tower Tienfin. from Pequis or rather from Tarteria, meetes it, and runnes together with it into the Sea, or into that Bay, betwix: Corai and China, after they have runne together one day. In this Tower there was a new Vice-roy extraordinary, by reason of that invasion of Coras from Japon. Hee They come to promided a huge Fleet for defence of Coras, by which meanes that whole Riner was full of Ships Program. of warre and militarie tumult. Ours went thorow the thickest of them without let, and at length came to the Port or Banke rather of Pequin, which banke is a dayes journey from the walls of Pequis. And although by Artthey have made a huge Channell to the walls, yet left it 50 (hould bee filled with multitude of Ships, they fuffer none but the Kings burthens to goe that way, the others being carryed by Carts, Beatls, and Porters. They came to Pegnin on a feftivall day, the Eeuen of the Virgins Nativitie.

The chiefe Mart Townes in this way were lameben in Nanquin Pronince, in thirtie two loweled Hode. degrees thirtie minutes. Hosingan in thirtie foure not all io much; Sincen in thirtie foure degon, Sincen. grees thirtie minutes. In Sciantum Prouince Zinim in thirtie fine degrees fortie minutes. Lincin Zinim licin. in thirtie feuen degrees fortie minutes. In Pequin Province Tiencin in thirtie nine degrees thirtie minutes. Pequin in fortie large. They are deceiued which eleuate it to fiftie. Now from Canton (which is two dayes from Amação) are of China furlongs (flue of which make a mile, and fifteene a league) by River to Nanbiun, one thousand one hundred and seventie. Thence to Nan- Length of the 60 cian eleuen hundred and twentie. From that to Nanquin, one thousand source hundred and fortie, way, And thence to Pequin three thousand three hundred thirtie five, in all seven thousand fixtie five: which makes of miles, one thousand foure hundred and thirteene.

Chine Lan-

Degam is fituated in the Northerne border about one hundred miles from the wall against the Tarrars. Nanquin exceeds it in greatnesse, composition of the Streets, lugenesse of Builwith Nanquis. sings, and Munitions: but Paquis exceedeth it in multitude of Inhabitants, and of Maguitates. Fo the South it is compassed with two walls high and strong, so broad that twelve Horles may eafily runne abrest oin the breadth without hindering one the other. They are made of Brickes. fane that on the foot it stands all on huge stones, the midle of the wall is filled with Earth; the height farre x ceeds thole in Europe. To the North is but one wall. On these walls by night is kent as vigelant watch as if it were time of warre: in the day Eunuches guard the gates par rather exact Tributes, which is not done in other Cities.

The Kings Palace rifeth within the inner Southerne wall, neere the City gates and extends to to the Northerne walls, seeming to take vp the whole Citie: the rest of the Citie running forthern both fides : It is some-what narrower then the Palace of Manquin, but more goodly and glorious; that feeming by the Kings absence, as a carkaffe without soule. Few of the Streets are paged with Bricke or Stone, fo that in Winter dirt, and dust in Summer, are very offenfine; and because it rainesh there seldome, the ground is all crumbled into dust, and if any wind blow, itenters every Roome. To prevent which they have brought in a custome, that no man of whatfoeuer ranke goeth on foot or rideth without a Veile or Bonnet hanging to his breft, of that fubtiltie that he may see, and yet the dust not annoy him: which also hath another commoditie that he may goe any whither vnfeene, fo freed from innumerable redious falurations, and also be spares attendance and cost. For to ride is not magnificent enough with the Chimois, and to bee 10 carried in their Seats is cofily, with Attendants especially; and in that time of Watre it fitted with ours to paffe vnknowne, being Strangers.

Muletters flood at the Palace, and City gates, and in every Street to let Mules, themfelues alforatending the Hirers whether they would in the City; which leading the beafts by the bris dle, in that frequencie made way, being also skilfull of the wayes, knowing most of the great mens Houses: all at a reasonable rate. There is a Booke also which truly relateth all the Streets, Lanes, Regions of the City: Porters also with Seats to carrie Men, and Horses are enery-where found, but dearer then at Nanquin, or other places.

All things are to bee had in abundaace, but brought thither and therefore dearer. Wood is scarce, but supplied with Mine-coles (we call them Sea-cole) necessary to that Region, cold be- 10 wond what the Climate vivally exacteth : their Beds are fo made with Brick-workes, that they by a new kindrof Stones admit the heate of those Coles : a thing vivall in all those Norsherne Regions. These Northerne Chinos are some-what more dull, but better Souldiers then the other. Here they learned that this Kingdome is Cataio, and the King of China the great Can, and

For the nine Kingdomes (of Mangi) are those Southerly Provinces which are under the great River lansuchian, and fixe vpon it make vp the fifteene, fo great that some one of them is as great as all Italy. Anno 1608, whiles we write, it is fortie yeares fince two Turkes or Moores out of Arabia brought to China a Lion (a beast seldome here seene) by Land, which had an Office given by the King to them and theirs, to keepe the Lion, and that they should carry no 49 Tales thence: They in conference called this Kingdome great (ata), and this City (amhalu the like we heard of others which had comne from Persia. The Chinois also have heard of that name, and still call the Tartars Lu, and the North parts Pa and Pe: to which Can the Tartarian Title added easily makes Canpalu or Cambalu with others; for the Chinois feldome vie B, and Marco Polo comming in with the Tartars called it by their name. And at this time without the walls of China is found no Catay. The Portugals called it China, borrowing the name as may be supposed from the Stamites, and hence Cosmographe:s made them two Kingdomes. But Goez his lourney by Land to Catay Hath taken away all scruple.

To returne to ours now come to Peguin, the Prefident gave them entertainment, and procured an Eunuch to vndertake the bufineffe for the Presents, which were a Clocke, two Pictures, two 50 Trigone-glaffes and a Bell : all pleafed the Eunuch, but his minde ranne more on making Silver of Quick-filter, which he had heard they could doe, and which would bee more gratefull to the King. And when he law that would not be undertaken, neither would be undertake to acquaint the King, in this time of Corayan Wartes; and ours also were taken for laponians, or necre vnto them, they not knowing how by true names to diffinguish Nations. The President also began to be fearefull and purpoled to carry them backe with him to Nanguin. Yet they flaid a moneth after him (he being at a certaine day by Law to depart) and when they had tryed all wayes in vaine, nonedaring to acknowledge Strangers, they returned to Nangain. They had a Bill of Exchange from Amacao to take vp money at Pequin, but the Merchant had plaid the Merchant and Chmese too, none such there to be found. They hired a ship at an easie rate for their returns 60 (because they goe empty) but not easie in this respect that the Owners pouertie made the lourney tedious for what of helpes. This benefit they made of this Journey to learne the Language goage and Ac. better, making a Dictionary, obseruing their Accents with Points deutled; (chat speech constfting wholly of Monolyllables, the want of skill in those Accents had caused that they neither

Chincles Letter. Their Monasteries, Charisie, Schooles, Studies. LIB. II. I rely runne thorow two of their Bookes, which they efteeme as their Metaphylikes, or first Philosophie, one of their learned men gratulated my proficience; when as I found therein no pandopine, one of their requirement of the Laniar. They lay, note but the Chinois can valerthad them, Father Ricci vieth to adde none better then the Europeans. A Letter of Taife to Revi hee added thus inferibed. Thaifo " younger Brether which fland at the " fide to heave, do fide. ner auerticius interioru. I intib mit my bead to the ground, and exhibite bonour and rentrence to the clair Brother, Master and Father Marchew Ricci, a famous Peere, and Master of the most choise slowers of the great Law, and cast downe my selfe at she feet of his Seat and Chaire. The Letter followeth, After our departing (it being foure yeeres fince fight of each other) there hash not beene a dayin Sciauchin, my (enurreyman, a Merchant, Latters to your Worlbip, thereby to learne where and whee it nouse (1).

This (116) did. I know not besther they have attayed that, to come to your magnificent hands, &c. When I went at the feet, with from your Walpup I faid it must goe into the North parts, if it mould belook the filendam and magniethe feet, with 1 cm your runnings and most go morry bad nothing fingular, that Nanquin Court was tradition the level lig. Scene of tou kinguisms, sum my control of the product was fit each for dwelling, because there were lea-

ned men in st of excellent vertue, and of a true and falid foris to receive the Law This year. gathering together those things which your Worship taught mee, I made a Booke, and exhibited it so the their fring at occiety of learned men, of which there was none which did not admire and fubfribe, faring, your Wes-Sop was Scingin, that is, a Saint of these times. Those things which I have added hapfy may be errous-Cutes. popular Senigui, tone so in oness y says treet.

Sente, son, and fore this they contradict is founder and larger tearning; and interfere beaut from my ferman 30. Non-hol clima to bring it to your Hardylop to reads, which I made it made, and to careful, the approach to truth, so hole out the falls, to illustrate the object, writing all in another Books, and feeding it by the falls. fernant in few dayes , because I would presently commit it to the Presse, that your Worshops learning friends in jun anges, yearnings a coming preparity community to known the thorough the World. In these places are of greatest reckning the Books of Hothu, Cocus, Pequa, Queulcieu, Thaiquitu, and other like, which have written of a Point, Lime, Extremite, and Tincravife. All these learned make of a Line a Circle: but according to your Worships teaching, of a ting sholy birth, greatest Line is made the termination of a Circle, and a Circle confists therein. From which principles the conotton, greatest clusions brought of Thatquit, that is, of God, doe farre exceed the Commentaries of all our learned learning that conjume or company of annual parties of the state of the state of antiquatie, which his horro bean not be may be Man norn. And they are enough to illustrate a thousand objectives of antiquatie, which his horro bean not beene pierced. This one thing affills mee, that my writing and file is meane and abieft, and most onfix to to illustrate and cularge the most excellent concests of its mind. Means while I much long, and as is pagas men an one cheg affish were on tiptoes looke about enery where, if haply I man fee your face. From Succes the two and twentich of the fourth Moone, and the foure and twentieth of the Raigne of Vanlia. Subscribed; Thailo younger Brother agains bends bis head to the ground, &c. Lombard proceedeth in his Letter, and sheweth the commodiousnesse of one King which ru-

leth all, of one Mandarine Tongue, of the common industrie and cheapnesse of prouisions (not as in the powertie of lapon, where the worke-mens maintenance must come from other parts) all fitting to bring in the Gofpell. There are, fayth he, almost infinite houses of Bonza maintayand by the King, besides gifts which they receive of others which yet repose no great considence in Idols: what would these doe if they beleeved to receive a hundred for one, and eternall life? 40 Their composition of bodie, complexion, condition, rites; no vse of weapons, not so much as a Knife carried (but by Souldiers in Garrison, not in the way or at home) their habite long, and anciently vsed, with their hands alway hidden in their long sleeues, except in vse of their fanne, which all, even the meanest carrie with them ; their quarrels, if any happen in the vulgar, ended in a few boxes or brawles; their feemely behaulour equall to the European; yea, in some Valuerfities in things to the Religious there; their studiousnesse of learning the onely foundation of dignitie Vinuerines and greatnesse, as many Athens there as great Cities, each having a Schoole or Vniuerstie with-Professors and out mixture of other Regions) their politike and morall Rules and Lawes; all these might be furtherances to the Gospell, Their tenacitie also of their owne customes and jelousie of Stranate normal are surfaces, might better secure them from Heresies. Hee commends also their worker of Piety, and 50 Charity, Almes, Hospitals for poore, voluntary chastisements of the bodie to subdue the affe-Ations, as fastings ( in which they abstraine from Flesh , Fish , Milke, and Egges , but eate other things as oft and as much as they will) liberties and gifts by Magistrates to Widowes which mansprinate fludies and the contaying themselves from second marriages; triall of a mans selfe in all his actions comtours, and the mended in their Bookes, especially of those things which other men cannot know; and hereexaminations vpon the liking of a folicary and contemplatine life in the Country, and refloring themselves to the first state, as they say, wherein the Heauen created them; for which purpose are congregations of learned men, together in Villages addicted to contemplation, and fleeing publike Offices (as the ancient Fathers had their conferences in woody and mountainous places) in which also their women are as forward as the men, many of them living in Nunneries, governed 69 by an Abbeffe; and all China women line so enclosed, as if their owne houses were Cloisters: These he commends in them, as also that of all vertues they give the first place to Obedience to Parents as in which confifts a mans perfection. And that no man may be ignorant of his duty, if they cannot reade (of which there are but few) they have a short Summe (or Catechisme)

for publishing whereof there is a man appointed at publike charge, every full and change, to A fornight publish the same in euery freet of the City, so that on the same day & houre, a little before Sun- Sabbath, rifing the same doctrine is propounded in all the Cities of China, and thorowall their streets, This is fixe Articles or Principles, which ate, First, Obey Father and Mother: Secondly, reservence Sixe precepts Betters and Elders: Thirdly, make peace among Neighbors: Fourthly, teach Children and Nephewes: of Chinas Fifibly, let enery man well discharge his office : Sixths, communit no offence, that is, not to kill, iteale, fornication, ecc. which in manner comprehend the second Table of the Decalogue. As for the first Table, the Chinois, especially the learned are Atheirts, little regarding Idols, whereof their Houses and Temples are full; little minding the re wards or punishments of the life to come, or

Ic the foules immortalitie, which yet are eafily found in their bookes touching the punishments at least of Holy Pao (so they call God) in Hell. Of rewards of bleffednesse there is not such euidence, as Thasfe affirmed. And although many difficulties happened to ours in the Bonzian habite, yet is it now farre otherwise. As for Canton Province, the Mandarines which come this Cantonians way, aske vs why we flay among it their Mangines, that is, Rufticks and Barbarians : We must, Aprilians. fay they, leave the Barke and pierce to the pith and marrow of the Kingdome, if we would fee the China splendor and politic. He writes for Labourers, Bookes, Images, and Pictures, for confolation of new Connerts: the Ethnicks worship that of the Virgin, and call her Scin mu nian Bleffed Virgin mian, that is, holy Mother, and Queene of Queenes: and ends with imploring the patronage honoured. and interceffion of all the heavenly Quire, specially of the bleffed Virgin, the Apostles, the An-

20 gels guardians of China, to obtaine of the holy Trinitie happy successe to their endeuours, &c. But wee will returne to our best acquainted in China, Ricius, whom we left newly arrived at Nanguin.

The case was now altered at Nanguin, they went on soot without impediment to their lodg- Nanguin, ing, which was in a huge Monaftery, called Cingbenfu, in which is great refort of guests which Cingenfu a there hire lodgings, being built in the centre of the Citie. The Inponiant were now beaten from great Abbie. Corai and Quabacondono was dead, which had fo terrified that vowarlike Nation. He heard that they had heard of his going to Pequin, and that the Coras warre was the frustrating of his defignes in that vnseasonable time. The President was verie glad of his comming, and exhorted him to buy a house there, and sends two of his followers to looke out for one. Scarlly had he

30 and Chiuraifo gotten home to their lodging, when the Prefident followeth to vifit them, which hee did with the folemnest Rites. And when they were fet in the Hall, the Abbot came to offer The Prefident them the wonted potion, kneeling to all three ( to the President hee was bound as supreme go- supreme gouernour of Temples) and the President inuited the Father to spend two or three daies in his uernour of house, to see the Fire-workes, which that full Moone, the first of the yeere would bee to bee Full Moone feene, which strange deuices of lights that and the following nights; which he did and beheld fre-workes. that which without wonder cannot be beholden, the Nanquiners herein exceeding as may be

When it was reported that the Prefident had vifited him, all the Maiestic of Magistrates did the like, yes some whom he had not visited. The President of the Court of Criminall Canfes, and the Prefident of the Treasury (which is the second Tribunall) came with rites & gifts, as also did others; yea hee which a little after was the High Colso at Pequin, which all viged him to buy a house; and he now went thorow all Streets and Palaces without gainclaying (which he knew from a vision hee before had had thereof) and procured a house which the President helped to furnish. So much admiration and respect had the opinion of European science acquired to him, these being to the China wits baits for the Gospels fishing. Now first did they heare that the Earth was round (for they conceited the Heauen round and the Earth square) that the Centre drew all heavie things to it, that the Vniverse was inhabited round, that there were Antipodes, that the Earths interpolition caused the Moones eclipse (some saying that the Moon Mathemankes Antipace, that the Entire unexportant contains a state of the Sunne and a state of the Sunne was dazled or amazed; others that there was a hole in the Sunne, againft Oop. It. 30 which the Moone opposed loft her light ) that the Sunne was greater then the Earth; and that the Starres also, this was out of measure paradoxicall: the like was the soliditie of the Orbes, and their number; the fixed pollure of the Starres, the Planets wandrings, the eleuation and depression of the Pole according to the various Climates; and likewise the inequalitie of the how valeaned

daies, without the Tropikes Geographicall Maps in plano, and Globes, Meridians, Parallels, Degrees, the Line, Tropikes, Poles, Zones, Spheres, Sun-dialls, they had not at all vinderfleed, with other points of European learning. A Doctor of theirs confessed himselse ashamed; For, laid hee, you may thinke of me as wee doe of the Tattars and barbarous out-lawes; for you begin where wee end ( which hee spake of the studie of eloquence, which takes up our childhood, their whole life. ) They numbred fine Elements, Metall, Wood, Fire, Water, Earlb, one of which they ec faid was procreated of the other: the Aire they did not acknowledge for one, because they fee it not, placing acvacuum or emptinesse where wee place the sire : as incredible it was that the firrie Element was the highest, and that Comers and Exhalations were therewith fired. Father Harris Col-Matthew writ a booke of the Elements in their language much applauded, and often by ledge in

them reprinted. Divers became his Schollars; one sent from his Master in Hantin Colledge in Region.

Pequin ( the chiefe place for China learning, to be admitted into, which is a great dignitie.) Hee was very wittie, and without any Mafter attained the first booke of Enclide, and exacted of Witofa Father Matthew Geometricall demonstrations. And when hee added some things of Christian Citte fe. nitic, you need not, faith he, confute that Idolatrous Sect, it is enough to teach the Mathema. Bonzis, dotages, tikes. For these Bonzis would also be Philosophers and Mathematicians. They faid the Sunne hid himselfe by night behinde a Hill called Siumi, rooted in the Sea foure and twentie miles Eclipies. deepe. And for the eclipses, they faid that the God Heischan caused that of the Sun couering

it with his right hand, and that of the Moone with his left.

Not at Pequin alone, but at Nanquin also is a Colledge of China Mathematicians of better Colledge of building then Aftrologicall Science. They do nothing but bring their Almanacks to the rules to of the ancients, when they mif-reckoned, they afcribed it to irregularitie of nature, not theirs, deuifing some prodigious euent to follow. These at first were afraide that Father Matthew would have deprined them of their dignitie; and freed of that feare, they visited him friendly, and he them, where hee faw a strange fight. There is an high Mountaine, on the top whereof is an open Plaine or Floore fit to contemplate the Starres. In this open space one enery night is appointed to watch, and obserue if any Comets or other alterations be in the skie, thereof to Mathematicall gine the King notice, and what it portends. In this place, of cast mettall are Mathematicall Intiruments, admirable for their greatnesse and neatnesse, the like whereof wee have not seenein huge Inftru-Europe. They have continued there in all chance and change of weather necre two hundred and

This time agreeth with the time of Tamerlant: which giueth au boform:r ftory of him : belides the Chinois call the laft Tartar which ruled them Temor.

Nobilitie of

made in Canton Prouince, and make larger Commentaries, and hee would print it at publike 50 rity to Albacors coff, which he did, and with an elegant Proeme commended the Author of the worke. This was published and carried into all parts, and in other places reprinted. The Vice-Roy of Cricen Province printed it with another methode, making to every Kingdome a proper Commentarie in a booke, adorning the Authoralio with his praises. Besides, the Presidents of the fixe Tribunalls (equal except for the Kings prefence, in the government of their Province, to thele of Pequin) hee had three other friends, yet vomentioned. There is a certaine hereditarie dignitie derived to the eldeft fonnes, from those Captaines which expelled the Tatars; they are called Quocum ; their posteritie are honoured by the King, most of all the eldest, which in processe of time have growne into a numerous Family; and although they beare no publike office, except some militarie commands, yet have they great dignitie and wealth; and these onely doe truely retemble the Nobilitie of Europe. One head of this Family is at Nanquin, liuing in great pompe, with Palace, Furniture, Gardens, all I ke a King. He one day inuited Fa-Artificial rock, ther Matthew, and entertained him in the beit Garden in the Citie : in which , befides other pleafing rarities, he faw an artificiall Mount or Rocke of dius re uppolished Marbles, hollowed

ruled ouer the Chinou, by some expert of our sciences.

fiftie yeeres without damage. Of them were foure greater, the one a huge Globe diffinguished 20 by degrees with Meridians and Parallels, as great as three men can fadome; it flood on a huge Cube of brasse likewise, vpon his Axel-tree : in the Cube was a little doore, sufficient for it to passe when need was. On the vtter superficies was nothing grauen, neither Stars, nor Regions, whereby it appeares that it was either vofinished, or purposely so left that it might serue both for a Celestiall and a Terrestriall Globe. The second was a huge Sphere, the Diameter whereof was a fadome; with Horizon and Poles, and in stead of Circles, certaine double chaines the space betwirt them representing the Circles in our Spheres : all these were divided into three hundred and fixtie degrees, and a few minutes. In the middeft was a Globe of the Earth, but a certaine pipe hollowed like the barrell of a Peece, which might bee turned any way, and fet in any degree and cleuation for triall of the Starres very ar ificially. The third was a Diall two 30 fadoms high in a huge &long Marble fet to the North, with a channell about the table to hold water, whereby to trie if it flood plaine or no : the stile placed perpendicular, both it and the Rone distributed into degrees; it feemes, for exact trials of the shadowes of Solstices and Equinoctialls. The fourth and greatest was an engine or instrument of three or foure huge Affrolabes fet one by another, each containing a Geometricall pace in a Diameter, with their Fiduciall line, or Halbilada, and Dioptra: one of them represented the agreetor inclined to the South. another (which made a croffe with the former) to the North; another flood erected to the South, perhaps for knowledge of the Verticall Circle, but turned about to flew any Verticall; all had the degrees marked with iron knots franding forth, that they might bee knowne by feeling in the night. This Worke of Astrolabes was fet in a plaine floore of Marble alfo, with channels about. In every of these Instruments was expressed in China Characters what every thing fignified : the foure and twentie Constellations of the Zodiake, answering in the number doubled of the Zodiake, to our twelue Signes. There was in them this one errour, that they were fet in the fixe and thirtieth degree of the Pole eleuated, whereas Nanquin stands without all doubt in two and thirtie and a quarter of a degree. They seeme to have beene made to be placed somewhere cife, and placed here by some voskilfull Mathematician. Afterwards Father Matthew faw the like, or the fame Inftruments rather at Pequin, cast with the same hand, at that time when the \* Tarturs

The greatest Magistrate defired Father Matthew to revise the Vniverfall Map, which he had

into Caues; it contained Chambers, Halls, Staires, Fish-ponds, Trees, and other things, Art wantoning with Nature to engender pleasure; especially in time of heate to coole themselves in their studies or feasts with this Caue-retiring; which although it comprehended no great space of ground, yet would it aske the space of two or three houres time to visit all the parts, the earesse being by another gate. This Nobleman was yong, and defired to see some things of Europe.

Another which became familiar with Father Matthew, was the Commander of all the Nan- Captaine of quin Souldiers, which had also another great Office, called Hen, who often vinted him, and be-the Citie Garcame his great friend, whole friendship gaue vs tecurity, to whom the watch and ward, and fe-

curity of the Citie belongeth. Beiides, I will name the chiefe Eunuch , which hath great au- Chiefe Eucurry of the Citie Denoises. Section 3. A reason of the Citie care, and over the Mangain Equichs, where I had a care, and over the military Muffers. Thurbands of the Kings Palace, and hath command of all the Citie gates, and oner the military Musters Enumbrace together with the former Captaine, with other parts of authority, and expressent the same Nanqua, with great pompe. He was almost decrepit, and after the Euguchs fashion there, not so gentle; and when Rieses came to him, his Courtiers commanded him to give him a title which answer

reth to Highnesse with vs. I explane it thus; when they speake to the King, they wish to him ten Van, ven, fit, thousand thousand yeares of life in these three (yllables, Van van sin, which is all one with the title as to the Eaof Maiefie: to others in the Palace, the Queenes, or Children of the King, they with inferiour by of An Mo. of reasigns to thousand yearer. Now the Eunuchs are fo arrogant that they expect this thousand ever Dan, 10, veres will, and to bee faluted on the knec. Father Mushew could not doe this fafely, left hee 20 should doe more to him then to the chiefe Magistrates; but hee had learned not to neglect in China their rites ; and he being deafe, one that hollowed in his eate made up what the Rather

wanted. Hee gaue him a great gift, which he refuied, and denyed him the trigone Glaffes yet this caused the other Eunuchs to honour him. At that time lived in Nanquin one which had obtayned the first place in the declaration of A principal

Dodors (which is a very great dignity) who lined here in this Country private, but on peace Dodors a eiteeme of all. He had degenerated to become a Francher of the three China Sects, and pinced. Preacher fed great knowledge of them, Hee had at his house a famous Votarie, or Bouzi-Monke, who A Mendarine renouncing the publike Offices which he had borne, had financed his head, and (which is rice, y becomes a fuall in China ) of a Learned Man, had become a Minister of the Idols, And because her was Bonn. 30 both learned in the China Sciences, and growne feuenty yeares old, he had acquired much tarne

and many Disciples, professors of that new Sect which he dentied. These villed Facher Marthem, to the wonder of all ; that Literate-apostata confessed, the fruth of our Law, and prefen ted the Father with a Fanne with two elegant Epigrams tierein, Two other vilited hints, one Epigrams. of which counterfeited himselfe to have lived three hundred yeares, whom the China Cushes much followed, as doting on the fludie of long life, the precepts whereof he read to his Scholers, Hee also boasted of Geomancy. The other was a Physician, and companion to the other cach blazing the others Science : and whiles both preferred the Easter, fome ful pected that bee had lined some Ages (which they wie to affirme of Strangers, differing in countenance from them) and would not let it be knowne. .

40 The Chinose have one day tolerune to Confusion the Prince of the Learned, in which they make confusion his a kind of Sacrifice to him, not as to their God, but their Mafter. They call it a Sacrifice, houldy, but in larger excent of the word. Mulike was prepared against that day, at the triall whereof Father Rissus was present. The Priests of the Learned, salled Taylor, ordered the Musike sand Musike of in the Kings Hall (or Temple rather) dedicated to the Lord of Heaven, this triall was made, China, ... The Priests came forth in precious vestures, as if they would facrifice, who after their wonted rites to the Prefilent, fell to their Musike: in which were small braffe Bells, Basons, other as it were Tabors, others of stone, ftringed Instruments, Pipes; Organs blowed with the mouth, not with Bellowes; others refembled Bealts out of the hollow bellie yedding a found; all thete founded together with fuch diffcording diffcord as you may imagine; the Chinois themselves con-50 felling the concord and harmoniacall confent to bee loft; onely the Inftruments remayning from

That Temple was great and magnificent , built neere the Citie in a Pine-groue, compafied Templeroyali, with walls twelve miles about. The wall of the Temple was of bricke, the other parts of time and meaning ber : it is dissided into fine fles; the Pillars were round of huge timbers as great as two men could farhome, the heigh proportionable to that thicknesse; the roofe is excellently carnet, and all gilded: and although it be two hundred yeerestince it was built, and the King relides not at Nanquin, nor facrificeth there, yet is it little decayed from the first inlendon. In the midst of the Temple is a more eminent place of most precious marble, in which is a double Throne, both of marble; the one fox the King when he fitteth to facrifice, the other is left for him to be 60 by, to whom the factifice is made. The Clouders without are beautified with most elegant windings, and left the Birds should defile all, the windowes are all netted with Iron wyers (which is virall therow all the Palace : ) all the garge of the Temple are covered with Profite plates gilded, and wrought with near Vilages of the same metall. Without the Temple were

many Altars of red marble, which represented the Surme, Moone, Staries, and Hills of Cons.

The Father vied the Habit of the Learned (as is faid) of those especially which profese themselves Preachers of the Law; the Habit modest, and the Cap not valike ours in Croffe fashion ale io. He confuted both the Sects of Idolaters, and commended that of the Learned, prayling Con. faring, which was rather filent, then would deurse any thing touching the next life, and taught good Rules for the Life, Family, and Republike. A great man flourished at Nangmin then (which in had some thousands of Disciples) in opinion of Vertue and Learning, and had set dayes in which to heare and to be heard enery moneth. Chintaife brought the Father, and this Father together, and in some reasoning Ricins wrung from him that some corruptions were in the Idoll Sects, which he followed not, holding that only (he fayd) which was good. It being a fathion that Learned men met in their Societies to conferre of Morall Vertues, in one of those meetings this man learnedly confuted Confutius, which another Magistrate tooke haynously, and cryed

ewist an Idol-

out, it was intolerable that the Sect of Idols brought out of other Countreyes should bee preferred before Confining, whom the Learned Ricins allo admireth, refelling the Idol-follies. Hear-I wered, he had spoken with the man, but he was not yet well acquainted with China businesse. and he would instruct him better. Soone after he inunted him to a Feast (for the Chinois vivally to Conference or in fuel meetings determine Controuersies ) and there hee met Samboi a famous Idol-Prieft, i Learned Philosopher, Orator, Poet, and well skilled in others Sects also. When they were fet. this Priest and the Father together, the Priest began shewing his desire to conferre of Religion, Ricins first asked what he thought of the first beginning of Heaven and Earth, and the Creatou of things whom we call the Lord of Heanen. Ideny not, fayd he, that there is fuch an one, bet he hath no Majesty nor Deity, but I am equall to him, and so are all others. Canst thou (faith Ricins) make those things which he hath dones he granted. Make then such a Chafing-dish (one flood before him) this, fayd the other, was an vnworthy demand. Thou (fayth he) art an Aftronomer, and makeft new Sunnes in thy minde when thou reasonest thereof. That, fayth Ricing, is but an Image or likenesse which the minde from things seene conceineth, as in reseasion of a to Glaffe whereon the Sunne shineth, yet dock not the Glaffe created Sunne. The Hoast forfeare of further quarrell parted them. At Dinner the Chinois disputed of a Question of bumane neture, how it came bad (they want Logicke and cannot well diffinguish betwire morall and naturall good, and neuer heard of originall finne) they discoursed thereof a whole houre ; after which Ricius repeating what had beene fayd, entred into diffrute with Sambos , who laughed at his and their Reasons and answered all with a Fale of I know not what Flowd, according to his Sect, but he straitned him with Arguments, so that he and this Disputation grew famous. They conceine that God and the Creatures are all of one fubftance, and that God is as a great Soule of the Vniuerfe : which opinion from the Idol-fects hath infected the Learned. Ricins writ a fummary of that point, which gaue men good fatisfaction, and his Law feemed not fo batharous as to they imagined.

Oppreffien. ftopped by anbe opened to preuent rob-

The Kings Treasure was exhaust by the Corayan Warre, whereupon contrary to the Lawes Mines of Gold he caused the ancient Mines which were sayd to be stopped, to bee sought, and opened, and imposed new Tributes, that in all Provinces, Merchandizes should pay two of a hundreth : which cient Kings & had beene tolerable if gathered by Magnifrates; but his Eunuches, lent to every Province, without shame or mercie exacted on the people, and rayled a worse combustion then that of Coray. So many Impostors, Counterfeits, Theeues were euery-where : if a man dwelt in a good Houle, they would digge it up to fearch for a Myne, to force composition from the owner. Some whole Cities and Prouinces compounded with these Caterpillers to free themselves from their vexations; the money io gotten they gaue the King as taken out of their Mynes. This caused Dearth, 30 and in some, Commotion. The Magistrates petitioned the King against these abuses, but sweetnesse of gaine had not only stopped that eare, but procured grieuous penalties to those which withstood his Catch-poll-Eunuches, which by those punishments grew more insolent. Ours which wintered at Linein, happily escaped these Harpy-clutches, who with their Presents arriuing at Nanquin rejoyced to see a Residence so prepared there. These Presents intended for the King, bred fuch an amazement in the beholders that others were ready to offer force to fee them. They fill minding to prefent the King, (the weather now more cleare and peaceable) Caranens went to Amacao; where was much rejoycing for these hopes, but soone quenched with forrow for loffe of their thip which tradeth to Iapon, men and goods loft, on which thip all their Commerce dependeth. They found themselves therefore vnable to maintayne three Refi- 60 dences : the Iesuites Rector scraped all hee could for that purpose, and added a Watch and Image of the bleffed Virgin, and Trigone Glaffes, Houre-g affes and other Rarities to their

Father Diego Pantoia 2 Spanish Priest also accompanyed Catanene to Nanquin, and thence

went with Ricius to Pequin, with Sebastian and Emanuell. Father Iohn was called from Nancian to reide with Catanem at Nanquin. They went with an Bunach then going to Pequin with fix Zinin. thips, who thewed them much kindnesse. In Zinin a City of the Prounce of Sciantum is a Viceroy wingli isar High Admirall ouer all the thips, whether they carry prouison or other things, High Admiral. Toy water the content of the content ftate hee followed him eg his faip and there vifreed him with vitall Rites of Vrbanity and a Prefens, and won-fred much at the fight of thole Prefens they carryed for the King. He fent an 10 Officer allo to make him a readier way. One Lecter had made way to this Vice-royes friending. who foone after killed himselfe, hearing that voon some complaint of his Books, the King had Licinkilleth

CHAP. S. S. G. Ricius named Sithai Mathan's mifchiefes, Ship, boafts, Feaft,

commanded him to bee imprisoned and his Books to bee burned; preventing so the study of his himielie. Aduerfaries to put him to fome shamefull death.

Amongst those Eunuches which the King had sent to oppresse the people, was one Mathan, Mathona great which dwelt at Linein, whole exactions had rayled the people and Souldiers into mutiny, which and bale Euburnt his Palace and killed his Servants, himfelre efcaping difguifed, but the Captine and Slave nuch. of Couetouinesse no lesse then before. Our Eunich addressed himselfe to him, but could not till Treacherie, the third time be admitted, because his Gitts were not answerable to the others appetite. Hee to make way for himselfe betrayed Ques ta this Harpy, they not knowing it, faying, that in

30 one of his thips were strangers with precious Gifts for the King, which he shewed closely to his Officers with their he might get the Kings fauour. The Governour which in that and the Neighbour Cities had great command was his great friend, of whom Ricuss asked counfell : he told him that now the Ennuches reigned, and they almost only were the Kings Counsellors, nor could the greatest Magifrates withfland their injuries. Yet the countenance of this Magistrate was a great helpe to him, this being the man whom of all the Gouernours he most feared; a man so well deserving that his Civizens erected to him a Temple, Image, and Inscription; who now al so both countenanced Ricius what he might, and game him the best aduice how to carry himfelie to this Eunuch, and perhaps but for him they had loft all and themfelies to. This Capon had Gress and erected Palaces and Temples, and had built a auge fup in which the King himfelfe might have glorious faip,

30 fayled; fo many were the Cels, Chambers, Hals, and other commodious Buildings thereof; the Windowes, Galleties of yndecaying wood carryed with many Meanders, "all flaining with Vernish and glettering with Gold. In this ship was bee carryed to our, where Resus mes lim. He viewed and liked all, and downe on his knees to the Virgins Picture, promifed to procure her a place in the Balace. Ricino modeftly refusing his fertice for them to the King, faying, many Magistraces of best ranke had vindertaken that kindnesse; he finited, faying, none of them could doe io much as he with the King : the King answeres my Petitions the Jame day, to them or late, or nothing. The Eunuch which brought ours was sent away, and all the Presents put a-board his thip, Hee carryed the letures with him to the Towre of Thienfin, whither hee went to fend Thienfan, thence thenx moneths Tribute to the King : he feasted them, Comedies, Rope-runners, Tum-

40 blers, Vaulters, and Mimicke Ape-men attending the cheare with fuch disports as they had nener feene in Europe. One cast three great Kniues into the Ayre one after another, and catched china Players. them agains in their sheather; another lay on the ground, raysing his feete over his shoulders, and Feat worwith which hee toffed up and tumbled too and fro an Earthen Pitcher in such fort, as hardly kers. could bee done with the hands; the like hee did with a Drumme on a Table. A Comedie was acted only with getures, of difguifed Gyants in glorious habits; one from the Theatre pronouncing all their parts, A Boy danced admirably, and then as it were falling, layd his hands on the ground, and another Boy of Clay came forth, which ving his hands for feete, imitated all the prankes of the other, and fell to wreitle with the liuing Boy, as if both had beene aliue.

We will leave you Spectators bere, and now bring you forth another Actor, which basing in little while 50 transled much and learned more of his Fellowes; Juddenly sent into Europe these Relations nos unworthy your view: which I base therefore examined with the Original Spanish, and the Latine Translation, and cut off some superstanties to give you more full content and to present Repetition; the rather because bee descendesh to many particularities which Ricius looking higher and knowing more, bath omitted.

\*This Booke I A Letter of Father DIEGO DE PANTOIA, \* one of the Company of IESVS, to Father LVYS DE GVZMAN, Prominciall in the Prouince of Toledo; written in Paquin, which is the Court of the King of China, the ninth of March, the yeare 1602.

#### ¢. IIII. "

Difficulties of entring China, their dwelling at Nanquin , going from thence to Paquin, with Presents for the King, troubles in the way by an Ennuch.

Ight Reservend Father in Christ, the peace of Christ bes with you. I thinke I doe not facisfie the dutie which I owe vnto your Worship, for the lone which you have 30 alway shewed vnto mee, and the Obligation wherein I am bound to so many most dearely beloued Fathers and Brethren of this Pronince, if being as I am in this great Kingdome of China, procuring the good of these Pagans, (whereumo it pleased our Lord to choose mee) I should not give you some briefe Relation of the things that concerne this our new Mission, and of some things also concerning the greatnesse of this Kindome, the Customes, Government and Policy thereof.

Being come, as heretofore I wrote to your Worship, to Macao 2 City of the Portugal, 2d-joyning to the firme Land of China, where there is a Colledge of our Company : and there attending till the Persecution, Tumults, and Warres of lapen, would permit ten or twelve Fathers of vs to passe thither, which stayed expecting sit oportunitie : when we were readie to de. pare, within few monethes, it pleased our God to change my Lot, and Enterprize which I had before myne eyes, and to fend mee to enter into China, whereinto I entred in the end of the yeare of our Lord 1599. There were in this Mission at this time, only fine Fathers divided into three Houses. For though it be twentie yeeres since they first began to enter, yet the entrance of Strangers is so hard and so firsitly forbidden, and their state and persenterance is so difficult, that in all this time there never paffed aboue five or fixe Fathers, and those which succeeded fince. though by little and little, did discouer the Countrey; But their entrance was by fiealth and fecretly. Confidering that all passages were shut up, and that in all ( bine there was no man that could or durft prefume to gue licence to preach the Gofpell; we alwayes fought to get fome ac-Meanes fought ceffe vnto the King, either by way of Embaffage, or by way of Prefene, and Gifes, and to feeke # to enter china to obtayne this in part, or in the whole, to this end and purpose.

Entrance into

Embaffage.

The Fathers alwayes fought to obtayne some Ambassage of the Pope, or of the Catholike King. But perceiuing they could not obtayne this, they procured it by way of gining a Prefent, not fo much of precious things, for they had none of that kind, as of ftrange things never feene before in China. And having procured this for many yeares space, without having any meanes to obtavne it; the Divine Providence ordayned one in the yeare of our Lord 1590, which was this : The Fathers being in Xanebeo, (a Refidencie of the Prounce of Canton) there paffed that way a great Mandarin, called by the King, to give him an Office in the Court, which among vs is like vnto a President of one of the chiefest Councels, which had known the Fathers long time; and now feeing themselves with him, and fignifying vnto him the defire which they had to goe 50 to Paquin, to give a Prefent to the King, and that if hee would doe them the courtefie to carne them along with him vnder his shadow and protection, they would alwayes remayne thankefull, and exceedingly bound to ferue him. After this and other motives which they prefented vnto him, did that follow which wrought most effect, which was a good Present, with hope of other things afterward, whereupon he shewed himselfe very tractable to grant their request, and to take them with him to Pagnin.

Being glad of this refolution, they prepared themselves for the Voyage, and tooke the things which they defired to give the King, which hereafter I will mention. It pleafed God to bring them to Paguin, in the company of fo great a Mandarin, without the hinderance of any bodie. Being come to Paquin they began fecretly to negotiate their bufineffe : because they durit not, 60 neither was the Mandarin that brought them willing that they should shew themselves abroad. But though they attempted all possible meanes, neither with gifts, nor any thing elfe, there was not any man that would meddle with this businesse, because it was a matter that concerned Strangers, confidering what might hereof happen vnto them. After they had spent certayne

# CH AP. 6. S. I. Hage Garrison. Mandarins Houses. Denils disturbe not Jesuis. 351

moneths, and faw they profited nothing, and fearing fome innovation, they determined to returne to their Residencies from whence they came. Having returned three hundred leagues, they came to the great Citie of Nanquin, which was

the ancient Seat and Court of the Kings of China: and now (though the King reside not there) vet is it the most noble, great, strong, and beautifull of all this whole Kingdome, and retayneth her being the Royall Court, with all the same Offices which the Citie hath where the King refideth. They defired greatly to get an entrance into this City, because, as I have faid, it is a fa- 100000, Gar. mous place, and hath fuch flore of graue persons in it, thereby to make themselues knowne, and rison southiers here to procure with more facilitie an entrance or accesse vnto the King. But it seemed a thing in Mangaia. here to procure with more recurring an entrance or accesse who the recurring the property of the procure with more recurring standard and a financial was a considered the property of the pro get licence, it seemed impossible to obtayne the same of so many great Mandarins, as governed 60000 are so the same. But our Lord (to whom every thing is abke polible) vouchsafed to comfort the Fathe Country the fame. But our Lord (to whom werey string in affice pointer) voluntated to common third with their fame their free fame of their journey to Paquis' and by additioning or their for the fame of their fame of the Atlantic for the Nation thers for their tasen and such the protection of the Mandarin for the Naule the counfell of fome friends which they had there, and with the protection of the Mandarin and See guard. had carryed them to Paquin, which at that scason came vinto this City, they dwelt in Nanquin, or kinus might without the contradiction of any Mandarin, although all of them knew thereof: howbeit, as speak of the a very great manfaid, which afterward became our great friend, hee was readie to fend to ap- or illnary are

20 time abode in China.

prehend the Fathers, vntill hee vnderstood that they were peaceable people, which had long temperable times. Paragraphs After they were purposed to remayne there, there was another difficulty to get leave to dwell some time and have an Hou'e within the wals. But the Divine Providence gave them a very sweet and while the Iseasse meane for all this, as here I will declare. The Mandarins live in this City in houses which Position warre are not their owne, but belonging to the Offices which they beare : and when one hath ended Continued. his Office, hee that succeedeth him, succeedeth him in his Hosses, which are all builded at the bouse are Rings coft. At this time a great Mandaron had builded one of thefe, wherein by his Office hee publike. was to dwell : But when he had finished it, it pleased God, that he enjoyed it not : and hee sent House posmany Deuils to enter into it, as they did in deed, which with fearefull shapes did terrise those fessed. which dwelt in it, especially by night: and this continued so long a time, that all men left it, and none would dwell in it. As Father Matthew Riccio (who was the party which negotiated

this businesse, as the Procurator of all this Mission) went about to seeke to buy an House, by way of jest they asked him, whether he would buy an house fill of Deuils! The Father answered, that hee tooke it not for a jest, but that if the house liked him, hee would not vary for that; for he ferued a God whom the Deuils feared and dreaded, and that trufting in his helpe he was nothing at all afraid of them, but that they did rather much feare him, because he was the Servant of fuch a Lord. They went to see the House, which presently liked him: and as they fold it good cheape because of the bad report that is had, in two words they agreed together: and the Mandarso that fold it was fo glad, that he give vs Patents to possesse it perpetually in China; Iesuits Patent a thing which in no place could be obtayned of any other Mandarin. Forth-with they went to for china hibi-

40 it, and at their comming in they bleffed it according to the Rite of the Holy Mother Charch; tation. and by the grace of God there was neuer dreame of any euill thing that troubled the same. All men looked what would become of this, and what successe they should have with the Deuils. And when they saw the great quietnesse, without any shew of Spirits, they were greatly asto-And when they key the great questions, without any men or applied, they were greatly alto-nied, faying, that without doubt this was a great God, and that hee fought to dwell in that Fame of Ie-Houle, and that therefore he had commanded the Deuils to dwell there, and not to fuffer others functioning.

to enter therein; and that when he came they went their way. To this fo good beginning the progresse from thence forward was answerable; for the grave Fame of their Mandarins vinlerstanding, together with the fame that they were Learned men, that they had Learning. many Bookes, that they were men of a good life, and that they had fome things of their Countrey, which were neuer feene in China (as certayne Clocks with Wheeles, and Images in Oyle, which and other present phinary) all of them for the control of and other prettie things) all of them fetting feareapart, and other respects, came to visit the Fathers in great effate, because they were the greatest Mandarines of all China, but with much humanitie, respect and courteste, with Presents of things to cate, and Banquets as they viewith their equals. They were fo well pleafed with all that they faw and heard, that all of them became their great Friends and Patrones: and gaue so good report of them, that all men lought to doe the like: and for continuance of their amity they came oftentimes to vific them, and oftendoe the like: and for continuance or their anney they same or continues to the standard people, times insuited them to their Palaces: and with this fame and honour of the grauelt fort of people, Their cities and the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, their cities and the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of people, the standard people of the grauelt fort of the grauelt fort of people of the grauelt fort of the grauelt all the relt of the inferiour and bafer fort yied them with much reuerence, no man daring to doe,

This was the flate of things when it pleased God to choose me for this Mission, and when I entred into it we had three Refidences, one in the Province of Canton, another in the Province of Quasci, which is somewhat more within the Land, another in the Citie of Nanquin, which is in the midft of the Kingdome, and three hundred leagues from Macco. I entred fecretly, as all the rest did (I say without particular Licence of any Mandaria, ) But my secrecic continue.

There lections.

but a while, as hereafter I will declare. I came at the first, without staying in any other House. to Nanquin, where three Fathers of vs were foure moneths; Father Maisbem Riccio our Superiour, Father Lazarus Catanio, and my felfe, and a Brother a Chinos, one of the two which are received into this Mission, and every thing goeth well. But as in matter of strangers the Chines are exceeding ferupulous, more then your Worship can beleeue, so there were many which spake of our abiding in Nanquin, confidering that now wee had three Houses in China. Wee beganne with much more earnestnesse to procure another better foundation, and to returne to Pagnin more openly, and seeke accesse vnto the King. And because in Nanquin there bee Mandarine to whom this belongeth, and some of them were our Friends, wee beganne to speake of this

frozen all the Winter.

thipping.

Lincin

But it was not needfull to spend many words; for straight way we met with a Mandarin, to pains stanted. whom by right this matter appertayned, who frankly and freely offered vs Patents, Dispatches. and whatfoeuer was needfull to accomplish this businesse. The promises of this Mandarin were not vaine : for when the time came that the River was

unfrozen, (which all the Winter is frozen ouer) and Barkes began to goe for Paquin, he performed his word faithfully, giving vs Patents and Paffe-ports needfull for the money; and befides. Nanquin ouer- hee fent vs a Barke of the Kings to carry our Prefent and our owne things. Beeing glad of these good newes and dispatch, we consulted how we shoul I deale in certayne things which offered themselues in this businesse, and who should goe: There was no question but Father Manthen Riccio should be one, but who should be his companion : for whom they choose me, and the Brother. We fet our things in order, particularly those which were of the Kings Present, Which kings Present, were two Clockes with Wheeles, one great one of Iron, in a very great Case made faire with a thousand ingraued worker, full of eided Dragons, which are the Armes and Signes of this King, as the Eagle is the Empercurs: another little Clacke very faire, aboue on handfull high , all of golden Metall, of the best Worke which is made in our Country, which our Father Generall had sent us for this purpose; Kings Armes, which was fet in a gilded Case, as the other was : and in both of them in stead of our Letters were grasen Pinto faith a the Letters of China, and an hand that came forth did point at them. Besides these there were three l-Lion, perhaps mages in Oyle, two great ones of an Ellbigh, and one listle one. The greatest was the figures and portrainre of Our Lady of the Poplar, of Saint Lucar : The second was of our Lady with the Babe le-sus, and Saint John : the third, was a Picture of Christ, which was the least; all of them were of excel. 30 quater meny lens Worke. Befides this, there were certayne Looking-glaffes; two Triangle-glaffes (which though Pole, fur, 349. among us they be of no account, yet are they eftermed here among them) adorned with Chaines of Silecorpethaps wer, and let in an excellent Case of Iapon, which was of twentie times more value then the Glasses, to them that know what Glaffes are. A Booke of The Theatre of the World, and a Breniarie exceeding Serpents fince, fairely bound, with an inscription, That that was the Doctrine of the True God, whose Images they the Royall En- did present bim mithall. A very faire Monocord, because it is an Instrument whereat the Chinois figne Besides a doe wonder much, and other pretie things of lesse importance,

All which things beeing fet in order, and imbarqued, we tooke our leave of the Christians of Nanquis, (which at our departure came to our House with a Banquet with great joy) and and perhaps of of the Mandarms our friends, which with great forrow, and shewes of love tooke their leaues of vs , and lent vs Presents for our sourney, and many Letters of fauour to the great Mana darins of Pagnin.

We departed with this good diffpatch from Nanquin in the yeare 1600, the twentieth day of May. And knowing not how the King, and the Mandarins of Paguin, and those of the Kings Court, would take this our Iourney, because wee were Strangers, wee sought to prepare our felues for that which might fall out : in great hope that we should find ayde eyther in all or in from Manquin part to obtayneour defire, which we had for the establishment of our Company in this King-1600ths 2006 dome, and to procure the opening of an entrance thereunto for the preaching of the holy We file-and.

We began to fayle vpa very great River, whereof hereafter I will speake somewhat; and 50 when we had fayled certayne leagues, wee entred into another small River made by hand about two hundred leagues, only to carry in Barges the Tribute which the Prouinces of the parts of Nanquin pay vnto the King, and other things which these Countries yeeld (which are the belt, and most plentifull of all things which are in China) because it seemeth impossible to carry it by 300 leagues as Land with Millions of people, being in Rice, Wheate, Silner, and a thouland other things very great : And the Veffels which are employed about this businesse are so many, that without doubt it is no Hyperbole to say that from Nanquin to Paquin , which is three hundred leagues, all the Summer time it seemeth to be a path way of the Kings Barges. We were all aswell Mandarins as particular men very well intreated all the way, whither many Mandarins came out of the Villages and Cities, defiring to fee the Present which wee carried, and our selves; bringing vs 60 many Presents for our Journey. Having travelled two hundred and thirty leagues in forty dayes, wee came to a very famous place and Mart Towne in China, which is in the Pro-uince of Xantan, which is next wnto the Territories of Paquin, called Linein. Where, because of the great Trafficke of Vessels and Merchants, which goe and come from the Court, who

pay to the King a very great tribute, he hath placed one of his chiefest Eunuchs, which serueth pay to the strings of the string of the stri euer he goeth abroad he is alwaies carried in a Chaire, vpon eight mens shoulders, which is a Kings Eunu he very great honour in China, with great store of Horsemen before and behind, with certaine Ba. his pompe, fons of Copper, which make a great found when they be playd vpon, to figuifie to the people that he commeth that way, that all may goe out of the way; as the cuttome is with all the great Mandarines in the Cities of their iurisdiction. Which Eunuch understanding of vs, and of the things which wee brought for the King, and of many other things which they put in his head that wee brought, to wit, precious stones, and others of that kind: hee lent vs word, that hee To knew what we had brought for the King, and that he defired much to fee it, and that the fame day or the next he would come, praying vs that we would make it ready.

He came at the appointed time, and having seene the things which wee brought for the King, and making account of them to be precious, and that the King would greatly delight in them, he fought meanes to cause them to be presented to the King by all meanes, as things that he had dealt with vs to bring, to please him, and thereby to obtayne some sure for himselfe: and befides this, with defire and hope that wee would give him fome precious stones (whereof the Chinois are very greedy) he determined wholly to meddle in this businesse. Hee sent vs a Prefent of things to eate, and a very courteous message, that wee should passe in one of his Barges, that shortly he would fend vs to Paquin, with Souldiers of his house, a Petition made with his 20 owne hand to the king; that we should consult together, and bethinke our selues what we defired to obtayine of the King, whether it were to bee Mandarines, or to have lands or houses, or all together, because there should be no difficulty in any thing. The message came with all this courtefie. And we made answer with the like, returning him a Present for his answer with gecourteils. And we make answer what the men recuming min a retrieue for mis answer with generall words. For though he came with fo great offers, yet wee knew that these Eanuchs, for minded, the most care has and courtous people.

It happened at this time that the chiefest Mandarine of this Citie, which was our great friend was come from Nanquin, from whence they had fetched him for that Office. Wee determined that Father Matthew Riccio should visite him with a small Present, according to the vice of the Countrey, to relate vnto him this businesse, and to aske his counsell what wee were best to doe. Hee received the Father with much courtefie and loue, and kept him two dayes in his houfe: which, after he had heard the whole matter, answered, that he was very forrie that we had met with this Eunuch, because we could looke for no goodnesse of his basenesse, couetousnesse, and bad meanes of proceeding; and that he could performe nothing that he had promifed, and that his intent was nothing but couetoulnesse; that hee would admie vs to take as little as we could of him: but for all this, that wee should not refuse that which hee offered, but rather to make a vertue of necessicie, and to thanke him with a very good continuance for that which hee promifed, because we were in his power, and he might and would hinder our passage, if weedid not fo, and take away our Prefent from vs, and give it himfelfe with his owne hand to the King, Notfable & te without making any account of vs, without controlment of any man, because he was not tubical ordinary Ma. 40 to any Mandarine

This feemed vnto vs to be very found counfell, and a forcible enducement to follow it. So we followed the fame, and applied our felues vnto him in euery thing, answering the Eunuch according to his defire, and passed in a Barke of his. He defired much forthwith to carrie the Kings Prefent to his house, saying, that he would trimme them to give them to the King, and this we courteoutly denyed him, faying, that we durft not depart with them till we had deliuered them to the King, neither that it feemed realonable, that when wee did give them, another should trimme them; especially, that these pieces were not such as had need of more trimming, since in themselues they were so precious : with which answer hee seemed to remayne satisfied. At the first he made vs great basiquets, sport, and cheere: but as in very deed his purpose was no-50 thing but to doe himleffe good, and to looke for his owne profit, and not for ours, hee beganne glickly to difcour himfelte: for hee flayed certaine dayes, looking that wee should gue him Conceited fome precious stones, which some body had told him that we had brought with vsto please him, Semmes. for some things that they looked for at his hands, and when he saw the dayes were passed, with-

in which he thought we would have given him them, he began to be out of hope, and to grow coll in our entertaynment : yet for all this, he came to vilite vs with great pompe at our embarking; and after fifteene dayes he dispatched vs for our iourney to Paquin with men of his them.

owne house, and with a Pecition to the King, fignifying vnto him how hee had met vs on , the way, and what our intent was, and what things we brought. We were very honourably entertayned in his journey, and in all the Townes and Cities of 6c his Jurisliction whereby we pasted, he commanded them to give vs without delay refreshing of Floh-meate, Fish, much Fruit, and Wine. Wee travelled eight dayes and came to the last place of his lartifaction: which is three dayes journey from the Court of the King We flayed there with company that did waite spon vs, watching day and right about the Barke with their Continuels and Bells, as they are wont to doe with the great Mandarines, and especially because

there were there things belonging to the King, and the reft of the feruants of the Eunuch went to Paques, to deliner the Perition to the King, and to know his pleasure. They delinered the Petition, and we looked for an answer thereof within three or foure dayes, as he had told vs. Bur God had disposed otherwise for the exercise of our patience and hope in him: and that was, that the King made no answer as we looked for : whereupon he was somewhat ashamed of the great brags that he had made to vs without performance of any thing: and hee and wee were all in suspense, when we saw the King returned no answer, which is wont to bee a token that he liketh not the Petition that is made vnto him. Fifteene dayes after wee arrived in this place, the Eunuch came thither; to fend from thence

to the King a third part of the tribute which he had gathered. He came accompanied with great 10

ftore of Veffels, and that wherein he was, was such, as assuredly your Wothip hath not feene

House, wholly divided into chambers and halls very high, full of carved workes round about,

with hangings of Silke, of many figures, and round about full of galleries to walke vp and

downe without being driven to enter in. And on the outside it was all covered over with a kind

of Oyle like Varnish, which runneth out of certaine trees, which they make with tempering of

all forts of colours, (whereof in lapon and here there is great abundance) and the Portugals call

it Charan; it is a very faire, thining, and durable thing : and the things that are coloured with it,

doe shine like Classes, if it be of the finest: and besides, though it be not cofly, yet it is as faire

gures, trees, and flowers; and if it be of the right, it doth not decay, and loseth no whit of his luttre. Herewith was the Barge trimmed without, with divers figures painted on the hull of the

Barge: from the hull vpward the windowes and the walls of the Halls and Chambers was full

of carued workes, knots, and carued flowers, some gilded, others of divers colours, agreeablem

their natures, which made a very pleafant flew : within it was of the fame worke with more

excellency, and the most part was gilded, and the floore of boords was painted with very shi-

ming Charan or Oyle. It was as long as a good Gallie, little more or leffe, and somewhat bros-

der, but farre higher , and in such fort, that when wind fayleth they vie very great Oares after

the manner of China, which ferue, and are managed as Fishes vietheir tayle to swimme. And

because they bee of this fashion they wie them with much facilitie in every Vessell how high so- 10

When he was come to this place, feeing the King fent no answere to his first petition, he fent

euer it be. This was the fashion of the Vesseil wherein the Ennuch came with much Musikeof

another to put him in remembrance, and to folicite an answere to the first: wherein lice answere

red nothing to this point, although he answered to other things. And though it bee true, that

sometimes the King maketh no answer, through forgetfulnesse and consustion, because the peti-

tions be infinite which are daily given him from all the Kingdome : yet most ordinarily when

he giveth no answer it serueth for an answer, either that hee will not doe, or liketh not of that

fur that is made vnto him. And therefore because there came no answer, the Euruch was much

cause he had given a Petition to the King, vntill he had seene some answer of his, fearing some

damage, or displeasure of the King, that hereof might ensue : and hereupon hee beganne to

estrange himselfe from vs, and sought not to see vs, nor to have to doe with vs, and sent sixe

grieued that he had meddled in this matter, out of which he could not withdraw his hand be- 40

Manner of petitioning the King.

Eunuch egranged.

men alwaies to stay in our Barge, under colour to ferue vs , but in very truth to watch vs day In this suspence wee continued three moneths in the extreme heate in a Barge, not knowing what would become of vs. At the end thereof newes was brought vs, that the King had fent to the Eunuch, that he should see what things they were (for vntill then he had not written to him but in generall) and fignifie it vnto him, and if he thought them worthie, he should fend him a Petition touching that matter. Wee were somwhat more joyfull with this message, which 39 was so indeed. And Father Matthew Riccio went to the Eunuchs lodging to receive the Kings answer, with such ceremonies and reuerences as they are wont to receive the messages that come from the King. And to put this commandement in execution, he came to our Barge accompanied with many inferiour Mandarines, as witnesses, and in the Kings name hee tooke all these things into his hands: which he fent vnto his house. There he fell to reason with vs, perswading vs that wee should conceale none of the precious things that wee had brought (whereof his minde did fo greatly runne) because the King would be greatly displeased, if hee knew that wee had any good things and would not give them him. Wee told him plainely the truth, putting him in plaine words out of that imagination which we knew he had conceived. And after many complements on both parts he returned to his lodging.

He wrote to the King what things they were which we had brought, looking that he would straight haue sent for them. But it fell out as it did at the first, that he returned no answer, and the cause thereof seemed to be, that they were things that he made none account of. Wee were now the second time in like case as wee were at the first, not being able to goe backe nor forward: for they would not fuffer vs to goe to Paquin, nor to returne backe. The Eunuch being readie to returne to the Citie of Linein, where we first met him, having need of the Barge where- Linein, in wee were, commanded vs to bee remoued vnto an houle in the Citie, there to flay vntill some meffage came from the King, either good or bad. We removed with great pleafure, for the defire that we had to fay Maffe, whereof wee were deprined many moneths. After we were come on This was the fhoare, we fet up our Altar whereon we faid Maffe euery day, preparing our felues for that which thirteenthof

CH AP.6. S.I. Conetoufneffe injurious. Images, Croffe, Chalice, Sufficion,

This Eunuch could not bee diffwaded from that which couetousnesse had perswaded him, to Couetousnesse wit, that we had brought some precious thing with vs. And seeing it seemed vnto him that he iniurious, to could not get vs by another way, to give that which hee defired, and wee had not; hee became

shameleste, and two dayes before his departure, he came with a great companie to our house, as though it had beene to vilite vs in friendship, we thinking nothing of any tuch thing : and when he was come in he began to speake vnto vs, and put vs in great feare, asking vs, how wee durft come so farre into the Kingdome without leave of the King ? and that other Eunichs had aduertifed him from the Court, that wee had many other things, and that wee would not shew them, nor give them to the King. While he was thus talking and dealing, hee commanded his men to feize vpon all our stuffe, which we had in foure or fine Hampers, and to lay them all out young banke, which with great celeritie aboue an hundred Officers which came with him performed, and in two words, they undid and opened all, and with his owne hands he opened as 20 many papers as he found, to feeke that which he defired : and feeing he could finde nothing that Images.

hee looked for, he tooke that which hee found, which was an Image of our Ladie, being one of the two small ones which wee had referred, that which hee left was better without comparifon, and very excellent, on which also hee had cast his eye : hee tooke also certaine Glasses, and other small things, of small importance, because there were no better : but that which grieved A Crosse and vs much was, that he tooke from vs a Croffe of very good and great Reliques, and a Cafe of Re- Reliques. liques likewife, and the Chalice wherein we faid Maffe, which because it was of Silver and gilt A Chalice. (which that yeere they had fent vs of Almes from Maaco) did pleafe him; and when we prayed him not to touch it, because it was a thing consecrated to God, which the Kings of our Coun-

trey durft not prefume to touch, hee made a left of it; and the more it was told him that hee 30 should not touch it, hee handled it the more with scorne, saying, that though wee told him he might not touch it, yet we faw he held it in his hands without any difficulty or danger. By the intercession of a Mandarine that favoured vs, he gave vs the Chalice againe; but wee . could never get the Reliques agains out of his fingers, as wee defired, for of all things elle hee

would depart with none. As he and those that ayded him so willingly were fearthing with much curiositie, and energy one catched what he could, because all things lay tumbled on the ground: at last they met with

a Case wherein was a carued Crucifixe, which was mine. He began to looke vpon our Lord Ie- A Crucifixe, fin Christ being bloudy and wounded, being a very faire and pleatant fight to our eyes and heart, but very strange, foule and offensive to his fight. He vsed certaine gestures not saying any word, 40 vntill he was assonished, and turned his head, and asked what it was? Wee told him, that that was the true God which made Heaven and Earth, whom all the World ought to worship, who died for our finnes, and to give vs life, and afterward rose againe by his owne power, and ascen-

ded into Heaven. He would not heare many reasons; for it seemed vnto him that we were deceitted in worshipping a God that in his eyes was dead : againe, he looked wistly vpon it; and the finall conclusion that hee made was, that that which hee suspected was true, that wee were suspicions very lewde fellowes, because wee had the shape of a man misused with so great inhumanitie , nayled on a Croffe, and all besprinkled with blood, as that was , and that it was nothing elfe but some witchcraft to kill the King; And though in this second point hee was deceived; vet in the first he had great reason, though hee knew not wherefore, fince our sinnes and euill deeds made Christ to be vied on that fort.

50 That which the Eunuch faid in our house, he vttered also abroad : in so much that certaine grave Mandarines which favoured vs, retired themielues from vs , and fent vs word, that from henceforth wee should leave that crucifixed man, and that seeing now wee remayned in China, we should wholly conforme our selues vnto them, for as long as we kept it they durst not speake in fauour of vs, because the report went that it was a deute to kill the King. But our China Boy which was a Christian before he brought ws the message, answered before the Mandarine, faying, That this was the true God: wherefore not onely wee, but himlelfe that was a Chinois would rather die then denye him one jot : whereat the Mandarme wasamazed, feeing him Dring dreatspeake resolutely of dying; a thing so much abhorred of the Chinois, even to speake of it: and sull. so he sent vs a moderate message, bidding vs to hide that Figure, that no bodie should see it, for

60 the report that went of it. The Eunuch gaue out many threatnings against vs, faying, that whether the King received the Present, or not , the least displeasure that hee would doe vs was, to thrust vs out of the Kingdome, as wicked fellowes, writing a Petition to the King against vs. Befiles this we remay ned thrust into an exceeding bad and naughty house in the greatest force

The force of Winter-

of the Winter, alwaies with many Souldiers within and without doores, the gates being flux with hanging Lockes, without fuffering our Boy to goe forth to buy any thing, without two Souldiers to goe with him. In which kinde of living (though still with some remission of the This was till the beginning rigour that we were kept in at the first) wee continued about two moneths and an halfe without any kinde of comfort or rest at any time of the day to say Masse.

At the end of which time, the Eunuch returned to the same place. Wee verily thought that our comming out of that place should not be such as it was, at the least we thought we should be thrust into a perpetuall Trunke or Prison, or in some worse place, as the same went, and the good will which the Eunuch shewed vs.

ð. I I.

The King fends for shem, is delighted with sheir Clockes and Pictures; they are flus up, after take a house, are admired for learning; Christianiste of China.

#ARCAS the cause of our trouble was the Kings not dispatching of our businesse, and our conceiuing that hee misliked of our comming, to all was ended by his remembring by chance to aske where the strangers were, which certaine moneths past they had told 18 him had brought him certaine Images, and certaine small Bells which strike of themselues ( for so they call Clocks) and wherefore they brought him not those things, and that they fends for them should fetch them quickly; and he game the charge of dispatching our businesse to a great Man-

Wee were lodged all the way in the Palaces of the Mandarins very honourably. Hauing travel-

led four dayes, we came to the walls of Paquin, and they lodged vs in an house without the walls. And because the King had referred the businesse to the Mandarin, which I spoke of the

Ennuch feared that hee should lose the thankes, which he thought to receive of the King for that

present, if another Mandarm should meddle with it. That day hee caused all things to be made

readie of the Petition and remembrance, which therewithall he was to give vnto the King, and

earely in the morning with other things and much Siluer of the revenues which he prefented,

being all guarded with many Horse-men and Foot-men, hee carryed it to the Kings Palaces.

received the fame: and when hee had feene all those strange things, the like whereof, or of so qo great excellencie, he had neuer seene before; they say that he rejoyced greatly, considering and

Who having the memoriall delivered vnto him, commanded his men to receive all things. They

viewing all things a very long while, with great shew of admiration, especially of the Pictures

and Clockes. Hee commanded them to bring vs to his Palaces, and to enquire of vs what kinde

of thing those Clockes were, and what thing was needfull, for to have them to goe well. Wee

anfivered to the point. And from the place where we were on horsebacke, by poite on two Hor-

fes which we mounted, and with the like speed we came to the Court. At the same of our com-

ming, and for to seevs an infinite multitude of people assembled, (because Strangers are no

ordinarie thing in China:) and when wee came to the Court, those which had the charge of

vs, were enforced to make roome with staues. When we were come to a cercayne place, a

vs what the King commanded him, and to fee how wee did handle those Clockes : They

faw how we yied them; but wee answered to the question, that it was needfull to ap-

great Eunuch accompanied with aboue two hundred small ones, came downe to demand of 10

darin of Paquin, to whom it belongeth to deale with Strangers.

These newes were brought to the Eunuch and vs, who for the executing of the Kings commandement (whose Letter they obey without reply) fent vs word that wee must goe to Pagum, because the King sent for vs, and sent vs eft-soones all the Pieces which hee had in his possession and the most part of those things which he had taken from vs, that wee our selves should put them in order, that they should receive no hurt by the way, and gave vs many men to carrie all

Their journey our stuffe on their shoulders, and Horses for all our companie, and a Mandarin to accompanie vs.

point some bodie of good capacitie to learne, which in two or three dayes would learne how When they had returned the answer, the King appointed foure Eunoches of his principall Mathematicians, to learne it, and command them to receive vs in the meane while in his house with n his owne Palace. They received vs with much respect and good ente taymment. A great multitude of Eunuches came to see vs, and euery one to enquire what came in his minde. But the King, which all those dayes was occupied in rejoycing for those new things, commanded the Images to bee placed in a principall Hall, whether, as the Eusuches told vs, the chiefe Queene 60 went to doe them reuerence : and they told vs of the King, that hee durft not keepe them neere him, being afrayd, because they seemed vinto him to bee alive. Often times he fent Eunuches vnto vs, to enquire divers things concerning our Countrey, whether it had any king, what manner of Apparell he wore, and what kinde of Hat? (for in China they make great difference of

CHAP. 6. S. 2. Pictures, Chinois ill Picturers, Kings closenesse, Ichintes request. 357

the apparell of the King, from the foot to the head, and of other men) and if wee had any Pichure of him that we should shew it. We had a picture wherein was the Pope with his triple Crowne, and the Emperour, and the King with their Enfignes, kneeling before the name of God, and we gave them it for a show, declaring that those were three kinds of Kings, and that all of them did worthip the true God, which made Heaven and Earth, whose Image we had giuen him. They carryed it vnto him, and because it seemed to bee small, he commanded them to otkings. draw another greater, in colours by it.

Afterward hee fent another to demand questions of the things of our Countrey, particularly

of the Kings Houses. Wee had a Map of the Escural, newly cut in Copper, and a picture of the The Escural 10 Place of Saint Marke in Venice, both which wee gave them. Though we suspect that they delivered but the fecond, faying, that they durft not give the other, because firaight in hafte hee Saint Market. would command them to paint them great, and there was none that durst take it vpon him, though wee know not whither they deliuered it afterward. Hee willed them further to enquire; after what manner wee buryed our Kings : because in the matter of Burials and Sepul- Sepulchers. chers, the Chinois are great South-layers, and put a great part of their felicitie in a good manner and place of their Burials. At that time wee receined a Map of the Death of his Majestie, (who Death of King liueth with God in glorie) and of the manner of his Funerall, and so we answered him, as it was Philip thes. in the Map, to wit, that they made him a Coffin within of Lead (which continueth long) and without of excellent Wood, and put these coffins in a Sepulcher of itone, and for this purpose,

20 there was a Church builded of purpose. They enquired many things of vs of this kinde these few dayes, where vnto wee answered, advancing the things that belonged to the service of our Lord God, as much as we might, and concerned our Europe, as farre as the truth would permit vs, because that we deemed it to bee convenient for the service of our Lord. They told the King fo many things, that it feemed hee greatly defired to feevs : But on the other part, he thought The King ne. it would bee too great a courtesse, and much beyond his custome, who never suffereth himselfe to ver suffereth be seene of his owne people, but of his Eunuchs, and Wines that serue him, and somtime very sel- himselfe to be dome of some one of the greatest Mandarins: yet, though he would not suffer himselfe altogether common peoto bee ouercome of this temptation, yet he suffered himselfe in part, and hee sent to take our Pi- ple. Starters: which two Painters did, each of them by themselues as well as they could. Yet in truth

Bad Pictures

30 I neither knew my felfe nor my companion in that picture, but as it was they carryed it away. diswers. It was not after such figure and manner, as your Worship hath knowne mee, but with a Beard an handfull long, and a garment of a Learned honourable Chineis, though downe to the foote, and very modeit: but from the head to the footfarre differing from our fashion.

After the Eunuches had beene instructed three dayes, the King in haste fent for the Clockes, Eunuches prewhich they carryed, and fet in order before him ; whereat hee tooke fuch pleafure, that he in-ferred, creased their Dignitie, aduancing those foure which had learned this skill, to a greater place of their Order. The King asked them many questions of vs, what wee did eate, and how much, and many other trifles. Whereunto the Eunuches answered (as they told vs afterward) as wee

40 They gaue vs all the welcomes of humanitie which the King did shew vs, appointing vs all Infaites offered to bee Mandarins (which is the reward and felicitie of the Chinois) which wee alwayes refus to be Manda fed, faying, that we came not for that purpose, but onely to dilate the Law of God, neither riss. could wee take that office vpon vs: But we were so neere to bee made Mandarins, that they told vs the King would bestow Dignitie vpon vs, that wee were enforced to beseech the Eunuches, that when occasion was offered, that his Majestie did aske them any thing, they would tell him plainely that we fought no kinde of Dignitie, nor could become Mandarins: who told him fo much , whereby our Lord God delinered vs out of much trouble, which wee should have endured in refusing the same, if the King had bestowed it vpon vs. Wee continued in these demands, questions and answers, goings and commings to the Kings Court: for now we had lived a whole 50 monethabroad: in which time euery day I at least was there, when wee could not goe both,

because Father Manhow Riccio was occupied with other Ghests and visitations. They enquired and asked vs, what we would demand of the King . Wee told them, that we fought no A Monethprofit at all; but if the King would give vs under his hand, some certayne place and a House to dwell in, we would bee very glad; because wee had none other intent, but to stay in some certayne place, and to feeke to dilate the Law of God. For though it bee true, that our purpose did ftretch it selfe further (as I have sayd in the beginnning) yet wee found things in so different a disposition from that which we imagined, that it seemed an exceeding great errour, to make any motion to giue an entrance for more companie and Fathers : for it was certayne that we

should doe no good, nor should finde any, which by any meanes durst presume to moone it to the 60 King, and affuredly should lose all that we had done, and at last should cast our selues wholly out of the Kingdome : and therefore it was not convenient that we should bee knowne, that we had any companions. And many of our friends gaue vs counfell, that wee should not seeme to feeke to dwell heere; for in that very point, they would have vs in inspition. Yet neuertheleffe, we went as farre as we could, and as we thought might bee brought to paffe, which

358

was, that we might have the Kings license, that no Mandarin might (if hee would) cast vs out. The Mandarin, to whom the King at the first had referred our builnesse, seeing the Eunuch had wholly medled in the same without him, being much offended therewith, did frowne alto-Mand:rin of. gether upon vs, and made a warrant out, to take vs wheretoeuer they found vs, vttering certaine grieuous words against vs, because that being Strangers, and remayning in the Court, wee preiented not our felues vnto him, to whom of right belonged all the bufineffe of Strangers. They were at the lodging where wee lay, and they that up our Boyes; for they neuer durit offer any discourtesse to Father Matthew Riccio, (which at that time was there.) At that time I was at the Kings Court, whither they fought to fend me word to fpeake with the Eunuches, and that they, if they could, should aduertife the King thereof, that they had apprehended vs. But they ja hindred with exceeding great care and diligence the going foorth of any bodie, and they flaved for me till I came home, (which came home thinking no harme at all ) and when I was come in they that the doore without. Wee rode the next day very honourably on Horsebacke to the audience of the Mandarin, and

They are thut

Manda ms Pc-

fignified vnto him, that in that we did not present our selues, was not our fault; hee vied vs w.ll, and honourably; but they put vs in an house with a Guard, where wee continued some three moneths, yet fo that certayne Mandarins came to fee vs. This Mandarin gaue the King 2 remembrance that hee held vs there : But that as our purpose was good to serve him with that prefent, it was reason to give vs some reward, setting downe that it would doe well to give vs the Ensience of the Mandarins, and to pay us for that which wee had given him Royally; but that it was fit to fend 10 vs away speedily into our Countrey, or to Canton (where vntill then wee had dwelt: ) for it seemed not well, that Strangers should dwell and that in the Kings Court, entring into the Palice of the King querie day, being a thing fo unufuall. And in very deed hee had reason : for to suffer vs to enter into the Palace, or to flay and lye there, they did vs fuch a faucur, that of long time the King of Chema hath neuer done to any Stranger. Wee feared some trouble by this Petition. But our Lord which had given vs this bitter morfell, afterwards made it fweet to vs againe, because the Kine made none account of it. And albeit divers times afterward, the faid Mandarin delivered foure Petitions concerning this point, hee made as small account of the last as of the first. And divers times the Euruches told vs, that the Kings meaning was of all likelihood, that wee should slay heere, For feare lest wee should returne into our Countres, to give newes and knowledge of his Kingdome; as they delt with a Turke, which hath beene heere aboue fortie yeeres. True it is, that hee answered as little, in performing nothing that was in the Petition : But wee tooke it for good fatisfaction, that hee did not yeeld to that, that we might not lofe the other thing, which was the principall.

When three moneths almost were spent, seeing the businesse would bee prolonged if wee attended the Kings answer, and being that vp we could doe nothing, nor negotiate any thing that we intended, nor deale in Gods matters, as we defired; wee fought to get out of this place, and They hyer an to get a license to take a House, and there to stay wayting till the King would give some order: and wee handled the matter fo well, by meanes of certaine Mandarins which favoured vs. and principally by the grace of our Lord, that wee obtained our whole defire : And we tooke an 40 house in the chiefe situation of this Citie : all that which they gaue vs at the Kings coft in that place, which was fufficient for our fustentation, after wee were gotten out they gaue vs the same allowance in like manner.

Visited by Mandarins.

China igno-

rance or the

Vic of Maps.

Many Mandarins of this Court, heard great fame of vs and of our things: and understanding that we were come out of that place, b. gan to come in great numbers and concourie with much honour and respect, courteste and presents to visite vs. and to enquire divers things which they defired to know. For the fame that went of vs, that wee knew all Countries, and the things and customes of the World, and the materiall and spirituall things of Heauen, was great ; and therefore every one came to enquire that which hee defired. And though our knowledge be but little, in comparison of the knowledge which is in our Countrey : yet being compared with 50 theirs of China, which knoweth nothing of the world, faue their owne Kingdome, which by a common name thy call, The World : of God, and of the things of Heaven nothing, and of other things little, it was fomewhat, and was fufficient to fend them home amazed, and alwayes with

III Colmogra-

They faw a very faire and great Map of the world which wee brought with vs, and we showed them how bigge the world was, which they thought to bee fo little, that they imagined that there was not to much more in all the same, as their Kingdome : And they looked one vpon another, and fayd, wee are not fogreat as we imagined, feeing heere they flew vs. that our Kingdome, compared with the world, is like a grayne of Rice, in comparison of a great heape. They also thought, that there was no other Writing, nor no other Bookes in the world but theirs: and when they faw ours, which at the leaft they faw in outward appearance, to bee much better then their owne, they were aftonied, and put out of their errour, doing vs alwayes more and more honour : and chiefly they were aftonied, when wee shewed vnto them certayne things in Mathematicks the Mathematickes which theyknew not, gitting Clockes to certayne perfons, which for this

end we made of purpose ; and by these, and other moanes, and principally by discourfing with them of Morall vertues, (whereof they write, speake; and have many Bookes) and of Gods mat- Ethikes ters, there ranne fo great a fame, that the greateft Mandarine of all this Kingdome furbich are the greatest persons nevt she King) sought to converse with vs, and to treke our friendship; and to many fent vs preliuta, and others came to visite vs. with great numbers of people : others with much courtefie insured vs to their houles : fo that in foure moneths space, were had gotten Foure months the greatest Mandarine of Pegnin to be our friends, and readie to favour vs in all things a And he which at this time particularly doth favour and honour vs, is the Profident of that Audience. which hath the charge of vs, and at the first approound vs : fo that wer remayne Inhabitors of this Citie; with all libertie that wee can defire, to deale with all fuch as are willing to heare the things that belong to our boly Law, and their faluation. And by this good fuccesse, our Lord hath made ye forget all that is past. And though it bee true, that hisherto wee have gotten no dispatch, nor resolution of the King, yet wer content our solues in that her letterth wafter heere, although hencuer grant vs more. For albeit by this our Journey, we have not obtayined all that wee delived, yet we hope that this our firme abode heere, shall tend greatly to the feruice of our Lord, and the good of this Miffion.

They bee commonly of good vinder franchings, so that easily they fell into reason, and are caps. Hopes of ble : they have not in the government of this Kingdome, any thing that forbiddeth eliem to fol- Christianite. low what Law they lift, nor any Law nor Obligation, which is contrarie to ser holy Law,

20 They have none which effectually and with authorate doth exhort them vito other Lawes, and with-draw them from the truth. For the Bones (which are dedicated for this purpose to Idols) The balenesse are in the common conceit of all men, the most base, contemptible, and worst people in all Chi. of the Benji. me, whole least care is, to exhort them to any thing more then to give them fomewhat and thus they doe not onely not exhort them to follow adole; but also with their bad manner of liuing, per wade them (as wee have often heard of men of good sudgement) that it is not good to ferne them, fince their Ministers bee such. And so in this matter of worldipping of Hols, though there be many that worthip them, and have many of them, and we their Ministers for their Funerals, and other things, yet with very small affection, and denotion thereunto, we eafily make them fay that they are naught, and that it is mot fit to worthip them.

30 Yet, though these things and others which I comise doe helpe them with ease to follow the Law of Go., the counterpois is great, and commonly it weighest downe the ballance on that fide. For first because the matter of Strangers is sendious in China; and the dealing with them fo fuspicious, one fort because they disdayne it, as the Princes, who albeit they now conceine better of vs. yet to learne or Strangers, and to receive a Law which is not of their owne meanes, they hardly perswade themselves : others for feare, as the base people.

The second difficultie, and perhaps the greatest, is a neural obtains, that all this Nation Indenotion hath of another life, and of immortalitie, and of faluation or condemnation of the Soule : and not onely an oblinion, har aifo an auerfion from all these things, wherein wee haue likewife

found them to differ from all other Nations. And it is a thing to be noted, that fince it is a thing 40 fo naturall to Man to reverence some God, either false or true, and to feare or love him, and to conceine or imagine what shall follow after this life : Those Chimose, (which on the other side are of fo good capacities in humane things, and fo wittle therein ) bee as though they were deprined thereof; for they are almost all \*lbeist, not knowing not worthipping neither false nor Almost \*lbeist\* true God, nor neuerthinking what shall follow after this lite: And those which a man would thinke are most bound hereunto, which are the Learned men, are they, which have least knowledge hereof : yea, rather one of the chiefest things that they commend, is, not to believe any thing that concerneth another life, Hell, nor Paradile, which they wholly place in this life. The Bookes of Phi-Bookes which they studie from their Child-hood, doe them much hurt, which are of certayne lolophers, a-Philosophers aboue two thousand yeeres old, whom they effectue little leffe, then if they svore boue 1000. their God, to whom earry yeers they offer Sacrifices: of whom they hold lo great an epission, yerresold, of that they thinks not that any thing more may be knowne, then They knew. And offerences Spirities of the whom they hold of great and spirities, strength of the whom they have the spirities of the short stated or whether were had not the Rooker in our Conservation. White the World Spirities of the short sp

they have asked vs, whether wer had not thefe Bookes in our Countrey ? What other Bookes might we have, that might compare with them ? And as these Philosophers, as Gentiles, spake nothing of the other life, but onely of good Gouernment, and Morall vertues, they thought they might attayne to farre, without beleeuing that there could bee another life. By reason hereof, and of the common vices which Paganifme draweth with it, which in this Countrey increase exceedingly, by reason of the fatnesse, abundance, and fruitfullnesse thereof, they feele great difficulties to vindergoe the yoke of Christ, (though it be fo (weet) fo contrarie to their appetite, which taketh from them the libertie which they have, in keeping as many Wines as they area-60 ble, and in a thousand other things.

These later yeeres in the relidencies of Canton, Nanquin, and heere in Paquin, were made some Some Christians true Christians, which ouercame all these difficulties, and goe on forward with great integritic, made there. constancie and servour. In the Province of Canton, in a residencie which wee have in Xancheo, a principall Citie, haue beene Baptifed within this two yeeres, about three hundred persons, which

according to the Letters which even now wee received, doe all continue with great example and according to the Letters within their new force of people, moused by the good example which they gue, doe-fauour them much : and especially, our Lord hath shewed many tokens of his fauour, in having theward great plagues vpon such men, as perfected them for becomming Christians. And about all, God hath frewed his ayde vpon the Women : who, befides the men, are very hard to bet wonne to receive our holy Law, which is, the great prinatenesse which they vie, be. nard to get wome to receme our noty naw, without is, one goes primary in the price of caule it is not lawfull to fee them, no not for their kinsfolker. But as I fay, herein the prace of our Lord God shewed it felfe very mightie, seeing it ourreame this difficultie, and so many of them were Baptifed, after they had beene very well Carechifed by the Fathers. On Sundays them were Daptines, aren tines man occur very men the Men, yet at leaft in this beginning, and Holy-dayes, because they cannot come to Mafe with the Men, yet at leaft in this beginning, the shey meete in places appointed for that purpole, and there they Pray; and reason; and interest of Divine matters. The men for the exhortations that they make vnto them; have tayer appoinnerrons are ted of themselines, and with their owne content, to conferre and repeats that which they have

Eurry day some bee Connected in Nangains : grane and learned men doe enter. Here in 72 gain while wee haus been heere, we have Baptied some, and some great Mandarini content. heare. If our Lord dee helpe them, and fled his bloud wpon thefe Chinois, (as fice high done in laper, and in other places) there will bee fetled one of the most famous and learned foundations of Christiannia, that is in all the world. For the greatnesse of this Kingdome, their Lawes and Gouernment conformable to reason, their being so studious as they are, and given to Learning, as and to know to much as they know of Morall vertues, and their good capacities gentle, docile, and ingenious, and the great peace and quietneffe which they enjoy, without having any bodie to trouble them with warre, promife much and give great hope, that the warrage which they have our other Nations fately discovered, in the gifts of Nature ( being affilted by the grace of God ) will helpe them in Gods matters.

Marke this

And Laffure your Worthip, that if the doore were opened to Preatisfreely and to Baptife, I fay not there the Fathers and Brethren of our Companie which might bee spared; but without ny amplification; at all, halferthe Religious men of all Europe, were needful to attend fo many Giries, Townes and places; and forminate numbers of people as there are : albeit when Christ. anitie is cauce begun indeed, chere is such abundance of grave people and of much estimation, that 10 many of them might bee made Priests Preachers; and Bilhops, without feeling any wanted thole of Europe since as now they bee Gentales, and their stope goeth no further then to this life, there be many very great Mandermaistibofe chiefe delight is to discourse of things conterming Vertue, and oftentimes they meete together as it were in Fraternities to treate thereof. And the grauer fort doe make Orations, and Conferences together, perswading one another, and delinering the meants to governe well, and to fellow vertue. And without doubt the more wee fee of this, and the more zeale in thele Chriftians, fo much the more our heart is readie to burft to see them so destitute, and to have so few meanes to obtayne accessarie remedie and helpe, entiquit o Abantementaria

The description of the Kingdome of China : of Catay and Musk, the diaftion inso Provinces, Coises and Townes described, Rivers, Shipping, Commodities, Diet, and feeding.

Ow by thehelpe of our Lord I will fay somewhat that I remember, touching the Caflomes, Policie, and Gouernment of this Kingdome, but not in fuch order as were re- 50 quisite, because I haue no leasure, and therefore I will onely write as things come vnto my minde, though things bee not lincked well together, because I cannot first wite one Copie, and after ward dispose it in order, with such distinction as were needfull; retering

China foure Description. that (as I sayd in the beginning) vntill our Lord grant me a better opportunitie.

This great Kingdome of Chies, is almost foure square, as the Chiese themselnes describe the Jame : it runneth North and South from the Prounce of Canton, which is the most Southerly pare of it, beginning leventeene or eighteene degrees under the burnt Zone, unto fotrie two degrees, which is the most Northerty part of it; it contayned from Canton by water, aboue fixe hundred leagues; but in a right line it is four hundred and fiftie, on the Balt it confined with Corea, which isyneth with the same, and with Japon, and with the Ocean Sea, by which they 69 come from Pern, and Nucua Espana, to Manilla: On the West with certayne small Kingdomes, which lye betweene Bengala, the Lands of Mogor and Persian; On the South, with the Iles called Philippinas, and the Malucas, and others, and more South-westerly, it hath Sion, Pegu, and other Kingdomes. On the North part, it hath those people which in our Countries wee

CH AP.6. S.34 Errours of our Maps and Conceits of China.

commonly call Tarrars, with whom they have alwayes had Warre, and once they wanne all the Kingdome from the Chineis.

For the Readers better satufattion I have here presented him Hondius his Map of China, not to hew it, but the erroneous-conceits which all European Geographers have bad of it: A more complete Map of China I shall present after, as by comparison will appeare.

### HONDIVS bis Map of China.

This Kingdome standeth in an excellent climate and situation; for besides the things which it hath in it lelfe, it standeth very neere vnto India, and other Kingdomes, from whence com-50 meth with great facilitie that which it defireth and wanterh. And before I paile any further, because I have spoken of the situation and heigth of China, I will note for their takes which would bee glad to learne, and also it may serue to mend two notable errours, which our neweft Maps haue. The one is, That they make China a third partigger then it is, placing this new & Maps.

Citic of Pagnan in fifty decrees being in were deal but in the control of the cont Citie of Pagum in fifty degrees, being in very deed but in forty onely, as we saw, which twice Pagus in 40, tooke the height thereof with a very good Aftrolabe: And the limits and end of this King-degrees. dome, which are three dayes iourney or leffe diltant from this City of Paquin, are at the most but The Kingdom two degrees more: And so those great walls so famous in our Europe are in two and forty de- of china social grees; and this is the greatest height of the Kingdome of China.

The second errour is, that our Maps make a Kingdome aboue China, which they call Catago, grees Northwhereas indeed it is none other but this selfe same Kingdome of China: and the Citie of Cambala, which they put for the head thereof, is this Citie of Paquin wherein wee are. Wee finde they are all this here to be true very plainely by occation of certaine newes which lately were spred ouer one. duers parts by the way of Mogor, which gaue out many things, and great matters of Catego, Comballa and which feemed to be so peculiar and proper to this Kingdom: of China, teat they made visdoubt Paquen need

that it was not a fenerall Kingdome. After wee were come to this Citie of Paguin wee mee with two Cafilas or Carauans, one of Moores of certaine small Kingdomes bordering vpon China, another of Tarkes with their Turbanes of the Countries of Moger, and of the greet / mael Sophi, ( for with this very name they call him) and of other parts , which had knowledge by fame of Spaine, Italie, Venice, India, and Portugall.

Very Merchants.

lafper ftone a

great mer-

chandile

These Turkes and Moores are wont to come hither every five yeeres by Land, in the name of their King, to acknowledge and pay Tribute to the King of China: for which purpose they counterfeit certaine Letters, wherewith they eafily deceme the Chinois, which thinke and hold that all the Kings of the World doe acknowledge obedience vnto theirs. But the trueth is, that they come to vie their trafficke and merchandile, and therefore the Chineis admit them to willingly : howbeit many now doe know, that their paying of Tribute is a fayned thing : In It is to in Meg. which their trafficke they speed very well. For the King doth maintayne them very plentifully from the time that they come into his Kingdome, vntill their departure; and they took all their Chifts of them, whereof this yeere they brought a thouland. The King tooke of them at an easie price a great part of the merchandise which they brought, and afterward hee gave them rewards. The thing of greatest bulke of merchandise are a kinds of stones, which themfelues call laiper stones; which is white, yet somewhat duskish, so that it enclineth to grey (which seemeth to bee that lasper which so often times in the holy Scriptures is called Precious stone.) It commeth in pieces vnhewen, but whole like peeble stones; which stone for many ornaments the Chinese effeeme much; especially the King: and they buy enery pound 30 of the best at eightie Duckets: and of that which is worse, at fiftie or sixtie Duckets, whereby they gaine greatly. I have feene thefe stones of other colours in our Countrey, but not of this which the Chinois esteeme.

When these men come to this Citie of Paguin, they put them into a great house, which there is for this purpole; (wherein wee were two moneths) and fuffer them not to come forth, Wee asked these men certaine questions: and one was this of Catayo, enquiring of them, How they called this Kingdome of China in their Countrey ! They answered , Catago, and that in all the Countries of Mogor, Perfia, and other parts , it had none other name , and that they knew none other Kingdorne that was called fo. Wee asked them how they called this Citie of Paquing They faid Cambala, which, as I have faid, is that which our men fet downe for the 30 head Citie of Catayo. Whereby it appeareth, that there can no doubt bee made, but that wee are heere resident in the Countrey which must bee Catago, if there were no fault in the Maps; and wee know that there is no fuch Countrey, nor Cities, but a few contemptible Mores and Géntiles.

Wee vnderstood also of their \* Ciuet or Muske, whereof they brought some, which is, as Spantise Latin it 7 were the maw (or stomacke) of a Beast somewhat bigger then a Cat, which they kill to cut away this maw. They breed wilde in the field , and in a Countrey very neere to China, though not of this Kingdome. I had read when I departed out of Spaine, a Booke which is printed of the things of China, which writeth of this Ciuet, and of other things, which I haue seene with mine eyes: it reporteth many errours by halfe informations, which hee which 40 wrote it should have beene better informed in , although in many things hee tell the trueth. Rhubaib. See They brought also great store of very good Rhubarbe, which heere wee bought of them of the before inchese- choice, at ten Marauedis the pound : it is a wilde root like vnto Nauewes, whereof, they fay, thefields are full. These men say, That there is a Sea of sand ( which our Maps doe place in Arabia) neere vnto China, which divideth it from Mogor, and other Kingdomes: And this should seeme to bee the cause, why these Kings, which heare great same of this Kingdome, of the greatnesse thereof, and of the weakenesse of the people, doe not feeke to inuade the same, being not very farre off; because it would beevery difficult to passe ouer the same sandie Sea, with a great Armie.

Diminon.

The Chinois divide this Kingdome into thirteene Provinces, and two Courts, which are, as 50 it were, two Prouinces. Every one of them have their Metropolitane Citie; and every Citie her division of so many Townes. It is knowne very particularly by Chinish Bookes which are written of this argument, how many Cities, Townes, and places there are in all the Kingdome, how many houses every one hath, and commonly what numbers of people, what every Countrey seuerally yeeldeth, and how much Tribute it payeth to the King, and many other things: but I doe not set it downe here : because I could not get those Bookes these few dayes past, to take a view thereof: At some other time, God granting mee life, I will doe it more at large. Chinepopulous Onely I say in generall, that all the way which wee travelled, weemet with so many Cities, Townes, and Villages, that to beleeve their greatnesse, it was necessarie to see them. For your Worthip will hardly beleeve, that wee spent two or three houres in fayling still by the walls 60 of one Citie. After which there still followed many Townes and Villages, one within fight of another. And after this manner all this way continueth, even to Paguin. Yea, the Villages are very great, and full of recople, and of much trafficke. For though wee give them

this name (which among vs figuifieth some small matter) The Chross doe not distinguish

Chorographi-

them by great or small, and so their Villages are bigger then others which wee call Townes. All the Cities and Townes are very well enclosed with high walls. And because, as I faid. I deferre this vntill another time, I will only speake of Nanquin, whereof I had some sight.

This Citie standeth in two and thirtie degrees and an halfe, eight or ten leagues from the Walls, Sea, vnto which it hath a mouth, and a mightie River. It hath three walls of Bricke very high Nanquin in 37and faire, with very great and beautifull gates, which they shut vp very timely before night, degrees and and faire, with very great and occasional genes, was the habitation of the Kings of China; an halfe.

This Citie, of old time, two hundred yeeres paft, was the habitation of the Kings of China; an halfe, the could be a supplied and all many and the could be a supplied and all many and the could be a supplied and all many and the could be a supplied and the could b and so it continueth in very good condition: The streets are very broad, and all paued with very great square stones, or set with brickes. It hath exceeding long streets of two leagues, Streets long. and two leagues and an halfe, and in the middest of the Citie are the Kings Palaces, which are Palaces,

very great.

The Chinois declare the circuit of this Citie, that two Horsemen going in the morning both Circuit. out of the same gate, and one going on the one fide, and the other on the other, going all the day they meet at night in the gate opposite to that which they went out at. The very truth is, that it is at least eleuen or twelve leagues in circuit, and seemeth to have above two hundred thoufand housesof people. It seemed to all of vs that were there, that Nanquin and this Citie of 200000.houses Pagnin, each of them have as many people or more, then foure of the most famous and populous Cities of all our Europe, as Rome, Lijbon, and others of the greater fort. For whereas these two whereof I speake are in themselves so great Cities, not one nor two streets, but the grea-

20 ter part of the Citie enery day doth swarme with people,

There are about this Citie many others within one or two dayes journey, and very famous Hambes and for greatnesse and trafficke; among which there are two, one named Hancheo, the other Sucheo; Sucheo. and this is very great and like to Venice, whose streets are halfe water and halfe land. The Chinois call these Cities \* Paradise, to expresse the goodnesse, abundance, and cheapnesse of all Quintay, Cinithings that are in this Kingdome, and come from other places. And Sucheo is so full of people, Imcali, merchandise, and trafficke, that a Booke which is printed (wherein all things are set downe which the Prouinces and Cities pay to the King) faith, that this only payeth one yeere with Revenue, another in Siluer, Gold, Rice, and Silke, and other things, wherewith it doth greatly abound, twelue millions : so that there be whole Provinces that amount not to so much by a great deale: which though it seeme an incredible thing, yet they write it for a certaintie; and hee which knoweth what these Cities are, will beleeue it.

Yet for all this, thefe Ciries have no notable things, neither fumptuous Temples nor buil- Building not dings, which are wont to be those things which doe beautifie a Citie: for the houses are not beautifull beautifull outwardly; nor they vie no great Porches, as they doe in our Countrey. And he that hath feene the things of our Countrey, and is skilfull in architecture (hel facility and in the samples). hath seene the things of our Countrey, and is skilfull in architecture, shal find it here very little. For the houses are low, and without galleries, lofts, windowes, or fight into the firet; yet they haue faire yards, and are very neate within , and painted with divers colours, with that Charan, or liquid Gumme, whereof I made mention before. And that which I speake of Nauquen touching the abundance of people, trafficke, and manner of houses, is after the same manner in the 40 other Cities which we law. For the Chinois are fo like, and fo vniforme in all naturall and artificiall things, that he that hath feene one of the principall Cities, findeth no new thing to bee Vinformitie in

feene in the others. And albeit that other Cities are not comparable to these in bignesse, yet in multitude of people proportionally there is little difference,

This Kingdome is commonly very fertile of all things that are necessarie for the vse of man : Fertilitie. and a great cause of the fertilitie and abundance thereof proceedeth of the great number of exceeding great Rivers which it hath; which befides the profit that the Rivers yeeld by the fi. Commodious shing, and besides the profit in watering of the grounds, wherein they stand the Chinois in great Ruccis-Read, they are occasion of great trafficke and communication of one Province with another with great ease by water, which is an enriching to them that vie it, and of great plentie in Infooleagues

50 every Citie of all things that are in the Kingdome. From our departure from Magae, till with-butone day by in a little of Paquin, which is, as I said, fixe hundred leagues, wee travelled not part one day Ind. by Land (because wee would not fetch too great a compasse about by water) wee trauelled. This is more a great part of this way vnto Nanquin by the greatest Ruer that ever I saw in my life red by siring which in some parts is about three leagues broad, and vary deeper, which the Chinois, for the amore exact a more exact a more exact. greatnesse thereof doe call, The little Sea; and that with good reason. For though it were and mature an hundred leagues from the Sea where I entred into it; yet there is great abundance of fish observer of all of those kindes which breed in the Sea; as Porposes, fishes with sharpe beakes, and others things for 8.5.

I faw in this River peere the bankes thereof men fish with certaine Fowles as bigge as small perhaps 201.10 60 Geeft, like vnto Rauens, with a long beake, and bending downeward like a crooked hooke, mentioned by which the Chinese teach to fish: They have a very long necke, which they binde in such fort P. so. that the fifthes cannot goe downe into their fromacke, but they fill their throat with them, if I ding with a they be small fillies, and when they come out of the water, they make them call tilem out; sinde or Ra and if the fifth beggreat, hee fighteeth with him and bestech him with both make the machine about the time of Common or Co and if the fifth bee great, hee fighteeth with him, and heateth him with pecking affaulting him more to

and they fay they take bigger. And because this fishing is so gainfull and so certaine, they pay Muddy River.

a certaine Tribute to the King for every one of these Rauens (or Cormorants.) Wee met with another River as great as this , which feemed to bee rather of mudde then water, because the water was alwaies mingled with earth, which whence it should come for fo many yeeres, I wot not. They cannot drinke the water without they clarifie it, which Alume vied in they doe with Alume. Besides these two Rivers all the rest is made by hand for vessels to passe

this fort wee faw this Fowle take Fishes sometimes of a pound, and a pound and halfe weight;

clarifying Shipping.

Ship-houses.

The Vettels which we faw in all the Cities which we passed, is one of the greatest things that belong to this Kingdome. For in every Citie there are two forts of there, one fort of vellets for burden, and another fort for houses. Some of them are very faire, and as fit to dwell in as houses themselues : and many of them also serue for houses for poore people, wherein they have their whole houshold, and bring up Hens and Hogs, and gayne their living in them. I remember that the same morning that wee entred into Nanquin there went 500. Vessels or more before our Barke, to enter at the fame houre, with their layles vp most pleasantly to behold; many of them being laden with divers things , all for the provision of that great Citie : and on this manner they continued all day long in going and comming.

Multitude of

Mandarines

Barges.

The Barges of the Mandarines (which are all made at the Kings coft) are the most costly, and are most for the fight, and very great. They would much rejoyce in our Europe to see them; be-The excellent cause it seemeth that there is nothing comparable to these in beauty. Most commonly these beauty of the haue Trumpets, and Drummes, which they play vpon when they paffe by the Citie, and when they meet with others, that all may give them place. They are commonly as long as Gallies, and as broad or more, but very high, to that to get vp into one of them is about a fathome high from the water, and therefore they carrie a great burthen.

Tributes in money and in kinde.

And because I spake before of those which carrie the Kings Tribute, I will here speake more particularly. Many Prouinces from whence they cannot carrie Rice and other like things with eale to Paquin; because they are farre off, pay their Tribute in Silver : but those Provinces from whence they may passe by water, pay a great part in Rice. For which occasion all the Cities have great and strong Vessels made of purpose for this service. And when the time of their departure is come, euery Cafila or Companie departeth from their Citie with a Mandarine that hath the charge of them.

10000. Veffels at Nanquin for Tribute of Vi-Cuals, and Tributes : and others many for workes. Path-way of

And they fay that those Vessels which goe from this part of Nauquin, in all amount to ten thousand, though they goe not all every yeere: yet they have alwaies more for veeres of greater plenty; and because many cannot returne in time, to goe backe agains the next years, 1000 for other I know not certainly how many they be; but this onely I know, that all this way from News quin to Paquin, seemed to be a path-way of these Vessels, whereby wee passed : for they went all along, and because they went so deeply loden, oftentimes they wanted water. To helpe this want of water (for because it is no natural River it never overfloweth) it hath floud-gates like Sluces, wherewith it keepeth in all the current three or foure or fixe hours: then opening Sluces or locks, the fame, many doe passe with great ease, and they may goe very well writill they come to such

Besides these Vessels of victuals, they carrie to the King every yeere many others, which bring him particular things, and dainties, whereof this Countrey of Nangain yeeldeth great flore, and also for the service of the Kings house. Some Cafilas or Caravans of these are of pieces of Silke for the Kings house, which may be some dozen of Vessels; others carrie many things to eate : and with one of these Canlas we passed. They were nine great and faire Vessels, which Silkes and per- carried pieces of Silke, and other things which they are wont to burne in the Sacrifices which they make wnto the dead, and before their Idols. They fay, that these Vessels for particu- 50 far things are a thousand : and as soone as they come within the Kings house, the Eunuches take the charge of them. From Nanquin vnto the middest of the Kings Palaces, Vessels may paffe by this River: to come to the place which they goe voto, they paffe thorow the middest of the Palaces. In all these Rivers, when they want winde, the Mariners draw the . Barkes with great facilitie, and fixe or feuen are fufficient eatily and merrily to draw one of the

7 fels for

Wee met likewise upon this way a very great number of Veffels which came from farre, hden with Brickes for the Kings workes, and greater flore this yeere to build a great piece of an house which fire from Heanen had burned : for this purpose they carried great store of timber for beames, and boords, and other leffer timber which are carried from the parts of Nanamin vn. 60 to Pagnin, some an hundred and two hundred paces long, and one log fastened spon another, so that thefe rafts grow high and great: they carrie upon them frames of dwelling houses ready made, wherewith there goeth an inferiour Mandarme, which hath the care of it, and iometimes the Marmers goe with all their houshold, and breed of Hogs, Hens and Duckes : for sometimes

they stay about a Summer in going to Paquin. These seuen or eight yeares this prouision of timber, Brickes, and lime, and other things hath continued.

The fertilitie of this Kingdome is great, of all things that feeme to be needfull for the vie of mans life, And if there bee any other Nation which liveth commodiously without needing trafficke with forraine Kingdomes, they are the Chinous, And though it bee true that some things come vnto them from forraine Countries, yet are they not the necessary things for the life, and which all men vie. The most that commeth out of forraine parts, and they defire, is Silver: Silveringres. And that which all men carrie from thence is very much, and very good merchandife: as Silke, refi request is Gold, Muske, Porcelanes, pieces of wrought Silke, raw Silke, cloth of Cotton wooll, all kinde Chine.

to of worke in Copper, Iron, and Latten, Quickfiluer, Sugar, Honey, Waxe, Cinnamon, workes The great flore made of fine wood, and gilded, as Bedifeads, Ink-horns, Cabinets, and an infinite number of other of metchan. things, whereof there is so great abundance, that although they send out many ships laden for distinctions. Lapon, India, Manila, and other parts : yet without doubt they might prouide ten times more: and if more would come to buy, they would alwaies have the more to fell. All things are very Cheipnesse. cheape, without all comparison cheaper then in our Countrey. A pound of Sugar is worth eight or ten Marauedis, and sometimes fixe: and if they buy any quantitie at once, an hundred pounds weight are worth nine or ten Rials of Plate: And here at the Court (where all things are dearest ) a pound is worth twenty, or foure and twenty Marauedis. There is great store of Waxe and that very good, which wee buy heere in Paquin for the feruice of our Altar, a pound for a 20 Riall and a Quartill: and the pounds here are greater then ours; for every one of them weigh fixteene Duckets of Siluer weight. Honey likewise is very good cheape. Of Copper and Latten there is exceeding great abundance: and Latten made and wrought into any worke that a man would have, with the fashion and all is worth a Riall and a Quartill the pound. Needles an hundred a quarto, and if they buy many together, better cheape. And I have fet downe for example their small things to know the particular price, and of other things (though they bee not so cheape) after the same proportion. Howbest those which come from forraine Countries Acaution for to trafficke with them, had need to be very heedfull: for the Chinois lose not opportunities to transe Merraise the price of them, when they may.

The abundance of things for food is likewife great, to wit, of Oxen, Weathers, Sheepe, Victual flore 20 Goats, and more then of all others of Hogs , because they are the common food that they line and sheape, of. Deere, Hares, which they catch with Hawkes, whereof here and in other parts there are many. And when they are dearest here, one of them is worth foure or fixe Quartos : they be as great as they bee in our Countrey, and they are found at all times. Hens, Geele, Duckes, and fundry forts of wilde Fowles, and all other fielh is exceeding good cheape. Wee came to a very great Citie, where Beefe, Mutton, Hennes, all was of one price a pound, which was foure Marauedis. And in Nanquin (though the Court be there) a pound of Hens flesh was fold for three halfpence, Fishes after the same manner, or better cheape, because it stands upon the Riuer. And I faw a Fish of ten pound weight fold for a Riall of Plate, and we bought great Trouts at Size pence. three Marauedis a pound weight. Egges ten, twelue, fixteene, eighteene for one Conduren, One halfpeny,

40 which in our Countrey is a penie halfpenie farthing. Fruits are of the like cheapnesse. In our iourney, which was when Abricockes beganne to bee ripe, which are here very good, they gaue vs two hundred for ten Marauedis. They are very much giuen to eate fresh Herbs and Sa- Herbs. lads, and Pulfe. At every banquet and good feast, there is alwaies Fleth or Fish. There are many Nuts , Chestnuts , Filberds , and Pine-nuts though but few , Figs , though not of our kinde, and yet as good or better, and many. And although they have all these things, yet enery Prouince and Countrey doth not yeeld them all : but that which one wanteth another supplyeth.

Their common food in stead of Bread is Rice solden only in water, whereof wee all did feed, although at the first wee had much adoe with it. Commonly they have every yeere two Har- Two and three 50 uefts, and in some places three. And the Land hath great Plaines with Rivers to water the Haruffin grounds: for the fields of Rice doe much defire to be coursed with water.

From our entrance into Canton vnto this Citie of Paquin, wee met with few Hills, and effer-Plaine Councially from Nanquin hither very few. Wee passed by a Plaine aboue an hundred leagues, farther trey, then wee could kenne. I faw likewise much Wheat, whereof they make rolls without leauen, Plaine of fodden in the reeke or vapour of feething water, and fo without cruft, good for old folkes that 100. kagues. want their teeth, Although that it bee true that the fruitfulnesse or this Countrey is very great, yet without doubt other things, faue Rice would not be fufficient, if the Chinois were as Spare feeding. great feeders as our people, and did not feed fo fparingly as they doe. They all eate commonly thrice a day; once, betimes in the morning; the second time, at two in the afternoone; the

third time, very moderatly at night. And besides, the rich Mandarines, few others which are of good abilitie, doe commonly eate either Flesh or Fish , but Pulse , Salads, and Herbs which cost Herb-eaters, almost nothing, and their chiefest food is Rice, or Millet, and hereof they fill their bellies.

They have many Horles, Mares, and Mules, whose fielh they eare, though I have not heard Horsersten report that the greater fort doe feed voon them. They have much Wine of divers forts; all Wines divers.

J. 1999. 11.C

**266** 

made of Rice: but herein they may not compare with the Wine of our Country : Whatforuer they drinke, be it Wine or Water they drinke it alwaies hot. They are neate in feeding, for they touch none of their meate with their hands, therefore they vie neither Table Napkins, nor Table-clothes. All their meat is ferued to the Table finely minced. They vie to feed with two fmall flickes of Juorie, Eborne Wood, or fuch like, wherewith they take vp all their metre verie hansomely. And herein, I confesse, they have a great advantage of vs because this manner of feeding is very commodious, and fuch as euerie man that hath triall thereof will much delight in teching is very commonitous, and the state in Lapon and Macao Vie it. Thirk adwars drinking Benefit of bot their drinke our Father and eating little fruit (for they are not for greedite of 3th as our men are) doth drinke, the state of the no Oliues, vet have they abundance of Oile. The best is of a kird of Herbe, which they call in Oile made of Spaine, Alegria, which fignifieth Ioy or Mirth. I fay not that it is as good as ours, but Nay, I find no fault in it, nor I doe not defire it, nor much leffe the Chinese, which can cate nor finell no kind of Oile, because the smell thereof pleaseth them not, as sometimes wee prooued by a little of ours' which we had : and they call their flinking Oile odoriferous, fo great a force there is in cuftome. As the Chinois are diverse in divers Provinces, fo are their Fruits; and those which grow in the Province of Canton, are not in all these colder Provinces. There are the best sweete O.

an herbe.

ranges which hitherto we have knowne, which are eaten with the skinne.

Their Moneyes, Apparell, Persons, Trades, Wealth, Learning, Marriages, Superstitions, Rites, and

bebought in

Timber planty

Here is in this Kingdome great flore of Timber; for proofe whereof wee need no more
but to fee the inhibititude of Barges laden there with 10 good cheape as it is. And therefor I thinke a man may build a flip with all things necessary thereunto, three parts of
four there is no the proof of the proof fore I thinke a man may build a thip with all things necessary thereunto, three parts of 10 foure better chespe then in our Countrey: They vie not Gold, though therebe much

to be bought; but all is Silver, which they doe not coyne in Money, but cast it in Barres, and when they would buy any thing, they cut it and weigh it in certayne fine Weights like the Remane Weights in our Countrey : and therefore every body that will boy or fell, carryeth one of thole Weights with them. Great store of Silver commeth out of forreine Countreyes. But the chiefe Maffe of it is out of the Mynes of the Kingdome it felfe, as also the Gold, When they buy or fell, they try the Siluer of how many Kiliates it is : and one is worth more, another leffe, according to the goodnesse thereof. It was very necessary for the Chinois to weigh and try their Silver, and not to coyne it into money : for otherwise there would have beene a thousand deceits, wherein the Chinois are very cunning. They vie Braffe Money, wherein also they try that to which is true or falle : for in all forts there is deceie and mixture. They have the best Porcelane that hitherto hath beene found, which is exceeding good cheape, and in fuch plentie, that befides all the Kingdome of China doth turnish it felfe thereof, they fend forth as many thips ladings as they will.

For their Apparell, though they have great abundance and cheapneffe, yet in goodneffe they may not compare with our Countrey. There is much Silke and that very good, but they know not how to dreffe it. They make good Damaskes, razed Veluets, Taffataes, and other forts : but the colours, though at the first tight they feeme reasonable, are quickly lost and fade away. The ordinary apparell of the common people is of blacke cloth made of Cotton, or of certayne shags of Silke, which are very great, farre greater then a flocke, which only serue for this pur- 10 pole, and are very warme. Persons of Honour weare commonly an outward Garment of Silke which they vie in Vititations, and other like Actions : And there are many which alwayes got abroad apparelled in Silke, but not in fuch great number as that Booke fetteth downe, whereof I made mention before. All men, even to the very Souldiers, weare their apparell long downe to the in-step of the foot, with very broad sleeues, open before, and fastened to the sides beneath the arme. They be so well contented and pleased with their manner of apparell, that they think there is none in the World comparable to theirs. And in very truth they bee graue and modelt, and especially those of the Mandarins, which differeth from all others, saving the Bonzi, which thaue their Beards and Heads. All the men and women let their Hayre grow long, and the men truste it vp, and wind it on a knot on the top of their crowne. They weare certayne Nets on 60 their heads like Coyffes, made very cunningly of Horfe-hayre : and in the Summer time many weare Caps and Hats of the fame. There are many forts of Caps or Hats (for I know not what their feuerall names are) according to the flate of euery one. The bafeth fort which the common people vie ordinarily is round. Their shooes, are of the same staffe that their Garments are

CHAP. 6.S.4. The Persons, Trades, Riches, Nobitie, Marriage, Heires.

of, very commonly of Silke made with many faire borders and knots. It is a discourse fie for a man to be seene (especially before any man of Worship) without a Cap on his head. They greatly effecte for the most part things of our Countrey, and they are very deare. And some pieces of Silke which the Portugall Merchants brings, especially Veluets of three Piles, are far more dearer then their owne. All woollen cloth is much efteemed and very deare, likewise Chamblers, and fine Linnen-cloth, which they bring from India are very deare. Looking-glaffes, and all things made of Glaffe, and many other things, which in our Countrey are very good cheape, are here deare, and in great estimation,

The Chineses hause commonly little Beards, small Eyes, and Noses, and all of them have black To Eyes, fo that they much maruelled at the colour of mine, which are " of Gray or Iron colour " Sarces lat. (which they neuer faw) and they find many secrets in them, and very commonly they say, that fortunize, these eyes of mine know where stones and precious things are, with a thousand other Mysteries, so that they thinke they haue Letters in them. To paint an euil-fanoured man, they paint him in short apparell, with a great Beard, Eyes, and Nole. They are commonly all white, yet not fo white as those of Europe: and therefore to them we feeme very white. The Learned men are very graue, of very good capacitie, and appeare outwardly very modest and graue.

There are Arificers of all Arts that are in our Countrey, and very many with the felfe-same Trades. manner forme of Instruments. Every man is free to follow what Trade he will, without being bound to follow his Fathers Trades, as divers times I have heard it spoken when I was in Europe : and those which will may fludy, fortake, or change that course of life. They worke very good cheape : but in cunning and excellencie ours most commonly excell them much, though in some

things they be very skilfull. The service of young men and maydes is easie and good cheape, because there is great store of people, so that a yeares wages is not aboue two Duckets, and meate and drinke, without appaa Seruants

rell. As there are many poore people that have many Sonnes and Daughters, it is a very ordin cheape. mary thing to fell them, and this the cheapeft thing in China. For a youth of twelve or fifteene dien vic, yeares without any naturall blemish will cost not past twelve or fifeeene Rials of Plate, and in time of Dearth much leffe, and it is a common thing to buy them for service; though they vie them well, and marry them at their time. 30 Although the abun lance and riches of this Kingdome be very great, as the people alfois: yet Nonevery

there is no body that is very rich, newther in any state of people may they compare in this point rich, with our Countriey. You shall not find in China, which is able to spend twenty thousand Duokets of Rent how neere of Kinne focuer he be to the King, and very few, and those case to be numbred that can fpend ten thousand Duckers, and the ordinary is no more which they possesses then that which their Lands and Offices yeeld them, which is not great. But though it bee true Yet astichas that thole of our Countrey pollelle much more Silvery confidering the cheapnelle of things in ours very tich their Countrey, all commeth to one account,

There are very few of the poore people idle, because all of them commonly cake pathes, and Fewide. earne their lining. Though the multitude of the Nation be so many, and the Kingdome so great, Surnames, 40 yet the furnames of all the Kingdome are not aboue three hundred, and all of one fyllable.

There are some, though very few, which may be called Knights, which for feruice-to the Knights. Kings in some necessities have given them Offices in succession : but the common vie is not to haue any Nobilitie by Descent in China; neyther can any man say, I am of a better House then Nobilitie on you. But the honour and Nobilitie dependeth wholly voon Learning, and to obtavne degrees ly in Learning. and Offices of Mandarins. And therefore an House which now is in Office, and his Father bee one, if he haue a Sonne a Doctor, which is made a Mandarin, he is honourable, and the honour No Lordbut continueth as long as the Learned men and Mandarins doe line. There is no man, neyther Kiniman nor not Kiniman of the King which hath ever a Village of his owne that payeth him Tribute : but all men pay it to the King; and hee giveth stipends and wages to the Mandarins, 50 fo that they receive nothing of particular men by right, though they extort much continually Extortion.

Commonly the Chinois doe marry from fifteene to eighteene and twentie yeares, and all of them doe marrie one Wife that is chiefe; and this is their lawfull Marriage. On the day of their Marriage, when the Bride doth passe to the House of her Husband, shee carriets openly before her through the freets all the things which she bringeth with her, and all her house-hold stuffe: But besides her they may marrie (I say they may keepe and doe keepe as many as they areable) as many Wines as they will, which for the most part they buy : and afterward when they will, fell them away againe. They may not only not marrie with any Kinswomen of their Wines, but with none of that furname, though they have no shew of Alliance. The sonnes of the Concu-

with none or that turns ne, though they have no new or annunce. The read honour, to be the Inheritence:

60 bines doe likewife inherit, and there is little or no difference in their flace and honour, to be the Inheritence. Sonne of the lawfull Wife or of the other, neyther make they any question of it. The thing wherein the Chinais are most observant, Ceremonious and Superstitious is in their Funerals and

Burials, Funerals, and Mournings: for herein they shew their obedience and loue to their Pa-mournings. rents, whereof their bookes are full. It is a very ordinary thing to have great respect to their Fa-

ther and Mother, and the disobedient are grieuously punished. Many graue men and Manda. rins begge leaue of the King to leave their Offices which they have, and to goehome to keepe their Father and Mother company, yeelding for a reason that they be old, and that they would goe to serue them. And it is a Petition in the fight of all men fo suft, that they grant it very ve fually. When the Father or the Mother dieth, all the Sonnes and Daughters (from the King to white Linners, the meanest Peasant) doe mourne for three yeares. The mourning colour, which among vsis blacke Bayes, among them is white Linnen, whereof they make all their apparell euen to the Cap. The first monethes they weare a very rough Sack-cloth, girded with a Coard, like the bare-footed Friers. And though he be neuer fo great a Mandorn, withoutany exception (fane only the Mandarins of the Warre) affoone as hee heareth newes of the death of any of his Parents, he is to leaue his Office and Dignitie, and all other Employment what foeuer of Gouernment and Examinations of obtayning his degree, and is to goe home for three yeares to burie his Father or Mother (and to mourne and bewaile them. The graue men which haue an house for this purpose, doe not strait way burie their dead, but keepe them two or three yeares in the house, in a Chamber which they keepe for this Office, and it is not the worst in the house; and very viually or enery day they go thither to make them a thouland Ceremonies and Renerences. and to burne Incense, and other sweet sauours, and to set ouer the place where they be laid, meate to eate; and at squerall times, many of those Bonzo doe meet , and with great Ceremonies begin

their Seruice and Prayers, and their Sonnes, Kinsefolkes and Wines make lamentation. The Mandanus do not only leave their Offices, and change their Weeds, but also all the things which 20 they did vie. Many fit not in Chaires, but vpon low Stooles : they vifit, or fuffer themselves to bescene very seldome: they change even the very Paper wherein they write, wherein they haue a piece of another colour, in token of mourning : when they name themselues in their Letters, they vie not the name which they did at other times, but others proper to the partie, as when he nameth himfelte, hee calleth himfelfe difobedient, fignifying, that by his difobedience to his Parents he did not preferue them aliue. They wie no kind of Mulikce, and many change their ordinarie Diet into courierfood, V pon

the Funerall day they prouide great company : many Kinsfolkes and Friends meete together all clad in white, with many Bonzs, (according to every mans abilitie) which fing with dolefull Infiruments. And by their apparell which they weare, and their time in finging, hee that knew 10 them not, would take them for Clerkes reuested, singing plaine Song; for they much resemble Funerall Fithem. They make many Beeres with men, of Paper or of white Silke, many Banners and other Ensignes. The place whither the Corps goeth is adorned with many figures: the Corps is put into a very great Coffin. This Nation holdeth a great part of their felicitie, for them and their Succeffours to confift in these things of their Funerals, especially in two, the Coffin or Chiff wherein the Corps is to be layed, and the place of their buriall. The stuffe to make the Coffin of, wherein themselues are to bee buried, and the making of the Coffin, they leave not to others to doe after their deathes, neither then may the body looke for much coft to make one of these Coffins, neither in this (as a thing of great importance) will they trust, no not their owne Sons:

Coffin,

but they themselues at leisure seeke some kind of Wood that is least corruptible, and Plankes 40 which are commonly foure, fixe, or eight fingers thicke ; which because they bee so thicke, and the Chifts or Coffins very closely thut they can keepe their Corps in their Houses without any euill smell. Some spend in making their Coffin seventy, eighty, and an hundred Duckets. They hold it for a felicity to be able to get one of these that is good; on the contrary for a great disgrace, not to have a Coffin to burie himfelfe in , and they are very few which faile in that one

The Sepulchre and place thereof is the thing for chooling whereof they vie great Sorcerie or casting of Lots, and doe it with great heedfulnesse, and with the helpe of some that are skilfull in this Art. For they hold opinion, that in making a good choice of the place dependeth a great part of their owne good fortune and of their Posteritie. And oftentimes they are a yeare in re- 50 foling whether it shall looke toward the North, or to any other part. And therefore the greatest and most contentious Sutes which are in China, are about places of Burials. These places of Burials are alwayes without the wals in the fields, or Mountaynes wherein they build Vaults very well made and strong of Bricke, stone, or other matter, wherein they lay the Coffin, and then close it vp very furely : And afterward now and then they come thither to performe certain Ceremonies, & to bring things to eat. They hold it very valuckie to burie a dead man in the Citie: and if they know it, though he were the greatest man that is in China, they will not sufhim to bewaile his dead Friends much , especially those which are women. There are many which beleeve the passing of the soules from one bodie into another; and therefore after the death of their Father and Mother, they will neuer kill any liung beaft, yeelding for a reason 60 why they will not doe fo , left fome of them should be their Mother or Father, or some other other person. And likewise many of them fast, because, that whereas some of them bee poore; they delire afterward to be borne againe in a rich and honourable Family.

Metempluchi-

Valuckie to

burie in the

Citie.

Although it bee true that the most part of them believe not in Idols, and it offendeth them

not to speake euill of them, yet commonly all of them at a certaine time of the yeare doe them fome reuerence, because it is the custome, though in no fort they worthip them as Gods: and those Idolarie, which put most confidence in them, burne Paper, Incense, and sweet smels vito them, and kill beaits before them. Their Bookes of these Idols speake of Hell, and in many places, or in a manner in all the Cities there is fet vp a portraiture of Hell made with bodily thapes, and many Deuils, as vglie as wee paint them. It is very well fet foorth, but badly beleeued : for it serueth only there for a bugbeare. And if any believe that which the Idols fay of Hell, that it is a place Of Hell. of torments, they fay, that after fo many yeeres be paffed, all men come out againe, and are tranf-Seein Pinte. of comments, tary 1233 target and the state of the state 10 what things shall come to passe : howbeit I have not heard in all China, that there was any an-

fwer of a Diuell in an Idoll, as is in other parts, in regard of the small beliefe that they have in them, and the lewdnesse of the Bonzi that ferue them. Their houses wherein they set them, Wicked Bonzi. whereof as yet I neuer faw any good one, are commonly verie filthy and stinking. And befides this confulting of Idols, the Chinois are much given to Divinations to know things Diviners and to come, and whether they shall have good or bad fortune; whether they shall have that which distinations.

they defire or no : and there becan infinite number of these South-sayers, and all of them pratlers, mumblers, and coofeners, whereby they deceine many. And though the Chinois be of good understanding, and know that these fellowes know nothing, and every foot doe take them in lyes : yet for all this, there are verie few that when any occasion is offered, doe not confult with 20 them. And though they feeme to bee but few, yet some of them are in league with the Deuill,

as oftentimes wee gather by certaine things.

Many of these grave men of China, have commonly two follies, wherein they doe erre more then in other things. The first is, that they perswade themselves that they can much prolong Studies to prether Lines; and for this purpose they vie a thousand inventions, and take many medicines, which long life. indeed rather doe shorten their dayes. There are many Masters and Bookes of this follie, which viuallie are graue and rich men. There are many that make themselues very old folks, whom the people follow like Saints to learne some rule of life of them, wherein they put all their felicitie. Many doe not beleene that we are so old, as we say we be, and that we doe diffemble : but that in deed we bee an hundred yeeres old, and that we know this rule to live for ever, and that we doe not Marrie because wee would line long. The other follie is, that they perswade themselves that they are able, and goe about to make Silver, whereof likewife there are many Bookes. They vie Bookes of Ale for this purpose many Hearbs, and Quick-filuer, wherein they spend that little Siluer which chimie, they have, and remaine beggers, but not perswaded but that it is feeible, but that it was not their good lucke, and good fortune : and to obtains this, many of them fast many yeeres.

Their bad Souldierie and Artillerie; Degrees, Priviledges, Honours and promotions of Learning. Their Authors and Bookes, and Printing. The Mandarins commended.

Here are many Souldiers in many Provinces of this Kingdome: and though they have Souldiers me had Peace these many yeeres, yet they still entertaine them: but because they bee lo-ny and sew. uers of peace and quietnesse, the most contemptible state, except the state of the Bonzs, is the Souldier. And indeed it is a most base people, which hath no valour nor

worthinesse, much lesse any fortitude in them. Many of them are Porters, which beare on their shoulders, the Chaires wherein the Mandarins and honourable persons are carried. And at the 50 time of Musters, which are made from time to time, they repaire thither, to obtaine wages, and thus they have no worth, nor jot of honour in them. The punishment wherewith their Captaines punish them, is the same wherewith they punish all other people : they whip them Basenesse. as wee doe Children in Schooles. According to the worthinesse and valour of the Souldiers, the Armont and beautie of their Armour, offensiue and defensiue is answerable, which is sitter to bee laughed at, Armesthen to be reported. They have no Harquebusses that are worth any thing; and all those which The burses of I faw (and I faw many Souldiers with them) had their barrels but a pannel ong : fo that it fee but a span long but a span long meth that they beare it and the rest of their Armour for fashions take. And I maruell not : for

fion to become valiant: but they are able men when occasion serueth, and it seemeth they will bad Souldies, 6c eafilie become val:ant. The Mondarms of Souldiers, is also a thing of small estimation, and they are nothing compare those from rable with those which they call the Mandarus of Learning, which are those, which take De-the control grees. The Mandarins or Captaines of Souldiers, obtaine not the same for Heroicall arts or proweffe, but they make a Discourse or an Oration, y pon some matter concerning warre, and they

by reason of the exceeding great Peace which they have so long enjoyed, they have none occa-. The carfesof

things with shadowes, and know not how to paint in Oile : yet in the second they are verie

into friendship with any. Also they make much account of Paintings, and playing upon Instru-Painting and

ments. And albeit they know but little in the first, because they have no Art, nor paint the Musicke.

make choise of certaine of those which had done it best. Likewise they shoote two or three Arrowes, to fee if they bee skilfull in shooting. They have no yfe of great Ordnance. Albeit I faw livarie.
No Ordance in the Gates of some Cities, certaine small short Pieces, as broad at the mouth as at the nether end, which I know not whether they shot off sometimes or no : I saw about fixe or eight of them woon the Walls. The defence of their Walls is their height, without any other Artilletie. The greatest force and number of Souldiers, resideth in the confines of the Tartars.

Most can write with one of theirs, containeth much more : for our letter is lesser then theirs. Though in China it 60 and reade. Postrie-

be harder to learne to reade and write, then in our Country, yet there be few but know ordinarie Letters to deale betweene man and man. Likewise they make great account of Poetrie, and also the graver fort give themselves much wnto it. It is verie ordinarie with them to fend vs fome Poefie in praife of vs, when wee enter

finely lay it ouer, whereby the Letters remaine white, because they bee deeper, and the rest remaineth blacke. I fend you with this Letter certaine papers thereof, that your Worship may

reioyce in beholding the excellencie wherewith it is done. One of our Bookes of equall volume

It is foure hundred yeeres fince a King of the Tartars wonne all China, (whereof Paulus Ve-\_netus writeth, which was in that Countrey) and they did also possesse it two hundred yeers: at the end whereof, a Bonzo a very prudent and valiant man rebelled, and cast the Tartar out, and at the end whereor, a Done a very procure and a sale. They alwayes keepe great Watch and procured King, whole issue continueth writin this day. They alwayes keepe great Watch and which was a sale of the continued of the continu ward vpon this frontier. Many youthes of these Tartars remayned in China, and namely in these parts of Paquin, there are many which keepe and maintagne their Law of Mahomet, and haue Mezquitas or Turkish Temples, and are much different in shapes and countenances from the Chinais. Except the Souldiers, there is none that keepe Weapons in their houses: not became it is forbidden, but because there is no need of them : but rather the Learned and grane people, count it a dishonest thing to keepe Armour : there is no vie of them but in the time of warre. For you shall neuer see them fight with weapons one with another as wee doe. But their fighting is to buffer one another, to pull them by the hayre of the head, and to draw them by the coller, and in two words to become friends againe. Our men make no great matter of giuing buffets and fuch like, for they kill one another.

The Chinois are greatly given to Learning and studie; for all their honour and riches depen. 24 deth thereupon. They have aboue fortie thousand fundry Letters : though many of them bee made one of another. They have no A, B, C, nor any thing like thereunto, as among vs. But to fignific cuerie thing they have one Letter, and all diverse. Their words are of one fyllable, and no more, though their Letters bee so many. Those which are commonly vied every day, are eight or ten thousand. They begin to learne to write and reade commonly, when they be seuen years old : they write with Penfils. They have many little Bookes which encourage Children to flu-Penfil-writing. die, exhorting them to take paines, with the reward that they shall grow to bee Mandarius. They know not, nor studie any Science, neither Mathematickes, nor Philosophie, nor any Rhetorike fole such thing, but onely Rhetoricke: for all the substance of their knowledge and fame of Learned men, consistes h in nothing else, but to know how to make a very elegant Discourse and Oration 19 vpon a theame, like as in our Europe the Oratours vied anciently. And as the Chinose have good wits, and by hope of reward are verie appliable hereunto, they doe it with great excellenmore exact in cie, and occupie themselues with nothing elfe, and haue no other knowledge to distract them

Euery Doctor (after hee hath obtained his degree) fetteth vp in his Countrey before the

doores of his House a Title of verie great letters, which faith : Thu is the House of a Dollar: which all men haue in regard. And before the doore, they fet vp many high Poles like mafts, which euerie Mandarm of that Citie where hee dwelleth fendeth him, with a Banner hanged vp, and alwaies they remaine there. They make a verie excellent Arch triumphall, to him that hath the first degree, at the gate of his House. The Chinois effeeme more then we doe, the skill to bee able to write well, and Print euerie yeere a great number of Bookes, whereof there is no forceofbookes examination nor choise, and euerie man Printeth what hee list, good or bad, and so they make booke of nothing. The best which come foorth are of no Science: for as I have said, they know none: but they are onely of Morall fentences, to the advancement of good Customes and Gouernment. Their manner of Printing is not like ours : for they joyne not their Letters, but for euerie leafe they make a table which hath letters on both fides, it would feeme to bee very hard, EssePrinting, but with the custome which they have gotten, they doe it with great ease, speed and cheapenesse. I will send you some Booke well printed, that your Worship may see it. They also print Letters in white, I fay white letters, and the ground blacke. And though in the former they so come not neare vs, yet in this they goe far beyond vs. They vsually print these letters in Stones, and the letters stand not in the Stone vpward to touch the Paper directly, but in the paper and Printing white the stone they stand all one way : and this is the order whereby they doe this : They wet the Paper, and laying it vpon the toppe of the Stone, they gently beate it with some veriegentle thing, wherby the Paper which lyeth vpon the Stone finketh into the hollownesse of the Letter, and resteth lower then the other, then with a kind of Inke which they have for this purpose, they

lift with the greatest Mandains of his Kingdome, as well as with the basest people thereof. Yet for all this, of late yeeres there were many, who with great libertie and courage reprehended his faults by writing (which is the manner of speaking most publikely with him) that all men might read it. And though they might feare fome gricuous punishment (besides the losing of their Offices, for that was certayn) neuertheleffe, there were many men of courage which wrote 30 vnto him: among whom there was one very renowned : The letter which he wrote to the King, began thus. That although bee were affored, that he were so be hanged, and that the Fire were kindled to burne him, yet her would reprehend his vices and lendueffes, and the enill example that her gave to all Heroike zeale. bis Kingdome : And so hee did, and spake verie freely, and put him in great feare. And it feemeth that for his finceritie and courage, the King had some regard of him, and chough hee punithed him, yet it was verie moderately, There fell out another accident in this kinde within these few yeares, which because it is notable I will heere fet it downe. This King hath many women besides his lawfull wife, which among themselues keepe the order of first and second. Hee hath no Sonnes by his lawfull Wife. but he hath one which is the eldest of the third or fourth, and others youger of the second. The 40 Eldest by the custome or lawes of the Kingdome, is the lawfull inferitour, although he bee of the fourth wife : but hee bare more affection to the other and to her Sonne, and defired, by her Question of

In from all our other Inftruments.

perswasion, to aduance him to bee Prince, and would not have advanced the lawfull Heire. The the Successor time being passed to performe the same, many Mandarus lost their Offices, for reprehending him of this diforder, and for feeking to make him advance the Eldeft. But the principall Manderies of the Court perceiuing that hee proceeded on, and would not doe that which they requested, and which was reason, consulted together, and published a Proclamation, which commanded all the Mandarius which are in the Court (which are aboue some thoulands ) that vn. Thoulands of der paine of losing their Office, they should all meete at sixch a day, and sixch an houre, in sixch a Court Manda. place of the Kings Palaces. When they were all affembled at the day appointed, with their 50 Enlignes of Mandarins, they put vp a Petition vinto the King, faying, That fince fo often they Enlignes of Creaman ins, they pure that the made some account of them, not feeling to advance the true Prince, that her bloom left the would ferue been, that all of them would ferue the true Prince, that her floud feele those that would ferue been, that all of them would ferue for the street for the street floud feele those that would ferue been, that all of them would feele the floud feele those that would feel been that the flower flow that the flower oner their Ensignes of Mandarins, and would no longer serme. It seemeth the King was afraid of to great a resolution of the chiefest men of his Kingdome : And so hee commanded an Eunuch to goe foorth vnto them, and answer them, that they should resume their Offices in Gods name, and that hee would fulfill their request. Finally, they did effect so much, that they caused him to doe that which was reason; and so this yeere 1602. hee advanced the true Prince, of whom hereafter I will speake somewhat.

readie on their Instruments, and play gravely and leafurely. I heard certaine forts of Musicke, especially in the Palace of the King : to welcome me, the Eunuches his Musicians played vnto me awhile, and they pleased me : although in this, little it seemeth vinto me they may compare with our Countrey, yet it is certaine, that they thinke they doe farre excell vs. They have not aboue one kinde of Instrument, which the graver fort wie and make much account of, which is like voto our Harpe, although the fashion and manner of playing voon it, differeth from ours, and As in China there is no fort of people more honourable then the Learned men, and Doctors: Noble Spirit fo there is no people of better condition, and of more Honourable and more Noble manner of of the Manda-

proceeding. And albeit before they were Doctors and Mandarius, they were verie poore and vint. base people, and many of their Fathers officers of vile Offices, (as it is verie ordinarie) neuerthelesse, after they have obtayined the Degrees, they put vpon themselves a more honourable spirit. And therefore albeit in (bins, wee indured much trouble at the base peoples hand, yet the Mandoms did alwaies vie vs honourably and with much respect : especially now, for which cause now no man dare trouble vs. And if there beeany, which in title are like our Lords, Knights, and

Courtiers, they are thefe. There are among them, men of much excellencie and finceritie in their 20 Office, which doe feeke the common good : And without doubt they make vs wonder, that fee- Sinceritie of ing they bee but Gentiles, which doe nothing for the zeale of Gods honour, nor for his fake, they fome be of fuch finceritie, which they shewed of late more then at other times, in having to doe with

this wicked, vicious, and couetous King, which they now have : who though hee be so absolute The present a Lord, that with the same libertie, and in a manner with the same facilitie, nee doth what he Kings dispose

of the Gouernment of China : Of the Mandarins ; the China Comple. ments and manifold nicities.

Ow I have touched the state of the Mandarins, it offereth it selfe to speake of the manner of Gouernment in particular ; But I confesse vnto-your Worthip, that the multitude of Offices which they have is so great a frame, that I was not able to vaderstand it, to reduce it into order. Onely I will say in generall, that they have many

Gouernment good if well executed.

good things belonging vnto Gouernment, but not the execution: finally, it is a Gouernment of 10 Gentiles, with a thouland faults. There are no great store of Lawes, but commonly they decide Controuerfies of their owne heads and make Lawes in their Juridiction after their pleasure, each executed. Controduction of their owne means and make have in their authorities and their present, cut.

Laws lawless ry one district. And heere your Worthip may imagine, that the Gouernment in the practice cannot bee very just, fince every one that can tell how to make a good theame or exercise, are not sufficient to bee Law-makers: And it is very ordinarie among them to direct all things to their owne profit, whereby of necessitie, they commit many absurdities and wrongs, and take all that they can get: Bribes are vitall, and men vie these more then any thing else: and though one of them know this fault in another, they all diffemble as being in the fame fault, that others may winke at them. And though they feeke to hide it one from another, yet it is like the fe-

State and

The Mandarius are many in all Cities, but very extraordinarie in the Courts of Nanquin, and Pagnin. For in this Citie of Pagnin, befiles the Mandarins of Armes, whereof no great account is made, and are more in number then the rest; and besides those which alwayes repaire thither, vpon the business or all the Provinces: Those that properly belong to this Citie and Court, ate aboue two thousand and fine hundred: who all, or the most part heare Causes ordinarily twice day; so that wee cannot imagine what businesses occupie so many Mandarius, nor what is the Iuritdiction of euericone. The most principall which are in all the Kingdome and heere, ate fixe, Prefidents of fixe Councels, being the chiefert of the Kingdome. There is one, which is the greatest, to whom belongeth the government of all the Mandarins of the Kingdome, to advance them to higher Offices that doe deserue it, and as much as they deserve, to chastile and to de- 30 grade those which badly performe their Office: which because it is a place so great and honourable, the Chinois call him, The Mandarm of Heanen : who proposeth all these things to the King, as to promote, to advance, to difgrade the Mandarins, and the King confirmeth them : So that all the Mandarins how small soever they bee; that are in all the Kingdome, are appointed by the King. The second hath the charge of all things belonging vnto Ceremonies, as well humane of Courtelies. and ceremonies in all royall Acts, as in making the King, the Prince, and in marrying of them, &c. And all that which belongeth to the worship of the Sacrifices of the Duad, and others which the Kings offer to Heaven and Earth. There is another chiefe of the Councell of Warre : another of the Kings Treasure, which taketh the account of the Kings rents: another Councell is of the Workes, as of the Kings houles, pronision for all things neces-40 farie, for the Walls of the Cities, &c. There is another of Chaffisement, whereunto causes criminall and sentences of Death due belong. About these (sixe) there is onely one Degree, which are absolutely the greatest, before whom whatsouer the King doth in anything is consulted of. Although it bee true, that these be rich and opulent in the conceit of the Chinois, yet none of them in any thing may compare with any of the meanest Lord of title, of our Countrey. The wages which they have of the King is small: the attendance which they have, is of base people, and of small countenance, yet they are much respected and obeyed : And the common people kneeleth vnto them, as to the Manuarins. The common chastisement which all the Mandarins doe give, is to whip them with peeces of Canes, of foure or fixe fingers broad and thicke, wherewith oftentimes they dye, when it is Lyd on foundly. Whipping is as common as it is to 50 whip Children in the Schoole : And sometimes for nothing they give a dozen stripes, as well to the Plaintiffe as to the Defendant, and therewith they end the Suites, and they stay to give none other fentence, but fay : Gine him twentie stripes,

Vitally when the Mandarms of any State goe through the fireets, men goe before them crying, or making a noile with Infruments, for the people to give place. And in particular Cities, when a great Mandarin palleth through the streets, all men hide themselves and goe into houses, and the Handicrafts-men cease from their worke, and that in such fort, that I saw once in a Citie in a street of great trusticke, a Mandarin appeare, and in a moment enery bodie got away, even the very Dogges, with exceeding great filence : so greatly they bee reuerenced of all men. And many carrie Chaines trayling them before them, and other Instruments. But in the Courts 60 (though the Mandarins bee greater) the people runne not away, they doe no more but give way that thy may passe. In the Courts many Mandarins, though they be great, side on Horl backe, and others in Chaires: but besides them, all goe in Chaires carried on mens shoulders, which we cording to their Offices are two, or foure, or eight.

Euery Prouince hath a Visitor, which publikely visiteth the same euery yeere, and taketh in-Visitors. formation of the Mandarines. There are fecret and prime Visitors. Sometime one is fent : But it is no viuall thing, and as I haue heard, it is long tince it was left off. I speake this, because I alwaies heard when I was in Spaine, that the Chinois vied this manner of Vilitation.

The Visitor onely may give sentence of death. They be not cruell in punishments by death. Punishment by Onely the King vieth iome cruell execution : and namely this King that now raignest, which deathrare. is a very wicked man. One of them is that which lately hee caused here to bee executed voon eight men, by the great frosts of Winter, for no great offence for so cruell a punishment, and as The great they fay, fallely imputed : And this it was : Hee caused their neckes to be put through a thicke frosts of Win-

CHAP.6.S.7. Vifitors, punishments, Apish humanitie, or tedious salutations.

10 planke, which taketh a great part of the head, and they fet the plankes to stand vpon Formes, tet in Paquine to that the man standeth upon his feet day and night in the middest of the street, with men to watch him. Hee condemned them to this punishment for three moneths : but they died before fifteene dayes, with their legs all rotted, and burit with flanding alwaies on foot : I my felfe faw them stand on this fashion, which pitied me extremely. I neuer faw nor heard of any other cruell punishments; though, as I have faid, often times the Mandarines kill them with whip-

ping, which is a very cruell thing. The Chinois are very curious in writing of newes, which viually they fet out in Print, and Bookes of in a very (hort space disperse them through all the Provinces. There are alwaies Bookes where- news. in all the Mandarines of the Kingdome are written, as well their names as their Countries : 20 And because they be changed every foot from one place to another, they blot out and put in the

names as foone as they know them, with great facilitie.

One thing among the reft is (wherein they bee very dutifull and prolixe) in their manifold courtefies, which are of many forts, according to the estate of him with whom they have to Complements doe. The vitall fathion is when they vitite one another, the firanger is fet on the most honourable hand (which in some places is the right hand, and in the Northerne Provinces the left) and ment. That putting one hand in the sleeue of the contrarie arme, which is very long and wide, they lift vp which is in a their hands fo fastned together, then bending their (bead and) body downe to the ground, fay- little letter is ing, Zin zin, which is of no fignification but an interiection of vrbanitie, their bowing veneration they added out of ing, 2.11 2111, where is of no jeginjication can be missing of visionite, that overing visitation ton. Triguitius. eall, Zo ye: they change places to repay courtefies. After this the Guell fitteth downe in " the "When they

30 Chaire of the Master of the house, and the Master of the house another besides that which the salute in the Guest hath, and each of them setteth them in their due place, which is the strangers Chaire in the street, they highest place, diltant from the wall, and the Chaire of the Master of the house is set in the midst turne to the highest place, distant from the wall, and the change of the lowest place, one over against another. After this (when they have ended their falutations) fide: at home they straightway cause a drinke to be brought, which they call Cha, which is water boyled with to the head of a certaine herbe, which they much esteeme, for this is a want of civilitie and courtesie: and at the theboufe. least they must drinke of it twice or thrice. He bringeth forth some Fruit or Sweet-meat, and a which is a-Spoone to take it vp. If the Gueft stay any time, straight without faile they will bring out some gainst the thing to eate, but with some preparation, answerable to the occasion and person; whereon they ward also their eate very little, vnleffe it be at the ordinary houres of feeding, and then they cate formwhat more. Temples and

When they visite one another (vnlesse they be very great friends and familiars) a Boy goeth Halls for enalway before, which carrieth a Libell or Booke of vilitation, which they call Papere, which is as terraynment alway before which carrieth a Libellot Booke or vintation, which they can a spire, which is being made much as, A Paper of vifitation: And this name neuer faileth, for alwains they we it: which doore the control of t mutitaes, are ager of visionium.

with the doors but mane with model epithets (as many perhaps as Visitors) are written, according as the quality is to the South. of them that vitite, and those that are visited; to is the manner most different whereafter they Che or Chis a Write the fame : to wit, with more humility, either as our better, or as an equall, or as an infe-dinke made riour, as a scholer, or as a master: for as the relations are many and particular, so the fashions and with a certaine manners which they yie are divers. Of their chings, and of all that hereafter I shall say touching berbe, this point. I will send out the sympler in their court. this point, I will fend you the examples in their owne parers of vifitations, which great Man-tingpaper. darins, and ordinary men brought vnto vs, fetting down in our tongue vpon every letter the de- Thefe Libels

50 claration thereof. And I doubt not but your Worthip, our most deare Fathers, and Brethren, and confist of 12. as many others as shall see the same will reioyce thereat. And when that Paper is brought, they Pages of white carrie newes into the boule to him that is vilited, which prepareth himselfie to receive his Guelt, paper a palme which comment within a windle after. When they he not people which the form the property of which commeth within a winle after. When they be not people which they see enery day, they &c. see Ric. vie not ordinary apparell in their vilitations, but they have garment proper for this purpole, of per. 66. a farre different fulhion. And if by chance one come so apparelled, and another he not, he sayth, Salutation or that he durst not salute him, nor receive him before he had put on his apparell, so he getteth him visitation. away in great hafte to put on his apparell, and then they begin to performe their complements. When the Guest departeth, hee alwaies goeth before, and at their going out of the doores

they vie falutations, and offers of courtefie; according to the qualitie of the Gueff, and the Ma- Taking leave. 60 fter of the house, so he bringeth him more or leffe way, or vnto the street : or it he goe so fare, he stayeth till he take his Chaire, or his Horse, and then lifting up their armes and sleeues unto their heads they take their leaues and depart one from the other. When they are departed, the Visitor and hee that is visited, each of them fend a Boy to give one another thankes, one for his vilitation, the other for his good entertaynment and friendly viage. If hee that is vilited be not

at home, they leave the Paytre at his house, which is a token that hee came to visite him. Hee that is vilited is bound to requite his vilitation prefently, or the next day, if he bee a man of Worthip, or if they be equals, within three or four dayes: which payment is performed after the selle same manner : and if hee finde him not at home, it sufficeth to leave the Payne there, If hee that requireth the vilitation bee a farre greater person then the first which visited him, (as if he be some great Mandarm) hee which first visited him, returneth the next day in person with a Head placeof he giueth him thankes by word of mouth. When the man which wifireth is of great Worthin hee fendeth word a good space before with a Pegire : and the Master of the house commeth forth hee fendeth word a good space perior with a raying a share Houses and Lodgings, have always to torceine him, and to bring him into the houle. All their Houses and Lodgings, have always 10 to the house him four whose shares the always 10 to the house him the house him. an head and more honourable place (which is the highest part) where alwayes they place the Great Letters Guest. Likewise in their writing they vie a great difference, according to the citates, Dignitic and Age : and in their Letter, the greater the Mandarin is, they vie the greater Letter : those that are equall, or inferiour vie a very small letter : likewise they observe the same order in speaking to energy one according to his qualitie. When they meet in the fireets, the ordinary courtefie, is, to put their hands into their fleeues, & clofing them together to hold them vp, & to vie a common speech, which they have for this purpose, When a couple enter into new acquaintance, they doe yet more, and that is, they kneele downe, and touch the ground with their head so often, and

tance. Sending Pre-

for great per-

374

with for great ceremonies, that I dare not speake of them, left I should never make an end, When they fend Prefents, they write downe all things which they fend in a paper, as they to doe their speeches, with words of Honour : whereof I send likewise examples to see, of very grave persons which sent vs Presents. And whether the partie receive the Present or not, or only a part, he alwayes fendeth backe another paper with certaine red lines (as herewith is to bee seene) with a Letter which sayth: I thanke you much : And when he receiveth the Present, hee alwayes gineth fome money to the youths that bring it : and hereby he remayneth bound to anfwer him, with another Presentas great at the least: And herein they be very precise, especially persons that are not of the greatest account. A thing which I finde very strange, and which doth put vs to much trouble, to be driven equally to answer those Presents which the greater Mande

rins doe fend vs, for they alwayes defire some thing of our Countrey, and here we are very poore. They send vs somtimes from Macao some Clockes of sand, or Houre-glasses, some Kniues, some 20 cases of tooles for Surgeans, and other things: for they much esteeme all things that come from our parts : and with these things, which in our Countries are little or nothing worth, heere wee procure friends, which stand vs in exceeding great stead to conferre with them of our holy Faith, and of the faluation of our Soules.

Innitations

Besides their Presents and visitations, they have Gossippings and Banquets, whereunto very viually they inuite one another. When their be very folerane, they fet every Guest two tables for himselfe, one of Flesh and Fish, &c. another of Fruits and sweet Meats. When they be not so so lemne, one table for every man, or two at every Table; they provide for these Guests great diverfitie of meates well dreffed and seasoned, which they bring foft and fayre one after another, that they may be hot. When they inuite one to a Banquet, they fend fixe or feuen dayes before a pa-40 per, wherein they isuite him against such a day. If hee cannot come, he sendeth another paper, wherein he faith, I excuse my selfe: If he excuse not himselfe, he is resolved to come. This paperis fent with many words of courtefie, & with much honour. On the day appointed in the morning, hee sendeth another to inuite him againe for the selfe same day : and at the appointed houre, hee fendeth another to pray him to come : and then hee goeth : If any of these messages should fayle hee would not goe. When he is gone to the Banquer, they wie many other ceremonies: But the most adoe is, about their places, so that it is long before you can place them, and allot out the roomes how they shall sit, because they ever seeke, or at least make shew that they seeke to give the chiefest roome to others. They feed not as men vie to doe in our Countrey : neither seemeth it that the Feaft is made to feed, but onely they taile of some small thing for fashion fake; and 50 they drinke very sippingly in small Cups of Porcelane, each of which will contayne fine or fixe Thimbels-full of Wine; and heerein and in deniting, they spend fine or fixe houres at a Banquet, and goe home an hungred. And thus it happeneth vnto vs ; although wee feeke to excuse our selves from them as much as we can, because wee lose much time, vnlesse it bee some great Mandarin, who we feare would take it evill, if wee should deny his request. When the Banquet is ended, the next day enery one of the Guests sends his Boy with a paper, wherein hee thanketh his Heaft for his good cheare.

Feafts to tafte

Chineis Com-New-yeere.

Heere your Worship may see, wherein the Chinois spend the one halfe of their life. For the greatest beninesse they have, and that wasteth most of their time, is in Visitations, Banquets, and fending of Presents. And the time wherein they most of all vie the same, is their New-yeere, 69 which lasteth fifteene dayes : their Birth day, which all of them keepe with great folemnitie: or when they goe foorth, or come home on a lourney. And to end the whole yeere, I fend you fome Papers of vifitation of all these things (whereof they have sent many vnto vs) that your Worthip may fee (though you understand not the outward Letter) the manner and fashion of

this people, how farre different Salutations, manners and fashions, we fend you from the plaineneffe of our Europe, and especially of our Companie, But for the present, wee all thinks it necess farie to eate after this falhion, and to vie their cultomes, to obtayine more free accesse vinto them. and to winne them to Christ.

CHAP.6. \$.7. Papacie applanded : hypocriticall Excuses ; China Women,

There is a Turke heere, a dweller in this Citie, which aboue fortie yeeres agoe, brought one or A Turke differtwo Lions to the Father of this King : who, partly because hee knoweth no Learning nor Sci- specked. ences, and partly because hee sought not to apply himselfe to the habite, customes, and manner of China, there is none that will deale with him, nor come neere his house : And through the grace which God hath given vs, and because they see vs apply our selves to their Apparell, Fa-To shion, and Courtesies, all the gravest Mandarus come home to our house to visite vs, and doe vs

the fauour, to hold vs publikely for their Friends : which they vie not to doe, to their owne Countrey-men, of our qualitie and condition : prayfed bee our Lord alwayes, Amen.

I will not omit to declare the great pleafure, wherewith these learned Chinois heare the great confent of the things and ceremonies, of our holy Faith in Europe, and that wee have Bishops, and, as we call them heere, Mandarins, and superiours in Spirituall things: and about all, they The Hietarchy reioyce exceedingly to heare of our Pope, that being so great a personage they preferre a Lear- applauded by ned and Holy man by way of Election, and not by Succession, and likewise the obedience and chinese. fubjection which other Kings doe yeeld vnto him; and that there have beene many (as wee told them) who being chosen Popes, refute it in good earnest, and by no meanes will accept the 20 same : and that we have all things which concerne the Law of God and good manners, fet downe

in writing, with all other Bookes concerning him, or his Ministers. And although that which I have spoken hitherto of our high Priest, is a thing very apparent and true, and wee delivered it for fuch, and they fo understand it : yet oftentimes they have giuen vs occasions of laughter. The first was, That when wee told them, that some refused so great an Office : ftraight-way they aske, where you lay that they refuse it, is it not euident that their excuse will not be accepted : As who should say, of they would accept of it, who is there that would make an excuse? And thus they say, because they doe so themselves : for when great Of- Ridiculousnis fices are bestowed voon them, ettsoone they offer vp a Petition, making a thousand excuses to ceite, the King not to receive them : and they defi e nothing leffe, neither can any thing happen fo 20 grieuous vnto them, as to accept their excule. But viually they be not admitted : though some-

times they bee, to their great griefe of heart, as I my felfe have feene : But to excuse themselves, or to refuse with some danger, is the vie to common, that they will not fayle to doe so : for if they should not doe so, it were more certayne that they should goe without the Office. The fecond thing that made vs more to laugh, is, that many of them tell vs, that if wee would returne into our Conntrey, without doubt they would make vs Popes: The reason (though not openly) which they yeeld, is, that wee haue a great aduantage about other men of our Countrey, to wit, that wee have seene, and studied, and understand their Bookes; because that they onely, in their opinion, can make a man perfect, and generally seene in all things. Such is the high conceit and reputation which they hold of their Bookes.

ø. VII.

Of their Women: Of the Tartars Conquest, Alls and Expulsion. The greatnesse of the King, and neighbouring States. Of the Queenes Eunuches.

Will conclude this Letter with two points : the one concerning the Women, whereof I haue little to fay : and the last is of the King, and of his Palaces and Services. Euery man (as I faid before) may keepe as many Wives as lee will, and so they

doe: which is the cause of many tumults, quarrels, and disorders in their houses a- Polygamie limong their wines, and among the Sonnes of diners Mothers: and therefore when wee tell them, tigious, 50 that in our Countrey no man marryeth but one Wire, they neuer are fatisfied in praifing it in words, though neuertheleffe they doe not follow it, nor put it in practife. And the difcontentment which the Women haue among themselues, and with their Husbands for this occasion, is like to prooue agreat encouragement vnto them, to make them defirous to receive our holy Faith, and to perswade their Husbands to embrace the same, seeing that it doth not permit any more but one lawfull Wife onely.

Of their other Conversation, Customes, and other things, weeknow nothing, neither is any Closeness of thing to bee learned : for they keepe house all their life time, and goe out of doores exceeding Women. feldome to visite either their Mother or Sisters, or nearest kinswomen, for they goe not to any clie, no not in thought: And therefore as they have no convertation, (but alwayes to keepe home) I can speake nothing of their behaviour. Their Apparell seemeth vnto mee houest and comely : (for fometimes I have seene the Wives of Officers, and of the poore people, for many of Apparell. them doe goe abroad.) In some parts of the Countrey wee have met many women upon the high way, in short garments, like to the men of our Countrey, without any difference, sace on

their heads, and their feete : for all the rest is all one kinde of Apparell ; but these are the common people onely : One of the greatest ornaments that the Women haue, is, to have verie little feete, and they are folittle, that they goe verie badly, and always they feeme to goe as though they would fall. I could not know the caule, nor the Chinois themselves know not the original occasion, why chis is counted for a beautie: albeit some say, it began not for a comelinesse, but onely with a purpose to cut off all occasion from them of going abroad.

Hifto: les of th: 11 Kings. Knowledgeof the Flood.

The Chinos haue beene very carefull in their Histories, and therefore they have histories of their Kings of aboue foure thousand yeeres. And if credit bee to be given to that which their Bookes report, touching those times, and is gathered by divers of their Histories; There are ma-Bookes report, concuming those times, and agreement of the pallo have forme knowledge in their ny more yeeres from the Flood to our dayes (whereof they also have been supported which transfer they are 10 Bookes) then the most followed and allowed Calculation among vs, which trate of that matter, doc allow of : for they fay, it is fixe thousand yeeres at the least. They say that they have continued Histories. But Heaue this, because I have not well conferred the truth and foundstion of the Chinib histories. At the least it is certaine, that they have knowledge of their matters, and certaine Kings within a little after the Flood, whenfoeuer it was. They had many ancient Kings, which were verie good men, which it may bee were faued in the law of Nature, because the heroicall workes of Vertue, which they report of them were great, and there is no record that they worshipped Idols, but some, that they worshipped the Lord of Heauen and durine contrary Earth. There were some that sought not to leave their lawfull Sonnes to bee their Heires, because they thought them not fit for Gouernment, but choose the wisest and best man, that they could finde, and left the Kingdome vnto him.

Moralitie and Nature midea Man-

This Kingdome in old time was divided into many small Kingdomes, vntill by little and little it was vnited. It is some foure hundred yeeres (25 I said before) fince a Tartar King posseffed it whollie, and two hundred, since a Bonzo or Religious man of China recovered it. This Mahumetan Tartar King, left some tokens of himselse in things that he did. Hee left in Nan-Mathematicall quin, certaine Mathematicall infiruments of Copper, the like whereof for goodnelle peraduenture are not in all Europe, at least not better. The Chinese Bonzo which expelled him out of the Kingdome, was a very valiant and wife

The China vin-New Lords,

new Lawes.

man, and there bee many Histories of his wisedome, and sentencious sayings, and judgement in man, and there bee many rationes on the wiscome, and which he ordayined in this King-hard matters: and the manner and forme of Googness the form. He was now of Googness and dome, which continueth inuiolable, doth greatly declare the fame. Hee made new Offices and gaue new Names to all of them: An viuall thing when one house beginneth to Raigne, to change all, even the name of the King, as also of all Offices, and also of many Cities. I omit the division of the Gouernment into fo many heads, and fo good distribution, that it feemeth (and fothe Chmois (ay) it is like to continue thoulands of yeeres, so that no man of the same Kingdome is able, nor hath any power to make any Rebellion of importance. For those which in former time revolted, were the Vice-royes of the Provinces, and other great Mandarins, in whole power were the Gouernment, the Souldiers, and the treasure. But hee divided it in such fort, that those which had power ouer the Souldiers, should have no money at all, neither should the pay of the Souldiers depend upon them : and those which keepe the Treasure must have no superintendencie and dominion ouer the Souldiers. Others which were mightie and rich, hee impouerished and divided their Authoritie and Revenues among many; and so there is no man that can call himselfe Great. I remember that I had read in a Booke, set out in the Spanish tongue, of the great power of certayne Captaynes, and because the King did not trust them, hee

uented by the policie.

> fent one of his house to will them to come vato him. All which relation, with many other things which hee reporteth of the prouidence of the King, how hee divideth his Authoritie among divers Princes, is not so in truth, neither in truth, neither is there any apparence thereof, neither have the Captaynes much authoritie, neither are they very rich : for though they have many people, yet the government of them is divided into divers heads, so that they can hardly affemble to raife any Ribellion, especially, be- 50 cause they remaine alwayes in the Kingdome, and neere about the King.

Renemie.

Expences.

The Reuenue of this King, without doubt, is exceeding great, and vntill wee have gotten is out of their Bookes (wherein every thing is fet downe very particularly) I will not prefume to publish the same, not as though I knew not that it is so, since whilest a man knoweth more of thu Kinedome, he doubteth leffe: Yet because I feare for all this that it will bee hard to make one beleeue the fame, which knoweth it not of a certainty; making the Accounts not very large, his Reuennes are one yeare with another an hundred Millions in Silver, Gold, Rice, and an infinite number of other things; although the greatest part is Silver. And he that considereth the greatnesse of the Kingdome, and that every man payeth Tribute to the King of their Persons, Lands, Trees, and other things (without carrying any Tribute out of the fame) that which I speake wil 60 not feeme excessive. But as his Revenue is very great, so his Expenses are many. For those which in this Kingdome doe live at the Kings charge are many, to wit, all the Chandarins to whom the King gueth Wages, all the Souldiers, all the Kinstolkes of the King, his Eunuches, and an infinite number of people, whereby his charges are exceeding great, although alwayes there re-

others fay, 150.

CHAP. 6. S. 7. State-contentednesse. The Queene and Concubines. Eunuchs.

mayneth a good deale for him to lay up; and there is no doubt but hee hath it in flore in exceeding great quantitie.

Many small Kingdomes round about acknowledge the King of *China*, and pay him Tribute, N ighbout as Corea, and others, whole names I know not, on this Northerne part : and on the fiele of Ma- Kingdomes. laca and Macao, many others. And fometimes on these Northerne parts they trouble him Corta or Corais somewhat, in robbing and killing of people. It may be that your Worlhip, or some bodie elie may demand, why the King of China being to great, subdueth not these small Kingdomes that lye about him to deliver himselfe of trouble ? I answere, that he wanteth no abilitie : but I will A Paradoxe. fay one fure thing, a Paradoxe to the people of our Europe, which is, That neither the Chinois, Io nor their King doe fleke, nor dreame of dilating their Empire more then it is. And this their Contentednes.

refolution is such, that although they would give them all these Kingdomes, they would not take them, & much leffe if they were farther off. For they hold it for one of the greatest miseries (especially the Mandarins & grave fort of people) to go out of their Kingdome to any other part.

There is one of the best Examples hereof that may be given: which fell out of late, and that was, that as by the danger which might grow to his Kingdome, if the people of lapon should none of China. winne the Kingdome of Corea, which is joyned to China by the mayne Land, as they began to doe; the Chinose syded the Coreans with many men: and the people of Lapon by the death of their King called Quabacondons, did wholly aband n it. The Kingdome remayned in the power of the Chinois, and fo continued two or three yeares. After which they whol-20 ly gaue it over, without any other greater respect, then that there were none that were

willing to goe thither to gouerne it, nor that the King had any need to annexe it vnto his Estate. And without doubt, it seemeth that he would doe the like with any other, although they would put it into his hands. And touching those Kingdomes which pay him Tribute, there is no great account made, whether they come or no : and their continuall comming, is more for the profit of those which come, then that the King doth desire it. And therefore the Philippine Ilands which in former times paid Tribute to the Kings of China, were made none account of when they ceased to pay it.

This King lath one lawfull Wife (as other men haue) in choice whereof they haue regard to nothing else but to her good qualities and externall beautie, for there is no Nobilitie to be 30 fought for. Besides her hee hath a great number of Concubines chosen after the same manner, whose Sonnes (if the lawfull Wines Children faile) inherit the Kingdome, which commonly Queenes fallethout, and fuch is he which now is King, and he which is to fucceed him. When any of these closensses. women be once entred into the Kings Palace to bee his Wife, there is no name which may bee compared vnto her in being kept close; for they may not only not greatroad, no nor bee seene of their Facher, Mother, or Brethren. They have little or none authoritie, but such as they obtaine of the King. Also the feruice of the King, of the Queene, and of his Concubines, is all by Eunuches, a service doubtlesse vnworthy of a King. All these Eunuches (without any exception) are of the most base people which are in all the Kingdome, whose Fathers (because they cannot keepethem when they were young) doe make them Eunuches, in hope that one day they 40 shall get into the Court to serue the King : the manner is farre different from some which are in

Europe : for these bee like those which the Turkes vie, Because their Fathers doe this for po- The gard and uertie, it followeth that they have no excellencie, for they have no meanes to learne it, and they all cut away. are little or nothing Learned.

They elect and choose these Eunuches from time to time to supply such as die, and this first yeare that I was here, they chose aboue three thousand, for which purpose there assembled aboue twentie thousaind (as they say) out of which number they made their choice. The Ble- Their numbers Ctors were a verie great Mandarin (to whom, as I faid before, the Kings private bufineffe belongs) and choice. and another Eunuch of the eldest and most private. The Examination and Election constiteth in two things, which are a good Countenance and a good Tongue : for proofe whereof, they

50 make them pronounce two words, wherein those that have not a readie Tongue doe shimble. When they are chosen, and gone to the Court, they divide them in divers Offices: yet at their Senice. first comming, they are appointed to waite vpon the old Euniches as Boyes, which make good triall of their patience, and obedience; and he that after certaine yeares sheweth himselfe towardly, they begin to employ in greater matters.

Of these Eunuches, the King hath his Musicians and Mathematicians, who, to bee briefe, I Ignorance. fay, have no found understanding in these things at all, but only for complement or superficially: vet some of them are bound to watch all night, and to looke whether any Comet doe appeare, or any fuch like thing in the Skie, to enforme the King thereof : and to performe other like Of-,

fices. They are visually versecouetous, and as they are bale, if they rife to bee prinate with the Couetonics. 6c King, some of them be proud and vncourteous. They serve the King as slaves, obeying his will which way toeuer he inclineth. The King chastiseth them verie sharp y for euery light offence: especially the King that now is, which is a very wicked man. He hash caused many tobe whipped to death, for some small matter wherein they have offended him. Yet there are some of them good and difer et, which the King vieth for dispatching of his businesse, and other matters

of weight. Though the ordinarie wages which they have of the King bee small, yet it serueth them well to line of, and therefore they goe verie well apparelled in many Robes of Silke verie finely wrought of divers colours, and the manner of their Cap and Apparell differeth from all o. ther peoples. There are of them in number, as they fay, about fixteene thousand of them in the Kings palaces, Hereby your Worship may see what Examples and Education the King of China obserueth, which spendeth all his time with these and with women.

The common poople neuer with the King. Law of Nations contem-

Emb-affager.

Although it be the custome of thele Kings, to shew themselves from time to time to certaine of the greatest Mandarist : yet they neuer luffer the rest of the people to see them, mor to speake with them; and when he speaketh with any bodie, they enter not into the place where hee is: but the King commeth forth to a certaine place. If there be any Nation among whom the Law to of Nations hath no place in many things it is this: for as they have no commerce with other Nations, to they have not the Law which is common to all men. And therefore they admit no Ambasiadour in China, valesse it be by the way of giuing some Present, the King not acknow. ledging anymeither doe they thinke that there is any in the World, which is able to deale with their King by way of an Embassadour. And if they bring any Message (as the lapons brought within thele few yeares, who came to intreate of certaine agreements , by no meanes they are admitted to the fight of the King, neither doth he give them audience: but some Mandarin doth accompany them : and the entertay ment which they give them, and honour which they flew to all strangers which come voto them is verie small. But as for the most part they have no great conceit of strangers, so their entertaynment is like to their conceit. Whosoeuer he be that 20 commeth into their Countrey, they shut him vp in a verie homely house, not suffering him to

The Kings Palaces are verie great; and albeit in the excellencie of Architecture they bee not comparable to those of our Europe, yet they much exceed in the hugenesse of Building. They have three wals foure square, the circuit of the first may be as bigge as the wall of a good Citie. Betweene the first and the second wall, there is a wall which enuironeth the greatest part of the House, and here are many Houses of the Eunuches of the lowest fort, which exercise Mechanicall Arts, or the like, as Porters, &c.

Betweene the second and the third wall there are many pieces of the Kings House, which is not joyned altogether, but in divers parts there be divers Roomes, built for divers purposes, one 30 answering to another. These parcels of Buildings which are here (which are euerie one as long as the Careere of an Horse, and very high) have no under Roome, but a great Building raised up with foundations of great Brickes, as broad and long as all the Building, wherein there are Gates of Marble from very wel wrought to passe from one place to another. This house or Foundation is about eight fathomes high little more or leffe. Aboue these are guilded Galleries, Tarefies, Hals, and Chambers, which on the out-fide flew verie gallant (which is as much as can be feene; for no man can get in to fee them.) The greatest part of them is of Timber, with many gilded Embossements, and many other pleasant Pictures. The Roofes are verie well made. The Tiles are of a farre better fashion, in mine opinion, then ours, and so even ioyned together that that they seeme to be all one piece : they are all anneled with yellow, which is the Kings Co-40 lour. To conclude, I say, that it seemed wnto me in multitude of Houses and greatnessea stately thing. Also betweene these wals the River runneth which I spake of: and to passe from one to another there are many faire Bridges of Marble made of very great stones : betweene these wals was one of the two fourth parts of the House, on which the fire from Heaven fell downe within these few yeares, and contumed it : and with the blowes of the stones which fell downe many verie great Houses were broken downe to the ground (as sometimes I beheld my selfe) and they remayned with many fignes of fire on them. They fay, that when this fire fell from Heauen, the King commanded his Sonne to kneele downe, and befeech The Heasen to be mercifull vato him, for he himselse was too wicked, and that the Heanen would not beare him. Within these wals are many Lodgings of the graueft Eunuches, who like Fellowes of Colledges line many in one 10 House, enerie one having his private Chamber. Herre betweene these wals are Mounts and Groues and other recreations whither the King repaireth to recreate himselfe. And the space of these wals is very great, for when I went to the Palace to teach the Eunuches which were in that place to trimme the Clocke, I passed before I came to their Lodging eight great Palaces, and on the other fide there were many more. The Lodgings of the Eunuches vinally are low and bad, for the Kings Seruants, yet very necessarie.

Third partf. -

River and

Bridges.

Fire from

No peace to the wicked.

Mounts and

Next after this followeth the third wal, where the King dwelleth, with his Wines and Children, and those which where his neerest fermants, whereinto no man entreth but they. And therfore albeit I have heard that it is a very beautiful thing & very much worth the feeing, as in very deed it sheweth to be : yet I cannot give any Relation of any thing concerning the lame in par- 60 ticular. Only this I fay, that when I was in the House of the Eunuches that were the Mathematicians, I went fometimes up into a Towre, from whence I might fee the tops of the Houfes, the Groues, and Orchards, and me thought that I never in my life faw so great a frame of Building, although I have feene many in mine owne Countrie. And therefore there are alwaies

a great number of Officers of all Offices, some making new Buildings, and others repayring the old. The King neuer goeth abroad, especially this King, and his Ancestors some one time and King a home no more, vnto a Temple which they have builded to The Heaven, and the Earth, where everie Priloner. yeare they offer Sacrifice. And therefore I know not with what pompe hee goeth abroad : But Temple of libe as in his femice he hath no men of qualities it cannot hee fuch as our Kines wis in their point. Heasen and like as in his feruice he hath no men of qualitie, it cannot bee fuch as our Kings vie in their going Earth. to Church:

There is a barbarous custome among the Kings, that when the Prince is advanced to the Kings. dome, within a fhort time after, all the rest of the old Kings Sonnes are to depart out of the

House to certaine places appointed for them, which vnto the third Generation are served like Barbarous v. 10 Kings, but they neuer come more in the presence of their Father, Mother, nor elder Brother; and fige of the therefore there is great lamentations of their Mothers at their departure. The Posteritie of these Kings Childoe alwaies remayne as Kinfmen, and with the name of the Kings Kinfmen. To all these (which dren, are very many) the King giveth sufficient mayntenance, which is no great matter. They never beare Office; and deale with other people, and marrie with them, without doing themselves much good or none at all in being the Kings Kinfmen, nor purchase any speciall authoritie thereby. Other Kinsfolkes of the King, married with the Sifters, Daughters, or Coulins of the King, or Queene, although they have fufficient to live vpon, yet have they exceeding small authoritie, and haughtinesse. And herein, nor in any thing may they compare with the Mandarins.

Here came to visit vs one married with the Sister of this King that is now , ina Chaire with 20 three or foure Boyes to wait on him. Another came oftentimes married with the Sifter of the Wife of the Prince that is to inherit, on Horse-backe with one Boy only attending on him; and hee entreth into the Examinations that hee may proceed Doctor and become a Mandarin : So litle is the benefit that groweth vnto them by the Confanguinity or Affinity of the King which are joyned vnto him thereby.

Here the time faileth me, though neither matter, nor defire to give contentment to your King Afficie Worship, and the rest of my most deare Fathers and Brethren , neither doth nor shall ever faile and Confee

me. And therefore if I shall understand, that they take this in good worth, I will give Relati- guintie, links on of that which shall fall out here by the helpe and grace of our Lord, to whom I humbly be-worth. feech all of them to commend mee.

I fend here withall two Maps of this Kingdome of China, which came to my hand after I Maps of China. had written this Letter, and Relation. I fought to translate all that which is contayned in the China Letters; which is all the Rent which every one of these Provinces payeth to the King of China; and to make a description of all the Houses which enerie Prouince hath, and how many people, and many things elfe: But your Worthip may beleeue that by no meanes I had leviure s and therefore I fend you only the figure, and another yeare (if it please our Lord God) I will fend you the fame with the declaration thereof.

All the rundles and squares which are therein are Cities , or Fortreffes of many Inhabitants, both of them walled about. There is no Towne here fet downe that it is not walled : the others

The Rivers are well diffinguished. The great lines are the limits of the Provinces : the other small lines, and of little circuit are the Iuridisdictions of some one principall Citie.

We print here another Map of all the World of our manner with Chaife Letters, which beand wee want time to declare the Letters, I fend not till the next yeare, which then we will fend if our Lord grant vs life.

I fend you many other Papers, that your Worthips may fee the fa hion of the Letters of these people of China, and what Characters wee committed to memorie. From Paquin, beeing the Court and Royall Citie of the King of China, the ninth of March, 1602.

cap. 2+ the nrft being a place; The duers mames of this

Here in the au. His vtmost Empire in the East, hath beene made knowne to Europe by divers appellations, as that of Pelemey, fina; that later of CMercus Peulus the Pentium, Cathey; and that most of Warren Pentium, the Cathey; and that most visual received from the Portugal, which call it China. I seem not pellation on all to that this is the Region of the Hoppophagica Hof-featers, a meat three as common as Beefe here: as allo that this is the Region Series or Sider; for the Arman Cathey; the Common of the Hoppophagica Hop much as there is no Kingdome of the East where Silke is found in that quantitie;

and the Portugals ship it thence for lapon, and all India; the Spaniards also of the Philippina L. Lands, fraight their ships therewith for all the American World. Moreover, I find in the China Chronicles that this Silke-worke was there two thousand fix hundred thirtie iix yeares before the Birth of Christ : whence it passed to the rest of Asia, to our Europe and to Africa. But in 30 this varietie nothing seemes so strange to me, as that all these names are so strange to them, not knowne or once heard of, although the change of names be not strange to that Countrey. For as often as the Empire passeth from one Family to another, according to the vicifitude of humane Affaires : He which attayneth the Throne, imposeth a name at his pleasure. So hath it beene The china: I flometimes called Them (which fignifieth exceeding) farge) another while In, that is, Reft, after far eighanthar functified by His, or Great; Sciem, Advised, Chen, Perfeit; Hon, The Milly may in Honging ging names & 30. And fince this Family, called Cin, which now holdeth the Sourreigntic, hath reigned, it is called Mm, which intimateth Splendour, and by vivall addition of one tyllable Ta-min, that is, the Kingdome of Groat Splendowr, Brightnesse or Glory. Yet doe few of their Neighbour Nations observe these changes of Names, whereby each of them almost, stile it by severall appella-40 tions. Those of Cocin, Cauchin-china, and the Siamites call it Cin; the Iapanders, Than; the Tartars, Han; the Westerne Swacens, Catas. Also amongst the Chinois themselves, besides that atbi rary name to imposed by their Kings, it hath some common to all Ages. Such are Ciumon, Conceitof the that is, the Kingdome; and Chiumboa, which fignifie tha Garden, a name arifing from their Geo-Earthsforme. graphy, beleeuing indeed the roundnesse of the Heaven, but a squarenesse of the Earth, and th eir Kingdome in the midft thereof, a conceit growne out of conceit now by better instru-Ction of the Icfa its.

The Kings

China Sina or

Cather, Vo-

knowners

them,

Their King is called Lord of the World, and they supposed accordingly that their Kingdome contayned the principall part thereof; not deeming the Neighbour Kingdomes worthy to bee called Kingdomes, which yet before their Commerce with Europeans were all they knew. And 50 not vinworthily is the name Great prefixed to their Kingdomes appellation, beeing the greatest Kingdome in the World, which at this day carrieth One Name, or hath done in former times. For Southward it beginneth in the nineteenth degree, at the lle which they call Hainam, that is, the South-Sea; and runneth into the North to the two & fortieth, even to those wals which diuide the Chinois from the Tartars. The longitude beginneth from the one hundred and twelith (reckoning from the Canaries) in the Province Tunan, and extends East-ward to the Sea in one hundred thirtie two. These Dimensions wee have observed in divers places of the Kingdome where we have passed, by Astrolabes and other Mathematicall Instruments; adding also the obfernation of Eclipfes in their Almanacks, where the Moones Change and Foll are juftly described, and specially by authoritie of Cosmographicall Plaines. Year others which shall come of 69 ter vs shall more exactly observe the longitude (which I dare by will be no great matter) I shall not vnwillingly yeeld. Hence may be observed that this ample Kingdome is for the most part The temperate within the temperate Zone; neither doth it extend fo farre North-ward as some Maps hand deferibed by many degrees. And left any should thinke that some great parts of so large a Domi-

Fu; the most of which be the twelne or sifteene Cities of reasonable quartitie, besides Villages, Hamlets, Castles and Townes. In these Provinces we two bundred sortie seven greater Cities, called Cheus howbeit sometimes distinguished from other Cities rather in disnitie then largenesse) of vulgar Cities, which they call Hien, 1152. Of men growne to ripe age, which pay tribute or poll money to the King, were then Ic fiftie and eight millions, fine hundred fiftie thou fand, 801. In all which the female fexe is not reckoned: and of the Masculine are omitted, Boyes, Touths, Eunuchs, Souldiers, the Royall kindred, Magistrates, Students, and very many others. And of the Souldiers, although there be a Supine peace (except some

Tattatian assault sometimes ) there are maintained in the Kings pay, and in perpetual Armes, about ten "hundred thousand. For the three Northern Proninces are almost halfe in pay, In that booke are num- "Somelay mabred Kingdomes adiopning to that of China and tributarie; to the East three, to the West fiftie three, to my more tee the South fiftie five to the North three. Tet I observe that nothing so many doe in these dayes pay tribute, the Map and and the few hich doe, carry more from China, then they bring thather : and therefore the Chinois care not notes, much whether they continue loyall or no.

To the worth of this Kingdome, may bee added, the fortification by Nature or Art round about it. To the South and East, the Sea washethir, and so many Ilands guard it, that hardly can a Fleet of Ships approach the Continent. To the North, fleepe pracipieer are loyned together, with a continued Tract of 405, leagues, and exclude the Tartars affaults. To the Northwelt is a landy delart of many dayes iourney, which prohibite passage of an Armie, or minace their burialis. The South-west hath great Mountaines and little Kingdomes to preuent feare on

From this largenesse of Territories proceeds such divertified varietie of things growing in that Kingdome, some in the torrid, others in the colder or in the temperate Zones: what some The commois required to the necessitie or delicacie of food or raiment being there naturall; nothing being dises of think here in Europe but either is there, or a better supply : Wheat, Barley, Panike, and other Corne; Rice, Pulle (in some Provinces two or three haruests yeerely) fruits and Apples of the best (Nuts Fruits of all

and Almonds excepted ) Figs and others wiknowne in our world, as the Liegas and the Longa- forts, nas in Canton Prouince onely ; the Sucufusa or China Figge, or Apple to called, because they may dry it as they do Figs, & liker to a Peach red, without hoatineffe or Hone : in Oranges, Citrons, Limons they exceed all places. So doe they in goodnesse and varietie of Gardens, Herbs, as being there much vsed, some for religion, others for powertie eating nothing else. Flowers have there taken up their bowers , admirably varied, more respected for fight then fent ; the Art of diffuling fweet-waters being there vuheard of. In the foure Southerne Prouinces grow Betre or Betele leafe, and the tree Arequa or Arequeira, so much vied in India, and chewed all day long for their fromacke and teeth. Sefame Oile is both odoriferous and plentifull. Wine is not

Iq

there fo good as in Europe (the Grape being neither plefant nor frequent) made of Rice and o-Hogs-fieth is common food : they have Buffails, Muttons, Goats-fieth; Hennes, Duckes, Fieth for food-Geefe, innumerable: Horses also, Asses, Mules, and Dogs-steff are food, and shamble commodities. In some places superstition abstaineth from Beese and Buffalls, Venison, especially red Deere, Hare, and divers domestick creatures are common; all cheape. Their Horses and Beasts of labour are not lo goodly as in Europe, but more in number, and therefore in cheapneffe. The whole Kingdome is very commodious for passige by Rivers both naturall and hand-made: Passige by whence the number and kindes of shipping is incredible; infomuch that a moderne Writer water. hath anerred, that there are as many which keepe on the waters as on the land; an Hyperbole,

50 yet not lo exceeding the truth to fuch as faile thefe Rivers, as may bee feene to others. I am of opinion, that there are as many Ships in this Kingsome, as are in all the world befind in freshwaters : for their Sea-hipping is fewer and not comparable withouts. But to returne to their ping and water Horise the Chimic boom not have a dwellers. Hories, the Chinois know not how to manage and breake them but by gelding ; fo that their Horses for service are innumerable, but so viscerusceable, that they will not indure the neighing Horses. of the Tartarian Hotse without flight. They snoot them not with Iron, so that in rockie and

Befides the Seas plentie of Fish and Rivers, they are stored also in Lakes, feeming for their Fish. depths and largeneile petie Seas. They have more flore of Fish-ponds also, then in these parts, whence the Market is daily furnished. Their Woods have no Lious, but store of Tigers, Beares, Wildeberts. 60 Woolnes, Foxes. Elephants there are not, but for pompe some kept at the Court in Pequin, Woolaes, Foxes: Elephants there are not, but for pomperione and a bandance of Cotton, brought from other places. Flaxe they have not, but are supplied with abundance of Cotton, Cotton. the feed whereof was brought thither foure hundred yeares frace, and hath so liked the soyle, that the whole world, as may feeme thence might have fufficient. Of Silke-workes wee by Sale of down no more. Of Hempe, and of some other Herbs, they make many clothes, especially for Summer

vie. They milke not their Sheepe; they sheare them, yet make no cloth of the Wooll (not withflanding, woollen-clothes brought thither by Merchants is well fold; but light Summer clothes for blankets and other fleight vies. The North parts, though neerer the Sunne then some Regions in Europe, are colder, the great rivers and lakes frozen over, of which we can give no reaion, but the neighbouring Mountaines of Tartaria: against which they are furnished with choice Furres.

China Porcelane, Buildings, Chia, Varnish, Fire-workes, &c. LI B. II.

Metalls.

All forts of metalls are there found. They make besides Brasse and Copper, another shining like Siluer, as cheape as the yellow Braffe. Of molten Iron they make Kettles, Caldrons, Belle Mortars, Ordnance, and other things. Their Gold is cheaper then with vs. Silucr they vie for money, diffinguished not by flampe but weight, in all bargaining fing the ballance, which is to made the more incommodious for the differing goodnesse of the Siluer, and frequent allay and fraud. In some places are Braffe farthings. Place and Gold vessells are vied by the greater, but nothing fo much as in these parts. The women spend much Gold and Siluer in heir head-tires. The vulgar vie earthen dishes, called, I now not why, porcellane; the best whereof is made in the Kiam fin Province of a yellow carth. It endureth without riving hot meates, yea as woodden dishes here with a wyre, they sowe the rifts and make them hold liquor. They make Glasse, but therein are short of the Europeans.

Chap. 4. Of their Arts in China. This is not to be vn ferftood of Temples. &c. as may ap-peare by Nan-

gun Temple, Ponting.

Their houses are of Timber commonly, cuen the Kings Palaces, the walls which serue for parritions of roomes being sometimes of Bricke, but the roofe suffained by Timbers : which toge-

ther with their shipping argues their plentie of trees. Oakes are tare, but supplied with a hard 20 and eur tlafting wood with them vied for coffins, in which their curiofitie will iometimes foend a thousand Duckets. There is also store of a kinde of reed, which the Portugalls call Bambu, of almo! Iron haranesse, the roundnesse scarcely compassed with both hands, and serves for smaller posts; the lesser of them for Launces and other vies, For fire they vie Wood, Coles, Reeds. Straw, and a bituminous substance called Mai (a kinde of Mine-cole or Sea-cole) which is most and best in the North, digged out of the earth. Of medicinable herbs they have divers, specially Rhubarbe, sold for tenne halfe pence the

pound : China Wood, or holy Wood growing in defatts naturally, and thence taken for no other price but the labour : Muske ; Salt both made of Sea-waters, and of others eafily in the Continent; Sugar more common there then Hony, though both plentifull : Waxe both of Bees, and 30 another whiter and burning better made by certaine wormes, which therefore are nourifhed in trees : another also made of a certaine fruit : Their paper is not so during as ours, nor can endure

I omit their parti-coloured Marbles, their gems, colours for paintings, odoriferous Woods. &c. I cannot paffe by fome raricles; as their thrub whence they make their drinke (id. They Cha, Chia, or Cia. gather the leaves in the Spring, and dry them in the shadow, and keepe it for daily decocion. vfing it at meates, and as often as any guest comes to their house, yea twice or thrice, if hee make any tarrying. They fup it hot , bitterish to the palate , but wholesome : not of ancient vie, for they have no ancient Character in their bookes for it. The lapanders pay deare for it, ten or twelve Duckets a pound for the best, and vieir otherwise, putting the poulder of the leafe 40 to hot water, as much as two or three spoonefulls : the Chinois put the leaves themselves into the hot water, which they drinke, leaving the leaves behinde. They have also a bituminous subflance like milke, thrained out of the barke of a tree, of pitchy cleaning, whence they make Sandaracha, a varnish for their houses and houshold, ships, and other things : yeelding a smooth touch to the hand and glaffie splendour to the eye with long continuance. Thus can they more then counterfeit the colours of any wood, and hereby are prouided against prouisions of Napery, this feruing for Table linnen; they recouring any greafie contagion with a little rinfing of water. They have an Oyle also pressed from an apple not valike it in vie, but not fore-

They have Cinamon and Ginger growing, Pepper and other Spices are brought from other 50 parts. They have flore of Gun-powder, not fo much for Artillerie ( which they can vie but meantly) as for Fire-works in pompous spectacles, thereby representing, Trees, Fruits, Battels, and other things with great Art and colt. We faw at Nanquin, in the first moneth of the yeere, as much this way fpent as would have ferued a continued fight two yeares.

For Mechanicall Arts, they are not comparable to our mens Architecture, whether veeregard the beautie or continuance of their buildings, they not fo much as conceiuing or crediting the stately magnificence or long durance of some in these parts. They either make no foundation, or verie fleight, and thinke a mans age to be age enough for a house, and that scarcely without reparations; their houses being also of Timber, and where the walls are Stone, threy have Time bers to beare up the roofe, that the wall may cafily be repaired or renewed without meddling 60 with the supporters.

Printing is ancienter there then here; fomethinke before the Incarnation, and most certains Antiquitie and 2boue fine hundred vecres old: much differing from ours because of the multitude of their Chamanner of it. racters. They graue or cut their Characters in a table of Peare-tree, Apple-tree or Zizyphus, In

this Table they lightly glue on a whole leafe written, and then cunningly shaue the drie paper, that they make very little transparence; after which they cut the wood, that onely the prints or lineaments of the Characters are eminent: which done, with great facilitie and celeritie they print off leaues at pleasure, one Printer often 1500. in one day; so ready also in cutting, that to mee Ours feeme to spend as much time in composing and correcting. This course is more accommodated to their great Characters then to ours, whose little letters are not easily out in woodden Tables. They have this commoditie also, that keeping these Tables by them, they may with little labour adde or take away words or fentences: and need not at once print off any more Copies then present vse or sale requireth. Wee doe this with Bookes of our Religion

Io of European Sciences, printing them at home by our China feruants. They have another way of Another way. printing Characters or Pictures printed before in Marble or Wood, laying on a leafe of Paper moift, and on that a woollen Cloth, whereon they beate with a Hammer till the Paper infinuates it selfe into the voide spaces and lineaments of the Characters or Picture : after which they lightly colour that leafe with Inke or other colour, those delineations onely remayning white, and retayning the Prototype-figure. But this is for groffer Pourtrattures.

They are much addicted to pictures, but nothing so cunning in painting, founding, grauing, Painting, graas Europeans. They make magnificent Arches with figures of men and beats, and adorne their uing tounding,

Temples with Idols and Bells, but their Genius otherwife generous and ingenious enough, for want of commerce with other Nations, is herein rudely artificiall. Shadowes and Oyle in want or commerce with other transpositions and the state of the state eye, and yet will be doing in huge ( indeed) Monsters of this kinde, in Earth, Brasse, and Mar-

ble. Their Bells haue all woodden Hammers, which yeeld a woodden found, not comparable Bells. to ours, nor feeming capable of those of Iron. They have variety and plenty of Musicall In- Musicall Infruments, yet want Organs and all that haue Keyes. Their Strings are made of raw Silke, and struments, know not that any can be made of Guts. The Symmetrie of their Instruments is answerable to ours. All their Musike is simple and single-toned, vtterly ignorant of confort in discord-concord: yet much applaud they themselues in their owne Harmonie, how socuer dissonant to our eares, But this pride feemes to grow (as vivally it doth) from ignorance, and it is likely they would 30 preferre ours if they knew it.

They have scarcely any Instruments for measuring of (that which measures all things) Time; Want of Hours fuch as they have, measure by water or fire, but very imperfedly, as is also their Sun-diall, which they know not to fit to differing places. They are much addicted to Comedies, and therein, and all their or an they know not to fit to differing places. They are much addicted to Comedies, and therein exceed ours; some practising the same in principall Townes, others trauelling thorow the Kingdome (or roguing, if you will) being the dregs of the Kingdome, buying Boyes whom they frame to this faigning facultie. Their Commedies are commonly antient, whether Histories or Comedies. deurces, and few new written. They are vied in publike and in private Solemnities; as allo in Featts, whereto being called, they offer to the Inniter a Booke, in which to take his choife, the Guelts looking, eating, drinking together; and sometimes after ten houres seasting, they will 40 fpend as much succeeding time in a succession of Interludes one after another. Their pronuncia- Seales,

tion is with finging accent, and not with the yulgar tone. Seales are of great vie with them, not onely for Letters, but for their Poems also, Pictures, Bookes, and many other things. These contayne the name, fur-name, dignitie, and degree : neither content they themselves with one, but haue many, inscribing sometimes the beginning and end of their workes; not imprinting them in Waxe, or such like substance, but onely colour them red. The chiefe men haue on the Table a Boxe full of Scales, which contains their divers names (for every Chinese hath many names) and those of Wood, Marble, Inorie, Brafie, Crystall, Corall, and better stones. There Various fib. are many workemen of that Scale occupation, their Characters differing from the vulgar, and flance effica-

There is another Art not valike, of making Inke for all writing, made into little Cakes or Inke-making. Balls of the fmoke of Oyle. For their effination of exact writing makes the making of Inde alfo to be holden an Art not illiberall. They vie it on a Marble smooth stone; with a tew drops of water rubbing those Balls, and colouring the stone, thence taking it with a Pensill of Heres Pensils in

Fannes also are in much wie by both Sexes for the causing of winde to coole them in Summer. Fannes. No man may goe abroad without a Fanne, although the weather be cold, and the winde already bee importunate: the vie being rather for ornament then necessitie. They are made of Reeds, Wood, Juorie, Ebonie, together with Paper or Silke, and a certaine odoriterous Straw, in round, ouall, or square forme. The chiese men vie them of Paper gilded with plaits to be let in or our,

60 and therein inf. ribe some pithie sentence or Poeme. These are the most common gifts or prefents (as Gloues in Europe) and we have a Chift full of them fent vs by our friends. In other things the Chinois are liker ours, ving Tables, Stooles, and Beds (which the adioyning Nations dee not, but fit on Carpets on the floore) to eate or fleepe.

#### ò. I I.

Of their Characters and writing downward: their studies, Ethikes, Aftrologie, Physike, Authentike Authors, Degrees how taken both Philosophicall and Militarie.

Cap.5. Monofyllable Language, as alfo our prope most wholly.

Ow, for their more liberall Arts, and Literate-degrees, this Kingdome differs from all others: in which their Learned beare principall fway. The China words are Monofyllables, not one otherwise, howsoener two or three Vowels sometimes are conjoy- to ned into one Diphthong, to speake after our manner; for they have not Confonants nor Vowels, but divers Characters for fo many things, and as many of them, as there are Words.

fo that a Word, Syllable, Letter, are the fame; and when we ione divers Syllables to make one Word, it is after our fashion, because they signifie the same thing; with them each Syllable -coop. Chara- is a feuerall word. And although the number of things and Characters feeme the fame, yet doe they fo compound them together, that they exceed not feventy or eighty thousand: and hee which knoweth ten thousand of them, bath the most necessary : to know all is in manner for any one man impossible. Of these Characters the found is often the same, the figure and fignification differing : to that no Language is fo equiuocall; nor can any Speech bee written from the Speakers mouth by the Hearer, nor can a Booke bee read to the Hearers understanding, ex. 20 Equinocations cept they have the Booke before them , by their eyes to diffinguish the equinocations which their eares cannot. Yea, in speaking accuratly, the Hearer often understands not without repetition and writing either with Inke, or water on the Table, or forming the Characters in the aire; and this most happens in the most elegant and polite discourses (the stile of Bookes and

Fine Accents.

Inkhorne-dialect of their learned, wholly differing from the vulgar Idiome.) This equitocation and paucity of founds is in fome fort exfed be Accents, which are fine, and not eatie to diflinguish; by which of one Syllable (as wee account it) they make it with differing tones fine fold in differing fignification: and there is no Word which is not pronounced with one of these Hardneffe of Accents. Hence is the Language so difficult as none else in the World for Strangers to learne to speake and understand; which importunate labour of ours hath yet attayned. The reason I con- 30 ceine to be that they alway have laboured to adorne their writing more then their freech, their eloquence still confisting in writing and not in pronunciation, as I forrates is commended amongst the Greekes.

Elaquentia fine

This multitude of Characters, as it is burthensome to the memory, so it hath this commo-Many Nations dity, the commerce with divers Nations of different Linguages by community of writing; laand Languapon, Corai, Cauchinchina, the Leubices, vnderstanding and reading the Characters, each into his ges baue the owne Language, which the other understand nothing at all. Each Province also hath its owne, iame Charaand all haue one common Tongue besides, which they call Quonboa, or the Court Language (the cters. Court Lan-Magistrates being all forrainers, and none bearing Office in his Countrey Province) vied in their Courts, and by the Learned: this onely did ours learne, nor is the other yied by the civiller or # learneder in conference, except priua: ly by Countrey-men : yea, children and women learne this Court-speech. I heare that the Isponians have an Alphabet also of Letters after our fashion, besides these Characters; but in China they have none, so that from their Cradle to the extremest age they are learning their Characters, as many as professe Learning : which howfoeuer it takes up time from better Sciences, it doth it also from idle youthfull vanities. Hence also rifeth a kinde of writing with them, in few Characters expressing that which would Their writing coft vs long discourses. Their course of writing is from the right hand , the line downward,

Morall Philo-Of all the noblest Sciences they are best skilled in morall Philosophie (naturall, they have safophie. ther obfcured ) and being ignorant of Logicke, they deliver those Ethicke precepts in confused 50 fentences and discourses without order by meere naturall wit. Their greatest Philosopher is Confutius. His heroike called Confutius, whom I finde to have beene borne 551, yeeres before the comming of Christ, and to have lived above 70. yeeres, by example as well as precept exciting to vertue, accounted a very holy man. And if wee marke his fayings and doings, wee must contesse few of our Ethnike Philosophers before him , and many behinde. But with the Chinois, his word is authori-

ours contrary from the left and fide-waves.

shipping him, not as a God, but as a Man; and his posteritie are much esteemed, the head of that familie inheriting by grant of Kings a title of great honour, with immunities and re-They have some knowledge also of Astrologie, and the Mathematikes: In Arithmetike and 60 Geometry antiently more excellent, but in learning and teaching confuled. They reckon foure hundred Starres more then our Astrologers have mentioned, numbring certaine smaller which doe not alway appeare. Of the heavenly Apparances they have no rules : they are much bufied

about foretelling Eclipses, and the courses of Planets, but therein very erroneous; and all their

tie, and no fixech of his is called in queftion; the Learned, yea the Kings also, ever fince wor-

skill of Starres is in manner that which wee call Indiciall Aftrology, imagining these things helow to depend on the Starres. Somewhat they have received of the Westerne Saracens, but they confirme nothing by Demonstration, only have left to them Tables, by which they reckon the Eclipses and Motions:

The first of this Royall Family forbad any to learne this Iudiciall Astrologie, but those which

by Hereditary right are thereto defigned, to preuent Innouations. But he which now reigneth mayntayneth divers Mathematicians, both Eunuches within the Palace, and Magistrates without, of which there are in Pegnin two Tribunals, one of Chinois, which follow their owne Authors, another of Saracens which reforme the fame by their Rules, and by conference together. 10 Both baue in a small Hill a Plaine for Contemplation where are the huge Mathematicall Instruments of Braffe before mentioned : One of the Colledge nightly watcheth thereon as is before observed. That of Nangum exceeds this of Pequin, as being then the Seat Royall. When the Pequin Aftrologers foretell Eclipses, the Magistrates and Idoll Ministers are commanded to affemble in their Officiary Habits to helpe the labouring Planets, which they think they do with beating brazen Bels, and often kneelings, all the time that they thinke the Eclipse lafteth, left Eclipses,

they should then bee deuoured (as I have heard) by I know not what Serpent

Their Phylicke Rules differ much from ours; they examine the Pulie alike. They fucceed Phylicians well in their Prescriptions, which viually are Simples, Herbs, Rootes, and the like. They have for it no publike Schoole, but each learnes it of his owne Mafter, yet in the two Royall Cities so Degrees of this Art are given after Examination, but curforily and without any respect acquired by his Degree, because all may practise which will. Neyther doth any study Mathematickes or Physicke, which is in any hope of the Ethikeglory, but such as want of wit or meanes hath deterred from studies more sublime. Contrariwise, that Ethike Science is the Ladder of China felicity. Confutius brought into order the Bookes of foure former Philosophers, and wrote a fift confutius his himselfe, which five Bookes hee called Dollrines: in which are contayned Morall and Politike five Bookes. Rules, Examples of the Ancients, Rites and Sacrifices, divers Poems also and the like. Besides Tetrabiblion these fine Volumes, out of Confusion and his Disciples are brought into one Volume, divers Precepts without order, Similes, Sentences Ethike, Oeconomike, Politike: this Booke for the foure parts is called the Foure Booker. These nine are the ancientest China Bookes, whence the

30 others most what are taken, and contayne most of their Characters. And the ancient Kings enacted that they which professe Learning , should take the foundations of their Learning from those Bookes, not only to learne the proper sense of the Text, but to bee able on the sudden to write fitly of any sentence, for which cause that Tetrabiblion is learned without Booke. Neyther is there any Vinnerfitie or publike Schoole (as some of ours have affirmed, the Masters or Profes. No Valuerstry. fors whereof haue undertaken to read and expound those Bookes; but every one gets a Master at home at his owne choice and coft (of which there is a huge multitude.) In this Science are three Degrees bestowed on them which offer themselves to be examined and are judged meete. That Degrees, Examination is almost wholly in Writing. The first Degree is conferred in every City in that Tibis the Pro-

place which is called the Schoole, by some learned man defigned to that Office by the King, who poser. 40 is by that place called Tibin; the Degree is termed Siencai, A threefold Examination is premifed, Siencai a B2-First, at his comming to any City of his Province, all that stand for that degree in that City, and chelors dethe confining limits thereof refort thither and are examined by those Masters which are set ouer fire of Arr the Bachelours till they have attayned further Degree, mayntayned by the Kings stipend. In with vathis Examination euery one is admitted, perhaps foure or 5000 affembled to that purpole. The fecond is by the foure Gouernours of the City (for none are admitted to Gouernment but the Learned) which present out of all that number 200. of the better Writers to the Tibio, and he in 2 third Examination chuseth 20,00 30.0f the beft, which he entituleth Bachelors: their Enfignes are a long Gowne, a Cap, and Boots, which none else may weare, & in all places they are much respected Ornaments. as in a ranke aboue the vulgar Citizens, and enjoy also divers Priviledges, being in manner subject Their Privile

50 only to the Masters aforesaid and the Tibio, other Magistrates scarsty medling with them. This ladges, Tibio not only hath authority over these new created Bachelors, but over those which were made before to re-examine them : and these according to their writing hee divideth into five rankes; the first he rewardeth with some publike Office in the City, the second with some inferiour honour, the third he newther rewards nor punisheth, the fourth he causeth to be publikely whipped, the last he degradeth and maketh againe Plebeians. The second Degree is called Kingin, and may be compared with our Licentiates, and is conferred but once in three yeares, and that in the Metropolitane City about the eight Moone with greater Majesty. And the degree is not Thesecond conferred to all, but to a certayne number of the worthieft, according to the dignity of each Pro- degree, Kin-

uince : Pequin and Nanguin haue each 150. Cequian, Quamfi, and Fuquian 95. others fewer. Only 210, 35 Licen-60 Bachelors, but not all, are admitted to this Examination, the Tobio fending out of each City or chelors in Di-Schoole 30. or at most 40. of the best, which number yet ariseth in some Province to 4000 of uninite, if we those Examinates or Probationers for this second degree. A little before the eighth Moon (which compare them often fals in September, the Pequin Magistrates present to the King 100. of the most esteemed withours. Philosophers in the Kingdome, who thence pricketh or nameth thirty, for each Province two, to Examining

Palace of examination.

take charge of the Examination of these Candidates. One of these two must bee of the Hanlin Colledge, the Collegians whereof are most famous thorow the Kingdome. The King doth not name them till that nicke of time when they must prefently packe to their Province, dilignify guarded also that they speake with none of that Province till the Ast or Commencement be past. In the fame Prouince also are chosen the best Philosophers to affift these two Examiners. In tuery Mother City is a huge Palace built for this purpole compassed with high wals, with many sign tions for the Examiners separate from noyse; and foure thousand Cels or Studies besides in the midlt of the Palace, wherein is a stoole and table for one man, that none may see or confer with

When the Examiners sent by the King, and those of the Province are come thicher, they are 10 presently shut up in their stations before they can speake with other men, or with each other, during all the Examination time. Night and day, meane-whiles the Magistrates and Souldiers guard the Palace from Colloquies. Three dayes (the same thorow the Kingdome) the ninth, twelfth and fifteenth of the eighth Moone, from morning to night are appointed for their winting, the doores being shur. A light refection provided the day before is given to the Writersat publike cost. When the Bachelors come to the Palace, they are thorowly searched whether they haue any Booke or Writing with them, and are admitted only with the Penfils which they vie in writing, their Plate, Paper and Inke; these also and their Garments searched to prevent all fraud, which found causeth the twofold punishment both of losse and sence. When they are admitted, the doores shut and sealed, the two Royall Examiners out of the Tetrabiblism propound to Theamer githree Sentences for fo many Theames to every of them; and foure out of the five Bookes of De-Seuen writings thrues for so many other Theames. These seuen Writings must bee made for elegance of words and weight of Septences according to the Precepts of China Rhetoricke; neyther must any Writing contayne aboue 500. Characters. Two dayes being passed for the Examinationn of thele; the next day out of the Chronicles, or other three Cales of Politie are propounded, wherein each which three Theames or Writing expresse their minde, or Libel-wise admonish the King what were fitteft to be done. The third day three Law Cafes, fuch as happen in the Maguitrates, Offices are propounded, for each thereof to expresse his Sentence. There in great filence, each in his appointed Cell, having written their Theames, subscribed with their owne, their Fathers, Grand-fathers and great Grand-fathers names, and sealed so that none but men to

appointed may reade them, offer them to certayne Officers, which before the Examiners fee them ; cause them to bee transcribed by certayne thereto appointed : which Capies to be diftinguished from the Originals are written in Red Inke, without the Authors names the Originals laid up fafely) that none might by the hand or name know the Authour. In this Examination the Affifants first reiect the worlt & present vnto the two Examiners twice so many as are to be chosen Licentiates; as if one hundred and fifty are to bee chosen, three hundred are tendered to passe their last scrutinie: who first lay by the best, so many as are to bee elected (and thence take the first, second, and third, and set them accurately in order, and then conferre them with the Originals, thence taking the names which they cause to bee written in great Cubitall Letters, in a luge Table, which they expose about the end of the eighth Moone in great 40 concourse of Magistrates, and applause of the new Elects Friends and Kindred. The Printledges and Ornaments of this Degree are more then of the former, and if they intend to proceed no further, they are hereby capable of very good Magistracies. After the AG, the Kings Examiners publish a Booke of their proceedings, the names of the Graduates and their principall Writings, especially his which is as the Elder Brother (they call him Quiagnen) and whose Theames were best liked. The Bachelors of other Provinces may not here be admitted; some only except of the Kings Schoole in Pequin and Nanquin.

Third degree called Cinfu.

The third Degree is like our Doctorship, called Cin fu, which is conferred enery third yeare alfo, but onely at Pequin, and alway is the next yeare after that Commencement of Licentiates. Only three hundred chosen ou of the whole Kingdome obtayne it, although the Li- 10 centiates of every Province are admitted to the Examination.

Co'as.

This Act is in the second Moone on the same dayes that the former and in like forme, saving that the diligence is greater, as for a greater degree, and the Colai, the chiefe Magistrates of the Kingdome are Examiners. The Doctors being pronounced in the same Palace, where the Licentiates vie to bee; all of them in the Kings Palace, before the chiefe Magistrates of the Court (yea anciently the King was wont to bee present) make a Theame, according to the judgement whereof, the order of the Magistracies which they are to beare, is declared, being distributed in three Rankes.

Hee that in Examination of Doctors had the first place, hath in this second Examination the third place without question : but hee which hath the first or second enjoyeth a great dignitie 60 during his life, besides the greatest Offices in the Common-wealth; and might (compared with ours ) bee as a Duke or Marqueffe, if it were Hereditary. These Doctours presently haue their peculiar Vest, Cap, Bostes, and other Enfignes of Magistrates, and are preferred to the best Offices, fuch as the Licentiates may not attayne, and are as the prime men of

Those Licentiates which are rejected from the Doctorship, if they meane to proceed no fur- Ambition will ther, are preferred to Magistracie, but if they list still to stand for that degree they betake them be highest or felius home to their Bookes atrefly, till the third-yeare-examination returnes, fo that fome fland nothing. tentimes, continuing foling private to become more publike. A Booke is also published of them and of their fuccesse. Another is yearely set forth contayning the Names, Country, Parents, O fices of all the Do tors; and where they governe, whereby a man may know how any hath rifen or descended all his life, as is there vsuall after their merits. It is remarkable also how the Licentiates and Doctors of the same yeare respect one the other as Brethren euer after, and loue the Friends also of their Colleagues, and honour their Examiners as Fathers.

They vie to grant at the fame times and places the fame Titles (in the Moone following) to give, Military Profesiors, but with lesse pompe, because Souldierie is of no such reckoning with them, and few fland for them. This Military try all is three-fold, in the first they shoot nine Arrowes on Horse-backe running; in the second they shoot as many at the same marke standing : and hee which hath hit the Marke with foure on Horke-backe and two Arrowes on foot, is admitted to Threefold the third tryall wherein they have some Theame of Military matters propounded, and the tryall, Judges examining this Triple tryall out of the whole number pronounce about fifty Licentiates in enery Prouince. And when the Doctorall Act is at Pequin, one hundred of the choice of these after a Triple Examination are made Military Doctors. These Doctors are more easily admitted to Military Prefectures (but scarcely without Bribes) then the Licen-30 tiates. Both the Philosophicall and Military, ouer their doores, fet vp in great Letters this

their new attayned dignity. All the Examiners, whether of Mathematicall, or Military, or Philosophicall degrees, are of those Pulosophers, without affiftance of any Captaine, Mathematician, or Physician, as if thereby they were inabled to all things.

Magistrates. Quenfu and Mandarin a

He also ordained that all Magistracie and Gouernment should belong to those Licentiates and Doctors, whereto neyther the fauour of the King or other Magistrates are necessary, but their owne merits, except where corruption frustrates Law. All Magistrates are called Quonfu, and for honours fake they are stiled Law je or Lau fie, that is , Lord, or Father. The Portugale call for noncours made they are those for reprefentation of Aristocratic, in that Gouernment: for 10 though they doe nothing but first petitioning the King, hee also determines nothing without Pertugal name. their follicitation. And if a private man petitions (which is seldome, because Officers areappointed to examine Petitions before the King fees them) the King, if hee will grant it, fends it to the Tribunall proper for that businesse, to admise him what is sit to bee done. I have found for certaine, that the King cannot give Money or Magistracie to any, except hee bee solicited by some Magistrate : I meane this of publike Reuenues; which doubtlesse doe exceed one hundred and fiftie Millions yearely, & are not brought into the Palace Treasurie, nor may the King spend them at his pleasure : but all whether Money or Rice and other things in kinde, are layed vp in the publike Treasuries and Store-houses, in all the Kingdome. Thence the expenses of the King his Wiues, Children, Eunuches, Family, and of all his Kindred are in Royall fort disburfed, but 18 How dispensed according to the ancient Lawes, neither more nor leffe. Thence the Stipends of Magistrates

and Souldiers and all Officers thorow the Kingdome are paid : the publike Buildings, the Kings Palace, Cities, Walls, Towres, Fortresseand all provision of War are thence sustained, which cause new Tributes sometimes to be imposed, this huge Revenue notwithstanding. Of Magistrates are two forts, one of the Court which rule there, and thence rule the King-

Bookesof

dome; and other Provinciall, which gouerne particular Cities or Provinces. Of both forts are fine or fix Bookes to be fold enery where, printed twice each moneth at Pequin, as by their course of printing (you have seene) is easie; contaying nothing else but the name, Countrey, and degree of the Magistrates; and therefore printed to often because of the exaltings, shiftings, fetting lower, death of Parents (which suspends three yeares to mourning in prinate) their owne deaths or deprivations.

1. Li pa, or Court of Magiftrates.

1. Ho-gu.

3. Li-pu.

Of the Court Tribunals are reckoned fixe; the first, Lips (Ps is a fmuch as Tribunall or Court, and Li, as (Magistrates) to which it belongeth to name the chiefe Magistrates of the King. dome, bringing up from the lower to the higher according to the Lawes prescribed, or if they descrue it, abasing or quite depriuing them. For those Licentiates and Doctors continually afcend, except their owne faults deject them, wherein a deprination makes for euer vncapable. The fecond is called Ho-ps, that is, the Exchequer Court, or that of the Treasury; which exacts and disburfeth the Kings Revenues. The third is the Li-pu, or Court of Rites, which ordereth the publike Sacrifices, Temples, Priests, Kings, Marriages, Schooles, Examinations, Festiuall Daves, common Gratulations to the King, Titles given to the wel-deferving, Physicians, Colledges of Mathematicians, entertayning and fending Embassages, with their Rites, Presents, Letters; the King holding it abasing to his Majesty to write to any. The fourth, is the Pimpu, or Military Court, which rewards the meriting, and takes from the fluggish Souldier; ordereth their Multers and giues Military degrees. The fifth is Cumpu, which hath care of the publike Buildings, Palaces for the King or his Kindred, and the Magistrates; Shippes for publike burthens or Armadas, Bridges, Walls of Cities and all like prouitions. The fixth Court is Himpu, which inquireth into Criminall Causes and sentenceth them; also all the publike Prisonsare fubject hereto.

All the affaires of the Kingdom depend on these Courts, which therefore have Magistrates and

order facilitating this fo weighty a Defigne. For first, in every Court is a Lord Chiefe Iusticeor

Notaries in enery City and Prouince, to admonish them faithully of all things, the multitude and 50

5. Campu.

6, Himpu.

The Prefident Prefident called Ciam Cin, who hath two Affiftants, one fitting at his right hand, the other at

his left, called Cilam : their dignity in the Royall Cities is accounted principall. After thefeeuery Tribunall hath diuers Offices, each of which hath diuers Colleagues, besides Notaties, Courtiers, Apparitors, and other Servants. Besides these Tribunals there is another the greatest colsi, or Coun. in the Court and Kingdome; they call them Colsos, which are three or foure, fometimes fixe fell of State. which have no peculiar businesses, but take care of the whole Re-publike, and are the Kings Priuy-Counfell in all Affaires. These are daily admitted into the Kings Palace, and there abide whole dayes, and answere as they see cause to the Petitions which are put up to the King (who was wont to define matters with these Colas in publike) and shewing their answere to the King, 60 hee alters or approoueth the same, and sets his hand thereto for the execution.

Choli and Zauli Befides these Orders of Magistrates and others not mentioned (as like to our owne) there are Magistrates two forts not vsuall with vs., the one Chois, the other called Zanis. In each of these Orders are extraordinary, about fixty choice Philosophers, men approued for their wildome and courage before experien-

### CHAP. 7. S. 2, Hanlin College, Yunlo remoues the Court, Symmetry of Magifirates, 289

ced. These two Rankes are vied by the King in Court or Promince businesses of greater weight, with great and Royall power, which caufeth to them great respect and veneration. These by Libell admonish the King if any thing be done contrary to the Lawes in any parts of the Kingdome, not sparing any of the Magistrates, nor the Kings House, nor the King himselfe; to the wonder of other Nations. And although the King sometimes bee touched to the quicke, and toucheth them to the quicke againe, yet ceafe they not still to rip the fore till it be cured. Other Magistrates may doe it, yea any private man, but these mens Libels or Petitions are of most worth, as proceeding from their peculiar Office. The Copies of them and of the Kings answers are printed by many, fo that the Court and State Affaires flye thorow the Kingdome, and are by 10 some written in Bookes, and those of most moment transcribed into the Annals of the Kingdome. Of late when the King would for love of a fecond Sonne have excluded the eldeft, so many by Libels reprehended the King, that he in anger deposited or abased one hundred of the Magistrates. They yet ceased not but one day went together into the Kings Palace, and offered vp their Magistracies if he persisted to breake the Law. Lately also when the chiefe of the Colas did not observe the Law, in two moneths space about one hundred Libels were put vp , not-

withstanding they knew him a great Fauourite; and hee dyed within a while after, as was

thought, of griefe. There are also besides Magistrates, not a few Colledges instituted for divers purposes, but the Colledges. most eminent is that called Han lin Tinen, into which none are chosen but choice Doctors after Han in Tinen. 20 due Examinations. They which line in that Royall Colledge, meddle not with Gouernment, yet are of higher dignitie then the Gouernours. Their Office is to order the Kings Writing, to make Annals of the Kingdome, to write Lawes and Statutes. Of these are chosen the Malters of the Kings and Princes. They wholly addict themselves to their studies, and in the Colledge haue their degrees of honours, which they attayne by writing. Thence they are preferred to great dignities but not out of the Court. Neither is any cholen to bee a Colas, but out of this Colledge. They gaine much also by Writings for their Friends, Epitaphs, Infriptions and the like; which all leeke to have of them, their name giving credit and reputation of Elegance. Thefe are the chiefe for Examinations of Licentiates and Doctors, who hold them for Masters and lend

30 All these Pequin Magistrates are foundationt Nonquin, but obscured by the Kings absence. Cause of the

Hum whad fixed his Seat at Nanquin, but after his death Thu to one of his Nephewes, who in removing the the Northerne Provinces defended with an Armie thole Borders against the Tarters, perceiving Seat Royall Hum-vas Sonne but weake, thought to deprine him of the Kingdome, which hee effected by from Nasquin helpe of the Northerne Promines, and with force, fraud and largeffe obtaymed his Voices to Preside. Throne. And because he was strongest in the North parts, and most seare was from the Tartars there, he there fixed his Refidence, where the Tartar Kings had avonted to abide and called that Citie Pequin, that is, the Northerne Court, as Nanquin fignifieth the Somberne, leaving to this the former Offices and Immunities.

The Gouernment of the other thirteene Prouinces depends on two Magistrates, the one Pn- Propincial 40 cinfa, the other Naganzafa: the former judging Civill Causes, the later Criminall; both residing Government with great Pompe in the Mother Citie of the Province. In both Courts are divers Colleagues Picin-fa. and they also chiefe Magistrates called Tauli, which governing other Cities often relide in them. Hagenceles The Provinces are all distributed into divers Regions, which they call Fin, each of which hach a Division of peculiar Gouernour called (ifn. Thefe Regions are subdivided into Cen, and Hien, that is the Provinces. greater or more eminent Townes, and those which are more vulgar, which are not lesse then our Regions or Cities, if you except our greatest. These have their special Governours called Ciorn and Cobien. The Governours of Cities and Regions have their foure Affittants and Colleagues as Auditors, Con and Hier. and ludges to helpe them. As for the opinion of some that thinke those only to bee Cities, Tule sumitswhich are called Fs, and Cess, and Hiers to bee Townes, it is an errour: for the City wherein the ken. 50 Gouernour of the Region refides, is also called Hien, and hath its peculiar Gouernour called Cibien, Cifu, Cibien and

and Affishmers; and the Cifu hath no more power there then in other places of his Luridiction; Chen. which is the first Appeale to him as Superiour from the Cibien or Cicen. The second Appeale is to the Pucumfu and Naganzosu and their Colleagues in the Metropolitane Cities, which Cities likewise haue their Cibien and Cifie, aswell as the Subordinate; all in incrediale

And because the whole Provinciall Government hath reference to Pequin, therefore in every Prouince besides these, are other two superiour to them sent from the Royall Citie, the one fixing his Refidence in the Province, called Tutam, which may be compared to our Vice-197, ha- Tutam.

uing command over other Magistrates, and in Martiall affaires: the other is yearely sent farm Cis years 60 the Court, and is called Csa-juen, as a Commissioner or Visitor, which reniewes all the Causes of the Prouince, the Cities also and Caffles, inquireth of the Magistrates, and punishesh some of the meaner fort, acquainting the King touching the reft, how every one demeaneth himselfe; and he onely executeth Capitall punishments. Besides these, are many others in Cities, Townes and Villages : and befide them, many which have command of Souldiers, especially in the Con-

Magistraces

fines and on the Coatts in fupinest Peace, watching and warding in Ports, Walls, Bridges, Ca. Militrie com- files, as in the hotteft Warres, with Mufters and Martiall exercises. All the Magistrates of the Kingdome, are reduced to nine Orders, whether you respect the Philosophicall or Militarie Se. Anigome, at retact to me change and the freatury is proportionably diffributed monethly ray, Money or Rice; yet little aniwerable to that their Magnifeence (the highest Order not having one thousand Duckets yeerely) and equall to all of the same ranke, the supreame in matters of Warre having as much as the supreame in the literate Order, if you looke to that which the Law ale loweth. But much more accrueth extraordinarie then this fee or flipend, belides what any mane

Robes and Or-

industrie, couetife, fortune, bribing addeth, by which they oft attayne to great wealth, All the Magistrates vie the same Caps, both Mercuriall and Martiall, of blacke Cloath with 10 two Eares or wings, of Quall figure, which may eafily fall off, which being a difgrace, caufeth the more modestie and steadinesse in carriage of their heads. They all weare like Vest, and like blacke leather Bootes of peculiar fashion ; also a Girdle wider then the body, about foure fingers broad, adorned with circular and square Figures : On the breast and backe, they weare two Square Cloubes Embroidered : in which and the Girdles is great varietie, according to their diuers Degrees; by which the skilfull know their ranke and place. The cloathes intimate it by the figures of Flowers, Fowles, Beafts; the girdles by the matter, of Wood, Horne, Sweet wood, Gold or Silver; and the best of all of that Iaffer before mentioned, called Tace, brought from Cafear. Their shadowes or Sumbreros, by their Colours and numbers intimate like difference. They have other Ornaments, Banners, Chaynes, Cenfors, Guards with Cryes to make way, to that in most frequent streetes no man appeareth, more or lesse, according to the Magistrates

Strangers.

The Chinois having plentie of all things, care not for fubduing the neighbour-Nations, better keeping their owne, leffe caring for others Countries, then our Enropeans : their Chronicles of foure thousand yeeres not mentioning any care of enlarging their Empire. And if any China imprefions or foot-prints bee, it is from men voluntarily going to other Countries, not from the Kings ambition fending them. It is also remarkeable that Philotopers beare all the sway, the Souldiers and Captaynes being subject to them, and sometimes beaten of them as Schoole-boyes by their Master : euen in Militarie matters, the King more vsing the adulfe of Philosophersthen Captaynes; whereupon euery haughtie spirit rather affects meane places in the Literate Order, then great in the Martiall. Yea these Literate are more magnanimous, and more contemne their Beautie of Or- lines in zeale of the publike then the Souldierie. No leffe admirable is the Symmetrie and Order of Magistrates in their subordinate Orders, in Obedience, Reuerence, Vilitations and Presents; the Inferiour giuing honourable Titles to the Superiour and kneeling to them. None beares any Office about three yeeres, except the King confirme it. And the chiefe Magistrates of Prouncces, Cities and Regions, every third yeere must appeare at Pequin, and doe their Rites to the King, at which time feuere inquirie is made of the Magistrates, and they thereupon rewarded or Seuere luftice punished. I have also observed, that the King dares not alter any of those things, which in this publike Disquisition are ordered by the Judges. Anno 1607, we reade foure thousand Magistrates condemned, that being the Search-yeere, and a Booke published thereof.

These Condemned are of fine forts; First, Couetons which have taken Bribes to pervert Inflice, or have viurped the publike or private mens fortunes : thefe are wholly deprived of all Offices for euer. The second are the Cruell, which have too severely punished, which are also deprived of their Places and Enfignes : The third are the Old and fickly, and the Remiffe and negligent; these are deprived, but permitted the Immunities and Ensignes. The fourth fort, are the rath, headdie, and vnaduifed, which are put in lower Offices, or lent to more easie places of Gos. Vagouerned themselves or theirs, worthy of that place of Gouernment; these are wholly deprived. The like Inquisition is made every fifth yeere of the Court Magistrates, and the same time also, of Militarie Commanders.

None may beare Office in his natiue Prouince, except Militarie. The Sonnes also or Dome- 10 flike feruants of Magistrates, may not goe out of the house lest they should bee Factors for bribes: but all services without doores is done by Officers, designed to his place : and when hee goth out of his House hee sealeth the doores, whether private or publike, that none of his Servants may goe out vn witting to him.

They permit no Stranger to live with them that mindes to returne to his Country, or is knowne to have Commerce with forraigne Nations : and no Stranger although of a friendly Nation and Tributarie, may have accesse to the inward parts of the Kingdome, a thing whereof I haue feene no Law, but Custome : neither haue I ever feene any of Cora in China, except fome Slaues which a Captayne brought thence, although a tributarie Nation which vieth in manner the China Lawes. And if a Stranger steale into the Country, they punish him not with Death nor Slaverie, but permit him not to returne. They most sewerely punish those, which without the Kingsleane have commerce with Strangers: and hardly can any bee periwaded to be fent abroad with Mandates; and fuch are rewarded with some Dignitie at their returne, None beare Weapon in Cities, not the Souldiers or Captaynes, but in their Traynings; nor haue any men

weapons in their Houses, except some rustie blade which they vie when they trauell for feare Weapons, weapons in their routes, except their testing of the property eth, none of his Sonnes are permitted to remayne in the Royall Citie, but the Heyre; and it is royallkindred. Capitall for them, being dispersed in divers Cities to stirre thence. Some principall amongst them, compounds their firites and rules them ; in Cafes with others, they are subject to the Magistrates.

ò. 1111.

Their manifold rites in Salutations, Entertaynments, and other Civilitie: to the King and Magistates : Of Buryals and Marriages, Birthdayes; their Men, Women, Names and Games, Habites.

Ourtefie or Civilitie, is reckoned one of their five Cardinall vertues, much commeded in Courtefie in Courtefie in

their Bookes. (Their common Rites yee have bad largely in Pamoia.) When greater remutually enespect is vied, as after long absence, or on a Solemne day, after the common bowing, ration and cirboth fall on their knees with the forehead to the ground, and then rife and downe as cumpetbegaine in like fort three or foure times. When they doe this reverence to a Superiour, hee frands haviour to oat the head of the Hall, or fits, and at all those prostations toyning his hands, bowes a little and sometime for greater modestie hee goeth to the fide of the Hall, whose head is Northwards as the doore is Southwards. The same rites they performe to their Idols; and sometimes as the Sido reus-Securates to ther Mafter, or the meaned of the people to honourable persons, which is presently rence, to kneele and knock the ground thrice with their forestead; they stand at his fide when their Mafter speakes, and kneele at enery answer. When one speakes to another, they vie not the second Respect of perperson, nor the first person when they mention themselves, except to their inferiour, and have sons, as many formes of depreffing themselves, as of exalting others, the lowliest of which is to call a See Thense E. 30 mans felfe by his proper name, in flead of (L) When they speake any thing of another mans, Pille, sup. 344 they vie a more honourable forme; Of their owne, or theirs, a more modest: which a man must

learne both for manners fake, and to understand their meaning.

The Vilitors fend their Libels or papers of vilitation, fo many that the Porter is faine to keepe Viliting one anote of their names, and where they dwell, left wee should forget; and if the partie to bee visit- another, ted be not at home or at leasure, that libell is left with the Porter for a testimonie. The more honourable the Vilitor, the larger hee writes his name. In fending Presents they vie like libelling; fetting downealfo each gitt in a line by it felfe, part of which may bee fent backe without offence, which is done with a like libell of thankes. They often fend money or pieces of Gold for 40 presents. They have Garments proper for visitations. The chiefe place in both Royall Courts. is given to Strangers, most remote especially, which made vs commonly to bee preferred. The fernant, when they are fet, brings as many little Cups of Cis as are Guefts. When they part, Tedious cours tenant, when the state of the s Seruant is fent after in his Masters name, to salute them, and they fend their seruants like-

Their Banquets are not fo much commessations as Competations; for although their Cups be 45 Chine banques little as Nut-ihels, yet they drinke often. Their Civill and Religious affayres are therein handled, befides the demonstration of kindnesse. In eating they have neither Forkes, nor Spoones, so nor Kniues; but vie small smooth flickes, a palme and a halfe long, wherewith they put all meats Feeding. to their mouthes, without touching them with their fingers. They bring all things to the Table cut in little pieces, except it bee of lofter condition, as Egges, Fish, and such things as their flickes will divide. They vie to drinke hot, even in hottelt weather, whether their Cis-decoction, or Wine, or Water : which it feemeth is profitable to the Stomacke ; for they live long, and are strong at seventie or eightie yeeres : Neither is any of them troubled with the Stone, The Stone vawhich I suppose is occasioned by our cold drinke. When any is Inuited, a Libell is sent a day or knowne is chimore dayes (if it bee to a folemne Banquet ) before, fignifying, that the Inuiter bath prepared a m, which fo Banquet of Hearts, and bath walbed his Cups, that at fuch a day and hours ( which commonly to many to mentch michs) has man have and to make the suppossition night) bee may beare and learne somewhat of him : At the day they send another like Libell (on in the Kidney, 60 the out-fide of these Libels, there is a red paper added with the more honourable Name of the in Vreter, Bladuited, which the Chinois vie besides their proper name) in the morning to each Guest, and der this last

my honorable Patron and best friend, B. King, 4880 1631. and 48000 1633. Master Bistidiamy neighbour, the pains full Mindlet at 763-Benwriedyeed of a Stone, which I weighed, and found (a miracle in Nature) much about 31 Ounces, whiles there or Gasar clauses are in the Peesse; therefore Letter membered, My felfe slid basing stone; a filter best processes are in the Peesse; therefore noe stone clause clauses.

third at the houre. Their furniture is not Hangings ( whereof they have no vie) but Pictures, Flowers, Veffels; to each Gueft his Table, and fometimes two to one, the one before the other, These Tables are some Cubits long and broad, but more in length, and covered with a cloath as our Altars. The Seats thine with their Varnish, adorned also with Pictures and Gold. The fift entertainment is with Cia in the Hall: and thence they goe to the Feafting-roome. Before they fit downe, the Inuiter falutes the principall Gueft with a low courtefie, and holding a cup of Wine : then goeth to the doore or porch, and first making a low courtese, turning his face to the South, powres out that cup on the ground, offering it to the Lord of Heaven, and bowing downe againe, returneth, and filling another cup goeth to that principall Guest, and bowing falutes him in the place in which the rites of falutation are vied; and then they goe together to 10 the Table where the chiefe Guest must fit. The midst of it is the chiefe place; there with both his hands he fets a dish with great veneration, and taking the two stickes (which vsually are of Ebonie, or Inorie tipped with Gold or Siluer, where they touch the meate) layer them by, and taking a feat, brusheth it with his sleeves lightly, and sets it in the middest; after which both

goe backe and bow themselves in the middest of the Roome. Thus hee doth to every one,

The Guefts courtefie to the Hoft.

Sipping oft, one draught,

placing the second on the left hand, the third on the right. Lastly, hee which shall have the chiefe roome receiueth of his feruant the Inuiters Dish and Cup, and bids Wine to be filled, and together with the other Guests and the Inniter, boweth downe and placeth the Dish on his Table (which is placed in the lower part of the Hall, with his backe to the South, and face to the chiefe Table) with the flickes and feat, as he had done before to him; and then all goe agains to 20 their place, with great ceremonie, to fit them better with both hands, he to whome the rite is done, standing by the side of the doer with his hands in his sleeues, and modestly bowing with thanks. They wash neither before nor after. After all this, they performe the last rite of inclination to the Inniter together, and then each to other, and then fit downe. When they drinke, the Inuiter with both hands takes the Cup in the Dish, and lightly lifting it vp, and then letting it down inuites them to drinke, all turning to him at the same time, and beginning to drinke, or to fip rather, foure or fine times fetting it to his mouth, not as we vie with one continued draught, After the first Cup the Dishes are brought in , of which the Inuiter beginning , all with their stickes apply a bit or two to their mouthes, diligently observing, not to lay downe their stickes before the principall Gueft hath layd downe his : and then the servants fill his , and after every 30 mans Cup, with hot Wine: and the same rite is againe and againe repeated, but more sipping then eating. Mean-while some discourse, or Comedie, or Mulike continue. The grace of their Feaft is variety, a little of each, Flesh also and Fish mixed, taking off nothing, but setting one Difth on another like Castles and Towers. Bread, and Rice (which there supplyes our Bread) comes not in solemne Banquets. They have games also, in which the loser is fined to drinke, with others disport. None is compelled to drinke aboue his strength. Their drinke is tipsie,

boyled like our Beere. Their folemne Banquets last all night, the remainders given to the Guess

but his Eunuches, and those which line in his Palace, Sonnes and daughters. None of the Magi- 40

frates without the Palace (the Eunuches also have their degrees) speake to the King butby

Throne and Dragon-enfignes are carued and gilded, often bowing and kneeling before it with

Petition, and those with so many formes of veneration that none can make them, which is not well exercifed, though he be learned. Euery new yeare which beginnes with that New Moone which next precedeth or followeth the Nones of February, out of enery Province a Legate is fent to visite the King , which is done more solemnely every third yeere. Also in every Citis on euery Change day, all the Magistrates assemble to one place in their Citie, where the Kings

Kings colour

The Palace

Table in his hand, and another on his head, ouer his Crowne hanged, about with threads of gemmes, his face hidden in presence from the beholders. The Kings colour is yellow (forbidden to others) of which his garment is wrought with many golden Dragons, which are carued or painted in all the Palace, and Vessell, and furniture; in the roofe also; whence some have thought the Tiles to be of Gold or Braffe, being of a yellow Earth, each nayled to the Timber: with Nayles gilded on the heads, that all may appeare yellow. It were treason for another to arrogate that colour or Armes, except he bee of the Roy- 60 all linage.

The Palace gates are foure, to the foure corners of the World. They which passe by, descend from their Horses or Seats, and goe on foot till they be past, the greatest soonest alight, and that at Nanquin alfo, where no King hath of long time refided. The gates to the South both inner

and our ward are three, the King only going in and out at the middle (which otherwise is thut) Kings gate, others at the other gates on the right and left hand. Their computation of time is onely by the Time. Kings Raigne. Sometimes the King bestoweth a Title on the Parents of the principall Magi- Inleilrates by a certaine writing, made by the Kings Philosophers in the Kings name; eftermed wonderfully, acquired with any cost, and kept in the familie as a thing facred. The like opinion is of other Titles given to Widowes, expressed in two or three Characters, given to Widowes. Widowes. which to their old age have refused second marriages; or to old Men which have lived an hun- Old men, dred yeeres, and in like cales. They fet thefe Titles over their doores. Magistrates also doe the like to their friends. To good Magistrates Arches are erected at publike coft, of Marble : by Arches.

to Citizens also to some of their Citizens which have attayned any notable dignitie. The most precious Artifices thorow all the Kingdome are yeerely fent to the King to Pequin with great Pequin, costs. The Magistrates of the Kings Citie goe abroad with leffe pompe, on horsebackes and few of the principall in Sears, and those carried but by foure Porters : all in reverence of the King. Foure times in the yeere, once a quarter, all the Court Magistrates assemble at the Sepulchres of the antient Kings and Queenes, and make there their offerings: giving the princi- Funerals of pall honour to Humun. They prepare to this folemnitie certaine dayes falling at home and fur- Kings:

ceafing of faits.

Next to the King they honour their Magistrates, both in formes of words and visitations, to Honour of which none afpire but Magistrates; and they which have beene deprived lose not all honour in Magistrates. 20 this kind, but sometimes come forth in their habits, and are respected by their Citie Magistrates. If one bee preferred to another dignity, which hath well executed his Office, they honour him with publike gifts, and referue his Boots in a publike Chift, with Verses in his praise. To fome they erect Temples also, and Altars with Images, and some are deputed to keepe lights there burning, and odours, at publike Rent charge perpetually, with huge Cenfers of Bellmetall, as they doe to their Idols. Yet doe they diftinguish betwixt this and Divine worship, of their Gods asking many things, whereas these Rites are onely memorials, though many of the vulgar confound them together. Cities are full of fuch Temples, by friends often ere. As in the day had dirited the winger tomound them together. Once they goe and performe kneeling and bowing Saints worthing Rites, and offer Meats. Their Bookes are full of precepts for obleruing Parents with due honour, and that of 20 and in outward flew no Nation performes to much. They will not fit ouer against them but God

on the fide, speake to them with great reuerence, they suffaine their poorer Parents with their Honour of palabour in best manner they are able, and in nothing are more curious then their funerals. The mourning colour is white, and all their habite from the Shooes to the Cap of a strange See in Pantain and miferable fathion. The cause of three yeeres mourning for Parents, is because follong they of Funeralls carried them in armes with fo much labour of education : for others as they please, a yeare, or and mourthree moneths, as they are in neereneffe : For the King they mourne three yeeres thorow all the nings. Kingdome, and for the Lawfull Queene. Their funerall Rites are written in a Booke which they confult on that occasion, all the parcels of the habite there pictured. When a man of ranke is Mourningby

dead, the Sonne or next Kinsman sends Libels to the friends within three or foure dayes: all the books. 40 Roome is white, with an Altar in the midst, on which they place the Coffin and Image of the dead. Thither all the friends come in mourning one after another, & offer Odors and two Waxcandles on the Altar; whiles they burne, making foure bendings and kneelings, having first censed against the Image. The Sonnes stand at the side, and the women behinde, couered with a Curtaine, mourning the while : the Priests also borne Papers and Silkes, with certaine rites to minister Clothes to the deceasted. They abstayne from wonted Beds ( sleeping on Straw-beds on the ground neere the Corps) from fiesh and other daintier food, Wine, Bathes, companie with their Wines, Bankets, not going out for certaine moneths, remitting by degrees as the three yeeres expire. On the funerall day the friends are by another Libell inuited, to which Buriall. they goe in Procession forme, in mourning; many Statues of Men, Women, Elephants, Tigres, Lions, of Paper all going before, diversified in colour and gilding, which are all burnt before the

50 Graue: a long ranke of Idoll Priefts, Prayers, and Players on diuers Instruments obseruing diuers rices in the way; huge Bell-cenfers also carried on mens shoulders; after which followes the Herse under a huge carued Canopie adorned with Silkes, carried with forty or fifty men. Next the children on foot with states, and then the women enclosed within a white gestatory Curtaine, that they may not be seene: followed by women of the kindred in mourning Seats. The Graues are all in the Suburbs. If the Sonnes bee absent, the Funerall pompe is deferred till their comming. They bring ( if it may bee) the deceaffed in another Countrey to lie by his friends. The Graues are adorned with Epiraphs in Marble magnificently. Thither on certaine dayes yeerely the kindred refort to cense and offer, and make a funerall banquet.

Their Marriages and Spoulals are with many rites, done in their youth; the Contracts com- Marriages 60 Their Marriages and Spoulate are with many rices, uone in their young.

pounded by the Parents without their conferns; they observe equalitie in yeeres and degree in pounded by the Parents without their conferns that he property leave. The poorer also but their the lawfull Wife. In their Concubines, luit, beauty, price beare Iway. The poorer also buy their Wines, and when they lift fell them. The King and his kindred respect onely beauty, Magiftrates appointed to make the choife. One is his lawfull Wife; the King and his Heire having

nine other Wives a little inferiour, and after them fixe and thirty, which are also called Wives: his Concubines are more. Thole which bring forth Sonnes are more gracicus, especially the Mother of the eldeft. This is also familiar to other families the row th. Kingdome. There fifth Momeror meencer, Imas sanchemmas comments of the Royall families) are a: land-mails, and may not fit, but fland in prefence of either of them: their Children allo calling that lawfull Wife their Mother, and for her (though not the true Parent) chierue triennial mourning. In Mariages tew. in Eug. they are curious not to take any of the fame fur-name, of which fur-names there are not a thoufand in all that vaft Kingdome. Nor may any man frame a new jur-name, but must have one antient of the Fathers side, except he be adopted into another familie. They respect no affinity antient of the Patiers But, except the de adopted and the Mothers kindred almoft in any to confanguinity in a differing fur-name, and lo marrie with the Mothers kindred almoft in any to degree. The Wife brings no portion, and although when thee first goeth to her Husbands house the street-full of houshold attends her, yet is all promided by his costs which sends money some

Euery mans Birth-day is fethually celebrated with Preferrs, Banquets and iollity: especially after the fiftieth yeere explice (at which time they are reckoned among it old men) and then auter the intrestry cere. The Children then procure Emblemes of their friends, and Epigrams, and forme write Bookes. That day is also festivall in which they are of age to take the Mani tap, which is about twenty yeeres, till that time wearing their haire loote. But the first New and Full Moone of the years is most generally testinall; each man then having ingeniously desifed Lights or Lamps made of Paper, Glaffe, or other matter, the house terming by the discribed 10 Lights to bee on a light fire. They runne vp and downe allo with great stirres in the night with Fire workes. Dragon-famioned Lights, and make great thewes of Powder-fire-workes.

The Chinois are white (but neerer the South more browne) with thinne beards (some had chans persons using none) with staring haires, and late growing; their haire wholly blacke; eyes narrow, of Egge forme, blacke and standing out: the nose very little, and scarcely standing forth; eares meane: in some Proninces they are square taced. Many of Canton and Quams Proninces on their little toes haue two nailes, as they haue generally in Cachin-china. Their women are all low, and account great beauty in little feet, for which cause from their infancy they bind them ftraight with clothes, that one would sudge them sump-sooted: this, as is thought, desided to make them house-wives. The men and women both alike let their haire grow without cutting: 30 but Boyes and Gitles till they are fifteene yeere old, are cut round, leauing a locke onely on the crowne : after which they let it gr w loofe ouer their shoulders till twenty. The most of the Priests shaue head and beard every eighth day. When they are men they binde up their baire in a Cap or Coife made of horse or mans haire, or in a filken Cawle; and in Winter of woollen: on the top it hath a hole, where the haire comes forth, and is tyed in a neate knot. The women weare not this Cap, but binde up their haire in a knot, and make it up with a dreffeof Gold, Silver, Stones, and Flowers. They weare Rings on their cares, but not on their fingers.

The men and women weare long garments. The men double them on their breaft, and raften them under both the arme-holes; the women on the midst of the breast. They weare wide long fleenes; but the womens wider, the mans flraighter, at the wrifts. Their Caps are artificially 40 wrought. Their Shooes are much differing from ours; the men weare them of Silke with diuers workes and flowers, exceeding the elegance of our Matrons. Shooes of Leather none but the meaner fort weare; and scarcely admit they Leather soles, but of Cloth. The Caps of their Learned are square, of others, round. Euery one spends halfe an houre at least in combing and trimming his haire. They winde also long clouts about their feet and legs, and therefore weare their Breeches loofe. They weare no Shirts, but a white Coat next the skinne, and wash often. They have a feruant to carrie a Shadow or great Sumbrers over their heads against the raine and Sunne; the poore carrie one for themselues.

For Names, befides the fur-name of which is spoken, the Father gives one to the Sonne (for females have no name but the Fathers sur-name, and called as they are borne, first, second, third, 50 in order of the Sifters: ) by this name they are called by the Father and Eiders; others call Fathers name: them like wife from that order amongst the Brethren, as is said of Sisters. They in their writings call themselves by that which their Father gaue them ; but if others either equall or superiour should so call them, it were both vacinill and injurious. When a Boy goeth to Schoole his Schoole name. Mafter giueth him another name, which is called his Schoole name, whereby onely his Mafter and Schoole-fellowes may still him. When he hath his Mans cap put on, and marrieth a Wife, Letter name, some more honourable person give h him a more honourable name, which they call, the Letter. by this any man may call him, but those which are subject to him. And when he is now at the full growth, he receiveth of some grave person his most honourable name, which they call Great, whereby any may call him present or absence but his Parents and Elders still vie the Letter-62 name. If any protestea new Sect, his Instructor calls him by a new name, which they call, of Religion. And when one visites another, he will aske what is his Honourable name, to shie him thereby: and we were therefore fayne to take a Greater name then that which we received in chriftian name, Baptilme, for them to call vs by.

Сн AP.7.\$-5. Seales, Seats, Ships, Masters, Games, Theeues, Dayes, Diviners.

They are fludious of Antiquities : much value old Trinets of Bell metall, Pictures in blacke and white Characters and writings, feeled with the Authors feale (for there are many Counterfeiters.) The Officers have all a Seale proper to their place given by Hunrun, which they vicon- Seales of Ma. ly fealing with red colour : and if they lose the Seale they lose the Office, and are besides seuerely gistrates. punished; and therefore they carry it with them, in a sealed and locked Boxe, and neuer leave it out of fight, at night keeping it vader their Pillow. Graue men goe not on foote thorow the streets, but are carryed in a feate closed, except they lift to open the fore-part, whereas Magiftrates feates are enery way open. Matrons feates are altogether closed, but easily knowne from Seats in which mens by the fashion. The Law forbids Coaches and Litters. Some Cities are in the midst of Ri- they are carryto uers and Lakes, in which they have very neate Boates to passe the streets. And because they goe edonames more by water then ours, therefore there Shipping is more convenient and elements. Boulders. more by water then ours, therefore there Shipping is more convenient and elegant. But the Boates kinja Magistrates, built by publike cost are as commodious as Houses, with divers Lodgings, a Hall, Kitchin, Cells, so neate as seeming Great mens houses, rather then Ships; and therefore they make their folemne Banquets a Ship-board, passing along the Rivers and Lakes for further pleafure. They honour their works gilded in places, with combined five the Eyes and Nofe. Masters more then with vs, so that if a man have beene anothers Scholler but one day in any Art, hee calls him Master euer after, and neuer sits in any meeting but at his side, and doth

Dice-play and Cards are common with them: Cheffe also with the graver persons, not also. Games, gether valike ours: but their King neuer remoues but to the foure next roomes, and the Bishops Cheffe. haue their Queenes. They have also which they call Poulder passes, which goe before the Knights and follow the Paunes. They have a grave Game in a table of three hundred roomes with two hundred men white and blacke, in which Magistrates spend much time, and the curning skill whereof gets much credit to a man, although hee can doe nothing else; and some chule fuch their Masters with wonted rites. Theft is not punished with Death : the second fault These punishtherein, is branded with an hot Iron and Inke in the Arme, with two Characters, the third time ment in the Face, after with their terrible W hipping or condemning to the Gallies, for a time limitted : so that there are abundance of Theenes. Euery night in Cities, many Watchmen at cer-30 tayne times beare Basons as they walke the streets, the streets also enclosed and shut, yet many thefts are committed, the Foxe being the Goofeherd, and the Watch partners with the Theefe. The Cities in greatest Peace in the midst of the Kingdome, are shut every Night, and the Keyes

Of their Superstitions, Cruelties, feares of Magistrates, of the Kings kindred, of Strangers and Souldiers. Their Deiries and three Sects: Priests, Nunnes, Monasteries, Legends, Lyes.

O superstition is so generall in the Kingdome, as the observation of luckie and valuekie chaps. Dager and Houses, for which purpose yeerely is Printed a two-fold Table of dayes by Obscruzion the Kings Affrologers, in fuch plentie that every house is full of them. In them is of times. written on enery day, what may bee done or not, or to what houre yee must forbeare Twofold Albusinesse, which may in that yeer happen. There are others more dangerous Masters, which different beginning of Building or Journaying cill their appointed day or houre come: & then Impollors how unfitting focuse that products with croffe weather, they fer on neuertheleffe, though it be how similarly locate that products white the workenight thence appears to take beginning. The like superfitious obfernation they have of the moment of the Nationitie, which they precifely fit downe, divers professing by Astrologie, or by superstitious numbers, or by Physiognomic, or Palmestrie, or Dreames, or words in Speech, or politure of the body & by innumerable other wayes to force and elling of tell future Fortunes, many Gpfe-juglings vied to fuch impoflures, as by a stalking Knaue which Fortunes, full profess his Fortunes exactly told him by the professor, or by searning out of printed Bookes that proteins no rotemps exactly took man by one proteins, or by reatting one of proteins which describe every Citie, Street and Familie, what hath hapned as an argument of the truth orthat which they fay shill happen. Yea, their credulitie breeds such strong imagination, that Strengthof 60 same being foretold of a Sicknesse such a day, will then fall sicke of conceit.

Many also consult with Deuils and familiar Spirits, and receive Oracles from the mouth of Deuils consul-Infants, or of Bealts, not without fraud. They are imperilitious in chaining a plot of ground, toe-ted. Intants, or or pears, not without read. They are uper introduced a tayle and feete of disers. Dra. Dreames of gess, which lise (forflooth) valler our earth, whence depends all good of bad Fortune. Dizers Dragons.

Learned men busie their wits in this abstruse Science, and are consulted when any publike Buildings are rayled. And as Aftrologers by the Starres, fo these Geologers by inspection of Rivers. Fields, Mountaines and scite of Regions, foretell Destinies ; dreaming by setting a Doore or Window this or that way, conveying the rayne to the right or left hand, by a higher or lower roofe, honour and wealth shall accrue to the House. Of these Impostors the Streets, Cities. Courts, Shops, Markets are full, which fell that which themselves want, good Fortune to all Foole-fortunate buyers : yea, Women and blinde folkes professe it, and some find such Chapmen of the Learned, Noble, King and all, that they grow to great riches by others little wits. Alldifafters publike or private are attributed to Fate, and ill scite of some Citie, House or Palace. The noise of Burds, the first meeting in the Morning, Shadowes caused by the Sunne in the house, are in

Auguric.

Cruell vices

For other vices, some will make themselves Servants to rich men, to have one of the handand vanaturall maydes become his Wife, fo multiplying iffue to bondage. Others buy a Wife, but finding their family becomine too numerous fell their Sonnes and Daughters as Beafts, for two or three pieces of Gold (although no dearth prouoke him) to everlatting separation and bondage, some to the Portugals. Hence is the Kingdome full of Slaves, not captived in warre, but of their owne free-Child-felling. borne. Yet is service there more tollerable then else-where ; for every man may redeeme himfelfe at the price payd for him, when hee is able ; and there are many poore which with hard Child-killing, labour fuffayne themselues. A worse cuill in some Prouinces is theirs, which finding themselues Pittileffe pitte, poore, smother their new-borne Babes, specially Females, by an impious pietie and pittileffe pitte 10

Transmigrati. preuenting that sale to Slauerie, by taking away that life which even now they had given. They pretend hereunto also their Metempfychofis, dreaming that the Soule of that Infant shall the foo. ner passe into some more fortunate body : and are not therefore ashamed to doe this in others presence, yea not the meanest of the communaltie. Many more inhumanely kill themselves, ei-Selfe-flavers. ther wearse of a miferable life, or willing after death to bee reuenged of fome enemy, whiles to the Enemy of mankind many thoulands yeerely Sacrifice themselves, by Halter, Drowning, and Poyfon. Another immanitie in the Northerne Provinces is vied vpon Male Infants, whomfor Eunuches. hope of Palace preferments their Parents make Eunuches; of which in the Kings house are ten

thousand, a dull and blockish kinde of vokind vomanly men. Their Whippings also take away moreliues, then the executions of fentences to Death ; their Reedes slit two ells long, a fin- 10 ger thicke and foure broad, at the first blow breaking the skinne and flesh on the hinder part of the thighes : to preuent which many bribe the Magistrates, of whose domineering fulmesse of power they live in perpetual feare, where calumnies and lyes are so rife : which Chi-84 perfidiousnesse made the Kings come so guarded abroad and vnknowne, and now not to come

Kings kindred.

The Kings kindred are now growne to fixtie thousand, and daily increasing become abusthen to the publike, and daily increase in idlenesse, impotence, numbers, the King being very jear lous of them, and fetting Guards, befides their perpetuall exile from Pegnin and Nanguin. No Strangers con- maruell if Strangers be no better trusted in China, where the Natives and Bloud are suspected: out of whose Bookes they scorne to learne, and repute them little better then Beafts: and the to Characters whereby they expresse them are taken from Beasts. How Legats are held as prisoners in publike houses is else-where delivered. Commanders of Souldiers, which guard places are Souldiers bafe, guarded and watched, and not trufted with the pay of their Companies : neither is there any more base then the Souldiery, most Slaves or condemned persons, for their owne or their Auceftors cuils : and when they are free from exercises of warre, they become Muletters, Porters, and of other base Offices. The Captaynes onely have some authoritie. Their armes are worthleffe for offence or defence, and onely make a flew, the Captaynes being also subject to the Magiftrates whippings. Their Alchimifticall vanitie, and fludy of long Life, with precepts and huse bookes of both, I omit. The founders for footh of these Sciences have gone body and souleto Heauen. The making of Siluer hath made many spend their siluer, wits and credit, cheated 50 by professing Artists; and the great Magistrates ( few in Pegnin free ) are taken up with the o-

ther Study; fome thortning their life to make it longer. They write of one of their Kings which

had procured such a potion of immortalitie, whom a friend of his was not able to diffwade from

that conceit, enraged, by his fudden fratching & drinking his prepared potion : which he feeking

by death to revenge, the other answered, how can I be killed, if this draught cause immortalitie?

Studies of Allong life.

and if I may, then have I freed thee of this errour. Touching the China Sects, I read in their Bookes, that the Chinois from the beginning worshipped one God, which they call the King of Heaven, or by another Name Heaven and Earth. Beneath this Deitie, they worshipped divers tutelare Sprits of Mountaynes, Rivers, and of the that Linterans four parts of the world. In all actions they held Reason to bee obeyed, which light of Reason 60 and calculate, they confessed they had from Heauen. Of that supreame Deitie and his administring Spirits, my not swell they neuer had such monstrous conceits as the Romans, Greekes, Egyptians, whence the lesures with be faued with-our the Pone hope that many of them in the law of Nature were faued. Their Sects are reckoned three: The out the Pope, nope that many of them in the law of Nature were raued. I heir Sects are reckoned that as the lades, first of the Learned, the second of Sciequia, the third Lauen. One of these is professed by all ters without God and Christ and worshipping that, which by Nature is not God?

which wie their Characters. That of the Learned, is most proper to China and most accient and all their Learned learne it in the course of their studies, Confusius is the Prince therof. This Sect hath no Idols, worships one God, beleeuing all things to bee conserued by his providence. They worfhip in inferiour fort the Spirits. The best of them teach nothing of the Creation : rewards and puriliments, they confine in this life to a mans lefte or his polteritie. Of the immortalitie of the Soule they freme to make no doubt, for they speake of the deceated lining in Heauern, but of Hell they make no mention. The later Learned deny both, with the foules immortalitie : yet fome fay, that the foules of good men are corroborated with vertue and made able to hold out, o-

thers dying with the body.

thers dying with the bounds.

The principall opinion feemeth borrowed of the Idoll Sect, fine hundred yeeres agoe; which Godfuppo ed The principate opinion retines to our matter, and that the Creatures are as formany the found that this whole Vinuerie conflits of one matter, and that the Creatures are as formany the found that the Creatures are as formal that th members of this huge body, fo that every one may actayne to the similitude of God bring one world members of this nage body, to that causy with him; which we confute out of their owne ancient Authors. Though the Literate acknow. Peffort had no ledge one supreame Deitie, yet they erect no Temple to him, nor any other place proper to his Temples, Worship, nor any Priests, persons or rites peculiar, nor have precepts thereof, nor any which prefcribeth, or punisheth defect of Holies; nor any which privately or publikely recite or ring ought to him. Yea they affirme, that the Office of Sacrificing to the King of Hesuen and his worthip belongs to the King : and if any should take on him that Office, hee should vsurpe the Kings, and be thereby a Traytor. For this purpole, the King hash two stately Temples in both Two Temples 20 Royall Cities, one dedicated to the House, the other to the Earth sin which former the evical Royal.

The Specifical has now in his place correspond Visibility to the submitted by the state of the

To the Spirits of Mountaynes, Rivers, and of the foure frates infan-Regions of the world, onely the chiefe Magistrates Sacrifice, nor are the people admitted out,

thereto. The precess of this Law are contayned in the Tetrabiblion and fine Bookes of Dollrines; nor are any other Bookes allowed, but onely some Commentaries thereon. Nothing in this Obite, Sect is more of note then their yeerely Obite, or parentations to their deceased Parents, common to all from the King to the meanest, observing their dead Ancestrie as if they were living. Neither yet doe they suppose that they eate of the meate which is set them, or need it, but they haue no better meane to exprelle their loue.

30 The Literate have a coffly Temple to Confusius in every Citie, by Law appointed, in that Confusius Temple place where the Schoole is, and adjoyning to the Magistrates Palace, which is let ouer the Ba- ple and Rites. chelors or Graduates of the first degree. In a principall place of that Temple his Image is erected, or elle his Name in golden Cubitall letters, written in a curious Table. Hither the Magultrates affemble enery New-moone, and Full, also the Bachelors, with wonted kneelings, Odours and Wax-lights, to acknowledge their Master. On his Birth-day and on other set times, they offer reftiual Diffies, thankefully confessing his learned workes, whence they have attayned their Degrees and Offices, but pray not to him nor looke for ought from him; but as is observed of their derd Parents. Other Temples also are seene of the same Sect to the Tute. Templeofine

As officers of the state of the Magnitude of the Thomas, where they follow the binde them these to follows to obligate Law and Indian when they follows to obligate them to be follows to obligate them to obligate them to be follows the to obligate them to be follows to obligate t 40 binde themselyes by solemne Oathes, to observe Law and Institut, when they first enter into their Temple. Office. In these they offer Dishes and Odours, but in differing Worship: for in these they ac- Outhol Magiknowledge, there is a Dinine power to punul the perjurious, and reward the good. The loope fluter. of this Laterate Sect, is the peace and good of the Common-wealth, and of Families, and of each perfons; their precepts agreeing with Nature and Christianitie. Fine Relations or Societies are Fine combinations observed by them, comprehending all duties of humanitie; of Father and Child, of Husband and tions Wife, of Master and Servant, of elder and younger Brethren, of Fellowes and Equals. They condemne Single life, permit Polygamie, and in their Bookes largely explaine that precept of Charltie, to doe to another as a man would be done to. They deny this to bee a Sect, but a certayne Acadamie instituted for the gouernment of the Common-wealth; and because it prescribes not, nor

50 prohibiteth any thing touching the Life to come, many adjoyne the other two Scots to this. The second Sect is called Sequia or Ominge, and by the Imporiants, Sciecca and Amilabu. Second Sect Both have the same Characters, and the same Totoque or Law. It came to the Chimois from the began Albes, Weft, brought from the Kingdome of Thienfew or Scints, now called Indeftan, betwixe Indus and Ganger, about the yeere of Christ 65. It is written that the King of Chma, warned in a Dreame, fent Legars thither, which brought Bookes and Interpreters from thence, the Authors of them nert Legast citizen, within cought Dooks and anterpreters from citizene, the running of being dead. And threefore I lee not how truely the Iapminn affirme that Science and Amidaba pierced thirter, and were Natue of Stam. The Authors of this See, have taken some things out Domerstians. of our Philosophers. For they hold foure Elements, and manifold Worlds and transmigration of systems and

Soules, and other things. Somewhat it teemes to acknowledge the Trimne fabling of three 60 Gods becomming one sit acknowledgeth suff rewards to the good in Hessen, to the bad in Hell. It extols Single life, so as it may seeme to reject Marriage. They leave house and friends and Likenessee. exauell into duers places Begging. The Rete of this prophare Seed, has great affinitie with our (Asom/b) Eccleiafficall: the Singings of more faviors than Green and the reaching a single and those or and the service of the service (Assurph) Eccleinfficial: the Singings of men faying their fertice may leeme nothing to differ Cont., most (Aussian) Economical to the Singlings of ment raying their former may be more forming country from our Gregorian; they have Images also in their Churches; their Priests Garments are also monomicate.

the streets ends on cercaine times, hired by the dwellers. They have a Prelate called Ciam; which dignity he transmitted to his posterity 1000, yeeres giam Prelate. fince by hereditary fuccessions, and seemeth to have taken beginning from a Magician which liued in a Caue of Quiamifi Prouince, where his posterity still continueth. Their Prelate liueth

most commonly at Pequin, observed by the King, and admitted into the inmost Palace to consecrate and hallow the Roomes suspected to bee hanted by ill spirits. Hee is carried in an open Chaire, and with other pompe competent to the chiefe Magistrates, and is allowed by the King 10 a great Renenue. But I haue learned of a Conuert that thes: Prelates now are so ignorant that Tanfiu (Prietts) and their Monasteries, many of which are also Alchimitts, These three Sects Multiplication have divertified themselves into 300 in seeming, daily encreasing and growing worse and worse. of Sees.

Humvu ordayned that these three Lawes should be kept for the good of the Kingdome, onely the Literate to rule; whence it comes that they feeke not to ruine each other. The Kings make vie of them all for their purposes, often repairing the old, and building new Temples. The Kings wives are more prone to the Idoll Sect, and maintayne whole Monasteries without the Palace, and buy their Prayers with Almes. The Islols are not onely in Temples in this Kingdome, but in primte houses in peculiar places, in streets, ships, Palaces, they are the first things you see, and 20 yet put they little confidence in them. Their wifeft men feeke to mixe all three Sects together, and to whiles they embrace all, are of none, and proue Arbeifts.

gether like ours, which with an Ecclefiafficall terms wee call, Pinnalia. In their Service they often recite the name Tolome, which themselves confesse to be ignorant of. But they denie eternitie in their Heauen and Hell, alcribing a new birth after I know not what revolutions of time. in some other of their conceited Worlds, then and there to be penitentially purged; withother o fooleties. They prohibite to eate of liuing creatures, but few impose on themselves this abstinence, and they finde easie absolution from this and other sinnes, it they give to the Priests, who professe to deliver from Hell by their Prayers or Recitations, whom they will.

This Sect came in at first with great applause, as clearely professing the Soules immortalitie : but nothing more differed it, then that that King and thefe Princes which first embraced it (which the Literate often object) died miferably with violent death, and publike loffe and miffortune followed. By writing of many Bookes they have entangled it in mextricable Labyrinths. The notes of Antiquity appeare in the multitude of their Temples, and most of them fumptuous : in which huge Monsters of Idols of Braffe, Marble, Wood, and Earth are feene; with ples. Sceeples, Steeples adjoyned of Stone or Bricke, and in them huge Bells, and other ornaments of great price.

coitly Temmany and mi-

The Priests of this Sect are called Ofciami, they shaue their head and beard, against the fashion of the Countrey: some travell, as is said, some leade a very austere life in Mountaines and Caues, but the greatest part which amount to two or three millions, line in Monasteries, sustayned with their antiently-given Revenues, and Almes, and alfo by their owne industry. These Priests are accounted and juffly, the most vile and vicious in the whole Kingdome, frung of the bafeff plebeians, fold in their childhood to the elder Ofiami, and of Slaues made Difciples, fucceed their Mafters in Office and Benefice, a course which they have found for their propagation. For, few are found which voluntarily by defire of fanctitie doe adjoyne themselves to those Monkes, Ignorance also and illiberall education makes them liker their Masters, few of them learning Letters or civill rites; and daily growing worse. And although they have no wives, they are much addicted to women, and cannot but by grieuous penalties be kept from them. The Colledges of the Ofciams are divided into divers Stations, in every of which is one per-

petuall Administrator, to whom his fernants or as many as he brings up, succeed. They acknowledge no Superior in those Cells, but every one in his owne Station builds as many Lodgings as he can (most of all places, in the Court) which after they let to strangers, so that they are rather Innes then Monasteries, as full of tumults as empty of deuotion. Although they bee of base e-steeme, yet are they employed to Funerals and other Rites, by which wilde beasts, and sowles. of wide erea. and fishes are set at liberty, by the professors of this Sect with opinion of great merit. In this tures. See P.n. our age this Sect hath much retitued, and many Temples are built and repaired, by Eunuches, A River faire. Women, and the rule vulgar, and especially by the Ciacum, or Fasters, which all their lives abflavne from Fleih, Fifh, ( Egges, and Milke) and worship a multitude of Idols with set prayers at home, and are by hire to be called to any other mans. Nunnes also observe the same Monasti-Miss, or Nuns, call rules, being fingle and flaued; they call them Nunnes, nothing fo many as the Monkes.

The third Sect is called, Lanza, derived from a Philosopher which lived at the fame time with Confutius, whom they fable to have beene carried 80. yeeres in his parents wombe before he was borne, and therefore called, Lanza, that is, the Old Philosopher. He left no Bockes of his Opinion, nor feemes to have intended any new Sect, but certaine Sectaries, called Taufa, made him the head of their Sect after his death, and wrote divers elegant Bookes gathered out of divers Sects. Thefe alfo line fingle in their Monasteries, and buy disciples, base and wicked as the former. They weare their haire as the Lay-men, differing herein, that where they weare their haire twed on a knot, these haue a Cap on the crowne of Wood. Some also are married, and say our their Holies in their owne houses. They say, that with other Idols they worship also the Lordof Heanen, whom yet they imagine Corporeall, and to have suffered many things. They tell, that the King of Heaven which now raigneth, is called Ciam, and he which before ruled was named Len. This Len came one day to the Earth riding on a white Dragon, and Ciam a Wizard entertayned him with a Feast, where whiles Len was eating, Cum gat vp on the white Dragon, and 10 Liss Hill, neere was carried to Heauen, and excluded Less from that four raignty; only he obtayned of this new the great Lake. King, that he might rule ouer a certaine Mountaine in his Kingdome, where they fay he fill liueth: thus confessing (as the Greekes of lose) themselves to worship an Vsurper and Traitor.

> having some dreame also, as the former of the Trinicie. They also speake of places of rewards and punishments, but differing from the former: for they promife a Paradife for foule and body together, and have Images of fome in their Temples which have fo gone thither. To obtayne this, they prescribe certaine exercises of sitting in divers pollures, fee Prayers, Medicines by which the life is lengthned, if not made immortall. Their Priests exorcise Deuils, and drive them out of houses, by painting herrible shapes of them 60 in yellow Paper on the walls, and making horrible cryes as it them felues were become Deuils. They arrogate also to bring downe or to stay Rames, and other publike and private fortunes, most impodent impottors, either Lyars or Magicians. They affift the Kings facritices in those Temples of Hemen and Earth (thereby acquiring much authority) being Matters of the Mutike therein:

Befides this Deity of Heaven, they acknowledge three others, one of which they fay, Lauza is,

Innes.

Third Sect. Lyc of Lauzu,

## Of Strangers, and forraine Religions in China.

Ow inhospitall the Chinois are to Strangers, we have in part heard, neither permitting egreffe to the Natines, nor ingreffe to Aliens except in three respects. The first, such as come to pay their annual Tributes. The second, such as pretending honour and tribute, come (as wee haue heard) from the West with seeming tribute, a colour to their gaine by merchandife. The third, fuch as in admiration of the Chimies vertues and learming, come thither (as the Qieene of Sheba to Salomon) to learne the fame, which is the Isfantes pretence : but these must here fixe their habitation , nor may be suffered to returne ; such is their fealousie, of discouering their mysteries to others. And this made the lessites, after so long stay, free from feare of expulsion, which yet fince complaine of perfecution. But it may not be known, that they have any intelligence or commerce with stranger .: & therfore the lefuster, which have obtayined two fo great priviledges, the Eurisches Palace for their refidence, and the imployment in correcting the China Kalender, both by Royall approbation; yet could not obtayne leave to 40 goe into the Prounce of Canton, though with Mathematicall pretexts for that Kalender-busines, to observe longitudes and latitudes of places, because they were said to be Countrymen to those of Macao. Yea, a Colas, or Counfellor of State, was deprined, for fending a message to a bordering King; a tempest of libelling complaints thundring and showring against him therefore. In the bordering Provinces they fee narrow watch at Cuitom-houfes, Bridges, and in the very Rivers, by thips of warre thereto appointed. But if they be once gotten into the inner parts of the Kingdome, there are no such Officers, nor fearches. Neither may any stranger past out of the Kingdome, after once entring, without the Kings licence. The tefautes steale their ingresse and egresse by meanes of the Portugals, which had the Towne of Macao affigned them by the Channes, for trafficke. These come vivally twice a yeare to the chiefe Citie of the Province of Canton, which is not called Quantum, or Canten, (the name of the Province) but Quant cen. All the day time This is allo tethey have free entrance in the Citic about their merchandife, but mutt lie on fhipboord at night. About Many

In the midft of the River there is a little Hand, and therein a Temple, in which they are allowed de Manjon. their Catholike denotions. There by Boat did they prounde to feale in or out of the Country. The Mahametan that come in by land, if they flay nine yeeres (as is observed may never return Many Mobile home againe. Of these there are now many thousand Families in China, dispersed into the most measuraches of the Prouinces and chiefe Cities. They have there their Temples very fumptuous, and their Circumcifion. But as farre as I could euer loarne, they neither teach, nor care to teach, others their denotions, but are vnskilfull of the Saracens Tenents, and are contemned of the Chinose. It feems, that their comming in was in the time that the Tatar reigned here, which fince have increased,

60 and after folong continuance, are not held in suspicion, as other strangers. Some say, after the fourth generation they are reputed as Natiues; year they are admitted to the studies of Learning. Degrees, and Magistracy, as well as the Chinose. But most of these, thus dignified, relinquish their former superstition, retayning nothing thereof, but abstinence from Swiner Best, which rather by Nature, then for Religion, they abhorre.

Мm 2

Christians.

Pinto.269.

Touching Christians in China, there is not so great certainty. Certaine Mogores told Ricing of some in the Xensian Province, in the North parts of China, at a place called Xucheo, which were white, hearded, vied Bells, worshipped Ifa, that is, Iefm, and Marie, and honoured the Crucifixe ; their Priefts married , which cured diferfes without medicines. A lew at Pequin gaue more full intelligence, that at Caifumfu, and at Linem, in the Province of Sciantum, and in the Prouince of Sciansi, there lived certaine Strangers, whose Ancestours had come out of forraine parts, which worshipped the Crosse which the Chinois expresse by the Character of Ten ) and made the figne thereof with the finger on their meate and drinke. They also made the fame figne with Inke on the foreheads of their children, to preferue them from misfortunes. A lefinte alfo faw, in the hands of an Antiquarie, a Bell, with a Church and Crosse thereon grauen, circum- Io fcribed with Greeke letters. The Iew also reported that those Croffe-worshippers had the same doctrine in their prayers which the lewes held: this the leswies interpreted of the Platter common to them both. Hee affirmed that there were many of them in the Northerne Provinces, which to flourished in Letters and Armes, that they grew fuspicious to the Chinair, which hee thought was caused by the Saracens some fixty yeeres before. The Magistrates were so incenfed hereby, that they for teare were dispersed, some turning lewes; some Saracens; others Idea laters : and their Temples were also converted into Idolatrous Temples, one of which he menfioned in his Countrey. Euer fince they hade their profession, and when the lesuites fent one of their Converts to make enquirie, he could learne of none : which they thought proceeded from their feare, taking him for a Spie fent from the Magistrates.

All these Sects the Chinois call, Hoei, the lewes diftinguished by their refusing to eate the finew or leg; the Saracens, Swines flesh; the Christians, by returing to feed on round-hoofed beasts. Affes, Hories, Mules which all both Chinois, Saracens, and lewes doe there feed on. The Saracens called the Christians also Ifai, as before; and Terzai, which is a name given in Persia to the Armenian Christians (as an Armenian affirmed to Ricius ) whence hee coniectured, that these Christians came out of Armenia. And by the report of Hauton the Armenian, which fayth, their Sce fup pag. 115 King came to the Great Can of Cathay (which wee have before observed, at least the best parts thereof, to be the North parts of China) to perswade him and his to become Christians; which in great part also hee affected , besides other Christians there reported to bee , by Paulus; and those of Sarnan, subject to the Great Can, mentioned by Vertomannus, which seeme to be neere 30 these in China. The Malabar Christians have Chaldee memorials of China, converted by Saint

Thomas; and their Metropolitan hath his style of all India and China.

A certaine lew at Pequin hearing of the lefuites there, came to them to fee and conferre with

chálamfu. Iew at Pequin

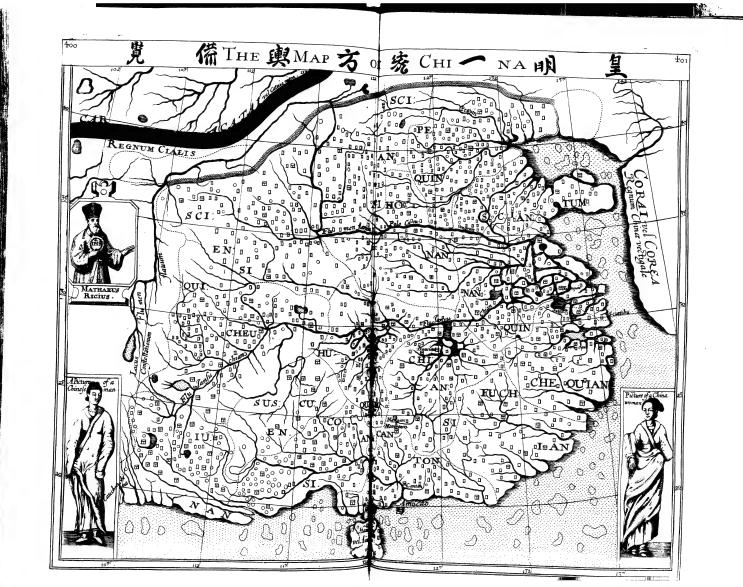

Sian.

them, imagining them to be Ienes. This Ien was borne at Charfamfa, the Mother-citie of the Province Honan, his name was Ngai, his countenance not refembling the Chinois; hee neels-Cting Indaifme, had addicted himselfe to the China fludies, and now came to Pequin to the examination, in hope of proceeding Doctor. There did hee enter the leseues House, professing that he was of their Law and Religion. Ricer leads him into the Chappell, where on the Altar food the I mage of the Virgin, lefus, and Iohn Baptist, kneeling; which he taking to be the Images of Rebecca and her Twins, did worship vnto them, contrary ( he faid ) to their custome. The Ima- 40 ges of the Euangelists he supposed to be so many of lacobs sonnes. But youn further question ming, the lesuite perceived that he was a professor of the Law of Moses: he confessed himselfe an Ifrachte, and knew not the name of Iem; fo that it feemed, the dispersion of the ten Tribes had pierced thus farre. Seeing the Hebrew Bible, hee knew the Letters, but could not reade them. He told them that in Chaifamfu were ten or twelve Families of Ifraelites, and a faire Synagogue, which had lately coft them ten thousand Crownes; therein the Pentateuch in Rolls, Which had bin with great veneration preserved five or fix hundred yeers. In Hamches the chiefe Citie of Chequian, hee affirmed, were many more Families with their Synagegue; many also in other places but without Synagogues, and by degrees wearing out: his pronunciation of Hebren names differed from ours, as Herusoloim, Moscia; for Messia, Ierusalem. His Brother, hee said, 50 was skilfull in the Hebrew; which he in affection to the China preferment had neglected; and therefore was hardly centured by the Ruler of the Synagogue.

Ifraelites dilewes at Han-

> To this Citie did Ricci fend one of his to enquire, who found those reports true, which also copied the beginnings and endings of their Bookes, which they compared, and found to agree with their owne Pentarench, fauing that they wanted prickes or points. He wrote also in Chie Want of prices no Characters to the Ruler of their Synagogue, that hee had the rest of the Bookes of the Old Testament, and other Bookes of the New, which contayned the acts of the Messias, being already come. The Ruler doubted, faying, that he would not come till ten thousand yeeres were expired. Hee also promised, that because hee had heard much good of him, if hee would come

thither, and abiliaine from Swines flesh, they would make him Ruler of their Synagogue. Af- 60 ter this, three Ienes came from thence to Pequin, and were almost perswaded to become Chriflians. These complayned, that through ignorance of the Hebrew, their Religion decayed, and that they were likely all of them in a short time to become Saracens or Ethnikes. The old Archifynagogue, was now dead, his fonne a young man succeeded in place, but ignorant of their

Law. And that their lewift Religion was indeed languishing, appeared by this, that they both worshipped the Popish Images, and complayned that in their Synagogue and primate houses they had none. They were offended that they were forbidden the eating of any creature, which themselues had not killed, which had they observed in this Journey had cost them their lives. Their wines and neighbours esteemed Circumcifion of their Infants on the eighth day a cruell thing, which they could be willing to alter, with acceptation of the Christian Law, nor would much standabout Swines flesh.

As for the Christian Religion thither carried by the Iesuites, you have heard the whole substance of their owne large Histories ; I meane not of Miracles , and other like stuffe and stuffings, To but the meanes of conuaying the Gospel to the Chinois, which are merchandise, money, & gifts, Mathematiks, Memorative-art, Morality, which to China Couetoufnes and Curiofity with their conforming to Confusius Ethikes, and China Literature, Habite, Names and officious Rites, were good Orators, and made way with much adoe to that little which is done; a mutuall exchange in many things, of Romife for Chinois Beades , Shauing , Vefts, Songs , Murafimus , Ta. pers, Cenfers, Images, Legends, Monkes, Nunnes, Processions, Pilgrimages, Monasteries, Al. tars, hee and shee Saints, and other things innumerable pertayning rather to bodily exercise which 1.Tim.4.2. tars, hee and thee Dantes, and other raines innumerance percayining tasher to would not married profite thirds, then to Goddinesse, or God-likenesse, who being a Spirit, required men to worshop 104,13,14 beam in spirit and truth; and by foolshousses for praching faueth them that between 100 prosidence of 1601,13,14 words, in elegant writings, and those more of Arts then Christianisy. The great Doctor of the on Gentilas tooke another course, not with excellency of words, fayth he, or wisedome; yea, bee efter-

med to know nothing among the learned Corinthians but Iefus Chrift and him crucified : neither food 1.Car. 21,233 bis word in the entifing speech of mans wisedome, but in playme enidence of the Spirit; not the wisedome of the World, but the wifedome of God in amysterie, &c. Which I speake not as denying the feruice of Arts to Dininity, but of Dininity in manner to Arts, where the profession is not as of a Tent-maker to live that he may preach, but as of an European Philosopher, where Hager domineereth, and Sora at some times whilpers a little, and except in Images and Shewes scarcely thewes her felfe, as more fully appeareth in the fore-going Hittory. But would God any Arts Waiton, c. t. or any Preachers may occasion the opening of their eyes, which were wont to bragge of two eves, and lay Europeans had but one, when as they have but this one natural eye, and in spiri-30 tual things are blinde: and would God the Chinois might as generally acknowledge themfelues thankfull to lessitical labours in professing the Gospell, as I doe here my selfe for this His-

è. VII.

The Map of China, taken out of a China Map, printed wish China Characters; illustrated with Notes, for the understanding thereof.

seeing He originall Map, whence this prefent was taken and contracted, was by Captaine Serie (whole industrie and acks haue both here and elfewhere enriched this worke) gotten at Bassam of a Chinese, in taking a distresse or debts owing to the English He originate study, whether this phenomenon both here and elsewhere enriched this worke) Test. 144.14 gotten at Banam of a Chinese, in taking a distresse for debts owing to the English 42.03. Merchants; who feeing him carefull to conuay away a Boxe, was the more carefull to apprehend it, and therein found this Map, which another Chimese lodged at his house, lately come from China, had brought with him. The greatnesse of the danger at home (if knowne) The China

made him earnefly begge for that which was on the other fide as earnefly defired and kept, is loss of Malter Haking procured it of the Captaine, professing his intent to give it to Prince Henry of Suragers. glorious memory, who being fuddenly advanced to a higher view in Heauen, and Mafter Hak-

days following, this Map came to my hand, who fought to express my loue to the publike in communicating what I could thereof. For it being in China Characters (which I thinke none in England, if any in Europe, vn.lerstands) I could not wholly give it, when I give it; no man being able to receive, what he can no way conceive, And as in greatest things our little understandings easier apprehend negations then affirmations, and can better tell what they are not, then what they are 16 this Map eafily tells at fifth, Benefit of this euen wirhout Commentaries, the comments and conceits of our Geographers, Ortelms, Mer. Map moonts cator, Hondius, and what societ other our Authors of Maps, and Globes, who all haue heerein tingothers. fayled, gining nothing leffe then China in their China; whether wee regard the generall figure

and shape thereof, or the particular Rivers, Hills, Provinces, Wall, Latitude, and if wee beleeve the lesistes Longitude also. They present it in forme somewhat like a Harpe, whereas it is also most foure square; they make Hills, Rivers, Lakes, Ilands, ( Cora, also for one, which is part of cora no lland, the Continent ) Cities, Prouinces, every thing out of due place. Whose industry I commend; but industry guided by fansie, and without light, is but the blind leading the blind, or like a freled vamanaged Horfe, the more spurred, the more ready to carrie his Rider into precipices, or out of the way at least. Our Geographers haue indeed payd the Chineis in their owne Coine:

for they, as before yee have read, knew nothing in manner of the other parts of the World, and expressed them as fanfifully in their Maps; and wee likewise knowing nothing of them, have entertayined, and beene entertayined with Fanfi-maps, in flead of those of China. As therefore by Sir Thomas Roes honourable industry wee haue given you Indus and India before, which no Geographer before had done (they all bringing Indus thorow Cambaia, and some seeking for Ganges at (anton in (bina) fo here we give you a true China, the Chinas themselves bring our Guides, and the lefuires their both Examiners and Interpreters.

The Originall is about four foot one way, and almost fine foot the other, whereof a vard and some source inches square is the Map it selfe; the rest are China Discourses touching the sayd Map in their Characters and Lines (running downward, and beginning at the right hand to bee read, after their manner) which are heere omitted, as not vindentood. Yet have wee fome vinderstanding (as where wee see a man farre off, whom we know to bee a man, and can obsense his habit, gefture, motion, though wee see not the proper complexion of his face) by that which Pantous hath told vs before; namely, that those China Characters contayne all the Tributes of each Province, yea the number of Houses and perions in the same. And in the Map (of which wee have given an extract) hee fayth the Rounds and Squares are Cities and Townes of principall note all walled; adding that the Rivers are diffir thy delineated; and the great Lines are boundaries of Prouinces, (wee haue heere ex pressed them after our manner in little prickes,) the leffer expresse the chiefe Cities Iurisdiction. Ours hath no such leffe Lines, but those mentioned Rounds and Squares, which perhaps hee meaneth; for therein are many others in Character, and without fuch lines round or square, and therefore as I suppose without Iuridiction; and in this extract wee have left them out, because we exactly knew not their meaning, and perhaps sometimes are Cities, fornetimes Caftles or Townes, or Hills, or fome other thing: and filence fee med better, then labour to expresse an waknowne Character, or boldnesse to expresse our owne folly or to occasion others, deceiuing and being deceiued. These Rounds and Squares also have their Characters in them, and those greater Squares with Crosses, haue, some three others four

Besides Passogia, another hath helped further to the particular understanding, namely our famous Countryman Malter Candifb, who in his voyage about the Globe, brought home certains references taken out of the Map of China, neere which hee fayled, and it feemes by fome skilful 20 of the Languages both of China and Portugall, had the fame interpreted to him. That the Prouinces beare other names then in our Map or discourse is no wonder; for both the Chinois themfelues in divers Provinces speake divers languages, and in all have the Court language besides the peculiar : and the China Characters are the same to many Nations, each of which reades them into his owne language, dialect and appellation. Thus what one Prouince callerh Language (wanting the N.) by divertitie of Dial Ct, is elfe-where called Nanquin; Pequin, Paquin, and Puching yea, by other language Taybin, and Cambalu, and Suntien, or Citie of Heauen. I durft not interpret all, chu fing rather to giue an vincertayne truth, then to hazard a certayne errour. Mafter Canablus Notes are thefe.

" Perhaps this is Scienfi. nThefe leagues feeme doubt-Pequin.

I He Province of Canfas \* hath 4. great Cities, and 20. fmall Cities, and 77. Townes and Castles : it contayeth in length 95. leagues a it hath 362000. Houses of great men that pay Tribute and 13900, men of Warre, and hath 47000, Horfes which are the Kings,

2 The great City of Paguin where the King doth lye, hath belonging to it 8, great Cities, and 18. small Cities, with 118. Townes and Castles, it hath 418789. Houses of great men o This note of which pay Tribute : it hath Horlemen for the War, 258 100 this City is in the latitude of oce. degrees to the North-wards, being there as cold as it is viually in Flanders. The Province of Sorehin hath 7. great Cities, and 16. fmall, with 12. Townes and Caffles,

and one great Citie, to which many repayre to fight against the Tartars; it hath ( ) leagues in 50 length, and hath 164118, great Houses which pay Tribute, and 96000 men of War. 4 The Province of Santo P hath 6. great Cities, and 14. fmall, with 90. Townes and Cattles; it is 82, leagues long, and hath 775 55, great Houles which pay Tribute : 62808, horie-

that there was men, and 31000. footmen of War. The Province of Oymen 4 hath 7. great Cities, and 14. fmall, with 90. Townes and Caltles; being 470. leagues long, and 132958. great Houses that pay Tribute, 82800. men of For the Chiman Warre. Out of this Prouince commeth Copper, Quick-illuer, and Black-lead.

6 The Province of . Cutchen hath 8. great Cities, and 12. fmall; and 82. Townes which make Armour to fight with the lawes which do inhabit beyond Cauchin-china: it is 100.leagues broad, and hath 32920. Horlemen and Footmen with 405670. great Houses which pay Tribute 63 whereof the men of War are payed.

7 The Pronince of Languyn hath 14. great Cities, and 17. fmall, and 95. Townes and Car Or Quichen, files: it is 1 20. leagues over, and hath 962818. great Houl s which pay Tribute : it hath in it 308900. men of Warre. Whereof there are 52500. Tartar Horlemen that take wages.

8 The Province of Vquam hath 14. great Cities and 19. small, 150. Townes and Castles, and is 210, leagues broad; and 53161. Houses that pay Tribute : and 71600, men of Warre.

9 The Province of Som hath 7. great Cities, and 11. small, and 103. Townes and Castles: and is 200. leagues broad : and hath Houses that pay Tribute 139567. and men of Warre

10 The Prouince of Essiram hath 12. great Cities, and 75. small, and 80. Townes and Cafiles, and is 440. leagues broad, and hath great Houses that doe pay Tribute 1242135. and 229000 men of Warre.

11 This Lake lyeth behind Siam, and before Champa, and doth joyne with the Lappians, and To from thence commeth all the water that ferueth the Kingdome of China; and the Indians and I sam Confess. the Chinians doe report this Lake to be the whole World, and so they paint the Sea, the Moone timum.

12 The Province of Lanfay, hath 13. Cities and a chiefe Citie, and 73. Townes and Castlesi and is 260. leagues broad, and hath great Houses that pay Tribute 1393629. and 12700. men

12 The Prouince Counts hath 12. great Cities, 45. Small, and 51. Townes and Castles, it is 260. leagues broad, and hath great Houles that pay Tribute 1306390, and men of Warre, both Horsemen and Footmen 100100.

14 The Province of Vanam hath 14 great Cities, and 36. fmall, and 34. Townes and Ca. 20 files, and is 88 leagues broad, and hath great Houses that pay Tribute, 389396. and 15100.

15 The Prouince of Figure hath eight great Cities, and one principall Citie, and 54. Towns and Caffles, and two great Gities of Garrison to keepe watch vpon the Japans, and is 200 leagues broad, and hath 1909532. great Houses that pay Tribute, and 4003225. men of the Kings

16 The Province of Canton hath 40. great Cities, and feuen small, and 77. Townes and Cafles; and a Citie that putteth forth hundreds of flips for the keeping of Cauchin-china, and is 380. leagues in breadth, and hath 483383. great Houses which pay Tribute, and 39400. men

30 17 The Province of Enous hath seven great Cities and 13. small, and 90. Townes and Cafiles : and is \$8. leagues broad, and hath 589296. great Houles that pay Tribute, and 15100.

The Spanish Friers of the Philippinas, as Mendoza recorderh, thus out of the China Bookes relate the names of the Prouinces, Paguia, Foguiem, Olam, Siufay, Sifuan, Tolanchia, Canfay, Oquiam, Aucheo, Honan, Xanton, Quichen, Chequian, Susuam and Saxy; tenne of which are seated on the Sea-coast. He also addes that Pagnia or Pequin hath forty feuen Cities (stiled Fu) and one hundred and fiftie others termed Ches. Canton hath thirtie feuen of the one, and one hundred and ninetic of the other, and so proceedeth with somewhat differing account, reckoning in all five hundred ninety one Cities entituled Fs, and 1593. of the Chen Cities, which he makes Townes: 40 whereas the Issuits have taught vs that Fu is the Title of a Region or Shire, in each Province,

which are sub-divided into Cen and Hien, those the more, these the lesse principall, but yete-Againe, 11 a Dialogue printed at Macao, in the Confines of China, 1590, by the Portugals, thefe Prounces are thus reckoned, Sixe vpon the Sea, Countums, Foquien, Chequian, Nanquin, Xantum, Paquim; the other nine In-land Proninces, Quianfi, Huquam, Honam, Xienfi, Xanfi, Suchnon, Queichen, Innan, Coansi. Perera reckons them thus, Fuquien in which Cinceo is the best knowne City, Cantan, Chequeam, Xutiamfu, Chelm, Quianci, Quicin, Quanet, Confu, Vrnan, Se-

china, Ge, all which diversity proceedeth partly from ignorance, partly from different Language and Dialect in the expounding these Characters. And it must needs be so, the Chinos wanting 50 vie of, and Characters to expresse b. d. r. and all their Characters being of things noe Letters; in proper names is very great difficulty to expresse ours in their Characters, or theirs in our Letters; insomuch that one lesuite doth not perfectly agree with another, nay, often disfents from himselfe, as in langen, Tameen, Hiancen, for their great River which Pole cals Quian; and Chi, and Ci, and Qui I find often confounded in their fyllables, as also x and sei, as X auchin, Scianchin, and the like. Yea, such is the difficulty, that the lesuits can scarsly devise to express in China Characters, the forme of Baptime, to put the Latine words thereof, into China Chara-Gers, that Baptisme might vnisormely bee administred after the Romish Rite, as themselves

Touching their Souldiers, I thought good, to adde this note for their Peeces whole Barels Note of Soul-60 Pastria layth, are but a span long, that Captayne Saria beeing asked told mee, hee saw many of diers Pecces. them , and they were as long as Piftols , but the Cocke fuch as makes them of little feruice.

I have added these Pictures of Man and Woman of China, not by ghesse, but out of certains the Printers in China Pictures made also in China in very good Colours, but with Arte meane enough, fault. fine cloth inferted in frong Indian Paper; of which Captayne Saris communicated many to me. Picares.

Their little Eyes and Nofes, long Hayre bound vp in knots, womens feete wrapped vp, long wide-sleeved Garments, Fannes, &c. I have (taking divers parts out of divers) presented to ther. A taste of the China Characters thou hast in the Title. That of Ricins I have added from Provinces and the Ichaits, in thankes for his great paines, and to shew the habit of the head, &c.

to the South. Degrees.

The names of the Proninces I have hunted out of the Iesuites Iourneyes and other Relations. In the most I am fure I am right, in the other 'you have my consecture; for neyther know we their Characters, nor haue any given vs a particular Geography or Chorography, but only the names of the Prouinces. I have added names also to some Cities and Rivers of principall note, As for the truth of the Map I finde well to agree with the Isfuites Journeyes; but it hath not European Art, it being neyther graduated, nor Hils, nor Woods, or other differing places pre- 10 sented to the view; only having Characters, Lines, Lakes, and Rivers. I have addendered to adde Degrees to helpe such Readers as cannot doe it better themselves, following the lefuits prescripts in generall, although I cannot but manuell at that longitude, so farre differing from the generall opinion, and could almost doubt, that herein these Portugals are minding that diuision agreed on betwixt the Spaniards and them , which hath anciently caused such contentions, and wherein you have read some Offices of the Iesuits in these China Discourses. But I will not contend, where them selues speake faintly,

Now for Quian which Polo hath mentioned, as the greatest River in the world(it is here called Suim. And tor Quian which rose nath mentioned, as the greaten Kiner in the world it is here called Mandeule & lanfu, or Humfu, or Tamfu, that is, the Some of the Sea, and lanfuchian) and another called Coo hers speake ramoran (Cara signifieth blacke, and this great Northerne River is alway thicke and troubled) of the irregula- and their Marriage by Art, is here viewed; and more then two hundred Cities (one of Polas Wonders) communicating their Merchandizes by that Quian, or Chian, as they now termeit Iansuchian, chian signifying the chiefe Riner. For the name Cathay to bee given by the Tartars to China, Goez his Journey hath made it out of doubt; also that Pequin is Cambalu, that is, the Citie of the King. I doe conceine that Polos Mangi was the nine Southerne Proninces of China; the Northerly before conquered was knowne by the name of Cathay; a name by the Tartarigia uen to divers Countreyes, as Cara Catay and Catay Calay and Great Catay. This Great Catay is China.

Polo and other Authors speake of Cathar and Mangi as two; perhaps the Tartars so accounting them; the one, to wit, the North parts being formerly subject to them, and called by their 18 ancient name, the other called Mangs in contempt; as the Romanes called the fubiect Britaines of this Iland by their former name, and the others Pitts and Barbarians; and as our Ancestors called those Britons which withstood them Walfb or Welch in a kind of difgrace. Nay still the Northerne Chinose call the Southerne Mangines , that is , rude or barbarone , as the Iefuites have taught vs. But neither Cashay, nor Manyi, was then the name which they affumed, but was given them by the Tartars, as China is a name vnknowne to them now. If any will find noother Cambalu, nor Cathay but Pequin and China, I will not contend, though my Reasons elle-P. Pil. LA. 12. Where given out of Pole, and Chaggi Memet, and others, with the former Relations of Pinto and Albacen, make me scrupulous, and fill to beleeve some greater Prince or Can with his Cambals or Court in the more Northerly parts of Afia, then the lefuits could learne of; which the is China icalouse, admitting no entercousse of Strangers, and the many quarrelling. Tartar Princes in the way have concealed from vs hitherto.

The great blacke space on the North-west hath in the Originall certayne Characters in it which expresse it whether it intendeth Mountayns which their Art could no better expresse, and the Rivers thence running may import, or that fandy Defere on the North-weft, I cannot fo well determine. The Iefuits fay, that ab occasu qui Aquiloni vicinior est, conterminu visina arena strentis ager, qui multorum dierum penuria aduenarum exercitus ab Sinarum Regno ant deteret, aut fepelet. I rather thinke that it is Cara Catay or Blacke Catay, before often mentioned, both Mountaynous, and Defert, and perhaps coloured blackish, as the name intimates, by black lands, or as health grounds with vs: it was the first Tartarian Conquest, and beginning of the greatest 50 greatnesse which this World hath yeelded; the Countrey before of Presbyter loannes A-

The wall is in this forme in the original, not in the Picture made up of Mountaynes, wherein I thinke they had not art to imitate Nature ; the Art in the whole Map much refembling our old Maps, of wooden prints, faue that I fee not one Mountaine prefented in fwelling fashion to the Eye. The Ilands are very many with their Characters, but poorely delineated, their names here omitted for their vncertaynties : fo little (and yet how much more then any other !) doe wee giue you of China, till Time giue vs more. The degrees are not so perfectly accommodated to the Map, by reason that we must at once follow the Chinian Map which had no degrees (nor could their Art without degrees give every place his just longitude or latitude) and the Iesuits Rules: 60 yet we haue comne som ewhat neere, as may be seene. Other things appeare in the History.

to them, kneed on Hus having with Pantogias eyes taken fome view of the Kings Palane and with Ricins of their whole Government, I hold it fit pot to leave this Chine Apoltle (fo Ricing is called) till wee have feene fome fruitant his laboure vintil and after on Leija his death. He tels vs that three dayes after they had beene that we in the Palace of Strangers as yee haue read, they were brought forth into the Kings Palace so performs the wonted Rites to the Kings Throne, This is done in a large and driven

glorious Court or Porch, where 20000. men might be contayagd; at the end whereof is a high Chamber, under which by fine great doores is a passage to the Kings Lodgings sin that Change ber is the Kings Throne, where anciently he fate to heare and dispatch butinelles and Embaffages. and to receive the Rites of Magistrates, rendring thankes for their Preferments. But in the pre. Kings Throne fent folitarinesse of the King, those Rites are done to the Empty Throne , many there gratula reucrenced 20 ting the King enery day. In this Court, engironed with flately Workes, 2000, Souldiers watch euery night, befides others watching in Towres without, a ftones caff from one another. In each of the fine Gates is an Elephant, which with the Souldiers goe forth when it is day; 'and those Elephants. are admitted which come to gratulate the King. These come in a peculiar Habittof Red, with an luory Table in their hand to couer " their mouth, and exhibit their kneelings and bow. "See the like ings to the Throne, as they are taught by Officers of Rites or Mafters of Ceremonies : one cry. [80.23. ing out to that purpose at the performance of each gesture. The Gouernour of Strangers having Throns. thut them vp, first petitioned the King tharply against Mathan the Eunach and them, but feeing no answere, he petitioned more gently but would have them fent from Pegain; which the King

30 also laboured their stay for feare the Clockes should miscarry beyond their skill. The Kings Mo- Kings politike ther hearing of a selfe-striking bell sent for it, and the King sent it, but to prevent her af- piecie. king it, canfed the Wheeles to be loofed, fo that not feeing the vie, the fent it agains.

When the Rituall Magistrates could get no answere to their Petitions for not touching their flay at Pequin; the Prefett fent to Ricius that he would make a Perition to give him leave to flag. there in precence of Sicknesse and Physicke, which beedid, and the other presently answered, giuing him libertie to hyre a House; continuing also his former allowance, with source servants to bring it every fifth day, (Flein, Salt, Rice, Wine, Hearlys, Wood,) and another fervant in continuall attendance : fo that now they recoursed libertie, and credit. The Eunuches alfo told Their liberie them of the Kings approbation of their flay; and they had out of the Treasurie right Crowness and allowance 40 moneth, which their goeth much further then heere : and the Captayne of Strangers by open Sentence gaue them full libertie. One of the Colai, and then the onely, became their great friend, with his Sonne, after some Enropean Presents, which hee bountifully rewarded : likewise the supreame President of the Court of Magistrates, and other of the Grands, besides the Eupuches of the Palace, and some of the Queenes and Royall family, Amongst others was Famochan a great Funother man, who for withflanding the Eunuches capacitie in Vquess Prouince, was deprined, whipped, and three yeeres Imprisoned; but by others honored with Temples, Odours, Images, and Bookes

became Rieins his Scholler, and was baptifed Leo, borne at Hancen, the chiefe Citie of Cechan, so of which afterward. Yet had Ricina a great enemy of a great Learned man of Hanlin Colledge, who in zeale of the One of Hanlin Idol-fect had put away his Wife, and professed himselse one of their Votaries or Shauelings, neth Idoldrew many Disciples after him, and writ many Bookes against the Literate Sell; and writ also Priess. against Recise his bookes. One of the Kings Admonifors accused him to the King by Petition, and the King referbing feuerely, hee flue himfelfe : yea, the King ordayned, that if the Magistrates would become Apostata shauelings, they should leave their Robes and get them to the

in prayle of him, as a Saint, and the King wearyed by multitude of Petitions for him, granted

him againe his libertie. Also Lingofon a great Magistrate and Mathematician as they accounted,

Deferts; many accordingly chufing rather to leave their Offices, then their Idols. One Thacon Thacon a fawas fo famous, that the cluefe Queene daily worshipped his habit, (hauing no other meane of en. mous infatercourfe) and fo proud that hee fent to Ricins to come and visite him, with the rites of kneeling, mous Prieft. 60 But on occasion of fearch for a Libell against the King, hee was found guiltie of writing ill of the King, for not professing Idols, and of ill viage to the Kings Mother, for which he was Whipped io, that before they could adde bonds, hee dyed. One which by torments confessed himselfe au-

thor of the Libell, had 1600 gobbets plucked from his flesh and then beheaded, a Death most (for the division of the body) abominable to the Chinois.

liked not, yet without Petition from the Magistrates would not detayne them. The Eunuches

Scianhai in

In the Xancean Residence some stirre happened, whiles they brought to the Iesuis house their Idoll Honquan, made with three Eyes, one in his forehead (for though the Chinois have no Idols representing any formes but humane, yet they admit Monsters) as their God of Eye-fights for whom they intended to build him a Temple, and carryed him from house to house a begging to that purpole; the lessies refuling to grue them. Runaours alio of Mashans detayning the Prefents were soone apprehended; as likewise certayne Stage-players which comming from Amacao, fet forth in Pictures those things which the Chinois hated in the Portugals, as their short Garments (feeming to them ridiculous) praying on Beads by men in Temples, with Swords girded to them, kneeling on one knee; their quarrels one with another and combats, Women going with Men in company, and the like; a Magistrate also accused the Jessies to the Tasis, 10 who space for them and visited them. It happened also that by occasion of a great Drought, Processions and Falts were commanded, and the Shambles shut vp, the Governour and people in diters places appointed thereto, begging rayne with their bowings; and when this pressyled stee, they beought air fall out of the Suburbes, called Levi, which was carryed about, adored, Issurvaluciti. Offered too, with no better faceesse. Hereupon they consulted a Witch, which sayd the Quant or Goddeffe was angry, that her backe was daily forched (fpoken of the Converts burning their Idols) which caused some conspiracie, quenched with the Tantis sauour and the rayne sollowing, At Nanquin one borne at Scianbai, and hift pronounced Licentiat in the examination 1597. was Baptifed by the name of Panins, who connerted his whole Family. Anno 1604. hee was made Dector, amongst three hundred and eight, of which number foure and twentie were cho- 28 fen of Hastin Colledge, after the Come course of best Writing, of which hee was the fourth : this Choile of four and twentie is but for probationers, for at the most after long tryafe by the Colai, but twelue or fifteene are let in possession, in which examinations hee was

I rhought to adde this by the way, that Ligorfun a learned friend of the lefuites, had beene put from his great place into I know not what petrie Office, for too light demeanour and too fre-Hollanderstake quent Cheffe-play, which continued three yeeres. The Hollanders much impountified the Pera Partugal thip sugals by taking the lapan Ship of Amacas, the fewell of the Issues beneficence. At Nancian they Converted three of the Blood royall, Baptifed by the names of Melchior, Gafpar, Baltha. far, and their Mother a woman much addicted to Idols, and observing the China Fast; who sent 10 them a Charter, called the Drectorie of Hell, which the Shaueling Impostors had fold her, written to the Infernall King, to give her good entertaynment, and remit her punishment. The le fustes exchanged their Images tor her Idols, and their Ecclefiafticall Falt for that Pegan.

At Nanquin, Chine also was baptifed by the name of Ignatius, firking the ground four times first with his forehead, and feciting the profession of his Faith, which hee deliuered in writing to the Fathers: the contents of which and of Pauliu, are expressed in our Author. The Hollanders fought entrance into China, to bee admitted Trade in Fuquien Province, but were denyed notwithstanding both promites and threats. Feare of them made the Poring als at Amacao begin to lesuricallypbuild a Tower and to fortifie. But a quarrell falling betwixt a Regular, and a Secular Priest, one ficeing to the lefane Rector for refuge, there grew such a combustion that the Chinois fled to 40 their Countrey, perswaded that Catameiu then there intended to get the Kingdome, whereof hee had such expense; at Canton was such terrour, that aboue one thausand Houses without the walls were polled downe, the Gates toward Amacao filled up with Lime and Stones, all commerce with Amacaons prohibited, great Watch kept; Francis Martinez betrayed by a false brother a Mariner whip- Convert, as a Spie, was twice to Whipped that hee dyed foone after the ftripes, as hee was entring the Prison. At Nanquin three thousand were found, Anno 1606, to have conspired the Death of the Magistrates, and to invade the ancient Treasuries. Those which were taken were put in those Pillorie boards, which force them to fland till their Legges rot, some of them holding out a Fortnight, as was thought by bribing the Executioners : the suspition hereof was by Some cast on the lesistes. Two Guides or Fraternities were erected of (bina Converts.

Zin Panlus the learned Connert, being to leave his place for three yeeres, to mourne for his Nanquin Pro- Father at Scianbai his native Towne, he obtayined Catamens to bee fent thither with him, where heestayed two yeeres. This is one of the meanest forts of Cities which they call Hien, one hundred fortie and foure Italian myles from Nanquin, and in that Province, in twentie nine Degrees, ouer against Corai and the Laponian Hands, within a little of the Easterne Sea. The name Sciantia, lignifieth on the Son; and it is fortified with Garrisons and a Fleet against the laponians, being a passage with a good winde of source and twentie houres sayle. The walls are two myles compaile, the Suburbes contayne as many Houses as the Citie; so that there are numbred fortie thouland Housholds (by this jon may measure the frequencie of great Cities,) the Territoris is an euen Playne, and so cultinated that they seeme a Citie of Gardons, full also of Villages, 60 Hamlets, Towers, contayning twentie thousand Families in this Townes jurisdiction, there being in that Circuit 300000. men. This Iurisdiction alone, payeth to the King the yeerely value of 1 50000. Golden Crownes, in the weight of Silver, and afmuch in Rice, in all 200000. (whence the incredible renennes of this Crewne appears also credible) the Ground being fertile of

Cotton, whereof there are reckoned 200000. Weaters, Pequin and other parts being hence fer- 200000. West-

ued with Cloathes. There are many good wits and Students, a good Ayre, and they live long, ners. eightie, ninetie, and a bundred yeeres.

Wee are now come to the Death of Father Ricine (the Author of our Iesuiticall Discourse of Ching hitherto; occasioned by multitude of businesse that yeere, fine thousand Magistrates comming to vilite the King, and five thouland others standing for their Doctorship, of which about three hundred onely are chosen. Wearyed with his Ecclesiasticall Fasts also and labour of building a Church, hee fell ficke and dyed, May 11, 1610. having much propagated the Goipell by his writings, and furthered it by his Mathematickes. For all Sects have beene there more en-To creased by Writing then Preaching. Hee dyed leauing much forrow to his friends and care also in that China forupulofitie, how and where to interre him. It was the counfell of their friends, to put vp a Petition to the King, whereupon they resolued, and Pantogia by Doctor Less helpe, thus Petitioned in behalfe of Ricius his Corps. I lames Pantogia, Subjett of the Kingdomes of the great West, Offer a Supplication in behalfe of another Forrainer now deceased. I humbly beseech your great Clemencie for a place of Buriall, that your Royall beneficence may extend to all, even Strangers of remotest Regions. I lames Pantogia am a Stranger of a most remote Kingdome, but mooned with the vertue and fame of your most Noble Kingdome, have in three yeeres fayle, with much trouble, paffed bither abone fixe thon and leagues. In the eight and twentieth yeere of Vanlie, (for so, as wee, they account their yeeres by the Kings raigne) in the twelfth Moone, I, with Matthew Ricius, came into 20 your Court; where wee presented some gifts, and have since beene sustained at the Kings charge. The nine and twentieth yeere of Vanlie, in the sirst Moone, we Petitioned your Maiestie for a place of resdence, and have many yeeres entoyed the Royall bountie. In the eight and thirtieth yeere of Vanlie, the eighteenth day of the third Moone, Ricius dyed. I, a Client of the Kingdome of the great West remains a sis subsect of pitie. The returne into our Courtrey is song oc. And I new, after so many yeares stay, suppose that wee may bee numbred to the people which solloweth your Royall Chariot, that your Clemencie, like that of Yao, may not contagne it felfe in the Kingdome of China alone, cre. So proceeds he He was a King to fet foorth the good parts of Ricim, and with a long supplication to begge a place of Buryall. of old, account fome Field, or part of a Temple; and bee, with his fellowes, should observe their wonted Prayers to the

Lord of Heaven, for thou fands of yeeres to bim and his Mother. This Libell was written with peculiar forme, Characters, Seales; many Rites herein necessarily observed. Before any bee offered to the King, it must be eviewed of some Magistrate; and they got this to bee allowed by one which is Mafter of Requests, which fent it presently to the King. They must also have many Copies thereof, to shew to those Magistrates, to whom it appertaines; which they did : one of them affirming, That Rismu deserved a Temple also, with his Image to bee there set up. This message hee tent them by another : for when they favour a cause, they shew great itrangeneffe. The King commonly answers the third day (except hee mislike, for then he suppresfeth) and fends it to the Magistrate that had presented it, who shewes which of the sixe is the peculiar Court, which judgeth of their things : This being fent to the Ritual Tribunall. Their antiwer is fent to the King within a Moneth (which there is a fhort space ) and repeating the Petition verbatim, and the Kings command to the peculiar Office, answers what the Law fauth in that case, and concludes the Petition to bee agreeing to Iustice, and earnestly pleades and sues for confirmation. The King fends this answers to the Colao, which subscribed his approbation; which being fent agains to the King, hee lubscribed with his owne hand Xi, that is First, or bee

at done, which the third day after was delivered them. The lefuites having so speedie and prosperous successe, bethought of gratifying their friends, which had furthered this defigne with Dyals, especially to the Colas, which vied Pantogia very kindly and writ to the Gouernour of Pequin to looke out a place fitting. Three or foure were offered to their choyse, one of which much pleased them.

It was about a quarter of a myle from one of the Citie gates, built by an Eunuch, who now so was condemned for some crime; and left his Palace which hee had heere builded, with Place affigned the expence of aboue foureteene thousand Duckats (which in China is a great fumme, in that to the Islands. cheapnesse of all things, farre beyond European computation) should fall into the hands of spoylers (the goods of Eunuches in this Kingdome, viually becomming his which first can catch them) hee confecrated his Palace, and made it a Temple, maintayning therein one Priest. Such Spoylers spoy-Palaces many of the Magistrates have neere to the Cities, as retyring places and Tusculanes for led. their Muses. The portraiture of this whole House, with the Garden, and other appurtenances, Trigautius hath fet foorth in Picture; being after the China building, with the doore Southwards, and fo running a great length into the North, with foure great Halls one beyond another; in the middle parts, and on each fide, Chambers and other Roomes; beyond all the Gar-

60 den, the pillars of Timber bearing up the roofe; the walls and pauement of Bricke. The outmost of these Halls was converted into a Temple or Idoll-Chappell, in which was a great Altar of Stone and Bricke cunningly fretted, paynted red (a colour forbidden to private Houses) and vp-Chappellof on the middest thereof fate a huge Monster of Earth, gilded from top to toe, of mattie quantitie. Chappellos The Chinois call it Ti cam, the God (as they fable) of the Earth & Treasures, as Plate in the Poets. na Plate.

fay, that the

thip not the Idoll, butGod

Inhis hand was a Scepter, on his head a Crowne, not volike those vsed by our Kings. On each fide flood foure ministers of the same matter : on both fides of the Roome two great Tables, and on each of them flue Kings, or great Officers of Hell. On both the wals were painted the fame Officers, or ludges, firting on their feuerall Tribunals, giving fentence on wicked men, every one according to the condition of his Court. Before them flood many Deuils, more terribly formed then with vs. The paines of Hell also were so deciphered, that could not but strike terror to Rhadamanthus treat wires. In passes of Little Beds, fome fryed in fedding Oyle, fome cut in pieces, or herebase we the beholders; fome rofted in yron Beds, fome fryed in fedding Oyle, fome cut in pieces, or here necessary to be consumers; some content of Dogges, or other wife tortured. The fift of those indges can other affiliors divided in the middle or torne of Dogges, or other wife tortured. The fift of those indges can mined the faults, which they faid hee law in a certayne Glaffe. Those which hee found guiltie, Ballances like were fent to the other Inalges, according to the qualitie of the crimes. One of these was ladge in 18 thole in quiets the case of Transfiniaration, which fent the foules of cruell men into Tygres; of vncleane perious, into Swine, and the like : or if their crimes were smaller, into the poorer fort. There was a great Ballance; in one of the Scales, a man laden with finnes; in the other, one of their Hypocritical Prayer-bookes, which counterpoyted the other Scale, and freed the Sinner. There range through Prayer-nouses, which carried away many. For our it were two Bridge, one of Gold, the other of Silver; by which, those passed over, which had beene devout Idola. ters, carrying in their hands Enfignes of the same : these were guided by the Priests, which led ters, carrying in their middle of Hell to faire and pleafant Groues and Gardens, In another part were painted the Dungeons of Hell, with horrible Serpents, Flames, Deuils. To the Brazen Gate thereof there comes an Idolatrous Priest, which in despight of all the Deuils delivers his Mother 20 from those flames. There was no infernall punishment painted, but had such an Inscription: He Trom trave trainers, I were was as measured parameter, spanles, our measured at antemption: see which shall pray to such an Idoll a thousand times. The ledutes beat the Earthen Idols to dust, and burnt those of wood, wherein the Chinese Connerts were the forwarder, because the Countrey custome is to fill the hollow bellies of these Images with denoted Money or Iewels. They demolished the Altar and playstred our the Pictures, and in place thereof erected the Image of Christ, No prinate man may erect a Temple by Law, which A little before this exchange of Idols into Images (after their distinction, and a \* filly one it

\* The lefuites is) some tooke their last leaue of Tream: one kneeling and bidding it fare-well; another chang, laid; Thou masse of Dung and Earth, if thou hait no power to maintagne thy Temple and thy selfs, 30 tayne their i., tayac metr., dolatries, (ay. what helpe may looke for at thy hand? Neither art thou worthy of any homen at mine. Others laid, that this had sometime borne the name of some other Idoll, and therefore was auenged for that

Ricius, having thus taken possession of China by his dead bodie, and living name, wee shall thereby reprebriefly out of the Ieluits Epistles adde some later accidents, and so leaue our China Discourse, which if they have feemed redious and troublefome, remember that China is both exceffuely ntuall, and also inhospitall to Strangers; and I have but imitated my subject, in long and wearifome entertaynment. These tell vs of the Kings vnkindnesse to his Heire, proclaymed, as yet haue feene against his will, scarsly allowing him necessary sustenance, nor permitting his Mother Prince and his at her death to be mourned for with wonted Rites, He is indenout, his Mother egregioully Su- 40 at the death to the minimum of the state of One had beene fo mad, that he being a Licentiate, bought children whom fecretly he killed, of their bloud making compositions for that purpose; which comming to light by one of his Concubines, he was put to a deferued death, three thousand pieces of flesh first cut from him.

In their Winter is greatest scarsity of water in the Rivers, and many shelves then cause many shipwrackes. As they want b. d. r. so they end no word in any other Consonant but m. and z. The China Conuerts are very zealous in selfe-whipping penance, and fasting, altered from their forme to the Ecclesiasticall, which is hard to them accustomed to eate thrice 2 day: Their Priests vse Beads, mumbling thereby their Denotions and many things alike. They built a 50

Chequian fornetimes the Imperial Pro-

fpeded.

Church at Nanquin, Anne 1611.

The Pronince of Chequian yeelds only to the two Royall, Nanquin and Pequin, beeing more excellent then any of the reft. Neither hath it loft other Provinciall Ornaments how sowerit hath loft the feat of the Chma Empire, but is still the best of thirteene. On the East it is washed with the Sea, which the winds fauouring admit passage to I spors in four eand twentie hours: on the West it confineth with the Prouinces of Nangum and Kiams (or Chians) on the South with Faquian: to the North is Xanto (or Sciantum.) It hath twelve Cities of principall note, which are the heads of fixtie three leffe; befides innumerable Townes, Caftles, Villages. The foile is the most fertile of the Kingdome pleasantly interlaced with Riuers, many of them produced by Art in imitation of Nature, in commodiouinesse no whit inferiour, yeelding a spectacle of amaze- 60 ment to the amufed Posteritic, how humane force could effect such wonders. These Rivers for further commoditie are towred with innumerable Bridges of huge massie stones arising into diuers Arches, like to the European workmanship. You have alreadie Almeidas Epistle of his and Rogers going into this Pronince, to Xao Him, whence foone after they returned. The Chinoir have

a Prouerbe of Hameen the Metropolis, and of Sucen, thien xam, thien tham, ti xam Su ham, that which in Heanen is the Hall of Heanen (lastea ona, as he elle-where interprets it) that on Earth Sucen and Hamcen. The Countrey to aboundeth with Mulbery-trees and Silke-wormes, that China, Iapon and India are thence furnished. Ten Vests of Sillke are there cheaper, then in our Countrey one of cloth. Hamcen stands from Nanquin South-eastward nine dayer lourney, almost in thirtie degrees elevation : about three dayes lourney from Scientist, where Caterine was, who with Trigamins our Author were fent thither by Less procurement. They went from Naquie by the Ruer lanfu first, and then into hand-made Rivers, Cities, Townes, Villages, so trequent in the way, that nothing feemes in the whole Kingdome more populous. Mid-way, where Nonquin and Chequian Prouinces joyne is that famous Sucen , feated in the Continent, and fee- Sec/pp-142ming yet the Daughter of the Sea, like another Venice, but more happie with her fresh waters:

ming yet one Doughast of the whole thipping of the Kingdome Were thither the Ports fo frequent, and thips to many as if the whole thipping of the Kingdome Were thither comne to some Faires, which yet are in succession perpetuals. When the Fathers were comne hither, the Chinais by I know not what rumour were conceited that their Foe or Gods were comne thither in Visitation. And a Magistrate sent to Les about it, to know if, and how, hee

But to leave their Fooleries, let vs take view of their Citie, Hameen is the chiefe Citie of this Hameen Ham-Prounce 1 yea, in all this Kingdome; leffe perhaps somewhat in compasse of walles then compassed with the compassed of walles then compassed the compassed of wallest the compassed the compassed of wallest the compassed the c Nangain , but better peopled : no place in the Citie emptie , nor occupied with Gardens, but 20 all builded, and all the Buildings almost with divers Stories, which in other Cities of China is not viuall. The Inhabitants are so many, and the Tribute so much, that the Iesuites durst not relate that which hereof they had heard by graue testimonie, for the incredibilitie: the description would aske a whole Volume. The chiefe street is almost halfe a dayes sourney in length, and cannot be leffe then admirable. For whereas the Chinois vie to erect triumphall Arches, as Monuments, to wel-deferring Magistrates, and Ornaments to their Cities; this one street hath and exceeding curious Workmanship, that if the Houses on both sides yeelded the like splendor, the World could not flew such a spectacle. But they occupie it all with shops, and build the most magnificence of their Houses inwards, and yet those not like the European Palaces.

there is also a Lake close to the Citie, which the eye can fearfly measure, which sliding in The Lake. I never a more accessive to the water primary was yet an actiny measure, writen mounty in- time Lane. to a Valley encompating, embodled with diners Hillocks, bath given occasion to Are to thew her. See the Map. or a variety companing, checking, beautifying all those spacious bankes with Houses, Gardens, Groues; a very Labyrinth to the bewitched eyes, not knowing whereat most in this Maze to bee most amazed, wherein most to delight. And in delights doe they spend their dayes, filling the Lake with Veffels, furnished with Feasts, Spechacles and Player on the water. There is a pleasant Hill in the middle of the Citie, whereon is a faire Towre or Steeple, where they meafure their houres by a strange deuice. Out of huge Vessels water droppeth from one to another, the lowest being very large, in the middle whereof is perpendicularly raysed a Rale, diffinguathe dwith hours-spaces, which by the ascent or descent of the water, diside the rising and de-thed with hours-spaces, which by the ascent or descent of the water, diside the rising and de-clining day, and declare the hours: every halfe hours some men appointed by Tables with Cu-

triming coys and the state of the time to all men. From this Hill is a prospect ouer all the Citic. All the freets being fet with Trees, make thew of pleafant Gardens. It is so full of Riuers, Lakes, Rils, Ponds, both in the Citic and Suburbs, as if a man would frame a Platonical Idea of elegancie to his minde. The Idoll Temples are many and stately, which Idolatry where it is wanting in China, hath a worfe Succeffor, Atheisme.

is wanting in Learns, natify worth succession, artherings.

Let vs ftay awhile and gaze (for where have you fuch an Object!) Is not Dainfay (whi- Quinfay, limits). Let v3 113 awnine and gaze (tot where mane you much an object. ) 12 100 2 mm/s/ (with gaze the Royall Seat of the Kings of Mangi, 25 Venetus recordeth, supposed by our Moderne can Geographers to be fivallowed up with fome Earth-quake, or in Bellma's all-confuming belly) Seet defendable to the seed of the here rayled up from the Grane? The Lake fluxte on the one b fide, (io Panin reports of b hear me to Quinfay) the Name Quinfay figurifying the Citie of Heaven, and this called a Heavenly Paradic bandwalege, Langay the reason samply ngurying the class of reason, and this cance a resucting Paraunt bounds by the Chinese; and Hamingnifes Latter via, in Heaven; and Con, perfett: yea, Quinfay, or as O . Oc. driens calls it (unfig, and Has or Chances, not so disgreeing in sound, as different Dialects e That which

are wont: the excellencie being chiefe Citie in the Kingdom, and this Pronince fometimes Royal, is before faid as Pequin now and Nanquin are: the fination. South-east from Cines and wonter all much a dates are wont: the executars of the fination, South east from Cinexian's, c fine and twentic ionney, as Pequin now and Nanquin are: the fination, South east from Cinexian's, c fine and twentic ionney, is to as region now and examples are the limber on some control of the exceeding the succession of the limber of the limber of the limber of the exceeding the exc mines from the Sea; the mgo rasones, and hones vines means, the exceeding a rate, returned, a see your filmes by water, multitudes, fairenesse, and length of the streets; all so conspiring to product his of the china Has or Hames tobe that Quinfa, of Paulus. True it is, that Quinfay was then greater, beeing industrial as Frontine faith, one hundred miles about: But the energing of that Ferfor and his Family, then the state of as Penants states, one numerous mines about. Due the energing of that any on a later to Nanquim by Hums. for reigning, the discreting of the Court to Cambalu by the Tartars, and after to Nanquim by Hums. formetime but

reigning, on emercing or the court to commune by the factors, and acted to commune out to mention of 24, and neuer returning hither, might leffen the lame. And might not warres, in that long feee 6 mylesaday. by the Tartart, in the recourty thereof by the Chinas, easily circumcife her superfluitie? Beides, who knoweth whether all this huge Lake might bee contayned in that account of Paulus, fall compaffed about with Buildings: Or before those Warres, the Lake it felfe might (as Sucra now is) be builded on; which Time and Warre hath confumed; nor fince the remouse of the Court

were so necessarie. Mandeuss mentions Warres at Quin say in his time; Nicolo di Conti (which was heere about the yeere 1440.) fayth, Quinfay was in his time new built, of thirtie miles

But that Quinfay of Conti and Abacen, is perhaps Thienfin, being (as they lay it) neerer Com-Thiomai fun.

But that Qninfay of Conti and Abacen, is perhaps I binnin, Deing (as they lay it) neerer Cam.

14. Thiomis balu. I confesse, much may bee layd for Nanquin to finde Quinfay there, and I have given such a macth Heauen, noce \* vpon it, to incite industrious search, because it was the Ancient royall Chamber : Nei-See pag. 338. ther could I finde any other Royall Citie but Pequin, in Ricius or other Writers, till Trigasmus later Epiteles intimated, that the Chequian Prounce hath beene fometimes Imperiall; which I conceive to bee that time of Farfur mentioned by Pole, and Hancen his Quinfay.

Anno 1618. Trigamine writes of Perfecution in China, raifed by an Idolotrous Magistrate in 10 Nanquin, and effected by bribes, which hath caused the lesuites to bee fent thence : but because our intelligence is little, wee will leave them heere (as much as lyeth in our power) and visite some of the other Northerne people; having first given you a briefe view of a French-mans trauell, Monsieur de Monfart, who having travelled thorow the Indies, saluted Canton in China, and Cauchinchina; whole knowledge therefore could not bee fo folid, as the Iefnites, nor yet is to contemptible that it should veterly bee forgotten. Wee will therefore present his Service as a French Page, and one attending the Issues Gravitie, and thus as it were bearing

Macao,

Rom Malaca I went to Macao, (neere a moneths travell) which is a Citie scituate on the 20 I Sea coast, at the foote of a great Mountayne, where in times past the Portugals had a great Fort, and to this day, there bee yet many that dwell there. This is the entrance into Ching. but the place is of no great importance; they are Gentiles, and there the Inhabitants begin to bee faire complexioned.

Canchinebina,

Thence I trauelled two moneths to the Cochinchines, finding nothing by the way worthy of note ; no not so much as necessaries, so that wee were fayne to carrie our Victuals with vs. the greatest part of the way. They are Subjects to the King of China, but sometimes they rebell and make Warre against him ; And there is great number of Christians among them, Their Kings treasure consisteth in a certayne kinde of Wood, called Calamba : for which the Portugals pay one hundred Crownes a pound, to make Paer-nosters with. It is of a mixt colour, with blacke and yellow veynes; the better fort of it is moyft, fo that being cut it expelleth a kinde of fat oylie liquour. It groweth out of a certayne Tree, which they fell and let it lye a while a putrifying : then they bruife it, and within the same, they finde this kinde of Wood, like many hard knots. They are a very white people, because there it begins to bee cold, low of Stature, flat Nofed, and little Eyed, with a very few hayres on their Chins, and Muflachoes : none at all on their Cheekes, the hayre of the Head they weare long like Women, tyed vp with a blacke filke hayre-lace, and weare a flat Cap vpon them. They weare Cloath breeches made very levell, and a short Robe above them, like a Matter of the cham-

There are found a kinde of Serpents that will swallow vp a whole Stagge; two Friers affu- 40 Huge Serpents red me that travelling in that Countrey, together with fixteene other men, through a Fenniemarsh, about the dawning of the day, they met to their feeming, a great Tree lying along the ground, the boughes being lopped off, vpon which they all began to fit downe and reft themselues : but no sooner were they sate, but that which they tooke for a Tree, fiercely rowsed it felfe from vuder them, and left them all to picke ftrawes on the ground, for indeed this was one

this of Lions

. Their cultome is (as they fay) to put themselves in ambush among the boughes of a Tree, and when they espie their prey to draw neere, bee it Man or Beast, they fall upon him with open mouth and devoure it. There are also store of Lions, Leopards, and Tigers : and there the Fruits begin to refemble those of these parts : but the Fruit, which aboue all others aboundeth there, 10 Thence I fent forwards to Canton, the principall Citie of all China, (fome three Moneths tra-This is not the uell diftant) beyond which there is no passage, say any body what hee will to the contrary; for

principall Cineuer any man proceeded further, except (as they fay) fixe lefuites, who dwelled twentie tie, except, of yeeres at Camon, as well to learne the Language perfectly, as to let their havre to grow long, afthat Produce, and for trauel, ter the Countrey manner, of whom there was never fince heard any newes, nor is their hope ling further, he cuer to fee their returne. That people is very white, and apparelled as is about fayd; they are speakestrus likewife Gentiles, and worship the same Image with three heads. Their Women of the better ofordinarie fort, and qualitie which are able to line of their owne without working, neuer goe out of their courfes, butotheir seculence houses but as they are carryed in a Chayre. And to that effect, from their Infancie, they put and the Art Li. their feete into certayne woodden Slippers, to make them flump-footed and impotent, in fo

is doubtfull.

Fathers have found admittance, as in the former Relations is feene. This restimonie touching Lefuites is worth the noting: For fome of Ours which vpon great offers could not finde meanes to enter China, have held that nene have beene there.

CHAP. 8. Merchandises, Cloath of Gold, Cabinets, Vessels, Massie Gold, Silkes.

much as they are not able to goe: the reason they alleadge for it, is, that Women were made to

The Christians are not permitted to lye within the Citie, but as soone as Night approaches they must recire themselves to their Ships, being lawfull for them to Traff que wherefocuer they please by Day-light. And for their traffique, what rarities sourt there bee throughout all Chima, are to bee had in this Gitie, which are diligently brought thicker, to with great store of eloath of Gold and Silke, Cabinets, wrought Veilels, Venus itells, Maffine gold, and many other things. They will exchange or barter Gold for twice as much waight in Silver; for they have tanger a new variance they would buy any thing, they carrie with them a piece of to Gold, and will cut off as much as they intend to beflow on what they take. They make carused Images of Silver, which they erect heere and there through the Streets, and no body dates

The Citie is gouerned by foure Rulers, and each one hath his Goustoment, or Circuit spare, feeluded from each other: those of one quarter dare not goe and labour in another, and those which caufe themselues to bee carryed, from one pare to another, must change their Bearers when they come to the Gate of the next circuit: thole Gates are opened eury morning, and that enery night, vnlede there bee any complaint made of some mildemeanour, committed within the Circuit: for then they shut them suddenly, or if they bee shur, they open them not, till the offender be found. The King bestowes these commands on those who are best Learned. This is 20 a most faire Citie, and well built, very neare a bigge as Park, but there the House are arched, and nothing neare to high. There is to much Sugar in that Country, that it is by them very little fer by, yet is Silke in faire more great abundance, but withill more course then ours, by rea. Silke women fon of their flore, being fo great as they are confirmed to make it abroad in the Fields, on the ton or their more, being nogices as may are country and to make a country in the execut, on the very Trees, in this wife; when the Wormes are harched, (whereof the Egges are faire greater then ours.) They observe what quantitie of Wormes each Tree will bee able to seed, then they lay fo many on it, leaving them there without any more adoe, except it bee to gather the cods, when they are ready to bee fpunne, which is done as they gather Apricocks:

Fishing.

for indeed a fare off they appeare to bee fo, and is a very fine light to behold: they yie a frange kinde of Fishing with Cormorants. They tie their neckes a little aboue their stomackes, less See Pols, Pare they should denour the Fish they take a then comming to their Master, hee pulleth it a-Ine, out of their throates: Likewife for water Fowle, they make vie of great Bottles with two holes, which they leave floating vp and downe the water a good while, to acquaint the Fowles therewith: then some fellowes will wade vp to the necke in the water, thrusting their heads into those Bot-

tles, and having a bagge underneath, come as neere the Fowleasthey will, taking them with their hands, without the rest being atraid

I findle in tione Colmographers, that the Rest Nation horrowed the name of the people allest Rest them, and were the very lame. Nation with them, at it
without all good probabilities, both in respect of the Exymptograf of the word symple is sery
tarrefreche), and aspeadly for the large and asselling of that people, which was between the Studenthia it is
two Ringraf Tanasa and Beriffbener, as the sergested; quite another way from the Comp. Sometimes of the sery from the Comp.

trey of Raffia.

When it bare the name of Samatia, it was divided into two chiefe parts the Winner and the ton annual Blacks. The White Samatia, was all that particularly sen towards the Morth, and on the falce of the tree. Blacke. In wome varmand, was all that patternatives towards the choice, amount one on the Lufland; as the Prounces now called Disput, Varba, Vist. Volgeda Carrandon, Nonogradus per owners of wherety Nonogradus was the Metapolitic, orchiter Citic. Black Sarmana was all the Carrandon of the Country that lyeth Southward, toward the Earn or Black See: as the Duk dome of Colombiant. of Marke Resemble. Some have thought that the name of Samain was first caken, from one or nanegy, example, spine and topped call formather, Some to lotten, and appear to Heber, of Gasta. the polteritie of Sem. But this seemeth to be nothing but a conjecture taken our of the likeness, 100 polterities.

The borders

of the name Afarmathes, For the dwelling of all Interns posteritie is described by Moses, to haut beene betwirkt Meschaor Masim, (an Hill Wage Amenier) and Sophace, neare to the River Emphrates: Which maketh it very onlikely, that Mormathes should plant any Colonies so lare off, int the North and North-west Countries. It is bounded Northward by the Laper, and the North Ocram. On the South-fide by the Tarters, called Chrims. Eastward they have the Marraian Tartar, that pollefieth all the Countrey on the East fide of Voleba, towards the Calbian Sea. On the West and South-west border, lie Litmania, Limonia and Polonia.

The whole Country being now reduced vader the Government of one, contribute these chiefe Proumees or Shires. Valedomer (which beareth the first place in the Emperours Bile, became their House came of the Dukes of that Countrey, Morke, Nifnougred, Pleske, Smelenf- 10 ho, Nonogrod velica ( or Nonogrod of the low Country ) Rostone, Tarnflane, Bealozara, Berton Dayna Cofe appla, Melbora, Vagba, Vlugba, Ghalet a. Thefe are the natural things permy-ning to Raffia, but farre greater and larger then the Shires of England, though not fo well people. The other Countries or Provinces, which the Ruffe Emperours have gotten perferce added of late to their beher Dominion, are thefe which follow, Twerra, Tongborta, RemnafValle, Beal. ghoria, Chernigo, Oudoria, Obdoria, Condora, with a great part of Siberia : where the people though they bee not gathrall Ruffer, yet obey the Empergut of Ruffic, and are ruled by the Lawer of his Countrey, paying customes and taxes, as his owne people doe. Besides these hee hath ynder him the Kingdomes of Cazas and Altracas, gotten by Conqueft not long finer. As for all his possessions in Lituaria (to the number of thirtie great Townes and more,) with Narmand to Dorpin Linonia, they are quite gone, being surprised of late yeeres by the Kings of Poland and Sweden. These Shires and Prounces are reduced all inco foure larssaidtions, which they call Chetfyrds (that is) Tetrarchies, or Fourth parts. Whereof wee are to speake in the Title or Chapter, concerning the Prouinces, and their manner of Gouernment.

The whole Countrey is of great length and breadth. Erom the North to the South (if you and length of measure from Coles of Minister which bendeth (omewhat Eastward) it zeacheth in length 20 the Countrey. bout foure thousand two hundred and sixtie verit, or myles. Notwithstanding, the Emperour of Ruffie hath more territorie Northward, farre beyond Cole vnto the River of Tromfebres, that runneth a thousand verit, well nigh beyond Pechinga, neere to Wardhouse, but not intire nor clearely limitted, by reason of the Kings of Swedon and Demarke, that have divers Townes there as well as the Rule, plotted together the one with the piet; every one of them clayming the schole bushos Rule, the comments as well as the Rule, plotted together the one with the piet; every one of them clayming the schole bushos Rule, the comments of the remarks of the rema mino life myle. If the whole dominion an the stuffe Emperous weers all habitable, and peopled in all places, as it is in some, hee would either hardly hold it all within one Regiment, or becour mightie for all his neighbour Princes,

And this firsh and speedy growth of the Spring there, seemeth to proceed from the benefit of red.

the Snow s, which all the Winter time being spred ouer the whole Countrey as a white robe, Essentials. 20 and keeping it warme from the rigour of the Froft, in the Spring time (when the Sunne waxeth warme, and disfolueth it mto water) doth so throughly drench and loake the ground, that is forms what of a fleight and fandie mold, and then shineth so hotly upon it againe, that it draw-5th the Hearbs and Planes forth in great plen ie and varietie, in a very short time. As the Win-

ter exceedeth in cold, to the Summer inclineth to ouermuch heate, specially in the moneths of Iune, July, and August, being much warmer then the summer ayre in England.

The Country throughout, is very well wattred with Springs, Rivers, and Ozeraes or Lakes. Registerell was Wherein the prouidence of God is to bee noted, for that much of the Countrey being fo farre in tered. land, so that fone parelyeth a thouland myles and more every way from any Sea, yet it is letned with faire Riners, and that in very great number, that emptying themselves one into another, rume all into the Sea. Their Lakes are many and large, some of fixtie, eightie, a hundred,

and two hundred myles long, with breadth proportionate.

The chiefe Rivers are these, I. Valeta, that hath his head or spring at the roote of an Alder. The chiefe River are the chiefe River are the chiefe River are the chiefe River are the chiefe River and two hundred well about Everylasse, and groweth so bigge by the increase of other River of Refig. uers by that time it commeth thither, that it is broad an Englife myle and more, and so runneth into the Calisa Sea, about two thouland and eight hundred verft or myles of length. The part is Berifiberes (now called Neper) that divideth the Country from Lituaris, and

falleth into the Enne Sca.

The third Tanase or Dan, (the ancient bounder betwixt Europe and Afia) that taketh his head out of Recon Osera, and fo running through the Country of the Chrim Tarter, falleth into the 40 great Sea lake, or mears, (called Manie) by the Cirie of A. on. By this River (as the Roffs reporteth) you may pale from their Citie Manh to Conflavrimente, and so into all those parts of the world by water, drawing your Boate (as their manner is) ouer a little Islamou or narrow dippe of land, a few verds ouerthware. Which was prooted not long fince by an Ambiffadour cent to Companiesple, who paffed the Riner of Montag, and to into another called Ocks, whence he drew his Boare over men Tenew, and thence passed the whole way by water.

The fourth is called Dayna, many hundred myles long, that falleth Northward into the Bay of Saint Nicholas, and hath great Alabafter rockes on the bankes towards the Sea fide.

The fifth Dana, that emptyethinto the Baltick Sea by the Towne Rige. The fixt Owegs, that falleth into the Bay at Solome to minety Veril from the Port of S. Niebs. to the property of the following following the following f and to into the Sound, you may puffeall by water, as hath been tryed by the Ruffer.

The feuenth Suchana, that floweth into Dayna, and fo into the North-fea. The mightsh Ooks, that seecheth his. Head from the Borders of the Chrise, and streameth

The nineh Makes, that runneth thorow the Citie Moste, and give thit the name. There is Wichida allo avery large and long River that rifeth out of Permia, and falleth into Pagete All thefe are Rusers of very huge firemes, the leaft to bee compared to the Thomas in bigoelle ans in length far more, befinder diuers ocher. The Pole at Morke, is fiftie fine degrees ten 60 manutes. At the Port of Saint Nicholas Cowards the North fixty three degrees and fifty minutes.

[Or kinds of traits, they have Apples, Peaces, Planmes, Cheries, Red and Blacke, (but the Black wild)a Deene like a Muske Milian, but more sweet & pleasant, Cucumbers and Goords The Nation (which they call Arbonfe) Raipes, Strawberries, and Hartibberries, with many other Berries in Commodules

Wheat and Rye being at thirteen edirects, and careful as they accounted this last year. Arms 1788. Wheat and Rye being at thirteen edirects and the finite in the produce of said that, 10 or fire shillings five pence sterling the Cherfird) the fault is rather in the practice of their Nobilitie that wie to engroffe it, then in the Countrey it felfe. The Native Commodities of the Countrey (wherewith they ferue both their owne turnes, and fend much abroad to the great enrichof the Couning of the Emperour, and his people) are many and fubfiantiall. First, Fusres of all forts, Where in the providence of God is to bee noted, that provide ha naturall remedy for them, to helpe the naturall inconvenience of their Countrey by the cold of the Climate. Their chiefe Furs are thefe, Blacke Fox, Sables, Lufernes, Dunne Fox, Marcrones, Gurnestalles or Aimins, Lafets or Miniuer, Beuer, Wuluerins, the Skin of a great Water Rat that Imelleth naturally like Muske, Calaber or Gray Sq sirrell, Red Squirrell, Red and White Foxe. Besides the great quantitie fpent within the Countrey (the people being clad all in Furs the whole Winter) there are tranfoorted out of the Countrey some yeares by the Merchants of Turkie, Perfin, Bougharia, Georgia, Armenia, and some other of Christendome to the value of foure or five hundred thousand Rub. bels, as I have heard of the Merchants. The best Sable Furre groweth in the Countrey of Peche. ra, Momeoforskor and Obdorskor, the worler fort in Siberia, Perm, and other places. The Black Fox and Red come out of Siberia, White and Dunne from Pecbora, whence also come the white Wolfe, and white Beare Skin. The best Wuluerin also thence and from Perm. The best Marrons are from Siberia, Cadam, Morum, Perm, and Cazan. Lyferns, Mineuer, and Armins, the best are out of Gallets, and Ouglites, many from Nonogrod, and Porm. The Beauer of the best fort bree-

a. Waxe.

The second Commoditie is of Waxe, whereof hath beene shipped in forraine Countreyes (as I have heard streported by those that best know it) the fumme of fiftie thousand Pood yeardy, every Pood contayning fortie pound, but now about tenne thousand Poods

deth in Murmonskey by Cola. Other common Furres, and most of these kinds grow in many,

and fome in all parts of the Countrey.

a. Honey.

The third is their Honey, whereof besides an exceeding great quantitie spane in their ordinary Drinkes (which is Mead of all forts) and their other vies, forme good quantitie is carried out of the Countrey. The chiefe increase of Honey is in Mordna and Cadam neere to the Cone. miffen Tarear : much out of Senerskey, Benan, Merum, Cazan, Derogobefe, and Vaffin.

4. Tallow.

Fourthly, of Tallow they afoord a great weight for transportation : not only for that their Countrey hath very much good ground apt for Pasturage of cartell, but allo by reason of their so many Lents and other Faits : and partly; because their greater men wie much Ware for their Lights, the poorer and meaner fort Birch dryed in their Stones, and consisted long fritiers, which they call Luchiness. Of Tallow there hath beene shipped out of the Realme a few water fine about one hundred thousand Pood yeerely, now not past thirty thousand or theresbouts. The best yeeld of Tallow is in the parts and Territories of Smelenste, Larighane, Ongliss; Nonograf, and Vologda, Offer, and Gorodetskey.

g. Hide.

Another principall Commoditie is their Loft and Cowillide. Their Loft or Buffe hide is very faire and large. Their Bull and Cow-hide (for O Zenthey make none, neither you Weather) is of a small size. There hath beene transported by Merchants strangers some yeares; one hundred thousand Hides. Now it is decreased to thirty thousand or theresbodes. Besides great store 10 of Goats Skins, whereof great numbers are shipped out of the Countrie. The largest kind of Losh or Buffe breedeth about Rostone; Wichida, Nongrad, & Moram, and Perm, The lefter fort within the Kingdome of Cazan.

6. Trane Oyle. An other very great and principall Commoditie is their Trane-oyle; drawneout of the Seal-The manner fish. Where it will not be impertinent to shew the manner of their hunting the Seale, which of bunning the they make this Oyle of : which is in this fort. Towards the end of Strinmer y before the Frost beginne) they goe downe with their Boats into the Bay of Saint Niebelal, to a Capt called Cufconesso or Foxnofe, where they leave their Boats till the next Spring tilde. When the Summe waxeth warme toward the Spring, and yet the Ice not melted within the Bay, they remine thirther agains. Then drawing their Boats over the Sea kee, they vie them for Houles to reft and 69 lodge in. There are commonly about seventeene or eighteene Fleete of them, of great large Boats, which divide themselves into divers companies, fine or fixe Boats in a confort.

They that first find the haunt, fire a Beacon, which they carrie with them for the none. Which being espied by the other companies, by hickamong them as are appointed of purpose,

they come all together and compasse the Seales round about in a Ring, that lye Sunning themfelies together vpon the Ice, commonly foure or fine thousand in a shoale, and so they inuade them enery man with his Club in his hand. If they hit them on the Nofe, they are foone killed, If on the fides or backe they beare out the blow, and many times fo catch and hold downe the Club with their Teeth by mayne force, that the partie is forced to call for helpe to his

The manner of the Seales is, when they fee themselves beset, to gather all close together in a throng or plumbe, to sway downe the Ice, and to breake it (if they can) which so bendeth the Ice, that many times it taketh the Sea-water vpon it, and maketh the Hunters to wade a foot or 10 more deepe. After the slaughter, when they have killed what they can they fall to sharing euery Boat his part in equal portions and so they flay them, taking from the body the Skin, and the Lard or Fat with all that cleaneth to the Skin. This they take with them, leaving the bodies behind, and so goe to shoare. Where they digge Pits in the ground of a fathome and an halfe deepe, or there about, and so taking the Fat or Lard off from the Skin, they throw it into the Pit, and cast in among it hor burning stones to melt it withall. The vppermost and purest is fold and vied to oyle Wooll for Cloth, the groffer (that is of a red colour) they fell to make Sope.

Likewife Ickary or Cauery, a great quantity is made upon the River of Volgba, out of the fift 7. Ickary. called Bellougina, the Sturgeon, the Seueriga and the Sterledey. Whereof the most part is shipped by French and Netherlandish Merchants for Italy and Spaine, some by English Mer-

The next is of Flaxe and Hempe, whereof there hath beene shipped (as I have heard Mer- 8. Hempe and chants (ay) at the Port of Name a great part of one hundred thips small and great yearely. Now flaxe, not past fue. The reason of this abating and decrease of this and other Commodities, that were wont to bee transported in a greater quantitie, is the shutting vp of the Port of the Narue towards the Finland Sea, which now is in the hands and possession of the Sweaden. Likewise the ftopping of the passage ouer-land by the way of Smolenike, and Plosike, by reason of their Warres with the Polonian, which caufeth the people to bee leffe prouident in mayntayning and gathering these and the like Commodities, for that they lacke Sales. Partly also for that the Merchants and Mousicks (for so they call the common sort of people) are very much discouraged by many 30 heavy and intollerable exactions, that of late time have beene imposed upon them; no man accounting that which he hath to be fure his owne. And therefore regard not to lay vp any thing, or to haue it before hand, for that it causeth them many times to be sleeced and spoyled, not only of their goods, but also of their lines. For the growth of Flaxe the Prounce of Volike, and the Countrey about is the chiefe and only place. For Hempe Smolenkeke, Derogobole and

The Countrey befides maketh great store of Salt. Their best Salt is made at Storarouse in ve- 9. Salt. ry great quantitie, where they have great store of Salt-wels, about two hundred and fiftie verst from the Sea. At Allracan Salt is made naturally by the Sea-water, that cafteth it vp into great Hils, and fo it is digged downe, and carryed away by the Merchants and other that will fetch 40 it from thence. They pay to the Emperour for acknowledgement or custome three pence. Ruffe vpon euery hundred weight. Besides these two, they make Salt in many other places of the voort act of the state of the s of Salt-pits, faue at Solonetskey, which lyeth neere to the Sea.

Likewile of Tarre they make a great quantitie out of their Fiere-trees in the Countrey of 10. Tarre. Duyna and Smolenske, whereof much is fent abroad. Befides thefe (which are all good and fub- 11, Ribezuba flantiall Commodities) they have divers other of smaller account, that are naturall and proper to that Country : as the fift tooth (which they call Ribacoba which is vied both among themfelues and the Perstans and Boughardens, that fercht it from thence for Beads, Knines, and Swordhafts of Noblemen, and Gentlemen, and for diners other vies. Some vie the powder of it a-50 gainst poylon, as the Vnicornes Horne. The fish that weareth it is called a Morie, and is caught about Pechana. These fish teeth some of them, are almost two soot of length, and weigh eleuen

or twelue pound a-piece.

In the Prouince of Corelia, and about the River Duyna towards the North Sea, there grow- 12. Slude. eth a foft Rocke which they call Sinde. This they cut into pieces, and so teare it into thin flakes, which naturall it is ape for and so wse it for Glasse-lanthornes and such like. It giveth both inwards and outwards a cleerer light then Glaffe, and for this respect is better then eyther Glaffe or Horne: for that it neyther breaketh like Glafe, now yet will burne like the Lanthorne. Salt- 13 Salt peeer peeter they make in many places, as at Onglises, Taruflane and Viling, and some small store of and Brimstone Brimstone vpon the River Voleba, but want skill to refine it.

Their Iron is somewhat brittle, but a great weight of it is made in Corelia, Cargapelle, and 14.1100. Their Iron is tomewhat brittle, but a great weight of it. In the Property of the Third Third Third The Color Myne they have none growing within the Realme.

Their beatls of strange kinds are the Losh, the Ollen, the wilde Horse, the Beare, the Wolue- The strange ring or wood Dogge, the Lyferne, the Beauer, the Sable, the Matron, the blacke and dunne bests, fift, Foxe, the white Beare towards the Sea coast of Perbora, the Gurnstale, the Laset, or Minener. foste &c. the

They breed in Ruffia

They have a kind of Squirrell that hath growing on the pinion of the shoulder bone, a long tufe of haire, much like vnto feathers, with a far broader tayle then have any other Squirrels, which they moue and shake as they leape from tree to tree, much like vnto a wing. They skife a large space, and seeme for to flie withall, and therefore they call them Letach Vechibe, that is, the five ing Squirrels. Their Hares and Squirrels in Summer are of the same colour with ours, in Winter the Hare changeth her coate into milke white, the Squirrell into gray, whereof commeth

the Calabar. Deare Horfes:

They have fallow Deere, the Roe Bucke, and Goats very great store. Their Horses are but small, but very swift and hard, they trauell them vnshod both Winter and Summer, without all regard of pace. Their Sheepe are but small, and beare course and harsh wooll. Of Fowle, they to Sheepe, I haue haue divers of the principall kinds : First , great store of Hawkes ; the Eagle , the Gerstalicon the Slightfaulcon, the Gof-hawke, the Taffell, the Sparhawke, &c. But the principall Hawke land breed twice a yeere; that breedeth in the Countrey, is counted the Gerfaulcon. the Ram hath foure bornes,

Of other Fowles their principall kinds are the Swanne tame and wilde, (whereof they have great store) the Storke, the Crane, the Tedder, of the colour of a Fealant, but farre bigger and lineth in the Firre woods. Of Fealant and Partridge they have very great plenty. An Owle there is of a very great bigneffe, more vgly to behold then the Owles of this Countrey, with a broad face, and eares much like vnto a man.

For fresh water Fish, besides the common forts (as Carpe, Pike, Pearch, Tench, Roach, &c.) they have divers kinds very good and delicate : as the Bellouga, or Bellougina of foure or five 20 elnes long, the Ofitrina or Sturgeon, the Seueriga, and Sterledy somewhat in fashion and taste like to the Sturgeon, but not fo thicke or long. Thele foure kinds of fifth breed in the Volgbe, and are catched in great plenty, and ferued thence into the whole Realme for a great food. Of and are executed in great prenty, and stock closed in the Goes of their four existing they make very great flore of I carry or Causary, as was fail before. They have besides these that breed in the Volgot, a fish called the Ribbella, or white Salmon, which they account more delicate then they doe the red Salmon, whereof also they have access ding great plenty in the Rivers Northward , as in Dayna the River of Cola , &c. In the Ozera or Lake neere a Towne called Peristane, not farre from the Moske, they have a small fish which they call the fresh Herring, of the fashion, and somewhat of the taste of a Sea-herring. Their chiefe Townes for fish are, Taruslane, Bealozera, Nonogrod, Aftracan, and Caxan: which all 30 weeld a large Custome to the Emperour every yeers for their trades of fishing, which they pra-Stife in Summer, but fend it frozen in the Winter time into all parts of the Realme.

Chap. 4. The chiefe Cidies of Ruffia.

"He chiefe Cities of Ruffia are, Mosko, Nonograd, Roftone, Volodomer, Plefco, Smolente, larustane, Peristane, Nisnonograd, Vologda, Ustinck, Golmigroe, Cazan, Astracan, Cargodia,

beareth his

The Citie of Moske is supposed to bee of great antiquitie, though the first Founder bee vid knowne to the Ruffe. It feemeth to have taken the name from the River that runneth on the one fide of the Towne. Berofus the Chaldran in his fifth Booke telleth that Nimrod (whom ospected author, ther profane Stories call Saturne ) fent Affring, Medus, Mofens, and Magog into Afia to plant 40 or tather that Colonies there, and that Molen planted both in Afra and Europe. Which may make some probality, that the Citie, or rather the River whereon it is built; tooke the denomination from this Mojens: the rather because of the climate or situation which is in the very farthest part and list of Europe, bordering upon Asia. The Citie was much enlarged by one Europe or John, some to Daniel, that first changed his title of Duke into King: though that honour continued not to his posteritie: the rather because he was innested into it by the Popes Legate, who at that time was Innocentises the fourth, about the yeere 1246, which was very much milliked by the Rufe people, being then a part of the Eastern or Greeke Church, Since that time the name of this Citie hath growne more famous, and better knowne to the World: infomuch that not only the Prouince, but the whole Countrey of Ruffis is termed by some by the name of Mosconis the Me- 50 tropolite Citie. The forme of this Citie is in a manner round, with three strong walls, circuling the one within the other, and fireets lying betweene, whereof the inmoft wall, and the buildings closed within it (lying fafest as the heart within the bodie, fenced and watted with the River Moskua, that runneth close by it) is all accounted the Emperours Caffle. The number of houses (as I have heard ) through the whole Citie (being reckoned by the Emperour a little before it was fired by the Chrim) was 41500. in all. Since the Tartar besieged and fired the Towne (which was in the yeere 1571.) there lieth waste of it a great bredth of ground, which before was well fet and planted with buildings, specially that part on the South side of Moskua, built not long before by Basilism the Emperour for his Garrison of Souldiers, to whom he gas priviledge to drinke Mede, and Beere at the drie or prohibited times, when other Raffet 60 may drinke nothing but water , and for that cause called this new Citie by the name of Nalsi, that is , Skinke or powre in. So that now the Citie of Moske is not much bigger then the Citie of London. The next in greatnesse, and in a manner as large, is the Citie Nonograde: where was committed (as the Ruffe layth) the memorable warre to much spoken of in Stories of the Seg-

Treacherie of bond flaues, Iaruflaue, Ruffe building, CHAP.I.

thian fernants, that tooke Armes against their masters: which they report in this fort: vz. That the Boiarens or Gentlemen of Nonograde and the Territorie about (which onely are Souldiers after the discipline of those Countries) had warre with the Tartars. Which being well performed and ended by them, they returned homewards. Where they understood by the way, Pleasant His that their Cholopey or Bondflaues whom they left at home, had in their ablence poffeffed their florie. Townes, Lands, Houses, Wives, and all At which newes being somewhat amazed, and yet disdayning the villanie of their servants, they made the more speed home : and so not farre from Novograde met them in warlike manner marching against them. Whereupon adulting what was best to be done, they agreed all to set upon them with no other shew of weapon but with

to their Horse whips (which as their manner is, every man rideth withall) to put them in remembrance of their femile condition, thereby to terrifie them, and abate their courage. And Likelips, like fo marching on, and lashing altogether with their whips in their hands they gave the onset; lettice. Which feemed to terrible in the eares of their villames, and froke fuch a fense into them of the fmart of the whip which they had felt before, that they fled altogether like Sheepe before the Driuers. In memory of this victory the Nonogradians euer tince have stamped their Coine ( which they call a dinger Nonogredskey, currant thorow all Ruffie ) with the figure of a Horse-man shaking a whip aloft in his hand. These two Cities exceed the rest in greatnesse. For ftrength their chiefe Townes are , Vobsko , Smolensko , Cazan , and Afracan, as lying upon the borders. But for fituation laruflane farre exceedeth the reft. For belides laruflant 20 the commodities that the foyle yeeldeth of Pasture and Corne, it lieth vpon the famous River

Volga, and looketh ouer it from a high banke very faire and flately to behold; whereof the Towne taketh the name. For laruflaue in that Tongue fignisfieth as much as a faire or famous Banke. In this Towne (as may be gheffed by the name ) dwelt the Ruffe King Vlademir, furnamed laraflane, that married the daughter of Harald King of England, by mediation of Suere the Dane, as is noted in the Danish Storie about the yeere 1067.

The other Townes have nothing that is greatly memorable, faue many ruines within their walls. Which sheweth the decrease of the Ruffe People, under this government. The streets of their Cities and Townes in stead of paning, are planked with Firre trees, plained and layd uen close the one to the other. Their houses are of wood without any lime or itone, built very Themannet 20 close and warme with Firre trees plained and piled one vpon another. They are fattned toge- of Ruffe builtther with dents or notches at every corner, and so clasped fast together. Betwixt the trees or dingtimber they thrust in mosse (whereof they gather plehey in their Woods, to keepe out the aire. Euery house hath a paire of staires that lead up into the chambers out of the yard or street after

and bricke : as being colder and more dampish then their woodden houses, specially of Fitte, that is a dry and warme wood. Whereof the probidence of God hath given them fuch store, as that you may build a faire house for twentie or thirtie Rubbels, or little more, where wood is most scant. The greatest inconvenience of their woodden building is the aptnesse for firing, which happeneth very oft, and in very fearefull fort, by reason of the drinesse and fat-40 neffe of the Firre, that being once fired, burneth like a Torch, and is hardly quenched till all bee

the Scottif manner. This building feemeth farre better for their Countrey, then that of Rone

The fur-hame of the Imperial house of Russia, is called Beata; It tooks the original (as is thouse of the Kings of Hangarie. Which may freme the more probable, for that the Of the house Hangarian Kings many yeeres agoe have borne that name: as appeareth by Bonfinius and other or flocke of Stories written of that Countrey. For about the yeere 1059, mention is made of one Beala the Ruffe Emthat succeeded his brother Andreas, who reduced the Hungarians to the Christian Faith from perour. whence they were fallen by Atheifme and Turkifh perswasion before. The second of that name was called Beala the blind, after whom fucceeded divers of the fame name.

That their Ancestry came not of the Russe Nation, Inan vasilowich father to this Emperour, In not naturally 50 would many times boaft, dislayning (as should feeme) to have his progenic derived from the Roffe. See 149. Ruffe bloud. As namely to an Englishman his Gold-smith, that had received Bullion of him to 56, where the make certaine Plate: whom the Emperour comman led to looke well to his weight. For my Tacins de-Ruffes (faid he) are theeues all. Whereat the Workeman looking vpon the Emperour, began to firoyed these Ruffet (laid he) are thecues all. Whereat the Workerman looking vpon the Emperour, began to Commeyes finile. The Emperour being of quicke conceit, charged him to tell him what hee finiled ac. If then called your Maiestie will pardon mee (quoth the Gold-limith) I will tell you. Your Highnesse said, that the Bulgaria maior, Russes were all sheenes, and forgat in the meane while that your felfe was a Russe. I thought is (quoth many fled into the Emperour) but thou art deceined. For I am no Ruffe, my Ancestors were Germanes (for io Hungarie: and they account of the Hungarians to bee part of the German Nation, though indeed they come after Estabas of the Hungarians. They immeds these Countries and and all indeed they come death, bo h 60 of the Humnes. That intraded those Countries, and refted in those parts of Pannoning, Dow cal-Hunterie and led Hungarus.

meanes to recourt themselves, and perhaps either by Hungarian affinitie with their Princes, or taking a Prince from Hungarie then affilled with Germans, they began to recour of that Tartwim dilease, whereof fill some Symtomes remayne.

The advancehou'e of Beals.

How they aspired to the Dukedome of Volademer (which was their first degree, and ingrafting into Ruffles ) and whether it were by Conquest, or by Marriage, or by what other meanes, I could not learne any certainty among them. That from these beginnings of a small Dukedome (that bare notwithstanding an absolute government with it, as at that time did allothe other Shires or Provinces of Ruffia) this house of Beala spred it selfe forth, and aspired by degrees to the Monarchie of the whole Countrey, is a thing well knowne, and of very late memorie. The chiefe of that House that advanced the Stocke, and enlarged their Dominions, werethe three laft that raigned before this Emperout, to wit , Inan Bafilem, and Inen father to the other that raigneth at this time. Whereof the first that tooke vnto him the name and title of Emperour, was Bafilem father to Inm., and grandfather to this man. For before that time they were con- 10 tented to be called great Dukes of Mosks. What hath beene done by either of these three, and how much they have added to their first estate by Conquest or otherwise, may bee seene in the Chapter of their Colonies, or Purchases perforce. For the continuance of the race, this House of Beals at this prefent ' is in like case as are many of the greatest Houses of Christendome, va. the whole Stocke and Race concluded in one, two, or some few of the Bloud. For besides the Em-Since the Scepreshath been perour that now is, who hath no child (neither is like euer to have, for ought that may bee coniectured by the constitution of his body, and the barrennesse of his wife after so many yestes marriage) there is but one more, vz. a child of fixe or feuen yeeres old, in whom refleth all the manifold comhope of the succession , and the posteritie of that House. As for the other brother that was eldeft of the three, and of the best towardnesse, he died of a blow given him by his father vpon 20 the head in his furie with his walking staffe, or (as some say) of a thrust with the prong of it driven deepe into his head. That he meant him no such mortall harme when hee gave him the blow, may appeare by his mourning and passion after his sonnes death, which neuer left him till it brought him to the grave. Wherein may be marked the inflice of God, that punished his delight in shedding of bloud with this murder of his sonne by his owne hand, and so ended his dayes and tyrannie together, with the murdring of himselfe by extreme griefe, for this his via happie and vanaturall fact.

bultions. The Emperor

milies, with

1588.

We have fince had two which hane affirmed to be this De metrius, and thereof and of

The Emperours younger buther of fixe or feuen yeeres old (as was faid before) is kept in a remote place from the Masks, wader the tuition of his mother and her kindred, of the Houfe of the Nagaies: yet not fafe (as I have heard) from attempts of making away by practice of some 10 that afpire to the succession, if this Emperour die without any issue. The Nurse that tasted behue obrayned fore him of certaine meat (as I have heard ) died presently. That hee is naturall sonne to feet Vafilowich, the Ruffe People warrant it , by the fathers qualitie that beginneth to appeare althereof and of ready in his tender yeeres. Hee is delighted (they fay) to fee Sheepe and other cattell killed, and to looke on their throats while they are bleeding (which commonly children are afraid t behold) and to beate Geese and Hennes with a staffe till he see them lie dead. Besides these of the male kind, there is a Widow, that hath right in the succession, Sister to the old Emperour, and Aunt to this man, sometime Wife to Magnus Duke of Holft, Brother to the King of Denmarke, by whom she had one daughter. This woman since the death of her Husband hath beene allured againe into Ruffia, by some that love the succession better then her selfe, which appeareth 40 by the sequele. For her selfe with her daughter, so soone as they were returned into Russia, were thrust into a Numerie, where her daughter died this last yeere while I was in the Countrey, of no naturall difease as was supposed. The mother remayneth still in the Nunnerie, where (as have heard) the bewayleth her selfe, and curieth the time when the returned into Raylia, encode with the hope of marriage, and other faire promises in the Emperours name. Thus it standeth with the Imperiall Stocke of Ruffia, of the House of Beals, which is like to determine in those that now are, and to make a conversion of the Russe estate. If it be into a government of some better temper, and milder constitution, it will be happie for the poore people that are now oppreffed with intolerable feruitude.

Chap,6. Of the manner of crowe ning or inau-Ruffe Empe-

He folemnities vsed at the Russe Emperours Coronation, are on this manner. In the great Church of Frechefte (or our Ladie) within the Emperours Calle is erected a Stage, whereon standeth a Scrine that beareth vpon it the Imperiall Cap and Robe of very rich stuffe. When ning or man-guration of the the day of the Inauguration is come, there refort thither, first the Patriarch with the Metropolitans, Arch-bishops, Bishops, Abbots, and Priors, all richly clad in their Pontificalibus. Then enter the Deacons with the Quier of Singers, Who fo foone as the Emperour fetteth foot into the Church, beginne to fing : Many yeares may line noble Theodore Juanowich, &c. Whereunto the Patriarch and Metropolite with the rest of the Clergie, answere with a certaine Hymne, in forme of a Prayer, finging it all together with a great noise. The Hymne being ended, the Patriarch with the Emperour mount vp the Stage, where flandeth a Seat ready for the Emperour. 60 Whereupon the Patriarch willeth him to fit downe, and then placing hunfelfe by him you another Seate prouided for that purpose, boweth downe his head towards the ground, and fayed this Payer: Ob Lord God King of Kingt, Lard of Lad, which have to me ground, sine ay-this Payer: Ob Lord God King of Kingt, Lard of Lad, which have Prophet Samuel didft choofe top ferman: Dauid, and anount hom for King oner thy People Heael, have now our Prayers, and love

from thy Sanituarie upon this thy Seruant Theo love, whom thou hast chosen and exalted for King oner these thy holy Nations, aboint him with the oyle of gladnesse, protect him by thy power, but upon his head a Crowne of Gold and procious Stones, give him length of dayes, place him in the Seat of Instice, strengthen bis arms, make subject onto him all the barbarous Nations. Let thy feare bee in his whole bears, turne bim from all errour, and shew him the saluation of thy boly and universall Church, that bee may indee thy people with Instice, and protest the children of the poore, and finally attayne enerlasting life. This Prayer he speaketh with a lowe voyce, and then pronounceth a lowd : All prayer and power to Godsbe Faiber, the Sonne, and the Holy Ghoft. The Prayer being ended, he commandeth certayne Abbots to reach the Imperiall Robe and Cap: which is done very decently, and with

10 great Solemnitie, the Patriarch withall pronouncing slowde : Peace be unto all. And fo he beginneth another Prayer to this effect: Bow your felices together with vs. and pray to him that respects oner all. Preferue him (oh Lord) under thy holy protection, keeps him that bee may doe good and holy things, let luftice shine forth in his dayes, that we may line quietly without strife and malice. This is pronounced somewhat sofely by the Patriarch, whereto hee addeth againe allowd : Thou are the King of the whole World , and the Samieur of our foules , to thee the Father, Sonne, and Holy Ghost, bee all prayle for ener and ener, Arrien. Then putting on the Robe and the Cap, hee bleffeth the Emperour with the signe of the Crosse: Saying withall, in the Name of the Father, the Sonne, and the Holy Ghoit.

The like is done by the Metropolices, Archbishops, and Bishops: who all in their order come 20 to the Chaire, and one after another bleffe the Emperor with their two fore-fingers. Then is faid by the Patriarch another Praier, that beginneth: Omost boly Virgin Mother of God, or. After which a Deacon pronounceth with an high lowd voyce : Many yeeres to Noble Theodore, good, bonourable, beloved of God, great Dike of Volodemer of Mosko, Emperour, and Monarch of all Ruffia, &c. Whereto the other Priests and Deacons that stand somewhat farre of by the Altar or Table, anfwere finging, Many yeeres; many yeeres, to the Noble Theodore. The fame Note is taken vp by the Prieffs and Descons, that are placed at the right and left fide of the Church, and then altogether, they channt and thunder out; inging: Many years to the Noble Theodore, good, bonomable; belond of God, great Dake of Votedemer, Mosko, Emprour of all Russa, &c. These Solemnities being ended, first commerti the Patriarch with the Metropolites, Arch-30 bishoppes, and Bishops, then the Nobilitie, and the whole Companie in their order, to doe homage to the Emperour, bending downe their heads, and knocking them at his feet to the very ground.

The Stile wherewith hee is invested at his Coronation , runneth after this manner, Theodore learnowich, by the grace of God, great Lord and Emperous of all Ruffs, great Duke of Volodemer, Mosko, and Nousgrad, King of Cazan, King of Altracan, Lord of Plesko, and great Duke of Smolensko, of Twerria, Toughoria, Permis, Vadska, Bolghoria, and others, Lord and great Duke of Nouograd, of the Low Country, of Chernigo, Rezan, Polotskoy, Rostone, Yarusaueley, Bealozera, Leifland, Oudoria, Obdoria, and Condensa, Commander of all Siberia, and of the North parts, and Lord of many other Countreyes, etc.

40 This stile contayneth in it all the Emperours Provinces , and setteth forth his greatnesse. And therefore they have a great delight and pride in it , forcing not onely there owne people but also Strangers (that have any matter to deliver to the Emperour by Speech or writing) to repeat the whole forme from the beginning to the end. Which breedeth much cavill, and sometimes quartell betwixt them and the Tarter, and Poland Ambasiadours: who refuse to call him Czar, that is Emperour, and to repeat the other parts of his long Stile, My selfe, when I had audience of the Empercur, thought good to salute him onely with thus much, viz. Emperour of all Ruffia, great Duke of Volodemer, Mosko, and Nouograd, King of Cazan, King of Aftracan. The rest I omitted of purpose, because I knew they gloried, to have their Stile appeare to be of a larger Volume then the Queenes of England, But this was taken in

50 fo ill part, that the Chancellor (who then attended the Emperour, with the reft of the Nobilitie) with a lowd chafing voyce called still upon me to fay out the rest. Whereto I answered, that the Emperours Stile was very long and could not so well be remembred by Strangers, that I had repeated so much of it, as might shew that I gaue honour to the rest, &c. But all would not ferue till I commanded my Interpreter to fay it all out.

Hemanner of their Gouernment is much after the Turkilb fashion : which they seeme to \_ Chap.7. imitates a neer as the Countrey, and reach of their capacities in Politike Affairs will gue them leave to doe.

The State and forme of their Government seemeth to apply all to the behoofe of the Prince, The Russe Go-60 and that after a most open manner: as may appeare by the Sophismata, or secrets of their Gouern a menument to ment afterwards fet downe, as well for the keeping of the Nobilitie and Commons in an vn- ranneall der proportion, and farre vneuen ballance in their feuerall degrees, as also in their Impositions and Exactions, without any regard of Nobilitie or People: farther then it giveth the Nobilitie a kind of libertie, to exact vpon the Commons and baser sort of People in all parts

Guill-kind giue-all kind tenure. Abfolute Soucreigntie.

of the Realme whereforeur they come , specially in the place where their Lands lye, or where of the Acadine white course they come a special first appointed by the Emperour to gouerne wider him: Alfo to the Commons fome final they are appointed by the simperior to governe a lost different of Inheritance to whether Some contentments, mentacting pane out the control of their sects by gift they will: which commonly they doe after our Ganill kend, and difpole of their sects by gift

of terminent without any constraints.

Concerning the principall points and matters of State, wherein the Sourreignetic confeited Concerning the principal points and amendment of public Lawss, the making of Magifrates, power to make Warre or can be the making and amendment of public Lawss, the making of Magifrates, power to make Warre or (as the manying amammany of provide are to pardon life, with the right of Appeals in all matter, buth Langue with any Euresiae State, to execute or to pardon life, with the right of Appeals in all matters, buth Laague wuo any correse osate, se caches or primary service or the Emperour, and his Coun-Count and Cromman, they were to the source of the Sourceigne Commander, and the Execution 10 ner of all thefe. For as couching any Law or publike Order of the Realme, it is over determined ner of all tires. You are the control of before any publike Affembly or Parliament be furmoned. Where before his Connell, he of Derore any public randomy of a same and the same concluded before had, but onely a few Bishops, Abbots, and Friers: to make aduantage of the peoples Superstitions, even against rew Dinneys, and trains a woman and juff, that paffeth with content of their Biftops and Clergie men, whatloeuer it be. For which purpose the Emperours are content to make much of the corrupt flate of the Church, as now it is among them, and to nounsh the same by extraordinary favours, and Immunities to the Bishops Seas, Abbeyes and Frieries: as knowing Superstition and falle Religion best to agree with a Tyrannicall State, and to be a special meanes to vp-

Magistracies.

Secondly, as touching the publike Offices and Magistracies of the Realme, there is none here. ditarie, neyther any fo great nor so little in that Countrey, but the bestowing of it is done immediately by the Emperour himselie, Insomuch that the very Diacks, or Clerkes in enery head Towns, are for the most part assigned by himselse. Notwithstanding, the Emperour that now is (the better to entend his Deuotions) referreth all fuch matters pertayning to the State, wholly to the ordering of his Wines Brother, the Lord Borris Feder wich Godonoe.

Hefucceeded Luridiction.

Thirdly, the like is to be faid of the Iurifdiction concerning matters Iudiciall, specially such as concerne life and death. Wherein there is none that hath any authoritie or publike Iuridiction that goeth by Difcent, or is held by Charter, but all at the appointment and pleasure of the Emperour, and the same practifed by the Indges with such awe and restraint, as that they derenot 30 determine vpon any speciall matter, but must referre the same wholly, vp to the Medico the Emperours Councell. To shew his Sourceigntie ouer the lines of his Subjects, the late Empe-Intervention Language Language

Fourthly, for the Souereigne Appeale, and giving of Pardons in Criminall Matters to such as are connicted, it is wholly at the pleasure and grace of the Emperour. Wherein also the Emprese that now is, being a woman of great Clemencie, and withall delighting to deale in publike Affaires of the Realme, (the rather to supply the defect of her Husband) doth behave her lelfe after an absolute manner, giuing out pardon (specially on her birth day and other solemne times) in 40 her owne name, by open Proclamation, without any mention at all of the Emperour. Some there have beene of late of the ancient Nobilitie, that have held divers Provinces by right of Inheritance, with an absolute Authoritie and Iurisdiction over them, to order and determine all matters within their owne Precinct without all Appeale; or controllment of the Emperour. But this was all annulled and wrung cleane from them by Inna Valionich Father to this

Parliament. The order of

Friday respect. of that day.

number. As for Burghers or other to represent the Comminattie, they have no place there: the people beeing of no better account with them then as servants or bond-slaves that are to obey, properties on to make Lawes, nor to know any thing of publike matters before they are concluded.

The Court of Parliament (called Zabere) is held in this manner. The Emperour cause the the fammons to be fummoned fuch of his Nobilitie as himfelfe thinketh meete, being (as was faid) all of his or allemblage Councell : together with the Patriarch, who calleth his Clergie, to wit, the two Metropolites, the two Archbishops, with such Bishops, Abbots, and Friers as are of best account and reputation among them. When they are all affembled at the Emperours Court, the day is intimated when the Selfion shill beginne. Which commonly is vpon some Friday, for the Religion 69

Heir highest Court of publike consultation for matter of State, is called the Zabore, that is,

The Public Affembly. The flates and degrees of persons, that are present at their Patila-

of twenty being all of his Councell. 3. Certayne of the Clergie men, &c. about the fame

ments, are these in order, 1. The Emperour himielse. 2. Some of his Nobilitie about the number 50

When the day is come, the Clergie-men assemble before at the time and place appointed, which is called the Stollie. And when the Emperour commeth attended by his Nobilitie, they arife all, and meete him in an out-roome, following their Patriarch, who bleffeth the Emperour

with his two fore-fingers, laying them on his fore-head, and the fides of his face, and then kiffeth him on the right fide of his breft. So they palle on into their Parliament House, where they fit in this order. The Emperour is enthronized on the one fide of the Chamber, In the next place not farre from him at a small square Table (that giveth roome to twelve persons or thereabouts) fitteth the Patriarch with the Metropolites and Bilhops, and certayne of the principall Nobilitie of the Engerours Councell, together with two Dracks or Secretaries (called Dunmoy dyakes) that enact that which passeth. The rest place themselves on benches round a bout the Roome, euery man in his ranke after his degree. Then is there propounded by one of the Secretaries (who represente the Speaker) the cause of their Assembly, and the principall matters that they are to confider of. For to propound Bils what every man thinketh good for the publike benefit (as the manner is in England) the Ruffe Parliament alloweth no luch custome,

nor liberty to subjects. The points being opened, the Patriarch with his Clergie-men haue the Prerogative to be first Their discourse asked their vote, or opinion, what they thinke of the points propounded by the Secretarie, at Parliament.

Whereto they answere in order, according to their degrees, but all in one forme without any Discourse: as having learned their Lesson before, that servet in their turnes at all Parliaments alike, what where is propounded. Commonly it is to this effect. That the Emperour and his Conneell are of great wisdome and experience, touching the Policies and publike Affaires of the Realme, and faire better able to sudge what is profitable for the Common-wealth, then they are, which attend upon the De Service of God only, and matters of Religion. And therefore it may please them to proceed. That instead of their adusse, they will aside them with their Prayers, as their duties and vocations doe require, erc. To this or like effect having made their Answeres every man in his course, vp standeth some Abbot or Frier more bold then the reft (yet appointed before-hand as a matter of forme) and defireth the Emperour it would please his Maj-stie to command to be delivered wnto them what his Majesties own judgement, and determinate pleasure is, as touching those matters propounded by his Desake. Whereto is replyed by the faid Secretarie in the Emperours name. That his Highnesse with

zbose of his Roble Conneell, upon good and sound advice have found the matters proposed to be very good and necessary for the Common-wealth of his Realme. Notwithstanding, for assmuch as they are Religious con metch with the transfer of the faid Propositions And therefore defreth them again to fine the mental series of the faid Propositions And therefore defresh them again to fleat them media freely. And if they fall live to give their confents, that then the matters may passe to a full conclusion. Hereunto when the Clergie-men haue giuen their consents (which they vie to doe without any great pauling) they take their leaves with bleffing of the Emperour : who bringeth the Patriarch on his way fo faire as the next Roome, and fo returneth to his Seat, till all be made ready for his returne homeward. The Acts that thus are passed by the Zabore or Parliament, the Deisekers or Secretaries draw into a forme of Proclamation, which they lend abroad into enery Prouince, and head Towne of the Realme, to be published there by the Dukes and Diakeis, or Secretaries of those places. The Session of Parliament being fully ended, the Emperour muiteth the 40 Clergiemen to a folemne Dinner. And so they depart euery man to his home.

The degrees of persons or Estates of Russia (besides the Sourreigne State or Emperour him-Other Noblity which is of four forts, Whereof the Chiefe Noblities and by for Birth, Authority, and Reuenne are called the Valency Knazer, that is, The exempt or primited ed ite, and by Dukes. Their held formerine a feneral Invisit Pour and this hour and the state of the st Dukes. These held sometime a seuerall Iurishiction, and absolute Authoritie within their Pre-it's kept in an cincits, much like vnto the States or Nubles of Germany. But afterwards (referring their Rights under proporvpon composition) shey yeelded themselues to this Houle of Beals, when it beganne to waxe tion agreeable mightte, and to enlarge it selfe by ouer-marching their Neighbours. Onely they were bound to to that State.

Granthe Emperous in his Warn your marching their Neighbours. ferus the Emperour in his Warres with a certayne number of Horfe. But the late Emperour I- Kneto chiefe 50 Man Vafilometh Father to this Prince, being a man of high fpirit, and fub ill in his kind meaning of the Nobito reduce his Government into a more first torme, began by degrees to clip off their greatnesse, little and to bring it downe to a leffer proportion: till in the end he made them not onely his Vallals, bu: his K.lopkey, that is, his very Villaines or Bond-flaues. For fo they terme and write themfelues in any publike Instrument or private Petition which they make to the Empirour. So that

now they hold their Authorities, Lands, Lines, and all at the Emperours pleasure as the rest do. The meanes and practice whereby hee wrought this to effect against those, and other of the Nobility (lowell as I could note out of the report of his doings) were these, and such like. First, he cash private emulations among them about prerogatine of their Titles and Dignities. Wherein hee vied to let on the inferiours, to prefer or equall themselves to those that were accounted to 60 be of the Nobler Houses. Where hee made his advantage of their malice and contentions, the one against the other, by receiving deuised matter, and accusations of secret practice and Conspiracies to bee intended against his Person and State. And so having singled out the greatest of them, and cut them off with the good liking of the rell, hee fell at laft to open practice, by forcing of the other to yeeld their Rights vnto him.

The faction of

2. Hee divided his lubiects into two parts or factions by a generall Schifme. The one part he Operation and called the Oppression or Selectmen. These were such of the Nobility and Gentry as he took to his Operations and Callect the Oppression of the Common. The Meet and maintagne given as his faithfull fubice. The other he called Zemsky, or the Common. The Zemsky contayined the base and vulgar fort, with such Noblemen and Gentlemen as he meant to cut off, as suspected to mislike his Government, and to have a meaning to practice against him. Wherein he provided that the Oppressing to number and qualitie of Valure, Money, Armour, &c. farre exceeded the other of the Zempskey fide, whom heput(as it were from under his protection: so that if any of them were spoyled or killed by those of the Oppression, (which he accounted of his owne part) there was no amends to bee sought for by way of publike luftice, or by complaint to the Emperour.

The whole number of both parts was orderly registred and kept in a Booke : so that every man knew who was a Zempsker man, and who of the Opprefini. And this libertie of the ope part to spoile and kill the other without any helpe of Magistrate, or Law (that continued fenen yeeres) enriched that fide, and the Emperours Treasury, and wrought that withall which hee intended by this practile, viz. to take out of the way such of the Nobilitie, as himselfe mishked. whereof were flame within one weeke to the number of three hundred within the Citie of

This milchieuous practice of making a generall Schilme, and publike division among the subsects of his whole Realme, proceedeed (as should seeme) from an extreame doubt, and defe perate feare, which he had conceived of most of his Nobilitie, and Gentlemen of his Realme, 10 in his Wars with the Polonian and Chrim Tartar. What time he grew into a vehement suspition (conceined of the ill successe of his Affaires) that they practised Treason with the Polonian and Chrim. Whereupon he executed some, and denifed this way to be rid of the reft.

Pomefiney

3. Having thus pulled them and feafed all their Inheritance, Lands, Priviledges, &c. Save some very small part which hee left to their name, hee gaue them other Landsof the tenour of Pomestnoy (as they call it) that are held at the Emperours pleasure, lying far of in another Countrey, and foremoued them into other of his Provinces, where they might have neyther favour, nor authority, not being Natiue nor well knowne there. So that now these of the chiefe Nobility (called Vaciney Knazey) are equalled with the reft : faue that in the opinion and fauourof the people they are of more account, and keepe still the Prerogative of their place in all their an

Their practice to keepe downe these Houses from rifing againe and recourring their dignities are thefe, and fuch like. First, many of their Heires are kept vnmarried perforce, that the stocke may dye with them. Some are sene into Siberia, Cazan and Afracan, under pretence of service, and there either made away, or elfe fast clapped vp. Some are put into Abbeyes, and sheare themselues Friers by pretence of a Vow to be made voluntary, and of their owne accord, but indeed forced vnto it by feare, vpon some pretenced crime objected against them. Where they are so guarded by some of speciall trust, and the Couent it selfe (vpon whose head it standeth that they make no escape) as that they have no hope but to end their lives there. Of this kind there are many of very great Nobilitie. These and such like wayes begunne by the Emperour Inan Va- 40 filorach are fill practifed by the Godonoes, who being advanced by the Marriage of the Empresse their Kinfwoman, rule both the Emperour, and his Realme (specially Borrs: Federowich Godonee, Brother to the Empresse) and endeauour by all meanes to cut off, or keepe downe all of the best and ancientest Nobilitie. Whereof divers already they have taken away, whom they thought likeliest to make head against them and to hinder their purpose, as Knoz. Andreas Guraken Bulgatkowe, a man of great birth and authoritie in the Countrey. The like they have done with Peter Gollaumi (whom they put into a Dungcon where hee ended his life) with Knez Vafile Vrywich Gollooben, with Andrien Inanowich Suskey accounted among them for a man of a great wiledome. So this last yeere was killed in a Monastery (whither they had thrust him)one Knez Inan Petrowich Suikey a man of great valour, and feruice in that Countrey : who about five or fixe yeeres 10 fince, bare out the fiege of the Citie Vobsko, made by Stephan Batore King of Polonia, with one hundred thousand men, and repulsed him very valiantly, with great honour to himselfe, and his Countrey, and difgrace to the Polonian. Also Micheta Romanowich Vncle to the Emperour by the Mothers fide, was supposed to hauedyed of Poylon, or some like practice.

Names of the

The Names of these families of greatest Nobilitie are these in their order. The first is of Knez fees of the Ruffe Volodemer, which resteth at this time in one Daughter a widow, and without Children (mentioned before) fometime wife to Harrock Magnus Brother to the King of Denmarke, now closed within a Nunnerie. The fecond Knez Methelosker, thrust into a Frierie, and his onely Sonne kept from marriage, to decay the houle. The third Glimsley. But one left of his houle, and hee owithout children faue one Daughter. The fourth Saukey, whereof there are foure Brethren young men, and vomarryed all. The fifth Hubershop. Of this House are foure living. The fixth Bulgaloy, now called Gulescher house, whereof are fine lining, but youths all. The seventh Vorallins. key. Two left of that flocke. The eighth Odgorkey, two. The ninth Telletikey, one. The tenth Taytone, three. Thefe are the Names of the chiefe Families, called Vaetney Knazy: that in effect

haue loft all now, faue the very name it felfe, and fauour of the people, which is like one day to restore them againe, if any be left.

The second degree of Nobilitie is of the Boiarens. These are such as the Emperour honoureth The second (befides their Nobilitie) with the title of Counfellers. The revenue of thefe two forts of their degree of No. Nobles that rifeth out of their Land affigned them by the Emperour, and held at his pleafure billine, (for of their owne Inheritance there is little left them, as was fayd before) is about a thousand Marcks a yeere : besides Pension which they receive of the Emperour for their sentice in his Warres, to the fumme of feuen hundred Rubbels a yeere, and none about that fumme,

But in this number the Lord Borris Federowich Godenos is not to bee reckoned, that is like a Lord Borris as-Transcendent, and in no fach predicament with the rest, being the Emperours Brother in law, his ter this Emper 10 Protector for direction, for Command and authoritie Emperour of Ruffig. His yeersty revenue rour. in Land and Pension, amounteth to the summe of 93700. Rubbels and more, as appeareth by the particulars. Hee hath of inheritance (which himfelte hath augmented in Vafma Dorogebofe, fixe thousand Rubbels a yeere. For his office of Connick, or Matter of the Horse twelve thousand Rubbels or Marcks, raifed out of the Conaffue Sloboday, or the liberties pertayning to that Office. which are certayne Lands and Townes neere about the Mosco. Befides, all the meadow and pasture ground on both sides the banke of the River Moske, thirtie verst vo the streams, and fore tie verift downwards. For his pension of the Emperour (besides the other tor his Office) freene thouland Rubbels. Out of the Province or Shire of Vagha, there is given him for a nemiliar exemoted out of the Cheffird of Posolskey, two and thirtie thousand Rubbels, besides a rent of

20 Furres. Out of Rezen and Sener, (another peculiar) thirtie thousand Rubbels. Out of Grer and Turiock another exempt place eight thousand Rubbels. For rent of Bach-fromes and Bathinghouses without the walls of Moske, fitteene hundred Rubbels. Befides his Pomest, or Lands, which hee holdeth at the Emperours pleature, which farre exceedeth the proportion of land al-

lotted to the rest of the Nobilitie.

One other there is of the house of Glinders, that difpendeth in Land and Pension about fortie thousand Rubbels yeerely. Which nee is suffered to enjoy, because he hath marryed Borris his wives Sifter, being himfelse very simple and almost a naturall. The ordering of him and his Lands are committed to Borris.

In the third ranke are the Voyandey, or fuch Nobles assire, or have beene Generals in the Em- The third for perours warres. Which deliner the honour of their Tiele to their postericies also : who take their of Nobilitle, place about the other Dukes and Nobles, that are not of the two former forts, viz. of the Vdelmey knazey, nor of the Boiarens.

These three degrees of their Nobilitie, (to wit) the Valley knazy, the Beiarens, and the Voisingdey, have the addition of Vicb, put vnto their inhame, as Borris Federowift, Scc. Which is a Title Vich. note of Honour that the rest may not viimpe. And in 15ats it bee not added in the naming of them, they may fue the Bestebest or penaltie of dispanous voon them, that otherwise shall tearme them.

The fourth and lowest degree of Nobilitie with them; is of such as beare the name of Kname. or Dukes, but come of the younger Brothers of those chiefe Houses, through many discents, and haue no inheritance of their owne, faue the bare name getitle of Duke onely. For their order is to deliuer their names and titles of their Dignities over to all their Children alike, whatfocuer elfe they leave them. So that the Sonnes of a Voisnodey or Generall in the field, are called Vois moder, though they never faw the field, and the Sonnes of a Knot or Duke, are called Knower, though they have not one groat of inheritance or linely hood to maintay,ne them selves wishall. Of this fort there are fo many, that the plentie maketh them cheape a fo that you hall fee Dukes glad to ferue a meane man for fine or tixe Rubbels or Marcks a years, and marchey will fland highly upon their Beficheft or reputation of their Honours. And thefe are their leverall des grees of Nobilitie.

nees of Nobilitie.

The fecond degree of perfons, is of their *Sina Beiarskey*, or the fonnes of Gentlemen specifically The fecond so are preferred, and hold that Name by their feruice in the Empesours warren better ach degree of perdiers by their very stocke and birth. To which order are reterred their Dyacks or Sestences, fons, that lense the Emperous in every head Towne, being joyned in Committee with the Dukes of that place.

at place.

The last are their Commons, whom they call Monstet. In which number they rate on their Theolimide. Merchants, and their common Artificers. The very lowest and baselt fort of this kinds (which green are held in no degree) are their Countrey people, whom they call Christianen. Of the Sina Boiarskey (which are all Souldiers) were are to fee in the description of their Forces, and Militarie prouisions. Concerning their Montion, what their, comittion and behaviour is, in the Title or, 60 Chapter Of the Common people. Store and state a store of the first men

He whole Countrey of Ruffia (as was fayd before) is divided into fours parts, which they Orthe Go-1 call Chetfirds, or Tetrarchies. Euery Chetfird contaymeth divers Shires, and an anthewed to a vernment of feuerall Office, whereof it takes the name. The first Chefferd or Terrachie, beareth the name of their Prouin-

Possbey Cheffed, or the Invisibilition of the office of Ambassages, and at this time is wider the chiefe Secretarie and officer of the Ambassages, called Andrew Schulculone. The standing see or stipend that hee receiveth yeerely of the Emperour for this service, is one hundred Rubbels or Marcks.

The fecond is called the Referancy Chatfird, because it is proper to the Referance or high Interest in care the appropriate by vertue of Office to Bafile Shalealane, Brother to Contague. At this critical is personally one Zapon Abramone. His pension is an hundred Rub.

is yestery.

The third is the Chesfird of Pomesting, as pertuyning to that Office. This keepeth a Register of The third is the Coeppray of companying property of the third is the Coeppray of the Coeppray att Lands guen oy me ampetous or them. The officer at this time is called Eleanor Wellington, His to

The fourth is called Coffankey Dworets, as being appropriate to the Office that hath the inrifdiction of the Kingdomes of Casan and Afracan, with the other Townes lying von the Fed. ges, now ordered by one Druzhine Penetiene, a man of very special account among them for his wifedome and promptnesse in matters of policie. His pension is one hundred and fifthe Rub-

Dessayeure.

From these Chessinds or Terreschies is exempted the Emperours inheritance or Voctors (as they call it) for that it pertayned from ancient time to the Houle of Beals, which is the firmame of the can it for the terretain the state of fixe and thirtie Townes with their bounds or Territories. Imperant pions. In Handston, which are likewife deducted out of those Cheffrid, as the 20 Shire of Pagha (belonging to the Lord Borrife Federowich Godonoe) and fuch like.

Thefe are the chiefe Governours or Officers of the Provinces, not resident at their chargeabroad, but attending the Emperour whither soener hee goeth, and carrying their Offices about with them, which for the most part they hold at Mosts, as the Emperous chiefe seate.

The parts and practice of these foure Offices, is to receive all Complaints and Actions where focuer, that are brought out of their feuerall Cherfirds and Quarters, and to informe them to the Emperours Councell. Likewise to send direction agains to those that are under them, in their Gyd Prouinces, for all matters given in charge by the Emperour and his Councell, to bee done or put in execution within their Precincts.

For the ordering of every particular Province of these source (bestirds, there is appointed one 10 of the Bukes, which were reckoned before in the lowest degree of their Nobilitie, which are of these Brances, wanter west reasonable and Provinces. Whereof energy one bath joyned with him in Commission a Drack or Secretarie to assist him or rather to direct him. For in the executing of their Commission, the Direct dothalk

The parts of their Commission are these in effect. First, to heare and determine in all civil matters within their Precind. Fowhich purpose they have vader them certayne Officers, as Gubany Statest or Coroners, who besides the cryall of felfe Murders, are to attach Felloms: and Dukes or Prethe Sondie or vnder Iustices, who themselves also may heare and determine in all matters of the fame nature, among the Countrey people of their owne Wards or Bayliwickes : but to that in cale either parte differe, they may appeale, and goe furthereo the Duke and Doe that refide of within the head Towine. From whom all other may remove the matter to the higher Court with the reas route. From whom a work of the strain of the strain of the strain of the Emperous Councell, where lye all appeales. They have under them also Switter Starts, that is Aldermen, or Baylifes of the Hundreds.

Secondly imall criminal matters, as Theft, Murder, Freafon, &c. they have authoritie to apprehend, to examine and to imprison the materietor, and to having received perfect evidence and to come of the Case; they are to fend it ready drawne and orderly digetted up to the Mored and propounded to the Emperours Councell. But to determine in any matter criminall, or to doe execution upon the partie offending, is more then their Commission will allow

This y, if there bee any publike fernice to be done within that Prounce, (as the publishing of any flaw, or common order, by way of Proclamation, collecting of taxes and impositions for the Emperor, mustering of Souldiers, and fending them forth at the day, and to the place assigned by the Emperous or his Councell) all these and such like percayne to their charge.

These Dukes and Dyacts are appointed to their place by the Emperour himselfe, and are changed ordinarily at enery yeers end, except upon some speciall liking or sute, the time bee them which oppressed for a yeere or two more. They are men of themselves of no credit, nor favour with the people where they governe, being neither borne, nor brought up among them, nor yet having inheritance of their owne there, or elfe where. Onely of the Emperour they have for that fernice an hundred Marcks a yeere, hee that hath most, some fiftie, some but thireie. Which ma- 60 keth them more fur pefted and odious to the people, becaute being to bare, and comming firth and humary \$160 them lightly enery years, they racke and fooyle them without dhe regard of Iuftice or Confeience. Which is easily tollerated by the chiefe Officers of the Chesfirds, to the end they may spoyle them againe, and haue a better bootie when they call them to account:

which commonly they doe at the end of their feruice, making an advantage of their injuffice and oppression ouer the poore people. There are few of them but they come to the Padkey or Whip when their time is ended, which themselves for the most part doe make account of. And therefore they furnish themselnes with all the spoyle they can for the time of their Gouernment, that they may have for both turnes, as well for the Emperour and Lord of the Cheffird, as to referue some good part for themselves.

They that are appointed to governe abroad, are men of this qualitie: faue that in the foure border Townes that are of greatest importance, are set men of more speciall valour and trust, two in every Towne. Whereof one is ever of the Emperours privile Counfell. These foure border 10 Townes are, Smolenske, Vobske, Nonogred, and Cazan, whereof three lie towards the Polonian and Sweden, one bordereth farre off vpon the Chrim Tartar. These have larger commission then the other Dukes of the Prouinces that I spake of before, and may doe execution in criminall matters. Which is thought behooffull for the Common-wealth : for incident occasions that may happen upon the borders that are farre off, and may not flay for direction, about every occurrent and particular matter from the Emperour and his Counfell. They are changed every yeere (except as before) and have for their (tipend 700. Rubbels a yeere he that hath most : some have but 400. Many of these places that are of greatest importance, and almost the whole Countrey is managed at this time, by the Godonoes and their Clients.

The Citie of Moske (that is the Emperours Seat) is governed altogether by the Emperours 20 Counfell. All matters there both civill and criminall, are heard and determined in the feuerall Courts, held by some of the faid Counsell, that reside there all the yeere lone.

Onely for their ordinary matters (as Buildings, Reparations, keeping of their Streets decent The governand cleane, Collections, leuying of Taxes, Impositions and such like) are appointed, two Gen-ment of Maste. tlemen, and two Djacks or Secretaries, who hold a Court together for the ordering of fuch matters. This is called the Zempskey house. If any Townel-man suspect his seruant of theft or like matter, hither he may bring him to have him examined vpon the Puckey, or other torture. Besides these two Gentlemen, and Secretaries that order the whole Citie, there are Starufts or Aldermen for enery feuerall Companie. The Alderman hach his Society or Confiable. and the Constable hath certaine Decetskess or Decurions under him, which have the overfight of 30 ten housholds a piece, whereby every diforder is sooner spyed, and the common service bath the quicker dispatch. The whole number of Citizens poore and rich are reduced into Companies. The chiefe Officers (as the Dyacks and Gentlemen) are appointed by the Emperour himselfe, the Starait by the Gentlemen and Dyacks, the Saskey by the Starait or Alderman, and the Decetskopes by the Conflables.

This manner of gouernment of their Prouinces and Townes, if it were as well fee for the giuing of inflice indifferently to all fores, as it is to prevent innovations, by keeping of the Nobility within order, and the Commons in subjection, it might seeme in that kind to be no bad nor vnpolitike way, for the contayning of to large a Common-wealth, of that breadth and length as is the Kingdome of Ruffae. But the opportion and flauery is 60 open, and fo great, that 40 a man would maruell, how the Nobilitie and People should suffer themselves to be brought vader it, while they had any meanes to avoide and repulse it : or being so strengthned as it is at this present, how the Emperours themselves can be content to practife the same, with so open intuities and oppretion of their Subieds, being themselves of a Christian professor. By this Anhardmatic appeareth how hard a matter it were to alter the state of the Bonff Government, as now ter to alter the standard of the Bonff Government, as now ter to alter the standard of the Bonff Government.

THe Emperours of Ruffia give the name of Counfellour to divers of their chiefe Nobilitie, Chap. 11. ather for honours fake, then for any vie they make of them about their matters of State. Of the Eurpa Thefe are called Boiagens, without any addition, and may be called , Comfollows at large. For rours Countel, 30 they are feldome or neuer called to any subhike confutation. They which are of his special and prime Counfell indeed (whom he yieth daily and ordinarily for all publike matters pertayning to the State) have the addition of Dunmer, and are named Dunmer, beieren, or Lords of the Counfell, their Office or Sitting Bearfine damma.

Their names at this prefent are their in their order. First, Kner. Feeder lanewich Methillof. The number kg. 2. Kner. Inan Michaelswich Glaukes. 3. Kner. Vallie Inanomich Sunbry Scopm. (Their and namics of three are accounted to be of greater birth then wisedome, taken in (as may seeme) for that end, the Connectrather to furnish the place with their honours and professes then with the place with their honours and professes then with the place with their honours and professes the with the place with the place with their honours and professes the with the place with t rather to furnish the place with their honours and presence, then with their advice or counsell.) 4. Knez Vafilie Inanewich Sankey, thought to be more wife then the other of his name. 3. Knez

Feeder Michaelowich. 6. Knez Michael Romanowich Trowbetthoy. 7. Knez Timophey Roma-60 nowich Trombetskey. 8. Knew Andrew Gregorimich Curakine. 9. Knew Demetrie Inanovich Foresime. 10. Knez Feoder Inanomich Europine. 11. Bodau Inanomich Sabarone. 12. Knez Inan Vasilowich. 13. Knez Fooder Demetrimich Shestinone. 14. Knez Fcoder Michaelowich Troyconione. 15. Înan Buterlyney. 16. Demetrie Inanowich Godonoe. 17. Borrise Federowich Godonoe, brother to the Emprelle. 18. Stephen Vafilowich Godonoe. 19. Gregorie Vafilowich Godonoe. 20. Inan

Gdenus of

Pafilowich Gadence. 21. Feader Sheremitone. 22. Andriew Petronich Cieficanina. 23. Ignate Philomico Camenoc. 21. Femor Oscistantes. 25. Demension Juanomich Chromosich Taisleue. 24. Romain Michaelowich Pena. 25. Demension Juanomich Chromosige. Letromen sunjume, 24 Arman arternations. 25. Vafile Shalcalone, 28. Vafile Shalcalone, 29. Elea. 26. Remain Vafilewich Afferione, 27. Elea. zar Wellusgin. 30. Drezbeen Penteleoue. 31. Zapon Abramone.

Foure Secre-

The foure laft of these are called Dunney deider or Lord-Secretaries. These are all of the Empercurs privile Counfell, though but few of them are called to any confultation, for the tall man. perous prime counters, trongs over the period of the period of the counter to the Emprese, terrain and determined vpon by Borra Federowich Godone brother to the Emprese, with fome flue or fixe more whom it pleafeth him to call. If they come, they are rather to the nature of the matters occurrent which are heare, then to gue counters, and one to constant them at their fittings by the Lond of the force to of State done within the Whereof mention is made in the Chapter concerning the Gourna-Cheefinds, or Tetrarchies. Whereof mention is made in the Chapter concerning the Gourna ment of their Prouinces. Who bring in all fuch Letters as they receive from the Dukes; Dracts. ment of their recommendations of the Citie and Catiles perrayaing to their feuerall Quitter or Captaines, and other Officers of the Citie and Catiles perrayaing to their feuerall Quitter or Chesfird, with other advertisements, and informe the Counsell of them.

The like is done by the chiefe Officer of euery feuerall Office of Record: who may come into the Counfell-chamber, and informe them, as occasion incident to his Office doth require. Befides matters of State, they consider of many private Causes, informed by the way of sipplinoes matters of state; they commented many properties and determine; as the Caule or meanes can procure fanour. Some they lend to the Offices whereto they perrayne by common meaners can proceed a process of their fitting are, Mondayes, Wedneldayes, and Fri. 20 dayer. Their time of meeting is commonly feven of the clocke in the morning. If there bee any extraordinary occasion that requireth confulcation on some other day, they have warning by the Clerke of of the Counfell, called Derofty Bulbers, who receive horder from the Rofered, or High Constable of the Realme, to call them together at the time appointed.

Ches. 12. The Offices of The Steward Receiver of

the Crowne-

land Rents.

COr the receiuing of Customes, and other Rents belonging to the Crowne, there are appoin-Of the Empethe Office of Dworrsona or Steward of the boulbold. The second is, the Office of the Chesfird, which I comprehend under one, though it be divided into foure leverall parts, as was faid before. The third is called, Bullba Prechode; or the great Income.

As touching the first, which is the Office of the Steward, it receiveth all the Rents of the Emperours Inheritance, or Crowne-land, which they call, Voctin. The Voctin or Crown-land contayneth in it fixe and thirtie Townes with the Territories or Hundreds belonging with them, Whereof the chiefe that yeeld the greatest Rents are thefe: Alexandrifea, Corolika, Orfer, Sinboday, Danielska, Moifalskoy, Chara, Samerska, Stravaronse, Bransone, &c. The Inhabitants or Tenants of these and the other Townes, pay fome Rent money, some other Rent duties (called Obrites ) as certaine Chesfirds or measures of Graine, Wilest, Rye, Barley, Oats, &c. or of other victuall, as Oxen, Sherpe, Swannes, Geefe, Hares, Hennes, wilde Fowle, Fish, Hay, Wood, Honey, &cc. Some are bound to lowe for the Emperours provision certaine acres of ground, and to make the Corne ready for his vie: having for it an allowance of certaine acres of ground for 40

This promition for the houshold, specially of Graine served in by the Tenants, is a great deale more then is fpent in his boule, or in other allowance ferued out in livery, or for the Emperous honour, called Schalonangs for which wie there is bestowed very much, both in Graine and other Victuall. This furplus of promition is fold by the Steward to the best hand, and runneth

In the rime of Image Validowich, father to this Emperour (who kept a more Princely and bountifull house then the Emperour now doth) this overplus of Graine, and other incomes into the Stewards Office, yeelded to his Treasurie not past 60000. Rubbels yeerely, but rifeth now by good husbanding of the Steward Grogory Vafilowich Godsmoe, to 230000. Rubbels a yeere. And 10 this by the meanes of the Empresse, and her kindred, specially (Borris Federarich Godones) that account it all their owne that runneth into the Emperors Treasure. Much of this surplusage that rifeth out of the Rent prouision, is employed to the payment of the wages of his houshold Officers, which are very many attending at home, and purueying abroad.

The Office of

The fecond Office of Receit, is called the Cheffirds, (being divided into foure feuerall parts, 25 before was faid ) hath foure head Officers: which befides the ordering and government of the Shires contayned within their feuerall Chesfirds, have this also as a part of their Office, to receine the Tagle and Podes belonging to the Emperour, that rifeth out of the foure Cheffels or Quarters. The Tagla is a yeerly Rent or Imposition railed upon enery 14 the or measure of Graine, that groweth within the Land, gathered by fworre men, and brought into the Office. The 60 Was contayneth fixtie Chesfirds. Every Chesfird is three Bushels English, or little lesse. The Podar is an ordinary Rent of money imposed vpon every Soake, or Hundred within the whole

This Tagle and Podes bring in yeerely to the Offices of the Cherfirds a great fumme of money:

as may appeare by the particulars heere fet downe. The Towns and Pronince of Voliko pay yeerely for Tagla and Podat about 18000. Rubbels. Nonogrod 35000. Rubbels. Terihocke and Offer 8000, Rubbels. Razan 30000, Rubbels. Morum 12000, Rubbels. Colmigrae and Dayna 8000. Rubbels. Vologda 12000. Rubbels. Cazan 18000. Rubbels. Ufing 20000. Rubbles. Rollone 10000. Rubbels. The Citie of Maske 40000. Rubbels. Sibierskey 20000. Rubbels. Refrome 12000. Rubbels. The totall amounteth to 400000. Rubbels, or Markes a yeere, which

is brought in yeerely the first of September, that is reckoned by them the first day of the yeere.

The third (that is called the Bullba Precbod, or great Income) receiveth all the Customes that with September. are gathered out of all the principali Townes and Cities within the whole Realme. Befides the 1 he Office of

To fees and other duries which rite out of divers smaller Offices, which are all brought into this Builba Prechod Office of Bullha Procbed. The Townes of most trade, that doe yeeld greatest Custome, are or great inthese here set downe. Mosko, Smolensko, Vobska, Nousgrod Velica, Strararquie, Forfhocke, Ot., come. fer, Yaruflane, Caftrome, Nefua Nonogred, Cazan, Vologda. This Cultome out of the great Townes is therefore more certaine, and easie to bee reckoned , because it is set and rated precise. ly what they shall pay for the Custome of the yeere. Which needs must bee payd into the faid Office, though they receive not fo much. If it fall out to be more, it runneth all into the Empe-

rours aduantage.

The Cultome at Mosko for every yeere, is 1 2000. Rubbels. The Cultome of Smolensko 2000. The Emperors Volike 12000. Rubbels. Nouvered velica 6000. Rubbels. Straratoufe by Salt and other commo-20 dities 18000. Rubbels. Torflock Soo. Rubbels. Offer 700. Rubbels. Tarnslane 1200. Rubbels. Cafrome 1800. Rubbels. Nofna Nonogred 7000. Rubbels. Cazas 11000. Rubbels. Vologda 2000. Rubbels. The Custome of the rest that are Townes of trade, is sometimes more. fometimes leffe, as their trafficke and dealings with commodities to and fro, falleth out for

This may bee faid for certaine, that the three Tables of Receits belonging to this Office of The whole re-Bullha Preched, when they receive leaft, account for thus much, we. The first table, 16000. ceit of the Bul-Rubbels. The second table , 90000. Rubbels. The third 70000. Rubbels. So that there com- fine Precisator meth into the Office of Bullha Prechod, at the least reckoning (as appeareth by their Bookes of great Income, Customes) out of these and other Townes, and maketh the summe of 340000. Rubbles a yeere.

20 Besides this Custome out of the Townes of trade, there is received by this Office of Bullba Prechad, the yeerely Rent of the common Bath-floues, and Cabacks or drinking houses, which pertayne to the Emperour. Which (though it be vicertaine for the juft fumme, yet because it is certaine, and an ordinary matter, that the Ruffe will bathe himselfe as well within as without) yeeldeth a large Rent to the Emperours Treaturie.

There is belides , a certaine Mul& or Penaltie that groweth to the Empergur out of every Rentront of Indgement or Sentence, that paffeth in any of his Courts of Record in all Civill matters. This the Indicial Penaltie or Mulct is twentie Dingoet or Pence vpon enery Rubbel or Marke, and fo ten in the hundred. Which is payd by the parcie that is consist by Law. He hath besides for every name contayned in the Writs that paffe out of their Courts , fine Alteens . An Alteens is fine pence 40 fterling, or thereabours. This is made good out of the Office, whence the Writ is taken forth.

Thence it goeth to the Office that keepeth the leffer Seale, where it payeth as much more to the Emperours vie. This rifeth commonly to three thouland Rubbels a yeere, or thereabouts. Farther also out of the Office of Roife onia, where all felonies are tryed, is received for the Emperour the halfe part of Felons goods, the other halfe goeth the one part to the Informer, the other to the Officers.

All this is brought into the Office of Bullha Preched, or Great income. Besides the overplus or remainder that is faued out of the Land-rents allotted to divers other Offices: as namely, to the Office called Roferade, which hath Landsand Rents affigned vnto it to pay the yeerely falaries of the Souldiers, or Horsemen, that are kept still in pay. Which in time of peace, when they rest at home not employed in any service, is commonly cut off and payd them by halfes, 50 fometimes not the halfe: fo that the remainder out of the Roferade Office that is layd into the Emperours treasurie, commeth for the most part enery yeere to 250000. Rubbels.

In like fort (though not fo much) is brought in the furplus out of the Strelletskoy Offices which hath proper Lands for the payment of the Strelfey men or Gunners, as well those at Moske, that are of the Emperors Guard (12000, in ordinary) as on the borders, and other garrifon Towns and Castles. Likewise out of the Office of Prechase, Shisting Newsbey, which hach set allowance of Lands to maintayne the forraine mercenary Souldiers, as. Poles, Sweadens, Dutches, Scots, &c. So out of the Office of Pulbarskey, (which hath Lands and Rents allowed for the promition of munition, great Ordnance, Powder, Shot, Saltpeter, Brimstone, Lead, and such like) there is left somewhat at the yeeres end, that runneth into the Treasurie. All these bring into the Of-

fice of Bullha Preched that which remayneth in their hand at the yeeres end. Whence it is delivered into the Emperours Treasarie. So that the whole summe that groweth to this Office of Bullha Prechod, or the great Income (as appeareth by the Bookes of the laid Office) amounteth to

800000. Rubbels a yeare, or thereabouts.

treature a ule file of Mosto.

All these Offices, to wit, the Office of the Steward, the foure Chetfirds, and the Bullea Priched deliver in their receipts to the head treasurie, that lyeth within the Emperours house or Cuffle within his Ca. at the Morke. Where lye all his Moneys, Iewels, Crownes, Scepters, Plate, and such like, the Chefts, Hutches, and Bags being figued by the Emperours themselves with their owne seale. Though at this time the L. Borris Federowich Godonoe, his feale and over-fight supplies for the Emperour, as in all other things. The vnder Officer at this time is one Stepan Vafilonich Godone, Coufin germane to the faid Borris, who hath two Clerkes allowed to letue vngerhimin the Office.

Emperors rent money.

1. Out of the Stewards Office about the expence of his\_ Sum 1430000. Rub-The fum that groweth to the bonse 23000. Rubbels.
Emperors Trea2. Out of the foure Chessirds for Souke and Head charges for his house to fury in money \ money, 400000. Rubbels. and ordinary falleries onely, for energy 3. Out of the Bullina Precod Office, or great Income of his Souldiers otherweere. for Custome and other Rents, 800000, Rubbels. wife discharged.

But besides this reuenue that is paid all in money to the Emperors treasurie, he receiveth yeerely in Furres, and other duties to a great value out of Siberia, Pechora, Permia, and other places, which are fold or barrred away for other forraine commodities to the Turkilo, Perfian. Armenian, Georgian and Bougharian Merchants, that trade with n his Countries, besides others of Christendome, What it maketh in the whole (though the value cannot bee let downe precifely, as being a thing casuall as the commoditie may be got) it may be gheffed by that which an was gathered the laft yeere out of Siberia for the Emperour's Custome, vz. 466. Timber of Sables, fiue Timber of Marttones, 180. blacke Foxes, befides other commodities.

To these may be added their seazures, and confiscations vpon such as are in displeasure, which rifeth to a great fumme, besides other their extaordinary Impositions, and exactions done voon their Officers, Monafteries, &c.not for any apparant neceffitie, or vie of the Prince, or Common. wealth, but of will and custome: yet with some pretence of policie. To this purpose this byword was vied by the late Emperout Iuan Vafilowich : That his people were like to his beard. The oftner fhanen, the thicker it would grow. Or like fheepe, that must needs bee fhorne once a yeare at the least : to keepe them from being over-laden with their wooll.

Vnderstand their politike courses of the times when the Agrhor writ. beens heavy to fro v among

MEanes feruing to which purpose were to preuent no extortions, exactions, or briberies what source, done upon the Commons by their Dukes, Diseks, or other Officers in their Provinces : but to suffer them to goe on till their time be expired, and to sucke themselves full, Then to call them to the Prancie (or whip) for their behaulour, and to beat out of them all, Gods chaftile- or the most part of the bootie, (as the Hony from the Bee) which they have wrung from the ment hath fince Commons, and to turne it into the Emperours Treasurie, but neuer any thing backe againsto fweep fuch ills the right owners, how great or enident soener the injurie be. To this end the needle Dukes, and Diacks, that are fent into their Prouinces, ferue the turne very well, being changed fo often (to wit) once a yeere : where in respect of their owne, and the qualitie of the people(as before was faid) they might be continued for some longertime, without all feare of innovation. For com- 40 ming fill fresh woon the Commons, they facke more eagerly: like Tiberius the Emperours Flies, that came new fill upon an old fore. To whom he was wont to compare his Prators, and other Provinciall Officers.

2. Yet they did make of these Officers (that have robbed their people) sometimes a publike example, if any be more notorious then the rest : the Emperour thus seeming to mislike the oppressions done to his people, and transferring the fault to his ill Officers. As among divers other, was done by the late Emperor Inan Vafilowich to a Diache in one of his Prouinces : that (befides many other extortions and briberies) had taken a goole readic dreft full of mony. The man was brought to the Market-place in Mosko. The Emperour himselfe present made an Oration. Thefe, good people, are they that would eate you up like bread, or . Then asked he his Po- 50 lachies or Executioners, who could cut vp a Goode, and commanded one of them first to cut off his legs about the midft of the shin, then the armes aboue his elbowes (asking him still if Goofeflelb were good meat ) in the end to chop off his head : that hee might have the right fashion of a Goose readie dressed.

3. They make an open shew of want, when any great Taxe or Imposition is towards. As was done by this Emperour Theodore Inanowich, by the aduice of some about him at the beginning of his raigne : when being left very rich (as was thought) by his father, he fold most of his Plate, and stamped some into Coyne: that he might seeme to want money, Whereupon presently out came a Taxation.

4. They fuffer their subiects to give freely to the Monasteries ( which for their superstition 60 very many doe, specially in their last Wills) and to lay vp their money and subtlance in them, to keepe it more fafe. Which all is permitted them without any restraint or prouiso, as was and is in some Countries of Christendome. Whereby their Monasteries grow to exceeding great wealth. This they doe to have the money of the Realme better flored together, and more res-

die for their hand, when they lift to take it. Which many times is done without any novie: the Friers being content rather to part from somewhat (as the increase groweth) then to lose all at once. Which they were made to doubt of in the other Emperours dayes.

To this end Inan Vafilowich late Emperor vied a very Brange practile, that few Princes would A franze prachave done in their greatest extremities. Heerefigned his Kingdome to one Velica Knez Simeon, tice to get mothe Emperours some of Cazan; as though hee meant to draw himselfe from all publike doings ney. to a quiet private life. To wards the end of the yeere, he caused this new King to call in all Charters granted to Bishoprickes, and Monasteries, which they had enjoyed many hundred yeeres before. Which were all cancelled. This done (as in diflike of the fact & of the mif-gouernment

of the new King ) hee refumed his Scepter, and fo was content (as in faugur to the Church and Religious men ) that they should renew their Charters, and take them of himselfe : reserving and annexing to the Crowne fo much of their lands, as himfelfe thought good,

By this practice he wrung from the Bishoprickes and Monasteries (besides the lands which he annexed to the Crowne ) an huge maffe of money. From fome forcie, from fome fiftie from fome an hundred thousand Rubbels. And this as well for the increase of his Treasury, as to abate the ill opinion of his hard gouernment, by a shew of worse in another man. Wherein his Grange (pirit is to be noted : that being hated of his fubicets ( as himfelfe knew well enough ) ver should venture such a practice to fet another in his faddle, that might have rid away with

his horse, while himselfe walked by on foot. 5. They fend their Meffengers into the Provinces or Shires, where the special commedi-20 ries of their Countrey grow, as Furres, Wax, Hony, &c. There to forestall and ingrosse sometime one whole commoditie, fometime two or more, taking them at finall prices what themselves lift, and felling them againe at an excessive rate to their owne Merchants, and to Merchants itrangers. If they refuse to buy them, then to force them voto it. The like is done when any commoditie either native or forraine (as Cloth of Gold, Broad-cloth, &c.) thus engroffed by the Emperour, and received into his treasury happeneth to decay, or marre by long lying, or fome other cafualtie. Which is forced vpon the Merchants to be bought by them at the Emperours price, whether they will or no. This last yeere of 1,589, was engroffed all the Wax of the Countrey : fo that none might deale with that commoditie, but the Emperour onely.

30 6. To take vp and engroffe in like fort sometime forraine commodities (as Silkes, Cloth, Lead. Pearle, &c. brought into his Realme by Turkifb Merchants, Armenians, Bongbarians, Poles English, and other. And then to force his Merchants to buy them of his Officers at his

owne price.

7. They make a Monopoly for the time of such commodities as are paid him for Rent, or Custome, and to inhance the price of them, as Furres, Corne, Wood, &cc. What time none must fell of the same kinde of commoditie, till the Emperours be all fold. By this meanes he maketh of his Rent, Corne, and other provision of victuali (as before was faid ) about 200000. Rubbels or Markes a yeere. Of his Rent, Wood, Hay, &c. 30000. Rubbels, or thereabouts.

8. In every great Towne of his Realme hee hath a Caback or other drinking house, where 40 is fold Aqua-vita ( which they call Ruffe Wine ) Mead, Beere, &c. Out of these hee receiucth Rent that amounteth to a great fumme of money. Some yeeld 800. fome 900. fome a 1000. some 2000, or 2000. Rubbels a yeere. Wherein besides the base and dishonourable meanes to encrease his treasury, many foule faults are committed. The poore Labouring man, and Artificer, many times spendeth all from his wife and children. Some vie to lay in twentie, thirtie, fortic Rubbels, or more into the Caback, and vow themselves to the pot, till all that be spent. And this (as he will fay) for the honour of Hofpodare, or the Emperour. You shall have many there that have drunke all away to the very skin, and so walke naked (whom they call Naga.) While they are in the Caback, none may call them forth whatfoeuer cause there be, because he hindereth the Emperours reuenue.

50 9. Some of his Boiarens, or Nobles of his Court, (whom he vieth vpon truft) that have houfes in the Moske, faine themselucs robbed : Then they fend for the Zemskey men, or Aldermen of the Citie, and command them to finde out the robbery : In default of not finding it, prane or cease the Citie for their misgouernment in 8000. 9000. or 10000. Rubbels at a time. This is many times practifed.

10. In these exactions to shew their Soueraigntie, sometime they have beene vied very plaine, and yet strange cauillations. As was that of Inan Vasilowich , father to this Emperour, after this fort. He fent into Perma for certaine loads of Cedar wood, wherof he knew that none grew in that Countrey. The inhabitants returned answer they could finde none there. Whereupon hee seazed their Countrey in 12000. Rubbels, as if they concealed the commoditie of

60 purpose. Againe, he sent to the Citie of Mosko to provide for him a Colpack, or measure full of live Fleas for a medicine. They returned answere that the thing was impossible. And if they could get them, yet they could not measure them, for leaping out. Whereupon hee praned, or beat out of their thins 7000. Rubbels for a Mulch. By like cavillation hee extored for his Nobilitie 30000. Rubbels, because he missed of his game, when hee went a hunting for the Hare:

the manner is) Praned prefently againe vpon the Monficks, or common people of the Country,

Of the flate of people in the Countrey of Ruffie.
The feruile and miterable eftate of the

Ruffe people.

Mil rie of

those times.

"He condition of the Commons and vulgar fort of people, may rartly bee understood by that which already hath beene fayd concerning the manner of their Gouernment, and the flate th. Common of the Nobilitie, with the ordering of their Prouinces, and chiefe Townes of the Land. And gar fortofthe first touching their libertie how it standeth with them, it may appeare by this : that they are reckoned in no degree at all, nor have any fuffrage nor place in their Zabore, or high Court of Parliament, where their Lawes and publike Orders are concluded upon. Againe into what feruile condition their libertie is brought, not onely to the Prince, but to the Nobles, and Gentle- 10 men of the Countrey (who themselves also are but servile, specially of late yeeres) it may further appeare by their owne acknowledgments in their supplications, and other writings to any of the Nobles or chiefe Officers of the Emperours. Wherein they name and subscribe themselves Kolophey, that is, their Villaines, or Bond-slaves : as they of the Nobilitie doe vnto the Emperour. This may truely bee fayd of them, that there is no feroant nor bond-slaue more awed by his Master, nor kept downe in a more seruile subjection, then the poore people are, and that vniuerfally, not onely by the Emperour, but by his Nobilitie chiefe Officers and Souldiers. So that when a poore Moufick meeteth with any of them voon the high way, hee must turne himfelre about, as not daring to looke him on the face, and fail downe with knocking of his head

manners and to the very ground, as he doth vnto his Idoll. Secondly, concerning the Lands, goods, and other possessions of the Commons, they answer the Name and lye Common indeed, without any fence against the rapine and spoyle, not onely of the highest, but of his Nobilitie, Officers, and Souldiers. Besides the Taxes, Customes, Seazures, and other publike exactions done upon them by the Emperour, they are fo racked and pulled

by the Nobles, Officers, and Meffengers, fent abroad by the Emperour in his publike affayres, specially in the Tammes (as they call them) and thorow faire Townes, that you shall have many Villages and Townes of halfe a mile, and a mile long, stand all vnhabited : the people being fled all into other places, by reason of the extreame viage, and exactions done vpon them. So that in the way towards Moske, betwixt Vologda and Taruflaneley (which is two nineties after their reckoning, little more then an hundred miles English,) there are in fight fiftie Dariennes or Villa- 30 ges at the leaft, some halfe a mile, some a mile long (that stand vacant) and desolate without any

inhabitant. The like is in all other places of the Realme, as is fayd by those that have better trauelled the Countrey then my felfe had time, or occasion to doe.

The great oppression ouer the poore Commons, made them to have no courage in following their Trades : for the more they have, the more danger they are in, not onely of their goods, but of their liues also. And if they have any thing, they conceale it all they can, sometimes conueying it into Monasteries, sometimes hiding it under the ground, and in Woods, as men are wont to doe where they are in feare of forraigne invalion. Infomuch that many times you shall fee them afraid to beeknowne to any Boissen or Gentleman, of fuch commodities as they have to fell. I have seene them sometimes when they have layd open their Commodities for a liking 40 (as their principal) Furres and such like) to looke still behinde them, and towards every doore: as men in some feare, that looked to bee set vpon, and surprised by some Enemie. Whereof afking the cause, I found it to bee this, that they have doubted least some Nobleman or Smaboiarsker of the Emperour had beene in company, and to layed a trayne for them to pray you their Commodities perforce.

This made the people (though otherwise hardened to beare any toyle) to give themselves much to Idlenesse and Drinking : as passing for no more, then from hand to mouth. And hereof it commeth that the Commodities of Russia (as was fayd before) as Waxe; Tallow, Hides, Flax, Hempe, &c. grow and goe abroad in farre leffe plentie then they were wont to doe: because the people being oppressed and spoyled of their gettings, are discouraged from their labours. Yet this 50 one thing is much to bee noted, that in all this oppression there were three brethien Merchants, of late that traded together with one Stocke in common, that were found to bee worth 300000 Rubbels in money, besides Lands, Cattels, and other Commodities. Which may partly be imputed to their dwellings farre off from the eye of the Court, viz. in Wichida, one thousand miles from Moske and more. The same are sayd by those that knew them, to have set on worke all the yeere long ten thousand men in making of Salt, carriages by Cart, and Boat, hewing of Wood and such like : besides sue thousand Bond-slaves at the least, to inhabite and till their Land-They had also their Physitians, Surgeons, Apothecaries, and all manner of Artificers of Doutcher and others, belonging vnto them. They are fayd to have payed to the Emperour for Custome to the summe of three and twentie thousand Rubbels a yeere, (for which cause they were 60 suffered to enjoy their Trade) besides the maintayning of certayne Garrisons on the borders of Siberia, which were neare vnto them. Wherein the Emperour was content to vie their purie, till fuch time as they had got ground in Siberia, and made it habitable, by burning and cutting downe Woods, from Wiebida to Perm, aboue one thousand verst, and then tooke it all away from

Rich Ruffian

them perforce. But this id the end being ennyed and dislayned, as a matter not standing with their policie, to haue any to great, specially a Monfick, the Emperour began fint to pull from them by pieces, fometimes twentie thouland Rubbels at a time, fometime more : till in the end their Sonnes that now are, are well saied of their Stocke, and have but I mail part of their Fathers substance : the rest being drawne all into the Emperours treasurie. Their names were lacone, Gregorie, and Simon, the Somnes of Omkang

For the qualitie of their people otherwise, though there segmeth to bee in them same, and nesse to receive any Art (as appeareth by the natural) wits in the men , and very children ) yet they excell in no kinde of common Art, much lelle in any learning or literall kinde of knowto ledge: which they are kept from of purpole, as they are also from all military practice; that they may bee fitter for the femule condition, wherein now they are and have neither reafon, nor valour to attempt umouation. For this purpole also they are kept from travelling, that Raffinit perthey may learne nothing, nor fee the falhious of other Countries abroad. You shall seldome muced to make fee a Ruffe a traueller, except hee bee with forme Embaffadour, or that hee make an estape out of his Countrey. Which hardly he can doe, by reason of the borders that are watched to narrowly, and the punishment for any such attempt, which is death, if hee bee taken, and all his goods confileate. Onely they learns to write, and to read, and that very few of them. Neise ther doe they fuffer any stranger willingly to come more their Realine out of any civill Countries. for the same cause, farther then necessite of vetering their commodities, and taking in of for-

reine doth enforce them to doe. And therefore this yeare 1580, they confulred about the removing of all Merchants strang. The isologie gers to the border Townes, to abide and haue their rendencie there, and to bee more wary in of the Empe. admitting other strangers heereafter into the Inland parts of the Realme. For the same pur, rour conce pose also they are kept within the bounds of their degree by the Lawes of their Countrey; ning his flate. so that the sonne of a Moussek, Artificer, or Husbandman, is euer a Moussek, Artificer, &c. and hath no meanes to aspire any highers, except, having, learned to write and reade, hee attayne to the preferment of a Priest, or Dyact. Their Language is all one with the Slavonian, which is thought to have beene dernied from the Rufe Tongue, rather then the Rufe from the Slanonian. For the People called Selani, are knowne to have had their beginning out of Sclanonia and 30 Sarmatia, and to have tearmed them (slaves of their Conquest Schauer, (that is) Famous or the Language.

Glorious, of the word Sclaus, which in the Rolle and Slausnian Tongue fignifieth as much as Glorie, or Fame. Though afterwards being fubliced and trod vpon by divers Nations, the Italians, their Neighbours, have furned the word to a contrary figuration, and terme every Semant or Pealant by the name of Sclaw, as did the Removes by the Gaes and Springs; for the same reason. The Ruffe Character or Letter, 15,00 other then the Greeks , somewhat

Concerning their Trades, Diet, apparell, and such like, it is to be noted in a severall Chapter of their private behaulour. This order that bindeth enery man to keepe his ranke and feneral degree, wherein his fore-fathers lived before him, is more meet to keepe the Subiects in a ferifle: 40 Subjection, and so apt for this and like Commonwealths, then to advance any vertue; or to breed any rare or excellent qualitie in Nobilitie or Commons: as having no further reward nor preferment, whereunto they may bend their endeauours, and employ themselves to advance their effate, but rather procuring more danger to themselves, the more they excels in any noble of

Heir Courts of Civill Inflice for matters of Contract, and other of like fort, are of three. Chep.14. kinds, the one being ubject vnto the other by way of appeale. The lowest Court (that Of their pubfeemeth to be appointed for fome ease to the Subiects) is the Office of the Gubney Starmer, that like liftic, and fignifieth an Alderman, and of the Society Sternit, or Bayliffe of the Soake or Hundred, where proceeding in of I spake before in the ordering of the Prouinces. These may end matters among their neigh- Civill, and 50 bours within their Soake, or feuerall Hundred, where they are appointed vader the Dukes and Criminall bours within their Soake, or leuerall Hungred, where they are appointed under the Libres and Disect of the Provinces to whom the parties may remove their matter, if they cannot be agreed matter.

Court of Car

The second is kept in the head Townes of every Province or Shire , by the faid Dukes and three, Djacks, that are Deputies to the foure Lords of the Cheffeds (as before was faid.). From these The Dokes Courts they may appeale, and remove their Suits to the chiefe Court, that is kept at the Moike, and Drace. Course they may appears and the foure Cheffield. These are the chiefe Indices of Indiges. Court, where are resident the Officers of the foure Cheffield. These are the chiefe Indices of Indiges. The high energy of them in all Civil Inactors that grow within their several Cheffed or Quarter, and. Court of may be either commenced originally before them, or profecuted out of the interiour Courts of Marie. 60 the Shires by way of appeale.

Their commencing, and proceeding in Civill actions is on this manner. First, the Plaintife putteth up his Supplication, wherein he declareth the effect of his Caule, or wrong done wire. Their minner purcen up as suppressions, whether in consistent the content which he delinerest testic Resistance in Could material with the state of the Could material Co or Sergeant, to doe the arrest vpon the partie whom hee meaneth to implead. Who wpon the retri-

arreft, is to put in Sereties to answere the day appointed, or elfe flandeth at the Sergeants deuo-tion; to be kept fafe by such meanes as he thinketh good.

The Seguants are many, and excelf for their hard and cruell dealing towards their prifoners; commonly they clap Irons upon them , as many as they can beare, to wring out of them some larger fees, Though it be but for fixe pence, you fhall fee them goe with Chaines on their les armes, and necke. When they come before the Iudge, the Plaintiffe beginneth to declare his matteractor the contents of his Supplication. As for Attorneys, Counfellors, Procurators, and Advocates to plead their Cause for them, they have no fuch order; but enery man is to tell his 

Ending of controuerlies

If they have any witnesse or other enidence, they produce it before the ludge. If they have the none, or if the truth of the Caufe cannot fo well bee differried by the plea, or enidence on both partie: then the fudge asketh either partie ( which hee thinkern good , Plaintiffe or Defendant) whether hee will hife the Croffe, voon that which hee anoncheth, or denyeth, Hee that taketh the Groffe (being so offered by the Indge ) is accounted cleare, and carrieth away the matter. This Ceremonie is not done within the Court, or Office, but the partie is carried to the Church by an Officer, and there the Ceremonie is done: the money in the meane while hanging when a naile, or elfe lying at the fdois feet, ready to be definered to the partie, as foone as he wash killed the Croffe before the faid Idoll.

by lot

This killing of the Croffe ( called Crenftina chelonania ) is as their corporall Oath , and accounted with them a very holy thing, which no man will dare to violate, or prophane to with a false allegation. If both parties offer to kiffe the Croffe in a contradictorie matter, then they draw Lots. The better Lot is supposed to have the right, and beareth away the matter. So the partie connicted is adjudged to pay the debt or penaltie whatforuer, and withall to pay the Emperours fees, which is twentie pence vpon every Marke, as before hath

When the matter is thus ended, the partie connicted is delivered to the Sergeant, who bath a Writ for his warrant out of the Office, to carrie him to the Pranenth or Righter of Luftice, if prefently he pay not the money, or contenanot the partie. This Prancip or Righter, is a place neere to the Office: where fuch as have fentence paffed against them, and refuse to pay that which is adjudged, are beaten with great cudgels on the finmies, and calues of their legs. E- 10 uery fore-noone from eight to eleven, they are fet on the Praisesh, and beate in this fort till the money bee payd. The after-mone and night time, they are kept in chaines by the Sergeant: except they put in fufficient Sureties for their appearance at the Prancy at the houre appointed. You shall fee fortie or fiftie fland together on the Prancufo all on a rew, and their hinnes thus becudgelled, and behafted every morning with a pireous crye. If after a veeres standing on the Pranens, the partie will not, or lacke wherewithall to satisfie his creditor, it is lawfull for him to fell his wife, and children, either outright, or for a certaine terme of yeeres. And if the price of them doe not amount to the full payment, the Creditor may take them to

The forme of

Such kind of Since as lacke direct enidence, or fland voon coniectures and circumftances to be 40 weighted by the Indge, draw of great length, and yetld great advantage to the Indge, and Officers. If the Suit beyon a Bond, or Biff, they have for the most part good and speedy inflice. Their Bonds or Bills are drawne in a very plaine fort, after this remour. I Ivan Vafileo base borrowed of Alphonaste Dementio, the summe of one hundred Rubbels of going money of Mosko , from the Kreshenea ( or hallowing of the water ) until the Saburney Voscreshenea (or Counfell Suiday) mithont interest. And if this money rest impaged after that day, then bee finall gine tel coursey ; mount per le fait money, after the common rate, as it gant among the people, vz. for every fine the five Rubbell. Ypon this there are Witnesses, Michele Sydroueskey, &c. Subicribed. This Bill bane I wraten Gabriel Iacouelefini, in the yeere 7096. The Witneffes , and Debter (if hee can write) endorse their names on the backefide of the Bill. Other figning, or fealing have

be his bond-flaues, for yeeres, or for euer, according as the value of the debt requireth.

When any is taken for a matter of Crime (as Treason, Murder, Theft, and such like) he is first brought to the Duke and Diack, that are for the Prouince where the partie is attached, by whom hee is examined. The manner of examination in such cases, is all by torture, as fourging with Pudey this white made of finowes, or whitleather (called the Pudey) as big as a mans finger, which giweth allore lash, and entreth into the fielh; or by tying to a Spit and rolling at the fire; sometimes by Breaking and wrefting one of their ribs with a paire of hot Tongs, or cutting their fielh winder the dayles, and fuch like.

The examination thus taken with all the proofes, and evidences that can bee alleaged against the partie, it is fent up to the Morke, to the Lord of the Cheffed or Fourth part, vnder whom 60 the Prouince is, and by him is presented to the Councill-table, to be read and sentenced there, where onely hidgement is given in matter of life and death, and that by evidence vpon information, though they never faw nor heard the partie who is kept full in prison where the fact was committed, and never fent up to the place where hee is tryed. If they finde the partie

CHAP.I. Executions ; no written Law ; Emperours Guard, Pensioners.

guilty, they give Sentence of death according to the qualitie of the fact : which is fent downe by the Lord of the Chefferd, to the Duke and Direck to bee put in execution. The Prifoner is carried to the place of execution with his hands bound, and a Waxe candle burning held betwixt his fingers.

Their Capitall punishments are hanging, heading, knocking on the head, drowning, put- Executions, ting under the Ice, setting on a stake, and such like. But for the most part, the Pritoners that are condemned in Summer, are kept for the Winter, to be knockt in the head, and put vnder the Ice. This is to bee vnderstood of common persons. For theft, and murder, If they bee committed voon a poore Mousick by one of Nobilitie are not lightly punished, nor yet is hee To called to any account for it. Their reason is becamfe they are accounted their Kolopher, or Bond-flaues. If by some Sinaboiarskey, or Gentleman Souldier, a murder or theft bee commit-

ted peraduenture hee shall bee imprisoned at the Emperours pleasure. If the manner of the fact be very notorious, hee is whipped perchance, and this is commonly all the punishment that is inflicted upon them.

If a man kill his owne feruant, little or nothing is faid vnto him, for the same reason: because hee is accounted to be his Kolophey, or Bond-slaue, and so to haue right ouer his very head.

The most is some small mulest to the Emperour, if the partie bee rich : and so the quarrell is made rather against the purse, then against the injustice. They have no written Law, faue Rivall (now onely a small Booke that contayneth the time and manner of their sitting, order in proceeding, right-all) and such other Indiciall formes and circumstances, but nothing to direct them to give Sentence vpon right or wrong. Their onely Law is their Speaking Law, that is, the pleasure of the Prince, and of his Magistrates and Officers.

He Souldiers of Ruffia are called Simboiarskey, or the Sonnes of Gentlemen: because they

are all of the degree, by vertue of their military profession. For every Souldier in Russia Their fotces is a Gentleman, and none are Gentlemen but onely the Souldiers, that take it by differnt from for the warter their Ancestors: so that the sonne of a Gentleman (which is borne a Souldier) is curr a Gentle-Officers and

man, and a Souldier withall, and professeh nothing else but military matters. When they are filaries, of yeeres able to beare Armes, they come to the Office of Roferade, or Great Confidele, and there The onely present themselues : who entreth their names, and allotteth them certaine Lands to maintaine Gentlemen. their charges, for the most part of the fame that their fathers emioyed. For the Lands affigued birth and inbeto maintayne the Armie, are ener certaine, annexed to this Office without improving, or detra-nizace. Aing one foot. But that if the Emperour haue sufficient in wages, the roomes being full so farre as the Land doeth extend already, they are many times deferred, and haue nothing allowed them, except some one portion of the Landbe divided into two. Which is a cause of great diforder within that Country: When a Souldier that hath many children, shall have sometimes but one entertayned in the Emperours pay. So that the rest having nothing, are forced to live by vaiuft and wicked faitts, that tend to the hurt and oppression of the Monsieke, or common fort of people. This inconvenience growth by maintayning his forces in a continual fucces-40 fion. The whole number of his Souldiers in continuall pay, is this: First, he hathof his Drorang, that is, Penfoners, or Guard of his person, to the number of 15000. Horsemen, with their Guard.

Of these fifteene thousand Horsemen, there are three forts or degrees, which differ as well Degrees of in estimation, as in wages, one degree from another. The first fort of them is called, Dworaney Hersemen. Bullery, or the companie of head Pensoners, that have, fome 100. some 80. Rubbels a yeer, 1. Petenson and none under 70. The second for are called Condensor 100. and none vinder 70. The second fort are called, Serediney Divorancy, or the middle ranke of Penfronces: these have 60, or 50, Rubbels by the yeere, none under 40. The third and lowest fort person, 15000 are, the Dyta Boiar ikey, that is, the lowe Pensioners : their salarie is 30. Rubbels a yeere, for him that hath most; some haue but 25, some 20, none under 12. Whereof the halfe part is so payd them at the Morke, the other halfe in the field by the General, when they have any warres, and are employed in feruice. When they receive their whole pay, it amounteth to 55000. Rubb.

And this is their wages, besides lands allotted to enery one of them, both to the greater and the leffe, according to their degrees. Whereof he that hath leaft, hath to yeeld him 20. Rubbels or Markes by the yeere. Besides these 15000. Horsemen, that are of better choise (as being the Emperours owne Guard when himf: fre goeth to the warres, not vnlike the Roman Souldiers called Pretoriani) ste 110. men of speciall account for their Mobilitie, and truft, which are chofen by the Emperour, and haue their names registred, that find among them for the Emperours Twoother warres, to the number of 65000. Horfemen , with all necessaries meet for the warres of the woupes to the 60 Ruffe manner.

To this end they have yeerely allowance made by the Emperour for themselves, and their Companies, to the summe of 40000. Rubbels. And these 65000, are to repaire to the field euery yeere on the borders towards the Chrim Tartar, (except they bee appointed for forme other fernice) whether there bee warres with the Tariars, or not. This might feeme peraduenture

somewhat dangerous for some State, to have so great forces under the command of Noblemen. to affemble euery yeere to one certaine place. But the matter is so vied, as that no danger can grow to the Emperour, or his State by this meanes. First, Because these Noblemen are many, to wit, 110, in all, and changed by the Emperour fo oft as hee thinketh good, Secondly, Because they have their livings of the Emperour, being otherwise but of very small Revenue, and receive this yeerely pay of 40000. Rubbels, when it is presently to be paid forth agains to the Souldiers that are vinder them. Thirdly, Because for the most part they are about the Emperors person, being of his Counsell, either speciall, or at large. Fourthly, They are rather as Pay-mafters, then Captaines to their Companies, themselves not going forth ordinarily to the warres, faue when some of them are appointed by speciall order from the Emperour himselfe. So the 10 whole number of Horièmen that are euer in a readinesse, and in continuall pay, are 80000. a few more or leffe.

continual pay

If he have need of a greater number ( which feldome falleth out) then hee entertayneth of those Sinaboiarskey, that are out of pay, so many as he needeth : and if yet he want of his number, hee gineth charge to his Noblemen, that hold Lands of him, to bring into the field every man a proportionable number of his feruants (called Kolopbey, fuch as till his Lands) with their furniture, according to the iuft number that hee intendeth to make. Which, the service being done, presently lay in their weapons, and returne to their seruile occupations againe.

Footmen in continuall pay

Strangers

mercenaries

in pay 4300.

Of Footmen that are in continuall pay, he hath to the number of 12000. all Gunners, called Strelley. Whereof 5000, are to attend about the Citie of Moske, or any other place where the m Emperourshall abide, and 2000. (which are called Stremaney, Strefley, or Gunners at the Stirrop) about his owne person at the very Court or house where himselfe lodgeth. The rest are placed in his garrison Townes, till there be occasion to have them in the field, and receive for their falarie or itipend enery man feuen Rubbels a yeere, besides twelue measures, a piece of Rye, and Oats. Of mercenary Souldiers, that are strangers (whom they call Nimples) they have at this time 4:00. of Polonians: of Chirchaffes (that are vader the Polonians) about 4000. whereof 3500. are abroad in his Garrilons: of Dutches and Scots, about 150: of Greekes, Turkes, Danes, and Sweadens, all in one band, 100, or thereabouts. But these they vie only vpon the Tartar lide. and against the Siberians: as they doe the Tartar Souldiers (whom they hire sometimes, but onely for the present) on the other fide against the Polonian and Sweaden: thinking it best po- 10 licy fo to vie their feruice vpon the contrary border,

The chiefe Captaines or I.The Voiauod or GeneralL

The chiefe Captaines or Leaders of these forces, according to their names and degrees, are these which follow. First, the Voyanodey Bulfbaia, that is, the Great Capsaine, or Licentement generall under the Emperour. This commonly is one of the foure houses of the chiefe Nobilitie of the Land : but so chosen otherwise, as that he is of small valour or practice in Martiall matters, being thought to ferue that turne fo much the better, if he bring no other parts with him faue the countenance of his Nobilitie, to bee liked of by the Souldiers for that, and nothing elfe. For in this point they are very warie, that thefe two, to wit, Nobilitie and Power, meet not both in one, specially if they see wise lome withall, or aptnesse tor policie.

Their great Voianod or Generall at this prefent in their warres, is commonly one of thefe 40 foure, Knez Feeder Inanowich Methilostey. Knez Inan Michailowich Glinskey, Cherechaskey, and Tranbetskor, all of great Nobilitie, but of very simple qualitie otherwise: though in Glinskop (as they fay) there is somewhat more then in the reft. To make up this defect in the Voicenod or Generall, there is some other joyned with him as Lieutenant generall, of farre leffe Nobilitie, but of more valour and experience in the warres then he, who ordereth all things that the other countenanceth. At this time their principall man, and most vsed in their warres, is one Knez. Demetrie lumonich Forestime, an antient and expert Captaine, and one that hath done great seruice (as they fay) against the Tartar, and Polonian. Next under the Voianod and his Lieutenant the field, foure. generall, are foure other, that have the marihalling of the whole Armie divided among them, and may be called the Marshals of the field.

2.Lieutenane

generall,

Euery man hath his quarter, or fourth part under him : whereof the first is called, the Prana Polsker, or Right wing. The second is , the Leney Polsker, or Left wing. The third is, Rufney Polskoy, or The broken band, because out of this there are chosen to send abroad upon any sudden exploit, or to make a refcue or supply, as occasion doth require. The fourth, Storesbonoy Polskoy, or The warding band. Euery one of these foure Marshals have two other under them (eight in all ) that twice every weeke at the least must muster and traine their severall wings or bands, and hold and give inftice for all faults and diforders committed in the Campe.

a.Marfhala

5. Coronela

Vnder-cap-

And thefe eight are commonly chosen out of the hundred and ten (which I spake of before) that receive and deliver the pay to the Souldiers. Vnder thefe eight are divers other Captaines, as the Gul anoy, Captaines of thousands, five hundreds, and hundreds. The Petyde Seiskey, or 60 Captaines of fifties; and the Decetskies, or Captaines of tennes.

Besides the Voianeda, or Generall of the Armie, (ipoken of before) they have two other that beare the name of Voianoda: whereof one is the Matter of the great Ordnance (called Naradna Voianoda ) who hath divers Vnder-officers , necessary for that service. The other is called , the

Voianneda Gulanoy, or the Walking Captayne, that hath allowed him 1000. good hioriemen of The walking principall choice, to range and ipye abroad, and hath the charge of the running Cattle, which Captayne, we are to speake of in the Chapter following. All these Captaynes, and men of charge must once enery day refort to the Bullba Voianoda, or Generall of the Armie, to know his pleasure, and to informe him if there be any requifite matter pertayning to their Office.

WHen Wars are towards (which they faile not of lightly enery yeere with the *Tortor*, they and many times with the *Polonian* and *Swedon*, (the foure Lords of the *Cheffird*; lend of their muforth their Summons in the Emperous name, to all the Dukes and Dyacks of the Provinces, to Stering, and Je-In be proclaymed in the head Townes of every Shire : that all the Sinabeiariker, or Sonnes of Gen- wying of fortlemen make their repayre to such a border where the Service is to be done, at such a place, and Armour, and by such a day, and there present themselves to such and such Captaynes. When they come to provide of the place affigned them in the Summons or Proclamation , their names are taken by certayne victuall for the Officers that have Commiffion for that purpole from the Roferade, or High Conflable, as Cletkes Warren of the Bands.

for mustering,

If any make default and faile at the day, he is muleted, and punished very severely. As for the Generall and other chiefe Captaines, they are fent thither from the Emperours owne hand, with fuch Commission and charge as he thinketh behoofefull for the present service. When the Souldiers are affembled, they are reduced into their Bands, and Companies, vnder their feuerall 20 Captaynes of tens, fifties, hundreds, thousands, &c. and these Bands into foure Polikeis or Legions (but of farre greater numbers then the Romane Legions were) under their foure great Leaders, which also have the authoritie of Marshals of the field (as was laid before.) Concerning their Armour they are but flightly appointed. The common Horse-man hath The Horse-

nothing else but his Bow in his Casevnder his right arme, and his Ogiuer and Sword hanging on mans Furnithe left fide: except some few that beare a Case of Dagges, or a laueling, or short Staffe along ture. their Horle fide. The under Captaynes will have commonly some piece of Armour besides, as a shirt of Male, or such like. The Generall with the other chiefe Captaynes and men of Nobilizy, will have their Horse very richly furnished, their Saddles of Cloth of Gold, their Bridles faire boffed and taffelled with Gold, and Silke frindge, bestudded with Peaste and Precious 20. Stones, themselues in very faire Armour, which they call Bulletnoy, made of faire hining Steele, vet couered commonly with Clothot Gold, and edged round about with Armine Furre, his Sceele Helmeton his head of a very great price, his Sword, Bow, and Arrowes at his fide, his Spease in his hand, with another Helmet, and his Shella pera, or Horse-mans Scepter carried before him. Their Swords, Bowes, and Arrowes are of the Tarkilo falhion. They practite like the Tartar to shoot forwards and backwards, as they flye and retyre. The Strelfey or Footman hath nothing but his Peece in his hand, his striking Hatchet at his ward and

Shooting fore

backe, and his Sword by his fide. The stocke of his Peece is not made Caleeuer wife, but with bakward, a plane and strait stocke (some-what like a Fowling-peece) the Barrell is rudely and wnartifi- Furniture, cially made, very heatie, yet shooteth but a very small Bullet. As for their provision of victus. Provision of 40 all, the Emperour alloweth none, either for Captayne, or Souldier, neyther provide thany for victuall. them except peraduenture some Corne for their Money. Euery man is to bring jufficient for himselfe to serue his turne for foure moneths, and if need require to give order for more to bee Provisions, brought vnto him to the Campe from his Tenant that tilleth his Land, or some other place. One great helpe they have, that for Lodging and Dyet every Ruffe is prepared to bee a Souldier before-hand. Though the cheife Captaynes and others of account carry Tents with them after the fashion of ours with some better prouision of victuall then the rest. They bring with them commonly into the Campe for victuall a kind of dryed Bread (which they call Sucharie) with fome store of Meale, which they temper with water, and so make it into a Ball, or small sumpe of dowe, called Tollockno. And this they eateraw in fread of Bread. Their Meate is Bacon, or 50 (ome other fielh or fish dryed, after the Duck manner. If the Russe Souldier were as hardie to execute an Enterprize, as he is hard to be are out toyle and travell, or were otherwise as apt and

well trayned for the Warres, as he is indifferent for his Lodging and Dyet, hee would farre exceed the Souldiers of our parts. Whereas now he is faire meaner of courage and execution in any Warlike service. Which commeth partly of his scralle condition, that will not soffer any Homes alit error. great courage or valour to grow in him. Partly for lacke of due honour and reward, which hee hath no great hope of whatfoeuer feruice or execution he doe.

"He Ruffe trusteth rather to his number, then to the valour of his Souldiers, or good orde- Chep. 17. I ring of his Forces. Their marching or leading is without all order, fane that the fore Polf. Of their more 60 ker or Legions, (whereinto their Armie is diuided) keepe themselues severall vinder their Enfignes, and fo thruit all on together in a hurrie, as they are directed by their Generall, Their Endmartill Directed by their Generall, Their Endmartill Directed by their Generall, Their Endmartill Directed by their General Company of the Burney of Company of Comp figne is the Image of Saint George. The Bullha Dworaney or chiefe Horfe-men; hau euery man a cipline. fmall Drummeof Braffe at his Saddle-bow, which hee striketh when hee gueen the charge, Gonge canigne.

Drummes.

They

gaines. 6. Mailers of the Artillerie. charging.

They have Drummes besides of a huge bignesse, which they carrie with them vpon a board layd on foure Horfes, that are sparred together with Chaines, euery Drumme having eight ftrie kers, or Drummers, besides Trumpets and Shawmes, which they found after a wild manner, much different from ours. When they give any charge or make any invafion, they make a great hallow or floute altogether, as loude as they can, which with the found of their Trumpets, Shawmes, and Drummes, maketh a confused and horrible noyse. So they set on first discharging their Arrowes, then dealing with their Swords, which they vie in a brauery to shake, and brandish over their heads, before they come to strokes.

The footmans Their Footmen (because otherise they want order in leading) are commonly placed in some ambuth or place of advantage, where they may most annoy the enemy, with least hurt to them- in felues. If it be a fet battell, or if any great inuation be made vpon the Rufe borders by the Ter-The milking tar, they are fet with in the running or moning Caftle (called Beza, or Gulay gorod) which is car. ried about with them by the Voianoda gulanoy (or the malking Generall) whom I spake of before This walking or mouing Caftle is fo framed, that it may be fet up in length (as occasion doth to quire) the space of one, two, three, soure, fine, fixe, or seuen miles : for so long it will reach. It is nothing eliebut a double wall of wood to defend them on both fides behind and before, with a space of three yards or thereabouts betwixt the two sides : so that they may stand within it. and have roome enough to charge and discharge their pieces, and to vie their other weapons. It is closed at both ends, and made with loope-holes on either fide, to lay out the nose of their Peece, or to pulh forth any other weapon. It is carryed with the Armie wherefoeuer it goeth, 20 being taken into pieces, and so layed on Carts sparred together, and drawne by Horse that are not feene, by reason that they are coursed with their carriage as with a shelfe or pent-house. When it is brought to the place where it is to bee vied (which is denied and chosen out before by the the walking Usianod) it is planted fo much as the present vie requireth, sometime a mile long, fometimes two, fometimes three, or more : which is foone done without the helpe of any Carpenter, or Instrument : because the Timber is so framed to claspe together one piece within an other : 25 is eafily vnder food by those that know the manner of the Raffe building.

In this Castle standeth their shot well fenced for advantage, specially against the Tarter, that bringeth no Ordnance, nor other weapon into the field with him, faue his Sword, and Bow and Arrowes. They have also within it divers field Peeces, which they vie as occasion doth require, 30 Of Peeces for the field they carrie no great store, when they warre against the Tartar but when they deale with the Polonian (of whole forces they make more account) they goebetter furnished with all kindsof Munition, and other necessarie prouisions. It is thought they no Prince of Christendome hath better store of Munition, then the Russe Emperour. And rother partly appeare by the Artillerie House at Moske, where are of all forts of great Ordnance, all

Braffe Peeces, very faire, to an exceeding great number.

The Ruffe Souldier is thought to be better at his defence within some Castle, or Towne, then he is abroad at a fet pitched field. Which is ever noted in the practice of his Wars, and namely, as the fiege of Volike, about eight yeares fince : where he repulled the Polonian King Stepan Batore, with his whole Armie of 100000. men, and forced him in the end to give over his fiege, with 40 the losse of many of his best Captaynes and Souldiers. But in a fet field the Russeis noted to haue-ouer the worse of the Poloman, and Sweden.

Reward for valour.

If any behaue himselfe more valiantly then the rest, or doe any speciall piece of senice, the Emperour fendeth him a piece of Gold, stamped with the Image of Saint George on Horseback. Which they hang on their fleeues, and fet in their Caps. And this is accounted the greatest honour they can receive, for any feruice they doe.

or purchales by force,

He Ruffe Emperours of late yeeres have very much enlarged their Dominions and Territo-I ries. Their first Conquest after the Dukedome of Moske, (for before that time they were but Dukes of Volodomer, as before was faid) was the Citie, and Dukedome of Nonograd on the 50 their conquests West, and North-west side : which was no small enlargement of their Dominion, and strengthning to them for the winning of the rest. This was done by Inan great Grand-father to Thesdore now Emperour, about the yeere 1480. The same began likewife to encroach upon the Countreyes of Lituania, and Linemia, but the Conquest onely intended, and attempted by him vpon fome part of those Countreyes, was pursued and performed by his Sonne Bafiless, who first wan the Citie and Dukedome of Plesko, afterwards the Citie and Dukedome of Smolensko, and many other faire Townes, with a large Territory belonging vnto them, about the yeere 1514. These Victories against the Lettors or Lauanians in the time of Alexander their Duke, hee atchieued rather by advantage of civill Diffentions and Treasons among themselves, then by any great policie, or force of his owne. But all this was loft againe by his Sonne Inan Vafilowich, about eight 60 or nine yeeres paft, vpon composition with the Polonian King Stepan Bajore: whereunto he was forced by the aduantages which the Pole had then of him, by reason of the foyle hee had given him before, and the disquietnesse of his owne State at home. Onely the Russe Emperour, at this time hath left him on that fide his Countrey, the Cities of Smolensko, Vitobsko, Cheringo, and Beala gered in Lituania. In Linenia, not a Towne, nor one foot of ground.

When Bafilem first conquered those Countreyes, he suffered the Natives to keepe their Poffessions, and to inhabit all their Townes, onely paying him a Tribute, under the Gouernment Litrania, of his Ruffe Captaynes. But by their Conspiracies and Attempts not long after, hee was taught to deale more furely with them. And fo comming upon them the fecond time, hee killed and carryed away with him, three parts of foure, which hee gaue or fold to the Tartars that ferued him in those Wars, and in stead of them placed there his Ruffer, so many as might ouer-match the rest, with certayne Garrisons of strength besides , wherein notwithstanding this ouer-fight was committed, for that (taking away with him the Vp-land, or Countrey people that should haue tilled the ground, and might easily haue beene kept in order without any danger, by other 10 good policies) he was driven afterwards many yeeres together to victual the Countrey (el pecial-

lythe great Towne) out of his owne Conntrey of Ruffis, the foyle lying there in the meanewhile waste, and vntilled.

The like fell out at the Port of Name in Liefland, where his Sonne Inan Vafilowich deuised Marie, to build a Towne, and a Castle on the other fide the River (called Inangorod) to keepe the Towne and Countrey in subjection. The Castle hee caused to bee so built, and fortified; that it was thought to be inuincible. And when it was finished, for reward to the Architect (that was a The Deuillite Poloman) he put out both his eyes, to make him vnable to build the like againe. But having left the Natines all within their owne Countrey, without abating their number or strength, the Towns and Castle not long after was betrayed, and surrendred agains to the King of Sweden.

On the South-east fide they have got the Kingdomes of Cazan and Aitracan. These were wonnefrom the Tartar, by the late Emperour Inan Valilowich, Father to the Emperour that now is : the one about thirty five, the other about thirty three yeeres agoe. North-ward out of the Countrey of Siberia, he hath layed vnto his Realme a great breadth and length of ground, from Wichida to the River of Obba, about 1000, miles space ; so that he is bold to write himselfe now. The great Commander of Siberia.

The Countreyes I kewise of Permis, and Pechora, are a divers People and Language from the Permis and Pe-Rulle, our come not long fince, and that rather by threatning , and thaking of the Sword , then chora. by any actuall force : as being a weake and naked people, without meanes to relift,

30 Their Neighbours with whom they have greatest dealings and intercourse, both in Peace Chap.ig.

Of the Tatter of the Tatter of the Pulminary home the Pulm called Tanks.

and Warre, are fifti the Tarrar: Secondly, the Polonian whom the Raffe calleth Laeber, and other bore and other bore. noting the first Author or Founder of the Nation, who was called Lasbes or Leches, whereunto dereis to the is added Po, which fignifieth People, and to it made Polaches; that is, the People or Posteritie of country of Laches , which the Latines after their manner of writing call Polanes. The third are the Swe- Raffia, wi h dens. The Polonians and Swedens are better knowne so these parts of Europe, then are the Tar whom they sars that are farther off from vs (as being of Afia) and divided into many Tribes, different both doesn was and in name, and government one from another. The greatest and mightiest of them is the Chrim prace. Tartar, (whom some call the Great Charm) that lyeth South, and South-east-ward from Rassa, Th. Polenians and doth most annoy the Countrey by often Inuations, commonly once every yeere; fometimes called Laches 40 entring very farre within the In-land parts.

In the yeere 1571, he came as farre as the Citie of Mosko, with an Armie of 200000. men, Terta. without any battell, or refistance at all, for that the Russe Emperour (then Issan Vasilowsch) lea- The bring of ding forth his Armie to encounter with him, marched a wrong way : but as it was thought of Monkey the wery purpose, as not daring to aduenture the field, by reason that he doubted his Nobilitie, and Conin Tartar, chiefe Captaynes, of a meaning to betray him to the Tartar.

The Citie he tooke not, but fired the Suburbs, which by reason of the buildings (which is all of Wood without any Stone, Bricke, or Lime, faue certayne out Roomes) kindled so quickly, and went on with such rage, as that it consumed the greatest part of the Crie almost within the space of soure houres, being of thirty miles or more of compasse. Then might you have seene 50 a lamentable Spectacle: befides the huge and mightie flame of the Citie all on light fire, the peofarthers from the Enemie, where meeting together in a mighty throng, and so prefing eneric man to preuent another, wedged them lelues to fast within the Gate, and streets neere voto 11,23 that three Rankes walked one vpon the others head, the vppermost treading downe those that were lower: fo that there perished at that time (as was faid) by the fire and the press, the num-

The Chrim thus having fired the Citic, and fed his eyes with the fight of it all of a light flame, returned with his Armie, and fent to the Ruffe Emperour a Knife (as was fayd) to sticke himfelfe with all : obrayding this loffe, and his desperate case, as not daring either to meete his Ene-60 mie in the field, nor to truit his Friends or Subjects at home. The principall cause of this continual quarrell, betwixt the Ruffe and the Chrass, is for the right of certayne border parts claimed by the Tartar, but possessed by the Ruffe. The Tartar alleadgeth, that besides Astracan and Cazan, (that are the ancient possession of the East Tarter) the whole Countrey from his bounds North and Westward, so farre as the Citie of Moske, and Moske it selfe, pertayneth to his right.

the Chrim Tat-See the first Tarters Con-

Homzgedone Which feemeth to have beene true by the report of the Ruffes themselves, that tell of a certayne by the suffero homage that was done by the Ruffe Emperour every yeare, to the great Christ or Cham, the Ruffe Emperour standing on foote and feeding the Chrises Horse, (himselfe fitting on his backe) with Oates out of his owne Cap, in stead of a Boll or Manger, and that within the Castle of Mosko. And this homage (they lay) was done till the time of Bafileus Grand ather to this man. booke or sas-thay and of the Who surprising the Chrim Emperour by a stratagem, done by one of his Nobilitie (called Income Demetrowich Belicher) was content with this Ransome, viz. with the changing of this homage into a Tribute of Furres : which afterwards also was denyed to bee payed by this Em-

Hereupon they continue the quartell, the Ruffe defending his Countrey, and that which hee 10 hath wonne, the Chrim Tarter invading him once or twice every yeere, fometime about Whitefontide, but oftner in Haruest What time if the Great Cham or Chrim come in his owne perfon, hee bringeth with him a great Armie of 100000, or 200000, men. Otherwise they make fhort and fodden roades into the Countrey with leffer numbers, running about the lift of the border as wilde Geefe flie, inuading and retiring where they fee advantage,

The manner of Their common practice (being very populous) is to make divers Armies, and so drawing the

fight, and Ar-

Apparell.

Mirchs of

Ruffe to one, or two places of the frontiers, to inuade at fome other place, that is left without defence. Their manner of Fight, or ordering of their forces, is much after the Ruffe manner. (ipoken of before) saue that they are all Horse-men, and carrie nothing elie but a Bow, a sheafe of Arrowes, & a falcon Sword after the Turkifb fash on, They are very expert horse-men, and vie 20 to shoote as readily backward as forward. Some will have a horf-mans staffe like to a bore Speare, besides their other weapons. The common Souldier, hath no other Armour then his ordinary Apparell, viz., a blacke Sheepes skinne with the wooll-fide outward in the day time, and inward in the night time, with a Cap of the same. But their Marfey or Noblemen imitate the Turke, both in Apparell and Armour. When they are to passe ouer a River with their Armie, they tye three or foure Horfes tegether, and taking long poles or pieces of wood, binde them failt to the tay les of their Horfe: fo fitting on the Poles they drine their Horfe ouer. At handle ftrokes ( when they come to joyne battell ) they are accounted farre better men then the Ruffe people, fierce by nature, but more hardie and bloudie, by continuall practice of Warre: as men mowing no Arts of Peace, nor any civill practice.

The fubrilise

Yet their subtiltie is more then may seeme to agree with their barbarous condition. By reaof the Tatter. fon they are practifed to inuade continually, and to rob their neighbours that border about them. they are very pregnant, and ready witted to denise Stratagems vpon the fudden, for their better advantage. As in their warre against Beals the fourth King of Hangarie, whom they invaded with five hundred thousand men, and obtayned against him a great v ctorie. Where among other, having flaine his Chancellor, called Nicholas Schinick, they found about him the Kings priuie Scale. Whereupon they deuised presently to countefeit Letters in the Kings name, to the Cities and Townes next about the place, where the Field was fought : with charge that in no case they should conuay themselues, and their goods out of their dwellings, where they might abide fafely without all feare of danger, and not leave the Countrey defolate to the possession of 40 fo vile and barbarous an Enemie, as was the Tarrar Nation, tearming themselves in all reproachfull manner. For notwithstanding he had lost his carriages, with some few straglers that had marched diforderly, yet he doubted not but to recour that loffe, with the accesse of a notable victory, if the fauage Torter durst abide him in the field. To this purpose having written their Letters in the Polifo Character, by cerrayne young men whom they tooke in the Field, and figned them with the Kings Seale, they dispatched them foorth to all the Quarters of Hungarie, that lay neere about the place. Whereupon the Ungarians, that were now fiying away with their goods, Wives, and Children, vpon the rumour of the Kings overthrow, taking comfort of these counterfeit Letters, stayed at home. And so were made a prey, being surprised on the sudden by this huge number of these Tartars, that had compassed them about before they were awares

When they beliege a Towne or Fort, they offer much Parley, and fend many flattering mellages to perswade a surrendrie : promising all things that the Inhabitants will require ; but being once possessed of the place, they vie all manner of hostilitie and crueltie. This they doe vpon a rule they have, viz. That luftice is to bee practifed but towards their owne. They encounter not lightly, but they have some ambush, whereunto (having once shewed them selves, and made fome shore conflict) they retire, as repulsed for feare, and so draw the Enemie into it if they can-But the Ruffe being well acquainted with their practile, is more warie of them. When they come a Rouing with some small number, they set on Horsebacke counterfeit shapes of men, that

their number may feeme greater.

When they make any onset, their manner is to make a great showte, crying all out together, Olla Billa, Olla Billa, God belpe vs, God belpe vs. They contemne death fo much, as that they choole rather to dye, then to yeeld to their Enemie, and are feene when they are flaine to bite the very weapon, when they are past striking, or helping of themselues. Wherein appeareth show different the Tarter is in his desperate courage from the Ruffe and Turke. For the Rufe

CHAP.I. Mijerable Captimitie, Tartar Religion, Idols, Sorcerie, Marriage.

Souldier if hee begin once to retire putteth all his safetie in his speedie flight. And if once he be taken by his enemie, hee neither defendeth himselfe, nor intreateth for his life, as reckoning firaight to dye. The Turk commonly when hee is past hope of escaping, falleth to intreatie, and cafteth away his weapon, offereth both his hands, and holdeth them vp. as it were to bee ty-

ed : hoping to faue his life, by offering himfelfe Bond-flaue.

The chiefe bootie the Tartars feeke for in all their warres, is to get store of Captines, Speci- Captines ally young Boyes and Girles, whom they fell to the Turkes, or other their neighbours. To this purpose they take with them great Baskets made like Bakers panniers, to carrie them tenderly, and if any of them happen to tyre, or to bee ficke on the way, they dash him against the ground, no or some Tree, and so leave him dead : The Souldiers are not troubled with keeping the Captiues and other bootie, for hindering the execution of their warres, but they have certaine bands that intend nothing elfe, appointed of purpose to receive and keepe the Captives and the other prey.

The Raffe borders(being vied to their invasions, lightly every yeere in the Summer) keepe few The Tarten other Cattell on the border parts, faue Swine onely, which the Taylor will not touch, nor drive a- Religion. way with him: for that he is of the Turkif Religion, & will eate no Swines-flesh. Of Christ our Saujour they confesses much as doth the Twee in his Alcaron, viz. That he came of the Angell Gabriel, and the Virgin Marie, that hee was a great Prophet, and shall bee the Judge of the world at the last day. In other matters likewise, they are much ordered after the manner and 20 direction of the Turke : having felt the Turkib forces when hee wonne from them Azon and Caffa, with some other Townes about the Euxine, or Blacke Sea, that were before tributaries to the Chrims Tartar. So that now the Emperour of the Chrims for the most part is chosen some one of the Nobilitie whom the Turke doth commend : whereby it is brought now to that paffe, that the Chrim Tartar giveth to the Turke the tenth part of the Spoyle, which hee getteth in his warres against the Christians.

Herein they differ from the Turkifo Religion, for that they have certayne Idoll puppets made Idols, of Silke or like stuffe, of the fashion of a man, which they fasten to the doore of their walking houses, to bee as lamistes, or keepers of their house. And these Idols are made not by all, but by certayne Religious women, which they have among them for that and like vice. They haue befides, the Image of their King or great Cham of an huge bigneffe, which they erect at eue-

30 rie stage, when the Armie marcheth: and this every one muit bend or bow vnto as hee passeth by it, bee he Tartar, or Stranger. They are much given to Witchcraft and ominous conjectures, Sorteries.

In making of Marriages, they have no regard of alliance or confariguinitie. Only with his Mo-Marriage, ther, Sifter, and Daughter, a man may not marrie, and though he take the woman into his house and accompanie with her, yet he accounteth her not for his Wife, till hee haue a Child by her. Then he beginneth to take a downe of her friends of Horse, Sheepe, Kine, &c. If shee be barren, after a certayne time hee turneth her home againe,

Vnder the Emperour they have certayne Dukes, whom they call Morfeis or Dysognorfeis! The Torto that rule ouer a certayne number of 10000. 20000. or 40000. a piece, which they call Hoords. Nobilitie, When the Emperour hath any vieo: them to lerue in his warres, they are bound to come, and to bring with them their Souldiers to a certayne number, euery man with his two Horse at the least, the one to ride on, the other to kil, when it commeth to his turne to have his Horse eate. For their chiefe victuall is Horfe-flesh, which they eate without Bread, or any other thing with The Tatte it. So that if a Tarter bee taken by a Ruffe, hee shall be sure lightly to finde a Horse-legge, or dye.

fome other part of him at his faddle bow.

This last yeere when I was at the Moske, came in one Kiriach Morfo, nephew to the Emperour of the (brims that now is (whole Father was Emperour before) accompanied with three hundred Tartars, and his two Wives, whereof one was his Brothers widow. Where being en-50 tertayned in very good fort after the Roffe manner, hee had fent vnto his lodging for his welcome, to bee made ready for his Supper and his companies, two very large and far Horses, ready flayed in a Sled. They preferre it before other flesh, because the meare is stronger (as they say) then Beefe, Mutton, and fuch like. And yet (which is maruell) though they ferue all as Horfemen in the warts, and eate all of Horfe-fielh, there are brought yearely to the Moute to bee exchanged for other Commodities, thirtie or fortie thouland Tartar Horse, which they call Cones. They keepeallo great herds of Kine, and flockes of blacke Sheepe, rather for the Skinnes and Milke (which they carry with them ingreat bottles) then for the vie of the flesh, though sometimes they eate of it. Some vie they have of Rice, Figges, and other fruits, They drinke Milke or warme Bloud, and for the most part card them both together. They wse sometimes as they tra-60 uell by the way, to let their Horse bloud in a veyne, and to drinke it warme, as it commeth

Townes they plant none, nor other standing buildings, but have walking Houses which the The Total Latiner call Very, built vpon wheeles like a Shepherds Cottage. Their they draw with them whis dwelling. therfoeuer they goe, driving their Cattell with them. And when they come to their Stage or

Moneable Citie and Court.

standing place, they plant their Cart-houses very orderly in a ranke : and so make the forme of ffreets, and of a large Towne. And this is the manner of the Emperour himselfe, who bath no other scate of his Empire but an Agera, or Towns of wood, that mooneth with him whithersoeuer hee goeth. As for the fixed and standing building vied in other Countries, they fay they

They begin to moone their Houses and Cattell in the Spring time, from the South part of their Countrey towards the North parts. And so driving on till they have grasted all up to the furthest part Northward, they returne backe againe towards their South Countrey (where they continue all the Winter) by ten or twelue miles a stage : in the meane while the grade being continue au tine W. Inter Joy ten or their Cattell as they returne. From the border of the Salara to forming vp againe, to ferne for their Cattell as they returne. From the border of the Salara to the border of the Salara to the border of the Salara to t wards the Cafrian Sea, to the Ruffe frontiers, they have a goodly Countrey, specially on the South and South-east parts, but lost for lacke of tillage.

Of money they have no vie at all, and therefore preferre Braffe and Steele before other men tals, specially Bullate, which they vie for Swords, Kniues, and other necessaries. As for Gold and Siluer they neglect it of very purpose, (as they doe all tillage of their ground) to be more free for their wandring kinde of life, and to keepe their Countrey leffe subject to inuations. Which gineth them great aduantage against all their neighbours, euer inuading, and neuer being inuaded,

For Person and Complexion, they have broad and flat visages, of a tanned colour vellow and forsideferibed. blacke, fierce and cruell lookes, thinne hayred vpon the vpper Lip, and a pit on the Chin, light and nimble Bodied, with short Legges, as if they were made naturally for Hotse-men : whereto 10 they practife themselves from their Child-hood, seldome going a soot about any businesse. Their Speach is very sudden and loude, speaking as it were out of a deepe hollow throat. When they Sing you would thinke a Cow lowed, or some great Bandogge howled. Their greatest exercife is Shooting, wherein they trayne up their Children from their very infancie, not fuffering them to eate, till they have shot neere the marke within a certain e scantling.

There are divers other Tartars that border vpon Ruffia, as the Nagaies, the Cheremiffens, the Mordwites, the Chircasses, and the Shalcans, which all differ in Name more then in Regiment, or of Tariars. other condition, from the Chrim Tartar, except the Chircaffes, that border South-west towards Litmonia, and are farre more civill then the rest of the Tartars, of a comely person, and of a stately behaulour, as applying themselues to the fashion of the Toloman. Some of them have subjected to themselues to the Kings of Poland, and professe Christianitie. The Nagay lyeth Eastward, and is reckoned for the best man of warre among all the Tartars, but very sauage and cruell aboue all the rest. The Cheremisin Tartar, that lyeth betwixt the Russe and the Nagay, are of two sorts, the Luganoy (that is of the valley) and the Nagornay, or of the hilly Countrey. These have much troubled the Emperours of Ruffia. And therefore they are content now to buy Peace of them, under pretence of gining a yeerely pension of Russe Commodities, to their Morfeis or Dr. noymorfeis, that are chiefe of their Tribes. For which also they are bound to serue them in their warres, under certayne conditions. They are fayd to bee just and true in their dealings ; and for that cause they hate the Ruffe people, whom they account to bee double, and false in all their

dealing. And therefore the common fort are very vnwilling to keepe agreement with them, but 40 that they are kept in by their Morfen, or Dukes for their penfions lake.

The most rude and barbarous is counted the Mordante Tartar, that hath many selfe fashions, and ftrange kindes of behaviour, differing from the reft. For his Religion, though hee acknowledge one God, yet his manner is to worthip for God, that living thing, that hee first meeteth in the morning, and to sweareby it all that whole day, whether it bee Horse, Dog, Cat, or whatfoeuer elfe it bee. When his friend dyeth, hee killeth his best Horse, and hauing flayed off the skinne, he carryeth it on high vpon a long pole, before the Corps to the place of Buriall. This he doth (as the Ross fayth) that his friend may have a good horse to carrie him to Heaven: but it is likelier to declare his love towards his dead friend, in that hee will have to dye with him the

best thing that hee hath. Next to the Kingdome of Astracan, that is the furthest part South-eastward of the Russe Dominion, lyeth the Shalcan, and the Countrey of Media : Whither the Ruffe Merchants trade for raw Silkes, Syndon, Saphyon, Skinnes, and other commodities. The chiefe Townes of Media where the Ruffe tradeth, are Derbent (built by Alexander the great, as the Inhabitants fay) and Zamachie, where the staple is kept for raw Silkes. Their manner is, in the Spring time to retime the Silke-wormes (that lye dead all the Winter) by laying them in the warme Sunne, and (to haften their quickning, that they may fooner goe to worke) to put them into bagges, and io to hang them under their Childrens armes. As for the Worme called Chrinifin (as wee call it Chrimfon) that maketh coloured Silke, it is bred not in Media, but in Affria. This trade to Derbent and Samachie for raw Silkes, and other commodities of that Countrey, as allo in Persia, 60 and Bongharia, downe the River Volgha, and through the Caspian Sea, is permitted as well to the English, as to the Ruffe Merchants, by the Emperours last Grant at my being there. Which hee accounteth for a very speciall fauour, and might proue indeed very beneficiall to our English Metchants, if the Trade were well and orderly vied.

The whole Nation of the Tanare are veterly voide of all Learning, and without written Law. Yet certayne rules they have which they hold by tradition, common to all the Hords for the practice of their life. Which are of this fort. Birth, To ober their Emperous and other Ma Tarters geneeiftrates, what former they command shout the public Service, Secondly, Except for the public behavio, tall Rules. gurante property of the free and aut of Controloguest. Thirds, No private may be pelfelle any Leuds, but the whole Congress to be as a Computer. Everable, it a neglect all destinates and versite of Adapts, and to contros them feluse with that which comments next to hand, for more benduelle, and readinable in the execonnect tory part of flower, Rfgip, To means any base Action, and to paced their Chather, whether there been my near or not : that when there is my differ no flower, is more experient Coate. Stock, To take or 10 floods from any Stranger what forms any transfer what forms any Stranger what forms are not one will find. tell shouldines to them, Somenthly, Tomards their owne Hourd and Mation, to beetragin mard and doed. Eightly, To Suffer vo Stronger to come mithin the Realme, if any dee, the fame to bee Bond Days to him that first taketh him, except fuck Marchants and other, at have the Taxtat Bull or Patters

He Permians and Sampirschat Ive from Ruffia, North and North east, are thought likewife to hene taken their beginning from the Tarter kinde. And it may partly be gheffed by the Of the Permi fashion of their Countenance, as having all broad and flat faces, as the Torters have, except the aut, Samoitte Chircoffee. The Permia ne are accounted for a very ancient people. They are now habject to the and Laper. 20 Rufe. They live by Hunting and trading with their Furres, as dothalfo the Sameyt, that dwel. The Permian.

lath mone towards the Worth Sea. The Samer hath his name (as the Ruffe faith) of Esting bornbimfolfe sas if in times part, they lived as the Cannibale, eating one another. Which they make more probable, because at this time they eate all kinde of raw flesh, whatsoeuer it bee, euen the very Carrion that lyeth in the ditch. But as the Sameits themselues will say, they were called Samoie, that is, of themselver, as though they were Indigina, or people bred voon that very loyle, that never changed their leate from one place to another, as most Nations have done. They are

Subject at this time to the Emperour of Rullia.

I talked with certaine of them, and finde that they acknowledge one God : but represent him The Sanits by fach things as they have most vie and good by. And therefore they worthin the Sunne, the Religion, 30 Ollen, the Loth, and such like. As for the Storie of State Babs, or the Golden bagge, (which I State Babs or haue read in some Mans, and descriptions of these Countries, to bee an Idoll after the forme of Hag, an old Woman) that being demanded by the Priest, gueth them certaine Oracles, concerning the fucceffe and event of things, I found it to bee but a very fable. Onely in the Province of Obdoris upon the Sea lide, neere to the mouth of the great River Ohks, there is a Rocke, which naturally (being somewhat helped by imagination) may seeme to beare the shape of a tagged Woman with a Child in her armes, (as the Rocke by the North cape the fhape of a Frier) where the Obdorian Samons vie much to refort, by reason of the commoditie of the place for Fishing : and there fametime (as cheir manner is) conceine, and practice their Sorceries, and ominous conje-Cturings about the good, or bad speed of their Journeyes, Fishings, Huntings, and such like.

They are clad in Seale-skinnes, with the hayrie ude cutwards downe as low as the kness, The Sameirs with their Breeshes and Netherthocks of the same, both men and women. They are all Blacke histic and behayred, naturally beardleffe. And therefore the Men are hardly differred from the Women by haulour. their lookes: faue that the Women weare a locke of hayre downe along both their cares. They line in a manner a wilde and a fainge life, rouing still from one place of the Countrey to another, without any propertie of House or Land more to one then to another. Their leader or directer

in euery Companie, is their Pape or Prieft.

On the Northide of Ruffie next to Corelia, lyeth the Country of Loppis, which reacheth in The Lapre. length from the furthest point Northward, (towards the North cape) to the furthest part Southeast (which the Rufe calleth Sweemeffe or Holy mole, the English men Cape-grace) about three hundred and forcie fine verft or miles. From Swattneffe to Cambelox, by the way of Verfega (which measureth the breadth of that Country) is nunetic miles or thereabouts. The whole Countrey in a manner is either Lakes or Mountaines, which towards the Sea fide are called Tonare, because they are all of hard and eraggie Rooke, but the inland parts are well furnished with Woods, that grow on the hills fides, the lakes ly implet weene. Their dyet is very bare and fimple. Bread they have none, but feed onely voon Fishand Fowle. They are subject to the Em- No Bread. percur of Raffin, and the two Kings of Sweden and Demmarke : which all exact Tribute and Cufrome of them (as was layd before) but the Emperour; of Ruffis beareth the greatest hand ouer them, and exact of them farre more then the reft. The opinion is that they were first tearmed Lappes, of their briefe and short speach. The Raffe dinideth the whole Nation of the Lappes into two forts. The one they call Nouromousky Lapary, that is, the Normegian Lappes : because

they bee of the Danis Religion. For the Danes and Noruegians, they account for one people. The other that have no Religion at all, but line as bruite and Heathenish people, without God Wilde Land. in the world, they call Dikey Lopary, or the wilde Lappes.

The whole Nation is veterly vulcarned, having not so much as the vie of any Alphabet, or

Speach. Shooting. Diners kindes

The Nagay Tartar the cruclieft. The Chircafee the civilleft Tertars. The Cheremiffen Tartar.

The Mordwit Tarter the moft barbarous of the reft.

Witches,

Letter among them. For practice of Witch-craft and Sorcerie, they passe all Nations in the the World. Though for the inchanting of ships that sayle along their Coast (as I have heard it reported) and their giving of winds good to their friends, and contrary to other, whom they meane to hurt by tying of certayne knots vpon a Rope (fomewhat like to the Tale of exchin his wind-bag) is a very Fable, deviled (as may feeme) by themselves, to terrific Saylers lor comming neere their Coaft. Their Wespons are the Long-bow, and Hand-gunne, wherein they excell, as well for quicknesse to charge and discharge, as for neernesse ar the Marke, by reason of their continual practice (whereto they are forced) of shooting at wild-fowle. Their manner is in Summer time to come downe in greateompanies to the Sea-fide, to Wardingfe, Cala, Koyo, in Summer time to come coverse in great companies to the same and the say of Vedagobs, and there to fifth for Col. Salman, and But-fifth, which they fill to the 10 Ruffer, Down, and Norwegians, and now of lare to the English men that trade thinter with Cloth, which they exchange with the Lapres and Corelisor, for their Fifth, Oyle, and Furres, whereof allo they have some store. They hold their Mare at Cole, on Saint Peters day, "white warreor and uney most Mardhorfe (that is Resint there for the King of Demarke) must be pre-fent, or at least tend his Deputie to set prices vpon their Stock-fish, Trans-oyle, Furres, andother Commodities : as also the Ruffe Emperours Cultomer, or Tribute taker, to receive his Cuflome, which is ever payed before any thing can be bought; or fold. When their fishing is done, their manner is to draw their Carbaffes, or Boats on shoare, and there to leave them with the Keele turned vpwards, till the next Spring-tyde. Their trauell too and fro is vpon Sleds, drawne by the Olen Deere : which they vie to turne a grazing all the Summertime, in an Hand called 30 Kilden (of a very good Soyle compared with other parts of that Countrey) and towards

Sicds drawne

Cola,

Chap. 21. ckfiafticall flate, with

Oncerning the Gouernment of their Church, it is framed altogether after the manner of the Greeke: as being a part of that Church, and neuer acknowledging the Iurifdicton of the Latine Church, vsurped by the Pope. That I may keepe a better measure in describing their Ceremonies, then they in the ving them (wherein they are infinite) I will note briefly: Fuff, what Ecclelia ticall Degrees, or Offices they have with the Iurisdiction, and practice of them. Secondly, what Doctrine they hold in matter of Religion. Thirdly, what Lyturgie, or forme \$0 of Seruice they vie in their Churches , with the manner of their administring the Sacriments. Fourthly, what other strange Ceremonies, and Superstitious Denotions are vsed among

the Winter time, when the Snow beginneth to fall, they fetch them home againe, for the vie

The Church

Offices.

Their Offices, or Degrees of Church-men, are as many in number, and the fame in a manner both in name and degree, that were in the Westerne Churches. Furt, they have their Patriare, then their Metropolites, their Archbifbops, their Vladkey, or Bifbops; their Protopopes or Arch priefts, their Deacons, Friers, Monkes, Nunnes, and Eremnes.

The Patriarch.

Patriarch of Sie, or Chie.

Their Pariarch, or chiefe Directer in matter of Religion untill this laft yeere, was of the Citie of Confiantinople (whom they called the Parriarch of Sie) because being driven by the Turke out of Constantinople (the Seate of his Empire) he removed to the He Sis, fometimes called Chis, 40 and there placed his Patriarchiall Sea. So that the Emperours, and Clergie of Russia, were wont veerely to tend Gifts thither, and to acknowledge a Spirituall kind of homage, and subjection due to him, and to that Church. Which custome they have held (as resemeth) ever fince they professed the Christian Religion. Which how long it hatfi bn I could not wel learne, for that they haue no Story or Monument of Antiquitie (that I could heare of ) to shew what hath been done in times past within their Countrey, concerning either Church, or Common-wealth matters. Onely I heare a report among them, that about three hundred yeers fince, there was a Mariage betwint the Emperour of Constantinople, and the Kings Daughter of that Country: who at the first denyed to joynehis Daughter in Mariage with the Greeke Emperour, because he was of the Christian Religion. Which agreeth well with that I find in the Story of Lamicu Chal. 50 cacendulas concerning Turkish Affaires in his fourth Booke : where hee speaketh of such a Mariage betwixt lobs the Greeks Emperour, and the Kings Daughter of Sarmatia. And this argueth out of their owne report, that at that time they had not received the Christian Religion: as alfo that they were converted to the Faith, and withall perverted at the very fame time, receiving the Doctrine of the Gospell, corrupted with Superflitions even at the first when they tooke it from the Greeke Church, which it felfe then was degenerate, and corrupted with many Superflitions, and foule Errours, both in Doctrine and Discipline : as may appeare by the Story of Nicephorus Gregoras, in his eighth and ninth Bookes. But as touching the time of their Conuersion to the Christian Faith, I sppose rather that it is mistaken by the Ruffe, for that which I find in the Polonian Story, the second Booke the third Chapter: where is faid that about the 60 yeere 990. Vladomirus Duke of Ruffia, married one Anne Sifter to Bafilius, and Conflaminus Brothers, and Emperours of Constantinople. Whereupon the Raffe received the Faith and Profesion of Christ. Which though it be somewhat more ancient then the time noted before out of the Ruffe Report, yet it falleth out all to one reckoning, touching this point, viz. in what truth and

finceritie of Doctrine the Ruffe received the first stampe of Religion : for asmuch as the Greeke Church at that time also was many wayes infected with errour and superstition.

At my being there, the yeere 1,38. came vnto the Morke the Patriarch of Constantinople, or on of the Pa-Sio (called Hieronimo being banished as some sayd) by the Turke, as some other reported by the triarchicallsea Greeke Clergie deprived. The Emperour being given altogether to superstitious devotions, gave from Constantihim great entertaynment Before his comming to Moske, hee had beene in Italy with nople or Sin, to the Pope, as was reported there by some of his company. His arrand was to consult with the Mosto. Emperour concerning these points, First, about a League to passe betwixt him and the King of Spaine, as the meeteft Prince to joyne with him in opposition against the Tirke. To which pur-

IO pole also Ambassages had passed betwire the Russe and the Persian. Likewise from the Georgians to the Emperour of Ruffia, to joyne league together, for the inuading of the Turke on all fides of his Dominion : taking the advantage of the simple qualitie of the Tarke that now is. This treatie was helped forward by the Emperours Ambassadour of Almayne, sent at the same time to solicite an inuation upon the parts of Polonia, that lye towards Rufland, and to borrow money of the Ruffe Emperour, to purfue the warre for his Brother Maximilian, against the Swedens sonne. now King of Poland. But this confultation concerning a league betwirt the Ruffe and the Spamiard, (which was in some forwardnesse at my comming to Moske, and already one appointed for Ambassage into Spaine) was marred by meanes of the ouerthrow given to the Spanish King by her Majestie, the Queene of England, this last yeere. Which made the Russe Emperour and his 20 Councell, to give a fadder countenance to the English Ambassadour at that time : for that they were disappointed of so good a policie, as was this conjunction supposed to bee betwixt them and the Spanish.

His fecond purpose (whereto the first served as an introduction) was in revenge of the Turke and the Greeke Clergie, that had thrust him from his seate, to treate with them about the reducing of the Rufe Church under the Pope of Rome. Wherein it may feeme that comming lately from Rome, hee was fet on by the Pope, who hath attempted the same many times before, though all invaine : and namely the time of the late Emperour Inan Vafilowich, by one Anthony his Legate. But thought this belike a farre better meane to obtayne his purpose by treatie and mediation of their owne Patriarch. But this not succeeding, the Patriarch fell to a third point 30 of reatie, concerning the relignation of his Patriarchihip, and translation of the Sea from Conflantinople or Scio, to the Citie of Moske. Which was fo well liked, and entertayned by the Emperour (as a matter of high Religion and policie) that no other treatie (specially of forraigne

Ambaffages) could bee heard or regarded, till that matter was concluded

The reason wherewith the Patriarch perswaded the translating of his Sea to the Citie of Moske, were thefe in effect. First, for that the Seaps the Patriarch was under the Turke, that is enemie to the Faith. And therefore to bee remooued into some other Countrey of Christian profession. Secondly, because the Russe Church was the onely naturall daughter of the Greeke at this time, and holdeth the same Doctrine and Ceremonies with it : the rest being all subject to the Tarke, and fallen away from the right profession. Wherein the subtill Greeke to make the bet-

40 termarket of his broken ware, aduanced the honour that would grow to the Emperour, and his Countrey : to haue the Patriarchs Seat translated into the chiefe Citie, and seate of his Empire. As for the right of translating the Sea, and appointing his Successour, hee made no doubt of it, but

that it pertayned wholly to himselfe.

So the Emperour and his Councell, with the principall of his Clergie, being affembled at the The Patriarch Morke, it was determined that the Metropolite of Morke, should become Patriarch of the whole this of the whole the control that the Metropolite of Morke, should become Patriarch of the whole this of the whole the who Greeke Church, and have the tamefull Authoritie and Iunifdiction that pertayned before to the ted to Mosfee Patriarch of Conftaminople, or Sio. And that it might bee done with more order and folemnitie, the fine and twentieth or Ianuarie, 1 588. the Greeke Patriarch accompanied with the Ruffe Clergie, went to the great Church of Prechefte, or our Ladie, within the Emperours Castle (having

50 first wandred thorow the whole Citie in manner of a Procession, and bleshing the people with his two fingers) where hee made an Oration, and deliuered his refignation in an Instrument of writing, and so layed downe his Patriarchicall staffe. Which was presently received by the Metropolite of Moste, and divers other ceremonies vied about the Inauguration of this new

The day was holden very folemne by the people of the Citie, who were commanded to forbeare their workes, and to attend this folemnitie. The great Patriarch that day was honoured with rich Presents sent him from the Emperour and Emptesse, of Plate, cloath of Gold, Furres, &c. carryed with great pompe thorow the streets of Moske, and at his departing received many gifts more, both from the Emperour, Nobilitie, and Clergie. Thus the Patriarchilhip of Conflan-60 timple, or See, (which hath continued fince the Councell of Nice) is now translated to Meske, or they made beleeve that they have a Patriarch with the fame right and Authoritie that the other had. Wherein the fubtill Greeke hath made good advantage of their Superitition, and is now gone away with a rich bootie into Poland, whither their Patriarchihip be currant or not.

The matter is not valike to make some Schisme betwixt the Greeke and Roffe Church, if the

Ruff- hold his Patriarchship that hee hath so well payed for, and the Greekes Elect another withall, as \* likely they will, whether this man were banished by the Turke, or deprined by "As they doe and ener fince order of his owne Clergie. Which might happen to gine advantage to the Pope, and to bring ouer the Ruffe Church to the Sea of Rome, ( to which end peraduenture hee deursed this Stratagem, and call in this matter of Schisme among them) but that the Emperours of Russia know well enough, by the example of other Christian Princes, what inconvenience would grow to their State and Countrey, by subjecting themselues to the Roms Sea. To which end the late Emperour Inan Vafilowich, was very inquilitiue of the Popes authoritie ouer the Princes of Chris flendome, and fent one of very purpose to Rome, to behold the order and behaulour of his Court.

Kilender pre-

With this Patriarch Hieronymo, was driven out at the same time by the great Turke, one De- 10 metrio Archbishop of Larifa: who is now in England, and pretendeth the same cause of their banishment by the Turke, (to wit) their not admitting of the Popes new Kalender, for the alteration of the yeere. Which how valikely it is, may appeare by these Circumstances. First, because there is no such affection, nor friendly respect betwire the Pope and the Timbe, as that hee fhould banish a Subject for not obeying the Popes ordinance, specially in a matter of some sequel for the alteration of Times within his owne Countries. Secondly, for that hee maketh no such scruple in deducting of times, and keeping of a just and precise account from the Incarnation of Christ: whom hee doth not acknowledge otherwise then I noted before. Thirdly, for that the fayd Patriarch is now at Naples in Italy, where it may be gheffed he would not have gone within the Popes reach, and so neere to his nose, if hee had beene banished for opposing himselfe a- 20 gainst the Popes Decree.

The Patriarchs Iurifdi-

This office of Patriarchship now translated to Mosko, beareth a superiour Authoritie over all the Churches, not onely of Russia, and other the Emperours Dominions, but thorow out all the Churches of Christendome, that were before under the Patriarch of Constantinople, or Sto : or at least the Ruffe Patriarch imagineth himfelfe to have the same authoritie. Hee hath under him as his proper Diocesse the Prouince of Moske, besides other peculiars. His Court or Office is kept at the Meske.

Two Metropo-

Before the creation of this new Patriarch, they had but one Metropolite, that was called the Metropolite of Moske. Now for more flate to their Church, and new Patriarch, they have two Metropolites, the one of Nonograd velica, the other of Roftone. Their office is to receive of the 10 Patriarch such Ecclesiasticall orders, as hee thinketh good, and to deliner the charge of them ouer to the Archbishops : besides the ordering of their owne Diocesse.

Foure Arch-Sixe Bishops.

Their Archbilhops are foure : of Smolenfo, Cazon, Vobsko, and Vologdo. The parts of their office is all one with the Metropolites : faue that they have an under lurifdiction, as Suffraganes to the Metropolites, & Superiors to the Bishops. The next are the Vladiteis or Bishops, that are but fixe in all : of Crutitika, of Rezan, of Orfer and Torfhock, of Collomenska, of Volodemer, of Sufdalla, These have every one a very large Diocesse : as dividing the rest of the whole Country among

Ecclefiaffical)

Their Gentles

The matters pertayning to the Ecclesiasticall jurisdiction of the Metropolites, Archbishops, and Bishops, are the same in a manner that are vied by the Clergie in other parts of Christendome. 40 For besides their authoritie ouer the Clergie, and ordering such matters as are meere Ecclesiasticall, their jurisdiction extendeth to all Testamentarie causes, matters of Marriage, and Divorcements, some Pleas of iniuries, &c. To which purpose also they have their Officials, or Commisfaries (which they call Boiaren Vladstskey) that are Lay-men of the degree of Dukes, or Gentlemen, that keepe their Courts and execute their Iurifdiction. Which besides their other oppressions ouer the common people, raigne ouer the Priests: as the Dukes and Dracks doe ouer the poore people, within their Precincts. As for the Archbishop or Bishop himselfe, hee beareth no Iway in deciding those causes, that are brought into his Court. But if hee would moderate any matter, he must doe it by intreatie with his Gentleman Officiall. The reason is, because these Boiarstey, or Gentlemen officials, are not appointed by the Bishops, but by the Emperour him- 50 felfe, or his Councell, and are to give account of their doings to none but to them. If the Bishop can intreat at his admission to have the choice of his owne Officiall, it is accounted for a speciall great fauour. But to speake it as it is, the Clergie of Russia, as well concerning their Lands and reuenues, as their Authoritie and Iurifdiction, are altogether ordered and ouer-ruled by the Emperour and his Councell, and have so much, and no more of both as their pleasure doth permit them. They have also there Assistants or severall Counsels (as they call them) of certayne Priests that are of that Diocesse, reliding within their Cathedrall Cities, to the number of foure and twentie a piece. These aduise with them, about the speciall and necessarie matters belonging to their

The Church

Concerning their Rents and Reuenues to maintayne their dignities, it is somewhat large. The 60 Patriarchs yeerely rents out of his Lands (befides other fees) is about 3000. Rubbels or Marcks. The Metropolites and Archbishops, about 2500. The Bishops, some 1000. some 800. some 500.8cc. They have had some of them (as I have heard say) ten or twelve thousand Rubbels 2 yeere : as had the Metropolite of Newograd.

Their

Their Habit or Apparell (when they shew themselves in their Pontificalibus after their folemnell manner is a Mitre on their heads after the Popish fashion, set with Pearle and Precious Stone, a Coape on their backes, commonly of Cloth of Gold, embroydered with Pearle, and a Crossers Staffe in their hands, layed ouer all with Plate of Silver double gilt, with a Crosse or Sheepherds Crooke at the upperend of it. Their ordinary habit otherwise when they ride or goe abroad, is a Hood on their heads of blacke colour, that hangeth downe their backes, and standeth out like a Bon-grace before. Their vpper Garment (which they call Reis) is a Gowne or Mantell of blacke Damaske, with many Lifts or Gards of white Sattin layed voon it, enery Gard about two fingers broad, and their Crofiers staffe carried before them. Themselves follow after, bleffing the people with their two fore-fingers, with a marvel-

The Election, and appointing of the Bishops and the rest, pertagneth wholy to the Empe- The Election rour himselfe. They are chosen euer out of the Monasteries : to that there is no Bishop, Arch. of Bishops, bishop, nor Metropolite, but hath beene a Monke, or Frier before. And by that reason they are, and must all bee vnmarried men, for their Vow of Chastitie when they were first shorne, When the Emperour hath appointed whom he thinketh good, hee is inuefted in the Cathedrall Church of his Diocesse, with many Ceremonies, much after the manner of the Popish Inaugura-

tion. They have also their Deanes, and their Arch-deacons.

As for preaching the Word of God, or any teaching, or exhorting such as are under them, The learning they neither vie it, nor have any skill of it : the whole Clergie being veterly vulearned both for and exercise they neither vie it, nor naue any same to the manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeere, we of the far other knowledge, and in the Word of God. Onely their manner is twice every yeer. the first of September (which is the first day of their yeere) and on Saint John Baptists day, the make an ordinary speech to the people, euery Metropolite. Arch.bishop, and Bishop, in his Catherall Church, to this or like effect: That if any bee in malice towards his Meighbour, hee shall leaue off his malice : if any haue thought of Treason or Rebellion against his Prince, hee beware of such practice: if hee haue not kept his Fasts, and Vowes, nor done his other Duties to the holy Church, hee shall amend that fault, &c. And this is a matter of forme with them, vttered in as many words, and no more, in a manner, then I have heere fet downe. Yet the matter is done with that Grace and Solemnitie, in a Polpit of 30 purpole fet vp for this one Act, as if hee were to discourse at large of the whole substance of

Diminitie. At the Monte the Emperour himselfe is euer present at this Solemne Ex-

As themselves are void of all manner of Learning, so are they wary to keepe out all meanes that might bring any in : as fearing to have their ignorance and vngodlineffe discouered. To that purpose they have perswaded the Emperors, that it would breed Innouation, and sow danger to their State, to have any nouelty of Learning come within the Realme. Wherein they fay but truth, for that a man of spirit and vinderflanding, beloed by Learning and liberall Education, can hardly indure a tyrannicall Gouernment. Some yeeres past in the other Emperours time, there came a Presse and Letters out of Polonia, to the Citie of Merke, where a Printing House was 40 fet vp, with great liking and allowance of the Emperour him elee. Bu: not long after, the house was let on fire in the night time, and the Presse and Letters quite burnt up, as was thought by the procurement of the Clergie-men.

Their Priests (whom they call Papaes) are made by the Bishops, without any great tryall for Priests. worthinesse of gifts, before they admit them, or Ceremonies in their admission : laue that their heads are shorne (not shauen, for that they like not) about an hand breadth or more in the crowne, and that place anointed with Oyle by the Bishop: who in his admission putteth upon the Priest, fift his Surplesse, and then fetterha white Crosse on his brest of Silke, or some other matter, which he is to weare eight dayes, and no more : and fogueth him authoritie to say and fing in the Church, and to administer the Sacraments.

They are men veterly vulearned, which is no maruell, for as much 25 their Makers, the Bi-They are men veterity vincarines, without a managery of the qualitie, and make no farther vie at all of those themselues (as before was faid) are cleere of that qualitie, and make no farther vie at all of those themselves. any kind of Learning, no not of the Scriptures themselves, save to reade and to sing them. Their ordinary charge and function is to lay the Lyturgie, to administer the Sacraments after their manner, to keepe and decke their Idols, and to doe the other Ceremonies vivall in their Churches. Their number is great because their Townes are parted into many small Parishes, without any diffretion for dividing them into competent numbers of Housholds, and people for a just Congregation : as the manner in all places where the meanes is neglected, for increasing of knowledge, and instruction towards God. Which cannot well be had, where by meanes of an vnequall partition of the people, and Parishes, there followeth a want and vnequalitie of 60 flipend for a fufficient Ministery.

For their Priests, it is lawfull to marry for the first time. But if the first Wife dye, a second The Roge. he cannot take, but he must lose his Priest-hood, and his living withill. The reason they make Priest can out of that place of Saint Paul to Timothy 1.3.2. not well waterflood, thinking that to bee fpo. marry but ken of diners Wines successively, that the Apostle speaketh of at one and the same time. If hee once

will needs marrie againe after his first wife is dead, he is no longer called Papa, but Rospapa, or Priest quendam. This maketh the Priests to make much of their Wines, who are accounted as the Matrones, and of best reputation among the women of the Parish.

For the stipend of the Priest, their manner is not to pay him any tenths of Corne, or ought elfe : but he must stand at the deuotion of the people of his Parish, and make vp the Incommes elle : out he must haus at the usualists the can, by Offerings, Shrifts, Maringes, Burials Direct towards his maintenance, 6 well as hee can, by Offerings, Shrifts, Maringes, Burials Direct and Prayers for the dead and the lining (which they call Molana.) For befides their publike Seruice within their Churches, their manner is for euery private man to have a Prayer laid for him by the Prieft, vpon any occasion of businesse whatsoeuer, whether he ride, goe, hile, plough, or what source else he doth. Which is not framed according to the occasion of his businesse, but 10 at randome, being some of their ordinary and vsuall Church-prayers. And this is thought to bee more holy, and effectuall, if it be repeated by the Priests mouth, rather then by his owne. They haue a custome besides to solemnize the Saints day, that is, Patrone to their Church once every yeere. What time all their Neighbours of their Countrey and Parishes about, come in to have Prayers faid to that Saint for themselues, and their friends : and so make an Offering to the Priest for his paines. This Offering may yeeld them some ten pounds a yeere, more or lesse, as the Patrone or Saint of that Church is of credit and estimation among them: The manner is on this day (which they keepe Anniuersary for the Priest, to hire divers of his Neighbour Priests to helpe him : as having more Dishes to dresse for the Saint, then he can well turne his hand vnto. They vie besides to visit their Parishioners houses, with Holy Water, and Perfume, com- 20 monly once a quarter: and so hauing sprinkled, and becemed the goodman and his Wife, with the rest of their houshold, and houshold stuffe, they receive some Denotion or less, as the man is of abilitie. This and the rest layd altogether, may make vp for the Priest towards his maynte. nance, about thirty or forty Rubbels a yeere : whereof he payeth the tenth part to the Bishop of the Diocesse.

The Priefts maintenance.

Their Priefts

The Pape or Prieft is knowne by his long Tufts of Haire, hanging downe by his Eares, his Gowne with a broad Cape, and a walking staffe in his hand. For the rest of his Habit , heeis apparelled like the common fort. When he fayth the Lyturgie or Seruice, within the Church, hee hath on him his Surpleffe, and fometimes his Coape, if the day bee more Solemne. They haue besides their Papaes or Priests, their Churmapapaes (as they call them) that is, Black Priess: that may keepe their Benesices, though they be admitted Friers withall within some Monastee rie. They seeme to be the very same that were called Regular Priests in the Popish Church Ynder the Priest, is a Deacon in euery Church, that doth nothing but the Office of a Parish Clerke. As for their Protopapaes, or Arch-priefts, and their Arch-deacons (that are next in election to be their Protopopas ) they ferue onely in the Cathedrall Churches.

Friers.

Of Friers they have an infinite rabble farre greater then in any other Countrey, where Popety is professed. Euery Citie, and good part of the Countrey, swarmeth full of them. For they have wrought (as the Popish Friers did by their Supersition and Hypocrisie) that if any part of the Realme be better and sweeter then other, there standeth a Friery or a Monastery dedicated to some Saint.

The number of them is so much the greater, not onely for that it is augmented by the Superfittion of the Countrey, but because the Friers life is the fafest from the Oppressions, and Exactions, that fall vpon the Commons. Which caufeth many to put on the Friers Weed, as the best Armour to beare off such blowes. Besides such as are voluntary, there are divers that are forced to shire themselves Friers, vpon some displeasure. These are for the most part of the chiefe Nobility. Diners take the Monafteries as a place of Sanctuary, and there become Friers, toanoyde some punishment, that they had deserued by the Lawes of the Realme. For if hee geta Monaftery ouer his head, and there put on a Coole before hee bee attached, it is a protection to him for euer against any Law, for what crime soeuer : except it be for Treason. But this Promso goeth withall, that no mancommeth there, (except fuch as are commanded by the Emperour to 50 be received) but he giveth them Lands, or bringerh his stocke with him, and putteth it into the common Treasury. Some bring 2000. Rubbels, and some more. None is admitted under three or foure hundred.

The manner of their Admission is after this fort. First, the Abbot strippeth him of all his Secular or ordinary Apparell. Then he putteth upon him next to his skinne, a white flamell shirt, with a long Garment ouer it downe to the ground, girded vnto him with a broad Leather Belt. His vpper-most Garment is a Weed of Garras, or Say, for colour and fashion, much like to the upper Weed of a Chimney-sweeper. Then is his crowne shorne a hand breadth, or more close to the very skinne, and thefe, or like words pronounced by the Abbot, whiles hee clippeth his haire: As these haires are clipped of, and taken from thy head; so now we take thee, and separate thee 60 cleane from the World, and worldly things, &c. This done, hee anointeth his crowne with Oyle, and putteth on his Coole : and so taketh him in among the Fraternitie. They yow perpetual Chastitie, and Abstinence from flesh.

Besides , their Lands (that are very great) they are the greatest Merchants in the whole

Countrey, and deale for all manner of Commodities. Some of their Monasteries dispend in Lands, one thousand, or two thousand Rubbels a yeere. There is one Abbey called Troits, that hath in Lands and Fees, the summe of 100000. Rubbels, or Markes a yeere. It is built in manner of a Castle, walled round about, with great Ordnance planted on the wall, and contavneth within it a large breadth of ground, and great varietie of building. There are of Friers within it, (besides their Officers, and other Seruants) about seuen hundred. The Empresse that now is, hath many Vowes to Saint Sergins, that is Patrone there : to intreate him to make her fruitfull, as having no children by the Emperour her Husband. Lightly euery yeere shee goeth on Pilgrimage to him from the Mosko, on foot, about eighty English miles, with five or fixe thousand women attending vpon her, all in blue Liveries, and foure thousand Souldiers for her Guard. But Saint Sergins hath not yet heard her Prayers, though (they fay) hee hath a speciall gift and facultie that way.

What Learning there is among their Friers, may be knowne by their Bishops, that are the What Learning unter a smong user the state of them at the Citie of Flood day where The Friest choice men out of all their Monatteries I talked with one of them at the Citie of Flood day where Learning. (to try his skill) I offered him a Ruffe Testament, and turned him to the first Chapter of Saint Matthews Gotpell. Where hee beganne to reade in very good order. I asked him first what part of Scripture it was, that he had read? he answered, that he could not well tell. How many Euangelists there were in the New Testament? He faid he knew not. How many Apostles there were! He thought there were twelve. How he should be faved! Whereunto he answered me with a piece of Russe Doctrine, that he knew not whether he should be faued, or no: but if God would Poshallowate him, or gravise him so much, as to saue him, so it was , he would bee glad of it: if not, what remedy. I asked him, why hee shoare himselfe a Frier? Hee answered, because he would eate his Bread with peace. This is the Learning of the Friers of Rassia, which though it be not to be measured by one, yet partly it may bee ghessed by the ignorance of this

man, what is in the reft.

They have also many Nunneries, whereof some may admit none but Noblemens Widowes. Nunneries and Daughters, when the Emperour meaneth to keepe them vnmarryed, from continuing the bloud or stocke, which if he would have extinguished. To speake of the life of their Friers, and Nunnes, it needs not, to those that know the hypocrisie, and vncleannesse of that Cloy-3C fier-brood. The Ruffe himselfe (though otherwise addicted to all Superstition) speaketh so fouly of it, that it must needs gaine silence of any modest man.

Besides these, they have certayne Eremites, (whom they call Holymen) that are like to those Eremites. Granosophifts, for their life and behauiour : though farre vnlike for their Knowledge , and Learning. They vie to goe starke naked, saue a clout about their middle, with their haire hanging long, and wildly about their shoulders, and many of them with an Iron coller, or chaine about their neckes, or midst, even in the very extremitie of Winter. These they take as Prophets, and Strange hards men of great Holinesse, gining them aliberty to speake what they hist, without any control- acise, ment, though it beeof the very highest himselfe. So that if hee reprooue any openly, in what fort foeuer, they answere nothing, but that it is Po gracum, that is, for their finnes. And if 40 any of them take some piece of sale ware from any mans shop, as he passeth by, to give where he lift, hee thinketh himselfe much beloued or God, and much beholding to the holy Man, for ta-

Of this kind there are not many, because it is a very hard and cold Profession, to goe naked in Ruffia, specially in Winter. Among other at this time, they have one at Marke, that walketh naked about the streets, and inueigheth commonly against the State, and Gouernment, especially against the Godonoes, that are thought at this time to be great Oppressors of that Commony again. Another there was, that dyed not many yeeres agoe (whom they called Bafileo) that Bafileo the Erewould take upon him to reproue the old Emperour, for all his crueltie, and oppressions, done towards his people. His body they have translated of late into a sumptious Church, neere the Em-SC perours Houle in Maste, and have canonized him for a Saint, Many Miracles he doth there (for io the Friers make the people to beleeue) and many Offerings are made vnto him, not only by the people, but by the chiefe Nobilitie, and the Emperour, and Empresse themselves, which vihe that Church with great Denotion. But this last yeere, at my being at Moske, this Saint had ill lucke in working his Miracles. For a lame man that had his limines restored (as it was pre- Lame Miracletended by him) was charged by a woman that was familiar with him (beeing then fallen out) that he halted but in the day time, and could leape metrily when hee came home at night. And that he had intended this matter fixe yeeres before. Now hee is put into a Monastery, and there rayleth vpon the Friers, that hired him to have this counterfeit Miricle practifed vpon him. Befides this difgrace, a little before my comming from thence, there were eight flaine with in 60 his Church by hire in a Thunder. Which caused his Bels (that were tingling before all day and night long as in triumph of the Miracles wrought by Bajileo their Saint) to ring somewhat softhigh tong as in training to the states wronger by same to the was another of great Nichola the account at Pleike, (called Niebola of Pleike) that did much good, when this Emperours Father Eremite-

came to facke the Towne, vpon supition of their revolting and Rebellion against him. The Em-

perour, after he had faluted the Eremite, at his lodging, fent him a reward. And the Holy man to requite the Emperour, sent him a piece of raw Flesh, being then their Lent time. Which the Emperour feeing, bid one to tell him, that he maruelled that the Holy man would offer him flesh to eate in the Lent, when it was forbidden by order of holy Church. And doch Euske (which is as much to fay, as lacke) thinke (quoth Nicola) that it is vinlawich to cate a piece of beatle fleih in Lent and not to eate up fo much mans fleih, as he hath done stready. So threatning the Emperour with a prophecy of some hard aduenture to come vpon him, except he lett murdring of his people, and departed the Towne : he faued a great many mens lives at that time.

This maketh the people to like very well of them, because they are as Pasquils, to note their great mens faults, that no man else dare speake of. Yet it falleth our semetime, that for this 10 rude libertie, which they take vpon them, after a counterfeit manner, by imi-ation of Prophets. they are made away in fecret: as was one or two of them, in the last Emperours time, for be-

ing ouer-bold in speaking against his government.

Cb49. 22. Of their Lyturgic, or form of Churchferuice, and their manner of admini firing the Sacrameats. Their morning Seruice.

Their morning Service they call, Zautrans, that is, Mattint. It is done in this order. The Priest entreth into the Church with his Descon following him. And when he is come to the middle of the Church, he beginneth to fay with a loude voyce : Blastaney Uladika (that 18) Bleffe vs heavenly Paftor : meaning of Christ. Then hee addeth, In the name of the Father, and of the Sonne, and of the bely Ghost one very God in Trinitie: and Afpody pomelui, or, Lord bane mersy vpon vs., Lord have mercy upon vs., Lord have mercy upon vs. repeated three times, This done, 28 he marcheth on towards the Chancell, or Santium Santtorum, (as they vieto call it) and io entreth into the Scharfuer Dwere, or the Heavenly Doore: which no man may enter into, but the Pricti onely. Where standing at the Altar, or Table ( fet neere to the upper wall of the Chancell) he fayeth the Lords Prayer, and then againe Afrody pomelui, Cr, Lord have merey upon vi, Lord have mercy upon vs, &c. pronounced twelve times. Then praifed be the Trimitie, the Father, the Sonne, and boly Ghost, for ener and ener. Whereto the Deacons, and Peopletay, Amen. Next after, the Priest addeth the Plalmes for that day, and beginneth with, O come let vs worship, and fall downe before the Lord, &c, and therewithall himfelfe, with the Deacons, and People, all turne themselves towards their Idols, or Images, that hang on the wall, and croffing themselves, bow downe three times, knocking their heads to the very ground. After this, he readeth the Ten Commandements, and Athanafius Creed, out of the Seruice Booke. This being done, the Deacon that standeth without the Heasenly Doore, or Chancell, readeth

Legend.

a piece of a Legend, out of a written Booke, (for they have it not in Print) of fome Saints life, miracles, &c. This is divided into many parts, for every day in the yeere, and is read by them with a plaine finging note, not valike to the Popish tune, when they fung their Gospels. After all this (which reacheth to an houre and an halfe, or two houres of length) he addeth certaine fet Collects, or Prayers upon that which he hath read out of the Legend before: and so endeth his Seruice. All this while stand burning before their Idols , a great many of Waxe candles, (whereof iome are of the bigneffe of a mans waste) vowed, or enloyned by penance, vpon the people of the Parish.

Candles.

About nine of the clocke in the morning, they have another Service, called Obeidna, (or Compline) much after the order of the Populh Service, that bare that name. If it be some High or Festivali day, they furnish their Service beside, with Blessed bee the Lord God of Ifrael, &c. and Wee praise thee, O God, &c. fung with a more folemne and curious note.

Their enening Service, is called Vecberna, where the Priest beginneth with Blaslane, Vladka, as he did in the morning, and with the Pfalmes appointed for the Vecberna. Which being read, he fingeth, My (oule doeth magnific the Lord, &c. And then the Priest, Deacons, and People, all with one voice, fing, Afpody pomelui, or Lord have mercy upon vs, thirty timestogether. Whereunto the Boyes that are in the Church , answere all with one voice , rolling it up so fast; as their lips can goe : Very, Very, Very, Very, or, Praife, Praife, Praife, &c. thirty times together, 30 with a very strange noise. Then is read by the Priest, and vpon the Holidayes sung, the first Pfalme : Bleffed is the man, &c. And in the end of it , is added , Allelnia, repeated ten times. The next in order is some part of the Gosp Il read by the Priest, which hee endeth with Alleluia repeated three times. And so having said a Collect in remembrance of the Saint of that day, hee endeth his eucning Service. All this while the Priest standeth aboue at the Altar, or high Table, within the Chancell, or Santium Santiorum, whence hee never moveth all the Seruice time. The Deacon, or Deacons (which are many in their Cathedrall Churches) it and without the Chancell by the Scharfuer Dware, or Heanenly Doore: for within they may notbe ieene all the Service time, though other wife their Office is to sweepe and keepe it, and to set up the Waxe candles before their Idols. The people stand together the whole Seruice time in the body of the Church, and some in the Church Porch, for Piew, or Seat they have none within their

Baptiline.

The Sacrament of Baptisme they administer after this manner. The child is brought vnto the Church (and this is done within eight dayes after it is borne ) if it bee the child of some

Nobleman, it is brought with great pompe in a rich Sled or Wagon, with Chaires and Cushions of cloth of Gold, and fuch like sumptuous shew of their best furniture. When they are come to the Church , the Priest standeth ready to receive the child within the Church Porch , with his Tub of water by him. And then beginneth to declare vnto them, that they have brought a little Infidell to be made a Christian, &c. This ended, he teacheth the Witnesles (that are two or three) in a certaine fet forme out of his Booke, what their dutie is in bringing vp the child after he is baptifed, vz. That he must be taught to know God, and Christ the Saujour. And because God is of great majestie, and wee must not presume to come vnto him without Mediators (as the manner is when we make any funt to an Emperour, or great Prince) therefore they must to teach him what Saints are the best, and chiefe Mediators, &c. This done, he commandeth the Deuill in the name of God after a conjuring manner, to come out of the water; and so after certaine Prayers he plungeth the child thrite ouer head and eares. For this they hold to bee a point necessary, that no part of the child be vndipped in the water.

The words that beare with them the forme of Baptilme vttered by the Prieft, when he dippeth in the child, are the very same that are prescribed in the Gospell, and vsed by vs. vz. In the name of the Father, and of the Sonne, and of the holy Ghoff. For that they hould alter the forme of the words, and fay, by the boly Ghost, (as I have heard that they did ) following certaine Heretikes of the Greeke Church, I tound to be vntrue, as well by report of them that have beene often at their Baptismes, as by their Booke of Lyiurgie it selfe, wherein the order of Baptisme

20 is precifely fet downe.

When the childe is baptifed, the Priest layeth Oyle and Salt tempered together upon the Oyle and Salt; forehead, and both ides of his face, and then voon his mouth, drawing it along with his finger ouer the childs lips (as did the Popith Prietts) faying withall certaine Prayers to this effect: that God will make him a good Christian, &c. all this is done in the Church Porch. Then is the child (as being now made a Christian, and meet to be received within the Church Doore) carried into the Church, the Priest going before, and there he is presented to the chiefe Idoll of Presented. the Church, being layd on a Cushion before the feet of the Image, by it (as by the Mediator) to be commended vnto God. If the child be ticke, or weake (specially in the Winter) they wie to make the water luke warme. After Baptisme the manner is to cut off the haire from the childs Cutting off 30 head, and having wrapped it within a piece of Waxe to lay it vp as a Relique or Monument in haire. a fecret place of the Church,

This is the manner of their Baptisme, which they account to be the best and perfectest forme. As they doe all other parts of their Religion, received (as they fay), by tradition from the best Church, meaning the Greeke. And therefore they will take great paines to make a Profelyte, or Profelyte. Convert, either of an Infidell, or of a forreine Christian, by rebaptiling him after the Ruffe man- paines. ner. When they take any Tartar prisoner, commonly they will offer him life, with condition to be baptifed. And yet they perswade very few of them to redeeme their life so : because of the naturall hatred the Tartar beareth to the Ruffe, and the opinion he hath of his falhood, and

iniuffice. The yeere after Mosko was fired by the Chrim Tartar, there was taken a Discommerfey, 40 one of the chiefe in that exploit with three hundred Tartars more: who had all their lives of- Tartars choose fered them if they would be baptifed after the Ruffe manner. Which they refuled all to doe, to die rather with many reproches against those that perswaded them. And so being carried to the River then turne Mosko (that runneth through the Citie) they were all baptifed after a violent manner : being thrust downe with a knock on the head into the water, through an hole made in the Ice for that purpose. Of Lieflanders that are captines, there are many that take on them this second Ruffe Rebaptifings

Baptisme to get more libertie, and somewhat beides towards their living, which the Emperour ordinarily vieth to give them.

Of Englishmen fince they frequented the Countrey there was never any found, that so much forgot God, his Faith, and Countrey, as that he would be content to be baptifed Ruffe, for any respect of feare, preferment, or other meanes whatsoeuer: faue onely Richard Relph, that fol-50 lowing before an vngodly trade, by keeping a Caback (against the order of the Countrey) and being put off from that trade, and spoiled by the Emperours Officers of that which he had, entred himfelfe this last yeere into the Ruffe Profession : and to was rebaptiled, living now asmuch an Idolater, as before he was a Rioter, and unthrifty person.

Such as thus receiue the Ruffe Baptilime , are first carried into some Monasterie to bee instru-Eted there in the doctrine and ceremonies of the Church. Where they vie these ceremonies. First, they put him into a new and fresh sute of apparell, made after the Russe fashion, and set a Coronet, or (in Summer) a Garland upon his head. Then they anoint his head with Oyle, and put a Waxe candle light into his hand: and so pray over him foure times a day, the space 60 of feuen dayes. All this while he is to abstaine from fielh, and white meats. The feuen dayes being ended, he is purified and washed in a Bath-stoue, and so the eight day hee is brought into the Church, where he is taught by the Friers how to behaue himselfe in presence of their Idols, by ducking downe, knocking of the head, croffing himselfe, and such like gestures, which are the greatest part of the Ruffe Religion.

The admini-Bring of the

The Sacrament of the Lords Supper they receive but once a yeere, in their great Lent time, a little before Easter. Three at the most are admitted at one time, and neuer aboue. The manner ftring of the Lords Supper, of their communicating, is thus. First, they contesse themselves of all their sinnes to the Priest (whom they call) their ghofily Father. Then they come to the Church, and are called up to the Communion Table, that flandeth like an Altar, a little remoued from the vpper end of the Church, after the Duteb manner. Heere first they are asked of the Priest, whether they hee cleane or no, that is, whether they have never a finne behind that they left vnconfessed. If they anfwer, No, they are taken to the Table. Where the Priest beginneth with certayne vsuall Pravers, the Communicants standing in the meane while with their armes folded one within another, like Penitentiaries or Mourners. When these prayers are ended, the Priest taketh a Spoone 10 and filleth it full of claret Wine. Then hee putteth into it a small piece of Bread, and tempereth them both together : and so delivereth them in the spoone to the Communicants, that fland in order, speaking the vsuall words of the Sacrament. Eate this, &c. Drinke this, &c. both at one time without any paule.

Communion

After that hee delivereth them againe Bread by it selfe, and then Wine carded together with alittle warme water, to represent Bloud more rightly (as they thinke) and the water withall, that flowed out of the fide of Chrift. Whiles this is in doing the Communicants vnfold their armes. And then folding them againe, follow the Priest thrice round about the Communion table, and so returne to their places againe. Where having sayd certayne other prayers, heedifmiffeth the Communicants, with charge to bee merrie, and to cheere vp themselves for the seuen 20 dayes next following. Which being ended, hee enjoyneth them to fait for it as long time after. Which they vie to observe with very great denotion, eating nothing else but Bread and Salt, except a little Cabbage, and some other Herbe or Root, with water or quaste Mead for

This is their manner of administring the Sacraments. Wherein what they differ from the institution of Christ, and what Ceremonies they have added of their owne, or rather borrowed of the Greekes, may eafily bee noted.

Chap. 23. Of the Do-Arine of the Ruffe Church. & what errors it noldeth, lowing of certaine parts of the Canonical

Heir chiefest errours in matter of Faith I finde to bee these. First, concerning the Word of God it selfe they will not read publikely certayne Bookes of the Canonicall Scripture, as 30 the bookes of Moles : specially the foure last, Exedus, Leutiens, Numeri, and Denteronomie, which they say are all made disauthentique, and put out of vie by the comming of Christ: as not able to difference the difference betwixt the Morall and the Ceremonial Law. The bookes of the Prophets they allow of, but reade them not publikely in their Churches, for the fame reason : because they were but directers vnto Christ, and proper (as they say) to the Nation of the Jems. Onely the Booke of Pfalmes they have in great estimation, and sing and say them daily in their Churches. Of the New Testament they allow and reade all, except the Renelation: which therefore they reade not (though they allow it) because they understand it not, neither have the like occasion, to know the fulfilling of the Prophecies contayned within it, concerning especially the Apostacie of the Antichristian Church, as have the Westerne Churches. Notwithstanding, 40 they have had their Autobrifts of the Greeke Church, and may finde their ownefalling off, and the punishments for it by the Turks invasion in the Prophecies of that Booke, Secondly, (which is the fountayne of the rest of all their corruptions both in Doctrine and

Images.

Ceremonies) they hold with the Papifts, that their Church Traditions are of equal authoritie with the written Word of God. Wherein they preferre themselues before other Churches: affirming that they have the true and right Traditions, delivered by the Apostles to the Greeke Church, and fo vnto them.

Thirdly, that the Church (meaning the Greeke, and specially the Patriarch and his Synod, as the head of the reft) having a soueraigne Authoritie to interpret the Scriptures, and that all are bound to hold that Interpretation, as found and authentique.

Fourthly, concerning the Divine nature and the three Persons, in the one substance of God, that the holy Ghost proceedeth from the Father onely, and not from the Sonne.

Fiftly, about the office of Christ, they hold many foule errours, and the same almost as doth the Popish Church : namely, that hee is the sole Mediatour of redemption, but not of intercession. Their chiefe reason (if they bee talked withall) for defence of this errour, is that vnapt and foolish comparison, betwixt God, and a Monarch or Prince of this world, that must bee sued vnto by Mediatours about him: wherein they give speciall preferment to some aboue others, as to the bleffed Virgin whom they call Prochefte, or vndefiled, and Saint Nicolas, whom they call Scora his 300. Angels pomofaick, or the Speedy belper, and fay, that hee hath three hundred Angels of the chiefeft appointed by God to attend upon him. This hath brought them to an horrible excesse of Idolatrie, af- 60 ter the groffest and prophanest manner, giving vnto their Images all religious worship of Prayer, Thankelgiuing, Offerings and Adoration, with proftrating and knocking their heads to the ground before them, as to God himfelfe. Which because they doe to the Picture, not to the portraiture of the Saint, they fay they worship not an Idoll, but the Saint in his Image, and so ofCHAP. I. Russe opinions of Saluation and Damnation. Abstinence Marriage.

fend not God : fergetting the Commandement of God, that forbiddeth to make the Image or likenesse of any thing, for any Religious worship, or vie whatsoeuer. Their Church walls are verie full of them, richly hanged and fet foorth with Pearle and Stone, vpon the smooth Table, Though some also they have embossed, that slicke from the board almost an inch outwards. They call them Chudonodites, or their Miracle workers : and when they prouide them to fet up in their Churches, in no cale they may fay, that they have bought the Image, but Exchenged money for it.

Sixtly, for the meanes of Iudification, they agree with the Papifts, that it is not by Faith one. 6. Iudification ly apprehending Christ, but by their Workes also. And that Open operations, or the worke for the by worker.

10 worke fake, must needs please God. And therefore they are all in their numbers of Pravers. Fafts, Vowes, and Offerings to Saints, Almes deeds, Croffings and fuch like, and carrie their numbring Beads about with them continually, as well the Emperour and his Nobilitie, as the common people, not onely in the Church, but in all other publike places, specially at any set or solemne meeting, as in their Fasts, law Courts, common Consultations, entertaynment of Ambalfadours, and fuch like.

Secentrally, they say with the Papifts, that no man can be affured of his faluation, till the fen- 7. Saluation tence be passed at the day of Judgement.

Eightly, they vie auricular Confession, and thinke they are purged by the very action from 6 8. Auricular many finnes, as they confesse by name, and in particular to the Priest.

Ninthly, they hold three Sacraments, of Baptifme, the Lords Supper, and the last Anothing or 9. Three Sa-Unction. Yet concerning their Sacrament of extreame Vnction, they hold it not so necessarie craments. to faluation as they doe Baptisme, but thinke it a great curse and punishment of God, if any dye without it.

Tenthly, they thinke there is a necessitie of Baptilme, and that all are condemned that dye that die wish without it.

Eleventh, they rebaptife as many Christians (not being of the Grocke Church) as they convert 11. Anabapto their Raffe profession : because they are divided from the true Church, which is the Greeke, time.

Twelfth, they make a difference of Meates and Drinkes, accounting the vie of one to be more 12. Difference

30 holy then of another. And therefore in their fet Fasts they forbeare to cate fielh, and white of meates. meates (as wee call them) after the manner of the Popish superstition : which they observe so firefly, and with such blinde denotion, as that they will rather die, then eate one bit of Flesh. Egges or such like, for the health of their bodies in their extreame sicknesse. Thirteenth, they hold Marriage to bee volawfull for all the Clergie men, except the Priefts 12, Marriage

onely, and for them also after the first Wife, as was sayd before. Neither doe they well allow of for some perit in Lay-men after the second marriage. Which is a pretence now vied against the Emperours sons valantall onely Brother, a childe of fixe yeeres old : who therefore is not Prayed for in their Churches, (as their manner is otherwise for the Princes bloud) because hee was borne of the fixt marriage, and so not legitimate. This charge was given to the Priests by the Emperour himselfe, by procure-40 ment of the Godones : who make him beleeve, that it is a good policie to turne away the liking of the people from the next successour.

Many other falle opinions they have in matter of Religion. But these are the chiefe, which they hold, partly by meanes of their traditions ( which they have received from the Greeke Church) but specially by ignorance of the holy Scriptures. Which notwithstanding they have in the Polonian tongue, ( that is all one with theirs fome few words excepted) yet few of them reade them with that godly care which they ought to doe : neither have they (if they would) Bookes sufficient of the old and new Testament for the common people, but of their Lyturgie onely, or Booke of common service, whereof there are great numbers. Which notwithflanding it is not to bee doubted, but that having the Word of God in some fort (though without the or-50 dinarie meanes to attaine to a true fenfe and understanding of it) God hath also his number among

them. As may partly appeare by that which a Ruffe at Moske fayd in fecret to one of my Seruants, speaking against their Images and other superstitions : That God had given vnto England light to day, and might give it to morrow (if hee pleased) to them.

As for any Inquintion or proceeding against men for matter of Religion, I could heare of Inquisition. none : saue a few yeeres since against one man and his wife, who were kept in a close Prison the space of eight and twentie yeeres, till they were over-growne into a deformed fashion, for their hayre, nayles, colour of countenance, and such like, and in the end were burned at Meske, in a small House set on fire. The cause was kept secret, but like it was for some part of truth in matter of Religion : though the people were made to beleeue by the Priests and Friers, that they 60 held some great and damnable Heresie.

He manner of making and folemnizing their Marriages, is different from the manner of o- Otthe manner A ther Countries. The man ( though hee neuer faw the woman before) is not permitted to of tokennihaue any fight of her all the time of his wooing : which hee doth not by himfelfe, but by his Marriages.

Mother

Mother or some other ancient woman of his kinne or acquaintance. When the liking is taken (as well by the Parents as by the parties themselves, for without the knowledge and confent of the Parents, the contract is not lawfull) the Fathers on both fides, or fuch as are to them in flead of Fathers, with their other chiefe friends, haue a meeting and conference about the downie, which is commonly very large after the abilitie of the parents : fo that you shall have a Market man (as they call them) give a thousand Rubbels, or more with his Daughter.

The manner

454

As for the man it is neuer required of him, nor standeth with their custome to make any joyn-The manner of indowment ter in recompence of the dowrie. But in case hee have a Child by his Wife, shee enjoyeth a third deale after his deceale. If he have two Children by her or more, the is to have a courtefie more, at deale after his accease. If he made at the depart without lifes by his wife, the in returned 10 home to her friends without any thing at all, laue onely her dowrie : if the husband leave fo much behind him in goods. When the agreement is made concerning the dowrie, they figue Bonds one to the other, as well for the payment of the dowrie, as the performing of the Marie age by a certayne day. If the woman were never married before, her Father and friends are bound besides to assure her a Maiden. Which breedeth many brabbles and quarrels at Law, if the man take any conceit concerning the behaulour and honestie of his wife.

Thus the contract being made, the parties begin to fend tokens the one to the other, the Woman first, then afterwards the Man, but yet see not one another till the Marriage bee solemnized. On the Eue before the marriage day, the Bride is carryed in a Collimago, or Coach, or in a Sled (if it bee winter) to the Bridegroomes house, with her marriage Apparell and Bed-flead so with her, which they are to lye in. For this is euer prouided by the Bride, and is commonly verie faire, with much cost bestowed vpon it. Heere she is accompanied all that night by her Mother and other women : but not welcommed, nor once feene by the Bridegroome himfelfe.

Ceremonies in Marriages.

Ring.

Loafe,

When the time is come to have the marriage folemnized, the Bride hath put vpon hera kinde of Hood, made of fine Knit-worke or Lawne, that couereth her head, and all her body downe to the middle. And so accompanied with her friends, and the Bridegroome with his, they goe to Church all on Horsebacke, though the Church be neare hand, and themselves but of very meane degree. The words of contract and other ceremonies in folemnizing the Marriage, are much after the order, and with the same words that are vsed with vs : with a Ring also given to the Bride. Which being put on, and the words of contract pronounced : the Brides hand is deliuered 30 into the hand of the Bridegroome, which standeth all this while on the one side of the Altaror Table, and the Bride on the other. So the marriage knot being knit by the Prieft, the Bride commeth to the Bridegroome (Randing at the end of the altar or table) and falleth downe at his feet, knocking her Head voon his Shooe, in token of her subjection and obedience. And the Bridegroome againe, casteth the lappe of his Gowne or vpper garment ouer the Bride, in token of his dutie to protect and cherish her ...

Then the Bridegroome and Bride, standing both together at the Tables end, commeth first the Father and the other friends of the Bride, and bow themselves downe low to the Bridegroome : and so likewise his friends bow themselves to the Bride, in token of affinitie and love euer after betwixt the two kindreds. And withall, the Father of the Bridegroome offereth to 40 the Priest a loafe of Bread, who delivereth it straight againe to the Father and other friends of the Bride, with attestation before God and their Idols, that hee deliner the downe wholly and truely at the day appointed, and hold lose ever after, one kindred with another. Whereupon they breake the Loafe into pieces, and cate of it, to testifie their true and fincere meanings, for performing of that charge, and thenceforth to become as graines of one Loafe, or men of

These ceremonies being ended, the Bridegroome taketh the Bride by the hand, and so they goe on together with their friends after them towards the Church porch. Where meet them certaine with pots and cups in their hands, with Mead and Ruffe Wine. Whereof the Bridegroome taketh first a Charke, or little cup full in his hand, and drinketh to the Bride : who opening her 50 Hood or Vale below, and putting the Cup to her mouth underneath it (for being feene of the Bridegroome) pledgeth him againe. Thus returning all together from the Church, the Bridegroome goeth not home to his owne, but to his Fathers house, and shee likewise to hers, where either entertayne their friends apart. At the entring into the Houle, they vie to fling Corne out of the windowes vpon the Bridegroome and Bride, in token of plentie and fruitfulnesse to bee

Silence:

Corne,

When the Eueuing is come, the Bride is brought to the Bridegroomes Fathers house, and there lodgeth that night, with her Vayle or couer still ouer her head. All that night she may not speake one word (for that charge shee receiveth by tradition from her Mother, and other Matrons her friends) that the Bridegroome must neither heare, nor see her, till the day after the 60 marriage. Neither three dayes after, may she bee heard to speake, saue certaine few words at the Table in a fet forme, with great manners and recerence to the Bridegroome: If sheebehaue herfelfe otherwise, it is a great prejudice to her credit and life euer after : and will highly bee diffiked of the Bridegroome himfelte.

After the third day, they depart to their owne, and make a Feast to both their friends together. The marriage day, and the whole time of their festivall, the Bridegroome hath the honour to be called Moloday Knez, or young Duke, and the Bride Moloday Knezay, or young Dutcheffe.

CHAP.I. Croffe Denotion ; Hallowing of Rivers ; Holy-water drinke.

In lining with their wines, they shew themselves to be but of a barbarous condition : vsing them as servants, rather then wives. Except the Noble-women, which are, or seeme to bee of more estimation with their hushands, then the rest of meaner fort. They have this foule abuse, contrary to good order, and the Word of God it selfe, that vpon dislike of his wife, or other cause what socuer, the man may goe into a Monasterie and shire himselfe a Frier, by pretence of deuotion : and fo leave his wife to shift for her selfe so well as shee can.

"He other Ceremonies of their Church, are many in number : especially, the abuse about I the figne of the Croffe, which they fet vp in their high wayes, in the tops of their Churches, Of the other and in every doore of their houses, figuing themselves continually with it on their forcheads & Ceremonies breafs with great deuotion, as they will leeme by their out ward gesture. Which were leffe of orth. Ruste fence, if they gaue not withall that religious reuerence and worthip vnto it, which is due to Church. God onely, and vied the dumbe shew, and signing of it instead of thanksgiving, and of all the crossishood other duties which they owe vito God. When they rise in the morning, they goe commonly it crossish out in the fight of some steeple that hath a Crosse on the top; and so bowing themselves towards other stuoties 20 the Croffe, figne themselues withall on their foreheads and breafts. And this is their thankigi- ons, uing to God for their nights rest, without any word speaking, except peraduenture they say, Affody Pomelny, or Lord have mercie upon vi. When they fit downe to meat, and rife againe from it, the thankigining to God, is the croffing of their foreheads and brefts. Except it be some few that adde peraduenture a word or two of some ordinary prayer, impertinent to that purpose. When they are to give an oath for the deciding of any controversie at Law, they dee it by (wearing by the Croffe, and kiffing the feet of it, making it as God, whose name onely is to bee vied in such triall of Institute. When they enter into any house (where ever there is an Idoll hanging on the wall ) they figue themselues with the Croffe, and bow themselues to it. When they begin any worke, bee it little or much, they arme themselues first with the signe of the Crosse. 30 And this commonly is all their prayer to God, for good speed of their businesse. And thus they

ferue God with croffes, after a croffe and vaine manner : not with flanding what the Croffe of Christis, nor the power of it. And yet they thinke all strangers Christians, to be no better then Turkes in comparison of themselues ( and so they will say ) because they bow not themselues when they meet with the Croffe, nor ligne themselves with it, as the Ruffe manner is. They have Holy-water in like vie and estimation, as the Popish Church hath, But heerein Holy-water, they exceed them, in that they doe not onely hollow their Holy-water (tockes, and tubsfull of

water, but all the Rivers of the Countrey once every yeere. At Marke it is done with great Hallowing of water, but an interview the Emperour himselfe being present at it with all his Nobilitie, mar-Riners. ching through the streets towards the River of Moikes, in manner of Procession, in this order 40 as followeth, First goe two Deacons, with banners in their hands, the one of Precheffe ( or our Lady) the other of Saint Michael fighting with his Dragon. Then follow after the rest of the Deacons, and the Priests of Mosko, two and two in a ranke, with Cosps on their backes, and their Idols at their brefts, carried with girdles or flings, made fast about their necks. Next the Priests come their Bishops in their Pontificalibus : then the Friers, Monkes, and Abbots : and after the Patriarches in very tich attire, with a Ball or Sphere on the top of his Myter, to fignific his voluerfalitie ouer that Church. Last commeth the Emperour with all his Nobilitie. The whole traine is of a mile long, or more. When they are come to the Riuer, a great hole is made in the Ice, where the Market is kept of a road and a halfe broad, with a flage round about it to keepe off the presse. Then beginneth the Patriarch to say certaine prayers, and consureth so the Deuill to come out of the water; and so casting in Salt, and confing it with Frankincense, maketh the whole River to become Holy-water. The morning before, all the people of Make vic to make croffes of chaulke ouer cuery doore and window of their houses; least the Deuill being conjured out of the water, should flye into their houses,

When the Ceremonies are ended you shalsee the black Guard of the Emperors house, & then the rest of the Towne, with their pailes and buckets to take off the hallowed water for drinke, and other vies. You shall also see the women dip in their children over head and cares, and many men and women leape into it, fome naked, fome with their clothes on, when fome man would thinke his finger would freeze off, if he should but dip it into the water. When the men haue done, they bring their horfe to the Riuer to drinke of the fanctified water, and so make 60 them as holy as a horse. Their set day for the solemne action of hallowing their Rivers, is that

we call Twelfib-day. The like is done by other Bishops in all parts of the Realme. Their manner is also to giue it to their ficke in their greatest extremities thinking that it will Incir manner is anothing of the incirculation of th fonable superstition, as did the Lord Borrie his onely sonne, as my being at the Meske: whom Holy, was a

Gruellblind-

he killed (as was faid by the Physitians) by powring into him cold Holy-water, and presenrefle of uper- ting him naked into the Church, to their Saint Baffles, in the cold of Winter in an extremitie of fickeneffe.

They have an Image of Christ, which they call Nernebi, ( which signifieth as much as Made without hands) for so their Priests, and superstition withall perswadeth them it was. This in their Processions they carry about with them on high vpon a pole, enclosed within a Pixe, made like a Lanthorne, and doe reuerence to it as to a great myfferie.

Brewing with

At every brewing their manner is likewife to bring a dish of their woort to the Priest within the Church: which being hollowed by him, is powred into the brewing, and so giveth it fuch a vertue, as when they drinke of it they are feldome fober. The like they doe with the first fruits of their Corne in Haruest.

Pilm-funday.

They have another Ceremony on Palm-funday, of ancient tradition : what time the Patriarch rideth through the Morke, the Emperour himselfe holding his horse bridle, and the people crying Hofanna, and spreading their vpper garments under his horse feet. The Emperour hath of the Patriarch for his good service of that day two hundred Rubbels of standing penfion. Another pageant they have much like to this, the weeke before the Nativitie of Christ: when euery Bishop in his Cathedrall Church, setteth forth a shew of the three children in the When early bushes the Angell is made to come flying from the roofe of the Church, with great admiration of the lookers on, and many terrible flashes of fire are made with rofen, and gun-pow. der, by the Chaldeans (as they call them) that run about the Towne all the twelue dayes, dif- 10 guifed in their players coats, and make much good spore for the honor of the Bishops pageant. At the Motke, the Emperour himselfe, and the Empresse neuer faile to be at it, though it be bet the same matter plaid enery yeere, without any new invention at all.

Fafts.

Besides their fasts on Wednesdayes, and Fridayes throughout the whole yeere, (the one because they say Christ was fold on the Wednesday, the other because he suffered on the Friday) they havefoure great Fafts or Lents every yeere. The first, ( which they call their great Lent) is at the same time with ours. The second, about Mid-summer. The third, in Haruest time. The fourth, about Hallontide : which they keepe not of pollicie, but of meere superstition, Inthele great Lent, for the first weeke, they eat nothing but bread and falt, and drinke nothing but water, neither meddle with any matter of their vocation, but intend their firining and falling on 10 ly. They have also three Vigils, or Wakes in their great Lent, which they call Stoignie and the last Friday their great Vigil, as they call it. What time the whole Parish must be present in the Church, and watch from nine a clocke in the Euening, till fixe in the morning, all the while standing, saue when they fall downe and knocke their heads to their Idols, which must bee an hundred and seucntie times just through the whole night.

Vigils. Burialls.

About their burialls alfo, they have many superstitious and prophane Ceremonies : asputting within the finger of the corps, a letter to Saint Nicolas : whom they make their chiefe mediatour, and as it were the porter of heaven gates, as the Papifis doe their Peter.

In Winter time, when all is conered with snow, and the ground so hard frozen, as that no spade nor pick-axe can enter their manner is not to bury their dead, but to keepe the bodies ( fo ma- 40 ny as die all the Winter time ) in an house, in the suburbs, or out-parts of the Towne, which they call Bobsedom, that is, Gods house: where the dead bodies are pyled up together, like billets on a woodftacke, as hard with the froft as a verie ftone, till the Spring-tide come, and resolueth the frost : what time euerie man taketh his dead friend, and committeth him to the ground,

Monehs minds

They have befides their yeeres and moneths mindes for their friends departed. What time they have prayers faid over the grave by the Priest: who hath a peny ordinary for hispaines. When any dieth, they have ordinary women mourners, that come to lament for the dead partie : and frand howling over the body after a prophane and heathenish manner (sometimes in the house, sometimes bringing the body into the back-side, asking him what he wanted, and 50 what he meant to die. They bury their dead, as the party vied to goe, with coat, hofe, bootes, hat, and the rest of his apparell.

Many other vaine and imperfittious Ceremonies they have, which were long and tedious to report. By these it may appeare how farre they are fallen from the true knowledge, and practice of Christian Religion, having exchanged the Word of God for their vaine Traditions, and brought all to externall and ridiculous Ceremonies, without any regard of Spirit and Truth, which God requireth in his true worship.

The Emperours private behaviour, so much as may be, or is meet to bee knowne, is after this manner. Hee riseth commonly about source a clock in the morning. After his appar- so Of the Empe. rours domerelling and washing, in commeth his ghostly Father, or Priest of his chamber, which is named intheir tongue, Orerz Dubouna, with his Croffe in his hand, wherewith he bleffeth him, laying it first on his forchead, then voon his cheekes, or fides of his face and then offereth him the end of it to kiffe. This done, the Clerke of the Croffe (called Chreiby Deyack Profery ) bringeth

into his Chamber, a painted Image, representing the Saint for that day; for every day with into his Champer, a panieto innigo, representing an annual transport of the placeth among the His private them hath his fewerall Saint, as it were the Patrone for that day. This hee placeth among the His private that the private of the placeth among the private that the private rest of his Image Gods, wherewithall his Chamber is decked, as thicke almost as the wall can Prayer. beare, with Lampes and Waxe-candles burning before them. They are very coffly and gorgeously decked with Pearle and Precious Stone. This Image being placed before him, the Emperour heginneth to crosse himselfe after the Russe manner, hrst, on the fore-head, then on both lides of his brest, with Aspody Powelny, Powelny mena bospody, facroy mena grasnick Sybodefina; which is as much to fay, as, Helpe me, O Lord my God, Lord comfort me, defend and keepe me a Sinner from doing enil, Je. This he directeth towards the Image, or Saint for that day, whom hee 10 nameth in his Prayer, together with our Lady (whom they call Procheste) Saint Nicholas, or fome other, to whom he beareth most denotion, bowing himselfe prostrate vnto them, with

knocking his head to the very ground. Thus he continueth the space of a quarter of an houre of

Then commeth againe the Ghostly Father or Chamber Priest, with a Silver Bowle full of Holy-mater, which they call in Ruffe, Sweta Voda, and a sprinkle of Basill (as they call it) in his hand : and so all to besprinkleth first the Image Gods, and then the Emperour. This Holy-water is brought fresh every day from the Monasteries, farre and neere sent to the Emperour from the Abbot or Prior, in the name of the Saint, that is Patrone of that Monastery, as a speciall token of good will from him.

These Denotions being ended, he sendeth into the Empresse, to aske whether she hath rested in health, &c., And after a little pawfes goeth himfelfe to falute her in a middle Roome betwixt both their chambers. The Empresse lyeth a-part from him, and keepeth not one chamber, nor Table with the Emperour ordinarily, faue vpon the Eue of their Lents, or common Fafts: what time she is his ordinary Ghest at Bed and Boord. After their meeting in the morning, they goe together to their private Church or Chappell, where is faid or fung a morning Service (called Zautrana) of an house long or thereabouts. From the Church hee returneth home, and fitteth The Emperour him downe in a great chamber, to be seene and saluted by his Nobilitie, sich as are in fauour a- giuethprebout the Court. It he have to fay to any of them, or they to him, then is the time. And this is lence every ordinary, except his health, or some other occasion alter the custome,

30 About nine in the morning, he goeth to another Church within his Caftle: where is fung by Priests, and Choristers, the high Service (called Obeadna, or Complin) which commonly lasteth two houres: the Emperour in the meane-time talking commonly with some of his Councell, Nobilitie, or Captaynes, which have to fay to him, or he to them. And the Councell likewife conferre together among themselues, as if they were in their Councel-house. This ended, he returneth home, and recreateth himselfe vntill it be Dinner time.

He is ferued at his Table on this manner. First, query Dish (as it is deliuered at the Dresser) is The Emperor taffed by the Cooke, in the prefence of the high Sceward, or his Deputie. And so is received by Service whis the Gentlemen-wayters (called Shifter) and by them carryed up to the Emperours Table, the Toble.

high Steward or his Deputie going before. There it is received by the Sewer (called Eraffrey) 40 who gueth a tafte of every Dish to the Tafter, and so placeth it before the Emperour. The number of his Difhes for his ordinary Service, is about feventy: dreffed fomewhat grofly, with much Garlike, and Salt, much after the Duich manner. When hee exceedeth vpon some occasion of the day, or entertainment of some Ambassadour, hee hath many more Dislies. The Service is fent vp by two Dishes at a time, or three at the most, that he may eate it warme, first the baked, then the Roass meats, and last the Broths. In his dining chamber is another Table : where sit the chiefe of his Nobility that are about his Court, and his Ghoffly Father, or Chapleine. On the one fide of the chamber flandeth a Cubboord, or Table of Plate, very faire and rich, with a great Cifterne of Copper by it, full of Ice and Snow, wherein fland the Pots that ferue for that meale. The Taster holdeth the cup that he drinketh in all Dinner time, and delivereth it voto him with a fay, when he calleth for it. The manner is to make many Diffnes out of the Service after it is let on the Table, and to fend them to fich Noblemen and Officers as the Emperour liketh best.

And this is counted a great fauour and honour. After dinner he layeth him down to rest, where commonly he taketh three houres sleep, except he employ one of the houres to bathing, or boxing. And this cultome for sleeping after Dinner, is an ordinary matter with him, as withall the Ruffer. After his sleep, he goeth to Even-long (called Veclurua) and thence returning, for the most pare recreatesh himselfe with the Empresse till Supper time, with Iesters and Dwartes, men and women, that tumble before him, and sing many

Songs after the Ruffe manner. This is his common recreation betwixe meales that he most delights in. One other speciall recreation, is the fight with wild Beares, which are caught in Pits Bearebying. 60 or Nets, and are kept in barred Cages for that purpole, against the Emperour bee disposed to see the pastime. The fight with the Beare is on this fort. The man is turned into a Circle walled round about, where hee is to quite himfelfe fo well as hee can: for there is no way to flye out. When the Beare is turned loofe, he commeth vpon him with open mouth ; if at the first push he miffe his ayme, so that the Beare come within him, hee is in great danger. But the wilde Beare

being very scarce, hath this quality, that giveth advantage to the Hunter. His manner is, when he affayleth a man, to rife vp right on his two hinder-legs, and fo to come roaring with openmouth vpon him. And if the Hunter then can puffi right into the very breft of him betwixt his fore-legs (as commonly he will not miffe) resting the other end of their Boare-speare at the fide of his foot, and so keeping the Pike still towards the face of the Beare, hee speedeth him commonly at one blow. But many times thefe Hunters come short, and are either slaine, or milerably torne with the Teeth and Talents of the fierce Beaft. If the partie quite himselfe well in this fight with the Beare, he is carried to drinke at the Emperours Seller doore : where he drinketh himselfe drunke for the honour of Hospodare. And this is his Reward for aduenturing his life, for the Emperours pleasure, To maintayne this pastime, the Emperour hath certayne Huntsmen that are appointed for that purpose to take the wild Beare. This is his recreation commonly on the holy dayes. Sometimes hee spendeth his time in looking vpon his Gold-smithes and Iewellers, Taylors, Embroyderers, Painters, and such like, and so goeth to his Supper. When is draweth towards Bed-time, his Priest faith certayne Prayers : and then the Emperour blesseth and croffeth hunfelte, as in the morning for a quarter of an houre or thereabouts, and so goeth to

Emperour Theodore deferibed.

The Emperour that now is (called Theodore Inanowich) is for his person of a meane stature. fome-what low and groffe, of a fallow complexion, and inclining to the Dropfie, Hawke-noted. uniteady in his pale, by reason of some weaknesse of his limmes, heavy and vnactive, yet commonly smiling almost to a laughter. For qualitie otherwise, simple and slow witted, but very 20 gentle, and of an easienature, quiet, mercitull, of no martiall disposition, nor greatly aptior matter of Policie, very Superititious, and infinite that way. Befides his private Devotions at home, he goeth euery weeke commonly on Pilgrimage, to some Monasterie or other that is neerest hand. He is of thirtie foure yeeres old, or thereabouts, and hath reigned almost the space of fix yeeres.

houthold Of-

Herfe.

Pilgrimage.

THe chiefe Officers of the Emperours houshold, are these which follow. The furth, is the Office of the Boisven Conesheus, or Master of the Horse. Which contayneth no more then is ross private, or expressed by the name, that is, to be Over-seer of the Horse, and not Magister Equitum, or Maiter of the Horsemen. For he appointeth other for that Service , as occasion doth require (as 20 before was faid.) He that beareth that Office at this time, is Borris Federawich Godonoe, Brother Mafter of the to the Empresse. Of Horse for Service in his Warres (besides other for his ordinary vies) he hath to the number of 10000, which are kept about Mosko.

The Lord Steward The Lord Treasurer. Comptroller. Harbengers.

The next is the Lord Steward of his houshold at this time, one Gregorie Vafilowich Godanoe. The third, is his Treasurer, that keepeth all his Moneyes, Iewels, Plate, &c. now called Signar Vafilowich Godonoe. The fourth, his Comptroller, now Andreas Petrowich Clefinine. The fift, his Chamberlaine. He that attendeth that Office at this time, is called Eftoma Bifabroza Paftelnif-Chamberlaine chay. The fixt, his Tafters, now Theodore Alexandronich, and Iman Vafilowich Godonoe. The feuenth, his Harbengers, which are three Noblemen, . no diners other Gentlemen that do the Office under them. These are his ordinary Officers, and Offices of the chiefest account.

Of Gentlemen, beside that wait about his Chamber, and Person (called Shilfer Strapfer) there the Chamber. are two hundred, all Noblemens Sonnes. His ordinary Guard is two thousand Hagbutters, ready with their Peeces charged, and their Match lighted, with other necessary Furniture, continually day and night: which come not within the house, but waite without in the Court or Yard where the Emperour is abiding. In night time there lodgeth next to his Bed-chamber, the chiefe Chamberlaine, with one or two more of best trust about him. A second chamber off, there lodge fix other of like account, for their trust and faithfulnesse. In the third chamber lye certayne young Gentlemen, of these two hundred, called Shilfer Strapfer, that take their turne by forces enery night. There are Groomes besides that watch in their course, and lye at enery gate and doore of the Court, called Estopnick.

Groomes.

The Hag-butters or Gunners, whereof there are two thousand (as was said before) watch about the Emperours Lodging, or Bed-chamber, by course two hundred and fiftie every night, and two hundred and fiftie more in the Court-yard, and about the Treasure-house. His Court or house at the Moske, is made Castle-wise, walled about with great store of faire Ordnance planted upon the wall, and contayneth a great breadth of ground within it, with many dwelling houses. Which are appointed for such as are knowne to be sure, and trustic to the Emperour.

Chap. 28.

THe private behaviour and qualitie of the Ruffe people, may partly be understood by that Or the primate which hath beene fayd, concerning the publike State and viage of the Countrey. As tou-Awhite hath beene sayd, concerning the publise State and viage of the Country, as two-pulatine of the hing the natural labit of their bodies, they are for the most part of a large fize, and of very of fellily bodies i accounting it a grace to be formewhat große and burley, and therefore they non-Constitution rith and spread their Beards, to have them long and broad. But for the most part they are very of their bodies vnweldy, and vnactiue withall. Which may bee thought to come partly of the Climate, and the numbneffe which they get by the cold in Winter, and partly of their Dyet that flandeth

CHAP. I. Russian drinking, bathing, extremes; womens painting; Attire.

most of Roots, Onions, Garlike, Cabbage, and such like things that breed groffe humours, which they vie to eate alone, and with their other meates.

Their Dyet is rather much, then cur ous. At their Meales they beginne commonly with a Their Dyet. Chark, or imall cup of Aqua-vite (which they call Riffe Wine) and then drinke not till towards the end of their Meiles, taking it in largely, and all together with kiffing one another at Drinking and euery pledge. And therefore after Dinner there is no talking with them, but euery man goeth killing. to his bench to take his after-noones fleepe, which is as ordinary with them as their nights reft. Sleeping. When they exceed, and have varietie of Difhes, the first are their baked meates (for roaft meats they vie little) and then their Broaths or Pottage. To drinke drunke, is an ordinary matter 10 with them euery day in the Weeke. Their common Drinke is Mead, the poorerfort vie water,

and a thm Drinke called Quaffe, which is nothing else (as wee fay) but water turned out of bis wits, with a little Bran meaihed with it.

This Dyet would breed in them many Difeafes, but that they wie Bath-floues, or Hot-hou- Bath floues, fes in itead of all Physicke, commonly twice or thrice every Weeke. All the Winter time, and almost the whole Summer , they heate their Peaches , which are made like the Germane Bathftones, and their Porlads like Quens, that so warme the House, that a stranger at the first shall hardly like of it. These two extremities, specially in the Winter of heate within their Houses, and of extreame cold without, together with their Dyet, maketh them of a darke and fallow complexion, their skinnes being tanned and parched both with cold and with heat: specially

20 the women, that for the greater part are of farre worse complexions then the men. Whereof the cause I take to be their keeping within the Hot-houses, and busying themselues about the heating, and viing of their Bath-Houes and Peaches.

The Ruffe because that he is vied to both these extremities of heate and of cold, can beare them both a great deale more patiently then strangers can doe. You shall see them sometimes (to Extremiles, feafon their bodies) come out of their Bath-stones all on a froth, and fuming as hote almost as a Pigge at a Spit, and prefently to leape into the River starke naked, or to powre cold water all ouer their bodies, and that in the coldest of all the Winter time. The women to mend the bad hue of their skinnes, v'e to paint their faces with white and redde colours, so visibly that every Women dans. man may perceive it. Which is made no matter, because it is common, and liked well by their bers.

30 Hisbands: who make their Wives and Daughters an ordinary allowance to buy them colours to paint their faces with all, and delighe the melues much to fee them of foule women to become such faire Images. This parcheth the skinne, and helpeth to deforme them when their pain-

They apparell themselves after the Greeke manner. The Noblemans attyre is on this fashion. First, a Taffis, or little night cap on his head, that concreth little more then his crowne, commonly very rich, wrought of Silke and Gold Thread, and fet with Pearle and Precious Stone. His The Noblehead he keepeth thauen close to the very skin, except hebe in some displeasure with the Emper, mans anyae, our. Then he suffereth his haire to grow and hang downe vpon his shoulders, couering his face as

vely and deformedly as he can. Ouer the Taffia he weareth a wide Cap of blacke Foxe (which 40 they account for the best Furre) with a Trava, or long Bonnet put within it, flanding vp like a Persian or Babyloman Hat, About his necke (which is seene all bare) is a Coller set with Pearle and Precious Stone, about three or foure-fingers broad. Next ouethis shirt (which is curiously wrought, because hee strippeth himselfe into it in the Sommer-time, while hee is within the house) is a Shepon, or light Garment of Sill e made downe to the knees, buttoned before; and then a Cafran or a ciole Coat buttoned, and girt to him with a Porfan Girdle, whereat he hangs his Kniues and Spoone. This commonly is of Cloth of Gold, and hangeth downe as low as his ankles. O ser that he weateth a loofe Garment of some rich Silke, surred and faced about with fome Gold Lace, called a Ferrie. Another over that of Chamblet, or like Stuffe called an Alkaben, seemed and hanging low, and the Cape commonly brooched, and set all with Pearle. When

so he goeth abroad, he catteth ouer all thefe (which are but fleight, though they feeme to be many) another Garment called an Honoraiker, like to the Alkaben, lave that it is made without a Coller for the necke. And this is commonly of fine Cloth, or Camels haire. His Buskins (which hee weareth in itead of Hole, with Linnen Folles under them in itead of Boot-hole) are made of a Persian Leather called Saphian, Embroydered with Pearle. His viper flocks commonly are of Cloth of Gold. When he goeth abroad, hee mounteth on Horle-backe, though it bee but to the next doore; which is the manner also of the Boiarskey, or Gentlemen.

ext coore I which is the maintraneou, the Dimerstry of Schalemen.

The Boiarskey, or Gentlemans attyre is of the ame fallion, but different in Stuffe: and yet. The Gentlehe will bane his ("ffan or Ynder coar sometimes of Cloth of Gold, the rest of Cloth or Silke, management of the Country of the Vhe Noble woman (called Chyna Boiarfhena) weareth on her head, first a Caull of some fort. The Noble-

60 Silke (which is commonly called Red) and ouer it a Fruntlet, called Obrofa, of white colour, womans at Ouer that her Cap (made after the Coife-fashion of Cloth of Gold) called Shaple Zemphie, tice. edged with some rich Furre, and set with Pearle and Stone. Though they have of late begun to distaine Embroydering with Pearle about their Caps, because the Disches, and some Merchants Wines have taken up the fashion. In their cares they weare Earenings (which they call

#### To the Reader.

Thought good here to give an account of my course. Having spent much time in that other World. fo little known to This (Tartaria and China) that the parts least known might be made best known; I have comme neerer home, to Rulla, and her neighbours, the neerer, or Chrim Tartars, the Samoveds, and others; whereof Doctor Fletchers Story being so elaborate (where, though the centre bee Russia, yet his circumference is more generall) and by men indictions which have in those parts enioyedmost bonourable employment, and exactest intelligence, commended; I have given our the first

20 place. And if some terme bee mollified, or some few things omitted, it is not to defrand Thee of the Historie (which for substance is whole, as by perusalt is found) but not to destand our industrious Countrymen in sheir merchandizing mysterie, wherein some perhaps would hence seche occasion of undermining. For like cause I have given the next place to Capsaine Edge , (the one our gowned Generall by Land , the other in his generall Historic also by Sea) as described by his ten year as Voyages , and his other Merits. As for the question of Willoughbies Land, I list not to dispute it ; but I strinke, nekher Hollander ( as is also confessed by the French Booke, called, The Historie of Spitsberghe a on the 2 H. G. A. ... Dutch behalfe) nor any other have found any fuch Lands as bis Stere describes, but some part of those consultant Ductive comps for my mane wee call, Greenland (bemfocuer the makers of Maps and Globes may feed on with a generall name wee call, Greenland (bemfocuer the makers of Maps and Globes may feed on with create Lands and Hands at pleasure, especially in onknowne places) and the first setled, ordinary, and or length, say to

20 derly Voyages for the Whale killing, and the most for discourse in those parts have been made by the Hesting very English, their gaynes awakening the Hollander to that enterprise, and that also (as elsewhere in the que no start-World) by English guides. That which I most greene at in this contention, is the detention of further niers Nont iron defensery to the Pole and beyond (where it is not likely to be colder then here, and at the Article circle: 72 degrees and au in the Red Sea, Ormus, and the Countrey about Ballara on this fide the Tropike, is found greater can Pips. beat then under the Line it felfe) the defire of gayne enery where can fing debate, and confequently loss 72 in Sir Hugh of the best gaine both in Earth and Heanen. Merchants might get the World, and give ve the World Willoughbies better, if Charitie were their Needle; Grace their Compas, Heanen their Hauen, and if they would Booke penhaps tabe their height he abstrains the Space of Richtenguinelle in the Compas, Heanen their Hauen, and if they would was militien take their height by observing the Sunne of Righteousnesse in the Scripture-astrolabe, and foun- for 17-their fidong their depth by a Leading Faith, and not by a Leadden bottomleffe Couetoulneffe : that is, if gure of 7, and they would feeke the Kingdome of Heaven brit, all things should be eadded; shey should finde that of 2, in

they would feeke the Kingdome of Heaven hrit, all things inoutd nee acuten; vory journa innae World enough in the Indian, and Polare Worlds, and wee and they floud arrive at better knowledge of oil writing, being very like World enough to the initiations. And of all men (that I may a little further answers that Historie of Spirite each other, to berghe) I would be glad to fee agreement betwire the English and Durch, both became I bonour that that the last r. Nation, as bath appeared in thus whole worke of Voyages, in which and of which the Durch are so great with a little a part: and because in Region, Religion, Original Nation, ingenious and ingenuous disposition, and wuch of the a part: and occusie in Acquin, actions, vigoran exacton, ingenious and ingenious ausposition, and running Pentions where the sings both on our Stage) the glory of Nanigation, they are so neere vs., and worthe to running Pention be bonored, it is true that every where the English hath beene the elder Boother, a Dollar, and Ductor, this hand, to the Hollanders, in their Martiall feats at home, and Neptunian exploits abroad, (that I mention I amfair, is c not their permitted wealthis filling on the English shoare) whom had they followed with as true and due the old inition 40 respett, as with happie successe; quarrels had not so distracted and distorted both sides. I appeale to Cithitime.as

Officer and appeared of the property of the pr Ductinggenius, 1 can roop and any interest of the property of finding America, and the Spaniards with his band, the happiness. But for the North America, and the robote Northern New World, Cabota before or and perhapsal bred at leaft in England, was either Aller or Author For the Dutch, I have frewed, for the compassion of his handof the World, and for the East Indies before, that our Drake, Candith, Mellis, Dauis, Adams, Se. Mapshau were their Fore-runners, Pilots, and Guides: Tea, their New-found Land Popages, and all the Nor-made on 1911 therne coast of America were discoursed by Sebastian Cabota, and other Englishmen. Sargee) of two Inches or more compasse, the matter of Gold see with Rubies, or Saphires, or fome like Precious Stone. In Sommer they goe often with Kerchiefs of fine white Lawne, or Cambricke, fained under the chinne, with two long Taffels pendent. The Kerchiefe spotted and fet thicke with rich Pearle, When they ride or goe abroad in raynie weather, they were white Hats with coloured bands (called Stapa Zempikey.) About their neckes they weare Collers of three or foure-fingers broad, fet with rich Pearle and Precious Stone. Their vpper Gazment is a loofe Gowne called Oposhen, commonly of Scarler, with wide loofe sleenes, hanging downe to the ground buttened before with great Gold Buttons, or at least Siluer and gilt, nigh as bigge as a Wal-nut. Which hath hanging ouer it fastned under the Cap, a large broad Cape as bigge as a Walling. Which was almost to the midst of their backes. Next voder the lo Opoiken or voper Garment, they weare another called a Leanich that is made chose before with great wide fleoues, the cuffe or halfe fleeue vp to the elbowes, commonly of Cloth of Gold: and order that a Ferris Zemskey, which hangeth loofe buttoned throughout to the very foot, On the hand wrests they weare very faire Bracelets, about two fingers broad of Pearle and Precious

Stone. They goe all in Buskins of White, Yellow, Blue, or some other coloured Leather, embroydered with Pearle. This is the attyre of the Noble-woman of Ruffie, when shee maketh the best shew of herselfe. The Gentlewomans apparell may differ in the Stuffe, but is all one for the making or fashion.

As for the poore Monfiek and his Wife they goe poorely clad. The man with his Odnorates, or loofe Gowne to the small of the legge, tyed together with a Lace before, of course white or blue cloth, with some Shabe or long Wast-coat of Furre, or of Sheep-skinne vnder it, and his furred Cap, and Buskins. The poorer fort of them have their Odnoratkey, or upper Garment, made of Cowes haire. This is their Winter Habit. In the Sommer time, commonly they weare nothing but their shirts on their backes, and Buskins on their legs. The woman goeth in a pel or blue Gowne, when the maketh the best shew, and with some warme Shube of Furre under it in the Winter time. But in the Sommer, nothing but two (hirts (for fo they call them) oneouer the other, whether they be within doores, or without. On their heads, they weare Caps

of some coloured Stuffe, many of Veluet, or of Cloth of Gold : but for the most part Kerchiefes. Without Earings of Siluer or some other Metall, and her Crosse about her neck, you shall see no Russe woman, be shee Wife, or Maide.

Theirwits and

As touching their behaulour, and qualitie, otherwise, they are of reasonable capacities, if 30 they had those meanes that some other Nations have to trayne vp their wits in good Nurture, and Learning. Which they might borrow of the Polonians, and other their Neighbours, but that they refuse it of a very selfe-pride, as accounting their owne fashions to be farre the best. Partly also (as I said before) for that their manner of bringing vp (void of all good Learning, and Civill behaulour) is thought by their Gouernours most agreeable to that State, and their manner of Gouernment. This causeth the Emperours to bee very wary for excluding of all Peregrinitie, that might alter their fashions. Which were lesse to bee disliked, if it set not a print into the very minds of his people. For as themselves are very hardly and cruelly dealt with all by their chiefe Magistrates, and other Superiours, so are they as cruell one against another, specially over 40 their inferiours, and fuch as are vinder them. So that the baseft and wretchedelt (bristianoe (as they call him) that stoopeth and croucheth like a Dogge to the Gentleman, and licketh up the Crueltic of the dust that lyeth at his feet, is an intollerable Tyrant, where hee hath the aduantage. By this Ruffe people. meanes the whole Countrey is filled with Rapine, and Murder. They make no account of the life of a man. You shall have a man robbed sometime in the very streets of their Townes, if he goe late in the Euening; and yet no man to come forth out of his doores to refcue him, though he heare him cry out. I will not speake of the strangenesse of the Murders, and other cruelities committed among them, that would scarily be believed to be done among men, specially such as professe themselves Christians.

The number of their vagrant and begging poore is almost infinite: that are so pinched with 50 Famine and extreame need, as that they begge after a violent and desperate manner, with Gine me and cut me, Gine me and kill me; and such like Phrases. And yet it may be doubted whether is the greater, the Crueltie or Intemperancie that is vied in that Countrey. I will not speake of Intemperancy. it, because it is so foule and not to be named. The whole Countrey ouerstoweth with all sinne of that kind. And no maruell, as having no Law to restraine Whoredomes, Adulteries, and like vncleannesse of life.

As for the truth of his word, as fome fay, the Ruffe neither beleeveth any thing that another man speaketh, nor speaketh any thing himselfe worthy to bee believed. These qualities make them very odious to all their Neighbours, specially to the Tartars, that account themselves to be honeft and just, in comparison of the Russe. It is supposed by some that doe well consider of 69 the State of both Countries, that the offence they take at the Ruffe Gouernment, and their manner of behautour, hath beene a great cause to keepe the Tartar still Heathenish, and to millike as he doth of the Christian protession.

The Mouficks

or common

Silver by a Dutchman (Michael Mercator, Nephew to Gerardus) many yeeres before Scouten or Mane intended that Voyage. As for Nous Zemla by Stephen Burrough, and others, long before discovered, they also have given new names, which I envie not: onely I feare a væ soli, and hate ingratitude both ours and therrs. But too much of this. Next to this more generall Discourse shall follow the Dutch Northerne Voyages, and the English North-easterne : after which wee will take a more complementall leaue of that Continent, and from thence visite the Northerly and North-westerne Discoue. ries; at once hunting for a New World and a New passage to This.

### CHAP. II.

A briefe Discouerie of the Northerne Discoueries of Seas, Coasts, and Conntries, delinered in order as they were hopefully begunne, and have ever fince bappily beene consinued by the fingular industrie and charge of the Wor-Society of Muscouia Merchants of London, with the ten severall Voyages of Captaine THOMAS EDGE the Authour

Greenland first discoursed by Sir HVOR WILLOVGHBIE: the Voyages of FROBISH'ER, PET and IACKMAN, DAVIS, the Dutch; First Morse and Whale-killing, with further Discoueries.

W.Gemeticensis

He Northerne parts of the World have ever beene held to be Officing Gentium 6 velut Vasina Nationium, Natures Shop and Store-house of Men, better furnished then any other part of the Earth, and from whence those notable Inundations came first of the Cymbrians and Tensons, in the time of the antient Roman; and secondly of the Gothes and Vandals under Atila, to the confusion of things both Dinne and Humane in all the Southerne parts of Europe, as farre as Barbarifine could preuaile against Civilitie and Religion. For remedie whereof the Townes alongst

the Baltick Sea entred into a confederacy under the names of the Hass Townes, and undertooke the keeping of those Northerne people, and the securing of these Southerne Kingdomes from any the like ouerflowings, vpon such Priniledges and Immunities as were granted and agreed vnto them by all the Southerne Princes, and according to such Lawes as were made and proui- 40 ded for the maintenance and strength of the faid Hans Townes, amongst which the supreme and fundamentall Lawe was that none of these Nations so secured should have trade or commerce in any parts beyond the Baltike Seas, to the end the barbarous people might not bee enabled thereby to practife or moue against the Hans Townes : which was the cause together also with the extremitie of cold, that those Northerne Seas were neuer looked vnto vntill the yeere 1553. At which time the trade of this Kingdome waxing cold and in decay, and the Merchants incited with the fame of the great masse of riches which the Portugals and Spaniards brought home yeerely from both the Indies, entred into a refolution, notwithilanding the prohibition of the Hans Law to discouer the Northerne Seas, which so long had beene frozen and Cathay. See I. a. that up; and to fee whether they could not affoord a passage to Cathay and the East Indies, and chaptered in mix vp rame or recovered to produce the mix vp rame or recovered to the mix vp rame or recovered to the mix vp rame or recovered to the mix vp rame of t age, with Richard Chancellor Captaine of the Edward Bonanemure, together with a third flip, called the Bona Confidentia. These three ships falling downe from Ratcliffe, the tenth of May in the forefaid yeere went on their Voyage, and proceeding as farre as the Cape of Norway, they were seuered by a tempest. Chancellor after he had stayed at Ward-house seuen dayes, expe-Sting the Admirall and the other ships, according to a former appointment upon any such cafualtie, and hearing nothing of them, went on, and discouered the Bay of Saint Nicolas, and

fetled a trade there, which hath continued to these times. Sir Hugh Willomebbie was driven to the height of 72. \* where heefell voon an Iland, now knowne by the name of Willowgbbie Land, and lieth from Sinam ( vpon the Continent of Nor- 60 tude, the Land way East and by North an hundred and fixtie leagues or thereabouts, from thence he went North Stands in 77. and North-west, and within eight dayes after he tell upon a Land which lay West South-west, and East North-east, betweene 74. and 75. degrees of latitude, and plying Westward along by

## CHAP.2. S.I. Greenland discouered by Sir H. Willoughbic, Borough, &c. 462

the Land, he was driven by the wind to put to Sca againe, vntill the wind came about. Then they made towards the Land againe, and bare with it, but finding that place wife for landing, they haled out againe, running along the Land fixteene leagues North-west, where they found a faire Bay, went on Land and found the place inhabited. From thence they put to Sea againe. runne along the coalt for fortie leagues together, till at length they came to an ancior within two leagues of the shoare, where they landed, and found two or three good Harbours.

Afterwards they entred into the Hauen which ranne vp into the Maine a- Greenland discoursed by Sir Hugh bout two leagues, where they remained for the space of a weeke vpon the willaughbie. This Voyage was writmaine Land. They found Beares, great Deere, Foxes, and other beafts. They tenby Sir H. Will. and found in his Io fent out three men three dayes journey to the South-west, and three others also thin, In lanuarie after he was aline, fent out three men three dayes sourney to the South-west, and three others and appeares by a Will of Gab. Will. full West, all which returned after divers dayes trauelling, and found no people his kindman, subferibed by Sir Hag. nor any likelihood of habitation. And this is that Land which now is called wifeness which Will I now haue. Greenland, or King lames his New-land, and is knowne to the Hollanders by the and keepe as a Relike of that worname of Spafbergen. Sir Hugh Willoughbie returned into Lapland, where he and this discourser and first finder of his companie were frozen to death, in the Hauen called Arzina, neere Kegor.

The Muscomia Merchants having thus settled a trade in Russia, and being incorporated by the name of, The Merchants of England, for the discourrie of new trades, purfued their first relolutions for finding a way to Cathay by the North-east, and in the yeere 1556. fent out Stephen Burrough, for discouerie of the River Obb, who proceeding forwards in that Voyage discouered 20 the River Pechora, the Streights of Vargats and Nonazembla "; went on shoare vpon the Iland \* See Hall, V of Vaigats, and upon the North Continent of Ruffia; met with the Samoeds, observed their 10m.1.psg.274. manner of life, their Religion, their Sacrifices to their rude and ill staped Idols; and the yeere

being ipent, returned into Ruffia.

The Companie having fought for the North-east passage, and finding such difficulties as are mentioned in their particular Journals, refolued to make triall, if the North-west part could not affoord a passage to the Indies, which was the first and maine scope of their Northerne Discoueries. And in the yeare 1 e 76, they fent forth Sir Martin Frebifber with two Barkes, who comming into the height of 62, or thereabouts, found a great Inlet, now knowne by the name of Sir M. Frebilber Frobifiers Streights, into which he put himfelfe, and fayled fixtie leagues with a mayne Land on Hatt. tom, 3.294 20 each tide, and to for that yeere returned.

The next yeere following he made a second Voyage to that place, purposely to lade himselfe with a kind of Oare, which the yeere before he had found there, and gaue hope by the colour to yeeld Gold, and being laden with some quantitie, returned.

The yeere following, being 1578. having made tryall here of that Oare, and finding it not to fall out according to his expectation, hee was furnished out to proceed in the further discouerie of those Streights, and entring into the same, made way so farre as hee thought fit, and then returned backe, having first taken possession thereof in the name of Queene Elizabeth of famous memorie, who called the place Meta incognita: he brought home some of the Natives,

and left iome of his men there.

In the yeere 1580, the Companie sent out a second Voyage for the discouerie of the River 1580. Obb, and thence to goe on to Cathay; furnishing forth two ships under the command of Arthur Pet and lack-Pet, and Charles Lackman, who following their instructions, arrived at Vaigats, passed those man, Hak tone Streights with a particular observation of those Ilands and places therein, plyed along the East 1.445. part of Nonazembla, and the North of Russia, and the Samoeds Countrey, so farre as the Ice would give them leave, and finding no possibilitie of passage by reason of the Ice, returned backe in the latter end of the yeere. By this time the Voyage of Saint Nicolas was knowne, and become a beaten trade. And the Companie sent out yeerely thicher ten or twelue ships, which returned fraighted with the commodities of that Countrey.

In the yeere 1583. by the leave and admittance of the Mosconia Companie, Sir Humfrey 50 Gilbert went out for the disconerie of the North part of Terra Florida, came into the great Ri- Sir H. Gilbers uer called, Saint Laurence in Canada, tooke possession of the Country, settled the government of Hakita-3. P.1432

the filhing there which is fo well knowne in thefe times. In the yeere 1,85. Master Iohn Danis was furnished out at Dartmouth with two Barkes, for the discouerie of the North-west, came into the height of 66. plyed along the coast, observed Master Danie the probabilitie of a paffage, and in the end of the yeere returned.

In the yeere following, being 1,86. hee went on againe in the further discouerie thereof, 6 feq. found a great Inlet betweene 55. and 56. of latitude, which gaue him great hope of a paffage, traded with the people there, and fo returned.

In the yeere 1587, hee made a third Voyage to those places, followed his course to the North 60 and North-west, to the Latitude of 57. degrees, having the Continent (which hee called America) on the West fide and Groineland, which hee named Desolation on the East, and going on the height of 86.degrees, the passage enlarged so that hee could not see the Westerne shoare. Thus he continued in the Latitude of 73. degrees in a great Sea free from Ice, of an vnmeasurable depth, but by the occasion of the departure of two Ships which were incompany with him,

Hak.to.3 - p. 93.

which hee left Fishing at a place, he returned home. This passage continueth the Name and me-Fretum Danis. morie or the first Discouerer, and is called Fretum Danis. And thus the Discouerie of the Northern Seas proceeded on from time to time, by the endeapour and charge of the Musconia Companie, vntill they had particularly discourred the Lands, Coasts, Ilands, Straights, Hauens, Bayes, Ruers and other places therein, and measured enery part thereof, by their often tracing to and fro: Together allo with the observation of the Commodities and Advantages, arising from curry part of the fame, continuing even vnto these times to haunt and frequent the parts which they had formerly found out; As by their yeerely Reportaries and Journals may appeare, and thateither without emulation or competition of any other Nation, that ever came into those parts or enterprifed any Discouerie there vntill of late yeeres, as appeares by this that followeth

Hal. Tom. I.

When Richard Chancelor had fetled a trade with lebn Vafilowich then Emperour of Ruffie, and his Ambassadourshad beene heere in England, to accomplish matters requisite for maintenance of the Amitie and Entercourse made and agreed voon betweene these two Crownes; King Philip, Queene Marie, Dukes also at that time of Burgundie, and Soueraignes of all the Netherland. made a grant of Priviledge vnto the Musconia Merchants for the fole Trade of those Seas, prohibiting all others to haunt and frequent the fame, without speciall Licence and consent of the favd Companie : which grant of Priviledge was accordingly enjoyed without diffurbance or interioping of the Hollanders, who out of obedience either to the Prohibition made by their Soneraigne, or for that they durft not adventure into these Seas, did not any way attempt to bee feene or appeare there, either for Discouerie or wrade of Merchandize, for the space of five and so twentie yeeres, after the Port of Saint Nicholas was first Discouered and found cut by the Es. gulb. For the Company having as is about mentioned, made their first Discouerie in the yeere 1552, there was neuer heard of any Netherlander that frequented those Seas, vntill the year 1578. At which time they first began to come to Cola, and within a yeere or two after, one John de Whale a Netherlander, came to the Bay of Saint Nicholas, being drawne thither by the perswasion of some English for their better meane of Interloping, which was the first man of that Nation that euer was seene there. And this as is formerly noted was fue and twentie yeeres after it was Discouered by the Musconia Merchants.

25. follow.

Afterwards the Hollanders crept in more and more, and in the yeere 1594, they made out Thele Voiages foure Ships for Discouerie of the North-east pussage to China, the Master Pylot whereof was 10 William Barrents, these came voon the Coast of Nonazembla to the Latitude of 77.degrees, drew backe againe towards the Straights of Vaigats, and then returned giving Names vnto iome places and Promontories upon that Land.

1595.

In the yeere 1595. They fent out a fecond Voyage, tracing the way through the Straightsof Vasgats in the same steps, as Pet and lackman had formerly passed, and so returned, In the veere 1 596. They fet out athird Voyage with two Ships, the one of which shaped her course from the Cape of Norway, to an Iland in the Latitude of 74. degrees, which wee call Cherie Iland, and they call Beare Iland, and from thence to Greenland, where Sir Hugh Willoughbie had beene two and fortie yeeres before, for fo long time there is betweene the nrst Discourse published 1613 thereof and the yeere 1596. And from thence to the North-east part of Nonazembla, in the 40 Latitude of 76. degrees, where they Wintred and loft their Ship, and came home with much In the yeere 1603. Stephen Bennet was imployed by the Companie, in a Ship called the Grace,

Hudfons Tout-

to those parts Northwards of the Cape, and was at Cherie Iland and killed some Sea-horses, and brought home Lead Oare from thence. In the yeere 1608, the faid fellowship fet foorth a Ship called the Hope-well , whereof William am willing to Hudson was Master, to discouer to the Pole, where it appeareth by his Sournall, that hee came to William Hudfon the height of 81 idegrees, where he gave Names to certayne places, vpon the Continent of Greenland formerly discouered, which continue to this day, namely, Whale Bay, and Hackluit Headto 81.Degrees. land, and being hindred with Ice, returned home without any further vie made of the Coun- 50 trey, and in ranging homewards, hee discourred an Iland lying in 71. degrees, which hee named

Thomas Welden, I bomas Edge the Author.

1610.

I mas Poole first

Heere it is to bee understood, that the Companie having by often refort and imployment to those parts , observed the great number of Sea-horses at Cherie Iland , and likewise the multitude of Whales, that shewed themselues upon the coast of Greenland; They first applyed themfelues to the killing of the Morces, which they continued from yeere to yeere with a Ship or two yeerely; in which Ships the Companie appointed Thomas Welden Commander, and in the yeere 1609, the Companie imployed one Thomas Edge their Apprentice, for their Northeren Voyage, and joyned him in Commiffion with the forefayd Welden. Now the often vfing of Cherie Hand, did make the Sea-horse grow scarfe and decay, which made the Companie looke out 60

for further Discoueries. In the yeere 1610. the Companie fer out two Ships, viz. the Lioneffe for Cherie Iland, Thomas Edge Commander ; and the Amitie, for a Northerne Discouerie, the Master of which Ship was longs Poole: who in the moneth of May fell with a Land, and called it Greenland, this is the

Land that was discourred by Sir Hugh Willoughby long before, which Ship Amitie continued vp. \* See Baffins on the coast of Greenland, discouring the Harbours and killing of Morces, vitil the moneth of North west August, and so returned for England, having gotten about some twelve Tunnes of goods, and an Vaicorne.

In the yeere 1611, the Companie fet foorth two Ships for Greenland, the Marie Margaret Horne, Admirall, burthen one hundred and fixtie tunnes, Thomas Edge Commander; and the Elizabeth, burthen fixtie tunnes, Ionas Poole Maiter, well manned and furnished with all necessarie Provisions, they departed from Blackwall the twentieth of Aprill, and arrived at the Foreland in Green. land in the Latitude of 79. degrees, the twentieth of May following, the Admirall had in her

IO fix Biskayners expert men for the killing of the Whale; this was the first yeers the Companie set First whale out for the killing of Whales in Greenland, and about the twelfth of Iune the Biskayners killed killing. fmall Whale, which yeelded twelue Tunnes of Oyle, being the first Oyle that euer was made in Bifcayners v-Greenland. The Companies two Shalops looking about the Harbour for Whales, about the five and twentieth of June rowing into Sir Thomas Smith his Bay, on the East fide of the Sound faw on the shoare great store of Sea-horses : after they had found the Morses they presently rowed vnto the Ship, being in croffe Road feuen leagues off, and acquainted the Captayne what they had found. The Captayne understanding of it, gaue order to the Master, Stephen Bennet, that he should take into his Ship fiftie tunnes of emptie Caske, and fet sayle with the Ship to goe into Foule Sound. The Captayne went prefently away in one Shallop with fixe men vnto the Sea-

30 morfe, and tooke with him Lances, and comming to them they fet on them and killed fine hundred Morfes, and kept one thousand Morfes living on shoare, because it is not profitable to kill them all at one time. The next day the Ship being gone vnto the place & well mored where the Morfe were killed, all the men belonging to the Ship went on shoare, to worke and make Oyle of the Morfes; and when they had wrought two or three dayes, it fortuned that a small quantitie of Ice came out of Foule Sound, and put the Ship from her Moring. The Master and ten men Shipwracke being a board of the Ship, let fall their Sheat anchor which brought the Ship vp to ride; the Ice by Ice, comming vpon heragaine, brought her Anchor home and ranne the Ship ashoare, where shee by the Masters weake Iudgement was cast away, and all their Bread spoyled not sit to eate. The

Ship being cast away without hope of recouerie, the Commander Thomas Edge gaue order, that 30 all the Morfe living on shoare should be let goe into the Sea, and so gave over making of Oyle, and presently haled vp ashoare all his Shallops and Boates, being fine, setting the Carpenter to trim them, the Saylers to make Sayles and Wastcloathes for the Boates, fit to serue them at Sea. Hauing fitted their Boates as well as they could with the small prouision they had, being in number foure small Shallops and the ships Boate, they divided their men into them equally with what provisions of victuals they could well carrie, and after they had fayd Prayers all together on Land; being fiftie men they departed from the place where they loft their Ship, on the fifteenth of July with the winde Southerly, and rowed thirtie or fortie leagues to the Southward, and then they loft companie of one Shallop and their thips Boate of Horne Sound, which two

Boates met with a Hull Ship, and acquainted him with the loffe of the London Ship, and that shee 40 had left on land goods woorth fifteene hundred pounds : So our men carryed the Hall Ship into Hall Ship. Foule Sound, to take in the Companies goods and to kill some Sea-horses for her selfe at that place. The Captayne and two other Shallops put from the Coast of Greenland in the height of 77. . Degrees, and set their course for Cherie Iland, which lyeth in 74. Degrees (—) sometimes Sayling and sometimes Rowing, and made Cherie Iland the nine and twentieth of July, having Cherie Iland. beene in their Shallops at Sea fourteene dayes, and comming into the Iland with a great fforme

at North-west, with much difficultie they landed on the South side of the Iland. Being on shoare, the Captayne sent three of his Saylers over land vnto the North roade, be-

ing three miles distant from that place, to see if the Elizabeth was there, and they saw a Ship riding in the North roade, and being ouer-joyed they returned backe vato the Captayne to ac-50 quaint him, without flaying to speake with any of the Ships companie, and by good hap the Mafter of the Elizabeth espyed men on the Shoare, being at that time weighing Anchor to set fayle for England, voon which hee stayed and sent the Boate ashoare to see what men they were, and when the men of the Elizabeth came ashoare, they found them to bee men of the Mary Margaret, and so went aboard vnto the Master to acquaint him; whereupon the Master cansed Anchor to bee weighed and went to the South fide of the Iland, and there tooke in the Captayne, and hee being aboard understanding what a poore Voyage the Elizabeth had made, gaue order to the Master to goe for Greenland, there to take in such Goods as the fayd Edge had left in Foule Sound. They departed from Cherie Hand the first of August, and arrived at Foule Sound the Fourteenth Dillo: where they found two Boates which they had lost companie of before, and

60 all their men being come thither with a Hull Ship which they met with, and brought to that place; which Ship had spent all the yeere in Horne Sound, and got little goods. The Elizabeth being mored, the Captayne gave order vnto the Mafter to deliver out of his Ship, all the goods hee had got at Cherie Iland, which was Sea-horse hydes and Blubber, being of little woorth; And to take in the Oyle and Whale-finnes, which were gotten by the Marie Margarets com-

panie, the Master in validing of his Ship brought her so light, that vasortunatly hee over-sether, Ship out fet, having goods in her worth learn hundred pounds. This ill chance happening vato the two Les. paining goods in net worth seven numerical pounds. I me in change impossing vitto me two London Ships, the Captayne of them agreed with Thomas Marmadus halfer or the Hull Ship, to don Ships, the cappayare of the goods which was faued, at the rate of five pounds the Turn e, which was agreat tate take in the goods which was faued, at the rate of five pounds the Turn e, which was a great tate take in the goods worth flue hundred pounds for the (notwitnitanding they had beene a meanes to get him goods worth flue hundred pounds for the (100 Minus and 100 me) August, 1611. they departed from Greenland in the Hope well, being ninetic nine meninall, and arrived at Hall the fixth of September, where the layd Edge tooke out the Companies goods, and Shipped them for London by order from the Companie. This yeere, Edge in coasting in the Shallops, discoursed all the Harbours on the West

#### II.

Dutch, Spanish, Danish difturbance ; also by Hull men, and by a new Patent, with the succeeding Successe and further Discourtes till this present.

N the yeere 1612, the Companie fer forth two Ships, viz. The Whale, burthen one hundred and fixtie Tunnes, and the Scalous hundred with the burther one hundred and fixtie Tunnes, and the Seaborfe, burthen one hundred and eighter tunnes, 20 under the Command of John Ruffell, and Thomas Edge, for discovering and killing of the

Holl anders.

Whale. They discourred that yeere nothing worth writing of, by reason of some falling out betwixt Ruffell and Edge; yet they killed that yeere leventeene Whales, and some Sea. hortes, of which they made one hundred and eightie Tunnes of Oyle with much difficultie; a not being experimented in the businesse. This yeere the Hollanders ('Okcepe their wont in fellowing of the English teps) came to Greenland with one Ship, being brought thither by an Eng. lib man, and not out of any knowledge of their owne Discoueries, but by the direction of one

Allen Sallowes, a man imployed by the Minfconia Companie in the Northerne Seas for the space of twentie yeeres before; who leaving his Country for Debt, was entertayned by the Hollanders, and imployed by them to bring them to Greenland for their Pylot. At which time 10 being met withall by the Companies Ships, they were commanded to depart, and forbidden to Spanish Ship. haunt or frequent those parts any more by mee Thomas Edge. There was also a Spanib Ship

Woodcocke Im.

brought thither, by one Nicholas Woodcocke this yeere, a man formerly imployed by the fayd Companie; which Spanis Ship made a full Voyage in Green-harbour. But Woodcocke at his returne into England, being complained of by the Companie, was Imprisoned in the Gatebooks and Tower, fixteene Moneths, for carrying the Spanish Ship thither.

In the yeere 1613, the Companie fet out for Greenland feuen fayle of Ships, under the Com-Besianus sesent mand of Bens sons to soph, and Thomas Edge, the Slips derarted from Grass and the fix and twentieth of Aprill, and arrived in Greenland the fourteenth of May. This yeere the English had the Kings Patent under the broad Seal- of England, to forbid all Strangers and others, but the Musica 40

MIA Conspanie to vie the Coast of Greenland. The English met with fitteene fayle of great Ships, two of them were Durch Ships, the rest were French, Spanish, and of the Archdukes, besides four Englib Intellopers. The Companies Ships forced them all from the Coalt of Greenland, not suffering any of them to make a Voyage; they tooke from the two Dateb Ships certayne goods, buing ing to take it, they neglected their owne voyage, which was damnified thereby to the value of three or foure thouland pounds. For their Ships came home dead Fraight two or three hundred Tunnes by that meanes. This yeere was Hope Hand and other llands discoursed, to the

1614. Thirteen oh ps and two Pin-

B.ff sarmed.

Dutch fhips.

In the yeere following, which was 1614, the Companie fet out for Greenland, thirteene great Ships and two Punalles, vnder the Command of Beniamin Isleph, and Thomas Edge, all which 50 Ships were well appointed with all manner of Artillerie for defence, and other necessaries for the making of their Voyage and for Discourie. This yeare the Hollanders set out for Greenland eighteene great Ships, whereof foure of them were of the States men of Warre, Ships with thirtie pieces of Ordnance a piece. This yeere the Dutch stayed and fished for the Whale perforce, they were farre stronger then the English, which was a cause that the English Ships came home halfe laden, and the Dutch with a poore Voyage. This yeere the Companie Discourred unto the Northwards of Greenland, as farre as 80. Degrees odde Minuts, in the Ship Thomases, as by herdaily lournall doth appeare at large; in which Ship was imployed Thomas Sherwin, and Walliam Baffin, being the second Voyage they were imployed into those parts. And some llands to the Eastwards of Greenland, were Discouered by soure Ships imployed in that service, as by their 60 Iournall more at large appeareth.

So. Degrees 1615.

In the yeere 1615, the Companie set out for Greenland, two sayle of great Ships and two Pinnaffes, vnder the Command of Beniamint of pb, and Thomas Edge, who following their Instructions, arrived upon the Coast of Greenland the fixth of June, which they found to bee much

pettered with Ice, and being foggie weather, they runne into the Ice, fo farre, that they were Fast in Ice. fait in it fourteene dayes before they could cleare themselves of it. This yeere also the Hollan- in lune fourders fet out fourteene fayle of thips, whereof three of them were States Men of warre of great teene dayes, force: they killed Whales in Horn-found, Bel-found, and Faire-hauen, and flayed voon the coaff of Greenland perforce, as they did the former yeere; whereby the English came home halfe la- King of Denden. This yeere allo the King of Demmarke lent vnto Greenland three of his ships, Men of warre, marke demands to demand a toll of the English; but they had none payd them : for they fell with the Foreland in 79. degrees, where Captaine Edge was, and he denyed payment of any toll, all dging Vn Enelify that the Countrey of Greenland belonged to the King of England. These were the first Danish English to tense thips that ever came to Greenland, who had for their Pilot one lames Vaden, an Englishman to Duich, Spanish, To bring them thither.

In the yeere 1616, the Company fet out for Greenland eight Sayle of great thips, and two their owne, Pinnaffes under the command of Thomas Edge, who following his course, arrived in Greenland 2. bout the fourth of June, having formerly appointed all his thips for their feuerall Harbours, for their making of their Voyage vpon the Whale, and having in every Harbour a sufficient number of expert men, and all promitions fitting for fuch a Voyage. This yeere it pleafed God to bleffe them by their labours, that they full laded all their thips with Oyle, and lett an over-plas in the Countrey, which their ships could not take in. They imployed this yeere a small Pinnasse vnto the East-ward, which discouered the East-ward part of Greenland, Namely, the lland cal-

led now Edges Hand, and other Hands lying to the North-wards as farre as feuentie eight de- Edges Hand. grees, this Pinnaffe was fome twentie tunnes, and had twelue men in her, who killed one thoufand Sea-horses on Edges Iland, and brought all their Teeth home for London. This was the first yeere that ever the Company full laded all their ships tent to Greenland, and this yeere they made twelse or thirteene hundred tunnes of Oyle in Greenland by the fourteenth of August All the thins arrived in fafety in the River of Thames, in the moneth of September. The Hollanders had this veere in Greenland foure thips, and those kept together in odde places, not easily to bee

found, and made a poore Voyage.

In the years 1617, the Company fet out for Greenland fourteene Sayle of thiss, and their two Pinnaffes turnished and manned with a fufficient number of men, and all other provisions fitting 30 for that Voyage, under the command of Thomas Edge. They departed from Grane fend about the foure and twentieth of Aprill, and arrived vpon the Coast of Greenland, the eight and twentieth

of May all in fafety.

At our first comming vpon the Coast this yeere, I met with a Dateb shippe of two hundred tunnes, which I commanded aboard, the Captaynes name was Coske, who told mee there were ten Sayle of Dutch vpon the Coaft, and two men of Warre, and that he came to make a Vove age voon the Whale. I shewed him the Kings Commission; and commanded him by vertue thereof to depart from the Coast, willing him to acquaint the rest of his Countrey-men with it. And further, I told him that if I met with him or any Dutch thips heereafter, I would take from them what they had gotten, and thus having entertayned him abourd with me courteout-40 ly, I let him goe without taking any prouitions from him. At his departure from mee, hee pro-

mifed hee would but flay to meet with two of his Conforts, which hee had loft company with the day before, and then hee would directly goe for Flufting, and acquaint his Merchants, that the English Captayne would not fuffer him to stay upon the Coast of Greenland; but it seemeth at his meeting with his Conforts, they agreed altogether to goe into Horne-found, and there they killed some few Whales which they saued in Blubber. I vinderstanding of it, gaue order to my Vice-admirall when he was laden, that he should goe into Horne-found, and put the Flemmings from thence, and take what they had gotten, which he did accordingly : but the goods he tooke from the Dutch thips, were not worth to the English twentie pounds, for it was but Blubber and Finne's, which they had no need of, in regard they had killed as many Whales as would lade their ships, and more then they could carry or laue. This yeere the English made nineteene hun-

dred tunnes of Oyle in Greenland, and all their thips arrived at home in the moneths of August and September in fafetie. They also employed a ship of fixtie tunnes, with twenty men in her, who discourred to the Eastward of Greenland, as faire to the North-wards as seventie nine degrees, and an Iland which he named Witches Iland, and divers other Ilands as by the Map appear witches Iland. reth, and killed ftore of Sea-horfes there, and then came into Bel-found : where hee found his lading of Oyle, left by the Captayne which he tooke in. This yeere the Hull men fet a small ship Hull men. or two to the East-wards of Greenland, for the Hull men still followed the steps of the Londoners, and in a yeere or two called it their Difcouery, which is falle and vntrue, as by Oath in the Admiraltie doth appeare. The Dutch likewife practife the same course.

60 In the yeare 1618, some difference having passed betweene the English and some Zelanders. the yeere before, in King James his Newland, alias Greenland (which Zelanders were neuer in those Zelanders. parts before, and vpon promile of the present departure) were permitted to passe elie-where with their prouisions which they had, and comming to Cherrie Iland, and meeting with one English Interloper of Hall; namely Marmaduke, he animated the faid Zelanders to returne back Marmaduke.

for Greenland, alleaging vnto them, that the Companies thips were in each feuerall Harbourba. for Greeness, attending, and that none would flure from his Harbours to moleft them, and that they being three ships of force, might returne to a Harbour in that Country, called Hamfood, they being consecutives and there make a Voyage perforce, which the faid Zelanders did attempt, and there matmed out divers Shallops, having many Bicksiners, and killed flore of Whales, fetting those English at ouers Snauops, maning man, and Edge, chiefe Commander of the English Fleet, having laden those ships that were in Harbour with him, and presently sent for William Help, his Vice-Jacen toole injective, well and was not then full laden, but in good forwardnessed by the ship he was in, and goe to Horne-found afore-faid, and put the said Zelander; from thence: which the he was in, and goe to recomply mental than the part of the preferred part in a notice to faid Hely preferrely put in execution. But before his comming thirther, the Zelander had notice to laid resp presency put it is they did not depart, the English Vice-admiral would come presentby an Engage Suggest, the state of the Relation of the Relation of the goods they had in two ly and fent them away before the comming of the English Vice-admirall, leaning one hip inips, and tent them away who be blubber, and two Whales and an halfe vicut vp, in a brauado to trye if the English would meddle with them or not, which faid ship and goods there left, were tive is the saying with Vice-admirall; the goods detayed to the Companies vie; and the flip reflored there to the Zelander; which flip having in her ten caft Peeces, and fixtie men, and having intelligence of one of the Companies ships, at that time laden in the Country with one hundred and eightie tunnes of Oyle, the Zelender gaue out he would lie in waite and with one munice and taging some solution of Jrs, the Latenth flip of the Companies and her lading, and carrie her to Zeland. For preuention where take that flip of the Companies and her lading, and carrie her to Zeland. For preuention where of, the faid Vice-admirall tooke fixe Peeces of Ordnance, and some Powder from the ship of the carries of the faid vice-admirall tooke fixe Peeces of Ordnance, and some Powder from the ship of the carries of the car Zeland, which were in England restored to the owners.

In which faid yeere 1618, the Zelanders lending over for reflitution of the goods taken from them. A new Company commixt of English, Senish and Zelanders, through the meanes of one Sir Iohn Commington Knight, procured a grant for fetting forth of fhipping to those parts, which might vtterly haus ouerthrowne and spoiled the trade of the first discournes thereof and to that angle, vices; mean characteristics and divers of the chiefe men were hired by the new Company that had been feruants to the feft discouerie, and much shipping and prouitions agreed for. Whereupon there was an agreement, East radia Ad. that the East India Adventurers should some stocke with the Moseonia Adventurers, and be one ioynt Companie for that trade of King James his Newland. The Scottifb Companies Patent thereupon diffolied, to the Mofemio Companies great trouble and coft, in taking of all the prouissons they had bespoken, and paying ready money for the same, having novsethereof, but great part spoyled, and came to little good, and in joyning unfortunately with the East ladie Companie, in which yeere, and the next yeere after, their Voyages proued very ill, and they were lofers, and much vexed and croffed in their proceedings, to the great diffeartning and detriment of the Moscomia Companie: yet that yeere 1618 they fet forth thirteene ships and two Pinnasses, vnder the command of the said Captaine Thomas Edge, who arriving vpon the coast of King lames his Newland, in the beginning of June separated themselves to severall Harbours for accomplishing of their Voyages, the most part being ships of no force. Presently after in all Harbours where the English were, arrived great store of ships of Zeland, in warlike 40 manner, being ships of great force, who continued in the same Harbours amongst the English, ferting two boats to the English one, with Biskainers, with a full purpose to drive the English from their Harbours, and to reuenge the iniurie (as they termed it) done them the yeere before: and for that the Scottife Patent was diffolued; wherein many Flemmings were to be intereffed. And to that purpose towards the latter end of July, ten Saile of the said Zelanders, being at a Harbour called the Foreland, where the faid William Heley, Vice-admirall of the English Fleet that yeere, was in the thip Pleafure, Matter Robert Salmon, with one English thip and a Pinnaffe there of no force, fet vpon the said English Vice-admirall, threatning, if hee would not yeeld prefently, to dispoyle him of ship and goods, not permitting to take his men aboord. And with two of their chiefest ships layd the English Vice-admiral abourd, there being but seven English abourd the ship, which they detayned for foure and twentie houres, the Zelanders not daring to enter, making many brauadoes and attempts, thinking to make the English to yeeld; and stand to their mercy, which was refuled. And thereupon fine of those Zelonders ships; namely, the Fortune of Campbine, burthen foure hundred tunnes, with eighteene cast Peeces, besides braffe Bales and Murtherers, Captaine Hubreght Cornelifon; the Saint Peter of Flufting, burthen three hundred tunnes , with eighteene cast Peeces, Captaine Cornelius Cooke; the Salamander of Flufing, two hundred tunnes, fourteene cast Peeces, Captaine Adrian Pesterson; the Cast of Debb Hauers, with fixteene cast Peeces, Abraham Lourstick being Captaine and Generall of the Zelanders, and William I obn for of Millworth, in a thip with fourteene cast Pecces: all which, after much conference passed betwixt the said Zelanders and William Hely: which said Zelanders gaue out many vnciuill speeches against the Kings Marettie, not esteeming his Commission; al- 60 ledging that there was good law in Flanders for what they did. And on Sunday the nineteenth of July, 1618, did forcibly fet you the faid English Vice-admiral, fue together plying their great Ordnance, small Shot, and Murderers, seeking what in them lay to kill and spoile all the

the Anglift.

English that were abourd: who refifted their force, and in spite of all their opposers set sayle, faluting them with their Ordnance, and maintayning fight against them till their Sayles were thot downe, some of their chiefe men flaine, others hurt, and their ship forced either to anchor, or run ashoare. The Zelanders vied the English very vokindly, tifling their ship of all their goods, and taking away all their munition and artillery, not leaving any goods ashoare, but burning vo the Caske, not permitting the English to take in fielh water, but shot their Boat thorow in going ashoare, and minding, as they protested and sworevnto the faid William Hely, that they would take and ransacke all the English ships in the Countrey, and carrie the English Captaine to Zeland: having as they faid, that yeere in those parts 23. fayle of well appointed thips, onely to 10 ouerthrow all the English, all which were to meet in Scotland outward bound. After the furpriling of the faid English Vice-admirall, all the reft of the English thips being dispersed farre afunder, could not joyne together, being in all places hindred by the Flemmings: and by that meanes the English Voyage veterly overthrowne, to the extraordinary great losse and charge of

the Companie, the most part of their ships returning home without any goods.

The next yeare 1619, the faid Mosconia and East India Companies fet out nine ships, and two Pinnasses , under the command of the faid Captaine Edge , in which yeere, divers Hollanders being in the Northermost Harbour in the Countrey, employing great quantitie of Boats in chafing the Whale there, off into the Sea, put them by their vivall course, so that the Companies ships, being fine of the nine, in the two Northermost Harbours, were disappointed of their

20 Voyage in those Harbours; and thinking to better it in the other Harbours; the foresaid William Heley fending a Shallop with ten men in her, with Letters to the faid Captaine Edge, of their ill fuccesse to the Northwards, the faid Shallop was cast away, and all the men lost: and the faid Captaine being laden, fent a Pinnasse to the said Heley in August, aduertising him of his departure, thinking all the ships to the Northward had been laden, wishing them to haste home. By meanes of which Shallops cafting away, the Voyage was greatly hindred to the Companies exceeding great loffe; in that the Hollanders did as then bring over great quantitie of Whale-oyle, and fold it at under rates, so that the Companie was forced to keepe theirs on their hands twelue moneths, and fell it afterwards at a very small price, and lost one ship in her returne homewards neere Tarmouth: which did fo much dishearten the faid Companie, that

30 they diffolued againe, and thought verily to have adventured no more thicker ( their fuccesses those two yeeres past, in which the East India Companie joyned with them was so bad, that any that would buy their provision might entry the benefit of the Trade there.) At which time, the worthie and famous Merchants Aduentuers; namely, Ralph Freeman, Beniamin Deicrope, George Strond , with Captaine Thomas Edge, all brethren of the Mosconia Companie , pitying the down-fall of so worthie a Trafficke, in which yeerely so many poore Land-men receited great comfort, and breeding of Mariners, at their owne charge compounded with the faid Companies, and tooke that Trade into their hands. In which yeere 1620, they fet out seuen sayle of ships, vnder the command of William Goodlad, and the faid William Heley; in which faid yeere, by reason of great store of Flemmings and Danes in the foresaid Northermost Harbours, their

40 ships had ill successe to the Northwards, and were forced to passe from Harbour to Harbour to seeke to make a Voyage, but could not, and so returned home halfe laden, with seuen hundred

The next yeere 1621. the forefaid Aduenturers hired, and fet forth eight ships, seuen for the Whale Voyage, and one to the South-eastwards vpon Discouerie, under the command aforesaid, which yeere in one of their chiefest Harbours their Voyage was ouerthrowne, by reason of the foresaid Flemmings and Danes, being to the Northward, as aforesaid, putting the Whale by her course, and in all places in the Countrey generally disheartned, and out of hope to have made any Voyage that yeere, whereby to have earned their bread. Yet it pleased God afterwards in some Harbours, Whales hitting in, a Voyage was performed, and 1100. tunnes of Oyle brought home, to the great encouragement of the faid Aduenturers: otherwise that Trade had beene 50 vtterly ouerthrowne.

The yeere following 1622. the faid Aduenturers at their owne charge fet forth nine ships, vnder the command aforefaid, and therein employed divers Land-men, many of which afterwards proue good Sea-men, and are fit for any Sea feruice. Eight of which ships were appointed to make their Voyage vpon the Whale, and one to goe on discouerie to the South-eastwards. But ill successe happening, one of their greatest ships of burthen, whereot lobn Masson was Master, haufing in her two hundred turns of Caske, Coppers, and divers prouitions, was unfortunatly call Shipwricke, away against a piece of Ice, upon the coast of King James Newland, four leagues from the shoare, in which thip perithed nine and twentie men, and the remainder being three and twenty, were 60 by the providence of the Almightie miraculously faued in a Shallop, coasting thirtie leagues af-

terwards to meet with some other ships to find some succour, having neither bread nor drinke, nor any meanes whereby to get any food: and fo remayned three dayes in extreme cold weather, being in a small Boat ready to bee swallowed up of enery wane, but that God prouided better for them. Many of which people their hands and feet rorted off, being frozen, and they

died in the Countrey. The rest of the ships returned home laden, bringing in them 1300, tuns of Oyle, yet the foresaid chiefe Harbour could not performe their full lading there, by reason of the Flemmings and Danes being to the Northwards, as aforefaid, which doth yearely kinder the Companies thips from making a Voyage.

The Description of the seneral sorts of Whales, with the manner of killing them: Whereto is added the Description of Greenland.

\* The ordinaric growne Whale. Finnes.

Small eyes, Some kinds haue greater. Stow mentions one taken on Tenet theare, the eye of which was a Cart-loade, a man might ftand in the hole vpright: The like wee may sheffe of the throat &c. Nature being herein luxuri-

You may fee this Story of the Whale-killing prefented lively in the Map, which bath liberally added to this

He Whale is a Fish or Sea-beast of a huge bignesse, about fixtie fine foot long, and thirtie fine foot thicke, his head is a third part of all his bodies quantitie, his fracious mouth contayning a very great tongue, and all his finnes, which we call Whale finnes. These finnes are fastned or rooted in his upper chap, and spread ouer his tengue on both

files his mouth, being in number about two hundred and fiftie on one fide, and as many on the other side. The longest finnes are placed in the midst of his mouth, and the rest doe shorten by their proportionable degrees, backward and forwards, from ten or eleven foot long to foure inches in length, his eyes are not much bigger then an Oxes eyes, his body is in fashion almost 20 round forwards, growing on still narrower towards his tayle from his bellie, his tayle is about twentie foot broad, and of a tough folid substance, which we vie for blockes to chop the Blubber on (which yeelds Oyle) and of like nature are his two swimming sinnes (and they grow for-

This creature commeth oftentimes aboue water, spouting eight or nine times before he goeth downe againe, whereby he may be descried two or three leagues off. Then our Whale-killers presently rowe forth from the place where they stand to watch for him, making what halle they can to meet him ; but commonly before they come neere him, he will be gone downe againe, and continue a good while before he rifeth; fo that fometimes they rowe past him, Yes are they very circums pect, euer looking round where they may espie him risen, or discerne his 30 way under water, which they call his Walke. When he is up and the Shallops neere him, they rowe towards him very resolutely, as if they would force the Shallop voon him, if hee went downe under water ; but the Harponyre, who flandeth up in the head of the Boat, darteth his ant, and diver- Harping-iron at the Whale with both his hands, to foone as he commeth within his reach; wherwith the Whale being strucken, prefently descendeth to the bottome, and therefore doe they reare out a rope of two hundred fathome, which is fastned to the Harping-iron, and lieth coyled in the Boat : And they let him have as much of the rope as reacheth to the bottome, and when they perceive him rifing they hale in the rope to get neere him, and when the Whale commeth wp about water, then do the men lance him with their lances, either out of one Shallop or the other; for most commonly there bee two Shallops about the killing of one Whale. In 40 lancing him they strike necre to the finnes he fwimmeth withall, and as lowe under water necre his bellie as conveniently they can: but when he is lanced, he friskes and strikes with his tayle fo forcibly, that many times when her hitteth a Shallop hee splitteth her in pieces; fo that the men are relieued and taken in by another Shallop; and sometimes he striketh to fully vpon them, that some of the men are either maymed, or killed with his stroke. Therefore they who undertake this businesse which is the principall thing in the Voyage, must not onely bee bold and reso-Capraine Edge lute, but also discreet and wary; otherwise their rash forwardnesse may preuent them of their expected conquest; confidering they have no shield to withstand the offended beast their enemy, but onely by a heedfull warmeffe to avoide the receiving of his dangerous stroke. Swimming is also requisite for a Whale-killer to be expert in, for it may be a meanes to saue his life, when 50 he hath loft his Boat, and another is not neere presently to helpe him.

The Whale having received his deadly wound, then he spouteth bloud (whereas formerly he cast forth water) and his strength beginneth to fayle him; but before he dieth, hee will sometimes draw the Shallop three or foure miles from the place where he was first stricken: and as he is a dying, he turneth his bellie vpwards, which lieth vppermost being dead. Then they faflen a rope to his tayle, and with the Shallops, one made fast to another, they towe him towards the ship with his tayle foremost. Then doe they lay him crosse the sterne of the ship, where he is cut vp in this manner; two or three men in a Boat or Shallop come close to the fide of the Whale, and hold the Boat fast there with a Boat-hooke; and another standing either in the Boat, or most commonly upon the Whale, cutteth the fat (which we call Blubber) in square pieces with 60 a cutting Knife, three or foure foot long. Then to race it from the flesh, there is a Crane or Cap-Ren placed purposely vpon the poope of the ship, from whence there descendeth a rope with a hooke in it; this hooke is made to take hold on a piece of Blubber : and as the men winde the Capsten, to the cutter with his long knife loofeth the fat from the flesh, even as if the lard of a

Swine were to be cut off from the leane. When a piece is in order cut off, then let they lower the Crane, and let downe the Blubber to flote vpon the water, and make a hole in fome part of ir, putting a rope thorowit; and so they proceed to cut off more, faithing ten or twentie pieces together to bee towed a shoare at one time, being made fast to the sterne of a Boat or Shallon. Thele pieces being thus brought vnto the shoare side, they are drawne by one and one vpon the floare with an high Crane, or carried vp by two men on a Barrow vnto a Stage, there to be cut into small pieces about a foot long, but thin : then it is carried vnto the choppers by two boyes, with two little hand-hookes, taking in each hand a piece, and so they put it into half-tubs which fland behind the choppers, out of which the choppers take it vp; who fland at the fide of a

boat which is raifed of an equall height fit for the furnace. And the boat being fitted with all 10 things necessarie for the choppers , they place the chopping blockes , which they make of the Whales tayle, and the Blubber is layd ready for them, as they vieit, in small pieces vpon the boord whereon they stand. Then the choppers take it vp with hand-hookes, and lay it on their blockes, and chop it in thin pieces (the thinner he cutsit, the better it is) and when it is chopped, they put it off the blocke downe into the Shallep, with a short Paddle made like a Colerake: and thus doe fixe or eight men stand chopping on the one side of the boat, and on the onther fide of the boat about two or three yards diffant are the Furnaces and Coppers placed and heated. Then betweene the chopping boat and the Coppers, is layd a broad thicke planke, on which standeth a hogshead, which contayneth as much as is put into the Copper, at one time for one boyling, and the tub being emptied, is made to flide vnto the chopping boat againe, be-

20 ing there filled with a copper ladle againe, and put into another Copper. When it is boyled enough, the small pieces of Blubber, which wee call Fritters, will looke browne as if they were fried. Then are they taken out with copper ladles, and some of the Oyle also with them, and put into a Barrow made close to dreyne the Oyle, which standeth ouer another Shallop, that is fet on the back-fide of the Furnace to receive the Oyle in, and as soone as the Fritters are taken cleane out of the Copper, then presently is the tub of small Blubber emptied into the Copper againe to be also boyled.

The Boat into which the hot Oyle is put out of the Coppers, is ever kept halfe full of water, which doth not onely coole the Oyle before it runne into the Caske, but also is a cleanfer of it 30 from drolle, which descendesh to the bottome of the Boat. Out of the Oyle-boat doth the Oyle runne thirtie or fortie years in Troughstor Gutten, and to into Burs or Hoppheads, which being filled, is rolled off to coole, and another Caske layd to fill, and when there is any quantitie of Oyle made, it is carried aboord the ship in rafts. In this manner is the Oyle faued and

Now concerning the Whale Finnes, the Whaleshead being cut off from the body (as hee Whale Finnes) floteth at the sterne of the ship where hee is cut up) is towed by a Boat as necre the shoare as it will come: but it is aground in twelue or thirteene foot water, then by crabes which are placed on land it is drawne on land, at feuerall times when the water is at higheit, so neere the dry, shoare, that men at a lowe water with their Boats on, cut off the Blubber and Finnes, which by 40 the crabes are drawne on shoare, and the Finnes are with Axes, one seuered from another, and being made cleane, are packed up by fiftie in a bundle, and fo shipped.

There are eight feuerall kinds of Whales, and differing the one from the other in goodnesse, Eight tinds of quantitie and qualitie.

The first fort of Whale is called the Grand bay, taking his name from Grand bay in New . Grand by foundland, as having there beene first killed : he is blacke of colour, with a smooth skinne, and While. white underneath the chaps. This Whale is the best for Oyle and Finnes of all the rest (and doth yeeld most the elder it growes.) This fort of Whale doth yeeld about an hundred hogsheads of Oyle, and some fine hundred Finnes.

The second fort of Whale is called Sarda, of the same colour as the former, but somewhat 2. Sarda. leffer, and the Finnes likewife leffer, and yeelds in Oyle according to his bignesse, fometimes le-50 tenerie hoghrads, or eightie hogheads. This Whale hath naturally growing vpon his backe,

The third fort of Whale is called Trumps, being as long as the first, but thicker forwards, of 3. Yrumps. colour more gray then the former, having but one spoute in his head, and the rest have all two; he hath in his mouth teeth about a span long, and as thicke, as a mans wrist, but no finnes; his he natural many mount of the two former, and in proportion fare bigger then his bodie. In the head of this Whale is the Permefitie, which lieth there in a hole like a Well. This is the Whale that Sparmacer. is supposed to yeeld the Ambergreese; There taken about fortie hogsh-ads of Oyle besides the

The fourth fort of Whale is called Otta Sotta, and is of the same colour of the Trumpa, having 4.0tts Sotta. finnes in his mouth all white, but not aboue halfea yard long , being thicker then the Trumpa, but not fo long : he yeelds the best Oyle, but not aboue thirtie hogsheads.

The fit fort of Whale is called Giberta, of colour blacke like the two first, fauing that it & Giberta, hath standing vpon the top of his backe, a sinne halfea yard long. This Whale is as bigge

as the first; his fins little or nothing worth, being not about halfe a yard long: and hee yeeldethabout twelue hogheads of Oyle, all which his backe yeelds; as for his bellie it yeelds The first fort is called Sedena, being of a whitly colour, and bigger then any of the former.

6. Sedeua.

the finnes not aboue one foot long, and he yeelds little or no Oyle." The feuenth is called Sedena Negro, of colour blacke, with a bumpe on his backe; this Whale yeelds neither Oyle, finnes, nor teeth, and yet he is of a great bigneffe.

8. Semria,

The eight fort is called Sewria, of colour as white as fnow, of the bignesse of a Wherrie, he yeelds not about one hoghead or two of Oyle, nor any finnes, and is good meate to becaten.

## The description of Greenland.

Antiphraffical appellation. I have found of Greenland,

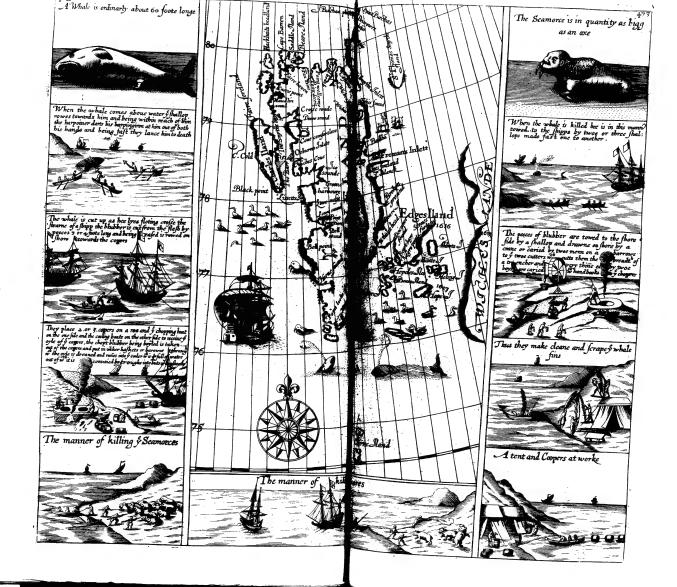

Reinland is a place in Nature nothing like vnto the Name: for certainly there is no place in the World, yet knowne and discouered that is leffe greene then it. It is couered with fnow, both the Mountaines and the lower Lands , till about the beginning of June , being very Mountainous, and beareth neither graffe nor tree, faue onely such as grow wpon the Moores and heathie grounds, in the North parts of England, which we call Heath, or Ling. This growth notes, written When the fnow melteth, and when the ground beginneth to be vincouered. And on this doe the by Ra. Fesherin. Decre feed in the Summer time, and become very fat therewithall in a moneths space, but how 20 they line in the Winter time it is not eafily to be imagined. For feeing at the end of May wee find the ground all couered with fnow, it is very like, that in the time of Winter there is no part bare, where any thing can grow; especially during the time that the Sunne is altogether depressed under the horizon, which in the latitude of 77.degrees, continueth from the eighteenth of October till the fourth of Februarie. This Countrey by all probabilities hath neuer been inhabited by any people; notwithstanding, I thinke men might line there, carrying thither good store of prouition of victuals, and other things necessary against the cold, which perhaps will be vehement in the Winter time, by the former reasons; namely, because the Sunne remayneth so long vinder the Horizon,

Neuertheleffe, there will not be any continuance of darkneffe, because the Sunne in his greatest declination will be but to degrees under the Horizon, at this time of his being in the South of the Meridian in the former latitude of 77, degrees, which is once in foure and twentie homes; and therefore the time of their Noone will bee much lighter then our Night here in England, when the dayes are at the longest; for then is the Sunne 15. degrees under the Horizon at midnight, and yet the greatest darknesse is but like twi-light. And although it bee a generall faying, and a common receined opinion, that the further North the greater cold, yet experience teacheth, that it is not alwaies true. For at Mofeo, and thereabouts in the Winter time, there is extreme frosts and cold weather, informach that oftentimes men are brought homedead, being flarned with cold; and many have their nofes and cares caufed to fall off, through the extremity of the piercing aire : yet at Edenborrow, which is more Northerly by one degree and an halfe, 40 and in all places neere vnto it the aire is temperate, and the cold tolerable, the fnow neuer sying any long time on the ground after it is fallen. Notwithstanding, wee have snow remayning all the yeere long in divers places of England, but the reason of this is, because the aire is ever warmest neere vnto the Sea stoare, (as Edemborrow standeth) and contrariwise the cold is most veeuen neere the hement in places which are fartheft remote from the Sea, as Mofce is fituated.

All the Creatures that appeare vato vs vpon the Land, are Deere, Beares, and Foxes, and fundrie forts of wilde Fowle, as Cuthbert Duckes, Willockes, Stints, Sea-pigeons, Sea-parrets, 30. and 40. the Gulls , Noddies , &c. The Author addes a discourse of sending condemned men to inhabite there, with diners protects for their sermice there, for the further discourrie how best to bee effected, for such things as are most need ary for this employment of Whale-killing, &c. but because experience halb gi- 50 nen best instructions already, and destructions must otherwise be prenented, I have forborne to detaine the Reader in those (otherwise indicious) freculations.

The Southermost part of Greenland stands in 76. degrees 30. minutes, which wee call , Point Looke our, and we have discouered all the West side of the Land as farre vnto the Northwards as 80 degrees odde minutes: in which compasse wee have already experience of fixe or eight good Harbours for the killing of the whale; and on the East side we have discovered as farre as 78. degrees, finding divers llands, great and small, yeelding good Harbours, and store of Whales, and Sex-horses; and for a surther discovery on the East side, I am perswaded it had beene farre greater, if the Dutch had not so disturbed vs in our proceedings, as also the Hull-men, who ever practifed to follow our steps, after the discouerie within one yeere or two: as by our Mafters Journall more at large may appeare. The best actions have their hindrances and crosses, and so hath this had; for, the Dutch have beene a bane to this Trade and Discouerie: The Hull-men have done some bad service in this Action , for they were the first that carried the Dutch to the Tutches, as by Whomdens Oath and Journalt appeares, they were also a cause of that bad Voyage,

Sea, and farre Sun, betwixt Winters are extreme, R. Foth.

to vs in 1618, in that they animated the Flemmings to come backe to Greenland againe, as appeareth in this lournall, in the yeere 1617, they have done fome other ill fernices against vs as well as the Dutch, but in regard they are our Countrey-men, I will omit and wish their amendment, and pray to God to fend a good and further Discouery to bee made in these Northerne

Eader, I present thee here three admirable Voyages of Discourry made by the Dutch, no whit en-R Lader, I prejent thee very cure automator of the more of Alls and Arts. They base formerly been published in Dutch, andtranslated by W. Philip. I have beere abbreniated them, as my vie is with others, 10 to aunid prolixitie. The Dutch themselmes " write that after the English Rustian Trade, one Oliver " Prolesmena. to assess presented: to obtain the minimum white the chigain and the set of the first the chigain and the set of the s nards, by the personalism of P. Plancius to goveright Northwards from Noua Zemla. Linschot wone fiftie miles beyond the Streights, the Northerly winds, and late scason forcing him backe. Bernards Journall bere followeth, of that and his two later Voyages, the two later written by one compleyed therein.

#### CHAP. III.

The first Nauigation of WILLIAM BARENTS, alias BER-NARDS into the North Seas ; Written by G z-RAT de VEER.

T is a most certayneand an affured Affertion, that nothing doth more benefit and further the Common-wealth (specially these Countryes) then the art and knowledge of Nauigation, in regard that such Countreyes and Nations as are strong and mightie at Sea, have the meanes and ready way to draw, fetch, and bring vnto them for their mayntenance, all the principallest commodities and fruits

In these Natigations we must not be dismayed if some missike, or if we cannot perfect a Difconery in the first, second, or third Voyage. Alexander Magnis (after he had wonne all Greeis, A thing not and from thence entred into little and great Afia; and comming to the farthest parts of India, communed, there found fome difficultie to paffe) faid, If wee had not gone forward, and perfifted in our intent, which other men effeemed and held to be impossible, we had fill remayined and flayed in the Allthingsare entry of Cieilia, where as now we have over-runne and past through all those large and spacious effected in Countreyes : for nothing is found and effected all at one time, neyther is any thing that is put in convenient 40 practice, prefently brought to an end. To the which end, Cierro wifely faith; God hath given vs time. fome things, and not all things, that our Succeffors allo might have some-what to doe. Therefore we mult not leave off, nor flay our pretence in the middle of our proceedings, as long as there is any commoditie to be hoped, and in time to bee obtayned : for that the greatest and richeft Treasures are hardliest to be found. I thought good to set downe, in regard that I have vndertaken to describe the three Voyages made into the North Seas, in three yeeres, one after the other; behind Norway, and along and about Musconia, towards the Kingdome of Cashaia, and China: whereof, the two laft, I my felfe holpe to effect; and yet brought them not to the defired end that we well hoped.

First, to show our diligent, and most toylesome labour and paines taken, to find out the right The first sin-50 courfe; which we could not bring to paffe, as wee well hoped, wished, and defired, and possible dingis hard, might have found it, by croffing the Seas, if we had taken the right courle; if the Ice & the fhort-but the iccone neffe of time, and bad croffes had not hindered vs. We have affuredly found, that the onely and enfer. most hinderance to der Voyage, was the Ice that we found about Nona Zembla, vnder 73.74-75. and 76. degrees, and not so much voon the Seabetweene both the Lands : whereby it appeareth, that not the neerenesse of the North-pole, but the Ice that commeth in and out from the Tartarian Sea, about Nona Zembla, caused vs to feele the greatest cold. Therefore in regard that the necreneffe of the Pole was not the cause of the great cold that wee felt, if wee had had the meanes to have held our appointed and illrended courfe into the North-east, we had peraduenture found some entrance : which course wee could not hold from Nona Zembla , because that 60 there we entred amongst great store of Ice; and how it was about Nona Zembla, we could not tel, before we had fought it; and when we had fought it, we could not then alter our course, at though also it is vincertayn, what we should have done, if we had continued in our North-east course, because it is not yet found out. But it is true, that in the Countrey lying vnder 80. degrees, (which we esteeme to be Greenland) there is both Leaues and Graffe to be feene : Wherein, fuch Bealts

of the heate voder the line. with the cold North Pole.

as feed of Leaues and Graffe (as Harts, Hinds, and fuch like heafts line, whereas to the contrary in Nona Zambia, there groweth neyther Leanes nor Graffe, and there are no beafts therein but fuch as eate fields, as Beares and Foxes, &c. Although None Zembla lyeth 4.5, and 6. de. grees more Southerly from the Pole, then the other Land aforefaid. It is also manitest, that vp. on the South and North-fide of the Line of the Sunne on both fides, betweene both the Troon the south and destroyed and an halfe, yet it is as hot, as it is right under the Line. What worse der then should it be, that about the North-pole also, and as many degrees on both fides, it should not be colder then right under the Pole ! It was not the Sea, nor the necrencife unto the Pole, but the Ice about the Land, that let and hindered vs (as I faid before) for that affoone as we made but the acc apose the Land, and put more into the Sca, although it was much further Northward, preferrly to we felt more warmth, and in that opinion our Pilot William Barent; dyed, who not wishfunding the searchal and intolerable cold that he indured, yet he was not discouraged, but offered to by wagers with divers of vs, that by Gods helpe, hee would bring that pretended Voyage to an wagers wire a source North-eaft from the North Cape, But I will leave that, and flew you of the three Voyages aforefaid, begunne and fet forth by the permission and furtherance of the Generall States of the vnited Proninces, and of Prince Marrice, as Admirall of the Ses, and the

First, you must vinderstand, that in Anno 1594, there was four eships fet forth out of theynited Prounces, whereof two were of Amferdam; one of Zelands, and one of Enchangen, that were appointed to fayle into the North Seas, to discouer the Kingdomes of Cathaia, and Chine; 30 Northward from Norway, Masconia, and about Tarteria, whereof William Bareut, a notable skilfull and wife Pilot, was Commander over the ships of Amsterdam, and with them vpon Whit-funday, departed from Amfterdam, and went to the Toxell.

Vpon the fifth of Iume they sayled out of the Texel, and having a good wind and faire weather, vpon the three and twentieth of Iune, they arrived at Rilduin in Masconia, which for that it is a place well knowne and a common Voyage, I will make no further description thereof. The nine and twentieth of June, at foure of the clocke in the after-noone, they fet fayle out

The fourth of July they faw None Zembla, lying South-east and by East fix or feuen miles from them, where they had blacke during ground at one hundred and fine fathome. William Ba- 10 rents tooke the height of the Sunne with his Croffe-ftaffe, when it was at the loweft , that is betweene North North-east, and East and by North, and found it to be eleuated about the Hon-ZOR fix degrees and f. part, his declination being 12. degrees and 55. minutes, from whence fibfiracting the aforefard height, there reflech fix menth degrees and 35. minutes, which being fibflracted from 90. degrees, there refleth 73. degrees and 25. minutes. Then they wound Eafward and layled fine miles, East and by South, and East South-east, and past by a long point of Land that lay out into the Sea, which they named Langenes, and hard by that point East-ward, there was a great Bay, where they went a Land with their Boat, but found no people. From Langenes to Cape Bape, Eaft North-eaft it is foure miles. From Cape Bape to the West point of Lombsbay North-east and by North are fine miles, and betweene them both there are two 40 Creeks. Lombibay is a great wide Bay, on the West-side thereof having a faire Hauen, fix, feuen,

or eight fathome deepe, blacke fand, there they went on floare with their Boat, and voon the shoare placed a Beacon, made of an old Mast which they found there; calling the Bay Lombson, because of a certayne kind of Beares so called, which they found there in great abundance. The East point of Louisbay, is a long narrow point, and by it there lyeth an lland, and from that long point to Sea-ward in, there is a great Creeke. This Lambfle ) lyeth under 74. degrees and , part. Admirals Hand From Lambifay to the point of the Admirals Hand, they fayled fix or feven miles, North-eaft and by North. The Admirals Iland is not very faire on the East-fide, but a faire off very flat, so that you must shunne it long before you come at it, it is also very vieuen, for at one casting of the Lead they had ten fathome deepe, and presently at another casting of the Lead they had but 50 fix fathome, and presently after that agains ten, eleuen, and twelve fathome, the streame runnine hard against the Flats.

From the East-end of the Admirals lland, to Cape Negro, that is the Blacke point, they sayled about fine or fix miles, East North-east, and a mile without the Blacke point it inscuenty fathome deepe, the ground flimy, as vpon Pamphine, right East-ward of the Blacke point, there are two sharpe pointed Hils in the Creeke, that are easie to be knowne. The fixt of July, the Sunne being Williams Hand North, they come right before the Blacks point with faire weather, this Blacks point lyeth under 75. degrees and 20. minutes. From the Blacke pome to Williams Hand, they fayled feuen or eight

miles, East North-east, and betweene them both about halfe a mile, there lay a small lland. The fewenth of July chey fayled from Williams Iland, and then Williams Bareets tooke the 60 height of the Sunne, with his Croffe-staffe, and found it to be cleusted above the Horizon in the South-west and by South 53: degrees and 6. minutes, his declination being 22. degrees and 49. minutes, which being added to \$3. degrees and 6. minutes, make 75. degrees and 55. minutes. This is the right height of the Pole of the faid lland. In this Iland they found great flore of

Drifimood, and many Sea-horses being a kind of fish that keepeth in the Sea, having very great Sea-horses, of teeth, which at this day are vied in fread of Juory or Elephants Teeth, there alio is a good Road Mories. for ships, at twelve and thirreene fathome deepe against all winds, except it bee West Southwest, and West-winds, and there they found a piece of a Russia ship, and that day they had the wind East North-east, mistie weather.

The ninth of July they entred into Beeren-fort, vpon the Road under Williams Hand, and there Beeren-fort they found a white Beare, which they perceiuing, presently entred into their Boat, and shot her white Beare, into the bodie with a Musket, but the Beare shewed most wonderfull strength, which almost is terrible. not to be found in any beatt, for no man euer heard the like to bee done by any Lion or cruell beaft what locuer : for not with standing that she was shot into the bodie, yet she leapt up, and fwamme in the water, the men that were in the Boat rowing after her, casta Rope about her necks, and by that meanes drew her at the sterne of the Boat, for that not having seene the like Beare before, they thought to have carryed her aline in the ship, and to have shewed her for a ftrange wonder in Holland; but she vied fuch force, that they were glad that they were rid of her, and contented themselves with her skinne only, for shee made such a noyse, and stroue in fuch fort, that it was admirable, wherewith they let her reft and gaue her more scope, with the Rope that they held her by, and so drew her in that fort after them, by that meaner to wearie her : meane-time, William Barents made neerer to ber , but the Beare swamme to the Boat , and with her fore-feet got hold of the fterne thereof, which William Barents perceining, faid, she will 20 there reft her felfe, but she had another meaning, for she vsed such force, that at last the had gotten halfe her body into the Boat, wherewith the men were fo abalhed, that they ranne into the further end of the Boat, and thought verily to have beene spoyled by her, but by a strange meanes they were delinered from her, for that the Rope that was about her necke, caught hold voon the hooke of the Ruther, whereby the Beare could get no further, but fo was held backe, and hanging in that manner, one of the men boldly stept forth from the end of the Scute, and thrult her into the bodie with a halfe-pike; and therewith thee fell downe into the water, and fo they rowed forward with her to the shippe, drawing her after them, till shee was in a manner dead,

wherewith they killed her out-right, and having flayed her, brought the skin to Amiferdam. The twentieth of July, they sayled out of Beeren-fort from Williams lland, and the same day Handof Croffet in the morning got to the Hand of Creffer, and there went on Land with their Pinnaffe, and found the lland to be barren, and full of Cliffes and Rocks, in it there was a small Hauten, whereinto they rowed with their Boat. This Iland is about halfe a mile long, and reacheth East and West; on the West end in hath a banke, about a third part of a mile long, and at the East end also another banke, upon this Hand there standeth two great Crosses, the Hand lyeth about two long miles from the firme Land, and under the East-and thereof there is a good Road, at fixe and twentie fathome fort ground; and formewhat closer to the Hand on the Strand, at nine fathome

From the Iland of Croffes to the point of Cape Naffam, they fayled Baft, and Eaft and by Cape Naffam, North about eight miles ; it is a long flat point which you must be carefull to shunne, for thereabouts at feuen fathome there were flats or shoales, very farre from the Land; it lyeth almost vnder 76. degrees and a halfe. From the West end of Williams Hand, to the Hand with the Croffes is three miles , the course North. From Nasaw point they fayted East and by South , and East South-east fine miles, and then they thought that they faw Land in Nor th-east, and by East, and fayled towards it fine miles North-salt to descrie it, thinking it to bee another Land, that lay Northward from Nous Zemble, but it began to blow so hard out of the West, that they were forced to take in their Marfaile, and yet the wind rofe in fuch manner . that they were forced to take in all their Sayles, and the Sea went to hollow, that they were confirmed to drine fixteene houres together, without fayle, eight or nine miles East North-east.

The elementh of July their Boar was by a great want of the Sea funke to the ground, and by that meanes they loft it, and after that they draue without fayles fine miles, East and by South, at laft the Sunne being almost South-east, she wind came about to the North-west, and then the weather began somewhat to cleere up, but yet it was very mistie. Then they hoysed up their fayles againe and fayled foure miles till night, that the Sunne was North and by East, and there they had fixtie fathome deepe, muddie ground, and then they faw certayne flakes of Ice, at which time voon the twelfth of July they wound West, and held North-west, and fayled about a mile with miftie weather, and a North-west wind, and sayled up and downe West Southwest three or foure miles, to see if they sould find their Boat againe: after that they wound againe with the wind, and layled foure miles South-east, till the Sunne was South-welt, and then they were close by the Land of Nous Zembla , that lay East and by North , and West and by 60 South, from thence they wound over against ill noone, and fayled three miles, North and by West, and then till the Sunne was North-west, they held North-west and by North three miles,

then they wound East-ward and sayled foure or fine miles North-east and by East. The thirteenth of July at night, they found great store of Ice, as much as they could descry out of the top, that lay as if it had beene a plaine field of Ice, then they wound Westward our from

Cape Truft.

The seventeenth of July, William Barents tooke the height of the Sunne with his entirela-The separate of the policy and then they were voider 77, degrees and a tof the Pole, and dyled Southward fix miles, and perceived the firme Land, lying South from them. Then they fayled till the nineteenth of July in the morning, Weit South-weft fixe or feuen miles, with a North-weft winde, and miftie weat' er, and after that South-west and South-west and by West seven miles, the Sunne being 77. degrees 5. minutes leffe. Then they fayled two miles South-west, and were close by the

The flue and reventieth of Iuly, they were so inclosed about with flakes of Ice, that out of the top they could not differne any thing beyond it, and fought to get through the Ice, but they could not paffe beyond it. At night, they tooke the height of the Sunne, when it was at the 10 lowest betweene North and North-east, and North-east and by North, it being eleuated about the Horizon 6, degrees, and 4, his Declination being 19, degrees 50, minutes, now take 6. degrees 1, from 19. degrees and 50. minutes, and there refleth 13. degrees 5. minutes, which fub.

stracted from 90. there resteth 77. degrees leste 5. minutes.

The fixe and twentieth of July in the morning, they tayled fixe miles South South-eaft, till the Sunne was South-west, and then South-east fixe miles, and were within a mile of the land of Nova Zembla, and came againe to Cape Truft.

The eight and twentieth of July, the height of the Sun being taken at noone with the Afrelabium, it was found to be eleuated aboue the Horizon 57. degrees and 6.minutes, her Declination being 19. degrees and 18. minutes, which in all is 76. degrees and 24. minutes, they being then a- 24 bour foure miles from the land of None Zembla, that lay all couered ouer with Snow, the wea-

The nine and twentieth of July, the height of the Sun being taken with the Croffe-ftaffe, A-Brolabium & Quadrant, they found it to be elevated aboue the Horizon 32. degrees, her declination on being 19. degrees, which substracted from 32. there resteth 13. degrees of the Equator, which being fubftracted from 90, there refted 77, degrees, and then the nearest North point of Nose Zembla, called the lee point, lay right East from them. There they found certaine Stones that glistered like gold, which for that cause they named Gold-stones, and there also they had a faire Bay

Vpon the same day they wound Southward againe, and sayled South-east two miles be- 30 tweene the Land and the Ice, and after that from the Ice poin & East, and to the Southward fixe miles to the Ilands of Orange; and there they laboured forward betweene the Land and the Ice, with faire full weather, and vpon the one and thirtieth of July got to the Hands of Orange. And there went to one of those Hands, where they found about two hundred Walrushen, or Sea-horfes, lying vpon the shoare to bast themselues in the Sunne. This Sea-horse is a wonderfull strong Monster of the Sea, much bigger then an Oxe, which keepes continually in the Seas, haning a skin like a Sea-calfe or Seale, with very short hayre, mouthed like a Lion, and many times they lye vpon the Ice; they are hardly killed vnlesse you strike them just vpon the forehead, it hath foure Feet, but no Eares, and commonly it hath one or two young ones at a time. And when the Filher-men chance to finde them vpon a flake of Ice with their young ones, shee casteth her 40 young ones before her into the water, and then takes them in her Armes and fo plungeth vp and downe with them, and when shee will reuenge her-felse vpon the Boates, or make resistance against them, then she casts her young ones from her againe, and with all her force gouth towards the Boate (whereby our men were once in no small danger, for that the Sea-horse had almost ftricken her teeth into the sterne of their Boate) thinking to over-throw it, but by meanes of the great crie that the men made, the was afraid, and fwomme away againe, and tooke her young ones againe in her armes. They have two teeth sticking out of their mouthes, on each fide one, each being about halfe an Ell long, and are effeemed to bee as good as any Iuorie or Elephants teeth, specially in Muscomia, Tartaria, and thereabouts where they are knowne, for they are as

The Sea-horfes that lay bathing themselues upon the Land, our men supposing that they could not defend themselves being out of the water, went on shoare to assaile them, and sought with them, to get their Teeth that are so rich, but they brake all their Hatchets, Cuttle-axes, and Pikes in pieces, and could not kill one of them, but strucke some of their Teeth out of their mourthes, which they tooke with them : and when they could get nothing against them by fighting, they agreed to goe aboord the Ship, to fetch some of their great Ordnance, to shoot at them therewith; but it began to blow so hard, that it rent the Ice into great pieces, so that they were forced not to doe it, and therewith they found a great white Beare that flept, which they shot into the bodie, but shee ranne away, and entred into the water; the men following her with their Boate, and killed her out-right, and then drew her vpon the Ice, and so sticking a halft-pike 60 vpright, bound her fast vnto it, thinking to fetch her when they came back againe, to shoot at the Sea-horfes with their Ordnance, but for that it began more and more to blow, and the Ice therewith brake in peeces, they did nothing at all.

After that, William Barouss finding that hee could hardly get through, to accomplish and end

CH AP.3. Nauigations into the North-Seas, by William Barents.

his pretended Voyage, his men also beginning to bee wearie, and would savle no further, they all together agreed to returne backe againe, to meet with the other Ships that had taken their course Thererentne to the Wer-gates, or the Straights of Maffer, to know what Difconeries they had made there. The backe again. first of August they turned their course to sayle backe againe from the Ilands of Orange; There William Berents tooke the height of the Sunne, it being vnder 71. degrees and #. and there they found a great Creeke, which William Barents judged to bee the place where Olimer Brunel had beene before, called Coffine farch. From the Blacke Hand they fayled South, and South and by Blacke Hand. East to another small point three miles, on which point there stood a Crosse, and therefore they called it the Croffe-poor, there also was a flat Bay and low water, fine, fix, or seuen sadome deepe Croffe-point.

Io fost ground. From Craft-paint they fayled along by the land South South-east source miles, and then came to another small point, which behind it had a great Creeke, that reached Eastward: This point they called the fifth point, or Saint Lawrence point. From the fifth point they fayled to the Seemer point three miles, South South-east, and there lay a long blacke Rocke close by the land, whereon there flood a Croffe; then they entred into the Ice againe, and put inward to the Sea because of the Icr. Their intent was to sayle along the coast of Nona Zembla to the Wey-gates, but by reason that the Ice met them, they wound Westward, and from the ninth of August in the Equening, till the tenth of August in the Morning, sayled West and by North eleuen miles, and after that foure miles West North-west, and North-west and by West, the winde being North in the Morning they wound Eastward againe, and fayled vntill Ecuening ten miles East, and and were against a great Creeke, where with their Boate they went on land, and there found a faire Hauen fine fathorne deepe, fandie ground. This Creeke on the North fide hath three blacke

20 East and by South , after that East, and East and by North foure miles, and there they faw land. points, and about the three points lyeth the road, but you must keepe somewhat from the third point, for it is stonie, and betweene the second and third point there is another faire Bay, for Saint Laurens North-west, North, and North-east windes, blacke sandie ground. This Bay they called Saint Bay.

Laurence Bay, and there they tooke the height of the Sunne, which was 70, degrees and \$. From Saint Laurence Bay, South South-east two miles to Seemes point, there lay along blacke Scence point. Rocke close by the land, whereon there food a Crosse, there they went on Land with their Boat, and perceived that fome men had beene there, and that they were fled to faue themselves.

20 for there they found fixe Sackes with Rye-meale buried in the ground, and a heape of stones by the Croffe, and a Bullet for a great Piece, and thereabouts also there stood another Croffe, with three Houses made of wood, after the North Countrey manner : and in the houses they found many barrels of Pike-staues, whereby they conjectured, that there they vied to take Salmons. and by them stood five or fix Coffins, by Granes, with dead mensbones, the Coffins standing vp. on the ground all filled vp with fromes ; there also lay a broken Ruffis thip, the Keele thereof being fortie foure foot long, but they could fee no man on the Land : it is a faire Hauen for all winder, which they called the Meale-hauer, because of the Meale that they found there. From the blacke Rocke or Cliffe with the Croffe, two miles South South-east, there lay a low Iland a little into the Sea; from whence they fayled nine or ten miles South South-east, there the height 40 of the Sunne was 76. degrees and 50. minutes, when it was South South-west. From that Iland they fayled along by the Land foure miles South-east and by South, there they came to two

Ilands, whereof the vetermost lay a mile from the Land : those Ilands they called Saint Clara. Then they entred into the Ice againe, and woond inward to the Sea in the wind, and fayled from the Hand vntill Ecuening, West South-west foure miles, the wind being North-west; that Ecuening it was very miftie, and then they had eightie fathome deepe.

Then againe they fayled South-west and by West, and West South-west three miles, there they had seventie fathome deepe, and so sayled till the thirteenth of August in the morning, South-west and by West foure miles, two houres before they had ground at fiftie fixe fathome, and in the morning at fortie fine fathome, foft muddie ground. Then they woond from the land and fayled North, and North and by East foure miles, from thence they woond to land againe, and fayled till the fourteene of August, fine or fixe miles South-west, fayling close by the land, colones,

which (as they ghelle) was the Hand of Colgogon.

August the fifteenth, the Sun being South-west, William Baronts tooke the height thereof, and found it to bee elevated above the Horizon 35. degrees, his Declination being 14. degrees and 1. fo that as there wanted 55 degrees of 90. which 55. and 14. degrees 1. being both added together, made 69. Degrees 15. Minutes, which was the height of the Pole in that place, the wind being North-west, then they sayled two miles more Eastward, and came to the Hands called Matfire Matfire and and Delgoy, and there in the morning they met with the other Ships of their companie, being of They meet Zelands and Enck-hussen, that came out of Wes-gates the same day, there they shewed each other with their companies where they had beene, and how farre each of them had sayled and discoursed.

The Ship of Enck buy fen had past the Straights of Weg-gates, and faid, that at the end of Weggates hee had found a large Sea, and that they had fayled fiftie or fixtie miles further Eastward, and were of opinion that they had beene about the River Obi, that commeth out of Tartaria, and that the Land of Tartaria reacheth North-eastward agains from thence, whereby they thought

that they were not farrefrom Cape Tabia, which is the point of Tarania, that reacheth towards that they were the Kingdome of Cathai, North-eaft and then Southward, and so thinking that they had Disco. nered enough for that time, and that it was too late in the yeere to fayle any further, as allo that perce enough for that time, and that it was been and to come home again before Winter, they turned against owards the Wog-gates, and came to an Iland about five miles great, lying Southturned against war and the farteries fide, and called it the States lland, there they found many Stones that were of Christall Mountayne, being a kind of Diamond,

When they were met together, as I sayd before, they made fignes of joy, discharging some of when they were merrie, the other Ships thinking that William Berests had layled round their Ordnance, and were mettic, the other only a timining the Wey-gate: and after they had to about venue comments, and made figures of joy for their meeting, they fet their fixed each other what they had done, and made figures of joy for their meeting, they fet their inewes seat unto water the course to turne backs agains for Holland, and upon the fatteenth of August they went under course to turne backs agains for Holland, and upon the fatteenth of August they went under the Hands of Mailes and Delger, and put into the road, because the wind was North-well, and lay till the eighteenth of August. Then they set sayle, and came to the Taxes the fixteenth

### CHAP. IIII.

A briefe Declaration of BARENTS his fecond Nationation, made in Anno 1595. behinde Norway, Muscouia, and Tartaria, written by GERAT DE VEER.

He foure Ships aforefaid, being returned home about Haruest-time, in Anne 1544 they were in good hope that the Voyage aforefaid would bee done, by pafing along the Straights of Woy-gates, and ipecially by the troort made by the two Ships of Zelands, and East, burgen, wherein John England of Linfchores was Committee, who declared the manner of their travell in fuch fort, that the Generall States and Prince (Maurice refolued, in the beginning of the next yeere to pre- 30

pare certayne Ships, not onely (as they went before) to discouer the passage, but to lend certayn Wares and Merchandizes thither, wherein the Merchants might lade what Wares they woold, with certaine Factors to fell the faid Wares, in fuch places as they fhould arrive, neither paying Fraight nor Custome. Peter Plantins a learned Cosmographer, being a great furtherer and setter forward of this Voyage, and was their chiefe Instructer therein, setting downe the scinuation of the Coasts of Tartaria, Calbaia, & China; but how they lye it is not yet sufficiently Discovered, for that the courses and rules by him set downe, were not fully effected, by meanes of some inconveniences that fell out, which by reason of the shortnesse of time could not bee holpen,

In Anno 1 595, the Generall States of the vnited Prominces, and Prince Maurice, caused seven Ships to be prepared to fayle through the Weg-gates, or the Straights of Naffare, to the King-40 dome of Cathaia and China: two out of Amsterdam, two out of Zelands, two out of Encl. hopfen, and one out of Rosterdam: fixe of them laden with divers kindes of Wares, Merchandizes, and with Money and Factors, to fell the faid Wares; the fouenth being a Pinnaffe, that had Commiffion, when the other Ships were past about the Cape de Tabin (which is the furthest point of Tanaria) or fo farre, that they might fayle forth Southward, without any let or hinderance of the Ice, to turne backe againe, and to bring newes thereof : and I being in William Barent: Ship that was our chiefe Pilot, and Lames Hemf Acres chiefe Factor, thought good to write downe the fame in order, as it is hereafter declared, as I did the first Voyage, according to the course and

First, after we had beene mustered at Amsterdam, and every man taken an Oath, that was then 50 purposely ministred vato vs; vpon the eighteene of June wee sayled to the Texes, from thence to put to Sea, with other Ships that were appointed to meet via a acertayne day; and so tobegin our Voyage in the name of God. The second of July wee set sayle out of the Texes. The fifth of August, the North Cape lay about two miles East from vs, and when the Sunne was Northwest, the Mosher and her Daughters lay Southward from vs foure miles.

The fewenteenth, wee faw great store of Ice, all along the Coast of Nona Zembla, and cashing out the Lead, had 75. fathom foft ground. After that we held divers courses because of the lee, and fayled South-east and by East, & South South-east, for the space of eighteene miles, till the eighteenth of August, when the Sunne was East, and then we cast out the lead againe, and found 30. fathome fort ground, and within two houres after that, fathome, red fand, with small shelles: 69 three Glasses after that we had ground at twentie fathome, red fand, with blacke shels, as before: then wee faw two Ilands, which they of Euck-bussen gave the names of Prince Maurice and his Brother, which lay from ve South-east three miles, being low Land, and then wee fayled eight miles, till the Sun was South. Then we fayled East, and of tentimes cashing out the lead, we found

twentie, nineteene, eighteene, and seuenteene fathome deep, good ground mixed with black shels. and faw the Wey-gates (the Sunne being West) which Ly East North-east from vs about fine miles, and after that we fayled about eight miles.

Then we fayled under 70. degrees, untill we came to the Wey gates , most part through broken Ice, and when we got to Weg-gates, we cast out our Lead, and for a long time found thirteene and fourteene fathome, fort ground, mixed with blacke thels, not long after that we cast out the Lead and found ten fathome deepe, the wind being North, and we forced to hold ftifly aloofe, in regard of the great quantitie of Ice, till about mid-night, then were forced to wind Northward because of certaine Rocks that lay on the Southfide of Wey-gates, right before vs, about a mile and a halfe, having ten fathome deepe : then we changed our courfe, and fayled West North-west for the space of foure Glasses, after that we wound about againe East, and East and by South, and fo entred into VVer-gates, and as wee went in, wee cast out the Lead, and found seven fathome deepe, little more or leffe, till the nineteenth of August, and then the Sunne being South-east, we entred into the Weg-gates, in the Road, the wind being North. The right Channell betweene Imagepoint, the Image point and the Samuters Land was full of Ice, so that it was not well to bee past the Samuters Land row, and so we went into the Road (which we called the Trace Bay, because we found store of Trace Bay. Traen-oyle there, this is a good Bay for the course of the Ice, and good almost for all winds, and we may fayle to farre into it as we will, at foure, fine, and three fathome, good Anchor-ground, on the East fide it is deepe water.

The twentieth of August, the height of the Sunne being taken with the Crosse-staffe, wee found that it was eleuated aboue the Horizon 69. degrees 21. minutes, when it was South-west and by South, being at the highest, or before it beganne to descend. The one and twentieth of August, we went on Land within the VVog-gates with foureand fiftie men, to see the situation They goe on of the Countrey, and being two miles within the Land we found many Vel-werek, Traen, and Land fuch like Wares, and divers foot-steps of men, and Deere; whereby wee perceived that fome men dwelt there abouts, or else vied to come thither. And to affure vs the more thereof, wee might perceiue it by the great number of Images, which we found there vpon the Image or Beelthooke, Images. (so called by vs) in great abundance, whereof ten dayes after wee were better informed by the Samuters and the Russians, when wee spake with them. And when wee entred further into the Land, we vied all the meanes we could, to fee if we could find any houses or men, by whom we might be informed of the ficuation of the Sea there abouts, whereof afterward we had better in-

telligence by the Samuers; that told vs, that there are certayne men dwelling on the VVeygates, and voon Nona Zembla, but we could neither find men shoules, nor any other things, fo that to have better information, wee went with some of our men further South-east into the Land; towards the Sea-fide, and as we went, we found a path-way made with mens feet in the Mosse or Marsh-ground, about halfe knee deepe, for that going so deepe we felt hard ground vnder our feet, which at the deepest was no higher then our shooes, and as we went forward to the Sea-coalt, we were exceeding glad, thinking that we had feene a passage open, where we might get through, because we saw so little Ice there : and in the Euening entring into our ship againe, we showed them that newes. Meane-time, our Master had fent out a Boat to fee if the Tarrarian Sea was open, but it could not get into the Sea because of the Ice, yet they rowed to the Cross-point, and there let the Boat lye, and went over the Land to the West point, and there

perceived that the Ice in the Tartarian Sea, lay full voon the Ruffian Coafts, and in the mouth of VVey-gates. The three and twentieth of August we found a Lodgie, or Boat of Pizzere, which was fewed together with Bast or Ropes, that had beene Northward to seeke for some Sea-horses Teeth, Traen, and Geefe, which they fetche with their Boat, to lade in certaine shippes that were to come out of Ruffia through Wey-gates. Which ships they said (when they spake with vs) were to fayle into the Tartarian Sea, by the River of Oby, to a place called Ugolita in Tartaria, there

50 to flay all Winter, as they vied to doe euery yeere : and told vs that it would yet bee nine or ten Weekes ere it began to freeze in that place, and that when it once beganne to freeze, it would freeze so hard, that as then men might go ouer the Sea into Tartaria (along vpon the Ice) which

The foure and twentieth of August in the morning betimes, we went on board of the Lodgie, to have further information and infiruction of the Sea, on the Eaffide of PVer-gates, and they gaue vs good inftruction, fuch as you have heard.

The fine and twentieth of August we went agains to the Lodgie, and in friendly manner spake with them, we for our parts offering them friendship; and then they gaue vs eight fat Geefe, that lay in the bottome of their Boat : we defired that one or two of them would goe with vs a-6c board our ship, and they willingly went with vs to the number of seuen; and being in our ship, they wondred much at the greatnesse and furniture of our ships and after they had seene and looked into it in every place, we fet Fish, Butter and Cheese before them to eate, but they refused it; faying, that that day was a Fasting day with them, but at last when they faw some of our Pickled Herrings, they eate them both heads, tayles, skinnes, and guts, and having eaten thereof,

Iames Hemfter exploit.

we gaue them a small Firkin of Herrings, for the which they gaue vs great thankes, knowing not what friendship they should doe vs to require our courteste, and wee brought them with our Pinnasse into the Traen Bay. About Noone we hoysed up our Anchors with a West North-west wind; the course of fretching of VVogague, is East to Grup point, and then North-east to the Twiff point, and fomewhat more Easterly: From thence the Land of Wogague, reacheth North-North-east, and North and by East, and then North, and somewhat Westerly, wee syled North-eaft and Eaft ward two miles, by the Twift point, but then we were compelled to faile backe againe, because of the great store of Ice, and tooke our course to our Road aforesaid : and fayling backe againe we found a good place by the Croffe point, to anchor in that night. The fix and twentieth of August in the morning we hoyfed Anchor, and put out our fork faile, and to 10 failed to our old Road, and there to stay for a more convenient time.

The eight and twentie, nine and twentie, and thirtieth of August till the one and thirtieth. They peaks I me cigar and we can summary and William B. arents our Captaine failed to the wind for the most part was South-west, and William B. arents our Captaine failed to the South-fide of VVey-gates, and there went on Land, where we found certaine Wildmen (called Samuers) and yet not altogether wilde, for they being twentie in number, staid and spake with our men, being but nine together, about a mile within the Land, our men not thinking to find any men there (for that we had at other times beene on Land in the VVeg-gates, and faw none) at last, it being mistie weather, they perceived men, five and five in a company, and weewere hard by them before we knew it : then our Interpretour went alone towards them to speake with them; which they perceining, fent one towards vs, who comming almost to our men, tooke 2a an Arrow out of his Quiner, offering to shoot at him; wherewith our Interpretor, being with out Armes, was afraid, and cryed vito him, faying (in Ruffien speech;) Shoote not, we are friends: which the other hearing, cast his Bow and Arrowes to the ground, therewith giving him to understand that he was well content to sprake with our man: which done, our man called to him once againe, and faid: We are friends: whereunto he made answere and faid; then you are welcome : and fainting one the other, bended both their heads downe towards the ground, after the Russian manner: this done, our Interpretor questioned with him, about the situation and streeching of the Sea East-ward through the Streights of Wy-gates; whereof he gaue vs good infinction, saying that when they should have past a point of land about five daies sailing from thence, shewing North-eastward; that after that, there is a great Sea (shewing towards the South-east to vpward,) faying, that he knew it very well, for that one had beene there that was fenr thither by their King with certaine Souldiers, whereof he had beene Captaine.

The manner of their Apparell is, like as we vie to paint Wildmen, but they are not wilderfor they are of reasonable judgement: they are apparelled in Harts skinnes from the head to the feet, valeffe it be the principalleft of them, which are apparelled, whether they be men or women, like vnto the reft, as atorefaid, vnlesse it be on their heads, which they couer with certains coloured Cloth lined with Furre : the rest weire Caps of Harts or Bucks skinnes, the rough fide Haire, perion, outwards, which fland close to their heads, and are very fir. They weare long Haire, which they make the state of their heads, and are very fir. They weare long Haire, which they flands. pleate and fold, and let it hang downe you their backes. They are (for the most pare all) thore and fow of stature, with broad flat faces, small eyes, thore legs, their knees standing outwards 40 and are very quicke to goe and leape. They trust not Strangers; for although that wee shewed them all the courtesse and friendship that wee could, yet they trusted vs not much : which wee perceived hereby, that as upon the first of September wee went agains on Land to them, and that one of our men desired to see one of their Bowes : they refused it, making a signe that they would not doe it. Hee that they called their King, had Centinels standing abroad, to see what was done in the Countrey, and what was bought and fold : At last, one of our men went necrer to one of the Centinels, to speake with him, and offered him great friendship, according to their accustomed manner, withall giving him a Bisket; which he with great thankes tooke, and presently eate it; and while hee eate it, hee still lookt diligently about him on all sides what

Their Sleds.

Their King.

Their Sleds stood alwayes readie with one or two Harts in them, that runne so swiftly with one or two men in them, that our Horses are not able to follow them. One of our men shota Musket towards the Sea, wherewith they were in fo great feare, that they ranne and leapt like mad men : yet at last, they satisfied themselves, when they perceived that it was not maliciously done to hurt them: and we told them by our Interpretor, that we vied our Peeces in flead of Bowes; whereat they wondered, because of the great blow and noyse that it gaue and made; and to shew them what wee could doe therewith, one of our men tooke a flat stone about halfe a handfull broad, and let it vpon a Hill a good way off from him: which they perceiving, and thinking that we meant some-what thereby, fiftie or fixtie of them gathered round about vs; and yet some-what farre off, wherewith hee that had the Peece, shot it off, and with the Bullet fmote the stone in sunder: whereat they wondred much more then before,

Departure.

After that, wee tooke our leaues one of the other, with great friendship on both sides; and when we were in our Pinnasse, wee all put off our Hats, and bowed our heads viito them, sounding our Trumpet: They (in their manner) faluting vs also, and then went to their Sleds agains.

And after they were gone from vs, and were fomewhat within the Land, one of them came riding to the shoare, to fetch a rough-hewed Image, that our men had taken off the shoare, and Image, carryed into their Boate : and when hee was in our Boate, and perceived the Image, he made's a figne that wee had not done well to take away that Image: Which we beholding, gaue it to him againe : Which when hee had receiued, he placed it vpon a Hill right by the Sea side, and tooke it not with him, but fent a Sled to feech it from thence : and as farte as wee could perceive, they esteemed that Image to be their God; for that right over against that place in the percente, they executed that images all Hundreds of fuch caraved Images, all Hundreds of rough about the Heads, being somewhat round, and in the middle, having a little hill in thead of ill supen test-10 a Nofe; and about the Nofe two cuts, in place of Eyes; and vnder the Nofe; a cut, in place of a ges.

Mouth. Before the Images, wee found great ftore of Alhes, and bones of Harts : whereby it is to bee supposed, that there they offered voto them.

The second of September, a little before Supne riling, wee put forth an Anchor to get out, for that the winde as then blew South South-weit; at being good weather to get out; and if weather to lye still: for wee lay under a low Banke. The Admirall and Vice-admirall seeing vs making out, began also to hoyse their Anchors, and to fet sayle. When wee put out out Focke-fayle, the Sunne was East and by South : and then wee fayled to the Croffe-point, and there wee cast Anchor to stay for the Vice-admirals Pinnasse; which with much labour and paines, in time got out of the Ice, by often cafting out of their Anchor : and in the Eeuening 20 face got to's: in the Morning about two hours before Sunne ring we fet fayle, and by Sunne

rling, wee got within a mile Eastward of the Twitt-point, and fayled Northward fixe miles, till the Sunne was South. Then wee, were forced to wind about, because of the great quantitie of Ice, and the Myst that then fell, at which time the winde blew so vncertayne, that we could hold no courfe, but were forced continually to winde and turne about, by reason of the Ice, and the vnconfiantnesse of the winde, together with myst, so that our coarse was vncettayne, and wee supposed that we had sayled Southward up towards the Samuers. Country, and then held our courie South-well, till the watchers were North-well from vs ; then we came to the point of the States Hand lying Eastward about a Musker shot from the land, having 1 3. fathom deepe.

The fourth of September, wee hoyfed Anchor because of the Ise, and sayled betweene the firme Land and the Stater Hand, where we lay close by the States Hand at foure and fine fathom States Hand deepe, and made our Ship fast with a Cable cast on the shoare, and there wee were safe from the course of the Ice, and divers times went on land to get Hares, whereof there were many in that lland. The fixth of Septembar, some of our men went on shoare spon the firme land to seeke for Stones, which are a kinde of Diamond, whereof there are many also in the States Iland : and while they were feeking the Scones, two of our men lying together in one place, a great leane white Beare came suddenly stealing out, and caught one of them fast by the necke, who not White Deare came assument, accounting one and several Anomaly where we wherewith the other, that lay not faree from him; lifted vp his head to fee two men.

40 Beare, and therewith profendy role vp and ranne aways.

who it was, and perceiuing it to bee a monftrous Beare, cryed out and fayd, Oh Mate! it is a Beare, and therewith presently rote up anoranne aways.

The Beare at the first falling upon the man, but his blood, in flighter, and fuckt out his blood, where with the reft of the ment that were on the Land, being about twentie in number, ranne presently thirther, either to faue the man, of else be drue the Beare from the dead body: and has her flourness. pung charged their Pieces and bent their Pikes, fet vpon her, that still was denouring the man; but perceiuing them to come towards her, fieroely and eruelly ranne at them, and got another of them out from the Companie which shee tore in pieces, wherwith all the rest ranne away.

We perceiving out of our Ship and Pinnaffe, that our men ranne to the Sea-fide to faue themfelues, with all speed entred into our Boates, and rowed as fast wee could to the shoare to relieue our men. Where being on Land, we beheld the croell spectacle of our two dead men; that had beene so cruelly killed and come in pieces by the Beare, wee feeing that, incouraged our men to goe backe againe with vs, and with Pieces, Curtalaxes, and Halfe-pikes, to fet vpon the Beare, but they would not all agree thereunto: fome of them faying, our men are already detd, and we final get the Bear well grouph, though we oppose not our selves into so pen danger, if wee might fane our fellowes lines, then wee would make hafte, but now we need not make feh speed, but take her at an admintage, with most securities for our selves, for we have to doe with a cruell, fierce, and rauchous Beaft. Whereupon three of our men went forward, the Beare fill dewouring her prey, not once fearing the number of our men, and yet they were thirtie at the least : the three that went forward in that fort, were Corneling tacebjon, Mafter of William Barents (hip, William Cifen, Pylot of the Pinnasse, and Hans wan Nosten, William Barents, Purfer : and after 60 that the fayd Master and Pylor had thot three times and mist, the Purser stepping somewhat further forward, and feeing the Beare to be within the length of a shor, presently levelled his Piece, and dicharging it at the Beare, that her into the head betweene both the eyes, and yet the

held the man fill faft by the necke, and lifted up her head with the man in her mouth, but thee

Begm fom what to flagger, where with the Purier and a Scottift-man drew out their Curtelaxes;

They kill the

and strooke at her so hard, that their Curtelaxes burst, and yet she would not leave the man, at last william Gersan went to them, and with all his might strooke the Beare vpon the snout with his Piece, at which time the Beare fell to the ground, making a great noyle, and William Geylen leaping vpon her cut her throat. The feuenth of September, wee buried the dead bodies of our men in the States Hand, and having flayed the Beare, carryed her Skin to Amferdam.

The minth of September, we fet fayle from the States Hand, but the Ice came in fo thicke and with fuch force, that we could not get through, so that at Eenening we came backe agains to the States Hand, the winde being Wefterly. There the Admirall and the Pinnaffe of Retterday, fell on ground by certayne Rockes, but got off againe without any hurt.

If on ground by creating the same from the States Iland towards the Wog-Sates, and Io fent two Boates into the Sea, to certifie vs what flore of Ice was abroad : and that Ecuening wee came all together into Wey-gates, and Anchored by the Twift-point. The eleventh of September in the Morning, we fayled agains into the Tartarian Sea, but we fell into great store of Ice, fo that we sayled backe againe to the Weg-gates, and Auchored by the Croffe-point, and about midnight we faw a Ruffian Lodgie, that fayled from the Beels-point towards the Sammers Land. The thirteenth of September, the Sunne being South, there began a great storme to blow out of the South South-welt, the weather being miltie, melancholy, and inowie, and the florme increasing more

The fourteenth of September, the weather began to bee somewhat clearer, the winde being North-west, and the storme blowing stiffe out of the Tartarian Sea, but at Ecuening it was faire 20 weather, and then the wind blew North-east, the fame day our men went on the other side of Wer-eates, on the firme land, to take the depth of the Channell, and entred into the Bough behind the llands, where there flood a little House made of wood, and a great fall of water int the land. The same Morning we hoysed up our Anchor, thinking once againe to try what wee could doe to further our Voyage, but our Admirall being of another minde, lay full till theffteenth of September. The same day in the Morning, the winde drawe in from the East-end of the Weg-gates, whereby we were forced prefently to hoyse Anchors, and the same day sayled out from the West-end of the Wey-gates, with all our Fleet, and made homewards againe, and that day past by the Hands called Marshee and Delgey, and that night we sayled twelve miles, Northweft and by West, till Saturday in the morning, and then the winde fell North-east, and it be- 30 gan to Snow. We saw the point of Candynaes, lying South-east from vs, and then wee had seven and twentie fathom deepe, red fand with blacke thels

The nine and twentieth of September, in the Ecuening entred into Ward-boufe, and there we flayed till the tenth of October. And that day we fet fayle out of Ward bonfo, and voon the eighteenth of November, we arrived in the Mars.

CHAP. V. The third Voyage Northward to the Kingdomes of Cathaia, and China, in Anno 1596. Written by GERAT DE VEER

What bappened to them at Sea, before they came to build their Honfo.

Free that the seuen Ships (as I said before) were returned backe againe from their North Voyage, with leffe benefit then was expected, the Generall States of 50 the Vnited Provinces confulted together, to fend certayne Ships thitheragaine, a third time, to fee if they might bring the faid Voyage to a good end, if it were possible to bee done : but after much Consultation had, they could not agree thereon; yet they were content to cause a Proclamation to be made, that if

any, either Townes, or Merchants, were disposed to venture to make further fearch that way, at their owne charges, if the Voyage were accomplished, and that thereby it might be made apparant, that the layd paffage was to be fayled, they were content togine them a good reward, in the Countries behalfe, naming a certayne fumme of money. Whereupon in the beginning of this yeere, there was two Ships rigged and fee forth by the Towne of Amferdam, to fayle that Voyage, the men therein being taken vp vpon two Conditions: viz. What they (hould have if 60 the Voyage were not accomplished, and what they should have if they got through, and brought the Voyage to an end, promifing them a good reward if they could effect it, thereby to encourage the men, taking up as many vnmarried men as they could, that they might not bee diffwaded by meanes of their Wiues and Children to leaue off the Voyage. Vpon these Conditions, those

two Ships were ready to let layle in the heginning of May. In the one, lacob Heemskerke Hendicklon, was Matter and Factor for the Wares and Merchandizes ; and William Barents chiefe Pylot. In the other, John Cornelison Ripp, was both Master and Factor for the goods that the Merchants had laden inher.

The fifth of May, all the men in both the Ships were Mustered, and vpon the tenth of May. they fayled from Amfterdam, and the thirteenth of May got to the Olie. The thirtieth of May we had a good winde, and fayled North-east, and wee tooke the height of the Sunne with our Croffe-staffe, and found that it was eleuated about the Horizon 47. degrees and 42. minutes, his Declination was 21, degrees and 42 minutes, fo that the height of the Pole was 69, degrees

The first of Iune we had no night, and the second of Iune we had the winde contrarie, but ypon the fourth of June we had a good winde, out of the West North-west, and sayled North-east. Three Sunnes on the fourth of lane we had a good winde, one of the yverthyouth-well, and tayled a vorth-walls

And when the Sunne was about South South eaft, wee faw a fittinge fight in the Element: for Rain-hower. on each fide of the Sunne there was another Sunne, and two Raine-bowes, that past cleane tho- The like hath row the three Sunnes, and then two Raine-bowes more, the one compassing round about the beene seene seene in Sunnes, and the other crosse thorow the great rundle; the great rundle standing with the vtter- England about most point, elevated about the Horizon 28, degrees: at moone the Sunne being at the highest, the therime this being the thereof was measured, and wee found by the Abrahams that it was also and the work entred. height thereof was measured, and wee found by the Astrolabium, that it was elevated aboue the worke entre Horizon a8 degrees and 43, minutes, his Declination was 22, degrees and 17, minutes, the which 20 being added to 48. degrees 43. minutes, it was found that wee were wnder 71. degrees of the height of the Pole.

John Cornelis ship held aloofe from vs, and would not keepe with vs, and would hold no course but North North-east, for they alledged, that if wee went any more Easterly, that then we should enter into the Weg-gates, but wee being not able to perswade them, altered our course one point of the Compasse, to meet them, and sayled North-east and by North, and should otherwise haue fayled North-east, and somewhat more East,

The fifth, wee faw the first Ice, which we wondered at, at the first, thinking that it had beene The fifth, wee law the fifth acc, wants we remain the Fore-decke, on a findden began to cry out with white Swannes, for one of our men walking in the Fore-decke, on a findden began to cry out with white Swannes, for one of our men walking in the Fore-decke, on a findden began to cry out with the was the ware under Harches has a loud voyce, and faid; that hee faw white Swannes: which wee that were under Hatches hea-20 ring, prefently came up, and perceived that it was Ice that came driving from the great heape, showing like Swannes, it being then about Ecuening, at midnight we sayled through it, and the

Sunne was about a degree eleuated about the Horizon in the North. The fixth, about foure of the clocke in the after-moone, were entred agains into the Ice, which was softrong that we could not passe through it, and sayled South-west and by West, till eight Glaffes were runne out, after that we kept on our course North, North-east, and fayled along

The feuenth, we tooke the height of the Sunne, and found that it was elevated about the Horizon 28 degrees and 38 minutes, his Declination being 22. degrees 38 minutes; which being taken from 38 degrees 38. minutes, wee found the Pole to bee 74. degrees ; there we found to great store of Ice, that it was admirable: and we sayled along through it, as if we had past betweenetwo Lands. The water being as greene as Graffe, and we supposed that we were not Greene water, farre from Greenland, and the longer we fayled, the more and thicker ice we found. The eight of Iune, we came to fo great a heape of Ice, that we could not fayle through it.

The minth of lune, we found the Hand that lay vinder 74. degrees and 30. minutes, and as we Beate, or Cheghest, it was about fine miles long. The tenth, we put out our Boate, and therewith eight of our tie-lland. men went on Land, and as we past by Iohn Cornelisms thip, eight of his men also came into our Boat, whereof one was the Pilot. Then William Barents asked him, whether we were not too much Westward, but hee would not acknowledge is : whereupon there passed many words betweene them, for William Barents fayd, he would proue it to bee fo, as in truth it was. The ele-

50 uenth, going on Land, we found great store of Sea-Mewes Egges vpon the shoare, and in that Iland we were in great danger of our lines : for that going vp a great Hill of Snow, when wee should come downeagaine, we thought we should all haue broken our neckes, it was so slipperie, but we fate vpon the Snow and flid downe, which was very dangerous for vs. to breake both our armes and legges; for that at the foot of the Hill there was many Rockes, which we were likely to haue fallen vpon, yet by Gods helpe we got fafely downe againe. Meane time William Variation of Barous fate in the Boate, and faw vs slide downe, and was in greater feare then we, to behold vs the Compasse. in that danger. In the faid lland, we found the varying of our Compasse, which was 13. degrees, to that it differed a whole point at the least : after that wee rowed aboord lobn Cornelsons ship, and there we eate our Egges.

The twelfth in the morning, we faw a white Beare, which wee rowed after with our Boate, thinking to cast a Rope about her necke; but when we were neere her, she was so great, that we Great durst not doe it, but rowed backe agains to our Ship to fetch more men and our Armes, and so made to her againe with Muskets, Harquebuffes, Halberts, and Hatchets. Ichn Carnelsons men comming also with their Boate to helpe vs : and so being well furnished of men and weapons,

Fight with

we rowed with both our Boates vnto the Beare, and fought with her while foure Glaffer were runne out, for our Weapons could doe her little hurt : and amongst the rest of the blowes that we gaue her, one of our men ftrooke her into the backe with an Axe, which flucke fast in her backe, and yet shee swamme away with it; but we rowed after her, and at last we cut her head in funder with an Axe, wherewith the dyed : and then wee brought her into John Cornelifons Bearesskin 13. Ship, where we flayed her, and found her Skinne to bee twelue foot long: which done, we cate fome of her flesh; but wee brookt it not well. This Iland we called the Beare-Iland.

The thirteenth we left the Iland, and fayled North, and somewhat Easterly, the winde being West, and South-west, and made good way : so that when the Sunne was North, weeghest that

we had fayled fixteene miles Northward from that Iland.

The fourteenth, when the Sunne was North, we cast out our Lead one hundred and thirteene fathomedeepe, but found no ground, and fo fayled forward till the fifteenth of lune, when the Sunne was South-east, with missie and drilling weather, and sayled North, and North and by East: about Eeuening it cleared up, and then we faw a great thing driving in the Sea, which we thought had beene a Ship : but passing along by it, we perceived it to bee a dead Whale, that flunke monstroully; and on it there face a great number of Sea-mewes : At that time, wee had

The fixteenth, with the like speed we sayled North and by East, with mistie weather; and as we fayled, we heard the Ice before we faw it ; but after, when it cleared vp, we faw it, and then woond off from it, when as we ghest we had fayled thirtie miles. The senenteenth and eigh- 28 teenth, we saw great store of Ice, and sayled along by it, vntill we came to the point, which we could not reach, for that the wind was South-east, which was right against vs, & the point of Ice lay Southward from vs: yet wee lauered a great while to get beyond it, but we could not doe it. The nineteenth, we faw Land againe, then we tooke the height of the Sun, and found that it was eleuated aboue the Horizon 33. degrees and 37. minutes : her Declination being 23. degrees and 26.minutes : which taken from the fayd 33. degrees and 37.minutes, wee found that we were and 11 miants, vnder 80.degrees and 11 minutes: which was the height of the Pole there. This Land was very great, and we fayled Westward along by it, till we were under 79. degrees and a halfe, where we found a good road, and could not get neare to the Land, because the winde blew North-east, which was right off from the Land : the Bay reacheth right North and South into the Sea.

Another fight Beare.

The twentie one, we cast out our Anchor, at eighteene fathome before the Land; and then we and lobn Cornelisons men, rowed on the West-fide of the Land, and there fetched Balast ; and when we got on boord againe with our Balaft, we faw a white Beare that swamme towards our thip; whereupon we left off our worke, and entering into the Boate with Iohn Cornelisons men, rowed after her, and croffing her in the way, droue her from the Land, wherewith the fwamme further into the Sea, and we followed her; and for that our Boate could not make good way after her, we manned our Scute also, the better to follow her: but shee swam a mile into the Sea: vet we followed her with the most part of all our men of both Ships in three Boats, and strooke oftentimes at her, cutting and hewing her, fo that all our Armes were most broken in pieces, During our fight with her, thee strooke her Clawes so hard in our Boate, that the fignes thereof 40 were seene in it; but as hap was, it was in the fore-head of our Boate; for if it had beene in the middle thereof, she had (peraduenture) ouer-throwne it, they have such force in their Clawes: At last, after we had fought long with her, and made her wearie with our three Boates that kept about her, we ouercame her and killed her : which done, we brought her into our ship, and flayed her : her Skinne being thirteene foot long. After that, we rowed with our Scute, about a mile inward to the Land, where there was a good Hauen, and good Anchor ground, on the East-fide being sandie, there wee cast out our Lead, and found sixteene fathom deepe, and after that, ten, and twelve fathome, and rowing further, we found that on the East-fide there was two llands, that reached Eastward into the Sea : on the West-side also there was a great Creeke or River, which shewed also like an Iland. Then we rowed to the Iland that lay in the middle, and there 50 we found many Red Geefe-egges, which we faw fitting vpon their Nelts, and droue them from them, and they flying away, cryed red, red, red : and as they fate we killed one Goose dead with a stone, which we drest and eate, and at least fixtie Egges, that wee tooke with vs abourd the ship, and vpon the two and twentieth of lune, we went aboord our ship againe. Those Geese were of a perfit Red colour, such as come into Holland about Weiringen, and eue-

13.foot long.

Red Geefe Egges,

Red Geefe breed their rie yeere are there taken in abundance, but till this time it was neuer knowne where they hatcht young Geefe, their Egges, so that some men have taken upon them to write, that they sit upon Trees in Scot-Vnder 80.De. land, that hang ouer the Water, and fuch Egges as fall from them downe into the Water become grees in Green young Geele, and swim there out of the water; but those that fall vpon the Land burft in funder, Fable of Barand are lost : but this is now found to bee contrary, and it is not to be wondred at, that no man 60 could tell where they breed their Egges, for that no man that ever wee knew, had ever beene

vnder 80. Degrees : nor that Land vnder 80. degrees, was neuer let downe in any Card, much

Note.

leffe the red Geefe that breed therein. It is heere also to bee noted, that although that in this land which we esteeme to be Greenland, lying under 80. Degrees, and more, there groweth Leaues and Graffe, and that there are fuch Beafts therein as eate graffe, as Harts, Buckes, and fuch like beafts as live thereon, yet in Noua Zembla vnder 76. Degrees, there groweth neither Leaues nor Graffe, nor any Beafts that eare graffe or leaves live therein, but fuch Beafts as eate Flesh, as Beares and Foxes: and yet this Land lyeth full 4. Degrees from the North Pole, further then Greenland aforelayd doth,

CHAP.4.S.I. Greenland, Low-land, Beare-Iland, Cherie-Iland,

The three and twentieth, wee hoysted Anchor againe, and sayled North-westward into the Sea; but could get no further, by reason of the Ice; and so we came to the same place againe where we had layne, and cast Anchor at eighteene fathome : and at Eeuening being at Anchor. the Sunne being North-east, and somewhat more Eastward, wee tooke the height thereof, and In found it to be elevated about the Horizon 13. degrees and 10. minutes, his Declination being 22.

degrees and 28 minutes : which substracted from the height aforesaid, resteth 10 degrees and 18. minutes, which being substracted from 90. degrees, then the height of the Pole there was 70. degrees and 42. minutes.

After that, we hoysted Anchor againe, and sayled along by the West side of the Land, and then our men went on Land, to fee how much the Needle of the Compaffe varyed : Meane time Bareaffaults there came a great white Beare swimming towards the Ship, and would have climbed up into them. it, if we had not made a noyle; and with that wee that at her with a Piece, but the left the thip, and swam to the Land, where our men were : which we perceiuing, fayled with our ship towards the Land, and gaue a great shout; wherewith our men thought that wee had fallen on a Rocke with our Ship, which made them much abashed; and therewith the Beare also being a-

fraid, swamme off againe from the Land, and left our men, which made vs glad : for our men had Variation of no Weapons about them. Touching the varying of the Compasse, for the which cause our men the Compasse

went on Land, to trie the certaintie thereof : it was found to differ 16. Degrees,

The five and twentieth of Iune, we hoysted Anchor againe, and sayled along by the Land, and went South, and South South-west, with a North North-east winde, vnder 79. degrees. There we found a great Creeke or River, whereinto we fayled ten miles at the leaft, holding our course Southward; but we perceived that there we could not get through: there we cast out our Lead, and for the most part found 10. fathom deepe, but we were constrained to lauere out again, for the winde was Northerly, and almost full North, and we perceived that it reached to the firme land, 30 which we supposed to bee Low-land, for that wee could not see it any thing farre, and therefore we fayled so neere vnto it, till that we might see it, and then we were forced to lauere, and vpon the feuen and twentieth of June we got out againe.

The eight and twentieth, we got beyond the point that Ly on the West side, where there was fo great a number of Birds, that they flew against our Sayles, and wee sayled ten miles South. Store of Birds; ward, and after that West, to shun the Ice. The nine and twentieth, wee fayled South-east and fomewhat more Easterly, along by the Land, till we were under 76. degrees and 50.minutes, for we were forced to out off from the Land, because of the Ice. The thirtieth of June, wee fayled South, and somewhat East, and then we tooke the height of the Sunne, and found that it was elenated about the Horizon 38. degrees and 20. minutes, his Declination was 23. degrees and 20.

40 minuts, which being taken from the former height, it was found that we were vnder 75, degrees. The first of July wee faw the Beare-Iland againe, and then Iohn Cornelison and his Officers July. came aboord our fhip, to speake with vs about altering our course, but wee being of a contrary o- Cheric Hard. pinion, it was agreed that we should follow on our course, and hee his : which was, that he (according to his defire) should sayle vnto So. Degrees againe : for he was of opinion, that there he should finde a passage through, on the East side of the Land that lay under 80. Degrees. And up- They pare on that agreement we left each other, they fayling Northward, and wee Southward, because of companies the Ice, the winds being East South-east.

The fecond, we fayled Eastward, and were vnder 74.degrees, having the wind North Northwest, and then wee woond ouer another Bough, with an East North-east winde, and sayled 50 Northward. In the Eeuening the Sunne being about North-west and by North, we woond about againe (because of the Ice) with an East winde, and sayled South South-east, and about East South-east, and then we woond about againe (because of the see) and the Sunne being South South-west, we woond about againe, and sayled North-east. The third, we were under 74-degrees, having a South-east and by East winde, and sayled North-east and by North : after that wee woond about againe with a South winde, and fayled East South-east, till the Sume was North-west, then the winde began to be somewhat larger.

The eight, wee had a good North-west winde, and sayled East and by North, with an indifferent cold gale of wind, and got vinder 72. degrees and 15. minutes. The ninth of July, we went Eaft and by North, the wind being West. The tenth of July, the Sunne being South South-west, 60 we cast out our Lead, and had ground at one hundred and fixtie fathome, the wind being Northeast and by North, and we sayled East and by South, under 72. degrees. The eleventh, we found 70.fathome deepe, and faw no Ice, then weeghelt that we were right South and North from Dandinaes, that is the East-point of the White-fea, that lay Southward from vs, and had fandie ground, and the banke firetched Northward into the Sea, fo that we were out of doubt that we

W:llowebbies

Land concei-

were vpon the banke of the White Sea, for wee had found no fandie go and all the Coast along, but onely that banke. Then the wind being East and by South, we failed South, and South and by East, under 72. degrees, and after that, we had a South South-east Wind, and sayled Northeast to get ouer the Banke.

The thirteenth of July, we fayled East with a North North-east wind: then wee tooke the height of the Sunne, and found it to be eleuated about the Horizon 54. degrees and 38. minutes. his declination was 21. degrees and 54. minutes, which taken from the height aforesaid, the height of the Pole was found to bee 73. degrees, and then againe wee found Ice, but not very much, and we were of opinion, that we were by Willaughbies Land. The fourteenth, we fayled North-eaft, the wind being North North-weft, and in that fort fayled about a dinner time, 10 ted from tome along through the Ice, and in the middle thereof we cast out our Lead, and had ninety sathome deepe, in the next quarter wee cast out our Lead againe, and had an hundred fathome deepe, and we tayled to farre into the Ice, that wee could goe no further: for wee could fee no place where it opened, but were forced (with great labour and paine) to lauere out of it againe, the wind blowing West, and we were then under 74. degrees and 10. minutes:

The fifteenth, we draue through the middle of the Ice with a calme, and casting out our Lead, had an hundred fathome deepe, at which time the wind being East, wee sayled West. The sixteenth, we got out of the Ice, and faw a great Beare lying vpon it, that leaped into the water when shee law vs : Wee made towards her with our ship, which shee perceiving got vp vpen the Iceagaine, wherewith wee shot once ather. Then wee fayled East South-east, and faw no 10 Ice, ghesling that we were not farre from Nona Zembla, because we saw the Beare there vpon the Ice, at which time we cast out our Lead, and found an hundred fathome deepe.

The feuenteenth, we tooke the height of the Sunne, and it was cleuated about the Horizon 37. degrees and 55. minutes , his declination was 21. degrees and 15. minutes , which taken from the height aforesaid, the height of the Pole was 74. degrees and 40. minutes : and when the Sunne was in the South, we faw the Land of Nona Zembla, which was about Lembar: I was the first that espied it. Then we altered our course, and sayled North-east and by North, and hoysed up all our sayles, except the Fore-sayle and the Lesien. The eighteenth, wee saw the Land againe, being under 75, degrees, and fayled North-east and by North, with a North-Admirati Iland, west wind, and we gate about the point of the Admirats Iland, and sayled East North-east, 30 with a West Wind, the Land reaching North-east and by North. The nineteenth, wee came to Croffe lland in the Croffe lland, and could get no further, by reason of the Ice, for there the Ice lay still close 76. degrees 200 vpon the Land, at which time the wind was Weft, and blew right vpon the Land, and it lay vnder 76. degrees and 20. minutes. There ftood two Croffes vpon the Land, whereof it had the Name.

The twentieth, we anchored under the Hand, for we could get no further for the Ice. There we put out our Boat, and with eight men rowed on Land, and went to one of the Croffes, where we rested vs a while to goe to the next Crosse, but being in the way wee saw two Beares by the other Croffe, at which time we had no weapons at all about vs. The Bearestofe vp vpon their hinder feet to fee vs (for they fmell further then they fee) and for that they fmelt vs: therefore 40 they rose varight, and came towards vs, wherewith we were not a little abashed, in such fort that we had little lust to laugh, and in all haste went to our Boat againe, still looking behind vs, to see if they followed vs, thinking to get into the Boat, and so put off from the Land : but the Master stayed vs, saying, hee that first beginnes to runne away, I will thrust this Hake-staffe (which he then held in his hand ) into his ribs ; for it is better for vs ( faid hee) to flay all together, and fee if we can make them afraid with whooping and hollowing; and fo we went foftly towards the Boat, and got away, glad that we had escaped their clawes, and that we had the leasure to tell our fellowes thereof.

The one and twentieth we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 35. degrees and 15. minutes, his declination was 21. degrees, which being ta- 50 ken from the height aforefaid, there refted 14. degrees, which fubftracted from 90. degrees, then the height of the Pole was found to be 76, degrees and 15. minutes, then we found the variation of the Compasse to bee 26. degrees. The same day two of our men went againe to the Crosse, and found no Beares to trouble vs, and wee followed them with our Armes, fearing leaft wee might meet any by chance, and when we came to the fecond Croffe, we found the foot-steps of two Beares, and faw how long they had followed vs, which was one hundred foot-steps at the least, that way that we had beene the day before. The two and twentieth being Munday, wee fet vp another Croffe, and made our Marke thereon : and lay there before the Croffe Iland, till the fourth of August, meane time we washt and whited our Linnen on the shoare.

The thirtieth, the Sunne being North, there came a Beare fo neere to our ship, that we might 60 hit her with a stone, and we shot her into the foot with a Piece, wherewith shee ranne halting away. The one and thirtieth of July, the Sunne being East North-east, seuen of our men killed a Beare, and flayed her, and caft her bodie into the Sea. The same day at noone (by our Infrument) we found the variation of the Needle of the Compaffe to be 17. degrees.

Nosa Zembia,

Two Beares.

The first of August we saw a white Beare, but she ran away from vs. The fourth, we got out of August, the Ice, to the other in e of the Iland, and anchored there : where, with great labour and much pame, wefetched a Boat full of stones from the Land. The fifth, wee set sayle againe towards Ice point, with an East Wind, and sayled South South-east, and then North North-east, and faw no Ice by the Land, by the which we lauered. The fixth, we gate about the point of Naf- Point Nasjam.

faw, and fayled for ward East, and East and by South, along by the Land. The feuenth, we had a West South-west Wind, and sayled along by the Land, South-east, and South-east and by East, and saw but a little Ice, and then past by the Trust-point, which we had Trust-point much longed for : at Ecuening we had an East Wind, with mistic Weather, so that we were forced to make our ship fast to a piece of Ice, that was at least thirtie fixe fathome deepe winder the

water, and more then fixteene fathome aboue the water: which in all was two and fifty fathome thick, for it lay fast v pon ground, the which was thirtie fixe fathome deepe. The eight in the Ice 52-fathom morning we had an East Wind, with mistie Weather.

The ninth, lying fill fast to the great piece of Ice, it snowed hard, and it was mistie weather, Snow, and when the Sunne was South, we went vpon the Hatches (for we alwayes held watch) where as the Mafter walked along the ship, he heard a beaft snuffe with his nose, and looking ouer-boord, he faw a great Beare hard by the fhip, where hee cryed out, a Beare, a Beare; and with that all Beares affault. our men came up from under Hatches, and faw a great Beare hard by our Boat, feeking to get into it, but we giving a great shout, she was afraid, and swamme away, but presently came backe 20 againe, and went behind a great piece of Ice, whereunto we had made our fhip fast, and climbed vpon it, and boldly came towards our ship to enter into it : but we had torne our Scute Sayle in the thip, and lay with foure Peeces before at the Boot-sprit, and shot her in the bodie : and with

that, thee ranne away; but it snowed so fast that wee could not see whither shee went : but wee gheft that shee lay behind a high Hoouell; whereof there were many upon the piece of Ice. The tenth, being Saturday, the Ice began mightily to breake, and then wee first perceived that the great piece of Ice whereunto we had made our ship fast, lay on the ground; for the rest of the Ice draue along by it, wherewith wee were in great feare that wee should bee compassed about with the Ice, and therefore we vied all the diligence and meanes that we could to get from thence, for we were in great doubt : and being vinder fayle, wee fayled voon the Ice, because it was all broken under us, and got to another piece of Ice; whereunto we made our thip fast againe with our Sheate Anchor, which we made fast vpon it; and there we lay till Eeuening; and when Liethander. we had supped, in the first quarter, the said piece of Ice began on a sudden to burst and rend in pieces, to fearefully that it was admirable; for with one great cracke it burft into foure hundred pieces at the least : we lying fast to it, weighed our Cable, and got off from it, under the water

it was ten fathome deepe, and lay voon the ground, and two fathome about the Water; and it

made a fearefull noyfe both under and aboue the Water when it burft, and spread it selfe abroad on all fides. And being with great feare, gotten from that piece of Ice, wee came to another piece, that was fix fathome deepe vnder the Water: to which wee made a Rope fast on both ides. Then wee law another great piece of Ice, not farre from vs, lying faft in the Sea, that 40 was as sharpe aboue, as it had beene a Tower; whereunto wee rowed : and carking out our Lead, we found that it lay twentie fathome deepe, fast on the ground vider the Water, and twelve fathome aboue the Water.

The eleuenth being Sunday, we rowed to another piece of Ice, and cast out our Lead, and found that it lay eighteene fathome deepe fast to the ground under the Water, and ten fathome about the water. The twelfth, wee fayled neere under the Land, the better to shunne the Ice, for the great flakes that draue in the Sea, were many fathome deepe under the Water, and we were better defended from them being at foure and fine fathome Water, and there ranne a great current of water from the Hill. There we made our ship fast againe to a piece of Ice, and called that point, The small Ice point.

The thirteenth in the morning, there came a Beare from the East point of the Land, close to Beare hilleds our ship, and one of our men with a Peece shot at her, and brake one of her legs, but she crept vp the Hill with her three feet, and we following her, killed her, and hauing flayed her, brought the skinne aboord the ship. From thence weelet sayle, with a little gale of Winde, and were forced to lauere, but after, that it began to blow more out of the South, and South South-east.

The fifteenth, we came to the lland of Orange, where we were inclosed with the Ice, hard Orange llands by a great piece of Ice where we were in great danger to lose our ship, but with great labour and much paine, we got to the Iland, the Wind being South-east, whereby we were constrayned to turne our ship, and while we were busied thereabouts, and made such noyse, a Beare that lay there and flept, awaked, and came towards vs to the flip, so that wee were forced to leave our 60 Worke about turning of the ship, and to defend our selves against the Beare, and shot her into the bodie, wherewith the ranne away to the other fide of the Hand, and fwamme into the water, and got vp vpon a piece of Ice, where the lay still, but we comming after her to the piece of Ice where the lay, when the law vs, the leapt into the water, and fwamme to the Land : but we got betweene her and the Land, and strooke her on the head with a Hatchet, but as often as wee

strooke at her with the Hatchet, she duckt under the water, whereby wee had much to doe before we could kill her: after the was dead we flayed her on the Land, and tooke the skinne aboord with vs, and after that, turned our shippe to a great piece of Ice, and made it fast

The fixteenth, ten of our men entring into one Boat, rowed to the filme Land of Nova Zembla, and drew the Boat vp vpon the Ice, which done, we went vp a high Hill, to fee the smatter of the Land, and found that it reached South-east, and South South-east, and then againe South which wee diffiked, for that it lay so much Southward : but when wee saw open water South writes were much comforted againe, thinking that we had wonne our Voyeaft, and Eaft South-eatt, we were much comported against, similarly to the work of the very age and knew not how we should get soone enough about, to certifie William Barratist Research 10.

The eighteenth, we made preparation to fet fayle, but it was all in vaine : for wee had almost loft our Sheat Anchor, and two new Ropes, and with much loft labour got to the place against from whence wee came : for the streame ranne with a mightie current, and the Ice drawerry ftrongly vpon the Cables, along by the ship, so that we were in search that wee should lose all the recogny year to the street was two hundred fatherne at the leaft, but God prouided well for vs, fo that in the end, we got to the place again from whence we put out.

The nineteenthit was indifferent good weather, the Windblowing South-west, the Ice still drining, and wee set sayle with an indifferent gale of Wind, and past by the point of Defre, whereby we were once againe in good hope, and when we had gotten about the point, we failed South-east into the Sea-ward, foure miles, but then againe wee entred into more Ice, whereby 20 wee were constrayned to turne backe againe, and sayled North-west vntill we came to the Land againe, which reacheth from the point of Defre, to the head point, South and by West fix miles : from the head point to Finfingers head , it reacheth South-weft , which are three miles one from the other: from the Flushinger, head, it reacheth into the Sea, East South-east, and from Flujbingers head to the point of the Hand, it reacheth South-week, and by South, and South-west three miles : and from the Iland point, to the point of the Ice Hauen, the Land reachethWest South-west foure miles: from the Ice Hauens point to the fal of Water, or the stream Bay, and the low Land, it reacheth West and by South, and East and by North seuen miles: from

The one and twentieth, we fayled a great way into the Ice Hauen, and that night anchored 30 therein: next day the streame going exreame hard Eastward, wee haled out agains from thence, and fayled againe to the Hand point, but for that it was mifty Weather, comming to a piece of Ice, wee made the ship fast thereunto, because the Wind beganne to blow hard South-west and Earthon the South South-west. There we went up you the Ice, and wondred much thereat, it was fich manner of Ice: For on the top it was full of Earth, and there wee found about fortie Egges, and is was not like other Ice, for it was of a perfect Azure colour like to the Skies, whereby there grew great contention in words amongst our men, some saying that it was Ice, others that it was frozen Land : for it lay vnreafonable high aboue the Water, it was at least eighteene fathom vnder the water close to the ground, and ten fathome about the water: there wee stayed all that ftorme, the Wind being South-west and by West. The three and twentieth , wee sayled 40 againe from the Ice, South-eastward into the Sea, but entred presently into it againe, and woond about to the Ice Hauen. The next day it blew hard North North-west, and the Ice came mightily driving in, whereby we were in a manner compassed about therewith, and withall the Wind beganne more and more to rife, and the Ice still draue harder and harder, so that the pinne of the Rother, and the Rother were shorne in pieces, and our Boat was shorne in pieces betweene the ship and the Ice, we expecting nothing else, but that the ship also would be prest

The fine and twentieth, the Weather began to be better, and we tooke great paines, and bestowed much labour to get the Ice, wherewith we were so inclosed, to goe from vs., but what meanes soeuer we vied it was all in vaine, but when the Sunne was South-west, the Icebegan 50 to drive out againe with the streame, and we thought to faile Southward about Nowa Zembla, to the Streights of Mergates, seeing we could there find no passage. Wee having past Nona Zembla, were of opinion that our labour was all in vaine, and that we could not get through, and so agreed to goe that way home againe, but comming to the Streame Bay, wee were forced to goe backe againe, because of the Ice which lay so fast thereabours, and the same might also it froze, that wee could hardly get through there, with the little wind that we had, the Wind then be-

The fix and twentieth, there blew a reasonable gale of Wind, at which time wee determined to fayle backe to the point of Defire, and so home againe, feeing that wee could not get through the were ats, although we vied all the meanes and industry wee could to get forward, but when 60 we had past by the Ice Hanen, the Ice began to drine with such force, that wee were inclosed round about therewith, and yet we fought all the meanes we could to get out, but it was all in vaine : and at that time we had like to have lost three men that were vpon the Ice to make way for the ship, if the Ice had held the course it went, but as we draw backe againe, and that the

Point Defre.

with I.e.

Ice also whereon our men stood, in like fort draue, they being nimble, as the ship draue by them. one of them caught hold of the beak head, another vpon the shrouds, and the third vpon the great brase that hung out behind, and so by great aduenture by the hold that they tooke, they got safe into the ship againe, for which they thanked God with all their hearts : for it was much likelier Escape of three that they should rather have beene carried away with the Ice, but God, by the numblenesse of men. their hands, delinered them out of that danger which was a pitifull thing to behold, although it fellout for the best, for if they had not beene nimble, they had surely dyed for it. The fame day in the evening, wee got to the West-fide of the Ice Hanen, where wee were forced in

great cold, pouertie, milerie, and griefe, to stay all that Winter, the winde then beeing East 10 North-eaft.

The feuen and twentieth, the Ice draue round about the ship, and yet it was good weather, at which time we went on Land, and being there it began to blow South-east, with a reasonable gale, and then the Ice came with great force before the bough, and draue the thip vp foure foot high before, and behind it feemed as if the keele lay on the ground, to that it feemed that the thip would be overthrowne in the place, whereupon they that were in the thip, put out the Ship lifted was Boat, therewith to faue their liues, and withall put out a flagge to make a figne to vs, to come and befet with aboard: which we perceiving, and beholding the ship to be lifted up in that fort, made all the Ice. hafte we could to get aboord, thinking that the ship was burst in pieces, but comming vnto it, we found it to be in better case then we thought it had beene.

30 The eight and twentieth, we got some of the Ice from it, and the ship beganne to sit vpright againe, but before it was fully vpright, as William Barents and the other Pilot went forward to the bough to fee how the ship lay, and how much it was rifen; and while they were busie vpon their knees and elbowes to measure how much it was, the ship burst out of the Ice with such a noise, and so great a cracke, that they thought verily that they were all cast away, knowing not Another dans

how to faue themfelues.

The nine and twentieth, the ship lying vpright againe, weevsed all the meanes wee could with Iron hookes and other inftruments, to breake the flakes of Ice that lay one heaped ypon the other, but all in vaines fo that we determined to commit our felues to the mercy of God. and to attend aide from him, for that the Ice draue not away in any fuch fort that it could helpe 30 vs. The thirtieth, the Ice began to drive together one vpon the other with greater force then before, and bare against the ship with a boystrous South-west winde, and a great snow, so that all the whole thip was borne up and enclosed, whereby all that was both about it and in it began to cracke, so that it seemed to burst in an hundred pieces, which was most fearefull both to fee and heare, and made all the haire of our heads to rife vpright with feare: and after that, the ship ( by the Ice on both sides that joyned and got wnder the same) was driven so woright, in such fort, as if it had beene lifted vp with a Wrench or Vice.

The one and thirtieth of August, by force of the Ice, the ship was driven up foure or five foot high at the beake head, and the hinder part thereof lay in a clift of Ice, whereby wee thought that the Rother would bee freed from the force of the flakes of Ice, but notwithflanding, it Rother broken 40 brake in pieces staffe and all: and if that the hinder part of the ship had beene in the Ice that draue, as well as the fore part was, then all the ship would have beene driven wholly vpon the Ice, or pollibly haue runne on ground, and for that cause were in great feare, and set our Scutes and our Boat out vpon the Ice, if need were, to faue our felues, but within foure houres after, the Ice draue away of it felfe, wherewith wee were exceeding glad, as if wee had faued our lives, for that the ship was then on flote againe, and vpon that we made a new Rother and a Staffe, and hung the Rother out voon the hookes, that if we chanced to bee borne voon the Ice againe, as we had beene, it migh: fo be freed from it.

The first of September being Sunday, while we were at prayer, the Ice began to gather toge- September. ther agains, so that the ship was I fred vp two foot at the least, but the Ice brake not. The same 50 evening the Ice continued in that fort still driving and gathering together, so that we made preparation to draw our Scute and the Boat ouer the Ice vpon the Land, the wind then blowing South-east. The second, it snowed hard with a North-east wind , and the ship began to rise vp higher voon the Ice, at which time the Ice burft and cracke with great force, fo that wee were of opinion to carrie our Scute on Land in that foule weather, with thirteene barrels of Bread, and two hogsheads of Wine, to sultaine our selues if need were.

The third, it blew hard but snowed not so much, the wind being North North-east, at which time we began to be loofe from the Ice, whereunto wee lay fast, so that the Scheck broke from the Steuen, but the plankes wherewith the thip was lined, held the Scheck fast, and made is hang on, but the Boutloofe and a new Cable ( if we had falled upon the Ice) brake by forcible 60 preffing of the Ice, but held fast agains in the Ice, and yet the ship was staunch; which was wonder, in regard that the Ice draue so hard, and in great heapes, as big as the Salt-hils that are in Spaine, and within a Harquebusse shot of the ship, betweene the which wee lay in great feare

The fourth, the weather began to cleare vp, and we faw the Sunne, but it was very cold, the

CHAP. S.S. I. Violent and incredible freezing. Ground not to be thaved. and perceiuing that she was dead, shee ran away, but wee tooke Halber; sand other Armes with

vs. and followed her, and at last the came againe towards vs, and we prepared our selues to with-

stand her, wherewith she rose vp vpon her hinder feet, thinking to rampe at vs, but while shee

reared her felfe vp, one of our men shot her into the bellie, and with that she fell vpon her fore-

feet againe, and rouring as loud as the could, ran away. Then we tooke the dead Beare, and ript

her bellie open; and taking out her guts, we fet her vpon her fore-feet, that so the might freeze as thee flood, intending to carrie her with vs into Holland, if wee might get our thip loofe, and

wind being North-cast we being forced to lie still. The fift, it was faire Sun-shine weather, and write came, and at evening when we had supped, the Loe compassed about ve againe, and wee very came, and a coming to the ship beginning to lie vpon the one fide, and leaked fore, but by Gods grace it became flaunch againe, wherewith we were wholly in feare to lofe the flip, it by Gods grate a present a which time wee tooke counfell together, and carried our old locke was in to great uanger: at within the state of the state Sayle, with rowger, Lean, a vent with a start a bout our Scure that we had drawne vpon the Land, and at that time we carried fome Bread, and Wine on Land alfo, with fome Timber, therewith to mend our Boat, that it might fence vs in

me of need.

The fixt, it was indifferent faire Sea-weather, and Sun-fhine, the wind being Weft, whereby less moved drive away, and that wee mishs on. 19 The INC, it was indirected, the ping that the Ice would drive away, and that wee night get we were some water commenced and the free man and the second seco ning of the water, but to the contrary, it lay hard enclosed with Ice, and no water at all about the ship, no not so much as a bucket full. The same day, sue of our men went on Land, but two of them came backe againe, the other three went forward about two miles into the Land, and or them came users against state, where allothey found great flore of Wood that had been driven chither, and there they found the footfleps of Harts and Hinds, as they thought, for they were closen footed, some greater footed then others, which made them judge them to be so.

The eight, it blew hard East North-east, which was a right contrary wind to doe vs any good, touching the carrying away of the Ice, so that we were still faster in the Ice, which put ses in no fmall difcomfort. The ninth, it blew North-eaft, with a little fnow, whereby our hip 20 was wholly enclosed with Ice, for the wind draue the Ice hard against it, so that we lay three or foure foot deepe in the Ica, and our Sheck in the after Steuen, brake in pieces, and the finip began to be somewhat loose before, but yet it was not much hurt. In the night time, two Beates came close to our ship side, but we sounded our Trumper, and shot at them, but hit them not, because it was darke, and they ranne away. The teath, the weather was somewhat better, because the wind blew not so hard, and yet all one wind.

The eleventh, it was calme weather, and eight of vs went on Land, every man armed, to fee if that were true as our other three companions had faid, that there lay Wood about the Riner, for that feeing we had so long woond and turned about, sometime in the see, and then againe got out, and thereby were compelled to alter our course, and at last we that we could not get out of 30 the Ice, but rather became faiter, and could not loose our ship, as at other times we had done, as alfo that it began to be Winter, we tooke counfell together what we were best to doe, according to the time, that we might winter there, and attend such adventure as God would send vs: and after we had debated upon the matter (to keepe and defend our felues both from the cold, and wilde beafts) we determined to build a houle vpon the Land, to keepe vs therein as well as wee could, and so to commit our selves vnto the tuition of God, and to that end we went further into the Land, to find out the convenientest place in our opinions, to raife our house vpon, and yet we had not much fluffe to make it withall, in regard that there grew no trees, nor any other we had not much name to make to make the build it withall: but wee leading no occasion vinought, to as our men went abroad to view the Countrey, and to fee what good fortune might happen vaas our men went amount of revening to very at laft we found an vnexpected comfort in our need, which was, that we found certaine need, when we trees roots and all, (as our three companions had faid before) which had beene driven vpon the wereforced to the state of the feelithe win-ter you the Land, wherewith (as if God had purpolely fent them vnto vs) we were much comforted, being Land, fent vs. in good hope that God would show vs some surther suour; for that Wood served vs not onely Wood to make to build our houfe, but allo to burne, and ferue vs all the Winter long, otherwise without all

The twelfth, it was calme weather, and then our men went anto the other fide of the Land, to fee if they could find any Wood neerer vnto vs, but there was none. The thirteenth, it was calme but very mifty weather, so that we could doe nothing, because it was dangerous for vs to goe into the Land, in regard that we could not fee the wilde Beares, and yet they could finell vs, for they smell better then they see. The fourteenth, it was cleare Sun-shine weather, but very cold, and then we went into the Land, and layed the Wood in heapes one vpon the other, that it might not bee conered over with the Snow, and from thence meant to carrie it to the place

The fifteenth in the morning, as one of our men held watch, we faw three Beares, whereof the one lay still behind a piece of Ice, the other two came close to the ship; which wee perceiuing, made our Peeces ready to shoot at them, at which time there stood a Tub full of Beefe vpon the Ice, which lay in the water to be feationed, for that close by the ship there was no water: one of the Beares went unto it, and put in his head to take out a piece of the Beefe, but she fa- 60 red therewith as the Dog did with the Pudding, for as she was snatching at the Beefe, shee was shot into the head, wherewith she fell downe dead, and neuer stirred: the other Beare stood still, and looked upon her fellow, and when shee had stood a good while, shee smelt her fellow,

when we had fet the Beare upon her foure feet, we began to make a Sled, thereon to draw the Wood to the place where we went to build our house, at that time it froze two fingers thicke in It freezenhin to the falt water, and it was exceeding cold, the wind blowing North-east.

The fixteenth, the Sunne shone, but towards the evening it was mifty, the wind being Easter- thicke in a ly, at which time we went to fetch Wood with our Sleds, and then wee drew foure beames about make. a mile upon the Ice and the Snow, that night agains it froze about two fingers thicke. The feuenteenth, thirteene of vs went where the Wood lay with our Sleds, and so drew fine and fine in a Sled, and the other three helped to lift the Wood behind, to make vs draw the better, and with more case, and in that manner we drew Wood twice a day, and laid it on a heape by the place where we meant to build our house,

The three and twentieth, wee fetcht more Wood to build our house, which wee did twice a day, but it grew to be mifty and ftill weather againe, the wind blowing East, and East North-20 east, that day our Carpenter being of Purmeesee died, as wee came about about evening. The foure and twentieth, we buried him vnder the fedges, in the clift of a hill, hard by the water. for we could not dig vo the earth, by reason of the great frost and cold, and that day wee went twice with our Sleds to fetch Wood.

\* The five and twentieth, it was darke wether, the wind blowing Well, & Well South-well, and House builded. South-west, and the Ice began somwhat to open, and drive away; but it continued not long, for that having driven about the length of the shot of a great Peece, it lay three fathoms deepe vpon the ground: and where we lay the Ice draue not, for we lay in the middle of the Ice; but if we had layne in the mayne Sea, we would have hoyfed fayle, although it was then late in the yeere. The same day we rayled up the principles of our house, and began to worke hard thereon, but 30 if the ship had been close, we would have left our building, and have made our after Steven of our fhip, that we might have beene ready to fayle away if it had beene possible.

The fixe and twentieth, wee had a West wind and an open Sea, but our ship lay fast, wherewith we were not a little grieued, but it was Gods will, which we most patiently bare, and wee began to make vp our house, part of our men fetched Wood to burne, the rest played the Carpenters: and were bufie about the house, as then we were fixteene men in all, for our Carpenter was dead, and of our fixteene men there was still one or other ficke. The seuen and twentieth, it blew hard North-east, and it froze so hard, that as we put a nayle into our mouthes (as when men worke Carpenters worke they vie to doe) there would Ice hang thereon when we tooke it Hard and vioout againe, and make the bloud follow: the fame day there came an old Beare and a young one lent froft.

40 towards vs, as we were going to our house, being all together (for we durft not goe alone) which we thought to shoot at, but she ran away, at which time the Ice came forcibly driving in, and it was faire Sun-shine weather, but so extreme cold, that we could hardly worke, but extremity

The eight and twentieth, it was faire weather, and the Sunne shone, the Wind being West and very calme, the Sea as then being open, but our ship lay fast in the Ice and stirred not; the same day there came a Beare to the ship, but when she espyed vs, she ranne away, and we made as much hafte as wee could to build our House. The nine and twentieth in the morning, the Wind was West, and after-noone it blew Northerly, and then wee faw three Beares between vs and the House, an old one and two young; but we notwithstanding drew our goods from the 50 ship to the House, and so got before the Beares , and yet they followed vs : neuerthelesse, we would not thun the way for them, but hollowed out as loud as we could thinking that they wold baue gone a way, but they would not once goe out of their foot-path, but got before vs, wherewith we and they that were at the house, made a great noyse, which made the Beares run away, and we were not a little glad thereof. The thirtieth the Wind was East, and East South-east, and all that night and the next day it snowed so fast, that our men could setch no Wood, it lay so close and high one vpon the other: then wee made a great fire without the House, therewith to thaw the ground, that fo we might lay it about the House, that it might bee the closer; but it Ground not was all loft labour, for the Earth was so hard, and frozen so deepe into the ground, that wee to be thawed. could not thaw it, and it would have cost vs too much Wood, and therefore wee were forced to

60 leave off that labour.

Ship faikned

They deter-

burne in the cold Winter.

ð. II.

Their cold, comfortlesse, darke and dreadfull Winter: the Sunnes absence, Moones light, Sunnes unexpected returne with miraculous speed. Of Beares, Foxes, and many ma-

He first of October, the Wind blew stiffe North-east, and aster-noone it blew North, with a great florme and drift of Snow, whereby wee could hardly goe in the Wind, 10 with a great total and a man could hardly draw his breath, the Snow draw fo hard in our faces, at which time we could not see two ships length from vs. The second before noone, the Sunne flione, and after noone it was cloudie againe, and it fnew, but the vycather was fill, the Wind being North, and then South, and wee let up our House, and upon it wee placed a May-pole

The third before noone, it was calme Sun-shine vveather, but so cold, that it was hard to bee indured, and after-noone it blew hard out of the West, with so great extreme cold, that if it had continued, we should have beene forced to leave our worke. The fourth, the Wind was Well, and after-noone North, with great store of Snow, whereby we could not worke : at that time we brought our Anchor vpon the Ice to lye the fafter, when wee lay but an Arrow floot from 20 the Water, the Ice was so much driven away.

The fifth, it blevv hard North-west, and the Sea was very open and without Ice, as farress vve could discerne, but vve lay still frozen as vve did before, and our ship lay two or three foot deepe in the Ice, and were could not perceine otherwise, but that wee lay fast upon the ground and then it was three fathome and a halfe deepe. The same day we brake up the lower dex of the fore-part of our ship, and with those Deales we coursed our Houses, and made it slope o. uer head, that the Water might runne off, at which time it was very cold. The fixth, it blew hard West South-west, but towards Equening, West North-west, with a great Snow, that wee could hardly thrust our heads out of the doore, by reason of the great cold. The secunth, it was indifferent good weather, but yet very cold, and wee calk't our House, and brake the 30 Extreme Snow ground about it at the foot thereof : that day the Wind went round about the Compasse.

is from the

North.

The eight, all the night before it blew so hard, and the same day also, and snowed sofast, that we should have smothered, if we had gone out into the Ayre; and to speake truth, it had not beene pessible for any man to have gone one ships length, though his life had layen thereon; for it was not possible for vs to goe out of the House or ship. The ninth, the Wind still continued North, and blew, and snowed hard, all that day the Wind as then blowing from the Land, so that feeme, that the all that day we were forced to flay in the ship, the weather was so foule,

The tenth, the weather was somewhat fairer, and the Wind calmer, and blew South-west, Tides and Sea and West, and South-west, and that time the Water slowed two soote higher then ordinary, which we gheft to proceede from the first North-wind, which as then had blowne. The same 40 day the weather began to be somewhat better, so that we began to go out of our ship againe : and as one of our men went out, he chanced to meet a Beare, and was almost at him before hee knew it, but prefensly he ranne backe againe towards the fhip, and the Beare after him, but the Beare comming to the place where before we had killed another Beare, and let her vpright, and there let her freeze (which was couered ouer with Ice, and yet one of her pawes reached about it) shee flood still, whereby our man got before her, and climbed up into the ship, in great feare, crying, A Beare, a Beare; which we hearing, came aboue Hatches to looke on her, and to shoot at her, but we could not see her, by meanes of the exceeding great smoke, that had so fore tormented vs (while we lay under Hatches) in the fouls weather which we would not have indured for any money, but by reason of the cold and snow ie weather, wee were constrayned to doe it, if wee 50 would faue our lives, for aloft in the ship we must vindoubtedly have died? the Beare stayed not long there, but ranne away, the Wind then being North-eaft. The same day about Eeuening, it was faire weather, and we went out of our ship to the House, and carried the greatest part of

The eleuenth, it was calme weather, the Wind being South, and somewhat warme, and then we carried our Wine and other Victuals on Land : and as we were hoyfing the Wine over-boord, there came a Beare towards our ship, that had layen behind a piece of Ice, and it seemed that we had waked her with the noyle we made: for wee had seene her lye there, but wee thought her to be a piece of Ice; but as she came neere vs, we shot at her, and she ranne away, so we proceeded in our worke. The twelfth, it blew North, and somewhat Westerly, and then halfe of 60 our men kept in the House, and that was the first time that we lay in it, but wee indured great cold, because our Cabins were not made; and besides that wee had not Clothes enough, and we could keepeno fire because our Chimney was not made, whereby it smoked exceedingly.

The thirteenth, the Wind was North and North-west, and it began agains to blow hard, and

then three of vs went abourd the ship, and laded a Sled with Beere, but when wee had laden it, thinking to goe to our House with it, suddenly there rose such a Wind, and so great a storme and cold, that wee were forced to goe into the ship againe, because were were not able to flay without, and wee could not get the Beere into the ship againe, but were forced to lee it fland without vpon the Sled : being in the ship, wee indured extreame cold, because wee had but a few

The fourteenth, as wee came out of the ship, wee found the Barrell of Beere standing upon the Sled, but it was fall frozen at the heads, yet by reason of the great cold, the Beere that purged out, froze as hard vpon the fide of the Barrell as if it had bene glued thereon, and in purgestous, trose as a serior spot and set the Barrell an end, and dranke it first vp, bur wee Bette meked. were forced to melt the Beere, for there was scant any unfrozen Beere in the Barrell, but in that thicke Yeaft that was unfrozen lay the strength of the Beere, so that it was too strong to drinke alone, and that which was frozen tafted like water, and being melted we mixt one with the other, and so dranke it, but it had neither strength nor taste.

The fifteenth, the Wind blew North and East, and East South-east, that day we made place to fet up our doore, and shoueled the Snow away. The eighteenth, the Wind blew hard East South-east, and then we setched our Bread out of the Scute which wee had drawne vp vpon the Land, and the Wine also which as then was not much frozen, and yet it had layne fixe Weekes therein, and not withflanding that it had oftentimes frozen very hard. The same day wee saw Sea concred 20 another Beare, and then the Sea was so couered ouer with Ice, that wee could fee no with Ice

The nineteenth, the Wind blew North-east, and then there was but two men and a Boy in The innercentin, the wind new renembers, and single-field was not make an although the ship, at which time there came a Beare that fought forcibly to get into the ship, although Beare shall be a bear beared as a bear bear beared as a bear bear beared as a bear the Imp, at which time there came a near than the grant and the two men shot at her with pieces of Wood, and yet she ventured upon them, whereby they she ship. were in an extreame feare, each of them feeking to faue themselues, the two men leapt into the Ballast, and the Boy climbed into the foot Mast top, to faue their lines, meane time, some of our men shot at her with a Musket, and then shee range away. The twentieth, it was calme Sume-fine weather, and then againe wee faw the Sea open, at which time wee went Barrels and L. on boord to fetch the rest of our Beere out of the ship, where wee found some of the Bar- ron boop 30 rels frozen in pieces, and the Iron hoopes that were vpon the locam Barrels were also fro- broken with

The two and twentieth, the Winde blew coldly, and very stiffe North-east, with so great a Snow, that wee could not get out of our doores. The three and twentieth, it was calme weather, and the Winde blew North-eaft, then wee went aboord our ship, to see if the reft of our men would come home to the Houle; but wee feared that it would blow hard againe, and therefore durft not flirre with the ficke man, but let him lye still that day, for hee

The foure and twentieth, the rest of our men beeing eight persons, came to the House, All come to and drew the ficke man vpon a Sled, and then with great labour and paine, wee drew our the Houfe. 40 Boat home to our House, and turned the bottome thereof vpwards, that when time ferned vs (if God laued our lines in the Winter time) wee might vieit : and after that, perceining that the thip lay fast, and that there was mothing less to be expedted then the opening of the

water, wee put our Anchor into the ship againe, because it should not be covered over and lost in the Snow, that in the Spring time wee might vie it: for we alwayes trufted in God that hee would deliner vs from thence towards Summer time, ey ther one way or other. The Sunne, when we might fee it best and highest, began to be very low, and we vied all the speed we could to feeth all things with Slede out of our hip into our Houle, not onely meate and drinke, but all

other necessaries, at which time the Wind was North.

The fine and twentieth, wee fetche all things that were necessary for the furnishing of our 30 Seute and our Boate: and when we had laden the last Sled, and stood readie to draw it to the House, our Master looked about him and saw three Beares behind the ship that were comming towards vs, whereupon hee cryed out aloud to feare them away, and wee prefently leaped forth to defend our felnes as well as we could rand, as good fortune was, there lay two Hala berds vpon the Sled, whereof the Master tooke one, and I the other, and made refistance against them as well as we could; but the rest of our men ranne to faue themselves in the ship, and as they ranne, one of them fell into a Clift of Icc, which grieued vs much s for we thought verily that the Beares would have ranne voto him, to denoure him, but God defended him; for the Beares fill made towardes the ship after the men that ranne thicher to saue themselves. Meane time, wee and the man that fell into the Clift of Ice, tooke our advantage, and 60 got into the ship on the other side, which the Beares perceiuing, they came sercely to-Fight with

wards vs, that had no other Armes to defend vs withall, but onely the two Halberds, Beares. which wee doubting would not bee fufficient, wee fill gave them worke to doe by throwing Billets and other things at them, and cuery time we threw, they ranne after them as a Dogge vieth to doe at a Stone that is east at him. Meane time, wee fent a man

downe under Harches to strike Fire, and another to fetch Pikes, but wee could get no Fire, and so wee had no meanes to shoote: at the last, as the Beares came siercely vpon vs, wee strooke one of them with a Halberd vpon the Snowt, wherewith shee game backe , when shee felt her selfe burt, and went away , which the other two that were not to great as thee , perceiving, ranne away : and wee thanked God that wee were to well delivered from them, and so drew our Sled quietly to our House, and there shewed our men what had happened voto vs.

. The fixe and twentieth, the Wind was North, and North North-west, with indifferent faire weather ; then wee faw open Water hard by the Land , but wee perceived the Ice to drive in the Sea, still towards the ship. The seven and twentieth, the Wind blew North- Io east, and it snowed so fast, that wee could not worke without the doore. That day our men killed a White Foxe, which they flead; and after they had rofted it, are thereof, which taffed like Conies flesh ; the fame day we fet vp our Dyall, and made the Clocke flrike, and wee hime vp a Lampe to burne in the night time, wherein we vied the fat of the Beare which wee melt, Beares fat for and burnt in the Lamoe.

The nine and twentieth, the Wind still blew North-east, and then wee setched Segges from the Sea-fide, and layd them upon the Sayle that was spread upon our House, that it might bee so much the closer and warmer : for the Deales were not driven close together, and the foule weather would not permit vs to doe it. The thirtieth , the Winde yet continued North-eaft, and the Sunne was full abous the Earth, a little aboue the Horizon. The one and thirtieth, the 20 Winde still blew North-east, with great store of Snow, whereby weedurst not looke out

The first of November, the Wind still continued North-east, and then wee faw the Moone rife in the East when it beganne to bee darke, and the Sunne was no higher aboue the Horizon Sun & Moone, then we could well fee it, and yet that day we faw it not, because of the close weather, and the great Snow that fell, and it was extreame cold, so that we could not goe out of the House,

The second, the Wind blew West, and somewhat South, but in the Ecuening it blew North, with calme weather, and that day we faw the Sunne rife South South-east, and it went downe South South-South South-west, but it was not full about the Earth, but passed in the Horizon along by the east, and goeth Earth : and the fame day one of our men killed a Fox with a Hatchet, which was flayed, roafted 20 downe South and eaten. Before the Sunne began to decline, wee faw no Foxes, and then the Beares yied to South west, not full about goe from vs.

The third, the Wind blew North-west with calme weather, and the Sunne rose South and Foxes succeed by East, and somewhat more Southerly, and went downe South and by West, and somewhat more Southerly and then we could fee nothing but the vpper part of the Sunne about the Horizon , and yet the Land where wee weren was as high as the Mast of our ship, then wee tooke the height of the Sunne, it being in the eleventh degree, and fortie eight minutes of Scorpie, his Declination being fitteene degrees and twentie foure minutes, on the South-fide of the Equinoctiall Line.

The fourth, it was calme weather, but then wee faw the Sunne no more, for it was no 40 Sun no more longer about the Horizon, then our Chirurgion made a Bath (to bathe vs in) of a Wineafter the third pipe, wherein wee entred one after the other, and it did vs much good; and was a great of November, meanes of our health. The same day wee tooke a White Foxe, that oftentimes came abroad, not as they wied at other times : for that when the Beares left vs at the fetting of the Sunne, and came not againe before it rose, the Foxe to the contrarie came abroad when they were gone.

The fifth, the Winde was North, and somewhat West, and then wee saw open water vpon the Sea, but our shippe lay still fast in the Ice, and when the Sunne had left vs, wee saw mully seene in the Moone continuall both day and night, and neuer went downe when it was in the the Sunnes ab- highest degree. The fixt, the Winde was North-west, still weather, and then our men 50 fetchr a Sled full of Fire-wood, but by reason that the Sunne was not seene, it was very darke weather.

The seventh, it was darke weather, and very still, the Winde West, at which time wee could hardly discerne the Day from the Night, specially because at that time our Clocke stood full, and by that meanes weeknew not when it was day, although it was day, and our men role not out of their Cabins all that day; but onely to make water, and therefore they knew not whether the light they faw, was the light of the day or of the Moone; whereupon, they were of seuerall opinions, some saying, it was the light of the day, the others of the night: but as wee tooke good regard thereunto, wee found it to bee the light of the day about twelve of the clocke at noone.

The eight, it was still weather, the Winde blowing South, and South-west. The fame day our men fetche another Sled of Fire-wood, and then also wee tooke a White Bread shared Foxe, and saw open water in the Sea. The same day wee shared our Bread amongst vs, each man having foure pound and tenne ounces, for his allowance in eight dayes, fo that then

Dackneffe,

CHAP, S.S.2. Foxe-trap Wine Sharing. Bathing. Foxe skinne Cabs.

we were eight dayes eating a Barrell of Bread, whereas before wee ate it up in fine or fix dayes: we were eight on hear our flesh and fish, for we had more flore thereof; but our drinke failed vs. Recressingly and therefore we were forced to share that also: but our best Beere was for the most part who - lesse with stools ly without any strength, so that it had no fauour at all : and besides all this, there was a great deale of it spile. The ninch, the Windblew North-east, and somewhat more Northerly, and then we had not much day light, but it was altogether darke. The tenth, it was calme weather, the Wind North-well, and then our men went into the ship to see how it lay, and wee Ship ballaft faw that there was a great deale of water in it, fo that the ballaft was concred oner with water, concred with but that it was frozen, and so might not bee pumpt out. The eleventh, it was indifferent wea- water. to ther, the Wind North-west. The same day we made around thing of Cable yarne, and like to a

Net, to catch Foxes withall, that wee might get them into the House, and it was made like a Foxersp. Trap, which fell vpon the Foxes as they came under it, and that day we caught one.

The tweltth, the Wind blew East, with a little light : that day wee began to share our Wine, Wine mared. euery man had two Glasses a day, but commonly our Drinke was water, which we melted out Drinke water, of Snow, which we gathered without the House. The thirteenth, it was foule weather, with great Snow, the Wind East. The fourteenth, it was faire cleere weather, with a cleere Skie full of Starres, and an East-wind. The fitteenth, it was darke weather, the Wind North-east, with a vading light. The fixteenth, it was weather with a temperate Ayre, and an East-wind. The feuenteenth, it was darke weather, and a close Ayre, the Wind East. The eighteenth, it was foule weather, the wind South-east : then the Master cut vp a packe of course Clothes, and dinided it amongst our men that needed it, therewith to defend vs better from the cold. The nineteenth, it was foule weather, with an East-wind, and then the Chist with Linnen was opened, and divided amongst the men for shift, for they had need of them, for then our onely care was to find all the meanes we could to defend our bodie from the cold. The twentieth, it was faire still weather, the Wind Easterly, then wee washt our sheets, but it was so cold, that when wee had walht and wrung them, they presently froze to stiffe, that although wee layed them by a great fire, the fide that lay next the fire thawed, but the other fide was hard frozen, so that wee should sooner haue torne them in sunder then haue opened them, whereby wee were forced to put them into the feething water againe to thaw them, it was fo exceeding cold. The one and

twentieth, it was indifferent weather with a North-east wind, then we agreed that every man flould take his turne to cleane Wood, thereby to case our Cooke, that had more then worke enough to doe twice a day to dreffe meate, and to melt Snow for our Drinke, but our Master and the Pilot were exempted from that Worke.

The two and twentieth, the Wind was South-east, it was faire weather, then wee had but feuenteene Cheeles, whereof one we ate amongst vs, and the rest were divided to every man one for his portion, which they might eate when he lift. The three and twentieth, it was indifferene good weather, the Wind South-east, and as we perceived that the Fox vsed to come oftner, and more then they were wont, to take them the better, wee made certaine Trappes of thicke Planckes, whereon wee laid stones, and round about them placed pieces of shards fast in the 40 ground, that they might not digge under them, and fo got fome of the Foxes. The foure and Bathing and twentieth, it was foule weather, and the Wind North-east, and then wee prepared our selues to purging. goe into the Bath, for some of vs were not very well at ease, and so source of vs went into it, and when we came out, our Surgeon gaue vs a Purgation, which dil vs much good, and that day we tooke foure Foxes. The fine and twentieth, it was faire cleere weather, the Wind West; and

that day we tooke two Foxes with Springs that we had purpolely fer vp. The fix and twentieth, it was foule weather, and a great storme with a South-west Wind, and great flore of Snow, whereby wee were fo closed vp in the House, that wee could not goe out, but were forced to ease our selues within the House. The seuen and twentieth, it was faire cleere weather, the Wind South-west, and then we made more Spinges to get Foxes, for it stood 50 vs vpon to doe it, because they served vs for meate, as if God had sent them purposely for vs, for we had not much meate. The eight and twentieth of November, it was foule flormic weather, and the Winde blew hard out of the North, and it frew hard, whereby wee were thut

vp againe in our House, the Snowlay so closed before the doores. The nine and twentieth, it was faire cleere weather, and a good Ayre: the Wind Northerly, and we found meanes to open our doore by shoueling away the Snow, whereby wee got one of our doores open, and going out, wee found all our Traps and Springes cleane conered ouer with Storeof Snow. Snow, which wee made cleane, and fet them up againe to take Foxes : and that day wee tooke one, which as then ferued vs not onely for meate, but of the skinnes wee made Caps to weare Fox-skin-csps. vpon our heads, wherewith to keepe them warme from the extreame cold. The thirtieth, it 60 was faire cleere weather, the Wind Well, and fix of vs went to the ship, all well provided of

Armes to see how it lay : and when wee went vnder the fore Decke, wee tooke a Foxe alive The fift of December, it was foole weather with a South-west Wind, and great store of December.

Snow, whereby we were once againe stopt up in the House, and by that meanes there was so

great a smoake in the House, that we could hardly make fre, and so were forced to lye all day in Lye fill in Ca- our Cabins, but the Cooke was forced to make fire to dreft, our meate. The fecond, it was full feule weather, whereby wee were forced to keepe still in the House, and yet wee could hardly nt by the fire, because of the smoake, and therefore stayed still in our Cabins, and then we heated flones, which we put in our Cabins to warme our feet, for that both the cold and the smoake were

Coldand Smoake. Le cracking

The third, we had the like weather, at which time as we lay in our Cabins, wee might heare the Ice cracke in the Sea, and yet it was at the least halfe a mile from vs, which made a huge noyfe, and we were of opinion, that as then the great Hils of Ice which wee had fene in the Sea, in Summer time, brake one from the other, and for that during those two or three dayes, be. cause of the extreame smoake, we made not so much fire as we commonly vsed to doe, it froze so fore within the House, that the Wals and the Roofe thereof were frozen two fingers thick with Ice, and also in our Cabins where we lay all those three dayes, while wee could not goe out by reason of the foule weather, we set up the Glasse of twelve houres, and when it was runne out, wee fet it up againe, fill watching it left wee should misse our time. For the cold was so Clock frozen, great, that our Clocke was frozen, and might not goe, although we hung more waight on it then before.

Ice in the

The fourth, it was faire cleere weather, the Wind North-east, and then we began enery man Deore digged by turne to digge open our doores that were closed up with Snow, for we saw that it would be often to doe, and therefore we agreed to worke by turnes, no man excepted but the Mafter 20 and the Pilot. The fifth, it was faire weather with an East-wind, and then we made our Sprine ges cleane againe to take Foxes. The fixt, it was foule weather againe, with an Eafterly Wind, and extreame cold, almost not to bee indured, whereupon wee lookt pittifully one vpon the other, being in great feare, that if the extreamitie of the cold grew to bee more and more, wee should all dye there with cold, for that what fire soener we made, it would not warme vs, yea, Cold stronger and our Sacke which is so hot, was trozen very hard, so that when wee were every man to have his part, we were forced to melt it in the fire, which wee shared every second day about halfee pint for a man, wherewith we were forced to fullayne our felues, and at other times wee dranke water, which agreed not well with the cold, and we needed not to coole it with Snow or Ice. but we were forced to melt it out of the Snow.

The fewenth, it was still foule weather, and we had a great storme with a North-east Wind,

which brought an extreame cold with it, at which time weeknew not wrat to doe, and while

we fate confulting together, what were best for vs to doe, one of our companions gaue vs coun-Sea-coale fire, fell to burne fome of the Sea-coales that we had brought out of the ship, which would cast a great heate and continue long, and so at Ecuening we made a great fire thereof, which cast a great heat: at which time wee were very carefull to keepe it in : for that the heate beeing fo great a comfort vinto vs, we tooke care how to make it continue long : whereupon wee agreed to flop vp all the doores and the Chimney, thereby to keepe in the heate, and io went into our Cabins to fleepe well comforted with the heate, and fo lay a great while talking together; but at last we were ta-Swounding & ken with a great fwounding and dazeling in our heads, yet some more then other some, which 40 fiffing by the we first perceised by a sicke man, and therefore the leffe able to beare it, and found our selves to Cole vapour be very ill at eafe, fo that fome of vs that were strongest, start out of their Cabins, and fift oand closenesses pened the Chimney, and then the doores, but he that opened the doore fell downe in a swound vpon the Snow, which I hearing, as lying in my Cabin next to the doore, flatt vp, and casting Vinegar in his face, recouered him againe, and to he rose vp : and when the doores were open, we all recouered our healths againe, by reason of the cold Ayre, and so the cold which before had

againe, gaue every one of vs a little Wine to comfort our hearts.

The eight, it was foule weather, the winde Northerly, very sharpe and cold, but we durit lay no more coales on, as wee did the day before, for that our misfortune had taught vs. that to shunne one danger we should not runne into another. The ninth, it was faire cleare weather, the skie full of Statres, then we fet our doore wide open, which before was fast closed up with Snow, and made our Springes ready to take Foxes. The tenth, it was still faire Star-light weather, the winde North-east: then wee tooke two Foxes, which were good meate for vs, for as then our victuals began to bee scant, and the cold full increased, whereunto their Skinnes serued Shoots on feet vs for a good defence. The eleuenth, it was faire weather, and a cleere ayre but very old, which frozen within. hee that felt not would not beleeue, for our Shooes froze as hard as hornes upon our feete, and They weare no within they were white frozen, so that we could not weare our shoots, but were forced to make great Pattents, the upper part being Sheepe-skinnes, which we put on ouer three or foure payre of Sockes, and to went in them to keepe our feet warme.

beene fo great an Enemy vnto vs, was then the onely reliefe that wee had, otherwife without

doubt, we had dyed in a fudden fwound, after that the Maffer, when we were come to our felues

Clothes on

The twelfth, it was faire cleere weather with a North-west winde, but extreame cold, so that our House walls and Cabbins were frozen a finger thicke; yea, and the Cloathes vpon our backes were white ouer with Frost, and although some of vs were of opinion, that wee should CHAP. S. S. 2. Cold blisters. Sunnes comfort. Foxes daintie at Venison, lay more coles upon the fire to warme vs, and that we should let the chimney stand open, yet we durst not doe it, fearing the like danger we had escaped. The thirteenth, it was faire cleere wea-

ther, with an East winde : then we tooke another Foxe, and tooke great paines about preparing and dreffing of our Springes, with no small trouble, for that if wee stayed too long without the Cold bliffers: doores, there arose blifters upon our Faces and our Eares. The fourteenth, it was faire weather; the winde North-east, and the skie full of starres, then we tooke the height of the right shoulder of the Rent, when it was South South-west, and somewhat more Westerly (and then it was at the highest in our Compasse) and it was elevated about the Horizon 20, degrees and 28, minutes, his Declination being 6. degrees and 18. minutes, on the North-fide of the line, which Declina-

10 tion being taken out of the height aforefayd, there refted 14. degrees, which being taken out of 90. degrees, then the height of the Pole was 76. degrees.

The fifteenth, it was still faire weather, the winde East : that day wee tooke two Foxes, and faw the Moone rife East South-east, when it was fixe and twentie dayes old, in the figne of Scorpio. The fixteenth, it was faire cleere weather, the winde East : at that time wee had no more Wood in the house, but had burnt it all : but round about our house there lay some courred over with Snow, which with great paine and labour we were forced to digge out, and fo shouell away with Snow, writen what great pains and state which wee did by turnes, two and two together; the Snow, and fo brought it into the house, which wee did by turnes, two and two together; wherein we were forced to vie great speed, for wee could not long endure without the House, because of the extreame cold, although we wore the Foxes skinnes about our heads, and double zing, 20 apparell vpon our backes.

The fewenteenth, the winde still held North-east, with faire weather and so great Frosts, that wee were of opinion, that if there flood a Barrell full of water without the doore, it would in one night freeze from the top to the bottome. The eighteenth, the winde fill held North-eaft. with faire weather ; then feuen of vs went out vnto the Ship to fee how it lay, and being vnder the decke, thinking to finde a Foxe these, we fought all the holes but we found none; but when we entred into the Cabbin and had ftricken fire to fee in what cafe the ship was, and whether the water role higher in it, there wee found a Foxe, which we tooke and carryed it home, and eate it, and then we found that in eighteene dayes absence (for it was so long fince we had beene there) the water was risen about a finger high, but yet it was all Ice, for it froze as fast as it 30 came in, and the reffels which wee had brought with vs full of fresh water out of Holland, were frozen to the ground.

The nineteenth, it was faire weather, the winde being South : then we put each other in good comfort, that the Sunne was then almost base over, and ready to come to vs againe, which wee Sunnes comfore longed for, it being a weary time for vs to bee without the Sunne, and to want the greatest fore. comfort that God fendeth vnto man heere vpon the earth, and that which rejoyceth every liuing thing. The twentieth, before notine it was faise cleere weather, and then we had taken a Foxe, but towards Ecuening, there role such a storme in the South-west, with so great a frow, that all the house was inclosed therewith. Theone and twentieth, it was faire cleere weather, with a North east winde, then we made our doore cleane againe, and made a way to goe out, and fed with from 40 clenfed our Traps for the Foxes, which did vs great pleasure when we tooke them; for they feemed as daintie as Venison vnto vs. The two and ewentieth, it was fould weather, with great ftore of fnow, the winde South, west, which stopt vp our doore againe, and wee were forced to digge it open againe, which was almost enery day to doe. The three and twentieth, it was foule weather, the wind South-welt, with great store of snow, but wee were in good comfort that the Sonne would come againe to vs, for as we gheft, that day hee was in Tropice Capricorni, Sun in Tropical

which is the furthest Signe that the Sunne passets on the South-side of the line, and from thence Capitornia. it turneth Northward againe. The foure and twentieth, being Christmasse Eeuen, it was faite Decem Stile weather, then wee opened our doore againe, and faw much open water in the Sea : for we had heard the Ice cracke and drive : although it was not day, yet we could see so fafte. Towards heard the ice cracks and urine; authors; it was not up, yet are the following for that all the paffage Cold Christian in the part of the North-east, with great flore of Snow, for that all the paffage Cold Christian in the part of the North-east, with great flore of Snow, for that all the paffage Cold Christian in the part of the North-east, with great flore of Snow, for that all the paffage Cold Christian in the part of the North-east, with great flore of Snow, for that all the paffage Cold Christian in the paf that wee had made open before, was flopt up againe. The fine and twentieth, being Christmaffe mille, day, it was foule weather, with a North-west winde, and yet though it was foule weather, we heard the Foxes runne ouer our Houle, wherewith some of our men sayd, it was an ill signe; and Ill signe inwhile we fated if puting why it should bee an ill signe, some of our men made answer, that it was deed.

an ill signe became wee could not take them, to put them into the Pot or roast them, for that had The fixe and twentieth, it was foule weather, the winde North-west, and it was so cold that

we could not warme vs. although wee yied all the meanes we could with great fires, good store Coldinaine of cloathes, and with hot flones and billets, layd vpon our feete and spon our bodies, as we lay, ble. 60 in our Cabbins; but notwithstanding all this, in the morning our Cabbins were frozen, which made vs behold one the other with fad countenance, but yet wee comforted our felters agains as well as we could, that the Sunne was then as low as it could goe, and that it now began to come to vs againe, and we found it to bee true : for that the Dayes beginning to lengthen, the Cold began to frengthen, but hope put vs in good comfort, and eafed our paine. The feuen and twentieth, it

was still soule weather, with a Notth-west wind, so that as then wee had not beene out in three was from four wearing out of doores, and within the house it was forgatives together, nor durift not cirrust our heads out of doores, and within the house it was forgatives. dayes rogerms, in a swe fare before a great Fire, and feemed to burne on the fore-fide, we from Burne perse, treame cours, true as we are the country men vie to be, when they come in at the country men vie to bee, when they come in at the gates of the Towne in Holland with their Sleds, and have gone all night. The eight and twentieth, it was still foule weather with a West wind, but about Ecuening it

began to cleere vp, at which time one of our men made a hole open at one of our doores, and began to creer vp, as what newes abroad, but found it is hard weather that hee flayed not long, and went out to fee what newes abroad, but found it is hardweather that hee flayed not long, and went out to see what it were much, that the Snow lay higher then our houle, and that if he had told we that it mad moved to me and the me had fayed out longer, his eares would vandoubtedly have beene frozen off. The nine and twentieth, 10 it was calme weather, and a pleasant ayre, the wind being Southward : that day, he, whole turns It was canne weathers and digged a hole through the Snow, where we went our of the houfe It was, opened the was in the state out of a Celler, at least feuen or eight steps high, each stepasoote vpon steps, as if it had beene out of a Celler, at least feuen or eight steps high, each stepasoote vpon neps, as a transfer of the Foxes, whereof for certaine days we had not taken any : and as we made them cleane, one of our men found a dead Foxe in one of them, that was frozen as hard as a stone, which he brought into the house, and thawed it before the fire, and after flaying it, some of our men eate it. The thirtieth, it was foule weather againe, with a storme out of the West, and great store of Snow, so that all the labour and paine that we had taken the day before to make steps to goe out of our house, and to clense our Springes, was all nactacen me say our season over with Snow againe, higher then it was before. The one and 30 thirrieth, it was fill foule weather, with a florme out of the North-weft, whereby we were fo faft shur vp into the house, as if wee had beene prisoners, and it was so extreame cold, that the fire almost cast no heate : for as we put our feet to the fire, we burnt our hose before we could feelethe heate, fo that we had worke enough to doe to patch our hole : and which is more, if we had not sooner smelt, then felt them, we should have burnt them ere we had knowne it.

Fire conque-

After that with great cold, danger, and difease, wee had brought this yeere unto an end, we As Dan 1597, entred into the yeere of our Lord God 1597, the beginning whereof, was in the same manner as the end of Inno 1596. had beene, for the weather continued as cold, foole, and Snowie, as it was before, so that woon the first of January wee were inclosed in the House, the winde then being West : at the same time wee agreed to share our Wine every man a 30 fmall measure full, and that but once in two dayes: and as we were in great care and feare that it would bee long before we should get out from thence, (and we having but small hope therein) fome of vs spared to drinke wine as long as we could, that if we should stay long there, we might drinke it at our need. The fecond, it blew hard with a West wind, and a great storme with both Snow and Frost, so that in foure or fine dayes, we durst not put our heads out of the doores, and as then by reason of the great cold, we had almost burne all our Wood; notwithstanding, we dust not goe out to fetch more wood, because it froze so hard, and there was no being without the doore, but feeking about we found fome peeces of wood that lay ouer the doore, which we close, and withall cloue the blockes whereon we vied to beate our Stock-fish, and fo holpe our felues so well as we could. The third, it was all one weather, and we had little wood to burne. The 40 fourth, it was fill foule stormie weather, with much Snow and great cold, the winde Southwest, and we were spreed to keepe in the house : and to know where the wind blew, we thrust a halfe-pike out at the Chimney with a little cloath or feather upon it, but as soone as wee thruft it out, it was prefently frozen as hard as a peece of wood, and could not goe about nor

Three Kings

The fifth, it was somewhat still and calme weather: then wee digged our doore open againe, that we might goe out, and carrie out all the fath that had beene made, during the time of our being flut in the house; and made every thing handsome, and fetched in Wood which we cleft, and it was all our dayes worke to further our felues as much as we could, fearing leaft we should be thus vp againe : and as there were three doores in our portall, and for that our house by couered ouer in Snow, wee tooke the middle doore thereof away, and digged a great hole in the fnow, that lay without the house, like to a side of a vault, wherein we might goe to ease our felues, and cast other filth into it : and when we had taken paines all day, we remembred our felues that it was Twelfth Eeuen, and then we prayed our Mafter that we might be merris that night, and fayd, that we were content to spend some of the Wine that night which we had spared, and which was our share every second day, and whereof for certayne dayes wee had not drunke, and so that night we made merrie, and drunke to the three Kings, and therewith we had two pound of Meale, whereof wee made pan-cakes with Oyle, and every man a white Bisket, which we lope in Wine; and so supposing that we were in our owne Country, and amongst our friends, it comforted vs as well as if we had made a great banquet in our owne house; and we al- 60 so made tickets, and our Gunner was King of Nous Zembla, which is at least two hundred miles

long, and lyeth betweene two Seas.

ftirre with the wind.

The fixe, it was faire weather, the wind North-east, then wee went out and cleanfed our Traps to take Foxes, which were our Venison, and we digged a hole in the Snow, where our fire-

wood lay, and left it clo fe aboue like a vault; and from thence fetched out our Wood as we needed it. The feuenth, it was foule weather againe, with a North-west wind, and some Snow. and very cold, which put vs in great feare to be shut vp in the house againe. The eight, it was faire weather againe, the wind North : then wee made our Springes ready to get more Venifon: which wee longed for, and then wee might fee and marke day-light, which then began Day-light to encrease, that the Sunne as then began to come towards vs againe, which put vs in no little espied. comfort.

The ninth, it was foule weather, with a North-west wind, but not so hard weather as it had beene before, so that we might goe out of the doore to make cleane our Springes. The tenth, it was faire weather with a North wind : then seuen of vs went to our ship well armed, which 10 we found in the same state wee left it in, and in it wee saw many footsteps of Beares , both great Beares in the and small, whereby it seemed that there had beene more then one or two Beares therein; and ship, as we went under hatches, we strooke fire, and lighted a Candle, and found that the water was risen a foot higher in the ship. The eleventh, it was faire weather, the wind North-east, and the cold began to be somewhat lesse, so that as then we were bold to goe out of the doores, and went about a quarter of a mile to a Hill, from thence we fetched certaine stones, which we lavd in the fire, therewith to warme vs in our Cabins.

The twelfth, it was cleare weather, the wind North-west: that evening it was very cleare, and the skie full of Statres, then wee tooke the height of Oculus Tanri, which is a bright and Oculus Tanri, well knowne Starre, and we found it to be eleuated about the Horizon 29. degrees and 54. mi-20 nutes, her declination being 15. degrees 54. minutes on the North fide of the Line. This declination being fubtracted from the height aforefaid, then there refted 14. degrees, which fubtraded from 90. degrees, then the height of the Pole was 76, degrees, and io by measuring the height of that Starre, and some others, wee gheffed that the Sunne was in the like height, and

that we were there vnder 76. degrees, and rather higher then lower. The thirteenth, it was faire still weather, the wind Westerly, and then wee perceined that day-light began more and more to encrease, and we went out and cast Bullets at the bale of the Flag-staffe, which before we could not see when it turned about. The fourteenth, it was faire weather and a cleare light, the wind Westerly, and that day we tooke a Foxe. The fifteenth, 30 it was faire cleere weather, with a West wind, and axe of vs went about the ship, where wee found the Bolck-vanger (which the last time that we were in the ship, wee stucke in a hole in the fore decke, to take Foxes) pulled out of the hole, and lay in the middle of the ship, and all torne in pieces by the Beares, as we perceitted by their footsteps.

The fixteenth, it was faire weather, the wind Northerly, and then we went now and then out of the house to stretch out our joynts and our limbs with going and running, that we might not become lame, and about noone time we faw a certaine redueffe in the shie, as a shew or mel- during blusheth senger of the Sunne that began to come towards vs. The seventeenth, it was cleare weather to lie so long with a North wind, and then still more and more wee perceived that the Sunne began to come in bed, neerer vnto vs, for the day was somewhat warmer, so that when we had a good fire, there fell 40 great pieces of Ice downe from the walls of our house, and the Ice melted in our Cabine, and the Cold releases water dropped downe, which was not so before, how great socuer our fire was; but that night

it was cold againe. The eighteenth, it was faire cleare weather, with a South-east wind, then our Wood began

to confume, and so we agreed to burne some of our Sea-coles, and not to stop vp the Chimney, and then we should not need to feare any hurt, which we did, and found no difease thereby, but we thought it better for vato keepe the Coles, and to burne our Wood more sparingly, for that the Coles would ferue vs better when we should fayle home in our open Scute.

The one and twentieth, it was faire weather, with a West wind: at that time taking of Foxes began to fayle vs, which was a figne that the Beares would come againe, as not long after we found it to be true, for as long as the Beares stay away, the Foxes came abroad, and not much before the Beares come abroad, the Foxes were but little feene.

The two and twentieth, it was faire weather with a West wind: then we went out agains to cast the Bullet, and perceined that day-light began to appeare, whereby some of vs said, that the Sunne would foone appeare vnto vs, but William Barens; to the contrary faid, that it was yet two weekes too soone. The three and twentieth, it was faire calme weather, with a Southwest wind : then foure of vs went to the ship, and comforted each other , giving God thankes that the hardest time of the Winter was past, being in good hope that we should live to talke of those things at home in our owne Countrey : and when we were in the ship, we found that the water role higher and higher in it, and to each of vs taking a Bisket or two with vs, wee went 60 home againe.

The foure and twentieth, it was faire cleare weather, with a West wind : then I, and I acob Hoemskerke, and another with vs went to the Sea-fide, on the South fide of None Zembla, where contrary to our expectation, I first faw the edge of the Sunne, wherewith wee went speedily Sunne appea. home againe, to tell William Barents, and the rest of our companions that toyfull newes: but Ina-14-

William Barents being a wife and well experienced Pilot, would not believe it, efferming it to be about fourteene dayes to foone for the Sunne to finne in that part of the World; but we earneftly affirmed the contrarie, and faid, that we had feene the Sunne.

ftrange, and CONLEASY to all learned mens

Opinions,

The flue and twentieth, and fixe and twentieth, it was mifty, and close weather, so that wee could not fee any thing: then they that layed the contrary wag.r with vs, thought that they had won; but vpon the feuen and twentieth day it was cleare weather, and then wee faw the nau won; our vpon the leuen and twentering by the resulting and the mainteffly appeared that wee had sun fully feen. Sunne in his full roundnesse about the Horizon, whereby it manitefly appeared that wee had Sunne in ans tour rountement above ching the same, and that wee said, it was cleane contrary to the opinions of all old and new which they ching the tame, and that were tain, it was cleane contrary to the opinions of an one and new had loft the 4. Writers; yea, and contrary to the nature and roundnelle both of Heaten and Earth; fome of vs 10 vertices; year contrary to the there had been no day, that it is ight be that we had oursilept our disperie to felues, whereof we were better affured : but concerning the thing in it felfe, feeing Cod is wonthem agrine vpon the 14, of derfull in all his workes, we will referre that to his almightie power, and leave it vnto others to vano the 14, of diffure of, but for that no man shall thinke vs to be in doubt thereof, if wee should let this pass without discoursing upon it, therefore we will make some declaration thereof, whereby we may affure our felues that we kept good reckoning.

You must vaderstand, that when we first law the Sun, it was in the fift degr. and 25 min. of Aquerius, and it should have staid according to our first ghesting, till it had entred into the 16.deg. and 27. min. of Aquarius, before he should have shewed there vinto vs, in the height of 76.deg. Which we ftriuing and contending about it amongst our selines, could not be farished, but won. 20 dred thereat, and iome among it vs were of opinion, that we had mistaken our selves, which nener held fie we could not be perfivaded vnto, for that enery day without fayle, wee noted what had part, and also had vied our Clocke continually, and when that was frozen, wee vied our Houre-glasse of twelue houres long, whereupon wee argued with our felues, in diuers wise, to know how we should finde out that difference, and leave the trueth of the time, which to tris, wee agreed to looke into the Ephemerides made by Isfopous Schole, Printed in Venice, for the yeeres of our Lord 1 , 89 . till A. 1600. and we found therein, that vpon the foure and twentieth day of Ianuary, (when the Sun fift appeared vnto vs) that at Venice the Clocke being one in the night time, the Moone and Inpiter were in conjunction, whereupon we fought to know when the same conjunction should be ouer or about the house where wee then were, and at last wee 30 found that the foure and twentieth day of January was the fame day whereon the conjunction Difference of aforesaid happened in Venice, at one of the clocke in the night, and with vs in the morning, when the Sunne was in the East: for we faw manifestly that the two Planets aforelaid approached neere vnto each other, vntill such time as the Moone and Impuer stood one inst our the other, both in the figne of Tourses, and that was at fixe of the clocke in the morning, at which time the Moone and Impiter were found by our Compasse, to be in conjunction over our house, in the North and by East point, and the South part of the Compasse was South South-west, and there we had it right South, the Moone being eight dayes old, whereby it appeareth, that the Sunne and the Moone were eight points different, and this was about fixe of the clockein the morning: this place differeth from Venice fine houres in longitude, whereby we may ghelic how 40 much we were neerer East then the Citie of Venice, which was fine houres, each houre being 14. degrees, which is in all 75. degrees, that we were more Eafterly then Venice, by all which it is manifeftly to be feene, that wee had not fayled in our account, and that also wee had found our right longitude, by the two Planets aforefaid, for the Towne of Venice lieth under 37. degrees and 25. minutes in longitude, and her declination is 46. degrees and 5. minutes, whereby it followeth that our place of Nona Zembla, lieth under 112. degrees and 25. minutes in longitude, and the height of the Pole 76 degrees, and so you have the right longitude and latitude but from the vetermost point of Nona Zembla to the point of Cape de Tahm, the vetermost point of Tarie is, where it windeth Southward, the longitude differeth 60. degrees; but you must vn-Note for deg. derstand, that the degrees are not so great as they are vinder the Equinoctiall Line, for right vin- 50 der the Line a degree is fifteene mikes, but when you leave the Line, either Northward or Southward, then the degrees in longitude doe lessen, so that the neerer that a man is to the North or South Pole, so much the degrees are lesse: so that under the 75. degrees Northward, where we wintred, the degrees are but three miles and two third parts; whereby it is to be marked, that we had but 60. degrees to faile to the faid Cape de Tabin, which is, 220. miles, so the faid Cape lieth in 172 degrees in long tude as it is thought; and being aboue it, it feemeth that we should be in the Streight of Anian, where we may fayle boldly into the South, as the Land reacheth. Now what further instructions are to be had to know, where wee lost the Sunne under the faid

tring place.

76. degrees upon the fourth of Nouember, and faw it agains upon the foure and twentieth of Ianuary: I leave that to be described, by such as make profession thereof, it suffices have 60 shewed, that it failed vs not to appeare at the ordinary time. The fine and twentieth of Ianuary, it was darke cloudy weather, the wind Westerly, so that Besterreturns the feeing of the Sunne the day before, awas againe doubted of, and then many wagers were with the feeing of the Sunne the day before, awas againe doubted of, and then many wagers were with the Sun. the seeing of the Sunne the day before, was again to district on, and then many weather sunner against the Sunne appeared, the same day we saw a Beare, (which

as long as the Sunne appeared not vnto vs we faw not) comming out of the South-west towards our house, but when we shouted at her she came no neerer, but went away again. The six & twen tieth, it was faire cleare weather, but in the Hor zon there hung a white or darke cloude, whereby we could not fee the Sunne, vehereupon the reft of our companions, thought that we had mistaken our selues voon the soure and twentieth day, and that the Sunne appeared not vnto vs. and mocked vs, but vve were resolute in our former affirmation, that vve had seene the Sunne. but not in the full roundnesse: That Eeuening the Sicke man that was amongst vs, was very Sicke man wyeake, and felt himfelfe to bee extreame ticke, for he had layne long time, and we comforted diethhim as well as vve might, and gaue him the best admonition that vve could, but hee dyed not

10 long after midnight. The twentie feuen it was faire cleare weather, with a South-west wind, then in the morning we dieged a hole in the fnow hard by the house, but it was still to extreame cold, that we could not flay long at worke, and so wee digged by turnes, every man a little while, and then went to the fire, and another went and supplied his place, till at last wee digged seuen foot depth where wee went to burie the dead man, after that when we had read certaine Chapters, and fung some Pfalmes, wee all went out and buried the man, which done we went in and brake our fafts, and while we were at meate, and discoursed among st our selues, touching the great quantitie of show that continually fell in that place, wee faid that if it fell out, that our house should bee closed vp againe with fnow, wee would finde the meanes to climbe out at the chimney, whereupon our Malter went to trie if hee could climbe up through the chimney, and fo get out, and while hee

was climbing one of our men went forth of the doore, to fee if the Master were out or not, who The Summeter ftanding upon the fnow, faw the Sunne, and called vs all out, wherewith we all went forth, and faw the Sun in his full roundnesse, a little aboue the Horizon, and then it was without all doubt. that wee had seene the Sunne vpon the foure and twentieth of Ianuary, which made vs all glad, and we gave God heartie thankes, for his grace shewed vnto vs, that that glorious light appeared

vnto vs againe.

The eight and twentieth, it was faire weather, with a West wind, then we went out many times to exercise our relues, by going, running, casting of the ball, ( for then we might see a good way from vs ) and to refresh our joynts, for wee had long time fitten dull, whereby many of vs To were very loofe. The nine and twentieth, it was foule weather, with great flore of fnow, the wind North-west, whereby the house was closed up againe with snow. The thirtieth, it was darke weather, with an East wind; and we made a hole through the doore, but wee shouled not the fnow very farre from the portall, for that as foone as we law what weather it was, wee had no defire to goe abroad. The one and thirtieth, it was faire calme weather, with an East wind. then we made the doore cleane, and shouled away the snow, and threw it vpon the house, and went out, and wee faw the Sunne shine cleere, which comforted vs, meane time we law a Beare. Beare, that came towards our house, but wee went foftly in, and watched for her till shee came neerer, and as shone as she was hard by we shot at her, but she ran away againe.

The first of February, being Candlemasse Eeue, it was boisterous weather, with a great storme, February, 40 and good store of snow, whereby the house was closed up againe with snow, and we were conftrained to flay within doors, the wind then being north-west. The second it was foule weather, and as then the Sunne had not rid vs of all the foule weather, whereby wee were somewhat difcomforted, for that being in good hope of better weather wee had not made so great prouision of wood as we did before. The third, it was faire weather, with an East wind, but very mystie, whereby wee could not fee the Sunne, which made vs tomewhat melancholy, to fee fo great a myst, and rather more then we had had in the Winter time, and then we digged our doore open againe, and fetched the wood that lay without about the doore into the houle, which we were forced with great paine and labour to dig out of the snow. The fourth, it was foule weather, with great flore of fnow, the wind being South-weft, and then wee were close vp againe with fnow, but then wee tooke not so much paines as we did before, to dig open the doore, but when we had 50 occasion to goe out we climbed out at the chimney, and eased our selues, and went in agains the

The fifth, it was still foule weather, the wind being East, with great store of snow, whereby They go cout wee were flut up againe into the house, and had no other way to get out but by the chimney, at the chimney and those that could not climbe out, were faine to helpe themselves within as well as they could, ney, The fixth, it was still foule stormy weather, with store of show, and we still went out at the chimney, (and troubled not our felues with the doore,) for some of vs made it an eatie matter to climbe out at the chimney. The feuenth, it was ftill toule weather, with much fnow, and a South-west wind, and we thereby forced to keep the house, which grieued vs more then when the Sun thined not, for that having feene it, and felt the heate thereot, yet wee were forced not to inioy it. The eight, it began to be fairer weather, the wind being South-west, then wee faw the Sun rife South, South-east, and went downe South South-west, by the Compasse that we had made of Lead, and placed according to the Meridian of that place, but by our common Compafie it differed two points. The ninth, it was faire cleere weather, the wind South- weft, but as then wee could not

Heat of the Sunne.

fee the Sunne, because it was close weather in the South , where the Sunne should goe downe, The tenth, it was faire cleare weather, so that wee could not tell where the wind blew, and then The tenting to was said the control of the Sun, but in the Ecurning it began to blow semewhat cold out

The elementh, it was faire weather, the wind South, that day about noone, there came a Beare towards our house, and wee watched her with our Muskets, but shee came not so necre as wee could reach her, the same night wee heard some Foxes stirring, which since the Beares began to come abroad againe we had not much seene. The twelfth, it was cleere weather and very calme, the winde South-west, then we made our Traps cleane againe, meane-time there came a great the winde South-west, then we make our stage of in, and weel feuelled at her with our Munkett, 10

Beare towards our house, which made vs all goe in, and weel feuelled at her with our Munkett, 10 and as shee came right before our doore, we shot her into the brest, cleane through the heart, the bullet paffing through her body, and went out againe at her tayle, and was as flatte as a Counter, the Beare feeling the blow, leapt backwards, and ranne twentie or thirtie foot from the house and there lay downe, wherewith wee leapt all out of the house, and ranne to her, and found her fail aliue, and when the faw vs, thee reard up her head, as if the would gladly have done vs form mifchiefe, but we trufted her not, for that we had tryed their firength fuffciently before, and therefore wee shot her twice into the body againe, and therewith shee dyed ? Then we ript up her belly, and taking out her guttes, drew her home to the House where we flayed her, and tooke at of a Bear, view belly, and taxing out nerguives, user the library which wee molt and burned in our Limps. This full fire Lamps. Greafe did vs great good feruice, tor by that meanes we ftill kept a Lampe burning all night 20 long, which before wee could not doe, for want of Greate, and enery man had meanes to burnea Lampe in his Cabbin, for such necessaries as hee had to doe. The Beares skinne was nine foot long, and feuen foot broad.

The thirteenth, it was faire cleere vocather with a hard West winde, at whith time we had more light in our house by burning of Lampes, whereby we had meanes to passe the time away, by reading and other exercites, which before (when we could not diffinguish Day from Night, by reason of the darkenesse, and had not Lamps continually burning) vvee could not doe. The foureteenth, it was faire cleere weather, with a hard West wind before noone, but after noone, it was still weather, then fine of vs went to the Ship to see how it lay, and found the waterto increase in it, but not much. The fifteenth, it was foule weather, with a great florme out of the 30 South-west, with great store of Snow, whereby the House was closed vp againe, that Night the Foxes came to denoure the dead body of the Beare, whereby we were in great feare, that all the Beares thereabouts would come thither, and therefore wee agreed, as foone as we could to get out of the honfe to burie the dead Beare deepe vnder the Snow.

The fixteenth of February, it was foule weather, with great store of Snow and a South-west wwind, that day was Shroue-tuelday, then wee made our felues formewhat merrie in our great griefe and trouble, and enery one of vs dranke a draught of Wine.

The nineteenth, it was faire cleere v veather, with a South-west winde, then we tooke the height of the Sunne, which in long time before were could not doe, because the Horizon was not cleere; as also for that it mounted not to high, nor gaue not so much shadow, as vve vvere to haue in our Astrolabism, and therefore we made an Instrument that was halfe round, at the one end having 90. degrees marked thereon, whereon we hung a thread with a Plumet of Lead, as the water Compasses have, and therewith we tooke the height of the Sunne, when it was at the higheft, and found that it was 3. degrees elevated above the Horizon, his Declination 11. degrees and 16. minutes, which being added to the height aforefayd, made 14. degrees and 16. minutes, which substracted from 90. degrees, there refted 75. degrees and 44. minutes for the height of the Pole, but the aforesayd 3 degrees of height, being taken at the lowest fide of the Sunne, the 16.minutes might well be added to the height of the Pole, and foit was just 76. degrees, as we had measured it before. The twentieth, it was foule weather, with great store of Snow, the wind South-west, whereby we were shut wp againe in the house.

The two and twentieth, it was cleere faire vveather, with a South-west wind, then we made ready a Sled to fetch more Wood, for need compelled vs thereunto; for as they fay, hunger driveth the Wolfe out of his denne, and eleven of vs went together, all well appointed with our Armes, but comming to the place where we should have the Wood, we could not come by it, by reason it lay so deepe vinder the Snow, whereby of necessitie we were compelled to goe further, where with great labour and trouble we got some : but as vve returned backe againe therewith, it was fo fore labour vnto vs, that we were almost out of comfort, for that by reason of the long cold and trouble that we had indured, vve vvere become so vveake and feeble, that vve had little strength, and we began to bee in doubt, that we should not recouer our strengths againe, and should not be able to fetch any more Wood, and so we should have dyed with cold, but the pre- 60 fent necessitie and the hope wee had of better weather, increased our forces, and made vs doe more then our strengths afforded, and when we came neere to our house, we saw much open vvater in the Sea, which in long time we had not feene, which also put vs in good comfort, that things would bee better.

CHAP. 5. S. 2. Tartarian Sea. Shooes of Felt and Ruoge. Shooes fozen.

The five and twentieth, it was foule weather againe, and much Snow, with a North winde, whereby we were closed vp with Snow againe, and could not get out of our House.

The eight and twentieth of February, it was still weather, with a South-west wind, then ten of vs went and fetched another Sled full of Wood, with no leffe paine and labour then wee did before, for one of our companions could not helpe vs, because that the first joynt of one of his great Toes was frozen off, and so heecould doe nothing.

The first of March, it was faire still weather, the wind West but very cold, and we were forced March, to spare our Wood, because it was so great labour for vs to fetch it, so that when it was day, we exercifed our felues as much as we might, with running, going, and leaping, and to them that In lay in their Cabins, wee gaue hot stones to warme them, and towards night we made a good fire, which we were forced to endure. The second, it was cold cleere weather, with a West wind, the same day we tooke the height of the Sunne, and found that it was cleuated about the Horizon 6. degrees and 48. minutes, and his Declination was 7. degrees and 12. minutes, which Substracted from 90. degrees, refteth 76. degrees for the height of the Pole. The third, it was faire weather with a West wind, at which time our Sicke men were fomewhat better, and fate vpright in their Cabins, to doe fome thing to passe the time away, but after they found that they were too ready to stirre before their times. The fourth, it was faire weather, with a West wind the same day there came a Beare to our House, whom we watcht with our Pieces, as wee did before, and thot at her, and hit her, but thee runne away, at that time fine of vs went to our Ship, 20 where we found that the Beares had made worke, and had opened our Cookes cupbord, that was concred over with faow, thinking to finde fome thing in it, and had drawne it out of the Ship

The fenenth, it was still foule weather and as great a winde, so that wee were shut vp in our Note. House, and they that would goe out, must climbe vp through the Chimney, which was a common thing with vs, and still we saw more open water in the Sea, and about the Land, whereby wee were in doubt that the Ship in that foule weather, and driving of the Ice, would be loofe (for as then the Ice draue) while we were thut vp in our House, and wee should have no meanes to helpe it. The eight, it was still foule vveather, with a South-west storme, and great store of Snow, whereby we could see no Ice in the North-east, nor round about in the Sea, whereby we 30 were of opinion, that North-east from vs there was a great Sea. The minth, it was foule vveather, but not fo foule as the day before, and leffe fnow, and then we could fee further from va and perceive that the yvater yvas open in the North-east, but not from vs towards Tartaria, for there we could fill fee Ice in the Tartarian Sea, otherwise called the Ice Sea, so that we weete of opinion, that there it was not very wide, for when it was cleere weather, we thought many times that wee faw the Land and thewed it to our companions, South and South-east from our house, like a hilly Land, as land commonly showeth it selfe, when we see it.

The eleventh, it was cold, but faire Sun-shine vventher, the wind North-east, then we tooks the height of the Sunne with our Aftrolabium, and found it to bee elevated about the Herizon 10. degrees and 19. minutes, his Declination was 3 degrees and 41. minutes, which being added 40 to the height aforefayd, made 14.degrees, which substracted from 90. degrees, there resteth 76. degrees for the height of the Pole. Then twelve of vs went to the place where wee vied to goe. to fetch a Sled of Wood, but still we had more prine and labour therewith, because we were vveaker, and when we came home with it, and were very vvearie, we prayed the Mafter to give each of vs a draught of Wine, which hee did, wherewith we were somewhat released and comforted, and after that were the willinger to labour, which was vnfupportable for vs. if meere extremitie had not compelled vs thereunto, faying oftentimes one vnto the other, That if the Wood were to be bought for Money, we would give all our Earnings or Wages for it.

The twelfth, it was foule weather, the Winde North-east, then the Ice came mightily driving in, which the South-west Wind had beene driven out, and it was then as cold, as it 50 had bin before in the coldest time of Winter.

The fifteenth, it was faire vveather, the Wind North, that day were opened our doore to soe out, but the cold rather increased then diminished, and was bitterer then before it

The fixteenth, it was faire cleere weather, but extreame cold with a North Wind, which put vs to great extreamitie, for that vve had almost taken our leaves of the cold, and then it bes gan to come againe this continued till the one and twentieth.

The one and twentieth, it was faire weather, but ftill very cold, the Wind North, the fame day the Sunne entred into Aries in the Equinoctiall Line, and at noone wee tooke the height of the Sunne, and found it to be eleuated 14 degrees about the Horizon, but for that the Sunne Solin Aries, 60 was in the middle Line, and of the like distance from both the Tropickes, there was no declination, neither on the South nor North fide, and so the 14. degrees aforefayd being fubfiracted Shoots of Felt from 90, degrees, there refted 76, degrees for the height of the Pole. The fame day, we made and Rugge. shooes of Felt or Rugge, which we drew voon our feete, for vve could not goe in our shooes, by

reason of the great cold, for the shooes on our feet were as hard as hornes, and then we fetcht a

Sled full of Wood home to our house, with fore and extreame labour, and with extremititof Sted full or wood nome to our nome, with the cold which we indured, as if March means to bid vs farewell, for our hope and comfort was, cold which we indured, as it means means to be that at length the firength thereof would that the cold could not still continue in that force, but that at length the firength thereof would

The three and twentieth, it was very foule weather, with infernall bitter cold, the wind North-eaft, fo that we were forced to make more fire, as we had beene at other times, for then it was as cold as euer it had beene, and it froze very hard in the floore and voon the walls of our it was as cold as ever it had beene, such that every with great flore of fnow, and a North wind, house. The foure and twentieth, it was alike cold, with great flore of fnow, and a North wind, whereby we were once againe that up into the house, and then the Coles serned vs well, which whereby we were once against unit vp mind the diffixed of. The fixe and twentieth, it was faire to cleare weather, and very calme, then we digd our felues out of the house again, and went out, and then we feecht another Sled of Wood, for the great cold had made vs burne vp all that we had.

The eight and twentieth, it was faire weather, the wind South-west, whereby the Ice drape away very fail. The same day, sixe of vs went aboord the ship to see how it lay, and sound it away very tate. a resume cap, in the Beares had kept an euill fanoured house therein.

He is one sort; our we personned that was faire weather, the wind North-east and very calme, then we tooke the height of the Sunne, and found it to be eleuated about the Horizon 18. degrees and tome to minutes, his declination being 4. degrees and 40. minutes, which being (b.bitracked from the height aforefaid, there rested 14. degrees, which taken from 90. degrees, the height of the Pole

the house.

504

The fixe, it was still soule weather, with a sliffe North-west wind, that night there came a Beare to our house, and we did the best we could to shoot at her, but because it was most were ther, and the cocke foifly, our Peece would not give fire, wherewith the Beare came boldly to ward the houle, and came downe the staires clole to the doore, feeking to breake into the houle, but our Mafter held the doore faft to, and being in great hafte and feare, could not barre it with the piece of Wood that wee vied thereunto; but the Beare feeing that the doore was flut, fire went backe againe, and within two hourse after thee came againe, and went round about and wpon the top of the house, and made such a roaring, that it was fearefull to heare, and at lat got to the chimney, and made fuch works there, that wee thought fine would have broken downe, and tore the fayle that was made fail about it in many pieces, with a great and fearful jo noile, but for that it was night, we made no refiftance againft her, because wee could not fee her,

The fourteenth, it was faire cleare weather, with a West wind , then we saw greater hills of Ice round about the thip, then over we had seene before, which was a fearefull thing to beheld, and much to be wondred at, that the thip was not inflicten in pieces. The fifteenth, it was fair calme weather with a North wind, then feuen of vs went aboord the fhip, to fee in what take it was, and found it to be all in one fort, and as wee came backe againe, there came a great Bere toward vs, against whom we began to make defence, but she perceining that, made away from vs, and we went to the place from whence shee came to see her Den, where we found a great hole made in the Ice, about a mans length in depth, the entrie the reof being very narrow, and with 40 in wide, there we thrust in our Pikes to seele if there was any thing within it, but perceiuing it was empty, one of our men crept into it, but not too farre, for it was fearefull to behold, after that we went along by the Sea-fide, and there we faw, that in the end of March, and the beginning of Aprill, the Ice was in fuch wonderful manner rifen and piled vp one vpon the other, that it was wonderfull, in such manner as if there had beene whole Townes made of Ice, with

The faxteenth, it was foule weather, the wind North-west, whereby the Ice began somewhat to breake. The feuenteenth, it was faire cleare weather, with a South-west wind, and then fewen of vs went to the ship, and there we faw open water in the Sea, and then wee went ouer the Ice-hills as well as we could, to the water, for in fixe or fever moneths we had not gone 10 fo neere vnto it, and when we got to the water, there we saw a little bird swimming therein, but as foone as it effied vs, it diued vinder the water, which we tooke for a figne, that there was more open water in the Sea then there had beene before, and that the time approached that the

The eighteenth of Aprill, it was faire weather, the wind South-west, then wee tooks the height of the Sunne, and it was elevated about the Horizon 25. degrees and 10. minutes, his declination 11. degrees and 12. minutes , which being taken from the height aforefaid , there refled 13. degrees and 58. minutes, which substracted from 90. degrees, the height of the Pole was found to be 75. degrees 58. minutes; then eleuen of ys went with a Sled to fetch more Wood, and brought it to the house, in the night there came another Beare upon our house, which so we hearing, went all out with our Armes, but the Beare ran away.

The eight and twentieth, it was faire weather, with a North wind, then we tooke the height of the Sumoe againe, and found it to bee eleuateed 28, degrees and 8, minutes, his declination 14. degrees and 8. minutes, which substracted from 90. degrees, there rested 76. degrees for the

## CHAP.S.S.3. Their many dangers by Beares, Ice, Famine, Scorbute.

height of the Pole. The nine and twentieth, it was faire weather, with a South-west wind, then we played at Colfe, both to the ship, and from thence againe homewards, to exercise our felues. The thirtieth, it was faire weather, the wind South-west, then in the night wee could fee the Sunne in the North ( when it was in the highest ) iust about the Horizon, so that from that time wee faw the Sunne both night and day.

### ð. III.

Their preparation to goe from thence: they depart in a Boat and Scute both open. and come to Cola, 1143. miles. Their many dangers by Beares, Ice, Famine, Scorbute, in the way.

He first of May, it was faire weather with a West wind, then wee sod our last flesh, May, which for a long time we had spared, and it was still very good, and the last morfell tafted as well as the first, and we found no fault therein , but onely that it would last no longer. The fecond, it was foule weather, with a fforme out of the South-weft, whereby the Sea was almost cleare of Ice, and then wee beganne to speake about getting from thence, for we had kept house long enough there. The third, it was still foule weather, with a 20 South-west wind, whereby the Ice began wholly to drive away, but it lay fast about the ship, and when our best meate, as fiesh, and other things beganne to faile vs, which was our greatest full enance, and that it behooved vs to be somewhat strong, to sustaine the labour that wee were to vindergoe, when we went from thence, the Master shared the rest of the Bacon amongst vs. which was a small Barrell with salt Bacon in pickle, whereof every one of vs had two ounces a day, which continued for the space of three weekes, and then it was eaten vp.

The fourth, it was indifferent faire weather, the wind South-west, that day fue of vs went to the ship, and found it lying still as fast in the Ice as it did before, for about the middle of March it was but feuenty fine paces from the open water, and then it was fine hundred paces from the water, and enclosed round about with high hills of Ice, which put vs in no small feare, 20 how wee should bring our Scute and our Boat through or ouer that way into the water, when wee went to leave that place. That night there came a Beare to our house, but as soone as shee heard vs make a noyle, the ranne away againe, one of our men that climbed vp in the Chimney, faw when shee ranne away, so that it seemed that as then they were afraid of vs. and durst not bee so bold to set vpon vs, as they were at the first. The fift, it was faire weather, with some snow, the wind East, that Ecuening, and at night wee saw the Sunne when it was at the lowest, a good way about the Earth. The fixt, it was faire cleare weather, with a great Southwest wind, whereby we saw the Sea open both in the East and in the West, which made our men exceeding glad, longing fore to be gone from thence. The fewenth, it was foule weather, and fnew hard, with a North wind, whereby we were closed up againe in our house.

The tenth, it was faire weather with a North-west wind, that night the Sunne by our common Compasse being North North-east, and at the lowest, we tooke the height thereof, and it was eleuated 2. degrees and 45. minutes, his declination was 17. degrees and 45. minutes, from whence taking the height aforefaid, there refted 14. degrees, which fubitracted from 90. degrees. there rested 76. degrees for the height of the Pole.

The fourteenth, wee fetcht our last \$led with fire-wood, and still ware our shooes made of Rugge on our feet.

The five and twentieth, it was faire weather, with an East wind, then at noone time wee tooke the height of the Sunne, that was elevated about the Horizon 34. degrees and 46. minutes, his declination 20. degrees and 46. minutes, which taken from the height aforefaid, there refted 14. degrees, which taken from 90. degrees, refted 76. degrees for the height of the Pole. 50 The fixe and twentieth, it was faire weather, with a great North-east wind, whereby the Ice came in againe. The feuen and twentieth, it was foule weather, with a great North-east wind, which draue the Ice mightily in ageine, whereupon the Mafter, at the motion of the companie, willed vs to make preparation to be gone.

The nine and twentieth in the morning, it was reasonable faire weather, with a West wind, then ten of vs went vnto the Scute to bring it to the house to dresse it, and make it ready to fayle, but wee found it deepe hidden under the fnow, and were fayne with great payne and labour to digge it out, but when wee had gotten it out of the snow, and thought to draw it to the house, wee could not doe it; because wee were too weake, wherewith wee became whol-60 ly out of heart, doubting that wee should not bee able to goe forward with our labour, but the Master encouraging vs, bade vs strine to doe more then wee were able; saying, that both our lives and our well-fare confifted therein: and that if wee could not get the Scute from thence, and make it ready, then heefaid wee must dwell there as Burgers of Nona Zembla, and Burgers of No. make our Graues in that place: but there wanted no good-will in vs but onely strength, " Zembla.

which made vs for that time to leaue off worke and let the Scute lie ftill, which was no small griefe vnto vs, and trouble to thinke what were best for vs to doe; but after noone being thus comfortlesse come home, wee tooke hearts againe, and determined to turne the Boat that lay by the house with her keele vpwards, and to amend it, that it might bee the fitter to carrie vs ouer the Sea, for wee made full account that we had a long troublelome Voyage in hand, where in wee might haue many croffes, and wherein wee should not bee sufficiently provided for all things necessarie, although wee tooke neuer so much care, and while wee were busie about our worke, there came a great Beare vnto vs, wherewith wee went into our house, and flood to watch her in our three doores, with Harquebusses, and one stood in the Chimney with a Musket, this Beare came boldlier vnto vs then euer any had done before, for shee came to the nea- 10 ther ften that went to one of our doores, and the man that ftood in the doore faw her not, because hee looked towards the other doore, but they that stood within saw her, and in great feare called to him, wherewith he turned about, and although he was in a maze, he shot ather. and the Bullet past cleane through her body, whereupon she ranne away. Yet it was a feartfull thing to fee, for the Beare was almost upon him before hee faw her, so that if the Peece had fayled to give fire (as oftentimes they doe) it had coft him his life , and it may bee, that the Beare would have gotten into the house: the Beare being gone somewhat from the houselay downe, wherewith wee went all armed and killed her out right, and when wee had ript open her bellie : we found a piece of a Bucke therein, with haire, skinne and all, which not long before thee had torne and deuoured.

The one and thirtieth of May, it was faire weather, but somewhat colder then before, the wind being South-west, whereby the Ice draue away, and we wrought hard about our Boat, but when wee were in the chiefest part of worke, there came another Beare, as if they had finelt that wee would be gone, and that therefore they defired to tafte a piece of some of vs, for that was the third day, one after the other, that they fet fo fiercely vpon vs, fo that wee were forced to leave our worke, and goe into the house, and shee followed vs, but we stood with our Peeces to watch her, and shot three Peeces at her, two from our doores, and one out of the Chimney, which all three hit her : but her death did vs more hurt then her life, for after we ript her belly, we dreft her Liner and eate it, which in the tafte liked vs well, but it made vs all ficke, specially three that were exceeding ficke, and wee verily thought that wee should have lost them, for all 30 their skins came off, from the foot to the head, but yet they recourred againe.

The third of Iune, in the morning it was faire cleare weather the wind West, and then wee were somewhat better, and tooke great paines with the Boat, that at last we got it ready, after we had wrought fixe dayes upon it: about evening it began to blow hard, and therewith the water was very open, which put vs in good comfort that our deliuerance would foone follow, and that we should once get out of that desolate and searefull place.

The fourth, it was faire cleare weather, and indifferent warme, and about the South-east Sunne, eleuen of vs went to our Scute where it then lay, and drew it to the ship, at which time the labour seemed lighter wnto vs then it did before, when wee tooke it in hand and were forced to leave it off againe. The reason thereof was, the opinion that wee had that the snow as 40 then lay harder upon the ground, and so was become stronger; and it may be that our courages were better, to fee that the time gane vs open water, and that our hope was that wee should get from thence; and fo three of our men stayed by the Scute to build her to our minds: and for that it was a Herring Scute, which are made narrow behind, therefore they fawed it off behind, and made it a broad stearne: and better to brooke the Seas, they built it also somewhat higher, and drest it vp as well as they could, the rest of our men were busie in the house to make all other things ready for our Voyage, and that day drew two Sleds with victuals and other goods vnto the ship, that lay about halfe way betweene the house and the open water, that after they might haue fo much the shorter way, to carrie the goods vnto the water side, when wee should goe away: at which time all the labour and paines that wee tooke seemed 50 light and easie vnto vs, because of the hope that wee had to get out of that wilde Desatt, irkefome, fearefull, and cold Countrey.

The fift, it was foule weather, with great store of haile and snow, the wind West, which made an open water, but as then we could doe nothing without the house, but within we made all things ready, as Sayles, Oates, Masts, Sprit, Rother, Swerd, and all other necessarie things. The fixt, in the morning it was faire weather, the wind North-east, then wee went with our Carpenters to the ship, to build vp our Scute, and carried two sleds full of goods into the ship, both victuals and Merchandise, with other things, which wee meant to take with vs; after that there rose very foule weather in the South-west, with snow, haile, and raine, which wee in long time had not had, whereby the Carpenters were forced to leave their worke, and goe home 60 to the house with vs, whereby also we could not be drie, because wee had taken of the Deales, therewith to amend our Boat and our Scute, there lay but a fayle ouer it, which would not hold out the water, and the way that lay full of fnow began to be foft, so that wee left off our shoots made of Rugge and Felt, and put on our Leather shooes.

The eight, it was faire weather, and wee drew the wares to the ship, which wee had packed and made ready, and the Carpenters made ready the Scute, so that the same euening it was almost done, the same day all our men went to draw our Boat to the ship, and made ropes to draw withall, fuch as wee vie to draw with in Scutes, which wee cast ouer our shoulders, and held fast with all our hands, and so drew both with our hands and our shoulders, which gave vs more force, and specially the desire and great pleasure wee tooke to worke at that time made vs itronger.

The tenth, wee carried foure Sleds of goods into the ship, the wind then being variable, and at evening it was Northerly, and wee were busie in the house to make all things ready, the 10 Wine that was left we put into little veffels, that fo wee might divide it into both our veffels, and that as wee were enclosed by the Ice, (which wee well knew would happen vnto vs) wee might easilier cast the goods upon the Ice, both out and into the Scutes, as time and place ferued vs. The eleuenth, it was foule weather, and it blew hard North North-west, so that all that day we could doe nothing, and we were in great feare left the storme would carrie the Ice and the ship both away together, (which might well have come to passe) then wee should have beene in greater miserie then euer wee were, for that our goods both victuals and others, were then all in the ship, but God prouided so well for vs, that it fell not out so vnfortunatly. The twelfth, it was indifferent faire weather, then we went with Hatchets, Halberds, Shouels, and other instruments, to make the way plaine, where we should draw the Scute and the Boat to 20 the water fide, along the way that lay full of knobs and hills of Ice, where wee wrought fore with our Hatchets and other inftruments, and while we were in the chiefest of our worke, there came a great leane Beare out of the Sea vpon the Ice towards vs, which we judged to come out of Tartaria: for we had seene of them twenty or thirty miles within the Sea, and for that wee had no Muskets, but onely one, which our Surgeon carried, I ranne in great hafte towards the ship to fetch one or two, which the Beare perceiting ranne after mee, and was very likely to haue ouer taken me, but our companie feeing that , left their worke and ranne after her, which made the Beare turne towards them, and left me, but when she ran towards them, she was shot into the body by the Surgeon, and ranne away; but because the Ice was so vneuen and hilly, she could not goe farre, but being by vs ouertaken, we killed her out right, and imote her teeth out Beare flame. 30 of her head, while the was yet living.

The thirteenth, it was faire weather, then the Mafter and the Carpenters went to the thing and there made the Scute and the Boat ready, fo that there refted nothing as then, but onely to bring it downe to the water fide, the Mafter and those that were with him , seeing that it was open water, and a good West wind, came backe to the house againe, and there hee spake vinto William Barents (that had been elong ficke) and shewed him, that he thought it good, (seeing it They departs was a fit time) to goe from thence, and fo willed the companie to drive the Boat and the Scute downe to the water fide, and in the name of God to beginne our Voyage, to fayle from None Zembla: then William Barents wrote a Letter, which he put in a Muskets charge, and hanged

it up in the Chimney, shewing how he came out of Holland, to sayle to the Kingdome of China. 40 and what had happened vnto vs being there on Land, with all our croffes, that if any man chaneed to come thither, they might know what had happened vnto vs, and how we had beene for-ced in our extremitie to make that houle, and had dwelt ten moneths therein, and for that wee were put to Sea in two imall open Boats, and to undertake a dangerous and aduenturous Voyage in hand, the Master wrote two Letters, which most of vs subscribed vnto, signifying how wee had flayed there vpon the Land in great trouble and miferie, in hope that our ship would bee freed from the Ice, and that we should sayle away with it againe, and how it fell out to the contrary, and that the ship lay fast in the Ice, so that in the end the time passing away, and our vichials beginning to faile vs, we were forced for the fauing of our owne lives, to leave the ship, and to fayle away in our open Boats, and so to commit our selues into the hands of God, Which

50 done, he put into each of our Scutes a Letter, that if wee chanced to lofe one another, or that by fformes or any other misaduenture we happened to be cast away, that then by the Scute that escaped, men might know how we left each other, and so having finished all things as we determined, we drew the Boat to the water fide, and left a man in it, and went and fetcht the Scute, and after that eleuen Sleds with goods, as Victuals, with some Wine that yet remayned, and the Merchants goods, which we preferred as well as we could, vz. fixe packes with fine woollen Cloth, a Cheft of Linnen, two packets with Veluet, two small Chests with Money, two Dri-fats with mens Clothes and other things, thirteene Barrels of Bread, a Barrell of Cheefe, a flitch of Bacon, two Runlets of Oyle, fixe small Runlets of Wine, two Runlets of Vineger, with other packes belonging to the Saylers, fo that when they lay all together vpon a heape, a 60 man would have judged that they would not have gone into the Scutes, which being all put into them, we went to the house, and first drew William Barents upon a Sled to the place where our Scutes lay, and after that we fetcht Claes Adrian fon, both of them having beene long licke, and so we entred into the Scutes, and divided our felues into each of them alike, and put into

either of thema licke man, then the Mafter caufed both the Scares to lie close one by the other,

The

Gerrat de Vect. Leenard Hen-Iohn(en Schea-

and there we subscribed to the Letters which he had written, and so committing our scheets to the will and mercy of God, with a West North-west wind, and an indifferent open water, we was subscribed fet sayle and put to Sea.

The fourteenth of Iune in the morning, the Sunne Easterly, wee put off from the Land of to the Pour Po- Nona Zembla, and the fast Ice thereunto adjoyning, with our Boat and our Scute, having a West wind, and fayled Eaft North-eaft all that day to the Hands point, which was fue miles, but our first beginning was not very good, for we entred fast into the Ice againe, which there by very hard and fait, which put vs into no small feare and trouble, and being there, foure of vs went tomes, recer 13 that a data settly which por containing the state of t

The fixteenth, we let layle againe, and got to the Iland of Orange, with a South wind which 10 is eight miles diftant from the Point of Defire, there we went on Land with two small Barrels, and a Kettle, to melt snow, and to put the water into the Barrels, as also to seeke for Birds and Egges, to make meate for our ficke men. We put to the Sea againe with a South-east wind and drowlie miseling weather, whereby we were all dankish and wet, for wee had no shelter in our open Scutes, and fayled West, and West and by South, to the Ice-point, and wee made our Scutes Open Scures. failt to a great piece of Ice, and there eate somewhat, but the weather was still souler and souler.

to that we were once againe enclosed with Ice, and forced to stay there.

The fewenteenth in the morning, when we had broken our fasts, the Ice came so fast vpon vs that it made our haires stare vpright vpon our heads, it was so fearefull to behold : by which so meanes we could not make fast our Scutes, so that we thought verily that it was a fore shewing of our last end, for wee draue away so hard with the Ice, and were so sore prest betweene a flake of Ice, that we thought verily the Scutes would burff in a hundred pieces, at laft, being in this discomfort, and extreme necessitie, the Master said, if we could take hold with a ropevpon the fast Ice, we might therewith draw the Scute vp, and so get it out of the great drift of Ice, but as this counsell was good, yet it was so full of danger, that it was the hazard of his life that should take upon him to doe it, and without doing it, was it most certaine, that it would cost was all our lives: this counfell as I said was good, but no man (like to the tale of the Mice) durft hang the Bell about the Cats necke, fearing to bee drowned, yes necessitie required to have it done, and the most danger made vs choose the least, so that being in that perplexitie, I being 30 Dangerous at. the lightest of all our companie, tooke on me to fasten a rope vpon the fast ice, and so creeping from one piece of driving Ice to another, by Gods helpe got to the fast Ice, where I made a tope fast to a high howell, and they that were in the Soute, drew it thereby vnto the said fast Ice. and then one man alone could draw more then all of them could have done before, and when we had gotten thither, in all haste wee tooke our ficke men out, and layed them vpon the Ice, laying clothes and other things under them, and then tooke all our goods out of the Scutes, and fo drew them vpon the Ice, whereby for that time we were delinered from that great danger, amaking account that we had escaped out of deaths clawes, as it was most true.

The eightcenth, we repaired and amended our Scutes againe, being much bruifed and crushed with the racking of the Ice, and were forced to drive all the nayles fast againe and to piece ma-40 ny things about them, God fending vs Wood, wherewith we molt our Pitch, and did all other things that belonged thereunto, that done, some of vs went vpon the Land to seeke for Egges, which the ficke men longed for, but we could finde none, but we found foure Birds, not without great danger of our lines, betweene the Ice and the firme Land, wherein wee often fell, and were in no small danger.

The nineteenth, it was indifferent weather, the wind North-west, and West South-west, but we were still shut up in the Ice, and saw no opening, which made us thinke that there would be our last abode, and that we should neuer get from thence.

Thetwentieth, Class Adrianson and William Barents died, the death of William Barents put vs in no small discomfort, as being the chiefe Guide, and onely Pilot on whom wee reposed our 50

The two and twentieth in the morning, it blew a good gale out of the South-east, and then the Sea was reasonable open, but we were forced to draw our Scutes over the Ice to get vnto it, which was great paine and labour vnto vs; for, first we were forced to draw our Scutes ouer a piece of Ice of fifty paces long, and there put them into the water, and then againe to draw them vp vpon other Ice, and after drew them at the leaft an hundred paces more ouer the Ice, before we could bring them to a good place where we might easily get out, and being gotten vnto the open water we committed our selues to God, and set sayle the Sun being about East North-east, with an indifferent gale of wind out of the South, and South South-east, and sayled West, and Efficioned again West and by South, till the Sunne was South, and then we were round about enclosed with Ice 69 againe, and could not get out, but were forced to lie still, but not long after the Ice opened againe like to a fluce, and we past through it and set sayle againe, and so sayled along by the Land, but were presently encloted with Ice, but being in hope of opening againe, meane time weeeate Somewhat, for the Ice went not away as it did before : after that wee vied all the meanes wee

W. Barents

could to breake it, but all in vayne, and yet a good while after, the Ice opened againe, and we got out, and fayled along by the Land, West and by South, with a South wind. The three and twentieth, wee layled still forward West and by South, till the Sunne was South-east, and got to the Trust-point, which is distant from the lee-point fine and twentie miles, Trust-point,

and then could goe no furtheer, because the Ice lay so hard and so close together, and yet it was faire weather : the fame day we tooke the height of the Sunne with the Aftrolabium, and alfo with our Astronomicall Ring, and found his height to be 37 degrees, and his Declination 23 degrees and 30. minutes, which taken from the height aforefayd, there refted 13. degrees and 30. minutes, which substracted out of 90 degrees, the height of the Pole was 76 degrees and 20 min notes, and it was faire Sun-thine weather, and yet it was not fo firong as to melt the Snow, that

we might have water to drinke, fo that wee fet all our Tinne platters and other things full of Extreame cold Snow to melt, and fo molt it, and put fnow in our mouthes, to mele it downe into our throates,

but all was not enough, so that we were compelled to endure great thirste

The foure and twentieth of Iune, the Sunne being Eatherly, we rowed heere and there in the Ice, to fee where we might beil goe out, but wee law no opening, but when the Sunne was South, we got into the Sea, for the which we thanked God most heartily, that hee had sent vs an vnexpected opening, and then we sayled with an East winde, and went luftily forward, so that we made our account to get aboue the point of Nasames close by the land, and wee could easily see the point of Nassames, and made our account to bee about three miles from it.

The fixe and twentieth, it still blew hard out of the South, and broke the Ice whereunto we were fast in pieces, and we thereby draue into the Sea, and could get no more to the fast Ice, 60 whereby we were in a thouland dangers to bee all cast away, and driving in that fore in the Sea, wee rowed as much as we could, but we could not get neere vnto the Land, therefore we hoyfed up our Focke, and so made up with our sayle, but our Fock-mast brake twice in peeces, and then it was worle for vs then before, and not with flanding that there blew a great gale of Wind, yet we were forced to hoyfe up our great Sayle, but the winde blew to hard into it, that if wee

had not prefently taken it in againe, we had funke in the Sea, or elie our Boate would have been filled with water, for the water began to leape ouer-boord, and wee were a good way in the Sea, at which time the waues went fo hollow, that it was most fearefull, and wee thereby faw nothing but death beforeour eyes, and every twinckling of an eye looked when wee should linke, But God that had delinered we cut of so many dangers of Death, holpe we once againe, and contrary to our expectations, fent vs a North-west wind, and so with great danger wee got to the fast Ice againe, when we were delivered out of that danger, and knew not where our other Soure was, wee fayled one mile along by the fast Ice, but found it not, whereby we were wholly out of heart, and in great feare that they were drowned, at which time it was myllie weather, and fo fayling along, and hearing no newes of our other Scute, we shot off a Musket, which they hear 10 sing that off another, but yet we could not fee each other, meane time approching never to each other, and the weather waxing somewhat cleerer, as wee and they shot once againe, we saw the smoake of their Piece, and at last we met together againe, and saw them lye fast, betweene driving and fast Ice, and when we got neere vnto them, we went over the Ice, and holpe them to wnlade the goods out of their Scute, and drew it ouer the Ice, and with much paine and trouble brought it into the open water againe, and while they were fast in the Ice, wee found fome Wood vpon the Land by the Sea fide, and when we lay by each other, we fod fome Bread and Water together, and eat it vp warme, which did vs much good.

The eight and twentieth, when the Sunne was in the East, wee layd all our goods voon the Ice, and then drew the Scutes vpon the Ice also, because we were so hardly press on all sides, with 10 the Ice, and the wind came out of the Sea vpon the Land, and therefore wee were in feare to be wholly inclosed with the Ice, and should not be able to get out thereof againe, and being you the Ice, we layd fayles ouer our Scutes, and lay downe to reft, appointing one of our men to keepe watch, and when the Sunne was North, there came three Beares towards our Scutes, where-Three Beares, with hee that kept the Watch cryed, three Beares, three Beares, at which noyle wee leapt out of our Boates with our Muskets, that were laden with hayle-shot to shoote at Birds, and had no time to discharge them, and therefore shot at them therewith, and although that kinde of shot could not hart them much, yet they ranne away, and in the meane time they gaue vsleafore to lade our Muskers with bullets, and by that meanes wee thot one of the three dead, which the other two perceiuing ranne away, but within two houres after they came againe, but when they 10 were almost at vs and heard vs.make a moyle, they ranne away, at which time the winds was

One Beare

Weft, and Weft and by North, which made the feet drive with great force into the Eaft.

The mine and twentieth of lune, the Sunite being South South-weft, the two Beares cameagaine to the place where the deal Beare lay, where one of them tooke the dead Beare in his mouth, and went a great way with it oues the ringged Ice, and then began to eate it, which we mouth and ear perceiuing shot a Musket at her, but she maring the neyse thereof ranne away, and let the dead Beare Ive. then foure of vs went thither, and faw that in fo hort time the had eaten almost the halie of her, we tooke the dead Beare and layd it upon a high heape of Ice, that we might fee it out of our Scute, that if the Beare came againe we might shoot at her, at which time we try-Strong Beare, ed the great firength of the Beare, that carryed the dead Beare as lightly in her mouth, as if 40 it had beene nothing, whereas wee foure had enough to doe to carry away the halfe dead Beare

Iuly,

The first of July, it was indistreent faire vveather, with a West North-west wind, and in the Morning the Sunne being East, there came a Beare from the driving Ice towards vs, and swam ouer the water to the fast Ice whereon we ky, but when she heard ve, she came no neerer but rm away, and when the Sunne was South-east, the Ice came so fast in towards vs, that all the Ice whereon we lay with our Scutes and our goods, brake and ran one peece vpon another, whereby we were in no small feare, for at that time most of our goods fell into the water, but wee with ereat diligence drew our Scutes further vpon the Ice towards the Land, where we thought to be better defended from the driving of the Ice, and as we went to tetch our goods, we fell into the greatest trouble that ever we had before, for that wee endured so great danger in the saving thereof, that as we layd hold vpon one peece thereof, the rest sunke downe with the Ice, and many times the Ice brake under our owne feete, whereby we were wholly discomforted, and in a manner cleane out of all hope, expecting no iffue thereof, in such fore that our trouble at that time firmounted all our former cares and impeachments, and when wee thought to draw vp. our Boates upon the Ice, the Ice brake under vs, and we were carryed away with the Scute, and all by the driving Ice, and when we thought to faue the goods, the Ice brake under our feet, and with that the Scute brake in many places, especially that which wee had mended, as the Mast, the mast planke, and almost all the Scute, wherein one of our men that vvas ficke, and a Cheft of money lay, which we with great danger of our lives got out from it, for as we were doing it, the Ice that was under our feet draue from vs, and slid voon other Ice, vvhereby we were in danger to burft both our armes and our legges, at which time, thinking that wee had beene cleane quit of our Scute, we beheld each other in pittifull manner, knowing not what we should doe, our lines depending thereon, but God made fo good pronision for vs, that the peeces of Ice draue from

each other, wherewith we ranne in great hafte vinto the Scute, and draw it to vsagaine in fuch case as it was, and laid it woon the fait Ice by the Boate, where it was in more fecuritie, which put vs vnto an exceeding and great and dangerous labour, from the time that the Sumne was South-east, votill it was W. It South-west, and in all that time wee rested not, which made vs extreame wearie, and wholy one of comfore, for that it troubled vefore, and it was much more fearefull wnto ve, then at that time when William Barents dyed, for there we were almost drowned, and that day we lott (which was funke in the Sea) two Barrels of Bread, a Chift with Linnen Cloth, a Dry Rat with the Saylors Clothes, our Aftronomicall Ring, a packe of Scarlet Cloth, a Rundlet of Oyle, and some Cheeses, and a Rundlet of Wine, which bouged with the to lee forther there was not any thing thereof faued.

The fourth, it was fo faire cleere weather, that from the time we were first in None Zemble. we had not the like. The lifth, it was faire weather, the Wind West, South-west, the same day

dyed lobe Branfon of Harless.

The fewenth, it was faire weather with some Raine, the Winde West, South-west, and at Ettening VVert, and by North, then we went to the open water, and there killed thirteene Birds.

which we tooke vpon a piece of driving Ice, and laid them vpon the fast Ice.

The minth, in the morning, the Ice began to drive, whereby we got open water on the Land fide, and then alto the fast Ice whereon we lay, beganne to drive whereupon the Master and the men went to fetch the Packe and the Chift, that flood vpon the Ice; to put them into the Scute, 20 and then drew the Scutes to the water, at least three hundred and fortie paces; which was hard for vs to doe, in regard that the labour was great, and we very weaks, and when the Sunne was South South-east we fet fayle with an East-wind, but when the Sunne was West, we were forced to make towards the fait Ice againe, because thereabouts it was not yet gone, the Winde being South, and came right from the Land, whereby wee were in good hope that it would drive away, and that we should proceed in our Voyage. The tenth, from the time that the Sunne was East North-east, till it was East, we cooke great paines and labour to get through the Ice, and at last we got through, and rowed forth, vntill we happened so fall betweene two great flakes of Ice that closed one with the other, so that we could not get through, but were forced to draw the Scutes vpon them, and to valade the goods, and then to draw them over to the open water 20 on the other fide, and then we must goe fetch the goods also to the same place, being at least one hundred paces long, and when we were in open water againe, we rowed forward as well as we

could, but we had not rowed long, before wee fell betweene two great flakes of Ice, that came driving one against the other, but by Gods helpe, and our speedy rowing, we got from betweene them, before they closed up, and being through we had a hard West Winde, right in our Teeth, so that of force we were constrayned to make towards the fast Ice that lay by the shoare,

The eleventh, in the morning as we fate fast vpon the Ice, the Sunne being North-east, there came a great Beare out of the water running towards vs, but we watcht for her with three Mul- Huge Beare, kets, and when she came within thirtie paces of vs, wee shot all the three Muskets at her, and

killed her out-right, fo that the ftirred not a foot, and we might fee the fat runne out at the holes 40 of her skinne, that was shot in with the Muskets, swimme vpon the water like Oyle, and so drining dead upon the water, we went upon a flake of Ice to her, and putting a Rope about her necke, drew her vp vpon the Ice, and imit out her Teeth, at which time we measured her bodie, and found it to be eight foot thicke, then we had a West Wind with close weather, but when the Sunne was South it began to cleere up, then three of our men went to the Iland that lay before vs, and being there, they faw the Croffe Iland, lying West-ward from them, and went this ther to fee if that Summer there had beene any Ruffier there, and went thither woon the fast Ice, that lay betweene the two Ilands, and being in the Iland, they could not perceive that any man had beene in it fince wee were there, there they got feuentie Egges, but when they had them, they knew not wherein to carrie them, at last one of them put off his Breeches, and tying them fast below, they carried them betweene two of them, and the third bare the Musket : and fo

50 came to vs againe, after they had beene twelve houres out, which put vs no small feare to thinke what was become of them, they told vs that they had many times gone up to the knees in water, vpon the Ice betweene both the Ilands : and it was at least fixe mile to and fro, that they had gone, which made vs wonder how they could indure it, feeing we were all fo weake. With the Egges that they had brought, wee were all well comforted, and fared like Lords, so that we found some reliefe in our great miserie, and then wee shared our last Wine amongst vs, whereof

euery one had three Glaffes.

The twelfth, in the morning, when the Sunne was East, the Wind began to blow East, and East North-east, with mystic weather, and at Equening fixe of our men went into the Land, to feeke certayne stones, and found some, but none of the best sort, and comming backe againe, ey-60 ther of them brought fome Wood. The thirteenth, it was a faire day, then feuen of our men. went to the firme Land to feeke for more frones, and found tome, at which time the VV ind was South-east. The fourteenth, it was faire vveather, with a good South VVind, and then the Ice began to drive from the Land, whereby wee were in good hope to have an open water, but the

Wind turning Westerly againe, it lay still, when the Sunne was South-west, three of our men event to the next lland that lay before vs, and there shot a Berchemet, which they brought to the Scute, and gaue it among ft vs, for all our goods were common.

The fixteenth, there came a Beare from the firme Land, that came very neere vnto ws, by reafon that it was as white as Snow, whereby at first we could not differne it to be a Beare, because it shewed so like the snow, but by her stirring at last we perceived her, and as she came neere vnto vs, vve shot at her and hit her, but shee ranne away : that morning the Wind was VVest and after that againe, East North-east with close weather. The seventeenth, about the South South-east Sunne, fine of our men went againe to the neerest Iland, to see if there appeared any open water, for our long staying there was no small griefe vnto vs , perceiung nochow wee to should get from thence, who being halfe way thither, they found a Beare lying behind a piece of Ice, which the day before had beene that by vs, but thee hearing vs went away, but onted cor men following her with a Boat-hooke, thrust her into the skinne, wherewish the Beareroke up wpon her hinder feet, and as the man thrust at her againe, she strocke the iron of the Boat-hooke in pieces, wherewith the man fell downe vpon his buttockes, which our other two men feeing, two of them shot the Beare into the bodie, and with that she ranne away, but the other man went after her with his broken staffe, and strooke the Beare vpon the backe, wherewith the Beare turned about against the man three times one after the other, and then the other two came to her and thor, her into the bodie againe, wherewith thee fat downe vpon her buttockes, and could feart runne any further, and then they shot once againe, wherewith shee fell downe, 20 and they smote her Teeth out of her head: all that day the Winde was North-east, and East North-eaft.

The eighteenth, about the Haft Sun, three of our men went vp vpon the highest part of the land to fee if there was any open water in the Sea, at which time they taw much open water, har it was so far from the land, that they were almost out of comfort, because it lay so far from the land. and the fast Ice, being of opinion that we should not be able to draw the Scutes and the goods so farre thither, because our ilrengthes still beganne to decrease : and the fore labour and paine that we were forced to indure more and more increased, and comming to our Scutes, they brought vs that newes, but we being compelled thereunto by necessitie abandoned all wearinesse and faintheartednesse, and determined with our selves to bring the Boats and the goods to the water side, 30 and throw vitte that Ice, where wee must passe over so get to the open water, and when wee got toit, wee valaded our Scutes, and drew them fift over the Ice to the open water, and after that the goods; it beeing at the least one khouland paces, then wee let fayle, till the Sunne was West and by South; and presently fell amongst the Ice againe, where wee were forced to draw up the Scutes againe upon the Ice, and beeing uponit, wee could fee the Cresse Ihand; which wee ghest to bee about a mile from vs, the Wind then being East, and East North-east.

The nineteenth, lying in that manner woon the Ice, about the East Sunne, feuen of our men went to the Groffe Hand, and being there they faw great store of open water in the West, wherewith they much reloyced, and made as great halfe as: they could to get to the Scutes againe, but 40 before they came away they got too. Egges, and brought them away with them, and comming to the Soutes, they shewed vs that they had seene as much open water in the Sea as they could discerne, being in good hope, that that would be the last time that they should draw the Scures ouer the Ice, and that it should bee no more measured by vs, and in that fort put vs in good comfort, whereupon we made speed to dresse our Egges, and shared them amongst vs, and presently the Sunne being South South-west we fell to worke, to make all things ready to bring the Scutes to the water, which were to be drawne at least two hundred paces over the ice, which wee did with a good courage, because we were in good hope that it would be the last time, and getting anothe water, we put to Sea with Gods helpe, with an East, and East North-east Wind, and a good gale, fo that with the West Sunne, we past by the Croffe Hand, which is distant from Cape 50 de Nassawes ten miles, and presently after that the Ice left vs, and wee got cleere out of it, yet wee faw some in the Sea, but it troubled vs not, and so wee held our course West and by South, with a good gale of Wind out of the East, and East North-east, so that wee ghest that betweene euery meale-tyde we fayled eighteene miles. .

The twentieth, having still a good gale about the South east Sunne, wee past along by the Blacke Point, which is twelve miles distant from the Croffe Iland , and fayled West South-west, and about the Eeuening with the West Sunne, we saw the Admirals Hand, and about the North Sunne past along by it, which is distant from the Blacke Point eight miles, and passing along by it, we saw about two hundred Sea-horses, lying vpon a stake of Ice, and wee sayled close by them, and drawe them from thence, which had almost cost vs deere, for they beeing mightie 60 firong fishes, and of great force, swamme towards vs, (as if they would be reuenged on vs for the despight that we had done them (round about our Scutes) with a great noyle, as if they would have denoured vs, but we escaped from them, by reason that we had a good gale of Wind, yet it

was not wisely done of vs to wake sleeping Wolues. The one and twentieth, we past by Cape

Plancio, about the East North-east Sunne, which lyeth West South-west eight miles from the Cape Plancie Admirals Hand, and with the good gale that we had about the South-weft Sonne, we fayled by Lancenes, nine miles from Cape Plancie : there the Land reacheth meft South-weft, and we had Langenes. a good North-east wind.

The two and twentieth, we having so good a gale of wind when wee came to Cape de Cant. Cape Cant. there we went on land to feeke for some Birds and Egges, but we found none, so we sayled forwards, but after that about the South Sunne we faw a Clift that was full of Birds , thither wee fayled and cafting stones at them, we killed two and twentie Birds, and got fifteene Egges. which one of our men fetcht from the Clift, and if we would have stayed there any longer, wee In might have taken alundred or two hundred Birds at least, but because the Master was somewhat further into Sea-ward then we, and stayed for vs , and for that wee would not loofe that faire fore-wind, we tayled forwards along by the Land, and about the South-west Sunne, wee came Strange Birds

to another point, where wee got a hundred twentie and fine Birds, which wee tooke with our breeding in hands out of their Nefts, and some wee killed with stones, and made them fall downe into the strong cold. water, for it is a thing certayne that those Birds never vied to see men, and that no man had ever fought or vied to take them, for else they would have flowne away, and that they seared no had the bat the Foxes and other wild beasts, that could not climbe up the high Chire, and that therefore they had made their Ness thereon, where they were out of feare of any beasts comming vato them, for we were in no small danger of breaking of our legges and armes, especially 20 as we came downe againe, because the Clift was so high and so steepe, those Birds had every one but one Egge in their Nelts , and that lay upon the bare Clife without any fraw or other thing vnder them, which is to be wondred at, to thinke how they could breed their young ones in fo

the heate which they give in breeding to many, may be wholly given vinto one Egge. The foure and twentieth, it was faire weather, but the winde still Northerly, whereby wee were forced to lye fill, and about noone we tooke the height of the Sunne with our Astrolabisms, and found it to be elevated about the Horizon 37. degrees and 20. minutes, his declination 20. degrees and 10. minutes which subftracted from the height aforesaid rested 17. degrees and 10. minutes, which taken from 90. degrees, the height of the Pole was 73. degrees and 10. mi-30 nutes, and for that we lay ftill there, some of our men went oftentimes on Land to feeke ftones,

great cold, but it is to be thought and believed, that they therefore fit but voon one Egge that fo

and found some that were as good as euer any that we found. The feuen and twentieth, wee had layled from Cape de Cant, along by Constinfarke, to the

Croffe Point, twentie miles, our course South South-east, the Wind North-west. The eight and twentieth, it was faire weather with a North-east wind, then we fayled along Two Rufflet by the Land, and with the South-west Sunne, got before Saint Laurence Bay , or Sconce Point, Ledies or Ledand fayled South South-east fix miles, and being there, wee found two Ruffians Lodgies, or thips gies. beyond the Point, wherewith we were not a little comforted, to thinke that we were come to the place where we found men, but were in some doubt of them, because they were so many for at that time we faw at least thirtie men, and knew not what they were, there with much paine 40 and labour we got to Land, which they perceiuing, left off their worke, and came towards vs. but without any Armes, and we also went on shoare, as many as were well, for divers of vs were very ill at ease, and weake by reason of a great scouring in their bodies, and when wee met together, wee faluted each other in friendly wife, they after theirs, and wee after our manner, and when we were met, both they and wee lookt each other stedfastly in the face, for that some of them knew vs, and wee them, to bee the fame men which the yeere before, when wee past through the Weg-gates had been in our ship; at which time wee perceiped that they were abasht and wondred at vs, to remember that at that time wee were so well furnished with a great thip, that was exceedingly prouided of all things necessary, and then to see vs to leane and bare. with fo small Scutes in that Countrey : and amongst them there were two, that in friendly o manner clapt the Mafter and me vpon the shoulder, as knowing vs since that Vovage: for there was none of all our men that was as then in that Voyage, but we two only, and asked vs for our Crable, meaning our thip, and we thewed them by fignes as well as we could (for we had no Interpreter) that we had loft our thip in the Ice, wherewith they faid, Crable propal (which wee vnderitood to bee, Haue you lost your ship?) and we made answere, Crable pro pal, which was as much as to fay, That we had loft our ship, and many more words we could not yee, because we understood not each other, then they made flew to be forrie for our loffe, and to be grieved that we the yeere before had beene there with so many ships, and then to see vs in so simple manner, and made vs fignes that then they had drunke Wine in our fhip, and asked vs what drinke wee had now, wherewith one of our men went into the Scute and drew some water, and let them

6c take thereof, but they shak't their heads, and said, No dobbre (that is, It is not good) then our Matter went neerer vnto them, and shewed them his mouth, to give them to vnderstand that we were troubled with a loofenesse in our bellies, and to know if they could give vs any countell to helpe it, but they thought wee made shew that wee had great hunger wherewith one of them went vnto their Lodging, and fetcht a round Rie Loafe, weighing about eight pounds, with

fome fmored Fowles which we accepted thankfully, and gaue them in exchange halfe a doozen some invited a writer with the state of the chiefe of them with him into his Scate, and gate them some of the Wine that we had, being almost a Gallon, for it was so neere out 1 and while we flayed there, we were very familiar with them, and went to the place where they lay, and fod some of our Mischayt with water by their fire, that we might eat some warme thing downe into our bodies, and wee were much comforted to fee the Ruffiers for that in thirteene moneths time, that we departed from Iohn Cornelision, we had not feene any man, but onely monferous and

The nine and twentieth, it was reasonable faire weather, and that morning the Russians be-In thin and twentieth, it was recommended to fet fayle, at which time they digged certapre 10 Barrels with Trayne Oyle out of the fieges which they had buried there, and putitinto

The thirtieth, lying at Anchor, the Wind fill blew North-weft, with great flore of Raine, and a fore florme, fo that although we had coursed our Scutes with our Sayles, yet we could not Tyedry, which was an vnaccuttomed thing vnto vs : for wee had had no Raine in long time before, and yet we were forced to ftay there all that day,

The one and thirrieth, in the morning, about the North-east Sunne, wee rowed from that Hand to another Hand, whereon there flood two Croffes, wee thought that some men had layne there about Trade of Merchandize, as the other Raffus, that wee faw before had done, but wee found no man there, the Wind as then beeing North-weft, whereby the Ice draw still towards 30 Scury graffe, the Wy gates : there to our great good wee went on Land, for in that Iland wee found great fore of Leple leanes, which ferued vs exceeding well, and it fermed that God had purposely lener care the country of the countr call infirmitie, meanes of those leaues we were healed thereof; for that as foone as we had eaten them, we were prefently cased and healed, whereast wee could not choose but wonder, and therefore wee gaue God great thankes for that, and for many other his mercies he wed vnto vs.by his great and vnexpected side lent vs, in that our dangerous Voyage: and fo as I faid before, wee eater them by whole handfuls together, because in Holland we had heard much spoken of their great force, and

as then found it to be much more then we expected. The first of August, the Wind blew hard North-west, and the Ice that for a while had driven towards the entry of the Wey-gates, stayed and drane no more, but the Sea went very hollow, whereby we were forced to remoue our Scutes on the other fide of the Hand, to defend them from the wanes of the Sea, and lying there were went on Land againe to fetch more Leple leanes, whereby we had beene to well holpen, and still more and more recourred our healths, and in to floor time, that we could not choofe but wonder thereat, fo that as then some of vs could eate Bisket againe, which not long before they could not doe. The second, it was darke mistie weather, the Winde still blowing stiffe North-west, at which time our victuals beganne to decrease, for as then wee had nothing but a little Bread and Water, and some of vs a little

The third, about the North Sunne, the weather being somewhat better, wee agreed amongst our felues to leave None Zembia and to croffe ouer to Ruffia, and so committing our felues to God, we fer fayle with a North-west Wind, and sayled South South-west till the Sunne was East, and then we entred into lee againe, which put vs in great feare and about the South-west Sunne got eleere thereof, and entred into the large Sea, where we faw Ice, and then what with fayling and rowing we had made twentie miles, and so failing forwards wee thought to approach neere vnto the Ruffien Coast; but about the North-west Sunne we entred into Ice againe, and then it

The fourth, about the South-east Sunne, being gotten out of the Ice, we sayled forward with a North-weft Wind, and held our course Southerly, and when the Sunne was South, at noone 50 time we faw the Coaff of Raffis lying before vs, whereat we were exceeding glad, and going neerer vnto it, we firooke our fayles and rowed on Land, and found it to be very low Land, like a bare Strand that might be flowed ouer with the water, there we lay till the Sunne was Southwest, but perceining that there wee could not much further our selues, having as then sayled from the Point of Nona Zembla (from whence we put off) thither full thirtie miles, wee fayled forward along by the Coaft of Ruffle, with an indifferent gale of Winde, and when the Sunne was North, we saw another Raffias lake or ship, which we sayled vato to speake with them, and being bard by them, they came all aboue Harches, and wee cryed vnto them Candinaes Candimass (whereby we asked if we were about Candinass) but they cryed againe and faid, Pstana, Pittora, (to flew vs that wee were there abouts) and for that wee fayled along by the Coaft, 60 where it was very dry, supposing that we held our course West and by North, that so we might get beyond the Point of Candinaes, we were wholy deceived by our Compaffe, that stood vpon a Chift bound with Iron bands which made vs vary at leaft two Points, whereby we were much more Southerly then wee thought our course had beene, and also farre more Easterly, for wee

thought verily that we had not beene farre from Candinaes, and wee were three dayes fayling from it as after we perceived, and for that we found our felues to bee fo much out of our way, we flayed there all night till day appeared.

The twelfth of August, it was faire weather, at which time the Sunne being Baff. wee faw a Ruffia Lodgie come towards vs, with all his fayles vp, wherewith we were not a little comforted, which we perceiuing from the Strand, where we lay with our Scutes, we defired the Mafter that we might goe voto him, to speake with him, and to get some victuals of them. and to that end we made as much hafte as we could, to launch our our Scutes and fayled toward them, and when we got to them, the Master went into the Lodgie, to aske them how farre wee had to Gardinaes, which we could not well learne of them, because wee vinderstood them not. they held up their fine Fingers unto vs, but we knew not what they meant thereby, but after we perceived, that thereby they would shew vs, that there stood five Crosses vpon it, and they brought their Compasse out and shewed vs that it lay North-west from vs, which our Compasse Russian Comalso shewed vs, which reckoning also we had made : but when we saw we could have no better patter intelligence from them, the Malter went further into their Ship, and pointed to a barrell of Fifth that he faw therein, making fignes to know, whether they would fell it vnto vs, shewing them a peece of eight Rials, which they understanding gave vs one hundred and two Fishes, with the Cakes which they had made of Meale, when they fodde their Fish, and about the South Sunne wee left them.

The fixteenth of August in the Morning, sayling forward North-west, we perceived that we were in a Creeke, and so made towards the Russian Lodgie, which we had seene on our starreboord, which at last with great labour and much paine wee got vnto, and comming to them about the South-east Sunne, with a hard winde, we asked them how farre we were from Sembla de Cool or Kilduin, but they shooke their heads, and shewed vs that wee were on the East-side of Zembla de Candinaes.

The seuenteenth lying at Anchor, in the Morning at breake of day, wee saw a Russian Lodgie that came fayling out of the white Sea, to vvhom we rowed, that vve might have some instruction from him, and when we boorded him, vvitbout asking or speaking vnto him, he gaue vsa loafe of Bread, and by fignes hewed vs as well as he could, that hee had feene our Companions, and that there was feuen men in the Boate, but wee not knowing well what they fayd, 30 neither yet beleeuing them, they made other fignes vnto vs, and held vp their feuen Fingers, and pointed to our Scute, thereby thewing that there was so many men in the Boate, and that they had sold them Bread, Flesh, Fish and other victuals: and while wee stayed in their Lodgie, vve faw a small Compasse therin, which we knew that they had bought of our chiefe Boatson, which they likewise acknowledged. About mid-night wee found a fall of fresh Water, and then we went on Land to fetch some, and there also wee got some Leple-leaues, and as wee thought to row forward, we were forced to sayle, because the flood was past, and still we lookt earne fly out for the point of Cardinaes, and the five Croffes, whereof we had beene inftructed by the Ruffians, but we could not fee it.

The Eighteenth, in the Morning the Sunne being East, we puld vp our Stone (which we vsed in fleed of an Anchor) and rowed along by the Land, till the Sunne was South, and then we faw a point of Land reaching into the Sea, and on it certayne fignes of Croffes, which as vve went necrer vnto we law perfectly, and when the Sunne was West, we perceined that the Land reached West and South-west, so that thereby we knew it certainely to bee the point of Candinaes, lying at the mouth of the white Sea which we were to croffe, and had long defired to fee it. This Point is eafily to bee knowne, having fine Crosses standing vpon it, which are perfectly to be discerned, and having a good North-east wind (which was not for vs to slacke) we let forward in the Name of God, and when the Sunne was North-west we past the Point, and all that night and the next day sayled with a good Wind, and all that time rowed but while three Glasses were so runne out, and the next Night after enfuing, having still a good wind, in the Morning about the East North-east Sunne, we saw Land on the West-fide of the white Sea, which we found by the rushing of the Sea vpon the Land before we saw it, and perceiuing it to bee full of Clifts, and not low fandie ground with some Hills, as it is on the East-side of the white Sea, wee assured our felues that we were on the West-fide of the white Sea, vpon the Coast of Lapland, for the which Lapland. we thanked God, that he had helped vs to fayle oner the white Sea in thirtie houres, it being for-

tie Dutch miles at the leaft, our course being West with a North-east winde. The twentieth, we espied certayne Crosses, with Warders vpon them, whereby we vnderflood that it was a good way, and so put into it, and being entred a little way within it, we saw a great Ruffian Lodgie lying at Anchor, whereinto we rowed as fast as we could, and there also 60 we saw certayne Houses wherein men dwelt, and when wee got to the Lodgie, we made our selves fail vnto it and cast our tent over the Scute, for as then it began to rayne, then we vvent on land into the Houses that stood vpon the shoare, where they shewed vs great friendship, leading vs into their Stones and there dryed our wer Cloathes, and then feething some Fish, bade vs fit downe and eate somewhat with them. In those little houses wee found thirteene Russians, Russian Houses.

August.

who every morning event out to Fish in the Sea, whereof two of them had charge over the rest, they fined very poorely, and ordinarily eate nothing but Fifth and Bread: at Ecuening when we prepared our felues to goe to our Scute againe, they prayed the Maiter and me to stay with them prepared our remost or go to do an arrived them for, would not doe, but I stayed with them all Laplanders might: befides those thirteene Men, there was two Laplanders more, and three Women traiting the behavior to the control of the outroland which the Rufflers gave them, as a peece with a Child, that lived very poorely of the outroland which the Rufflers gave them, as a peece of a Fish, and some fishes heads which the Roffings threw away, and they with great thankfulor a run, and touc management of their popertie, we hought our felies to be well furnifined : and yet we had little enough, but as it fermed their or linary litting was in that manner, and we were forced to stay there, for that the vv and being North-west, it was against vs.

The one and twentieth, wee met our other Companie vyherewith we rejoyced, and shewed and the une and weekings, and how wee had tayled too and fro in great necessitie and hunger, and yet they had beene in greater necessitie and danger then we, and game God chankes that hee had presented vs aline, and brought vs together againe, and then we cate something together and dranke of the cleere Water, such as runneth along by Colley through the Rhone, and then wve agreed that they should come vnto vs, that we might sayle together.

the two and twentieth, the rest of our men with the Boate came vnto vs, about the East South-east Sunne, whereat wee much rejoyced, and then we prayed the Ruffians Cooke to bake a such case of Meale for vs, and to make it Bread, paying him for it, which hee did, and in the meane time, when the Fifther-men came with their Fifth one of the Sea, our Mafter bought foure Cods 20 of them, which we fodde and eate, and while we were at meate, the chiefe of the Raffians came vnto vs, and percenning that we had not much Bread, hee fetched a Loafe and gaue it vs, and although we defined them to fit downs and eate some meate with vs. yet we could by no meanes get them to grant thereunto, because it was their Fasting day, and for that we had powred But-Source a fast ter and fac into our Kish: nor wee could not get them once to drinke with vs, because our Cup was somewhat grease, they were so superstitious touching their Fasting and Religion, neither would they lend vs any of their Cups to drinke in, leaft they should likewise bee greased, at that

The foure and twentieth, the wind blew East, and then the Sunne being East, we got to the freen Hands, where we found many Fisher-men, of whom we enquired after Cool and Kildsin, 30 and they made fignes that they lay West from vs. (which we likewise ghest to bee so) and withall they the wed we great friendthip, and caft a Codde into our Scate, but for that wee had a good gale of wwind, we could not flay to pay them for it, but gaue them great thankes, much wondering at their great courtefie, and so with a good gale of wind we arrived before the seuen Hands, when the Sunne was South-weft, and past betweene them and the Land, and there found cer-tayne Fifner-men that rowed to vs., and asked vs. where our Crable (meaning our Ship) was, whereunto we made answer, with as much Ruffien language as wee had learned; and fayd, Crable pro Pal, (that is, our Ship is loft) which they understanding, sayd unto us, Cool Brahouse (rable, whereby we understood, that at Cool there was certayne Netberland Ships, but wee made no great account thereof, because our intent was to fayle to Ware-bons, fearing least the Rufflan: 40 or great Prince of the Countrey would stay vs there.

The fine and twentieth, fayling along by the Land with a South-east vvind, about the South Sunne, we had a fight of Kildnin, at which time we held our courie West North-west, and fayling in that manner betweene Kildmin and the firme Land, about the South South-west Sunne, we got to the West end of Kildnin, and being there looked if we could see any Houses or people therein, and at last we saw certayne Rossian Lodgies that lay vpon the Strand, and there finding a connenient place for vs to Anchor with our Scates, while wee went to know if any people were to bee found, our Mafter put in with the Land, and there found fine or fixe small Houses, wherein the Laplanders dwelt, of whom we asked if that were Kildsin, whereunto they made answer, and shewed vs that it was Kildein, and sayd, that at Cools there lay three Brabant Cra- 50 bles or Ships, whereof two were that day to let layle : wee found a small House vpon the shoare, vuherein there was three Men and a great Dogge, which received vs very friendly, asking vs of our affaires, and how we got thither, whereunto we made answer, and shewed them that we had loft our Ship, and that wee were come thither to fee if we could get a Ship that would bring vs into Holland: whereunto they made vs answer as the other Russians had done, that there was three Ships at Cools, whereof two vvere to let layle from thence that day, then wee asked them if they would goe with one of our men by Land to Coola, to looke for a Ship, wherewith wee might get into Holland, and layd we would reward them well for their paines, but they excused themselves, and sayd, that they could not goe from thence, but they sayd they would bring vs oter the Hill, where we should finde certayne Laplanders whom they thought would goe with vs, as they did: for the Mafter and one of our men going with them ouer the Hill, found certaine Laplanders there, vwhereof they got one to goe with our man, promising him two Ryals of eight for his paines, and so the Laplander going with him, tooke a Piece on his necke, and our man a Boat-hooke, and about Ecuening they fet forward, the vvinde as then being East, and East

The fixe and twentieth, it was faire weather, the wind South-east, at which time we drew vo both our Scutes vpon the Land, and tookeall the goods out of them, to make them the lighter; which done, we went to the Ruffians and warmed vs, and there dreffed fuch meater as wee had, and then againe we began to make two meales a day, when we perceived that we should enery day finde more people, and we dranke of their drinke which they call Quaffe, which was made of broken peeces of Bread, and it tafted well : for in long time wee had drunke nothing elie but Water. Some of our men went further into the Land, and there found blew Berries and bramble Berries, which they plucked and eate, and they did vs much good, for we found that they healed vs ot our loofenesse, the wwind still blew South-east.

The eight and twentieth, it was indifferent good weather, and then we drew the Scutes voon the Land againe, that we might take the rest of the goods out of them, because the wind still blew hard North, and North North-west, and having drawne the Scutes vp, we spred our sayles vpon them, to shelter vs vnder them, for it was still mystie and raynie weather, much defiring

to heare some newes of our man, that was gone to Cools with the Laplander.

The nine and twentieth, wee fpyed the Laplander comming alone without our man, whereat we wondred, and were somewhat in doubt, but when hee came vnto vs; he shewed vs a Letter that was writen vnto our Master, which he opened before vs, the Contents thereof being, that hee that had written the Letter wondred much at our arrivall in that place, and that long fince hee verily thought that we had beene all cast away, being exceeding glad of our happie fortune, and how that he would prefently come vnto vs with victuals, and all other necessaries to fuccour vs withall, we being in no small admiration who it might bee, that shewed vs so great fanour and friendship, could not imagine what he was, for it appeared by the Letter that he knew vs well : and although the Letter was subscribed, by me lobn Cornelson Rip, yet wee could not bee perswaded that it was the same John Cornelison, who the yeere before had beene set out in the other hip with vs, & left vs about the Beare Hand : for those good newes we payd the Laplander his hyer; and besides that, game him Hose, Breeches, and other furniture, so that hee was apparelled like a Hollander: for as then wee thought our felues to bee wholly out of danger, and fo being of good comfort, we layd vs downe to reft. Heere I cannot chuse but shew you how fast the Laplander went : for when he went to Cools, as our Companion told vs, they were two Dayes and two Nights on the way, and yet went apace, and when he came backe againe he was but a Day and a Night comming to vs, which was wonderfull, it being but halfe the time, so that we fayd, and verily thought that hee was halfe a Conjurer, and he brought vs a Partridge, which hee had killed by the way as he went.

The thirtieth, wee faw a Ruffian Ioll come rowing with Iohn Cornelison, and our Companion that we had fent to Cools, who being landed, wee received and welcommed each other, with great joy and exceeding gladneffe, as if either of vs on both fides had feene each other rife from death to life againe : for we esteemed him, and hee vs to bee dead long fince : hee brought vs a Barrell of Refwicks Beere, Wine, Aqua vite, Bread, Flesh, Bacon, Salmon, Suger, and other things. which comforted and relieued vs much, and we rejoyced together for our fo vnexpected meeting:

at that time giving God great thankes, for his Mercie shewed vnto vs. The first of September, in the Morning with the East Sun, we got to the West-side of the Ri- September. uer of Coola, and entred into it, where we rowed till the Flood was pait, and then wee cast the Stones that ferued vs for Anchors vpon the ground, at a point of Land till the Flood came in againe : and when the Sunne was South, wee fet fayle againe with the Flood, and so sayled and rowed till mid-night, and then wee cast Anchor againe till morning. The second, in the Mor- Trees atare ning, we rowed up the River, and as we past along wee faw fome Trees on the River fide, which fight. comforted vs, and made vs glad as if we had then come into a new world, for in all the time that wee had beene out, we had not feene any Trees, and when we were by the Salt Kettles, which is about three miles from Cools, we stayed there a while, and made metrie, and then went forward Cooks, 30 againe, and with the Welf North-west Sunne, got to lobn Cornelisons Ship, wherein we entred and drunke: there wee began to make merrie againe, with the Saylers that were therein, and that had beene in the Voyage with Iohn Cornelison the yeere before, and bad each other welcome: then we rowed forward, and late in the Ecuening got to Coola, where some of vs went on Land, and some stayed in the Scutes to looke to the goods: to whom we fent Milke and other things to comfort and refresh them, and we were all exceeding glad that God of his mercie had delivered

vs out of so many dangers and troubles, and had brought vs thither in safetie. The third, wee valaded all our goods, and there refreshed our selnes after our toylesome and wearie Iourney, and the great hunger wee had endured, thereby to recouer our healths and ftrengths againe.

ttengens againe.

The eleventh, by leave and confent of the Bayart, Governour of the great Prince of Mafee. This Score and Box layd mia, we brought our Scute and our Boate into the Merchants Houle, and there let them Rand for up for a Monu a remembrance of our long, farre (and neuer before fayled way) and that wee had fayled in those ment how open Scutes, almost foure hundred Dutch miles, through, and along by the Sea Coasts to the much more Towne of Cools.

the old world

The feuenteenth of September, John Cornelifon and our Master being come aboord, the next day about the East Sunne, we fet sayle out of the River Coola, and with Gods grace put to Sea, to fayle homewards, and being out of the River, wee fayled along by the Land North-weft and by North, the winde being South.

Vpon the nine and twentieth of October, wee arrived in the Maje, with an East North-east wind, and the next morning got to Mafeland Sluce, and there going on Land, from thence rowed to Delfe, and then to the Hage, and from thence to Harlem. And upon the first of November about Noone, got to Amfterdam, in the fame Clothes that wee wore in Nona Zembla, with our Caps furr'd with white Foxes skinnes. The newes thereof being spred abroad in the Towne, it was also carryed to the Princes Court in the Hage, at which time the Lord Chancellour of Der. 10 marks, Ambassadour for the sayd King, was then at Dinner with Prince Marrice : for the which cause we were presently setcht thither by the Scout, and two of the Burgers of the Towne, and there in the presence of those Ambassadours, and the Burger-masters, wee made rehearfall of our Journey both forwards and backwards.

I thought good to adde bither for Barents or Barentsons sake, certaine Notes which I bane found (the one Translated, the other Written by him) amongst Master Hakhuyts Paper.

This was Written by William Barentson in a loose Paper, which was lent mee by the Reucrend Peter Planting in Amsterdam, March the feuen and twentieth, 1609.

Intelligence from Samoreds 1595. Barkes going from Pechora to Gielbfidi : Wintering Gielbsidi won tars 1592.

15920 Floud.

"He foure and twentieth of August, Stilo nouo 15050 wee space with the Samoieds, and asked I them how the Land and Sea did lye to the East of Way-gates. They fayd after fine dayer intrine toing North-east, wee should come to a great Sca, going South-east. This Sea to the East of Way-gaza, they faydwas called Marmoria, that is to fay, A calme tea. And they of Ward-house bane told us the Jame. I asked them, if at any time of the yeere it was frozen over ? They fand it was. And that sometimes they passed it was Sleds. And the first of September 1595. Stilo nouo, the Russes of the Louis or Barke affirmed the same ; saying , that the Sea is sometimes so Frozen, that the Lodies or Barkes going Sometimes to Gielhfidi from Pechora, are forced there to Winter : which Gielhfidi was wonne from 20 the Tartars, three yeeres pail. For the Ebbe and Flood there I can finde nome; but with the Winde so runneth the streams. The third

of September, Stilo nouo, the winde was South-west, and then I found the water higher, then with the winde at North or North-east. Mine opinion is grounded on Experience, That if there bee a passage, is is small: or else the Sea could not rise with a Somberly winde. And for the better proofe to know if there were a Flood and Ebbe, the nimb of September, Stilo nous, I went on Spoare on the South end of the States Hand, where the Groffe flandeth, and layd a Stone on the brinke of the Water, to prome when ther there were a Tide, and went round about the Iland to Scote at a Have, and returning, I found the Stone as I left it, and the Water neither higher nor lower : which producth as afore, that there is no

#### CHAP. VI.

A Treatife of Iver Botr & Gronlander, translated out of the North Language into High Dutch, in the geere 1560. And after out of High Dutch into Low Dutch, by WILLIAM BARENTSON of Amsterdam, who was chiefe Pilot aforesaid. The Same Copie in High Dutch, is in the hands of I o D o cv & Hondivs, which I baue seene. And this was translated out of Low Dutch, by Master WILLIAM STERE, Marchant, in the geere 16c8. for the vie of me HENRIE

HVDSON. WILLIAM BARENTSONS Booke is in the hands of Mafter PETER PLANTIVS, who lent the same unto me.

Narima, it is reported by men of Wisedome and Vnderstanding borne in Growland, That from Stad in Norway to the East part of Island, called Horn-ness, is feuen dayes fayling right West.

Items, men shall know, that betweene Island and Gronland, lyeth a Riffe called Gombornse-skare. There were they wont to have there passage for Gronland. But 60 as they report there is Ice vpon the same Riffe, come out of the long North Bot-

tome, so that we cannot vie the same old Passage as they thinke. Item, from Long-neffe on the East tide of Island to the aboutlaid Horn-neffe, is two dayes fayle to the Brimstone Mount.

with, and after fall againe, there remay neth your the Land much Fish drie. Item, when you fayle out of Emefines Ford, there lyeth an Inlet, called South-woders Wike : Bloming.

Irem, if you goe from Bergen in Norway, the course is right West, till you bee South of Rokeselle in Illand : and diftant from it thirteene miles, or leagues. And with this course you shall come under that high Land thas lyeth in the East part of Groneland, and is called Swafiler. A Smafiler, day before you come there, you shall have fight of a high Mount, called Huit-farke : and betweene Whitfarke and Graneland, lyeth a Head-land called Hernoldus Hooke; and thereby Whitfarke lyeth an Hauen, where the Norway Merchants Ships were wont to come : and it is called Hernoldus

Sound Hauen. Item, it a man will fayle from Island to Gronland, hee shall set his course to Snofnesse, which is in Groneland, by West Rokenesse thirteene miles or leagues right West, one day and nights sayling, and after South-west to thun the Ice, that lyeth on Gombornse-skare; and after that one day and night

10 North-west. So shall hee with this course fall right with the abouelayd Smaster , which is high Land, under which lyeth the aforefayd Head-land, called Hornoldus Hooke, and the Sound Hauen.

lauen.

Item, the Easter Dorpe of Groneland lyeth East from Hernoldus booke, but neere it, and is calSkagen Ford. led Skagen Ford, and is a great Village.

Item, from Skagen Ford East, lyeth a Hauen called Beare Ford : it is not dwelt in. In the Beare Ford. mouth thereof lyeth a Riffe, fo that great Ships cannot harbour in it.

Item, there is great abundance of Whales: and there is a great Fishing for the killing of them A great fifting there : but not without the Bilhops confent, which keepeth the fame for the benefit of the Ca- for Whales, thedrall Church. In the Hauen is a great Swalth ; and when the Tide doth runne out, all the A great Swalth

20 Whales doe runne into the fay! Swalth. Item, East of Beare Ford, lyeth another Hauen called Allaborg Sound : and it is at the mouth Allaborg Sound narrow, but farther in, very wide :: The length whereof is fuch, that the end thereof is not yet

knowne. There rumeth no Streamer & lyeth full of lettle Hes. Fawle and Oxen are there com- Store of Oxen. mon : and it is playne Land on both fides, growne ouer with greene Graffe.

Item; East from the Icie Mountayne, ty than Hauen called Feedehother; fo named, because in The Icie Saint Olafer time there was a Ship caft away, as, the speach hath beene in Gromeland; In which Monntayne. Ship was drowned one of Saint Olafer men, with others: and those that were faued did The Hauen of burie those that were drowned, and on their Granes did fet great flone Croffes, which wee fee No.e. 30 fem de la companya de la companya

Items, form what more East toward the Leie Mountayne, lyeth a high Land, called Corfe Hought.

An hunting of vport which they Hune white Beates, but not we have the Bulhops leave, for it belongeth to the white Beares Cathedrall Church. And from tuence more Easterly, men fee nothing but Ice and Snow, both More Easterly

by land and water.

All Defart.

Now wice shall return agains to Hernoldius Hooks, where was first began to come to the first. The Towner Towns that lyech on the East field of Hernoldus Hooke, called Shager Ford; and to we will write from Hernoldus the Names of all that Iye on the West-fide or the Ford or Sound.

tem, West from Hernoldus Hooke, lyeth a Dorpe called Kodosford, and it is well built : and as ward. you fayle into the Sound, you shall see on the right hand a great Sea and a Marsh : and into this The Towns of 40 Sea runneth a great streame : and by the March and Sea standeth a great Church, on which the Godafird Holy Croffe is drawne, of colour white : it belongeth to Emineffe de Hokefong, and the Land Church with a to Peters Wike. 1 1 a way of a passe or bright a lody, by manner .

Item, by Peters Wike, lyeth a great Dorpe called Wartfdale, by which lyeth a water or Sea of on it. ewelne miles or leagues ouer : in which is much Fifth : And to Peters wike Church belongeth wantidall. Wart Idale Boy or Towne, and the Villages. (h. for sport the boy and the

Item, neere this Boy or Towne, lyeth a Cloy thron Abbey, new hich are Canons Regular, it is tongue fignifi-Dedicated to Saint Olafas, and Saint Augustinas parie. And to it belongeth all the Land to the eins Towne. Sea fide, and toward the other fide of the Cloyther. ் வரும் வர்வர் மல் நார்க்க

Item, next Godorford, lyeth a Ford called Rompnes Ford : And these lyeth a Clouder of Nuns Anumerie, of Saint Beneditts Order. ned V ant. L'avid & illi lightige.

50 Item, this Cloyfter to the bottome of the Sea and to Wegen Karket Was Dedicased to Saint Q. Het waters in Lafe the King. In this Ford lye mady fmall Hes. Andre this Clayster belongeth Blic the Ford Grenelaid. and the Church. In this Sound are many, warme Wastess. In the Winter they fart, intollerable. A place called hot but in the Summer more moderates, and many Bashing in them are cured of many distalts. Single below

Item, betweene Rampus and the next Sound, lyeth a great Garden called Hofe, belonging to King, the King. There is alto a coffly Church dedicated to Saint Nicolas. This Church had the King Sunt Nicolas before this. Neere it lyeth a Sea of Fresh water, called in which is great abundance Church. of Fish, without number. And when there falleth much Rayne, that the Waters doe rife thereSouthwoder;

60 and formewhat higher in the same Sound, and on the same side, lyethed little Cape salled Bloming: Granwicke and beyond that lyeth another Inwike called Grannike, and aboue, that lyeth a Garden called Deleth Garden, Daletb, which belongeth to the Cathedrall Churche And on the right hand as you tayle out of Agree: Wood the same Sound, lyeth a great Wood, which persayneth to the Church, where they Rede all and Horses

Item, West from this lyeth another high Land, called The long bigh Land: and by another cal-Eight great Orchardsbe. led whereon are eight great Orchards, all belonging to the Cathedrall Church. longing to the But the Tenths thereof they give to Warfedall Church. Cathedrall

Hem, next to this Sound lyeth another Sound called Smalfter Ford, wherin standeth a Church To called Swaffer. This Church belongeth to all this Sound, and to Romfe Ford, lying next it. In Items, next to that lyeth Ericky Ford, and entring therein lyeth an high Land called Ericky.

Swalfter Ford, Erick: Hought.

Hongbe; which pertayneth the one halfe to Deners Kerke, and is the first Parish Church on Groneland, and lyeth on the left hand as you fayle into Ericks Ford : and Deners Kerks belongethall to Meydon Ford, which lyeth North-west from Ericks Ford.

Shogel Kerke.

Item, farther out then Erseks Ford, standeth a Church called Skogel Kerke, which belongeth to all Medford : And farther in the Sound standetha Church called Leader Kerke. To this Church belongeth all thereabout to the Sea; and also on the other side as farre as Boufels. There lyeth also a great Orchard called Grose Lead, in which the Gusman (that is a chiefe or Baylisse over the 20

Folfa Sound.

And farther out then Ericks Ford, lyeth a Ford or Sound called Foffs, which belongeth to the Cathedrall Church : and the fayd Foffa Sound lyeth as mentayle out towards Ericks Ford ; and to the North of it lye two Villages, the one called Ener-boy, and the other Forther-boy, because Item, from thence farelier North lyech Breile Ford, and after that Lormont Ford from that West, and from Larmone Ford to the West is Ice Dorpe. All these are places built, and in them

Breda Ford. Larmat Ford. Ice Dorpe. The Sherlen-

Item, from the Easter builded Land to the Wester Dorpe, is twelve miles or leagues and the rest is all waste land. In the Dorpe in the West standeth a Church, which in times past belonged 10 Many Horfes, so the Cathedrall Church, and the Bilhop did dwell there. But now the Sketlengers have all the Well Lands and Dorps. And there are now many Horses, Oxen, and Kine, but no people neisther Christian nor Heather; berthey were all carryed away by the Enemie, the Skirlangers.

Oxen, and Kine. Iner Bety the

All this before Written was done by one Iner Boy borne in Gronland, a principall man in the Bishops Court : who dwelt there many yeeres, and faw and knew all these places. He was chofen by the whole Land for Captayne, to goe with Ships to the West land, to drive away their Enemies the Skerlengers. But hee comming there, found no people neither Christian nor Hea-then, but found there many Skrepe running being wilde, of which Skeepe they wooke with them as many as they could carrie, and with them returned to there Houses. This before named Indo Bory was himfelfe with them. To the North of the West Land, Iyeth a great Wildernesse with Clifes or Rockes, called He-

A great Wilderneffe called to the North of the Well Mines of Sil-

ner, white

Beares, whire

fores of Fifh.

Grant Land not

fo cold as Ife-

mel Hatsfelt. Farther can no man fayle, because there lye many Smalgen or Whirle-pooles" and alfo for the Water and the See. " Item, in Groneland are many Siluer Hills, and many whice Beares with red patches on their heads; and also white Hawkes, and all fores of Fish, as in other Countries.

item, there is Marble stone of all colours, also Zeuell stone or the Load stone, which the Fire cannot hurt, whereof they make many veffele, as Pots, and other great veffele. Item, in Groneland runneth great streames, and there is much Snow and Ice : But it is not so fold, as it is to flowed or Mormay.

Item, there grow on the high Hills, Nuts and Acornes, which are as great as Apples, and good 50 for ate. There groweth alfor the best Wheate, that can grow in the whole Land,

land or Norway. Fruits.

This Sea Card was found in the lies of Fero or farre, lying betweene Shor-last and Iffiend, in an old reckoning Booke, written about one hundred yeares agoo : out of which this was all taken. Press and Pas ... Isom, Primmi and Pother fe, have inhabited Island certayne yeeres, and fometimes have gone to Sea, and hate had their trade in Groneland. Also Pumnie did give the I funders their Lawes, and caufed them to bee written. Which Lawes doe continue to this day in Hand, and are called by name Pumite Lawes. Lagret ...

## The Course from Island to Groneland.

F men bee South from the Hauen of Brad Ford in Illand, they shall fayle West, till they see Winfarke apon Groneland; and then fayle fomewhat South-west till Whitfarke bee North off you, and to you need not feare Ice, but may boldly fayle to whitfarke, and from thence to Ericks Haven

CHAP.6. Gronland Commodities. Counsell for Gronland Travellers.

If men be North the Hauen of Bredford in Island, then sayle South-west, till Whit sarke beare North: then tayle to it, and to come to Ericks Hauen.

If you fee Ice, that commeth out of Troleboshon, you shall goe more Southerly, but not too Troleboshon farre South for feare of Free land, for there runneth an hard streame. And it is fifteene miles or leagues from Freefland.

Item. Freefland lyeth South, and Island East from Grenland.

Item, From the Ice that hangeth on the Hilles in Gronland, commeth's great Fogge, Fioft and Cold. And fuch a Fogge commeth out of the Ice of Trolebothon : and it is a great Wil- Trolebothon, a dernesse.

There are Sables, Marcernes, Hermelins, or Ermins, White Beares, and White Hawkes, neffe. 10 Seales, White and Gray, Gold and Silver Hills, also Fish dryed and salted, and thousands dities of Grandof Salmons: also store of Losh Hides and other Hides. There are Hares, Foxes, Wolues, Ot- land ters, and Veltfrafen. Now if it please God they come to Gronland, then shall they set but two men on shoare; Good counsell

who shall take with them diners kindes of Marchandize : and let them deale with good for travelling order, and let them bee such as can make good Report, what they there doe see or findes to Grenland,

and let them obserue whether men may there Land or no, with the love of the Inhabitants. And I counfaile and charge those that shall Trade for Gronland, that they set no more folke on Land, but they keepe men enough to man the Ship. And looke well to the course you hold to Gronland, that if those that bee set on shoare bee taken, they may come

20 home againe with God, helpe. For if shipping returne, they may come home or bee relecued in a yeere and a day. And in your living there so demeane your felues to them, that in time you may winne the Countrey and the people. Remember my Scholler and Clearke, which shall bee there appointed as Commander, that

you fend those on Land, that will shew themselves diligent Writers, and that they carrie themselues so, that they may learne thereby the State of the Countrey. They shall take with them two Boats and eight Oares, and take Tynder-boxes for fire if there be no Habitation. Also Tynder-boxes fet vp Croffes of Wood or Stone, if need be.

# This Note following was found in an old Booke of Accompts, in the Teere 1 596.

Normis, From Grad in Norway, standing neere the Latitude of fixtie three Degrees, you Courfes for I shall hold your course due West: and that course will bring you woon Swartnesse in Gron- Gronland. land. And in this course is the least streame and least perill of Swalgen or Indrastic. There is leffe perill this way, then is on the North-side; you shall keepe ? of the Sea on Freesland side, and one third on Island fide. And if it bee cleere weather, and you have kept your course right A fforme in Welt, you shall fee the Mount of Suesets lotest in the South-west part of Isand. And if you have the North a storme in the North, you must shunne it as you can, till stringlands be North of you. Then whitest

40 shall you sayle right with it, and seeke the Land : and you shall finde a good Hauen, called Erick Ford: Item, If you bee betweene Gronland and Island , you may see Suenels lokal on Island, and Whitfarke on Gronland, if it be cleere weather. Therefore men of experience doe affirme, that it

is but thirtie leagues betweene both. Alfo if you have a storme betweene Gronland and Island, you must have care you bee not laid on Freefland with the streame and Winde; for the streame or Current doth fun strong vpon Freefland, out of the North.

Also if you have a storme out of the South, you shall not sayle out of your course, but A storme in keepe it as neere as you can possibly, till Whit farke in Gronland beare North off you: then the South 30 Sayle toward it, and you shall come into Ericks Ford, as it is afore-said in the first Article.

## CHAP.7. S.I. Osoil. Imperiall Priviledge, River Wichida, Oncekos.

CHAP. VII.

A Description of the Countries of Siberia, Samoicda, and Tingoesia. Together with the lourneyes leading Onto the Same Countries toward the East and North-east, as they are daily frequented by the Moscouites.

The first and fecond Paragraph: were rublished in Latine by Hellell Gerar. dus Art. 1612. here a little contracted: the last I found in M. Hallayts P:pers. White Sea :0 the North of Ruffia. Samoieds.

Discouerie of Siberia, and the subjecting of the same

Here is in Mosconie, a Kindred called the Sonnes of Onecko, of a rusticke or hase defeent, and first spring from one Oneselo, at Husband-man. He being very rich in Lanls, dwelt vpon a certaine River called Wiebuda, or Wisfigda, falling into the River Duma, which about one hundred leggues beneath, never way to the Calle 10 called S. Michael the Archangel, which falleth into the White Sea. This Oneselo being with the selicible but were Cell His and the Sea. descent, and first sprung from one Onecke a Husband-man. He being very rich in ing rich (as is faid) had also many Children, God having largely bleffed and pro-

unded him with plentie of all things. Yet neuertheleile, hee had an earnest delire and affection, Arisa or Oncele to know what Countreyes were possessed and inhabited by those people, which yeerely came into Russia to trassicke, bringing with them costly Furres, and divers other Merchandizes, much distring in Language, Apparel, Religion, and Behauiour, calling themselves Samoreds, and by other vnknowne names. These people came energy yeere downe the River Wichida, and exchanged their Commodities with the Ruffes and Moscouites, in the Townes of Ofel and Viling, on the River Oyet and Pfling Duina; which at that time were the Receits and chiefe Mart Townes of all kind of Marchandizes, but especially of costly Furres. Onecke therefore (as hath beene faid) was most desirous to 30 know, from whence these people came, or what Countreyes they did inhabit, easily conjecturing, That great wealth was there to be gotten; fince the Furres yearely brought them amounted to a great summe of Money. Wherefore secretly hee got acquaintance and conforted him-Sammedicoun- felfe with diuers of them, and fent in their company about tenne or twelve of his owne people into those parts; enjoyning them, that through what Countreyes so ever they should travell, they should make diligent fearch of enery particular thing therein, and fully observe the Manners, Rites, Dwellings, and whole course or life of those Nations; that at their returns they might bring from thence perfect knowledge thereof. Which they having at length performed, he enterrayned them bountifully at their returne, and shewed them all fauour, but with especiall 40 charge to keepe filence. Hee likewife kept all thefe things close to himfelfe, not reuealing them to any man.

The fecond Voyage.

for the Sa-

The first Voy-

great Riuers. Riuer Obi Great wealth by the Tride the prople. No Bread Shooting, Apparell. Honics.

And the next yeere following, he fent thither a greater number of his people, joyning with them certaine of his Kindred and Alliance. These carried with them divers base Alarchandize; as small Bels, and other like Dutch small Wares; and tooke diligent notice of every thing in those parts; and after they had palled many Deferts, and divers great Rivers, they came to the River Ob; Many Deferts where making Acquaintance and Friendship with the Samoieds, they found that Furres were to be had for a small price, and that great wealth was there easily to be gotten; and further, that this people had not any Cities, but lived together in Companies, and peaceably, and governed by tome of the ancientest among them; that they were lothfome in their feeding, and lived on the Helh of fuch beafts as they tooke : that they had no knowledge of Corne or Bread , were cun- 10 ning and skilfull Archers, making their Bowes of a gentle and flexible kind of Wood, and that to the Ruser of their Arrowes were headed with sharpened stones or fish bones; with those they killed wilde Conditions of heafts, which are exceeding plentifull in those places: that they fowed also with bones of fishes, ferning them for Needles; their thred being made of the finewes of certaine small beasts, and so Gouldment, they tew together the Forres, wherewith they cloath themselves : the Furrie side in Summer turned outward, and in Winter inward. That they covered their Houses with the Skins of Elkes and such like beasts, lettle esteemed among them. Finally, these Messengers of Oneeke, searched curiously into enery matter, and returned home flored with coffly Farres. Now when as Oneeke understood by their report, that which he so much longed to know, he

together with certayne others of his Friends, continued his Trafficke into those Countreves for 60 divers yeares together : by meanes whereof the Oneekos grew very mightie, and bought great continuance of Possessions in all parts. Those that dwelled neere vnto them beening ignorant from whence all this Voyage. this wealth arofe, greatly wondred at it. For the Oncefor builded Churches in force of their

Villages. Yez, afterward they erected in the Towns of Ofoll vpon the Wichida, where at that time they dwelt, an exceeding faire Church, which was rayled from the very roundations of hewen flone. Finally, they knew no end of their goods.

Now among the Rufferst goeth for a common Proverbe, that Hee which bath no friends in Court, is scarce to be accounted in the number of the lining. For most commonly it happeneth, that they that excell others in any thing, are prefently enuyed and falily accured in the Princes Court, where if they have not a friend to fuccour them, they are forth-with without hearing the cause, oppressed; yea, and veterly ruined. For which cause the Oneckes beeing growne to L. Ecis, that \* much wealth, as is faid, got into the fauour of one of the greatest in the Court, which was Bo- Theodore Em-

10 Produces Brother to the Wife of the Emperour Phoesiar Engounes then reigning; to whom record, the slight feeder also be faced in the Empire. Vint this Beris the Oneshot determined to reurale the whole Registro-Thousand to reueale the Empire. Vnto this Boris the Oneeless determined to reueale the whole nounce that matter: who first presenting him with gifts after the custome of the Countrey, prayed him to ob. grant them hearing in a matter, which they had to deliver for the benefit of the whole Empire. Boris presently listning to this Petition, received them with extraordinary kindnesse: and after they had declared vnto him the fituation of the Countreyes of Samoiedia, and Siberia, then what they had feene and observed therein, and how great Riches might thence arise vnto the Empire of Molconia. Boris presently grew into an ardent defire to set forward this businesse, entertayning them as his Children, and gracing them to the vttermost of his power, procuring them from the Emperour a most ample Printledge, by which it was ordayned, That they should for e- Imperiall-ri-20 uerenjoy the Lands which they possessed, and might dispose of them vnto their Heires at their mileden.

pleasure. And farther, it it happened they were abiding in the Citie of Mojeua, he tooke them into his owne Sled : which among the Moscouites is the greatest kind of honour, especially being offered by principall Noblemen, such as then was Boris, a man of the greatest power, and in whom the chiefe authoritie of the Empire refted. Boris pondering thele things attentiuely, fignified the whole matter to the Emperour, to whom it was very plealing; And not fleeping about the matter, employed therein certayne Captaynes, and Gentlemen of small abilitie of his owne followers: commanding them to prepare themselues to goe to that Iourney, in company of such as the Oneckes should appoint vnto them, and that they should apparell themselves gallantly, and like voto Ambastadors, adding further certayne Souldiers, and Presents of small value to 30 be distributed among the people, to which they should come: enjoying them further to note

diligently all Passages, Rivers, High-wayes, Woods, and what elfe they should meete with in their travell; as also to commit to memorie the names of them; that at their returne they might make a faithfuil and true report thereof : adding further that they should intreat the people with all courtelle, and that they should feeke out some convenient place for building of Caltles and Fortreffes, and that in any case (if it were possible) they should bring backe with them into Mosconia, some of the Inhabitants of those Countryes.

These Messengers being sufficiently furnished with all things necessary for the Journey, name- The first Voyly, Apparell, Weapons, Money, and Preients, departing from the Mofena, not long after came age for our by to the River Wechida, and to the Oneckes: who also fent some of their owne people with them. Baris Godfagous.

40 Alloone as they were arrived into those parts, they began to performe what was given them in charge, shewing freely all tokens of courtetie vnto the barbarous people, and carefully observing who were of greatest authoritie among them, to whom they vied reuerence and gaue gifts, fuch as were of small and almost no value to themselves, but which seemed so precious vnto the other, that when the Moscouites were comming a farre off towards them, they would stay for them with great dancings and clapping of their hands, and call themselnes downe at the feet of the Givers, being fo gallantly attyred, accounting them altogether as Gods. The Mofconnes vfing the Samoieds for their Interpretors, which had continued certayne yeeres in the Villages of Moscoma, to learne their Language, began to discourse with the Barbarians concerning their Emperour of Moscouie, whom they wonderfully extolled, and made him little leffe then an Earthly God, enterlacing other things with all, whereby those people were stirred up to wish

50 that they might behold thefethings with their eyes. Thefe their defires were pleating to the Moscourtes, who fignified that they were likewise well contented therewithall : Adding, that they would leave certayne pledges among them, which during the Samoieds abode in Mosconia, might learne their Language: And by this meanes they drew vnto their purpose the good will of many of the people on the Wetl-fide of Obr, who of their owne accord fibiected themselves to the authoritie of the Moscourtes, and suffered them to lay a Taxation vpon them , promiting They felt mit yeerely of every head (not excepting the Boyes that were but yet learning to handle the Bow) themselves to two skinnes of Sables; which to themselves were of no value, but esteemed of the Moscounes as precious as Iewels. These they promised to deliuer to such a Treasurer as the Emperour should ordayne. Neither did they faile to performe the fame.

After this the Mellengers palled over the River Obi, and travelled beyond it almost two hundred leagues toward the East and North-east, having seene by the way many wild beasts of Travilles-Arong thapes, most cleare Countaynes, extraordinary Plants and Trees, pleasant Woods, and Sa- youd On. moved or divers forts, whereof fome did ride on Elkes or Loftes, other were drawne in Sleds by Elker or L. Gree.

Raine Deere, and others also were drawne by Dogges, which are equall to Harts for swiftnesse, Ruine Deere. Finally, many other things in their whiele lourney they met with, not before seene, and theregrining many other unings in their whole country they mee want, no centre cette, and there fore to be manuelled at : which orderly and truly noted downe, that they might more certainly report the fame at their returne, And foat length taking with them fome voluntarie Sameieds, and leaving there divers of their owne people to learne their Language, they returned backe into Mescant, where at their first commence they made knowne to Beru, and by him vato the

Samoieds shoo. ting; \* Stiuer.

They maruelled at the Samoieds which were brought vinto them, commanding them to make A ney matterieu as one campagn, y mort processor and for the comment of the comme fome shew of their cunning in smooting; which they one to perfectly, the amount of any man incredible. For taking a piece of Coyne lesse then our \* Pennie, and fashing it to the any man incredible. any man increasion: For examine present of control and the fact of they did enery time that they did floot fo affuredly hit the fame, that they did not one miffe it. Where at many of the beholders did aboue measure wonder.

And on the other fide, the Samoied as greatly wondred both at the Mosconius manner of liuing and fashions, as also at the stateliness of the Citie: neither did they without a certayne terrour behold the Emperour himselfe, so richy attired and mounted either on Horse-backe, or in his Coach drawne by many Horfes together, and enuironed with fo many Nobles most gallantly adorned. Then with admiration they beheld the Guards furnified with their Caluers, of whom about foure hundred waited on the Emperour at his going abroad. So of allo as they whom about four numbers water on the Emperor at the Mosconites, and law to many 20 heard the ringing of the Bells, which are very many among the Mosconites, and law to many 20 faire shops, and the rest of the Cities beautie, they were altogether associated, and thought themselves to bee in some Mansion of the Gods; withing withall, that they were a while among their Country-men to tell them of all things. Yea, they reported themselves to be happie, that they had the fortune to serue so glorious an Emperour, whom they altogether accounred as a Diuine power. The Meates which the Mosconites did set before them, they did greedily cate : whereby it plainely appeared, that the same were more pleasant to their taste, then the raw flesh, or fish dried in the winde, wherewith they feed themselves at home. Finally, they promifed to receine the Emperour for their Lord; and to perfwade their Country-men, inhabiting farreand wide to doe the same. They humbly also prayed the Emperour to youchinhabiting rarreand while to doe the same. They mainly follower them, and to whom they 30 feethem the facour, to fend them certaine Governours to rule over them, and to whom they 30 might pay the aforefaid Tribute. Concerning their Idolatrie, there was no speech made thereof, but they were left to their owne customes. Notwithstanding, I thinke that the Christian Faith would eaflybe spred among them, if they had sufficient and godly Teachers. Neither doubt I but the Moscomics would have taken order therein, if they had not beene hindred by these most

These things so done as is declared, the Onecker were raised to great Honours, and endowed with great Priviledges, as allowith Supreme Authoritie over many places, adjoyning vino their Lands, enjoying Postessions lying one hundred miles a funder upon the Rivers of Dina Whithida. and Suchana: to that they are very mighty and rich, and increase daily in greater Honours.

It was further orday ned by the Mosconiter, that there should bee places chosen by the River 40 Ob, and in the fields addopning vnto it, fortified by the natural lituation for the building of Cariles thereon, and furnishing them with Garrifons, and that there should be sent chither a chiefe Gouernour, principally for further discourring the Countrey, and bringing it vnder subtection. These things so ordayned, did likewise take effect. And first of all, there were builded certaine Cattles enclosed with certaine strong beames, cut out of the Woods thereby, and fastned one in another in double rewes, filled betweene with earth, and fortified with Carrifons; And fogreat a multitude of men is duely sent thither, that in some places there are Cities affembled, confilling of Poles, Tarans, Raffes, and other Nations mingled together. For, into these parts are sent all that are banished, Murtherers, Traiters, Theeues, and the scumme of fuch as deferue death: some of which are for a time kept in prilon, others enforced to continue 50 there for certaine yeeres, every one according to the rate of his offence: whereby there are very populous affemblies of people growne together, who with the Cattles already builded, doe almoit make a pretie Kingdome: Many men of the meane fort, daily flocking thither, the rather for that they enioy great primiledges, neither pay any thing for the Lands which they polletic.

Caftles buil

The whole Countrey is called Siberia, the Citie builded therein Siber. And in deed at the fiest, the Offenders among the Mosconites, did no lesse tremble at the name of Siberia, then doe Then Male, coill perfons in London, when they are threatened with New-gate; for they were forth-with facts of Am. fent away into Sibria. But now the often inflicting of that punishment is almost growne informs the to contempt. But Noblemen and great Perforages, if at any time they incurre the Prince dil. pleasure, doe as yet very much loath the name of Siberia. For many times both them- 60 felues, with their Wiues and Families are sent away into those parts : where some Office is committed vnto them, till the Emperours anger bee allwaged, and they called home into

I will now thew the way by which they travell out of Messenia into those parts, and that

in the best manner that I could get notice thereof. Which whatsoeuer it shall feeme to bee, I This Iournall have not attayed vnto it, without great paines and ready furtherance of fome friends, which to the North-I found in the Court, while I continued in Ruffia: who though they were ready to pleasure me, east was harde and that I had beene very initiant with them about it, yet with much adoe were brought to com- ly obrayned by and that I had beene very initiant with them about it, yet with index above to blodge for the municate this particular lournall vnto me. For if at any time after, when the land should bee at in Court, municate this particular vision in Court, aniet, it should any way come to light, doubtlesse it would cost them all their lives. For such is The great danthe disposition of the Russes, that they will not indure to have the secrets of their State to bee ger for imparmade knowne.

#### **∂.** II.

A briefe Description of the wayes and Rivers, leading out of Moscouia toward the East and North-east into Siberia, Samoiedia, and Tingoesia, as they are daily frequented by the Russes: with further Discoueries sowards Tartaria and China.

Rom the Citie Ofoil vpon the River Wiehids, where the Oncekos dwell, they goe a- Ofoil. gainst the fireame, vntill they come to lauinis, a little Towne built by the Ruffes, lauinis 17 daies and it is distant from Ofoil almost seventeene dayes journey. The River Wichida springeth out of the from Ofoil, accome, they paffe many Rivers and Woods. The River Wichida springeth out of the from Ofoil, accome, they paffe many Rivers and Woods. Mountaines of Ingeria, which to the South ioyne vpon Tatarie, and from thence runne Northwards to the Ocean Sea. Out of the same Mountaines issueth the River Petfora, which falleth Ingeria, into the Ocean Sea on this fide the Streight of Waygats. From launis, after three weekes iour- River Pelfora. ney, they come to Neem; a River so named of the gentle gliding of her streames through the Neem River 3. Woods. For Neem in English fignifieth Still or Dumbe. On this River they proceed about weekes jourfine dayes space with their Boats; and then , for that the Neem taketh his course another way, nie for shortning their journey, they must of force cause their stuffe to be carried by Land, the space of aleague: And so they come to the Wifera, a River isluing out of certaine Rockes adjoyning From Neem to of a league. And to they come to the Workes the Moscomites call Camenas. From hence they are journey. carried downe the River Wifers, for the full space of nine dayes, vntill they come to Soil Cam- From Wifes to feer, a small Towne builded by the Moscomites, for refreshing of Trauellers for a short space, Soil Campon which hence forward are to proceed on their lourney by Land. As for the Wefers, it keeping 9-dayes. on his course somewhat farther, at length falleth into the Cam, which passing by Viateam, a Volga by the Towns of Molcoma, falleth into the great River Rose, commonly called Volgs, which entreth Fail Fail with feuenty branches into the Caffien Sea, as I have received from eye witnesses.

The Towne of Soil Campley is reasonably inhabited, having many Villages round about it. The Soil campley. Inhabitants, for the most part are Ruses or Tariars. Here is great store of Cattell, and chiefly of Horses. Transellers having here some what refreshed themselves, doe lade their carriages on Horses, 40 and travell for the most part through Mountaines full of Firres, Pines, and other trees of strange forts. Betweene these Mountaines they passe ouer the Rivers Soibs, and from thence over Cof. The River

se, both running toward the North-east. Now these Mountaines are divided into three parts; whereof the two first are passed over collect each of them in two dayes, and the third in foure dayes. The first part is called Coofminscoy Ca- Mountaines in men: The fecond Cirginfor Camen: The third Podninfor Camen. And doubtleffe all their moun-three parts, tainous Countries are much different from the other Countries out of which they enter into Cominges Cathem. For the Woods vpon them, are fairer and thicker growne with trees, bearing enery where Circuites Care divers forts of Plants. These three Defarts are frequented by none in a manner but Tartars, men and Samoisds, who onely hunt after those coffly Furres, which are to pay their tribute to the Poduinsoy Ca-50 Emperour of Mofessia. The Mountaines of Poduinfeoy Camen are higher then the reft, and for men. the most part covered with Snow and Cloudes, and therefore difficult for Travellers to passe ouer: but by little and little they have a gentle descent. From thence they come to Vergateria, Vergateria. in which Towne they must abide wntill the Spring, by reason of the River Toera, which arising Toera River.

not farre from thence, is all the reft of the yeere very shallow. But the Spring approaching, when the Snow melts from the hoary Hills, and the Land waters arife, it is passed ouer with Skiffes and small Boats. Vergateria is the first Towne of the Vergateria the Countrey of Siberie, and was begun to be builded with some other Townes within these one first Towne of and twenty yeeres. It is reasonably full of buildings, and the lands about it are tilled as in Siberia. Molomia. Heere there is retident for the Emperour of Molomia 2 Gouernour, which yeerely Ruffian Gouer-60 at the beginning of the Spring, by way of the Rivers doth distribute great store of Corne, and neur. Victoris among the Caftles with Garrisons throughout all Siberia: furnishing also in like manner the Mofconites, which remayne beyond the River Oby. For in those places the ground is not yet tilled; and the Samoieds, as before is faid, for the most part feed on the flesh of wilde beafts.

Downe

Fine dayes iourney to Iasbanis.

Downe the River Toers, in fine dayes they come to Isphanis, a Towne builded and inhabited within these two yeeres. Thence againe they passe downe the Teers, and having proceeded two dayes thereon, they are enforced by reason of the often windings and turnings of the Riuer, to cut ouer it in certaine places, for shortning of the way. In these places there now dwell here and there, Tartars and Samoieds, living for the most part vpon Cattell and Fishing.

Tabab a michleagues from From Iaphanis to Timia 12. dayes iourney by fled Many tranell farre beyond

At length leaving Toera, they come to the mighty River Tabab, diftant from Vergairia about two hundred leagues. And from thence they proceed farther to Tinna, a populous Towne, and builded by those about mentioned. But many trauell also from Isphanis to Tima, by Sleas in the Winter time, in the space of twelve dayes. And here is vsed much buying and selling of coffly Furres, betweene the Mulconnes, Tartars, and Samoieds, And this is a very concument 16 place, for such as determine to say in the Countrey not aboue sixe moneths. But many doe fearch the further parts, and trauell farre beyond the Oby, toward the East and South,

From Tinna they come to Tobolfea, the chiefe of all the Townes of Siberia: wherein is the Thre ocyona of the feat of the chiefe Governour of Siberia, and of the Moscowings that are in the same. To this OFF CONTROL IN PLACE YEEFERY are brought from the other Townes of the whole Countrey, as well on this fale, as beyond Oor the tributes, which being brought together, and guarded with Souldiers, are after carried into Mosconia to the Emperour, Here also the Law is most severely administred: and all the other Gouernours in Samiedia, and Siberia, are bound to obey him onely. In this Citie befides is the chiefe Market of commodities brought out of Mosconia; the Tartar: out of the South parts, and almost farthest parts of Tartarre, and men of other Nations repairing thither: 20 who, the farther that the report of these Countries reacheth, doe in so much the greater number affemble thither : whereby there arifeth great profit to the Molcounter. Furthermore, in diners places there are Churches and Chappels creeted, wherein the Greeke Religion is exercifed, which among the Ruffer, and other Northerne People is most vsed, although corrupted with divers Superfittions. But howfoever, no man is forced against his will to their Religion: but certaine gentle meanes are vied by the Ruffer, by which these people are persuaded and

The Citie Tobolfes is situated on the River Tris, which with a most forcible streame, and as it were another Danubius, rifing from the South, taketh his course toward the Ob, through

which it feemeth to runne with the fame courfe. On the other fide is the River Tabol, of which 30

the Citie taketh her name. Into this falleth the Ruer 74fs, which feemeth to spring from the

Tobal River. Taffa River.

of Siberiae

Pohemy a

Tris River. Olicongrad

North-east, and from certaine Mountaines there upon the Coast. On the side of this River the Mosconies haue of late builded a Towne, talled Pobenty, inhabited with dwellers drawne out of Siberia, for no other cause, but that it is enumoned with an exceeding fertile soyle, as also with very pleasant Woods, wherein dauers sorts of wilde beasts doe breed, as Panthers, Ounces, Foxes, Sables, and Marterns. Nows Poberty is diffant from Tobolfes, about two weekes Iourney toward the North-east. Tris with almost the like distance from Tobosca, falleth into the Obj. And at the mouth of it was builded a Towne calle: Olfcoggrood, but afterward razed downe by commandement of the Gouernour of Siberia . The cause whereof was not then knowne: which not with landing I guesse to have been either the extremity of the cold, or that the Towne stood 40 rer vnto the Sea then they thought fit, and feared left tome inconveniense might grow thereby. for which cause about fittie leagues aboue that razed Towne, they builded another vpon an Iland Zergolica nown of the Riner Oby, called Zergolica. From hence fayling up the Riner, they wie small sayles, either because winds blow faintly, or for the highnesse of the shoare: so that, though the Oby bee almost every where very broad; notwithstanding, they drew their Boats in it with ropes, altogether after the same fort that they trauell vp the Rivers of Mostonia.

builded in an River Oby.

Caftle 200

They travell

Two hundred leagues aboue Zergolta, they came to Normfon, a Cafile builded thirteene yeers agoe, at which time the Gouernour fent certaine men thither out of Siberia, to fecke out Counleagues abone tries profitable for mankind, and fit to build Townes in. Wherefore at that time they builded this Caffle, and furnished it with a certaine Garrison, in a very pleasant, wholsome, warme, and fertile loyle, and wherein were great flore of Beatls and Fowles of rare kinds. The very Cattle being situated toward the South-east, by little and little grew to be a Citie. The Inhabitants whereof were enjoyned to proceed by degrees into forther and more temperate Countries, and to trafficke truely in euery place, and courteoully and kindly to entreat all people that they met withall: whereby at length they might more largely extend the Dominion, and ipread abroad the Russian Name. Wherefore flocking thither in great numbers, and piercing into the Inland foure hundred leagues, they found goodly Countries, but not inhabited. And whereas ten yeeres past, having sayled two hundred leagues up the River Ob, they lighted upon a Countrey very fruitfull and pleasant, which was very temperate, and free from all discommodities, and the Winters very flort, and in a manner none at all. They tooke occasion thereupon to returne into The Reigne of Siberia, & to fend word of thefe things into Mofema. Boru Gedmons was then Emperor there, 60 Bern Codenzate: who having reteined fuch good ridings, forthwith commanded the Governour of Sheria, that with all speed hee should cause a Citie to bee builded there. The Governour obeyed, and there was a Castle builded upon his commandement, with certaine houses adiogned; so that now it

is a large Citie. The name thereof is Tooma, because they understood, that a great multitude of Tartars in times pait were feated there, of whom this Citie tooke that name for the pleifant. The Cide neffe of the fituation thereof. And it is reported that their Tartari had at that time a King. whose name was Alim: Whereby it came to passe, that the Citie which was first builded, held Tarker King, out many affaults of fundry people that dwelt in those Champion Countreyes. And now this Citie is so mightie, that in procede of time, some reasonable great Kingdome is likely to grow

Furthermore, betweene this Castle of Noxinscoi, and the Citie Tooma, and Siberia, the Moscontest daily doe difcouer many people dwelling in the In-land parts, fome of whom call them-In felues Offachies, and now are growne into one bodie with the Tartars, Samoteds, and Ruffes, li- Offachiesa uing friendly together; they have many Kings among them, almost like vinto the Indians (I Pcople. speake of the pettie Kings, not of the greater Kings of India.) And to bee briefe, the Moscourtes have proceeded to farre into that mayne Land, that we have just cause to marriell thereat. Mores ouer, there are many Caltles and Townes betweene the Riners of Obrand Treis, builded almost at the same time when Tobolfon was, and are now proper Townes: whose Inhabitants are Mos. counters, Tartars, and Samoreds of their kind, which we call, The same Samoteds, in scipe of of those which are altogether wild.

And the first of the Townesis Tara : from which place it is neere ten dayes sourney between lorgoetum. Obiand Triis. Then forgoetum, builded about fifteene yeares patt. Befobia, and Mangarfoifesi. Befobia. 20 gored, both of them builded about lorgoetum toward the South. The Inhabitants that dwell on Manganfaifelle the west side of the River Obi , seeke daily to discover more and more. On this side of Obi are Nation and feated the Civies Tobolfea, Siberia, Berefaia, and certaine others, builded upon certaine Rivers : Toma beyond and more are builded dairy. Beyond Ob are Narins, Tooms, and divers other Cities, the Inhabi. Obi. tants whereof infreed of Horfes vf. Reyne Deere, or exceeding fwift Dogs, which they fatten Reyne Deere with diners kinds of fishes, and especially with Thornebacks; because they thinke they be made swift Dogs the stronger with that kinde of food, lorgoetam, whereof I spake before, is builded in an Hand vied instead of of the River Obi.

Alfo about Narim as men travaile toward the East, they maete with the River Telea: on the fed with banke whereof they have builded a Castle, named Composition The gartison Souldiers of which Fisher. 30 Cattle, together with the Inhabitants of Narm, about Maen yeeres past, were commanded by the East bethe Gouernoor of Siberia to travell East, and diligently to learch what vinknowne Nations road Obia dwelt in those parts. Therefore travelling through certaine wast Deferts, for the space of tenne Comer lies weekes or there abouts, palling in the way through many faite Countreys, many Woods, and Caffles Rivers, at length they espied certaine Cottages set up in the fields, and certaine Hords or travell East-Companies of people. But because they had Samoieds and Tartars for their guides, which were ward from Obi acquainted with those places, they were not afraid. The people came vnto them reverently, wherein the and with humble behaulour, and fignified by the Samoleds and Tartars, that they were called Tingocfies were Tingoes, and that their dwelling was upon the banke of the great River Iemsce, which they faid first discourdid ipring from the South South-east, but that they knew not the head thereof. These people Timeses a peo-40 were deformed with swellings under their throats, and in their speech they thratled like ple dwelling Turkie-cocks. Their language teemed not much to differ from the Samoieds, which also vider in Companies flood many of their words.

Ienifee being a River farte bigger then Obi, hath high mountaines on the East, among which The Impeter are some that cast out are and brimstone. The Countrey is plaine to the West, and exceeding deformed fercile, stored with plants, flowers, and trees of divers kinds. Also many strange fruits do grow with swellings therein, and there is great abundance of rare Fowles. Iemifce in the tpring overfloweth the vader their fields about feuentie leagues, in like manner as they report with one, as Nilus doth Egipt, Where throats: a difwith the Tingoes being well acquainted, doe keepe beyond the River, and in the mountaines, drinkers of untill it decrease, and then returne, and bring downe their heards of Cattell into the plaines.

50 The Togoef being a very gentle people, by the perswasion of the Sommeds, without delay Mountaines fubmitted themselves to the Lime Governours which they obeyed, whom they reverenced as a on the East kind of Gods. But what God they worship, or with what rites, it is vincertaine, neither as yet cashing out fire can bee knowne, the Moscowites being negligent fearchers into fuch things.

Neither hereaf er will I maruell, though the Streight of Waggats bee flopped up to the The ouesflow-North-east, with such huge Mountaines of Ice, since the Rivers Obs and Ienisce, and very many ing of tenisce more, whose names are not yet knowne, powre out so huge a quantitie thereof, that in a man. in the springs more, whose names are not yet knowne, powre out to huge a quantitie thereor, that in a mail.

as it may be nerit is incredible. For it commeth to passe in the beginning of the spring, that in places neere from melted. vnto the Sea, the Ice through the excessive thicknesse and multitude thereof, doth carrie downe Snows whole woods before it. And without doubt this is the cause, that about the shoares of Reason why. 60 the Streight of Waygats, fo great abundance of floting wood is every where feene. And where- "agents is flogas in that Streight neere vnto Nova Zembla, it is extreame cold, it is no maruell, if in regard of pid with Ice. the narrownesse of the Streight, so huge heapes of Ice are gathered and frozen together, that in tabous these the end they grow to fixtie, or at leaft to fiftie fathoms thicknesse, as this present yeare (1612) in the Streight

attempt the fame , valefle they take another courle in the businesse. But let vs returne to our runti-ermore, those whom I mentioned before, undertooke a long Journey beyond the Riner Ienifee Eastward, and were somewhat afraid to turne to the South, taking with them cerbeyond th Ritaine Tingoesses, by whom they were informed, that many Nations dwelt toward the South, which differed much from them, whole Kings were most commonly in warre one with another. Many Nations But having travelled certaine dayes to no great purpole, at length they returned home; Yet before their returne they gave order to the Timgosfier, to learch those Countreys more thorowly; 10 who promife that they would doe so : And they renewed the league which formerly they had warre one with ware one with make with the Mofemites. The Mofemites at their departure, left diners of their people in are the Zagatay those pares, and alio certaine Samoieds and Tarters their confederates, after they had bellowed fome small gifts among the Tingoefies.

fore in Goes is The yeere following, the Tinguesses sent divers of their owne people Eastward : who trauelling somewhat farther then they had done before, at length found another mightie River, somewhat lesser then lessifee, but as swift as it : And following the course thereof some few dayes, they lighted upon certaine people whom they tocke, being swifter a foot then they: Burthey could not vinderstand their language, saving that by certaine signes and words of the Salmages, which often repeated on on, they coniectured that on the other fide of the Riner, they 20 heard it often thunder. They added also, that they had often heard the noyse of men in those parts: And pointing to the River with their fingers, they often repeated the word Pifids: whereby the Tingaeffes gathered, that that should bee the name of the River; but by the voyces om om, the Moscomies did afterward gather, that they were knollings of Bells. The Tingorfies at their returne from thence, carried with them divers of the people of that Countrey, which died all by the way, either for feare, or through change of ayre. The Tingoe fies were verie forrie for their deaths. For at their returne they : firmed, that they were men of good vnderstanding, well let, with small eyes; flat faced, browne colour, and enclining to tawnic,

When the Moscouitan wnderstood these things by the Samoins, which returned into Siberia out of the Country, of the Ingessies, etcliones they were flired up with a great defire to learch 30 out the farther parts of that Countrey, wherefore they became futors to the Gouernour, that they might bee fent thither with some others soyned with them. Hee presently yeelded to their request, granting vnto them a certaine companie of Souldiers, and enioyned them curiously to fearch out all things, and to take with them Tingosfies, Samoinds, and Tartars. So beeing about The third voy-Guen hundred men, they passed the Riner Obi, and came to the Riner Senifes, through the countreys of the Samoieds and Tingoefies: And paffing the River, they marched forth Eastward. hauing the Tingeofies for their guides : which did not onely serve them as guides, but also plentifully prouided all the company with victuals, taking with wonderfull dexteritie, Fowles, Goats, Reyne Deere, and such like wilde beafts : as also no small quantitie of fish out of the Rivers which they met in the way. Having travailed as farre as the River Pofids, they pitched their 40 Tents on the banks thereof, with purpose to stay there till it were passable, the Ice being shortby to breake vp. because the spring was at hand, at which time they came thither, yet they durif not passe one the Riner Passe; having now plainly heard the sound, whereof they were aduertised before: which they certainly judged to bee nothing else but the towling of Brazen Bells; and when the wind blew from the farther fide of Pifide, they fometimes heard the noyfe of brazen

Bells; of men and horses. Moreouer they saw certayne sayles, though but a few; whereby they coniectured that they were vellels, which sayled downe the streame. They sayd further, that the fayles were square, like the Indian sayles, as wee suppose. But seeing no people at all on that China, and perfide of the Riner where they remained, after they had staied there a certaine space, and had perceited that in the spring time the River did greatly swell (which neverthelesse they can hardly 50 affirme for a certaintie, lince the shoare is high on both sides: ) At length by very great journeys, and yet not before Autumne they returned home to Siberia; reporting, and that woon their Veffels fayling oathes, That in the moneths of Aprill and May, they were very much delighted with the exceeding faire shew of that Countrey; And that they had seene therein many rare Plants, Flowers, Fruits, Trees, Fowles, and wild Beafts. But the Mojcoures are nothing curious in fuch things, as men that feeke after nothing but gaine, in all things elfe very negligent and rude.

These newes being brought to the Court of Mosconia, the Emperour Boris, and the Noblemen that were with him, much wondering thereat, and inflamed with a great defire to fearch out exactly all particulars, refolued the yeere next enfuing, to fend Ambaffadours thither, which should carrie presents with them, and should take Tarios, Samoieds, and Tingoefies in their com- 60 panie. And they were enioyned to fearch out the further fide of the Ruer Pifide, and to make a league of friendship with the Kings if they foundary, and set downe in writing all things that they could obletue by the way, and should make report of them most exactly. But these things did not take effect, because of the breaking out of the civill warres, among the Moscowies in the

Doubtleffe (it is to be lamented) that the Hollanders have not had good fucceffe in passing the 40 Streight of Way-gars; but furely they know not the right way to attempt the fame. For if they attempt it by thippes, though it were an hundred times, it would hardly once take effect. But if they would throughly discouer these Countreves, then they should stay two or three yeares about Petfora and Way-gats, where they should not want good Hauens, nor Victu- North-cast alls : and from theire they should fend out some with small Boares to district the first parts. parts, by the very example of the Refer, whose Friendship is they would process with Nose themselves, they should easily first Guides and Pilots; and so at length at their Coasts would throughly bee discourred. ther transfer institution reds 💱

Doubtleffe goodly Countreyes would bee found out, and not only Hands or by the Marie Landalfo. Yet there is just cause to doubt, whether America above China joyne not with so fome of the three parts of the old World : As wee see Africa joyned waten Ala with a name row necke of Land spon the Redde Sea, And doubtlesse, this feemeth likely to bee true: For who can affirme, that they bee separated ! Sauing that they have found some things as the Writings of problane Authors; whereby it may be proceed, and bring many Arguments from thence. And though these parts bee not joyned together, yet they multiple disided with fome fmall Streight. His detunesh of laprill we weighed Anchor as Blacke making the River of Thomes, I braship called the America websers of lamus Hodger was Matter, and fayling a lidage the Coafts of England, Teclulary, Newton, and Environes, on the elements of the next moneth of May, wee found our fellers in the latitude of T. degrees 40. minutes, il attention on but in

The twelfth, wee ranne fortie eight leagues North North-east, the wind being at South-east, and found our folios in the latitude of 73, degrees 42, minutes, and at 10 night wee had shouldings of Cherie Hand for wee were entoyated by our Commission to touch there, although it were three degrees to the North out of our way.

The timecounts, being Whit-funday it cleared up, and then we did fee Cherie Hand fix lengues East South-east from vs.

The fourteenth, being faire weather, we flood to the Northwards, thinking to have gone on shoare, but we could not for Ice, and labouring to Land on the South fide of the Iland, wee met with Ionas Poole about Eeuening in the Elizabeth , who came as then to the Hand , and was fet forth by the Right Worthipfull Company of our Ruffien Merchants, to discouer further Northward, from eightic degrees toward the North Pole. Then we flood to the Eastward, where wee found great store of Ice.

The fifteenth, we spent on the South-side of the Hand, in hope of the arrivall of the Marie Margant, which being a ship of nine score Tunnes , was fet forth very chargeably by the aforefaid Ruffiae Company, and had in her fixe Basker, being excellent Whale-killers of Saint Ison de Laz, for the killing of the Whale on the Coast of Greenland, in a Road called Croffe Road,

standing exceeding farre to the North, even in the latitude of 79. degrees and better. The same day at night, feeing that there we could doe no good, we determined to proceed on our Voyage for the River of Pechara: and Letters being given one to the other for Teltimoniall of our meeting in that place, we left Ionae Pooley, and directed our course to the Eastward.

The two and twentieth of May, we came to a small Hand, called Bigs Hole by Tapani Harbour. May. The three and twentieth, we arrived at the Ile of Kildin in Lappia.

The foure and twentieth, loftas Logan, which was appointed Factor for Pecbora, and my felfe Olena. with two more, went to Olena, and flayed there all the fine and twentieth, being Saturday, where wee found a flip of Tarmouth, whereof James Wright of Hull was Master, of whom we learned IO the proceeding of the Hollanders.

The feuenth of Iune, in the morning we had fight of the Coast of Lappia, a little short of Cape Iune. Comfort, and met with a thip of Amfterdam, by which we fent Letters to Mafter lobn Mericke Cape Comfort our English Agent, then Relident in Colmogro; and we had two Hogsheads of Beere of them.

The eight, we plyed to Cape Comfort, the wind at South-east. The ninth being Sunday, in the morning wee put off from the Coast of Lappia, to cross over the White Sea, to the Cape of Callinos corruptly, and commonly called Candinos. At noone we

paffed through some Ice, the weather being thicke and foggie. The eleuench, we plyed to the Cape of Callinos, passing through much Ice, the wind at North North-east. And therefore wee thought it better to goe to the Southward againe: and in the

20 Equening we came to an Anchor in ten fathomes. This night wee had a fore frome; the winde at North-eaft.

The twelfth, in the morning we weighed, and in weighing brake our Anchor: and then wee
They goen flood to the Southward, and came to an Anchor; and at night wee went on shoare for Wood, shoare. and Water, where was good flore of Drift Wood: And within a ledge of Rockes on the West-Ten Ledias of tide of Callinos there lay ten Lodias or Ruffe small shippes, some fourteene or fifteene Tunnes the Pinega bound biggeft (of a Towne called Pinega) all which were bound for Nona Zembla, to kill the Morfle: for Nona Zembla, with the men of which Fleete wee had some conference, and did see their Prouisions : which bla were Launces of their fashion, and Harping Irons; their Victuals were Salt-fish, Butter, Bacon, Meale, their Drinke Quaffe.

30 The fixteenth, in the morning wee weighed and flood our course for the Ile of Colgoiene, the wind being at South South-welt, and did find the Ice that was close to the shoare to bee open: but at night finding that we could not fayle our course for the Ice, we thought it better to stay, and so came to an Anchor.

The feuenteenth, wee weighed in the morning, and food along the shoare, which did lye South-east by East, and North-west by West. And in the after-moone, wee went on shoare with our shallon, and came to a River, which we called Hablages River, where wee did see certayne Samoieds, with their Deere: but when they perceived vs, they fled into the Land, carrying with them fuch things as in halte they could get together : but left most of their necessaries, as Bowes , Arrowes, long Speares, wanting Iron heads burnt at the epd, Harping Irons, Wimbles, 40 and Morfle-skinnes, lying hid, fome in one place, fome in another : which wee caused our men to

vncouer, and would not suffer them to take anything away ; only I tooke the Pizzell of a Morsse which they had lately killed; and Iofias Logan left a Knife, that they might not shunne vs hereafter. The same Ecuening we anchored and stayed all night.

The eighteenth, wee weighed, and at noone wee came to an Harbour; which, as wee thinke, A good Harwas the very fame where Mafter Stephen Barrow was in his Discourrie of Vaigatz, and None by Zembla, 1556, where there is twelve, or thirteene foot at high water voon the Barre, and Stephen Burton within fix or feuen fathomes. Also in this place were three Lodias of Pinega, which when they Three Lodias faw vs come in, rowed out, and at night returned, and some of their men came abourd of vs, and of Finese. told withat they could not paffe for Ice; and faid, that they were bound for Sharshai Gooba, or Sharshai Gooba, 50 Shar Bay to fish for certayne fishes; which they call Omitie, which are somewhat like a Shad, and which is the

The twentieth, lofiat Logan and my felfe went ouer to the Mayne, which was diffant two leagues, and came to a great River in 67. degrees and 40. minutes, where there had beene people : and there we faw foure or fine great white fishes swimming, which are foure or fine yards They land the long, and called by the Ruffes Belluga, whereof they make Oyle, whereof afterward we found Agreet Riger. at Pechora, great store to be spoyled.

The one and twentieth, we fent our men for Wood, for there was good frore of Flote-wood Flore-wood. as we had found all the Coast along ; but none growing.

The two and twentieth, in the morning we came ouer the Barre, the winde at South South-60 east, directing our course for the lie of Colgiene; and at noone wee passed through much Ice, which lay to thicke that wee could not fayle, but tooke in our fayles, and made fast our ship to a piece of Ice.

The three and twentieth, in the morning wee fet sayle, and plyed to the Wind-ward, the wind at South-east, with raine : and at night wee mored to a Cake of Ice.

Kıldız in Lappia

The foure and twentieth, in the morning we let fayle, and pyled to wind-ward, the windar South-weft to get cleere of the Ice; and at noone we observed and found our selues to be in 67. degrees 12, minutes, and in the after-noone we had fight of the Land againe, being four legues Aforesyde vp. to the Southwards of the aforefand Harbour; and finding the Tyde to fer very fore vpon the Aforeigney, to the Southwards of the automate values, and the Earthward, bearing through the Ice, and attiwelle at

The nue and twentieth, we loosed and fayled to the Eastward, till we found the Ice so thick, that we could not passe further: then we made fast to a piece of Ice: the wind at North North. east, thicke fogge, and some raine. The fix and twentieth, we set our fore top-sayle, the wind eart, enticke togge, and some rames, are to all the form of the following forms as: North North-eaft, blowing hard and thicke fogge; we flood fometimes one way, fometimes to another, as we could find the Ice open; and at noone we had fight of the shoare, being source fine leagues off, and the Ice lying to thicke, that we could make no meanes to get farther from the shoare: wherefore wee made fast to a great Cake of Ice. The seuen and twentieth, wee Lay still, the Ice lying very close, with thicke foggie weather: the wind at North North-west.

The eight and twentieth, in the morning it was cleere, and the Land did beare North by West fouen leagues off, and then we fet sayle, passing to the Eastward till noone: then we made fast to a piece of Ice, it being very foggie: the wind at West North-west. And the same day at eight in the after-moone wee loofed from the Ice, it being cleere, the wind at North-west. And

at mid-night we got cleere of the Ice, keeping our course East North-east.

William Courdangooth on Two Ruffe Croffes.

A despe Bay

Wood.

The nine and twentieth, at eight in the morning, we had light of Cape Swetines, the winde 20 at North North-west, with thicke foggie weather: At noone, finding the Ice to lye close to the shoare, we cast about to the Westward. And at eight in the Ecuening, wee came to an Anchor in tenne fathomes; and then I went on shoare, where there were two Russian Crosses: the Land was imooth, and full of fresh Ponds, being a kind of white Chalke Cliffes. At our commings. boord, we weighed and flood neerer to the shoare because of the Ice. The thertieth, in the morning the Ice came so extreamely upon vs, that we could not weigh;

for our men being catt from the Capstan, our Cable brake, and so wee lost an Anchor. Then feeing wee could not passe to the Eastward, wee stood to the Westward of Cape Smetimes, Cape Swelins; into the afore-fail deepe Bay in seuen fathomes : the wind at East North-east, cleere weather.

The first of July, we went on shoare to see if there were any thing to take notice of : but wee 30 Land againe. found nothing worth the going. For only we faw a wild Derre, and an House of Wood after An house of the Ruffe fathion, where people had beene. The second, likewise we rode still, and going againe on fh. are we did see the Ice all gone to the Eastward; and so came aboord. The third, at fixe in the morning we weighed, theiwind at East North-east, and plyed through some Ice : and at foure in the after-noone we got cleere of it; and at eight of the clocke wee came to an Anchor, it being calme and cleere weather: then I went on shoare, where we were first; and came abourd because of the great abundance of Muskitos or Gnats. At our comming having the windeat South-weit, we fet fayle and flood along the shoare,

Land the fixth A undince of Muskicos.

The fourth, we fayled along the shoare with faire weather, having the winde variable. The fifth, wee plyed to the Eastward, wind at North-east by East taire weather. The fixth, wee 40 plyed along the shoare, the wind at North by East. And in the after-noone wee passed through much Ice. The isuenth, we plyed through the Ice to the Eastward, the windest East Northeast, thicke and foggie. The eight, with cleere weather, the winde at North North-east, we plyed to the East ward; and at noone observed the Sanne having 69. degrees 40. minutes: At Equening we had fight of the Land to the Eastward of the River or Pecbera; and thinking to get into the shoare we could not for the shoald water.

The ninth, in the morning we flood backe to find the Barre or entrance of the River of Pe-Croffes found chora. And in the after-noone, feeing the Sand ouer the Ice, which was not broken off from the shoare, I went thither with my shallop, and going on shoare, we espeed three Crosses, and certayne Ruffes walking upon the Sand; who told vs, that that was the place that we defired : and 50 one of them came aboord our ship to bring vs ouer the Barre. But comming to should water, The depth of wee durst not trust his skill, but stood backe againe, and came to an Anchor in foure fathomes.

The teach, in the morning I went to found the Barre; where we had eleuen and tenne, and in one place but nine foot water. And comming aboord wee set sayle to come in. And in going ouer the Barre we were on ground; but, God be thanked, wee got well ouer, and came to an Anuerth. Barre, chor in fix fathomes.

and ride in fix

The eleuenth, the Ice brake off from the shoare, and came so fast vpon vs, that we could not shift fathoms water, from it, but were put on ground vpon a Sand; yet God be thanked without any harme. The fame day leaving our ship lying to, lofias Logan our Factor, my felfe, William Purfelque, being rowed in our Skiffe by fix of our Mariners, tooke our way toward the Towne oner a shoald Sea, which the 60 Pichera, ouer Ruffes cal, The Dry Sea: which may very well be so called. For on the starboard or West side going Diggs is freen up is a low dry Sand, and on the Larboord or East fide is all should water, as two, three, or four foote water. And feuen leagues within to the South-west is an Hand called Dolgoi, that is to lay, from the Barre The long lland, which you must keep on the Larboord or East fide, & then steer away South South-

welf, neere vpon twentie leagues, all in shoald water; and then you shall come to the fight of an high Land called The Boluan; which in the Ruffe Tongue tignineth, a Blocke: which you must The Boluan; or leaue on the Larboord, or East fide. And be fure to keepe the channell, which doth trend South- East bead land west, and South-west by West. By report of the Inhabitants the Riner hath two and seuen-

The twelfth, we passed over the Drie Sea, (which the Russes call in their Language, Suchoi trengeth Morie, ) to the mouth of the River Pechera: where we found many small Hands, some a mile, South wift. fome two miles in length, and so should water, that wee could not get to the shoure with our Shallop, but lay in her all night at an anchor, being vncertaine which way to take : and feeing to fo many entrances before vs, we could hit right at none. The thirteenth, in the morning wee An lland necre got to an Iland, at the very mouth of the River, where wee flayed all the day, having much the mouth of the River.

wind and fogge. The fourteenth, being Sunday, we fet fayle from the Hand, the Sea going very They find one high: and at noone we came by Gods direction, into one of the chiefest entrances of the River of the chiefest Pechora; and came to an house, where there were two and their families, who made vs the entrances of best entertaynment that they could, and gaue vs directions how to goe to the Towne.

The fifteenth, we came to a Sari or Ferme house of one of the principall men of the Towne; They come to who bid vs kindly welcome: and as the place and feafon affoorded, hee made vs good cheere.

A Ferme bould be lay there at this time, to take Duckes, Swanger Goeffe and other Foundation of a principall He lay there at this time, to take Duckes, Swannes, Geefe, and other Fowles: for then was man of the the time of the yeere. Their feathers they fell, and their bodies they falt for winter promition. Towns.

He also gaue vs a man to bring vs to the Towne.

The fixteenth, we came to the Towne of Pufforers, which flandeth vpon a Lake. There was The Towne is no Gentleman or Gouernour in the Towne at our arrivall! for he had deltroyed the Caftle, and called Puffe. fled away the last Winter. For certaine dayes wee could have no answer, whether wee might 30%. stay or no, all the chiefe men being abroad for their Winters promision. But the chiefe Customer Marphe, fending men to know their mindes, the three and twentieth day of the fame moneth of Iuly, we were embraced of them, and defired to stay, and they appointed vs an house to dwell in. Furthermore, they told vs that the River Pechera was more convenient for vs, then the River of Duyna: and that a great part of the goods, which come to Colmogro vpon Dwina. doe passe in one place or other by the River Pechera, which, they say, runneth through Siberia; and how much farther they themselves know not. The five and twentieth, in the morning, ha-

30 ning one of their Boats full with feathers, weedeparted from the Towne, taking our leaves of Siberia and fat-Iofias Logan, who stayed behind.

The fixe and twentieth, we came downe to the Bolues, where were went abourd of two Co. Two Coches ches of some fifteene tunnes a piece, bound for Monguezea. Here I went on shoare, and bought or Lodias, an airie of Slight-falcons, being very young. The feuen and twentieth, in the Ecuening wee Mousearte came aboord our thip, and the fame night tooke in the Feathers, and laded their Boat againe Hebuyeth two with Meale, fending her vp to the Towne by the Ruffes that brought her downe.

The eight and twerrieth, we got out our goods, which were appointed to be left at Pechora, The flocke of vnder the charge of Mafter Logan, and made ready our flip. The nine and twentieth, wee goods left in weighed anchor, and fell lower downer the wind North North and The thirtieth was gold Puffered. 40 weighed anchor, and fell lower downe, the wind North North-east. The thirtieth, wee rode fill, and in the after-noone two Lodias that were fifthing for Omulais, went out to Sea, the wind at North-well by Welt. The one and thirtieth, the wind being at Welt North-welf, there came in foure and twente fayles of Lodias or Coches, all bound for Magnances but the yeer being fare spent they gaue ouer their Yoyage, and went to the Towne of Pafactes, to winter. Out of one of the which Lodias we hired a man belonging to the Towne, to stay with william watd of Ob. Pursglone and Marmadake Wilson, by our goods, till the Lodia came, which we had hired. Which two were to winter with Malter Logan in the Countrey. The aforefaid foure and twentie Lodias were of Colmogro, Pinega, Mezen, and Puftozera.

The first of August, the wind at West, we weighed, and, God bee thanked, came safely over They safely the Barre of Pecbera. From thence wee directed our course for Noua Zembla: and at noone passethe Birre 50 we came to Ice: where having fayled many points of our Compaffe, at mid-night wee tooke in of Pethola. our sayles, and made fait to a piece of Ice; the weather being very thicke and toggie. The second being very cleere, and feeing no way to passe to the Northward for Ice, we determined to return; and because the yeere was to farre spent to go tor Cherie Hand, to see if it pleased God to give vs there any good tucceffe, for the bearing of the charges of this Voyage. So wee looked, and at eight in the Equening wee got cleere off the Ice, keeping our course by the edge of it, which did lie East by North, and East North-east. The third, at noone we had fight of Colgoiene Hand, Colgoiene Hand and tooke the latitude, being on the North fide of the Iland which was 69, degrees 20, minutes minutes minutes. and at night I went on shoare to see the Land, which was high clay ground : and I came where there was an airie of Slight-falcons: but they did flie all away faue one, which I tooke vp, and Falcons.

60 brought aboord. This Ile of Colgorene is but thirtie leagues from the Barre of Peebora. The fourth, we passed through some Ice, and at noone wee got cleere off it, and stood to the Northward, Colgoiene bearing South-west fixe leagues, the wind at East North-east. The fire, we had faire weather, the wind at East South-east, wee sayled two and thirtie leagues North

70 degrees 40. minures. 72. degrees 34

534

North-west, we observed, and found our selves in 70, degrees and 40 minutes. The fixt, the wind being at South South-well, we steered North North-west fortic leagues, and were in 72. degrees 34. minutes. The feuenth, the wind was variable, the weather faire : we steered North by Wett, eight and thirtie lesgues, and at noone had the latitude of 74. degrees 30. minutes, And at eight in the Eenening we founded, and had eightie fathomes greene Oze. The eight, the wind at Weft, we fayled North twenty leagues: in the morning we founded, and had fenenty fathoms Oze: and at three in the afternoone, the wind comming North, wee cast about to the

The ninth, faire weather, we sayled thirteene leagues West, the wind at North. At noone we founded, and had an hundred and twentie fathomes, greene flime. The tenth, the wind va- 10 riable, with fogge and raine: wee fleered West North-weit fine and twentie leagues: and at 74, degrees 57. moone we observed, and had the latitude of 74. degrees 57. minutes. The eleventh, was thicke foggie weather; wee layled foure and twentie leagues West: and at eight in the Ecuening wee founded, and had ninety fathomes, foft Oze. The thirteenth, at noone wee had fight of Cherie Hand, being within a mile of it, before we did see it : and the same Benening wee got into the Cone, and mored our ship. Here we stayed twelue dayes, taking what it pleased God to send,

Cherie Hand.

The fixe and twentieth of August, we left the Iland, because the time of the yeere was fare spent, and returned for England, where (blessed be God) we safely arrived in Saint Catharines Poole, in the Riner of Thames, on Saturday being Saint Masthews day, and the one and twen- 20

30. Lodiar.

There were in the Hauen of the River Pechora, at our being there, about thirtie Lodias, or small Roffs thips , having ten, twelve, fourteene , and fixteene men in each of them : which purposed to have gone, some to Nona Zembla, some to Taffe gorodoe, and some to other places in Mongamfey, to the East of the River Ob. Their Louiss for the most part, were of Ufing, Cal. moero, Pmega, Mezen, and Pecbora.

50. Cayucks or

Allo, we that went up to the Towne, found about fiftle Cayucks, or Boats of foure, five, fix, filling Boass, and feven tunnes a piece, fifthing in the River of Pechers for Salmons, and other kinds of fill; hauring the most of which Cayueks come from the great Towns of Using, and the Towns thereunto adioyning, by the River Ing, through the Land into the River Pechera, and at the Bolmen, at the Riv 30 uers mouth they tooke most part of their Salmon,

## CHAP. IX.

A Letter of RICHARD FINCH to the Right Worshipfull Sir THOMAS SMITH, Governour; and to the rest of the Worshipfull Companie of English Merchants, trading into Ruffia : touching the former Voyage, and other observations.

Sa Ight Worshipfull, my dutie remembred vnto you, with prayer to God for the preservation of your healths and prosperous successe in all your worthie affaires. My last Letters vnto you were from Typani in Lapland, by Thomas Hare-castle of Hull, dated the foure and twentieth of May, 1611. The other, the nine and twentieth of May from Kyldin neere Camen, by a thip of Hamburg : which forefaid Letters were directed to our Gouernour, the right Worthipfull Sir Thomas

Two Croffes flanding on the land. Pinega.

Smith, Knight. May it now please you further to understand, That the ninth day of July, wee They arrive in came to the mouth of the Riner of Pechora, which the Ruffes call Pechorikoi Zanoros with our 50 the Fortor Pe. ship. And being entred into the aforesaid Harbour, it was full of Ice, and hard to finde : for we found no mayne Land, faue a small Sound behind the Ice. And labouring to and fro along the fame, we fent William Gourdon in our Shallop manned to the shoare : who, as soone as they were landed, espied two Croffes standing on the sand : and presently our men espied three men comming toward them. These men belonged to three Boats of Pinega, which Boats had beene in our companie not long before, at a place called by them, Promoja, by vs, Observe, but by other Writers, Mershouitz. One of these Russes came on board of our ship, and told vs, that wee could goe no farther with our fhip, then the place, that their Veffels, called Conder, rid in; and that to the Towne we must goe in small Veffels; giuing vs directions to layle by, for the better finding of the Towne. After our getting ouer the Barre of the Perborshei Zamoret, and that we 60 were come to an anchor, we rode in great danger by the abundance of Ice, and the strong tide Ship endange-both of the ebbe and floud, which droue the fame to forcibly againft our hip. For, the eleventh of July, lying in foure fathomes water, a piece of an Iland of Ice, fer with Juch a power against our ship, that it droue vs out of our riding into eight foot and an halfe, and nine foot water.

The eleventh of July, Master losias Logan , William Gourdon , and William Pursglone, with our Shallop went up to the Towne of Pechera, taking directions of the Ruffes for the finding of the same. Neuerthelesse, two dayes after their departure from our ship, they had mistaken their way, if by chance they had not met with a small Russe Boat, in which were Russes that directed them. Being about thirty Verits from the Towne, they came to the house of one Valiti Deadoolone, who that this present is one of the chiefest Customers : by which Customers the Towne of Pechora is now gouerned, fince there was no Gentleman fent from the Mofco. This man gaue them good entertaynment, and fent vp with them a man of his owne, fearing that the people would bee amazed at our mens fudden and vnexpected comming. Yet as foone as they Our men ar-

10 espied our people, they were all exceedingly afraid. Divers of them with their women fled in-rive at Towne espied our people, they were all exceedingly atraid. Divers of them with their women neu into the Woods, until that one of the chiefest Customers had fent for them other Customers, who of Peebwa.

People atraid at that time were all out of Towne. But being met together, Master Logan shewed them the of the Entitle. Priniledges, of feuerall of their Emperours granted to your Worships. After the perusing of which, with the good report given of Maiter Mericke, your Agent, and our Nation by one of Colmogro, with whom Mafter Logan was acquainted; the Townel-men were well fatisfied: and appointed our people an House. And many of them sent Bread, Pies, Ducks, Fish, and such like vnto them, entertayning them very well, according to the fashion of the Countrey, with continual admiration how they found the Towne.

Touching the Inhabitants, there is no doubt, but that they will be glad of our trading thi-20 ther. Neuerthelesse, by that which I have heard and perceived, it is very likely, that the same will be distastfull to the Merchants of the Countrey, and others that travell thither in the Winter time, out of many parts of Russia: and also, to them that trade in the Summer time, by Sea to Mongofey, and through the River of Peoza in Cayucks to Perm, Ouft-zilme, and Pechora.

The seven and twentieth of July, our Shallop with a small Ruffe Boat , returned to our ship from Pechora Towne, departing from the fame the Thursday before, being the flue and twentieth of Iuly, in our foresaid Shallop, and Russe Boat, were sent downe by Iosias Logan, flue and fortie bags of white Partridges feathers, and an hundred and feuentie white Foxe skinnes. These White Par-Feathers and Foxe skinnes, are bought of a Colmogro man, to be payd for the lame in Ruffle by Fraxes. Mafter Mericke; and, as I vnderstand, not so cheape as others doe buy there of the Fowlers 30 themselves. But if two men were left, one at Pecbora, another at Ouft-zilme, and Perm, with ready money and a little commodities, much good might be done in the Winter time by buying

of Sables, Beuers, Beuers wombs, Squerrils, Foxe skinnes white and dunne, Losh hides, and Deere skinnes. And for the transportation of your goods to Pechora, or bringing of your goods from Pechora; the fame may be done from Arch-angel vpon the Dayna to Mezen, and from

Mexen to Pechora, Ouft-zilme, and Perm, both by Winter ouer Land, and in Summer through fresh water Riuers, or alongst the shoare with speed, and with a little charge : as by the manner of their ordinary travell appeareth, as it hath beene of a trueth delivered mee, from the mouthes of men of long experience. The last of August, came into Pechorikoi Zameret, or the Hauen of Pechora, fixe and twentie The Fleet of 40 Lodies or Boars, which was the Fleet let out from Ouffing, Colmogro, Pinega, and Mezen : all of Mengely of them being bound for Mangafer: but having been croffed with contrary winds, & the time of the Or Mangal yeere being frent, they gaue ouer their intended Voyage; purposing with the next faire wind, to sayle to the Towne of *Peebora*, there to lay vp their Lodias and commodities till the next

Spring, and themselues with their small Boats or Wherries to goe home, passing from thence up the River of Peoza, which they told me they could eafily doe in a moneths time. As foone From Pechera as this Fleet of Lodias was come to an anchor, many of them came abourd of our thip, wondring to colmogra is a to fee a ship there. They demanded of me, how wee came thither, and what the intent of our monethstrauch comming was : and whither we purposed to sayle from thence. Among these were some which by Ruer.

feemed to be Merchants , who asked to buy Lifts , remnants of Cloth, Cap-clothes, Aqua vita, 50 especially, they asked for small Pewter D. shes, which I understand to be a commoditie fold by SmallPewter them to the Samoyeds, at a great rate. I answered them, that the goods which wee had brought, Diffee, a great were part already at Pechora, and the reft was to be transported thither, as soone as the Vessell came that was hired to carrie the same vp : so that, if any of them were minded to buy of our commodities, they might have it of one of our Countrey-men there. After which, two or three of them demanded of me, whether I would buy any Sables, or Squerrils: which was but a brag. At this time many of them being on board together, some of them were in primate talke, which was my chance to ouer-heare, and was as followeth : If these Neamchines, or Strangers refore to these places, it will be an occasion in short time to make vs to be without Bread. The like speeches I heard a little before, of two men of Pinega; and of an old man remayning in 60 Pechera, that came downe to our ship with the Feathers.

Touching the goods left with William Purselone, Marmaduke Wilson, and the Russe, in regard the same lay in no good place, we were desirous to have hired one of their Ruffe Boats, to have carried the same to the Towneat a reasonable rate; the rather because it was on their way, and their Boats were not overladen: which they with two Boats might have done with eafe: yet

they would not, valetie wee would give them thirtie or fine and twentie Rubbels at the leaft, and that with Condition, that they might distribute into each Boate somewhat thereof. Therefore understanding their unreasonable demand, having a Boate already hyred, wee utterly refused to talke with them any further thereof: especially when they were minded to diuide the goods into all the fixe and twentie Lodias or Boates : which had beene a tricke to

August 1. Huge Ice.

535

The first of August, leaving Master Issas Logan, William Pursulous, and Marmadake Walson, at Pechora, wee sayled ouer the Barre of Pechora in Camoros, directing our course for Nona Zembla, till that wee had runne so farre, and were so inclosed in huge Ice, that in a Day and a Night we could goe neither backward nor forward: And finding no meanes to proceed on our intended Voyage for Nona Zembia, wee cleared our felues out of that place. Truth it is, that this hath beene an hard Summer to all the Rufes, both to them which were bound for Mangezes, and Omeli Filbring: those that went to kill Morses, and fishing of a certayne Fish called Omeli. From the foresayd place wee fet our course for Cherie Hand, intending to meete with the He of Colgoine, and Willoughbies Land. With Colgoiene wee met, but we missed of the other. The seventh of Augus,

William Gow don and I with our Shallop went on shoate. This Coloriene, is a very long and broad

Iland with many Vallies in it. On the same are many Geele, which the Russes vie to take with

Nets in the time of the yeere, before they becouer fledge. In this Iland feemeth to bee flore of

Hawkes. Heere William Gowrdon and our Cooper, caught two Hawkes, whereof one was spoy-

led in the taking, the other remayneth aline.

They land on Geefe.

Two Hawkes

Cherie Lland, See fup.c.2.

The thirteenth of August, wee arrived at Cherie Hand, standing in 74. degrees and odde mia 20 nutes, and Anchored in the South Coue, finding the same very cleare of Ice. And presently after our Ship was at an Anchor, lames Vadin the Master, Willian Gonrdon, and I, went on shoare on the Coue to looke for Morfes. Here we found a certayne Note, which was left thereby Thomas Edge: the effect of which was: That he arrived there with three Shalops from Greenland, and that there he had found the Ship called the Elizabeth, and that hee was gone in her to Greenland the foure and twentieth of July, hoping to finde the goods which hee had left there : and that hee did purpose to returne againe to Cherie Iland with as much speed as could be made. Subscribed:

At our comming to the Iland, wee had three or foure dayes together very fine weather : in which time came in reasonable ftore of Morfes, both at the South Coue and at the North-fide: 30 and wee were in good hope we should have made a fauing Voyage. Neuerchelesse, though there Morfes feare. were store of Beasts, yet by no meanes would they goe on those beaches and places, that formerly they have beene killed on. But fortie or fiftie of them together, went into little holes within the Rocke, which were so little, steepe and slipperie, that as soone as wee did approach towards them, they would tumble all into the Sea. The like whereof by the Masters and William Gongdons report, was neuer done. For lying as they did, and being so shey as they were, it was not possible to doe any good voon them. Moreover, to get them off these foresaid Rockes to make them come on shoare upon their accustomed places, the Master and our men on both sides of the Hand went to drive them away, yet they would not. But by often driving of them out of their 40 holes, we killed as many as wee could. In the end the weather growing stormie and cold, there were few or none of them left. Wherefore seeing all hope of good to be done of them to be past, wee departed from thence the fixe and twenneth of August 1611 for England. We did not perceine any Ship of Hull to have beene there this Summer.

August 26.

Hauing touched the chiefest points of our Voyage, I thinke it meete to set downe somewhat of the State, Commodities, and Trade of Pechora, Ouft Zilma, and Parmia.

Rechora.

Ousting.

The Towne of Pechora is imall, having three Churches in it : and the most part of the people are poore. In the Spring and a great part of the Summer, they live by catching of Partridges, Geefe, Duckes, and Swannes, of which they every Summer take a great number. The flesh of these Fowles they salt, and line of them the most part of the Winter. But the feathers of the said Fowle they gather together, and fell to the men of Colmogro, Oufling, and others, that come e- 10 uerie yeere ont of Ruffia to buy the same : Some of them give a little money before hand to the Fowlers. Which must be done with great care as the times are now. One Menfed a mans fonne of Pechora, whose Father is a man of great dealings, told mee, That they fold white Partridge feathers to men of Colmogro for readie money, at fine Altines the Poul, and Duckes feathers (among which was Downe) they fold now for feuen or eight Altines the Poud. Likewise hee told me that in former times the Ruffes that vied to trade thither, before the people of the Countrey knew what Commodities were worth, had commonly a Poud of Partridge feathers for of their Pence, two pence of their money, and a peece of cake Sope worth at Colmegre ten pence of their money. So that the chiefest Commoditie and best cheape is Feathers, being bought at Pechera with readie Ruffe money of the Fowlers themselves, and not of the Ligers there, that vie to fell them 60 A great filhing to vs at Archangel on the River of Duyna.

weight. An Alteen is fine

A Poud is 37.

Moreouer one hundred English miles on this fide of the Towne of Pechora, is a place called by furiof August, them the Boluano, where they take great store of Salmons. But it is alwayes the first of August

before they begin to cast out their Nets. And oftentimes toward the later part of the Summer. they have such store, that they are sold ordinarily for foure-pencea Fish, and sometimes for a penie a Fish of their money. Yea, in a plentifull yeere, I haue beene told, one may buy whole draughts of Salmons for a very small summe of money. The Salmons heere are fat : three Fishes weighing commonly a Powd and no more. The best fort of the people of Pechora, vie to preferue a great quantitie of their Salmon with a little falt. For they falt eightie, or one hundred Fishes with a Powd of Salt and many times in plentiful yeres, much Fish is cast away for want of falt: which they are loath to bestow when Salt is deare.

CHAP.9. Trauelling Deere. Ruffe Merchants. Commodities, Provifions.

This Salmon is carryed by the Pechora men to Mozen in Sleds, drawne with Reyne Deere-Ic But if they be minded to carrie the faid Fish from Mezen to Colmogro, then they carrie the same from thence with Sleds drawne with Horses.

Also many men of Colmogro, Pinega, and Mezen, buy Salmons at Pechora, and carrie it in the Winter time to Mezen, to which place they pay from Pechora for the hyer of a Sled and a Reyne Deere, ordinarily ten Altines, being twelve dayes journey : and from Mezen to Colmogro, being fixe dayes journey, they pay foure-pence a Powd at the most. The Deere that trauell from Pechora to Mezen, will not draw about feuen Powd weight. This way is trauelled every Winter twice. The first is fixe or eight weekes before Christmaste. And the second time is two or three weekes before Shrouetide : which bee the times that they very diligently observe to fell the Salmon in. Most part of the men of Pechora, have every one his owne Deere to travell with. And 20 fome particular men of the better fort haue twentie or thirtie Deere, which they let out to hyer Trauelling in the Winter time; and in the Summer time they put them foorth to the Samoreds to keepe, Deere, Also when the Winter way is set and beaten, many Merchants and others come out of Russia to buy Sables, Beuers, Beuers wombes, Squirrels, blacke, white and dunne Foxes, of which in the Winter time is flore, brought thither by the Samoieds round about those parts : which Trading is in the Wintertime and not elfe. The chiefest Ruffe Merchants or Furriers that vie their

parts, I have beene told, are the Obleazoues, the Sheperkins, and the Yeadomskoies. The Com-

modities carryed by them, are red, and yellow Cloathes; but chiefly Ruffe money, with which they buy Commodities there of the Russes, as well as that which they buy of the Samoieds

The Commodities carryed from Volochda, Oasling, Colmogro, Pinega, and Mezen, to Pechora and Mongozei, are Meale, Bacon, Butter, Ote-meale, Tolockno, and Salt, with some small quantitle of Yeasts and tanned Leather, with some Cloath, and other of our Commodities. These Commodities at Mongozei are fold at great rates. But at Pechora, Commodities are fold sometimes deare and sometimes chèape, in respect of profit. For if the Fleet, being at least thirtie Boates that fet out every Summer for Mongozey, laden with thele Provisions and Commodities aforesaid, bee croffed with contrarie windes; and that by the latenesse of the yeere they cannot reach to Mongozer, but are constrayned to leave the same and come for Pechora, (as this yeere 1611, they were:) Then commonly Meale, Bacon, and such like Commodities with them are not deare. For by report a little quantitie of Meale doth serue all those parts. For the greater Fishia stead part of them live of fresh Fish fod and dryed in stead of Bread, of which Fish they have plentie, of Bread. Likewise, there vieth not to goe from Colmogro with these Prouisions, about two Boates in a Summer directly to the Towne of Pechora: especially fince the Towne was burnt, and that there

was no Gouernour in the same.

Also by the Mongozey men it did appeare, that there was no likelihood for them to veter that quantitie of Commodities at Pechora, at any rate. For it there had, there would not have resolved to lay vp their goods in Ware-houses till the next Spring, and then to proceed for Mongozer.

Further from the Towne of Pechora, is a place called by the Ruffes, Ouff Zilma. This is, by Ouf Zilma. the description given vnto me in distance from Pechora, as Oussing is from Colmagno: and is likewife to bee trauelled by water against the streame : And in Winter time it is to bee trauelled in 50 Sleds drawne with Reyne Deere. In this place of Onft Zilma, is great store of Squirrels, Beuers, and Beuers wombes, Foxe skinnes white and dunne, and other Furres, but chiefly Squirrels, of which is great store by all mens report, that I have talked with all. So that having a man in the Winter time at this place, a good quantitie of Squirrels and other Furres, may bee provided at a reasonable rate. Moreouer, heere are to be bought Losh-hydes, and Deere-skinnes, which in the Winter time are brought to this Towne of Ouf Zilma from Perm, which is not farre from thence. But to buy Losh-hydes and Deere-skinnes, the best course is to goe from Oust Zilma to Perm, and to buy them there, where one should bee sure to have Chorse, and at a farre better Perm, rate. Also those that wie to come out of Ruffis in the Winter time to Perso, to buy these foresaid Hydes stoward the later part of Winter carrie all these Hydes by Sleds, some two or three dayes 60 Iourney from Perm to the fide of a certayne River, neere vnto which is a small Towne or Village; whereas foone as the Ice is gone, they have small Dorshenicks and Floates, on which they

lade their Hydes, and being out of this River, they enter into Disyna, and transport them to Colmogro and Archangell. Likewise being at Pechora, Oust Zilma, or any of those parts, there is in the Winter time to

ı.

bee had among the Samoyeds, Elephants teeth, which they fell in pieces according as they get tecth, whence, it, and not by weight. And I have beene told, they fell the same at a very small rate. It is called in Ruffe, Mamanta Kaoft. Thus much may suffice at this time to bee spoken of Pechora, Ouffe

Now I will fet downe as I have beene enformed by divers Ruffes, the Names of the chiefest places which they vie to fayle vnto from Slobodes, an Hauen fo called in the Province of Me. zen, to the Pechorshoie Zauorot, orthe Hauen of the River of Pechora, and the Diffances to each place : with a Direction how to layle from Pechorskoie Zauoros up to the Towne of Pechors.

I will also set downe the Ruffer layling from the forelayd Pechanikoie Zaworet, to the Tomborskeie-share. And from thence to the River of Ob : and thence to Mongozer.

I will likewise set downea true Direction, to goe by water in their Boates called Contes, through the River of Peona, and other Rivers , till they come from Mexen to Ouf Zilma,

Likewife I meane to write of the Samoieds, travelling from Vaggats to the parts of Mongozes, in the Winter time, and from thence backe agains to the forelayd Towns of Mezes, called Slobodca.

Lastly, I will intreate of such Commodities as are to bee had at Mezen, with the speedie pas fage from thence to Colmogro by Sea, or by Land in the Sommer time. And it is as followeth.

The things aboue mentioned, that I have not seene my selfe, I have not sleightly set downe from the mouthes of one or two, but from the mouthes of many ancient men, well experienced 20 in the Trauelsand Trades of all these parts, which Master I ames V adam the Master of our Ship can likewise witnesse. Therefore if the same may bee any way beneficiall vnto the Company, and that thereby I have discharged my dutie vnto your Worships, I shall bee heartily glad thereof, Thus fearing I have beene ouer tedious by my rude Letter, I rest, with my heartie prayer vnto Almightie God, for the happie preferuations of your selues, and all yours. Written on Shipboord, the last of August, 1611.

Your Worships bumble Sernant to command, RICHARD FINCE.

### The Names of the principall places, which the Russes sayle by from Mezen to the Pechorskoie Zauorot, or the Hauen of Pechora, 1511.

Rom Mezen to Candinos, with a faire wind and fliffe gale, is thirtie houres fayle: They fay-Fling commonly almost 40. leagues in foure and twentie houres, according to which it is 50. leagues. From Candinos to the Ile of Colgoie, is as before thirtie houres fayling, and after 40. leagues in foure and twentie houres, is 50. leagues. From Candinos to Promoja or Obscure, is twentie houres fayling, or 35. leagues. From the Ile of Colgois to Colocol coun, is fifteene houres 40 fayling, and reckoned as aboue appeareth, is 25. leagues. Along the shoare of this place are heapes of Sand, in the forme of Bells. Therefore the Ruffes call this place Colorol-come, being derived from Colocol, which in English fignifieth a Bell. From Colocol-coma to the Peasanestsa, is three houres fayle, or 5. leagues. This place is onely a small Brooke which they vie for a Sea-marke, more then for any benefit is to bee reaped at the same. From Peafancetfa to the Peeborskoie Zamoret, is fixe houres fayle, or 10. leagues. So that from Colgoie lland to this forefayd Pechorskeie Zaworet, is not about 40. leagues at the most.

## A direction to Sayle from the Pechorskoie Zauorot, where wee rode with our Ship in August 1611. to the Towne of Pechora,

Dolgoie Iland in

Rom this Pechorskoie Zanorot, they sayle into the Sooboie Mora, or Drie Sea, and not before: I firring away from hence South-west and by South, and in a faire gale of Winde, in source houres they come to an Iland called Dolgoie. This Iland is reported to bee three or foure Raffe Versts long, having on it in some time of the yeere many Geele, which the men of Pechora take before they bee able to flie. From this Dolgois, they flire away South South-west; and sayling this course with a faire gale of wind, in eight or nine houres sayle they come in sight of the maine Land, being an indifferent high Land. This Land is called the Bolnamon; and this is 20. leagues at the most. This Boluanon they have on their Larboord side. Neere this place are divers that inhabite in Raffe Houses: where in the Summer time they lye a Fowling, and fishing of a certayne Fish called Omes, which are like our Maccarels. If need bee, heere a man may have a guide or

## CHAP.9. Greene Hands. Tbicke or troubled River. Greene Lake.

good infirmations to conduct him to Pechora Towne. Hard by this Bolumon, is the Oufile or barre of the entring of Pecbora River. For as soone as you are over this barre, you come into the Rivers mouth, which leadeth to Perbora Towne. If if bee thicke foggie weather, then one of them continually foundeth the depth of the Channell, keeping as neere as they can in the deepeft water : and in fo doing, they feldome miftake their way, fo that they ftirre away West from the Belianmen to the Rivers month, keeping the Land on there Starboard fide. And by all mens report, from the Balmanon to Parbona Towne, is with a faire winde and fliffe gale, not about twentie houses layle : which according to their layling, is about three and thirtie leagues. And it is not about fiftieleagues from the Pechershoie Zaneret, where our Ship lay, to Pechera Towne.

The names of the places that the Ruffes Sayle by, from Pecharskoie Zauorot, to Mongozey : with the manner of their Tranell, and Distance betweene each place, or time of Sayling, Halling, and Rowing Unto the Came.

Rom Parler those Zampes to Marphepous Ofrens, or Hand, is with a faire wind and fiffe gale, Maphepous O. Lat the most thirtee houres sayle, which being rackoned as before; rafter fortic leagues in four from. and swentig hours is fiftie leagues to which they furre away East From Marphyone Offrone to Touberhole the Toutiershoie-flowe, is mine hours sayle or fifteene leagues. When they are come to this Iland, Shore. they fir away rom thenge Bail to the faid Toubor keis four. Alfo in cleere weather from Mat. The Meedans pheyon Offices, they can be the maint Laul, with the Mendonetiche Zamers: where the two the Zames:

Hands be called the Zalessies or Grossellanis .. to which lands many of the Ragios refore, to where Hambstake a kinde of Fishes, called Gonels, which are like Maccarels : of which heere are Rote. This The ewo Imaine Landthey have on their right hand or S athourd lide, lying South from Marphrone O. lands called from. Alio to the Southward of the Marphrone Offices, is another hand which the Reflex call Zelentie, or Dalgone, that is, the long Hand. So that there are two Dolgone : the one, within the Peebershois the Greene I-Zaueres, entring into the Saskey Mora, or Dru Seu : The other is Chie, which is betwitt the Delgae Officute Mapherone Offrene, and the Tongarkere-bare ; lying as before was layd, South from the fayd or the Long I-30 Marpheyone Offrone. From which iland in a cleere day they can fee the Land of Vajgars, which land. lveth on the Larboord fide, being very high Land. So that furring out-right, in the middle betweene the Mondones here Land on their Starboord, and the Land of Vargats on their Larboord tween the measurement of the property of the state of the may Oftrone, or Meaftury Island. Further it is to bee immembred, that as foone as they enter this from any Island. Carriese Goods or B y, they tayle vp a Ruser, leaving this Bay on their Starboard : which River And Hand.

40 bringeth them into the Mostneya Ress. which fignifieth the thicke or troubled River. From Mostneya Ress. Cernicis Geobs to this Mosseya Rea, is 20 leagues. Likewife, being a little paft the Twoor their. One Thicke There, there may bee described an high Land, which they call Second Londs, that is, The Howley. sereb. And being over the Mostnoya Reca, which they are eight dayes and eight nights in halling along the shoare by the Rope or Beachana, they come into two Lakes, which two Lakes from one end to the other they commonly row over in one Day or two Tides: the same not being about ten or twelve leagues. Having gotten to the end of those two Lakes, they come to a The Newbie. place called the Nanologe, which fignifieth an Ouer-hall. And it is almost two hundred fathonis, or foure hundred paces in length : And having emptyed their Veffets, called Cosches, laying poles under them, with the Companies or men of foure or fine Boates, having twelve or thurteene men in a Boate, they hall their Veffels over, launching them into a third Lake, which they

call the Zeleney Ofere, that is, the Greene Lake. There Querahalls conftraine them to confort Lake. themselves into Companies : otherwayes they could not get this way to Mongotes. At the and of this Zeleney Ofera, or Greene Lake, they come into the Zeleneya Reca, or Greene River, in- Zeleneya Reca, to which they runne with the ftreame, being often compelled to emptie their great Boates with Rose fallah their Lodias, or Wherries, laying their Goods vpon the shoare : which being done they row into 06. their great Lodias ouer the shoalds emptie ; and having got ouer the shoalds, they bring their 20 ods on boord againe, And thus they doe in divers places of this Zelenga Reca. or Greene River: by reason whereof they are commonly ten dayes from the Ouer-hall, before they can get through this forelayd River, which is all with the ffreame; but the Diffance hereof cannot yet

60 bee perfectly learned. Being come to the end of this Zeleneya Reca, they enter into the River of The River Ob. Ob: and having rowed a little way up the fame, they come to a place which they likewife call Zaueret: which fignifieth a turning, winding, or entring into a place. From this Zaueret, they The Zaueret in turne into the Tanze Reca, flirring away South to Tanze River; but it is foure and twentie houres fayle, or fortie leagues from the River of Ob, before they come into any part of the Tawes Tong Read,

#### CHAP. X.

The Voyage of Master Iosias Logan to Pechora, and bu wintering there, with Master WILLIAM PVRSGLOVE, and
MARMADVRE WILSON. Anno 1611.

He first of July, William Gurdon, Richard Finch, and William Pursglone, went on The former thoare at Snatinefe, where two Croffes stand. The second, were weighed anchor part of the againe, and flood into the Bay because of the Ice: and that night wee went on Voyage is hoare againe. The third, we weighed anchor, and stood it about Swatinofe. The anoide redious fift, we food to the Eastwards fine leagues more, and about twelue of the clocke repetition, at night, wee were thwart of the lland of Toxar. The tenth, at eight of the Toxar.

clocke at night, we weighed, and went ouer a Barre, at two fathomes, and came into Harbour, where wee anchored at ten of the clocke in the morning in flue fathoms, having fands round about vs , being land-locked. The eleventh , my felte , William Gurdon , and William Purfglone, with fixe of our men more, departed from the ship with our Shallop, to goe vp to the Towne

The fourteenth, wee arrived at the fishing house of one Enan Vasilion sene fowban, where the Pufferent people were afraid of vs, and were ready to runne away: but we spake to them, and gaue them fome Biscuit and Aqua vita, and they fod vs some fish, and shewed vs our way to another Fishery : but they ran away from vs, so we departed on our way. The fifteenth day, at soure of the clocke in the afternoone wee met with a Raffe, that was borne at Ufting, who gaue vs Milke, and fuch things as he had, and we gave him some Biscuit, and some Aque vite, and hee directed ws vnto another Fishery, about some five miles from that place where wee arrived, about sixe of the clocke the same night. But comming alhbare, we found not any, saue one man, who after some conference had with vs, and giving him some Bread, and some of our Aque vite, hee told vs, that the Master of the house, with three of his sonnes were hunting of Duckes, and that 30 their wines were afraid, and were runne into the Woods to hide themselues, leaning a young childe behind them for hafte, So he brought vs into the house, where by that time that we had flayed an houre ( because there were so many Muschines, which are like vnto a Midge, and fline most horribly, so that we were not able to fray without) the Master of the house, and his somes came thither, who at the first were afraid, thinking we came to rob them. And they were about to shoot our men in the Boat; but one of our men holding wp a Biscuit cake, they then came to them, and spake voto them; but our men not voderstanding them, made them signes to the house, where my felfe, William Gurdon, and William Pursglone were: who, when they came into the house, being yet afraid, they came in one after another. Now, when we had faluted them after the Ruffe manner, they asked vs of whence we were, and for what cause we came thither: 40 whereunto I made answere, that wee were English-men, who because of the troubles in Russia.

came thicher to feeke a Trade, having heard divers times of the fame of those parts. Then hee replied, that in times past those places had beene good for trading : but now, by reason of a bad Gouernour, in those troublesome times, vpon a spleene he had fired the Towne, and burned above an hundred houses: and so by that meanes they were fallen into pourty, and trading decayed, by reason of his great exactions. Yet hee said, that they have great store of Salmon, and that the last yeere they got about 1,000. Salmons, and in the Winter is their chiefest Mart. For then the Samojeds come thither from diners places, and bring Sables , and Beauers , white Foxes, Rofamackes, Feathers, and fome Squerrils. So having hipped with him, we gave him a gallon of our Aqua vita, and some fortie cakes of our white Biscuit; and three or foure pound of Railins: for we heard, that he was one of the principalless men in the Towne. Then desiring 50 his fauour, he holpe vs to a man to goe with vs vp to the Towne, because of the fearefulnesse of the people, which they conceine through the Warres of the Poles: and so wee departed from thence that night to the Towne.

The fixteenth, in the afternoone we arrived at the Towne of Puffozera, where wee found not many people, confidering the number of houses there, which are betwixt fourescore and an hundred, being of wood, built after the Ruffian manner, and they are jubiect vinto the Ruffe, obferting all their Rites as doe the Ruffes. The people were all abroad (tome, in getting of Morfes Oyle, and Belougaes Oyle, and some fishing of a fish called Ometta, which is a very sweet fish, and some hunting Duckes) saving the Customers, and three or soure more, who were likewise afraid of vs, although we had one of their owne people with vs, and were ready to flee away. 60 So we feeing their fearefulnesse, caused their man to goe first on shoare with vs three aboue mentioned, not permitting the rest of our men to come on Land as yet : then hee calling to them, they stayed, still peeping from behind the corners of their houses, vitill at the last there was a Ruffe, one of Colmogro, that had wintred with them, who knew me, and had feene me fome two

yeeres before at Cola in Lappia, at his Vncles house. And so he encouraged them, speaking greatly in our commendation, thewing them, that I was a Merchant, and came to trade with them, and not with any intene of harme: for hee knew mee very well, and told them, that I was at. Cola foure or fine yeeres together, and lay at his Vncles house. So he came to me, and tooke me by the hand, asking me how I did, and told me his name, and how hee had seene mee with his Vincle at Cola. Then I called to mind, that I had feene him there, and so we grew acquainted; and he went with vs to the Custome-house, where staying an houre, at length the Customer came: and after many questions had concerning our comming thither, I craued licence, that foure of vs might winter with them: which they denyed, alledging that they durft not without the Emperour of Roffis his licence. Whereupon I answered, that the Emperours Maiestie, when he was 10 raigning, was very gracious vnto our Nation, aboue all other strangers; and shewed what great prinileges hee had bestowed on our people: and how by the Englishmens meanes at the first, what a trade is now at Antania, and what profit came, not onely into his Maiesties Treasure, but also into all parts of his Dominions, which in time might be brought hicker: and withall shewed the Emperours primitedge. Wherefore then they began to put away feare, and willed vs to flay fine or fixe dayes, vntill he had fent for the chiefeft men of the Townes-men, who were abroad. and then they would give vs an answer. Then I desired, that we might have an house to be in, and not to flay without doores. So he gaue libertie to any that would, to entertaynevs, where to there was one Calless that made answer, that he would: whereupon wee went with him, and were in an Ambar of his, vntill wee received answer from them. In the meane time wee 29 made much of them, and feafted them with our Aqua vite, Biscuit, and Figs, that we might the better obtayne their loue.

The foure and twentieth, the Customers came to gine vs our answere, and told vs, that they had concluded that we might flay if wee would : but they must write vp to the Maske of our being here. So we thanked them, and gaue them such entertaynment as we could, and sent prefents to fixe of them of the chiefest, which they tooke very thankfully, and promised what fauour they could. So this night I made ready my Letters to fend for England.

The fourth of August, fine and twentie Lodyas arrived at the Towne laden with Meale, and others which were bound for Molgomfey: but by reason of contrary winds, they were forced into Pechora, and came up to the Towne of Puffoxer, and unladed to make fale. Pale baprized

The fixe and twentieth, we removed from the house where we were at the first, vnto a Poles house, who is christened Rufe, where we are to remayne all the Winter.

The nine and twentieth, the frost was so strong, that the Ozers was frozen over, and the Ice drining in the River to and againe, brake all the nets, fo that they got no Salmon, no not fo much as for their owne victuals. The second of September, the frost brake vp againe, and it was open weather. The eight of September, there was a Soyma, which the Towns-men bought, that went downs the River to have gone for Ingeria, and had a faire wind : but they neglecting two dayes fayling, that would have carried them forth of the River to the Sea, the wind came contrary, fo that they were wind-bound, and could not get any further: and on the ninetcenth, game ouer their Voyage, and came up to the Towne.

The thirteenth of October, the frost was so extreme, that the Ozers flood in one night, that men did walke on it the next day, and fo continued all the Winter after.

The twelfth of November, there went two men of Penega to Ufi-zilma, to buy Squerrils, and Beauers, and other commodities. The thirteenth, the Sunne arole at South and by East by the Compasse, and set at South-west and by West.

The foure and ewentieth, there went divers men, with at the least, three or fourescore Sleds Slabades Mart. drawne with Deere, to a place called Slabades, where they hold a Mart, from the beginning of December to the middle thereof : and they carried fresh-water fish thither, with whom William Purselone went into Russia. The fixe and twentieth, the Sunne arose at South and by West by the Compasse, and fet at South-west and by West.

The first of December, the Sunne arose at South and by West Westerly by the Compasse, and fet South-west and by West Southerly. The fourth, the Towns-men of Pechera went over land into Ingeria, to trade with the Inhabitants there, and the Samoyeds.

The eleventh, Marmadake Wilson faid that he faw the Sunne, but it was but the way of the Sunnes beames. The thirteenth, I faw the Sunnes beames my felfe, but I could not fee the Sun it felfe, although I watched it very strictly. The fourteenth, it was snowie, and stormie weather, and continued so vntill the foureand twentieth day, which was close weather also.

The fine and twentieth, being Christmas day, I saw the Sunne, and it rose at South and by West, and set at South-west and by South, it having the neathermost part of it all the way init with the Horizon. The fixe and twentieth, it was flormy and fnowy weather, and fo conti- 60 nued vntill the end of the moneth.

The fecond of Ianuarie, the Sunne arose at South somewhat Westerly, and set South-west a little Southerly, it mounting a pretie height aboue the Horizon.

The fift, William Purselone returned from Colmogro. The eleventh, the Sunne arose at South by East by the Compasse, and fet at South-west and by West.

The twelfth, there came a command from the Patriarch, that there should bee a generall Fast, Generall Fast both for young and old, not exempting the fucking babes; which began the thirteenth, continu- for three dayes ing three dayes space, they neither eating nor drinking, so much as water, neither admitted they very first. their fucking Babes, faue those that fainted, to whom they gaue a few Figs and a little water.

The nineteenth, the Inhabitants of Puffozer that went into Ingoria, returned from thence. bauing had but an hard Voyage, by reason of the Warres which the Samoyeds had among st themselves: so that they durit not goe into Molgomsey, where they catch the most part of the Sables which come into Ruffia.

The three and twentieth, came the Carratchey, which is the chiefe of the Samoyeds, but they In had no commodities to speake of, by reason of the Warres: so that they neither durst trade with the Samojeds of Molgemfey, neither hunt for the Sables themfelues , which at other times they were wont to doe. The thirtieth, I had the chiefe Carratchey, his fonne, his fonnes fonne, and his brothers fonne at Dinner, and had fome conference with him, who told mee, that they had feene ships in the Vaggats, two yeeres one after another: but they durft not bee feene of them, but fled from them : for the Ruffes told them, that they would kill them, or carrie them Ruffes fraud. away prisoners. Yet they seemed to be glad of our comming, when they saw our behaulour and the entertaynment that they had of vs: Neuertheleffe, they are very timerous, and vnreafonable couetous, as by more acquaintance I perceived by them.

The second of February, the most part of the Samoyeds went to Slobodea with their commo- February. 20 dities, because in the Summer they had beene together by the eares with the Samoyeds of Calle-Samoyeds nofe, and had flayne one or two of them : wherefore they went to agree with them, and to quirielle

pay ranfome for fome of their men that were taken afterwards. The fifteenth, the Sunne arofe at South-east, a little Southerly, and fet at West and by South Westerly. The fixteenth, the Sunne arose at South-east, and set at West due by the Compasse

as I could fet it, the variation being two points Westerly : for, at a South South-west, the Sunne Veriation. commeth to the Meridian.

The twentieth, I had conference with a Ruffe, concerning their trade of Molgomfer, who had The report of beene there twice, and he was the first that euer attempted it, and none hath beene farther then a Ruffe, a great beene there twice, and he was the first that ever accomplete to, and note has beene that words. And he told me, that their courie from Medensky Zanores, at the mouth Trauellet of the way from 30 of Pechera to the Eastward, to the two Ilands called Zyelenfa, is two dayes and three nights di- Pecherato Ob. flance, fayling with a faire wind. From thence to Broin-vinnofe, three dayes and three nights Medenston Ze failing with a faire wind, which is within the Streight of Vaggars. And from thence by an Hand, word. or rather a Rocke, called Socolia Londia, leaning it on the Starboord fide for feare of Rockes, Zyelenja two fill keeping your coarse North-east, vntill you come to a long Point on the Starboord side, Breit vimele, with a fand lying off into the Sea three miles, fome fine or fixe dayes fayling. Which when you Socalia Lordia have gotten about, you must hold your course somewhat more enclining to the South, fine or six A long Point, daves more : and then you shall come to the Riner of Ob; against the mouth whereof lieth an From Medem-Hand: but you must keepe the Sea-boord of it, by reason it is should betwist it and the Mayne, it a Zaustatto
The Land all alongst the shoare is a fine lowe Land, and the going into the River, is on the East

Cola in Lappia.

yeeres before at Cola in Lappia, at his Vncles house, And so he encouraged them, speaking greatly in our commendation, thewing them, that I was a Merchant, and came to trade with them, and not with any intene of harme : for hee knew mee very well, and told them, that I was at Cola foure or fue yeeres together, and lay at his Vncles house. So he came to me, and tooke me by the hand, asking me how I did, and told me his name, and how hee had feene mee with his Vincle at Cola. Then I called to mind, that I had feene him there, and fo we grew acquainted: and he went with vs to the Custome-house, where staying an houre, at length the Customer came: and after many questions had concerning our comming thicker, I craued licence, that soure of vs might winter with them: which they denyed, alledging that they durst not without the Emperour of Ruffia his licence. Whereupon I answered, that the Emperours Maiestie, when he was 10 raigning, was very gracious vnto our Nation, about all other strangers; and shewed what great primiledges hee had bestowed on our people : and how by the English-mens meanes at the first; what a trade is now at Arkania, and what profit came, not onely into his Maiesties Treasurie, but also into all parts of his Dominions, which in time might be brought hither: and withall shewed the Emperours printledge. Wherefore then they began to put away feare, and willed vs to stay fine or fixe dayes, vntill he had fent for the chiefest men of the Townel-men, who were abroad. and then they would give vs an answer. Then I defired, that we might have an house to be inand not to stay without doores. So he gaue libertie to any that would, to entertayne vs, whereto there was one Calless that made answer, that he would: whereupon wee went with him, and were in an Ambar of his, vntill wee received answer from them. In the meane time wee 20 made much of them, and feafted them with our Aqua vite, Biscuit, and Figs, that we might the better obtavne their love.

The foure and twentieth, the Customers came to give vs our answere, and told vs, that they had concluded that we might stay if wee would : but they must write up to the Maske of our being here. So we thanked them, and gaue them fuch entertaynment as we could, and fent prefents to fixe of them of the chiefest, which they tooke very thankfully, and promised what fauour they could. So this night I made ready my Letters to fend for England.

Frost in Au-

The fourth of August, five and twentie Lodyas arrived at the Towne laden with Meale, and others which were bound for Molgomfey : but by reason of contrary winds , they were forced into Pechora, and came up to the Towne of Puffezer, and unladed to make fale. The fixe and twentieth, we removed from the houle where we were at the first, vnto a Poles Pole baptized

house, who is christened Russe, where we are to remayne all the Winter.

The nine and twentieth, the frost was so strong, that the Ozers was frozen over, and the Ice driving in the River to and againe, brake all the nets, fo that they got no Salmon, no not fo much as for their owne victuals. The second of September, the frost brake vp againe, and it was open weather. The eight of September, there was a Soyma, which the Towns-men bought, that went downs the River to have gone for Ingeria, and had a faire wind: but they neglecting two dayes fayling, that would have carried them forth of the River to the Sea, the wind came contrary, fo that they were wind-bound, and could not get any further: and on the nineteenth, gave over their Voyage, and came vp to the Towne.

The thirteenth of October, the frost was so extreme, that the Ozers flood in one night, that men did walke on it the next day, and so continued all the Winter after.

The twelfth of Nouember, there went two men of Penega to Uft-zilma, to buy Squerrils. and Beauers, and other commodities. The thirteenth, the Sunne arose at South and by East by the Compasse, and set at South-west and by West.

The foure and twentieth, there went divers men, with at the least, three or fourescore Sleds drawne with Deere, to a place called Slobedca, where they hold a Mart, from the beginning of December to the middle thereof: and they carried fresh-water fish thither, with whom William Purigious went into Ruffis. The fixe and twentieth, the Sunne arole at South and by West by the Compaffe, and fet at South-west and by West.

The first of December, the Sunne arose at South and by West Westerly by the Compasse, and fet South-west and by West Southerly. The fourth, the Towns-men of Pechers went over land

into Inseria, to trade with the Inhabitants there, and the Samoreds. The eleventh, Marmadule Wilfon faid that he faw the Sunne, but it was but the way of the

Sunnes beames. The thirteenth, I faw the Sunnes beames my felfe, but I could not fee the Sun it felfe, although I watched it very firictly. The fourteenth, it was snowie, and stormic weather, and continued so vntill the foureand twentieth day, which was close weather also. The fine and twentieth, being Christmas day, I saw the Sunne, and it rose at South and by

West, and set at South-west and by South, it having the neathermost part of it all the way init

with the Horizon. The fixe and twentieth, it was flormy and fnowy weather, and fo conti- 60 nued vntill the end of the moneth. The second of Januarie, the Sunne arose at South somewhat Westerly, and set South-west

a little Southerly, it mounting a pretie height aboue the Horizon.

The fift, William Purigione returned from Colmogro. The eleventh, the Sunne arofe at South by East by the Compasse, and fet at South-west and by West.

The twelfth, there came a command from the Patriarch, that there foodld bee a generall Faft, Generall Faft both for young and old, not exempting the fucking babes; which began the thirteenth, continu- for three dayes ing three dayes space, they neither eating nor drinking, so much as water, neither admitted they very fria. their fucking Babes, faue those that fainted, to whom they gaue a few Figs and a little water.

The nineteenth, the Inhabitants of Puftozer that went into Ingeria, returned from thence. having had but an hard Voyage, by reason of the Warres which the Samoreds had amongst themselves: so that they durst not goe into Molgomfey, where they catch the most part of the

Sables which come into Ruffia.

The three and twentieth, came the Carratches, which is the chiefe of the Samoreds, but they In had no commodities to speake of, by reason of the Warres: so that they neither durst trade with the Samoreds of Molgomfey, neither hunt for the Sables themselues , which at other times they were wont to doe. The thirtieth, I had the chiefe Carratcher, his sonne, his sonnes sonne, and his brothers some at Dinner, and had some conference with him, who told mee, that they had feene ships in the Vaygets, two yeeres one after another: but they durft not bee feene of them, but fled from them : for the Ruffes told them, that they would kill them, or carrie them Ruffes fraud. away prisoners. Yet they seemed to be glad of our comming, when they saw our behaulour, and the entertaynment that they had of vs: Neuertheleffe, they are very timerous, and vnreafonable couetous, as by more acquaintance I perceived by them.

The fecond of February, the most part of the Samejeds went to Slobedes with their commo- February. 20 dities, because in the Summer they had beene together by the eares with the Samoyeds of Calle- Samoyeds nofe, and had flayne one or two of them: wherefore they went to agree with them, and to quiriell. pay ransome for some of their men that were taken afterwards.

The fifteenth, the Sunne arole at South-east, a little Southerly, and fet at West and by South Westerly. The fixteenth, the Sunne arose at South-east, and set at West due by the Compasse as I could fet it, the variation being two points Westerly : for, at a South South-west, the Sunne Variation.

commeth to the Meridian. The twentieth, I had conference with a Rufe, concerning their trade of Molgomfer, who had The report of beene there twice, and he was the first that ever attempted it, and none hath beene farther then a Russ, a great beene there twice, and he was the first that ever attempted it, and none nature that the fact the Eastwards. And he told me, that their course from Medensky Zanores, at the mouth the way from the way from 30 of Pechora to the Eastward, to the two Ilands called Zyelenfa, is two dayes and three nights di-Pechorato Ob. flance, fayling with a faire wind. From thence to Broin-vinnofe, three dayes and three nights Medenthen Zeflance, 1871ing with a later wind, which is within the Streight of Vogeti. And from thence by an Iland, work. Gailing with a fire wind, which is within the Streight of Vogeti. And from thence by an Iland, work or rather a Rocke, called Secalia Louis, leaving to on the Starboord fide for feare of Rockes. Species wood rather a Rocke, called Secalia Louis, leaving it on the Starboord fide for feare of Rockes. Species are fill keeping your course North-east, vntill you come to a long Point on the Starboard side, Breit ripmese. with a fand lying off into the Sea three miles, fome fine or fixe dayes fayling. Which when you Seculatorming have gotten about, you must hold your course somewhat more enclining to the South, fine or fix A long Point. dayes more : and then you shall come to the River of Ob; against the mouth whereof lieth an From Medem dayes more: and then you man come to the more of or is against the market in and the Mayne, to District and the Mayne, to District and the Mayne, to District and the Mayne. The Land all along it the shoare is a fine lowe Land, and the going into the River, is on the East 40 fide of the Iland. The River is reported to be a Summer dayes fayling ouer in bredth, and is full An Iland. of Hands: whereby they report it to be should. Yet, in my opinion, so great a River cannot be Obis full of I-

deepe water, and runneth from the South, how farre as yet it is vnknowne. Although that hee yowilling that affirmed, that he himselfe had sayled at the least three weekes up the River: and all along as we should goe they went , they met with fundry forts of People, differing in Language one from another, to 06. 50 which they call Sampeds. Yea, and the People there did cerrifie them, that vp more to. The River which they call Samogeds. Yea, and the reopie these did certine them, that vp more to-wards the South, there are Tarrar; inhabiting, who ride vpon Horles. And hee affirmed, that Samogeds, they found pieces of Ploughes that had beene driven downe the River by the flouds, caused Horiese by the Snow melting from the Mountaines. This River is very high Land, and deepe water on Ploughes, both fides. Into this River, on the East fide falleth another River, called Tinguffer, and the In- The River of habitants thereof are so called: whereby I conjecture, that it is not farre from the Citie the Tingustry. Tangut in Carbay. Thele Tinguifes report, that there is another hage River, that trendeth to Tangut mentithe Southwards, which the necke of a Land parteth from the River of Tinguffey: wherein oned by Palo, a there are great ships, not valide vnto the Ruffer ships, that sayle in it, haung many Mass and large kingdom which was the sayle in the sayle in it.

Gunnes, which when they are shot off, make all the earth shake with the noyle: which should from Caulog or 60 feeme to be the Chinians, that trade thither in the Summer, and returne backe againe ere the China. Winter doth come. The like also affirmeth another, being a Ruffe, who hath beene in the River The River of Tinguffey, where the people make this report.

The first of March, the Ruffes tooke their lourney from hence, from Puffozer into Ruffia, with March fuch commodities as they bought.

without a mayne channell; which as yet they have not fought for : and therefore they judge it lands, broad

innauigable. Also they report it to bee very plentifull of Fish of duers forts: but the people and should here, and the Ruffer are vnwilling that wee should goe thither. Moreouer, hee told mee, that from the River Ob to the Eastwards, the Land stretcheth East, some fixe or eight dayes sayling The people of more. To the Eastward of the River Ob lieth another great River as large as Ob, and is very the faults are Aprille

The twelfth, the Sunnes altitude by the Que frant was 67. degrees and 40. minutes; and the P. Mozirain 68. de lination, no degrees 52. minutes, which being added, maketh 68. degrees and 30. minutes, degrees 30, or being the true heigth of Puffezer.

The thirteenth, the Sun arose at East and by South a little Southerly, and set at West Northwest. This day the Sunnes altitude by the Quadrant was 67. degrees 20. minutes; and the declination, 1. degree 14. minutes : which added together, maketh 68. degrees 35. minutes : fo that I conclude, that Puffoxer flandeth in about 68, degrees 30. minutes. The eight and twentieth, the Sunne arose at East and by North, and set at North-west and by West.

The eleuenth of Aprill, the Inhabitants of this Towne returned from Slobodca, bringing with

them Rie, Rie-meale, and other prouitions.

The one and twentieth, having conference with a Permack, concerning what commodities were to be had at the Towne of Uf-zilma, he told me, that there were Losh hides, Squerrils, Sa-The report of bles, white Foxes, and Rosomackes. Moreover, he told me, that beyond the River of Tenifer, Teniffey: bethe Land trendeth due East, and then there is a River called Peaseds, and beyond that another, called (atonga, which runneth into Cathay : whole King, thele Permacks and Ruffes call Tentha land trendeth tfar. The River lieth North and South as they of Teniffey fay, but they cannot tell how farre: for, there hath not any beene vp the River, by reason they are afraid of their shot. And this Pelida River. Permack told me, that on the Sea coaft betwixt thefe two Rivers , Peafeda and Catonga, they Catonea Riner runneth out of found certaine stones like vnto Gold , and some like Silver , being about the halfe way betwixt Gold and Sil-

The two and twentieth, we had newes brought that the Ice was broken, in the Pechora, all uer in the mid- along it by the fides.

The ninth of May, the Sunne arose at North-east somwhat Easterly, and set at North somwhat Westerly, it being iust foure houres by the Houre-glasse under the Horizon, The three and twentieth, the Sun did not goe under the Horizon, for it was a pretie height

aboue the Horizon, at a North North-east point of the Compasse: it then being at the lowest. The River Ice The foure and twentieth, we had newes that the Pecbora brake vp, vpon the twentieth day of this instant moneth. The fixe and twentieth, at foure of the clocke in the after-noone, I departed from Pultozer, to goe to Uft-zilma, where I arrived the thirtieth day instant. And the Riuer of Pechora lieth most part North North-east, and South South-west, and sometimes North 10 and South. Uf-zilma, is a Village of some thirtie or fortie houses, and standeth in the height of 66, degrees and 20, minutes. They have Corne growing there, both Barley and Rie; and zilma. Ouft-zilma is in their Barley is paffing faire and white almost as Rice.

The ninth of June, I departed from Vit-zilma backe againe to Puflozer, where I arrived the eleventh of Iune. The one and twentieth, seventeene Somas departed from hence to goe to Molgomfey : some belonging to this place, some to Vft-zilma, and some to Mezen, and Penega. The two and twentieth, diners Boats went from hence to the Sea, to fish for Omelyes and Bealowgaes Oyle. The foure and twentieth, I fent downe William Purfglone to the Sea fide, to 17. Somas de- buy the Oyle which God shall fend them.

The third of July, I received a Letter forth of England, by the way of Colmogro.

The fift, we had newes that the Governour and Souldiers of Tom have burnt the Towne, and fled from thence, by reason they wanted victuals, and their pay: and about three hundred of them intended to come to Uft-zalma, to rob the Inhabitants thereof. This day I was told. that from Puffozer vp Peebers with a faire wind, to the River of Oufe, is three weekes travell : and then up the River of Onfe, to Podcamen, ten dayes, and from thence to Ob, eight dayes. drawne by Deere : and from thence to Berefous, fixteene dayes, which is a Towne of trading. This mine Host told me, that he was a prisoner at Beresona, and at Tobolseo: and hee affirmeth, that Tobolfco is a Citie of great trade, and that the Tofecks, Bowhars, and Tarters, come thither to trade, who bring Silkes, Veluets, Grogran, Sendames, and Kindackes, and that great flore of Cloth, Pewter, and Copper may be vented there. Also there is great flore of Forres, as Sa- 10 bles. Scuerrils, Foxes, Blacke, Rofamackes, and Beauers. He fayth, that from Pofferer to Vade in Ingoria, which is on this fide Ob, with carriage vpon Deere, it is a moneths Lourney, and Notone is on the other fide of Ob; and it is two weekes and an halfe with light carriage or polt. Moreouer, he told me, that Pecbera runneth into Veleka permia, fine weekes journey from Puffozer, and from Veleca permia to Verho touria, nine dayes iourney by Horse and Sleds : and from thence to Tamen by River, ten dayes : and from Tamen to Tobalfee, fixe dayes by the Riuer Irtifh, and is the chiefe Citie of all Siberia. And from Tobolfeo to Somroost, is fixe weekes Intelligence of Iourney up the River Ob, from whence come all the rich Furres which come to Arcania. From the Country. Sourgone to Tome, which is among it the Tartars, is three weekes up the River Ob : and yet none knoweth how farre the Ob runneth further, as he fayth, he was carried these wayes to the Musko, in the beginning of Roffriga his time.

The fixteenth, I was told by a Permack, having some speech with him concerning the Vaygats, that from Medniskoy Zanoros to the Vayeats, is one day and a nights layle with a faire wind. And as you goe forth of the Vargats, there lieth an lland salled Meafino Offrone, not

being farre from Socolia Lowdy : and from Vaygats through Yongorskey four into Oarskey gomba, Scola Londia. (which is a great Bay and deepe) is two dayes and one nights tayling into Movemeny River, the Yomgaring it of course East, somewhat Southerly. And from Mowerney to Sharrappa shar, which is an Inlet, is Mommoy a Ri, halfe a dayes fayling : and from thence to Tomeonome is halfe a dayes fayling , which is an high uer. Land : and from thence to Narome is is a dayes fayling. And there are three little Rivers be Sharrappa Shar. twixt them : and there are Morfes all alongft that shoare, and farther he knew not by Sea. But Yourse he fauth, that the River Ob is a daves fayling right over. And from Zylena reca to the Taz, zamoros, the course is South-east, a dayes sayling : and from the Zamoros of Tax to the Rivers ob. mouelt, is a day and a nights fayling : and there is an Hand in the mouth thereof, being high land. Zylena River. To And from thence vp the River, the course is South-east to the Towne eight dayes journey, to Taz Zawerat. be haled with a rope, there runneth fuch a ftreame. But, ere you come to the Taz River, there Taz River. an Illand in the and you must leave the lland at the Tax on the Larboord fide. And from Tax Town Tax. up the River Volochanco; is fixe dayes journey Eafterly against the streame, vntill' you come to a The Towne. Vollocke, about a mile and an halfe long, Marish ground, and so into another River, some foure Powe River. dayes rowing with the freame, to the Ruer that is called Trowban, which is a great Ruer, and Anliand called falleth into Teniffer, fome three dayes journey more with the streame : at the entrance whereof The River lieth an lland; called by the fame name; whereon there is a little Towne of the fame name, From Hauteronthencedowne the River Teniffer to the River Hantike, is twelve dives fayling : and it is a great ne hout of can

CH AP. 10. Mowmoy River. Indiga River ; deepe water, good Harbour.

Kishayskoy Tsarrstua. The fitt of August, my selfe, and the Boy, went aboord the Lodia departing from Pustozer. August. The tenth, we arrived at the Glombocke, which are the deepe water, whither William Parfegione They depart was come with the Oyle, where we melted what we could, before we departed. The twelfth, I observed in the Gloubocke, and had it on the Quadrant 56. degrees 30. minutes : and the Declination was 12. degrees 42. minutes, fo it standeth in 69.degrees 12. minutes.

The eighteenth, we departed from the Gloubocke, and entred the Dry Sea, and arrived at the Zaures the one and twentieth.

The two and twentieth, we weighed and went out to Sea, the wind at East North-east, but the Gloubecke in sa 20. wind comming to the North-well, we put roomer againe, and came to an Anchor at the Zanerot againe. The foure and twentieth, I observed at the Zawrot, and had it on the Quadrant 62, minutes. degrees no minutes, and the Declination was 7. degrees 26. minutes, foit flandeth in about 70.

The fix and twentieth, we departed from the Zanoros about noon, the wind being at East, the land trending betwixt it & Collections East & Welt, being two Voadaes, or fixty Verits distance. Collections. The feuen and twentse: h, we came to an Handcalled Mezzon Sharry, being fixtie Verits to Mezzon Sharry

the Eastwards of Suatinofe, and it is about ten Verste in length, and two Verste broad. At the East end thereof, Oliner Brunell was carried into Harbour by a Ruffe, where he was Land-locked, Oliner Brunell.

having the lland on the one fide, and the Mayne on the other.

40 The eight and twentieth, we departed from Mezzon Sharry, the wind at North-east, a little gale, but before night it fell thicke, and wee steered away North-west, and about mid-night, it came to the North North-east blowing a very fore storme : so that we were not able to beare our fayle aloft, and having floud under foot, we were fogged into the Bay, and put alware fome two houres before day, upon the long point of the obscure Harbour, about three miles to the Westwards, the wind being at North : where we got all our goods on Land, alwayes looking when the Lodia would have iplic. But, by Gods Almightie Providence, she heate over that Sand, and lay betwixt it and the beach: fo that when the ty de was fallen, the fate on ground, as if the had beene in a creeke, the Sands all dry round about her. Also on the West fide of Snatinofe, in the Bay is a great River, called Indiga, which is, deepe Water, and a good Harbour for a ship, as Indiga. 50 the Ruffes doe report.

The thirtieth, the storme continued all the day long. The one and thirtieth, about noone it blew leffe wind, and at hight we stopped our leakes as well as we could.

The first of September, in the morning wee got our goods againe aboord. The second, in the Septembere morning, we went roomer with the obscure Harbour, the wind being at the North-west, but at noone, it came to the South-east and East South-east, so we weighed, and stood to the Westwards againe, vntill wee came to the River, where wee came on shoare the last yeere: which is called Zenomen, where wee anchored a little to the Eastwards, and ridde the most part of

The third, in the morning we weighed, and stood to the Westwards, but the wind comming 60 to the West South-west blowing hard, and having the tyde against ve, we anchored againe about ten of the clocke on Thursday, being the third day : yet within two hours after, we were forced to weigh, and put roomer to a little River or Creeke, that is, called Creeftons where wee ridde vntill the ninth day. Then we loofed, thinking to have gone forth to Sea, the wind being Eafterly; but it blowing hard, and there running a great streame of fresh water, that it put vs

20 River, and runneth to the East (as it is thought) into Cathay, which of the Permacks, is called they.

on ground againe, wee were in great danger againe of loning all. So wee were forced to get all things on fleare againe, and then got her off the elementh day, and went into the Crakeagaine : and stopping our leakes as well as we could, we got our goods abourd againe,

The fourteenth, the winde comming to the East South-east, wee got forth to Sea with much adoe; and forme after, the winde came to the East North-east, a faire gale: and wee flooditalongst the Land South-east and by South, and North-west, and by North all that after-moone vatill mid-night; at what time we were thwart of Callenge, The fifteenth, about three of the clocke in the morning, the winde came to the North-caft, and blew very hard, so we specied away South South-west, and at night weesfell, with a should, which they faid, is thwart of the Mezen mouth; but I take it, it, was Knocke John.

The fixteenth, in the morning about eight or nine of the clocke, haping carried but an hul-Danielous Stelle locke of our fayle all night, we fell with Danielous Stelle on the Coaft of Lappia, the mind being at South, and blowing hard, so that we went into Harbour at the West of the Hand, there standing five Crosses on it, is being a Rocke: And there are foure Warlocks on the Mayne, and another on a Rocke to the Westwards : yet it is but for Lodyes, and that a bad one also, beeing full of Rockes round about, where we rid vinill the fix and twentieth. Then we departed forth of Daniela Stolbe about moone, and at night we came to Sofnouers, where we rid all night. The feuen and twentieth, in the morning we fell with Churus Nofe. The eight and twentieth, wee arrived at Arkania, where wee landed our Oyle. The nine and twentieth, wee arrived at

Arbenia. Colmorro.

### Extracts taken out of two Letters of Josias Logan from Pechera, to Master Haklunt Prebend of Westminster.

This piece of an Elephants Tooth was fent into Eng-The Sea Naromzie.

Here vie to come buther in the Winter about two thousand Samoieds with their Commodities, which may be such as we dreamed not on yet. For by chance one came to vs with a piece of an Elephants Tooth, which be faid he bought of a Samoied. And heere are men called Tinguffies, whose Commercial beyond the Riners of Obi, and Taes; and borderetb upon the great Riner Yeniffe : which is a good Riwer and a deepe, and falleth into the Sea Natomzie: And it fould seeme it is not farre from China. 30 Therefore yourmay conceine what hope thereis of this Enterprise, if it please God it may be followed as it onghe to be. Thus be feeching Almizhiu God to hilfle you and us . I commit you to the protection of him, who is the giver of all goodsesse, led. 24. 1611.

In another Letter from Peccara, Auguft 16.

Hetescone two or three thoughand Samoicus utitier to stade onto the supplier of the Ferent Moffer, Reformack, Etimines. And bere is caught in September, good flore of Ferent, Squirrels, Wolfer, Reformack, Etimines. And bere is caught in September, good flore of the Semi-Hetecome two or three thonfand Samoieds bither to trade with their Sables, Beauers, Blacke Salmon, Traine of a certagne great filh, called a Bealonga, and Morfles, and Seales Oyle in the Sommer time, and White Foxes and Feathers, I had some conference with a Russe, who sold mee that the Samoieds told him, that there lye Minchins, which in their Language is strangers, buried in the Sand in Coffins, with their armee arrose their keelts which they estimate to be about fixtie yeeres ago: And 40 that they found Writing Tables in one of their pockets, and other small Trifles which they rooke away. The Vayeats is sometimes open and sometimes shut : and upon them groweth Christallof the Mount, Chryfull voon The Ruffes and Permacks reade yearely with them of the River Obi, and beyond. They goe by Sea mthe Ingests to the great Bay beyond Pechota, called Yowgorsky Shar : into which there fall foure Rivers; The Eastermoit mitere of they call Cara Reca, enche Blacke River ; beyond which they passe unto another, Moetnaia Reca, talled Moetnaia Reca; then shey come to a Voloc, or necke of Land, which continues b but three Verfit; The Volce of oner which they draw their Boats and goods, and fo come to another River, called Zelena Reca, or The necke of Land. Greene River which bringeth them unto Obi : Into which on the Easter fide, the River Tacs falleth. making but one mouth with the Riner Obi, being Should, and they report it to bee as broad toward the mouth, as a man can discerne oner, baning many Ilands therein.

Horfes People in Ar-

Moreoner, there is another great Riner, called Yenilley beyond Taes: which they fay, is rather big. ger and deeper iben Obi; and it runnetb up into the Land no man knoweth bow fare : Although they bane disconcred some fourteene dayes rowing up therein: neither can they learne of the Enhabitants thereof bem farre it firetcheth; whom they call Tinguffey timbe are a proper people of themfelatt. And the Samoieds report that they have travelled fo farre, that they came within fight of a White Citie or Greatinging Towns : which found freme to be builded of flore, for they durft not goe to make trial : and they hard great ringing of Bels . Alfo they fay, that they faw beafts, but they were not like their Deere; for they had a great Mane, a long Taile, no Hornes, and their footing was round, not closen, as their Deeres Ma and they afe toride upon then backs; and not to draw in Sieds as their Deere vie to doe: Thefe I aflove my felfe met. Horfac. And for they report, that there came people mets them all made of Iron, 60 then beauty we mer, hands, and logges: fo that neither Arronies, Swords, nor Spences, could enter; which, They are not 41 I commellar, were people in Armonic. For they faid, that the bundred of them they thought were tire from Co. offic to conquer althor Razlem: By thus you may guither, thus they ore not fore from Cassia and Chi-tina and China. 30. Thus have (ficused ones you the greatest factor, and the mercil to the truth that I know Requesting

7011, if you thinke it meet, that the Right Houserable the Earle of Salisbutic might base a Copie thereof. Thus withing you health and profesitie in this World, and felicitie in the World to come, I cease.

### CHAP. XI.

A briefe Relation of a Voyage to Pechora, and wintering there, began in the geere 1611. Written by WILLIAM PVRSGLOVE.

After Iosas Logan, and William Gourdon, having received directions from the Right Worthipfull Company of English Merchants, Trading Russia. The eleventh of Aprill, 1611. departed from Blacke wall in the River of Thomes, in a good thip, called the Amitie; whereof Iames Vadam of Radriffe was Mafter.

The fixteenth of July, we arrived at Puffeners, being much wondred at by the Inhabitants, a Permae received vs into his House, and let ve have a Ware- They were first

house for our goods. We all continued there vntill the fine and execution of July. Then wee received into returned in our Shallop agains to our ship, having a small Ruffe Boate in our company, to carrie Permacks 20 some of the Feathers and Downe, which we brought there, our owne Boat not beeing able to House, carrie all, being pettered with our Prouision, and some Feathers, and White Foxes. Wee came aboord our thip the feuen and twentieth of July, where wee delivered those White Foxes, Feathers, and Downe, and an exceeding rich blacke Foxe skinne, having laded the Ruffe Boate with part of our goods. The reft of our goods they laid vpon the Sand to be fent vp afterward, leaving mee and Marmaduke Wilfon, and an hired Ruffe with them, where wee attended to heare of Bas from the Towne. But Master Lagan not hearing of any aboue a sunne and an halfe, could not get any to come downe to vs; because they feared to goe over the dry or should Sea in their little Boates being laden.

The one and thirtieth, our flaip departed over the Barre, purposing to make sheir Voyage in 30 Nona Zembla, or fome Ilands not farre diftant from thence. At their departure there were five and twentie Coaches or Soyman, in that Road of Pecbers, with at least two hundred men in them bound for Molgomfey; but hindered by contrary Windes and Ice, our shippes being over the Barre, they all came on house to vs; fome threatning, others flattering vs , but after I had bestowed two Bottles of Beereamong some of the best of them, they all went vp to Pastezera: where most of them that had any goods to sell stayed all Winter, and fold their Commodities in barrer with the Inhabitants, and when they could happen fecretly upon any Samoieds, they would be trading with them alfo : which is contratie to the Printledges granted by the Emperour to the Puffacerits. Their Wintering there was no little hinderance to vs for the fale of our goods.

We arrived at the Towne the feventh of August. In mine absence Master Legen had hired August. part of an House of one, called Tiffon Vrian sch, a Polo san, who was turned Russ.

The three and twentieth of November, I departed from Paffezers to goe for Ruffia, at three November, of the clocke in the afternoone, in the Company of certayne Ruffes, Permacks, and Samoieds, His Voyage of which Samoieds were our Guides ouer the Mountaynes: and one dayes journey ouer the Rocks, per-land to which they call Cameni, which are not Rockie Hills, as in Norway, but high Lands, yet in most Commerce. places smooth, and most marith grounds full of little Hillocks, which being covered with Snow Mountaynes & and frozen, did not much annoy vs. Our Argeshey or Caravan were about two hundred and ten Cameri, or Sleds, drawne the most part with two Deere in a Sled. They had also about two hundred spare Rockes. Deere, to ease the wearied. We kept company untill the fourth of December together, having

50 passed two third parts of our way to Slobotca, being the first Towne in the Countrey of Melen, that we faw. And then in company of foure Sleds, having each two choice Buckes, with a Samoied in the fift for our Guide, we left the Argelney, and rid polt for Sloboten, where were arrived He sermeth & the ninth of December, at ten of the clocke at night. In this Towne I found one Thomas Ligar of December an Englishman, who had ferued Mafter Richard Cackes of London, who faluting mee in English, maruelled much to meet me there: and carried me from the rest of my company to his Lodging, Thomas Ligan, and gaue me there very kind entertaynment. The next morning I departed thence in his Sled, hauing over night hired an Horfe to the next Towne, which was fifteenth Verits off : And to travelling day and night, changing Horfes at enery convenient place. I came to Colmogro the twelfth of December : and delinered my Letters from Mafter Iofias Logan our Factor in Paffere. He arrived at

60 ra, to Master Fabian Smith, then Agent for the English Company. Having rested my selfe foure Colmogro, the dayes there, and receined certayne Money to helpe to put off fome of our goods at Pechora, I 12.0f December departed from Colmogro the feuenteenth of December, and came to Slobotca the nineteenth day; the height of the Pole being there some fixtie five degrees. I stayed there till the two and twentieth of the faid moneth, by which time the Permacks and the Inhabitants of Puffoxers,

Winter doe fend Cloth and Money ouer Land.

Slobetca.

Trade with the

Hauing made my prouision for my journey, and taken my leane of Master Thomas Ligon, wee fet forward that night, and rid not aboue five and twentie Verits, to a place where wee found the Argeshey which set out from Sloboica the two and twentieth day in the morning by breake of day. We had better passage in our returne, then we had in our journey from Pustozera, by rea-Show berts retatheir Tra. fon of much Snow fallen in the time of our being in Ruffia, and trozen fo hard, that it bare both Deere and Sleds in all places. Wee kept together with the Argeshey, being then two hundred and fiftie Sleds, till we had pasted more then two thirds of our way ouer the Mountaynes: and 10 then long before day having choien Buckes of the best, wee departed the fourth of Januarie, being eight Sleds in company, and rid post all that day and night following, beeing Moone-light, faue forsetimes for the space of an houre that wee stayed where, the Samoied our Guide knew Mose food for there was good store of Mosse, (which is white) to refresh our Deere. The fifth of Lamurie, we came to Puffezera, having in forcie houres travelled three hundred and fiftie Verits with

our choice Buckes. Our Argeshey or Carauan arrived there after vs the twelfth of Ianuarie.

ny other places Eastward, as Ongoria, Siberia, or Molgomfey; know, by their continuall travell,

The Samoteds being the onely Guides in Winter, either from Paffozers to Slobotca, or to a-

were readie to returne to Pechora with their goods, being Rie, Malt, Hops, Salt, Aqua-vite, and fome course Cloth. Moreouer, divers Ruffes having their Sonnes or Kinimen Leigers there, in

the way, though it be neuer fo thick weather, as also where most store of white Mosse is growing: and according as they find themselues neere vnto some mossie place, be it somthing before night, 20 or within night foure or fine houres before they can come thither : there for that Night they pitch their Tents, being for the most part made of Deere and Elkes skinnes : we had in our companie foute great Tents fet vp, and some twentie under each Tent. This worke of pitching the Tents belongeth vnto the Women. In the meane time the men vnyoakethe Deere, and turne them loofe to digge through the Snow, bee it neuer so deepe, for their food and sustenace. Then the Samoinds (of every Tent one) out of the next Wood, provide as much Fuell as shall serve in turnes for their abode there. First, they set on Kettles full of Snow water, which being welted, Hard loft lod. they drinke thereof every one a good draught : then they feeth their Supper, ving as before Snow water melsed for their Drinke. Our lodgings were vpon the Snow within our Tents, round about the Fire, having vnder vs for our Beds the skinnes of Deere, conered with our day 30 apparell. For all the time of our journey, the Merchants, whether Stranger, Rulle, or Permac, according to the number of them, make prouision of Victuals to feed the whole familie in every Poore Samuelds Tent, every man his day about, together with the Samuelds, their Wives and Children; who carrie all their Houshold enery where with them ; and out of their Sonnes and Daughters, they appoint a watch ouer their Deere, for feare of the Wolfe and other Beafts, which notwithftanding their watch sometimes kill in a night one or two of their Deere, as it fell out two nights in our journey to Slobetca. This Slobetca is a pretie Towne, having in December and Ianuarie, great refort of people repayring thither, as well Rich Ruffer out of many places, with money to buy Furres, as others with provision of Meale and Malt, and other Commodities, to furnish the Puffezerits, as also to buy Fish, to wit, Salmons, Oyle of Bealages, Deere skinnes, 40

and Furres of them. The tenth of Ianuary, the Inhabitants of Puffozera, returned from Trading with the Sa-Samuels of Ou- moieds of Ougoria, on which Iourney they fet forward the fine and twentieth of November : and within three dayes after, came betwixt eight or nine hundred Samoieds with a small quantitie of their Commodities, in respect of former yeeres, by reason of Warre betweene the Samoieds of moiels come to Ougoria, and Molgomfey, who were wont to Trade one with another, and not to watre one against another. So Sables, and other Commodities being scant, the inhabitants fold them very deare : yet notwithstanding, the Ruffer bought vp all, strining one to have them before another, So that after that little money, which we had was bestowed, wee could not doe any thing in barter. Moreouer, the Raffer did not onely informe against vs to the Inhabitants to ftirre them The falle fug. vp againft vs, but also vied the like meanes to the Samoieds to diffwade them from trading with vs, either in their owne Countries, or else-where; alleadging that wee would betray them, and not onely carrie them away to make them Slaues, and robbe them, but also would murcher and destroy all the rest, where foeuer wee should come. The Inhabitants also of Passozera, being incensed by the Russes, doubting wee would enter farther into their Trade Eastward, began also to hinder, and forbid the Samoieds to come to vs. Yet by meanes of our Hoalt being a Polac borne, we spake with divers of the principall of the Samoieds, hee being our Interpreter, and wee our felues understood certayne Samoieds speaking broken Ruffe, and by these meanes we found out more at large the despitefulnesse of the Russes, and the enuie of some of the Inhabitants against vs ; as also their feare, least wee or any other Stranger, should enter into further Discouerie of their trafficking toward the East, but especially about the River Ob. Some fayd we were sent as 60 spyes to betray their Land to the Pole or the Swethen, with whom they then had warre. Some gave counsell to put vs vnder the Water : others admised to fet vs vpon the Sand, where wee Should have beene without all doubt drowned in thort space, others thought best to send vs vp

to the Nobi litie, and to feaze on all our goods to the vie of the State. But divers of the beft in the Towne, with whom wee kept all friendship that possible we could, withstood those bloudie practifes. The Lord therefore bee bleffed. The fifth of March, the Inhabitants of Pufforer went agains to Slobetca, carrying the Ruffes March.

with their Commodities thither.

They returned home the eleventh of Aprill, 1612. The one and twentieth of Aprill, water Aprill, 1612. was first seene vpon the maine River Peshora aboue the Ice, descending from aboue Onstructiona,

May so, the Ice The twentieth of May, the Ice brake vp. The fine and twentieth of May, certayne of the In-brake vp.

habitants of Puftozer, went by water vnto Ouft-zelma.

The fixe and twentieth, lofias Logan with our Hoaft the Polonian, hired a Boate and went toward Onli-zilma, carrying with him certayne Cloath and Copper Kettles, in hope to fell them well there, being intreated in the Summer before by one of their Townelmen to come thither, or to fend one to Winter there : alledging that they got great flore of Lofh-hydes, Squirrels, Sables, and Bevers, Which some yeeres indeed, as we were credibly informed, falleth out according to his report. But at his arrivall there, divers of the Townelmen came against him, and would not suffer Our meain. him nor any of his Boate to Land for the space of ten houres : but in the end, they let him goe on treated to wing shoare, after, as wee suppose, the Inhabitants of Pufforer had bought most of their Commodities. teras Ouff-So that hee thaying there two dayes, could get but nine Losh-hydes, and halfe a timber of course vilna. Sables, in barter for some Cloath and Copper. The principall cause of his going thither, was to meete with some of the Permacks out of Permis, who some yeeres come downe with Rie, and Rie-meale, and thought to have given notice to those Permacks of our being at Puffoxer, and to

haue willed them to have perswaded their Countrey-men to bring thit her the next Spring following all their Commodities, being Waxe, Honey, Losh-hydes, and Furres, which they might doe for halfe the charge that they are at in bringing them to Archangell, on the River Duina. Ouff-zilma is a pretie Towne of some uxtie Houses : and is three or foure dayes sayling with Ouff vilna.

a faire wind against the ftreame from Puffexer, but backe againe they may fayle it in two dayes. The third of Iune, came the first Ruffes in their Cayooks by River out of Ruffes to Puffozer. Iune 3.

These Cavooks, be small Boates of two tunnes, having two men in each Boate.

The twentieth of Lune, nine Ruffe Coaches or Soymas, passed by Pustorer from Outstainen for Sixteene Soy-30 Molgomfey. The one and twentieth, fixe Ruffe Soymas more departed from Pufforer: all the man depart for rest having given over their Voyage, which came thither the Summer before, 1611. The two Malgorife. and twentieth, one Soyma belonging to the Towne of Puffezer, departed for Molgomfer.

The three and twentieth, and four and twentieth, the Inhabitants of Puffoxer, went to Fish Fishing for for Bealugos under the Boluan, being the highest Land neere unto the Drie Sea, and two dayes the Boluan.

fayling from the Towne. The fine and twentieth, I departed after them, and arrived there the feuen and twentieth

But with most not one.

hoping to have provided good fore of Bealingos Oyle. But it fell out contrarie : though there were aboue fiftie Boates, having in every Boate three men, and in many foure, by reason it pleafed God to fend fuch windie and stormie weather, that the Boates could not goe to Sea in many 40 dayes together, during their wonted time of Fishing for those Bealts; being till the twentieth of July. Then every man leaveth that Fishing, and repaire to their owne Fisherie, to hunt Ducks, Geefe, and Swannes, which most yeeres they get in abundance, and make good profit of their Feathers and Downe : as also of their Flesh, which they falt vp in Caske for Winter prouision, feruing them also all the Summer for Flesh dayes. These Bealinger they catch with harping Irons, Manner of kiltyed fast to a long rope of ninetie or an hundred fathoms, with a staffe of the length of two lingthem. yards or formewhat longer, being put loofe into the Iron, wherewith when the bealt commeth The Ruffer sp. within the reach of him that ftriketh, he finiteth him with the Iron, leauing it in the Beaft : then on the Ice vie the rope being layed out cleere to vere out, the man holding his Staffe still in his hand : but the Morfe assister. Beaft being wounded hafteneth to the bottome, where having beate himfelfe neare to death, doe sheir zeeso they hall in their rope by little and little, the Beaft afcending thereby. And if they finde him lugo: but their not neere death, they firike him againe : and being dead they cut off his skinne with the fat on rope is longer, it in hany parts, some the breadth of two hands, some more or lesse. Then comming on shoare, made soften they take the Fat from the skinne, and cut it in small peeces to dissolue it to Oyle, casting away one end to the Flesh which is red, to the Fowles of the Sea; except some poore Samoied come that way, buoy it. who taketh it, though it have lyen putrifying two or three dayes, and dryeth it, and maketh Sameieds pogood cheare with it with his Familie. This Beaft is as bigge as two good Sturgions. Moreouer, uertie. I was informed by an ancient Traueller, that the Flesh and Fat of that Bealt, being cut as Beefe meate in Italie meate in Italie and falted in Caske, is a great and rich Commoditie in Italie; which cannot chuse but to bee much better then young Whales, which I have heard that the Biskayners vie to preferue for good 60 meate. With the Fat of some one of these Beats, they will fill three Barrels, of some leffer two barrels, and some yeeld but one barrell of Blubber, which they call Shilliga. In that Summer when I was there, by reason of Northerly windes blowing hard, they killed by all their Boates not about fortie Beaits : with fome Boate they killed two, with other three, with fome foure.

August.

A Boarefent

The thirteenth of July, I received a Letter from Mafter lofiat Logan, the effect whereof was ; That the Company of our English Merchants of Ruffia, had lent a Boate out of Ruffia by River, which stood them in foureteene Rubbels or Marks for vs to goe in her, or by Lodia for Russia For they were purposed not to send a Ship for vs that yeere.

The ninth of August, Master lossas Lagan, and Marmaduke Wilfon, came from the Towne of The ninthol August, Matter Issue Logan, and Marmaduke Walson, came from the Towne of add in Com-Puspecera in a Lodia to goe for Russia, and Anchored in the Glambus, which is a deep place of the pany into Ross. River. Heere wee stayed ten dayes to make up our Oyle. In the meane time the Lodia got her full lading with Omelies, and Seegies salted in Caske, attending a faire winde.

The minth of August, wee set sayle out of the Glowbue, and entred the Suebei-morie, that is, The Drie or Should Sea, and stirred away next hand North North-east.

The nine and twentieth, a little before day, not thinking wee had beene fo neere the Land, we were on the Breches of Promoi Coskoi, or the Sands of Promoi, a bad Harbour so called by the Ruffer, and beate ouer one Sand by Gods prouidence onely, so high, being halfefull of water, that in disparre of euer getting her off againe, wee vuladed most of the goods, as Fish, Oyle, Feathers, Downe, and Losh-hydes, as soone as it began to bee day-light, and that the Russes knew vs to bee vpon the mayne Land. The thirtieth day, being fomewhat calme, and the wind Easterly, but thicke weather still, there came three men from Vafilie Beregen his Lodia, who was our Confort, while wee were working to get our Lodia a floate againe, and told vs, that their Lodia was beaten in peeces vpon the mayne Land, some seuen or eight Versts to the Westward off ws. The one and thirtieth, wee laboured againe, and by Gods affiftance got her a floate, having 20 taken out almost all her goods: and that night laded some part againe.

September.

The first of September, wee got all our goods aboord, and at Night-tide being faire weather, the winde North-west and Moone-light, wee put from that comfortlesse place, and went into the Promoi Harbour, having on the Barre nine or ten foote water ; but within foure or five fathoms. A South-west Moone maketh there a full Sea. It is in the great Bay betweene Suetinos and Candinos. The second, the winde at East North-east faire weather, wee set sayle with our leake Lodia, the Pumpe neuer resting.

The third, the winde variable, wee fayled along the the shoare till about Noone : then the wind comming to the West, wee put backe againe for Christona Stanonecha, which is the Crosse

Harbour, where wee rode in a fine River, having a bad Barre.

The ninth, in the Morning wee purposed to put to Sea againe, the winde Easterly : but the Barre was so growne and warped vp with sands, when wee came vpon the entrance of it, that we could not passe ouer, neither with Wind nor Oares, but wereforced vpon the mayne : where our Lodia was beaten so high vpon the sand, that all hope of saving her was past. That day wee got out of her an hundred Barrels of Fish and Oyle, and yet we could not get her off againe.

North-meft winder cause March Snow.

The tenth, the winde being at North-west, caused high Tides. by which meanes we got her off, and brought her againe into Harbour. The eleventh wee had fo much winde and Snow, that we could not get our goods aboord all that day. The twelfth, we got all aboord, having stopped most of our leakes with Mosse and old Cloutes.

Candina.

The thirteenth, the wind at East, faire weather, wee put to Sea out of that bad Harbour, lea- 40 uing one of our Boates there, and eight Barrels of Fish to ease our leake Lodia. The fourteenth, about mid-night we were thwart of Candines, and stirred South-west, and South South-west all the next day : but the Night following being much winde, the Ruffes effeeming themselves to bee on the Westerne shoare, strooke sayle, and by Day-light we saw Land to the Westward of the White Sea, being the fixteenth day : and wee were forced againe into another bad Harbour, called Danilo Stolb, that is, Daniels Piller, on the Coast of Lapland, where we made our Lodia fast among the Rockes : where shee lay drie halfe-tide, and lay there beenept and wind-bound vntill the fixe and twentieth day : and then at Tide-time wee got out of that place.

Archangel,

The eight and twentieth, wee entred into the River of Dayna, and landed that night at the Caffle of Archangel in the English House, all our Oyle, Losh-hydes, and other goods; as Fea- 50

The nine and twentieth, about mid-night we came to the English House at Colmogro, and there continued all the Winter.

The three and twentieth of Aprill 1613. the River of Dayna brake vp at Archangel.

a little Towns and a Church. And from thence they fayle downs the River to Hawtick, which Hawtick is a great River, and runneth vnto the Eaft.

Goates in this Countrey.

The River of the Tinguffies, is three dayes and three nights fayling within the River Tenifeey. The River of There are no Woods neere vnto the mouth of lemifee. But in the River of Tinguifie are great flore the Tinguifies. of Woods. There are two or three Rivers betweene the mouth of Tenifer and Tinguifie, but not Two or three Colored as the Timeuffie River is never with which the Ruffer doe fifty and officers in the Rivers from fo large as the Tompuffic Riner is; neere vnto which the Ruffes doe fifth: and afficone as it free- Tinguffic some zeth, they go againe to their old trade of hunting the Sables, Beners, and Foxes. And having in mouth of Ye two winters solaboured for themselues, those that be good Husbands return rich into Russia: And nice. 40 except they fall againe into pouertie through fire or other wayes, neuer returne thither againe.

The Tinguiffus are a taller people then the Samoieds, and weare their Garments made of skins thorter, and made closer to their bodies then the Samoieds. They be a very gentle people to con-

From the mouth of Ob to the great River lenifee, as a Ruffe told mee, is foure dayes and foure nights fayling. Betwixt Ob and Tenifee, is high blacke Land.

Beyond lenifce Eastward is another great River, called Pifda. The Land trendeth due East The River Pife beyond the River Imifee to Pifida: and to another River, called Catonga, which commeth out of da. Cathay, whose King the Permackes call Tentha Tfar. The River lyeth North and South, they The River Caknow not how farre. For the Tinguffies, of whom they had intelligence of this River, are afraid tonge. 50 of Gun-shot that they doe heare, which they vie on the South part of that River, and dare not trauell vp it. In it they faw Veffels with two or three fayles; which in the Spring, fayle downe Ships with two the River Northward, and in the Autumne, returne agains to the South. But they know not or three failes, whether they fish, or goe to gather some Mynes, which are supposed to be in those Countreyes, not daring to goe neere them. It was told me, that betwixt Pifida and Catonga, about the midway vpon the Sea-coaft were found diners Stones, some like vnto Gold in colour, other white Horses about and like Silser. Allo the Tregulius haug feene people about that great Ruer, called Catomes, the Ruster and its faid, that there is great store of Come, Beefer, Horles, Sheepe, and tregue.

The travell from Pechora to Permia, Ougoria, and to the River Ob, and the Townes situated thereupon, oner Land.

Rom Puffozera vp the River Pechora, with a faire wind to the River Oufe, is fourteene dayes fayling by River. From Onfe to Podcamen, ten dayes. From Podcamen to Ob eight dayes by

1

Berefena.

Deere in Winter time, associate sthe Snow is fallen and frozen. From thence to Beresena fixteene dayes; which is a Towne of Trade, it is from Puffozera to Vade in Ougeria, beeing on the West fide of Ob, a monethes journey or travell by Detre. This Vade is a little Towne, having the The River of Pechora, runneth through great Permia; and the head thereof is five Weekes

in the Ruffe Tongue, The higher: as Vercho-towria, is Towria The higher. From thence by River is ten dayes journey to Tumen. From Tumen to Tobolfes, fixe dayes down the River Irigh, To-

trauell from Puffozera. From Great Permia, is nine dayes travell by Horse and Sled to Vercho-towria. Vercho signifieth Verebio-towria.

Tobolica. Surzout.

bufca is the chiefest Citie in Siberia. From Tobolfca to Sargana, or Sergalt, is fixe Weckes jour- 10 ney up the River Ob. From Surgest to the Citie Tom, feated among the Tarton, is three Weeks up the River Ob. The Ruffer know no farther of the River Ob; nor how farre it firetcheth to the Southward : But they suppose that it runneth much farther to the South, by reason there Many Nations come so many severall Nations downe the said River to trade at Surgest, and Tobolice: 25 namely, the people of Boughar, the Teficks or Persian Merchants, and many forts of Tartars. Abrabam Michaelonich was chiefe Customer at Surgent, 1611. And hee told me, that hee received for South to trad: the Emperours Cultome for goods, bought and fold that yeere, the fumme of fixteene thousand

Moreouer, he told me, that the people of Cathar doe trade to Surgout, and people from divers The Country other Kingdomes, as from Alteen Tear, or King Alteen, who among other things bring Plates of 20 of King Alteen. Silver and fell them. Another Russe named Philat, who had travelled farther among the Tingus-An Aline is 6x Plate of Silver weighing in Ruffe Money fortie two Alteens, foure Dingoes, for twentie blue

Berefous vpon the Ob, before you come neere Tobolfos, is a Towne of Trade for Furres, but especially for Losh-hides; which are bought for tenne Alteenes a piece. I was told by a Permae, that there was a Ruffe which bought foure thousand Elkes, or Losh-hides, there for a fourth part of a Roble or Marke a piece.

To the Eastward of Pechora are store of Hawkes, which I hold to bee as good as the Tinkie Hawkes, namely, flight Falcons, Goshawkes, and ler-falcons, whereof some are as white as 30 Snow, others speckled White and Red. Likewise, there are all kinds of the richeft Sables white as from, brought from Molgomfey, and blacke Foxes. There is also Christall of the Mountayne, If we might haue libertie to trauell thole Countreyes, wee might haue these Commodities cheaper there then at Pechora. And within the Ob we might vent our Commodities at a better rate.

> Commodities for Pechora, Siberia, Permia, Ougoria, and among the Tinguffies.

[Irft, at Pechora readie Money, being Rosse Money, is the best and principallest both to put off 40 other goods to profit, as also to get credit among the Merchants frangers at our first comming thither, till Trade be fetled and knowne through Permia, and Siberia. Salt, Rie, Meale, white Danike Rie Kil-dryed for heating in the ship, Oat-meale and Butter for the Samouds; all forts of course Cloth, some fine Cloth, Copper, and Brasse Kettles of the middle size, from two pound to thirtie, or thirtie fiue. But Braffe not aboue fifteene pound with eares of Braffe, all the Kettles and eares of one piece. Also Files to sharpe Arrowes and other things, small Horse-bels, course Canuaffe for vpper Gownes. Foure peny, fixe peny, and ten peny Nayles: fmall Anchors of foure and twentie pound a piece. Frankincenie for their Churches and Houtes.

## Commodities for the Tinguffics.

Thewter, Pewter Sawcers, Little Platters, Flat Poringers, some grauen, some ungrauen. Nefts of Cups, some grauen, others vngrauen. Salt-fellers. Plates, or sheets of Latten being white. Hamberough Lichenaes, Blue, Red, and Tawny. But I think our course Northerne dozens, and course Kersies Northerne dyed into those colours, would vent as well and better then they: they being thicker walked. And the Samoieds delight aftogether in thicke Cloth. Grey doozens of an easie price would vent well among the Permiets, which were much grey or mingled coloured course Cloth. And some course doozens died Yellow, or Northerne course Cloth Red and Yellow, would bee no bad Commoditie.

Aqua vita of two forts, the best and indifferent for the Samoieds. Gliffe Beades, Skie colou- 60 red. Needles round and three square. Braffe Basons, Ruffe Linnen Cloth, or Polife Linnen Cloth. Hops, Mault, Ruffe Sope. All forts of strong Wines, as Sacke and Canarie Wine. Bacon is a good Commoditie in Siberia.

CHAP. XII.

Later Obsernations of WILLIAM GOVEDON, in his Wintering at Pustozera, in the yeares 1614. and 1615. with a Description of the Samoyeds life.

He twentieth of Nouember, I departed from Pufforera, to goe to Tongorie, at foure Nouember; in the after-noone, and did ride most of the Night, before wee came to the 1614.

Choome, going East South-east. The one and twentieth, Mibiles returned Histourney to the Towne, and we remoued and went our lourney, faire and little wind. The leagues of Ot. two and twentieth, little wind North, wee kept on our courfe East South-east, and neers to hauing gone from the Towne 50 miles, at night Mibiles came to vs. The three Before, and twentieth, little wind, we went on our Lourney, and at Noone passed ouer a little River, cal. The River Co.,

led Coy, falling North into Pechora, 14. leagues below the Towne, and at Night came all the close the Ruffes from the Towne, having gone 24. miles East South-east. The foure and twentieth, wee removed on our Journey being very cold, and went not a-

boue ten miles East South-east, at Night wee broke one of our Sleds, which went laden with

The fine and twentieth, wee went forward very flowly, at Noone I received a Letter from Master Copman by Forma Cretisone, this after-noone another had his Sled broken, we went 10. or 12. miles. The fixe and twentieth, we continued on our Journey, and at Eeuen we passed over 2

The River River, called Shaptina, falling South into Pechora; halfe way betwixt Puffozer and Ouff-zihna, The Kiver Shaptina, falling South into Pechora; halfe way betwixt Puffozer and Ouff-zihna, Shaptina, falling South into Pechora; halfe way betwixt Puffozer and Ouff-zihna, a Sled broken and mended out of hand, going East South-east 15, miles. The seuen and twentieth ling into Prebeing Sunday, the wind at South-west, did blow very hard, and Snow all the day, the snow dri- chora uing that wee could hardly fee which way to goe, yet we kept on East South-east 18.miles,

The eight and twentieth, in the Morning, wee passed oner Nongorotka River, which falleth The River West South-west into Shapkina River, fixe dayes lourney aboue Oust-zisma, the wind South-Novemoikasal west, and Snow all day, wee kept on still East South-east 15. miles. The nine and twentieth, ling into Shep-30 the wind South, with Snow all day, being not cold, we went on East South-east 20. miles. The tina. the wind South, the wind East South-cast, very cold in the after-noone, we passed over Habeaga River, falling imo Fe

which falleth into Pechera, fixe dayes lourney aboue Oufl-zilma, going 20.miles. The first of December, the wind East blowing very hard, the Snow did drive so hard, that we could not goe forward, but flood still all day and did not remoue. The second, calme and not so December. cold, wee went on East South-east 10 miles. The third, in the Morning it was very warme, at Noone the wind North, it was extreame cold, the Snow driving very thicke, in the after-noone The River Hawe passed ouer the River Haryena, which falleth into Columy South-east, having gone East South-into Column,

The fourth day warme, we went East, at Eeven we came to a River called Colney, which fal- The River cal-40 leth South into the River Oufe, where wee stayed all Night, having gone 20. miles. The fift, \*97 falling inin the Morning we went on vpon the River fix or feuen miles East and by North, and came where to ONS. it parted in two, the one keeping North-eaft, the other being called Sandamets; from the Southeast wee went betwixt them both East and by South 12. miles, and tooke vp our lodging vpon 2 Playne where no Wood is to bee seene.

The fixt, being Saint Nicholss day, which with the Ruffer is held a principal day, in the Saint Nicholss In clux, oring same exposuse us, which we can be come, lighting Wax-candles before them, making their Prayers to them, according to their order; after which, I gaue them a bottle of Aqua vita, wherewith the Guides were drunke, that they could not guide their Deeres, but fet me to direct the way by Compasse, which I did all the day, although I had but little skill,

so we went South-east and by East 20. miles. The fewenth, being very faire weather, our Guides lay all the day with Pohmeall, and could not goe forward. The eight, faire and calme, we went forward South cast and by East 10.miles, and A small River tooke vp our lodging by a small River which falleth into Sandauets River. The ninth, very cold, Sandauets, that we had much adoe to keepe our felues from freezing, going on foot all the day ouer a playne where no Wood groweth, going South-east 15. miles, and lay by a Wood side all night. The

Sunday, the Frost continued extreame, we remouing, there were few in the Companie that had not some part of their faces frozen, and my selfe, although I was something better provided then any of them, yet I had fomething to doe to keepe my felte from freezing, going on foot most 60 part South-east and by East 15. miles. The tweltth, the Frost was so extreme, that there was no

looking forth, but lay still all day. The thirteenth, not altogether so cold, were proceeded on our The River Ho-Iourney 20. miles South-east & by East, and at night we passed over the River Hofeda, which fal- feda, falling me leth South-east into the River Azua. The fourteenth, the winde South, with Snow and not fo to Atla. cold, we went thorow Woods 20. miles, East South-east. The fifteenth, the wind South, with

tenth, the Frost was so extreame, that wee lay still and could not proceed. The eleuenth, being Terrible Frost.

CHAP.

The fixteenth, the wind South, in the Morning we fet forth East South-east, over a high ridge to Ouf.

The Mountain or Mountayne, called Tangoda and you the top of the fame the wind shirling North, with Snow fo thicke, that our Guides did not know well which way to goe, yet fometimes backe and fomtimes forward, with much adoe we got ouer, in the Ecuening passing ouer the River Regards Meniba, falling South into Oufe, where we stayed all Night, having gone 20, miles.

Deeplog, rating South the Costs, where we tayed at Fugor, having gone 20, mines.

The feuenteenth, faire and warme, wee passed thorow Woods, where the Snow was very deepe, and came to a Playne, called Correspon Tundra, where a Russe whose name was Correspondent to the Costs of deepe, and came to a Playne, called Correspon 1 mores, where a knife whose name was correspond to dyed, (and was buried, therefore they gave that place that Name) some thirtie yeeres past, and was buried therefore they gave that place that Name) from thirties with the buried came as a miles Courbe coeff and bu F.16. The sink-aparts in al., 10 where we stayed all Night, having gone 15 miles South-east and by East. The eighteenth, in the The River Re Morning wee went on thorow Woods, the Snow being very deepe, and at Mid-night we came norming were well as the state of the Ruffer had a Gorodocke, and bettering with the Sameit, talling into having gone 30 miles East South-east, the River falleth with turnings to the Southward into

The thirtieth of December, I observed with my Astrolobia, and had the Sun 2. degrees aboue Akitude and Ianuarie.

the Horizon, Latitude 65 degrees and 48 minuts, the variation of the Compaffe being 20 degrees. The fixth of Ianuary, at three in the after-noone, wee departed from the Gorodocke, the wind South South-west blowing very hard, going North-west 30.miles, and at mid-night came to the Choome. The feuenceanth, the wind South South-weft, blowing very hard, the Snow driving 20 fo thicke, that we could not goe ouer the Mountayne, called ? angode, but flayed by a Wood fide, to thicke, that we could not goe out the mountain department, out has endy a recool had hading gone West North-west 14. miles. The eight, in the Morning wee passed our the Riner, called Roganeya Meniha, and at Noone ouer the Tangada, keeping backe our way 30. miles West North-west, faire and warme. The ninth, little wind North but sharpe, we went on North-west and by West, at Noone we passed ouer Azua River, and in the after-noone came to a Herd of wilde Deere, the Sameits killed three, giving me a haunch ; going in all 20. miles,

The tenth, calme and very cold, we went on 20 miles, Weft North-weft. The eleuenth, little wind South-east; at Noone we passed ouer Hofela River, which falleth South-east into Acua, we went 30.miles North-west & by West. The twelfth, the wind South and cold, we went West we were 30 minus round recks & Ponds 25 miles. The thirteenth, this day the wind South and 30 not cold, we went West & by South 30. miles, thorow many woods and plaines. The fourteenth, faire and warme, at Noone we passed ouer Saudaers River, which falleth South-west into Colury,

The fifteenth, being Sunday, we went West North-west over a broad playne, with many great Ponds, at Night we passed over Columy River, going South into the River Onfe, which falleth into Pechara, nine dayes journey from Ouft- zitms, we went 30.miles, having most of our Deere tyred, the Snow was so deepe. The sixteenth, little wind, we went on West North-west, at noone we puffed ouer Haryens River, which falleth South-east into Colney, going 20. miles. The feuenteenth, the wind South, blowing very hard, the Snow driving, wee went West North-west 25.miles, at Night we tooke vp our lodging vpon the River Habeaga, which falleth into Pecho- 40

The eighteenth, we went on West North-west 10, miles, where the Townslmen ouer-tooke vs, riding post to the Towne, where making our selves ready, wee followed, the same Eenening we passed ouer Nongorotha River, which falleth West South-west into Shapkina River, which falleth South-west into Pechora, halfe way betwixt Pufforer and Oust-zitma, and in the Morning we passed ouer Cog Riner, which falleth into Prebora 14.leagues Northward from Pussor; and the fame day, being the nineteenth day in the after-noone, wee came to the Towne, having rid about 150. miles without reft. The last of Aprill, 1615. being Sunday, was the first appearing of the water, increasing at Puffozora. The feuenth of May, Enan Cresicone, had almost flaine with a knife his two Vncles, Foma Croticone, and Erasmi Croticone.

The eighteenth, the water was at the highest, being so extreame that many were forced out of their Houses, and we our selues in like manner, having the water a foot deepe in our bed Chamber. The twentieth, the water did a little begin to fall, and so continued falling by degrees.

The ninth of lune, my servant Marmaduke Wilson came from Ouft-zilma, having Wintered there, to buy and fell goods, bringing with him fuch Commodities as the place doth affoord, as Sables, Rolomacks, Wolues, Ermins, Squirils, &c.

The fifteenth, we laded three small Lodias with goods, to carrie downe to the Glouboka. The three and twentieth, I departed from Puffoxer, and came to the Glouboka the fine and twentieth, Shoulder in 67. With two small Lodias laden with goods. The eight and twentieth of June, I observed at the wint two man Louiss sales in the height of 67 degrees 55 minutes, and the Compafe varyed 60 18. degrees. The last of lune, I went from the Gloubules to passe out the Drie Sea, the wind at South, but the wind comming to the North, I returned backe the next day. The second of July, being Sunday, the wind at South South-east, I departed the second time, to come to the Zawers, but comming neere Dolger, an Iland lying in the Drie Sea, the Ice lay fo firme, that we could not paffe but returned backe to the Glauboka.

CHAP. 12. Samoyeds apparell, Sleds, Deere, Women, Polygamie, Religion, &c. 555

The fourth of July, Iohn Copman came to the Glouboka, bringing with him all our goods for favle, having payed all Customes and duties for the same. The fixth of the same, I departed the third time from the Glauboka, the wind at South, but did not continue, but came to the East, and East North-east, so rowing along it the shoare, wee passed to the West side betwint the shoalds and the shoare, and having passed the Wester Hand, called Leuerstey, we came to the Zackbarreoueberage or Coaft, which doth lye South-west and North-east, and put into a small River, where we stayed (the seventh) all night, and the next day with Sayle and Oares, wee came to a Bay to the South of Cafness Note, where we stayed all might, the wind East South-east.

The eight, in the Morning we passed by Cuenerf-Note among it the Ice, having much adoe to Ic get cleare, the wind at North North-weft, and at Night we came to the Zauorot, where were fine and twentie layle of imall Lodias, some going for Mangantes, other for Fish, and some going to Pultozer, who told me they had beene aboord our Ship at Sea. The ninth, this day being Sunday our Ship came over the Barre, where I was received, not looked for. The eleventh, at Night we departed from the ship, and went to get downe our goods from the Glonboka and the Towne.

The fixteenth, I departed from the Glouboks, with three imall Lodias laden with goods, but the wind at East North-east, two of them returned backe, but I kept on and came abourd our Ship the eighteenth in the morning. The twentieth, the other two came with the goods aboord, and the one and twentieth, we returned to the Glonboka with three Boates, and got thither that night. The three and twentieth, I came the second time from the Glouboke, with three Boates with goods, and the next morning came to our Ship, where I remayned, fending vp all the Boats the fixe and twentieth of Inly.

The eight of August, came John Copman with Thomas Dogget, bringing two Boats laden with goods, fitting to fet layle for Holland, but did not depart till the 21. of August. And the three and twentieth of September, (giuing heartie thankes to God) we arrived at Dors in Holland.

NOw for the manner of the Samoits in their lourney, their vpper Coas is called a Parka, Apparellofsai which is for the most part of Deere-skin, and some of white Foxe or Woluerin, which they moveds. wearethe hayre or furre outward, under that they have another Coat, which is called a Mallet, made of young Fawne-skins, or Hare-skins, or Swan-skins, very foft and well dreffed, a Cap of Beuer, double and close to their heads, with two flaps for their Eares, tyed vnder their Chin, a payre of Breeches of Deere-skin with the hayre inwards, vpon their Feete they have fockes or flockins of Deere-skin, the hayre to their skin, vpon that long Boores which they call Pempes, made of the legges of Deere-skins, thus apparelled, they fre upon their Slede croffe-legged, with Sleds. a Deere-skin under them. Two Decrebeing yoaked toa Sled, they will ranne with fuch fivilt- Deere wift. neffe, and fo long to continue, as is not to be beleeued, except to those that have seene the same. neffe, For riding post, they will ride without rest or sleepe, two hundred miles in four eard twentie houres; but with their Argish or stuffe, thirtie miles in twelve houres; their Women vsully doe Women. guide their Argish, which is ten Sleds, and to every Sled a Backe, all made fast one after another, the Men in the way doe prouide Wood for firing, and doe hunt for all manner of Beafts & Fowle, 40 which the women dreffe. It is the Womans labour to fet vp the Choome or Tent, making one Tentand place therein alwayes Holy, which the woman must not fet her foot into, neither goe about the Chappell.

Tent round; which if they chance to doe, they will prefently remoue all, for feare of the Wolfe Superflitton. or Beare, which they fay, would denoure them if they did not remoue. Their Tent or Choome, is made in this manner; first, they set vp long Firre-poles, then they haue fixe quarters double of Deere-skin; which being fet vp, they throw Snow round about the edges a yard thicknesse, leauing the top open for to vent smoake, making a Fire in the middle,

foreading Deere-skins, vpon which they lye, in which manner, it is altogether as warme as the Stones in Ruffia, they have no Townes, neither any certaine place of abode, but with their No Townes, Deere they travell from place to place, where they finde the heft Moffe for their Deere,

Their Wines they buy for Deere, and will have if hee have abilitie foure or fine Wines, with Marrie Wines, whom he lveth by turn every night feveral; he is the richeft man that fath most Deere or Daugh bought and ters, selling them to any that will give most for them. In their Marriages having agreed of price, fold. they vie not great Ceremonies; onely they make a Feast to their friends, after which the Wo- Marriages. they vietne great community unknown and to the Herberg lang with many Iron Rings and Brazen Bels, all departing out of the Tent faut they two till the next Morning, and then he Bels. departeth; but if he bee one of wealth, they will continue their Featt feuen dayes. It falleth out many times, that after they have had their Wives halfe a yeere or a yeere, they will turne them backe to their Friends, taking their Deeres againe, paying for the charge of the Feast, which Diuoree. is alwayes to bee made at her Fathers charge, and lofing the increase of his Deere.

They have not knowledge of the true God, but worthip Blocks and Images of the Deuill, vnto Religion. which, they will strangle tame Deere, rebbing the blond on the Idols, and eating the meate

When a Rich man dyeth, because hee should not travell on foot, his friends will kill three Funerals Decre to draw him in the new World, and they will strangle a Slave to tend on him. The Decre

Their verre but halfe a

they kill in this manner to ferme the dead man, they make a Stake sharpe, which they thrust into the Beafts fundament, with many howlings and cryings, till they be dead. The Mailer with the Slaue they barie, the Deere they cate as well raw, as boyled or roalt, although they vie all, three If a young Child dye vnder foureteene of their yeeres, which is feuen of ours, they doe hang It by the necke on some Tree, faying, it must flie to Heaven.

If any Controuersie bee, which cannot bee decided or the truth knowne, then one of the two betwixt whom the Controuerfie is, must bee fwome, which is in this manner; they will make na I ming of a Man of Snow, bringing a Wolpes nofe, delivering a Swood to him that mind fewere, he rehearing by name all his Friends, defring that they might all bee cue in peeces in (weare, he reheating by mane as the street, which is the he himlelfe, doch out the Image of Snow that manner, as hee doth cut that Image of Snow 10 all to peaces with the Sword; then after, the Wolnes nose being layd before him, he defires that the Wolfe may destroy all his tame Deere, and that hee may never more take or kill any wilde Deere after that, if hee speake not the Truth, so cutting the Wolues nose in peeces, there is no more to bee fayd of that Controversie.

Their persons. The Samoir is stout and bold of Spirit, not very tall but broad Brested, broad Faces, with hollow Eyes. Their ordinary infituments for Warre, are Bowes and Arrowes, very dangerous, they have long Speares, (the heads bee made in Monganzer, by another fort of Samoits) and (hort Swords, not much vnlike tome that I have feene brought from East India.

Digination.

When they would know any thing to come, they fend for their Priest or Witch to converse when tury would allow any with the Deuill, fitting in one fide of the Tent, having before his face a peece of an old fhire of the the Deuill, fitting in one fide of the Tent, having before his face a peece of an old fhire of the third have been determined by the tent of Mayle, hung with Bels and peeces of Braffe, in his right hand a great Tabor made with a Wolucs skinne, beating vpon the same with a Hares foot, making a very dolefull found, with finging and calling for the Deuill, to answer his demand, which being ended, they strangle a Deere for a Sacritice, making metrie with the Fleih.

The Women be very hard of Nature ; for at their Child-bearing, the Husband must play the Midwife, and being delinered, the Child is washed with cold water or Snow, and the next day the Woman able to conduct her Argish.

The Ruffes have a yeerely Trade with the Merchants of Bogbar, at a place called Tomor in Tartarie, whither they of Boghar come with Camels enery yeere.

From Tames in Tobal in Saberia, they come in foureteene dayes,

From Tobal, they come to Berefona in nine dayes, all downe the River Ob. From Berefone, partly by the River Ob, then over a necke of Land of halfe a mile over, into the River Oufe, and downe the River Oufe into the River Pecters, and fo to Pufferers in three weekes. At Pufforera, the Englifbhaue Wintered three yeeres.

CHAP. XIII.

Divers Voyages to Cheric Iland, in the yeeres 1604. 1605. 1606. 1608. 1609. Written by IONAS POOLE.

" This was Mafter Bennet fecond Voyage thither. His first Voye 4. 1603,I have added at the end of this Chapter, after Pooles Relacions: this be-

Ee set sayle \* from London the fifteenth of Aprill 1604. in a Ship called the God Speed, of fixtie Tunnes, with thirteene Men and a Boy ; our Merchant was one Mafter Thomas Welden, our Mafter was one Stenen Bennit of Saint Catherins. We arrived at Cols in Lapland, the first of May, where weetarried till the last of the fame Moneth, at which time wee fet fayle from Cols, and went to an Harbour called Pechingo, which lyeth betweene Cola and Ward bonfe. In which Harbour of Peshings, we continued untill the thirtieth of June. At which time wee fet fayle from thence, and through contrarie windes and foule weather, were put into Ward-bowfe, where we tooke in

fresh water, and stayed vntill the fixth of July.

The same day, the wind came Southerly, and we steered away Northwest and by North about ing setherfore 1 36. leagues, wee observed the Sunne at twelve of the clocke at Noone, and found our selves to be in 73. degrees 5. minutes of Northerly Latitude. The feuenth of July, it was all day calme, and wee founded, but had no ground in two hundred and fiftie fathoms. The eight day, we had little winde, which was at South-east, and foggie weather; and at eight of the clocke at Night, wee faw great flockes of Sea-fowles, which we call Willockes : fome of these Fowles had each of them a small Fish in their bills, and slew toward the North-west and by North. The other without Fish, some of them slew contrarie to the former, and some sate in the Sea very necre our Ship.

About twelve of the clocke at night we founded, and had ground at one hundred and twen- 60 tiefathomes. We steered away North-west and by North, till soure of the clocke the eight day in the morning, then it fell calme : and as the ship lay still, our Master spied a Morste, which same to our thip and twamme round about it, While we were all gazing at this Monfter, I spied

the Hand sandragues off, bearing North North-west halfe a point Westerly, which shewed very high Land, and much Snow vpon it. The wind came to the North-eaft. The minth day, wee there Hand came to an Ancher onlike South South-east fide, infine and twentie fathomes streamie ground, described We hoy fed our our Beare, and Matter Wolden twent toward the Land : but thinking to have landei he copid not, because there went a great Sea, and great flore of 'kee all along the theoris fide. Within one houre the Boate pame aboard, and they fair, there were fo many Powles, that they Store of concred the Rockes, and flow in such great flockes, that they thewer like a Cloud. While this soulce. they were talking close by the Boats, rolovous linge Morife, putting his head about the water. looking assnally at the Boate, and made such an horrible hoyle and foating, that they in the Markenine to Boate thought he would have funke it.

The fame day, at eighe of the clocke as night, we weighed and flood away South well and he South shout four miles, where wee applied the Southermall point of the Hand, and found the Land to trend North North-weft, and all along the theart forme frattering ice. We hayled along the theart, finding feuerittene, eighteenes, and semetimes twentie fathomes, firramic ground with white shels. We held this course will were faw all the Northermost part of the lland : and being within three miles of it, and about thirteene miles from the Point, wee came roundabout it. And some two miles from the Land, we anchored in fixteene fathomes, streamie ground, We had not ridden one house to arrend, but a gazar piece of Ice came directly with the tyde voon vs; and before wee could weigh, it ftrookening thip, with forth force, that it hilded on the one fide.

and notice we can wright, an appropriate my warrach agent, same to make our the one me.

20 Affione as it was paft, we went on lineary, where were found abundance of Sea Fowles, Se Willocks, Gulles, Noddies, Sea-mewes, a finall Fowle like a Willocke, and divers others, as wilde Sea-fowles Geese, Sea-pidgeons, Oxbards, and such like : whereof Master Thomas Welden killed to many found on with his Peece, that we almost laded our Beate with them. The same night we shot three heaps shoure. of fifting-lines, but when we haled them, wer found neither fift nor hayte ; for the Seales had

ten them all on.

The ninth day, Mafter Welden and our Matter went on thours, to too what they could finde. They went in the fore-noone about eight of the clocke, and came againe about fourt in the after-noone very weary, feeing nothing by small Foxes, along the Dogges in overy being flight their finell and their tryles. In the means time, the Mattern Mate, and my. fails obleaned the

30 Sunne, and found that part of the line to be in 74-degrees and 45, minutes.

The tenth day we weighed, having the wine Southerly, and found the Land so trend away Nos. East South-east, The length of this fide is about ten miles, good ground. We had not failedpast East south-east, are regard to make the property of the property of the many o Boate, whetein was Mafter Welden and fixe men more: we landed, and law abundance of Morffes on the shoare, close by the Sea-side; and drawing negre varo them, were perceived that they result in the three company, which wee had seen before. It formed very strange to we to see such a multitude of Montiers of the Sea lye like Hogges vpou heaper: I la the end wise fine at 40 them, not knowing whither they could runne fixitly or leize vpon vaor no. To be briefe, wee them, not knowing winter they could be made a few first factor a Musker, and another a Musker. They delike the doubt three Perces, Marker Made as Fowling Perces, thay fells a Musker, and another a Musker. They delike the doubt three Perces, Market Made as the Musker and another as Musker. Their Peeces were spoyled instantly. For Master Welden, was cloyed, the other man wherehee M had that one by himselfe, thought to knocke him on the head with the fleck, but following Peece, I shot still, and some when they were wounded in the flesh , would but looke up and lye downe againe. Some were killed with the first shot; and some would goe into the Sea with fine or fixe thot : they are of fuch an incredible strength. When all our Powder and show was frent, wee would blow their eyes out with a little Peafe shot, and then come on the bland side of them, and with our Carpenters Axe cleage their heads. But for all that, we could det, of about a thousand we killed but fifteene. We tooke off their heads, and when we had done, we went ftending vp so and downe to fee what we could find. I found the first Touch that was castwoon the lland, and going a little farther alone, I found as many Teeth more, as hand three men more confidentie!

which filled an Hoghead; all which would deliver to Matter Welders The next day following, being the cleuenth day, we want on thouse againe, and billed about Tech. fixe more : And afterward wee went up into the Land, and faw nothing but Fowloand Power. I perceived in deed a great print of a Beares foote; and after that many other footings, bus yet faw no Beare or other wild beaft.

The twelfth, wee weighed from thence, and fined so the Eastward: wee had not gone past foure miles, but we found the Land to fall away South call and by South. The length of this fide is about twelue miles. All this fide we went close by the thoate with our Boate, and the 60 (thip fayled along about three miles off. We went oftentimes on shoare, but could fee mothing on Abundance of all that fide but Fowle, and abundance of Drift Wood, tho most part whereof was Firres, which Drift Wood haue beene beaten up and downe the Sea. This day being Sunday, about sight of the clocke at night, we anchored within two miles of the place where we arrived at the first. The same right wee went on shoare, and in a Bay under an huge Cliffe of a Rocke, upon the Beach, wee found

cola.

neere athousand Morfen, wee killed shirtie or thereabours, and when wee had taken off their Mories found. heads, we went abourd.

The thirteenth, wee went on shoare againe, and with our Pieces fell a killing of the beafts, One of our company named Rubard Lang caftle phir his Piece, and with all his handibut Mafter Welden with Salues of his owne, healed it to skilfully, that he hath the vie of it againe. We killed that day fixtic Morfer, all the heads whereof were very principall. When we had done, wee went about a mile to the Eastward, to see what weecould finde : And landing at a Bay where 160 Lead Vre, weet googs a man to the same the years before, and found a piece of Lead Vre, wee looked for the Reality of some that of the first of the same day returning about of wee fer fayle for Pechings in Lepland, where wee arrived the fine and twentieth of July; and flayed there foure dayes: at which time 10 we fee fayle for Cole, and arrived there the eight of August, where wee continued till the fixteenth day, at which time we departed thence for England, and arrived in the Thomes the fif-

Why the lland teenth of October, of the yeere atorefaid 1604. When wee came to Landon, because Sir Francis Cherie Knight and Merchant was at the charges of this Discourrie, this Hand was called Cherie Bland.

> The third Voyage to Cheric Iland, performed by Master WELDEN Merchant, and STEPHEN BENNET Mafter, in the yeere 160%

The che yeere about hid, wee fet fayle from London, the first of May, with one ship of fixtie curmes, and two and twentie men and boyes. The three and twentieth of the faid moneth, we were taken by a fhip of Dunkirke. They tooke from vs two Hogheads of firing Beers, our Muskets, a Fowling Peece of Master Weldens, which cost three pounds sterling. After the Captayne had misused was his pleasure, though we were in peace with his Country, he let vs goe.

The fight of

Morfes. Eleven ums of

tayon man manuncu yan un pirantre, muogin we weem pease wan in a country, ne set ve goe. The eight and twentest of fune, we put of from #figuration ? \*\*sat, which is a place not fare from the North Cape, and about 70 degrees in latitude, but by contrain winds wee were put backs againe. Yet the second of July, we came to Cherie Hand, and anchored on the South-east 10 fide; and having a Shallop in pieces to fet vp, we carried it on shoare, and went to worke vpon it; and the third day after we had it on flote. The fixth day we entred into a Coue, having all cour men on shoare with shot and jauchings, and shorabundance of Morses. The yeare before we Many souther flow all with those, nor shinking that a justing could pierce their skinnes; which we found now the limit of the said with the sa enter or if he dos enter, he shall spoyle his Lame woon their bones; for they will strike with their fore-feet, and bend a Lance round, and breake it, if it bee not all the better plated. They will salle firike with their Teeth at film that is next them : but because their Teeth grow downward, their frokes are of small force and danger, After we had opened the beafts which we kind flaine, we tooke out the blubber, and carried it a mile into the Bay, where weelet up the 40 shallop. The reason why we carried it thirher, was, becapse we thought that the fire of our Furnage would feare them away : for wee did boyle all their facto bring it into Oyle. Thus wee followed our businesse till the foureand twentieth of Idly, at which time wee had very foule weather with fogs. Now the ship riding in the same Coue, where we killed our Morfes, had taken in eleven tunnes of Oile, and the teeth of all the beafts aforesaid. Then we made preparation to be gone home: and I was fent with our shallop, and eight men with me to fetch our Tent, and our boyling Coppers, our mens Clothes and some Teeth. At my returne, when I was almost abourd, comming through a place betweene the Hand and a Rocke, which of necessitie we must needs passe, the tyde being against vs, and a stiffe gale of winde blowing out of the Sea, made the Seadyr very high woon the Rocker, whereby we had like to have beene funker for our Boat 10 was almost full of water; and if weehad not speedily rowed backe againe, weehad dyed each man of vs. To make short, we got into a Cone, where the Rockes did keepe the growne Seas from vs, & we lighted our Boat. In this Coue I found a Myne of Lead Vre, and digged vp about thickid potunds weight of it, which I brought into England. And calling to mind that wee were in fight of our ship, when we shipped the water which I spake of before, I misstusted that they thought, as they did indeed, that we were all drowned. Therefore I demanded who would goe with me, to the top of a Cliffe which stood over against the ship? And one lobn lenings said, that be would goe ; he had not gone halfe way, but hee would goe no farther because it was so cold, and the Hill fibod floping very fleepe toward the Sea, and all the fide of it was loofe Earth, which we must needs paste. Then I went forward all alone, and found all our men on shoare, lauingan old man, and a ficke men. But the Cliffe being fo high and fleep, that they under it could fearce understand what I said, nor I what they said, but with much adoe : They demanded, as I tooks it it all our men were wel: I told them yea, as loud as I could: And then I threw downe a piece of the lead Vre which I had found, which Mottelden took vp: And when I was going away

I heard them shout, and looking behind me, I saw them all point coward the Skiffe that lay at anchor hard, by the shoare; whereby I perceived that the rope was broken, which made it fast to the ineare, and the Skiffe was gone off to the length of her rept fo that they could not go abourd except one of them did wim to the Skiffe, which was exceeding dangerous, both because it was extreame cold, and also for feare of being killed by the Moffes, that were in the Sea all about the Bost. Whereupon with all speed possible I rame to helpe our men in that diffrestle, and comming to the Shallop, some were willings, and some rowilling. But I faid that out I would; and taking sothing abound with me but a few reeth, wee got out : and in the place where we had like to have beene funke before, wee had a great hollow See? but our Boat being light, and the tyde 10 with vs, was got through: whereit Ih Welden, and Stenies Bennet our Mafter, with all the com-

pany were not a little toyfull, and gaue God humble thankes, that had of his great mercy defen-ded va from a great many of dangers that slay. For that day wee faw abundance of yee driving Abundance of toward the land, but the winde and tyde fhifting, put it another wiy. Likewife two boyes driving lea-had like to have been faine with the fall of a rockle, which fell clofe by them, they being but newly flepped out of the place wheet where the rock fell.

In the time that we were in this diffreste, I called the Mountaine by the name of Mount-wis Mount Mistry ferie, which is fo called at this day. Likewife there is a very high Mountaine on the East Southeast point of this Hand: which, because Master Welden and I got two Foxes necre it , I called it Mount maleperdus, alluding to the name in the merrie booke of Remold the Fox.

The fixe and twentieth of Iulie, wee got out of the Cous with the Ship, having fuch a fogge, A montrous that although wee ridde to neere the land, that we could heare the fewle that were on shoare. yet wee could not fee the land. This fogge continued vitill the eight and twentieth of July : on which day having electer weather, wee got our water and other provision about ; and fet fayle for England, and passing by the coast of Finmarks and Normay, we arrived at London the foure and twentieth of August. 1605.

The fourth Poyage to Chery Hand, 1606.

VV E fet fayle from London in a Ship and a Planoffe; the Ship being of burden fixtie Tuns, August 14, and the fame due I was in the Summer before; Mafter Thomas Welden was Merchant, A Ship field. and Mafter Bennet Mafter, having in all two and swencie men and boyes. The Pinnalle was of twentie Tunnes, and had eight men in her, and I Jones Pool was Mafter of her : we were fer out by Mafter Raffell, one of the Mofeonie Company.

The eight and twentieth, wer had fight of land on the coast of Norway, in the latitude of sixtie degrees and a halfe; nine leagues off.

The fixe earth of tune, we fell with the Affampien, it bearing South and by West eight leagues The Affampien, off : and we lay bearing betweene the North Cape and it, till the eighteenth of Iune: At what we have the second of time weeput off, and steered away North North-west about fiftie fine leagues, and found Much Leage. 40 much Ice : wee thought to have gotten through it, but could not : and when wee had fpent leagues from twelue houres in it, and having the wind Northerly, we put backe againe. The two and twen- Cape. tieth, we fell with the North Cape againe, at twelve of the clock at noone. The foure and twentieth, we put off againe, and being fine and fortie leagues from the Cape, wee met with Ice, and Ice within 450 wpon a piece office we faw a Beare. The Ship being on head of vs, bare close to the Ice; and Ma-fier Welden that the faid Reare dead at the field that. This Reare was found in the land of the North Cape. fler Welden shot the said Beare dead at the first shot. This Beare was from the neerest land about A Beare on Ice feuen and twentie leagues, and lived of Seales or other fift that he could prey vpon.

The second of July, we saw Cheris Ilandat a North found : the land bearing North and by stom any land West about ten leagues off. The same time we sounded and had ground at seventie sue fathoms, laif de white small shelly ground with small blacke stones,

50 The third of July wee anchored on the West side of the Hand in twentie fathoms, having verie much Ice. I observed the Sunne at the lowest, and found the latitude of that place to bee in 74 degrees, 55 minutes. It followesh shere South-west and by South and the floud commech lined in 74der from the South-west.

The fifth and fixth dayes, we were troubled with much Ice; but it being broken, we brought minutes. the ends of our Cables to our maine Mafts; and having a good tyde, we did sheere, as wee tearme The floud it, cleere off the Ice. We ridde thus in Ice fixe dayes, to wit, vntill the thirteenth day; at white comments time the Ice began to goe way, and the Morfes came on thoare. For their nature is such, that they from the will not come on land as long as any Ice is about the load. will not come on land as long as any Ice is about the land .

The fourteenth, we went on land; Mafter Welden, and Mafter Bennet, with the Ships company, of July. 60 and I with the company of the Pinnasse. And being altogether on shoare, and seeing of the Thenature of beafts sufficient to make our voyage, wee prepared to goe to killing. Master Welden and Master the Morks. Benner appointed mee to take eleuen men with mee, and to goe beyond the brafts where they lay; that they and wee might meet at the middeft of them, and so inclose them, that mone of them should get into the Sea.

A great white

As I ferched a compatie about, before we were aware, rose a great white Beare within a Pikes length of vs : whereupon we made a stand, and my selfe having both a Musker and a Lance, thought to have flot him: but remembring my felfe, that the report of my Pecce might make all the Morfes goe into the Sea, and is basard our Voyage, I went to him with my Lance. All this while he fare forning at the mouth, and would not firre, but gapted and roared as though he would have eaten yeall; but prefently wee prickerhim in the snout; and then with an eafe pace we proceeded on with our bufinesse; and before has hourses were ended, we had shayne about pace we note that the state of the state of

flayne in fixe Agreat Froft

The fixe and swentieth, we had taken in two and swentie sums of the Oyle of the Morfes. and three hogheads of, their Testbe.
The lepen and twentierh, Mafter Welden flue another Beare.

The eight and twentieth, we tooke in Water and Wood. The nine and twentieth, we fet tayle for England. The fiftgenth of August, 1606, we arrived in the Themes.

The fixth Voyage made to Cheric Iland, the South part whereof flandath in 74. degrees and 40, minuses of Northerly latitude, in the yeere 1608.

He fixteenth of Aprill, in the yeere 1608, we fet fayle from Blacks wall, and came to Grass f.

Tipany.

The one and twentieth of May, we were within 4. leagues of the North Cape, flanding in 71. degrees and 2 of North latitude. The four and twenteth, were came to Ward-buile. The four and twentieth, we weighed and came of Tipany in Lapland the five and twentieth: where we flayed about our bufineffe till the thirteenth of lune.

lune 13.

We may cannot our company on my cannot be used to the morning wee faw forms I - land. The thirteenth of lung aforefaid, were weighted anchor, and directed our course for Cheric I - land. The eighteenth, at four of the clocks in the morning wee faw forms I land, it bearing North North-weff 10, leagues off: and as foure of the clocke at night wee anchored on the North-weff for it: and Maker Woldes went on Land on the North ide, and flue a Bears. Thenineteenth, we rid ftill, and Mafter Wollen went to the North file againe, and flue ano-Another Beare ther Beare. The same day we sent two men to the South fide of the land, to fee if there were any Morfes on shoare. They came againe the next day, and faid, that there were great flore.

Great heats

The twentieth and one and twentieth dayes it was calme, and the weather cleare, and wee had it as hot as I have commonly felt in England at that time of the yeare. For the Pirch did runne downe the ships sides ; and that side of the Masts that was to the Some ward, was so hot, 40 that the Tarre did frye out of it, as though it had boyled. The two and twentieth, at a North-caft Sun, we weighed and went to the South fide of the

1000, Morfes

Hand, and came into a Cope, where the Mories were, and flue about 900, or 1900, or the Hand, and came into a Cope, where the Mories were, and flue about 900, or 1900, or them in felle then seuen hours: and there were plyed our bufinesse vanil site second of fully: at what time we had taken into our thip 22 tunnes and three hogificads of Oyle. The third of Inly, being Sunday, one Richard Sement of Harewich came to the faid Cherie Iland, in a hip called the Dragen, being factor by Maffeet Duppe, is Brewer dwelling in Same Catherine nette the Tower of London; which fee out a ship with Maffeet Toppes the Toppes with the Catherines neets the Tower of London; which see out a ship with Maffeet Toppes tricking the

Iland, 1607.

The ninth day, we made our Voyage, and came out of the Coue, having taken in 31. tumnes of 50 Oyle, and one hoghead, one barrell, and one terce of Mories teeth: befole a oo, other teeth, The twelfth, we tooke into our fair twee young Morkes, male and female, aline: the female died before we came into England: the male lived about ten weekes. When were had watered, we fet fayle for England about foure of the clocke in the morning.

The fourteenth day, we saw the Hand bearing North North-weff, 15. leagues off vs, and four-

nesse, we brought our living young Morse to the Court, where the King and many honourable personages beheld it with admiration for the strangenesse of the same, the like whereof had neuer before beene seene aliue in England. Not long after it fell sicke and died. As the beast in 60 shape is very strange, so is it of strange docilitie, and apt to be taught, as by good experience we

The senenth Voyage to Cherie Iland, made in the yeere 1609.

VVEe were furnished with two ships, determining to goe to Tipany in Lapland, to buy fish of the Lappes and Rasses, and afterward to goe to Charie lland: the one was salled the Lioneffe, in which I went for Mafter, the other, the Paul, which was there the last yeere. 1608. The one and twentieth day of March, we weighed anchor at Granefend: and the fixe and twentieth, we came to Harwich: where it was concluded, that the Limeffe should goe directly to Chrie Hand. The fifteenth of Aprill, we weighed at Harewich: and the last of the same mo-

neth we fell betweene Lofost and Zenam vpon the Coast of Finmark.

The second of May, we came to the North Cape; and the same day wee stood for Cherie I. Zenen, land : but meeting with contrary winds and foule weather, we bare backe agains for the Cape. May 2. and fell with the Land the fourth day. The fift day in the morning, we put the fecond time from the North Cape; and the eight day wee anchored at Cherie Hand. It did freeze very hard, but They arise at we found no Ice about the lland, faue that which claue to the Rockes. We went into the Coue Cherie Iland with our Shallop, and found eight Morfes on the Ice hard by the shoares side: And we also found all the beafts that were killed the last yeere not washed away with the Sea , couered ouer with Snow and Ice. Wee thought to have gotten abundance of Fowle as wee had done in the yeeres Foule. before : but they would not fit; the reason was, because they were but new come to the Iland, 20 and not fetled as then: yet some Fowle we got, and came aboord. And because the wind was Northerly, that we could not conveniently goe to the North fide with the fhip, we determined to fend fome men ouer Land, to fee if there were any Morfes on shoare voon that side. The ninth day, I prepared to goe over Land to the North fide, about a North-east Sunne, with three men in my companie. I my felfe had a Musker, and about a quarter of a pound of Powder, and fixe Bullets: an Halfe-pike in mine hand, and an Hatchet at my backe. One of the men had a birding Peece; the other two had each of them a lauelin. Wee went ouer the Snow and Ice anace outward; but came wearily homeward, by reason we rested not any where. And when we were within a mile of the other fide, one of my companie faid, he faw a Beare : whereupon we looked vp, and law three great ones. Whereupon I made a ftand, and gaue each of my com. Three Beares. 30 panie some Aque vite, and a little Bread, and told them, that wee must not in any case seeme Qualities fearefull , because the nature of them is such , that wholoeuer seemeth fearefull , or offereth to Beares

feeing vs to come toward them, flood vpon their feet, and two of them went toward the Sea : tor. The third flood still champing and forming, as though hee would have eaten vs. When I was within flot of him, he beganne to follow his fellowes, still looking behind him with his former gesture: In the meane while I got ground of him, the three men following mee with their weapons. In the end the angry deuill turned backe, and came directly toward mee : Het him come within two long Pikes lengths, and gaue him such a welcome, that hee fell downe stone dead. A Beare slaine, 40 The company that were with me were glad as well as I: yet I had beene at the killing of Beares before. After this Beare was slayne, we told seuenteene more, whereof three were young ones. 17. Beares in This done, we went on to the Sea fide, where we found the Shallop which we left the yeere be- fighter fore. Wee were no fooner fet to eate a little food, but there came a Beare with two young ones as big as Lambes of a moneth old: they skipped about their dams necke, and played with one Young Betteanother very wantonly. The dame came so neere that I shot at her, and being loth to hure the whelps young ones, being playing about her fore-parts, I shot her through the top of the shoulder; then the went away. Immediatly we faw another Beare comming toward vs, which before he came

to vs, flood vpon his hinder feet twice or thrice, vling the fame countenance that the first did, which I slue. Het him come very neere, and thinking to give him his pasport, the fint of my Musket was broken, which made him come very neere vs. Then the fellow that had the bir-50 ding piece shot him into the foot : whereupon he ran away faster then wee could follow him. Wee feeing fo many Beares, and having no store of Powder nor Shot, bent our journey toward our ship againe. Wee had not come a quarter of a mile, but wee faw a huge Beare fast a sleepe on the Snow. I went foftly toward him, and gave him fuch a filip, that he never rose out of the place where helay. His skin when he was flayed was thirteene foot long. A neere neighbour A Beare flayn, of his hearing the report of my Peece came toward me: and him I flue alio. Now, having but the skin wherone shot left, I thought it not best to bestow it there, although I faw another lie voon the Snow of was 13, foot. hard by. While we fate downe to reft vs in the mid-way, there came toward vs another Beare flayae.

with one young one: they came almost within shot, and went backe againe: presently shee turned againe, and came within hot of me, and flood on her hinder legs directly vpright, and Ofo did the young one. I made account they would have come neerer; but they to the contrarie ran away. Wee came being very wearie aboord our ship about a North-west Sunne. Then wee weighed, and flood to the Northward, having the wind at South; and by three of the clocke the next morning, wee came to the North-east Point with the ship. There wee manned our The tenth day.

runneaway, they will feize vpon him. In this time I made my Musket readie: and the Beares Feare a Trais

The

Shallop, and Matter Thomas Welden and I went on shoare, where hee slue fine Beares, and I one, and I wounded two more very fore. And before a North Sunne, our men had fleyed them flyar. All the Beares all; both them that I flue the day before, and them that wee flue this last time: for they were

The eleventh day, we went on Land, and washed some old steyed Morses skinnes, which had lyen there two yeeres: but they will hardly proue good. The twelfth day, we rid at the West fide, and got some Fowle with shor, and there we rid till the thirteenth.

The thirteenth, wee faw very much Ice to the Southwards and Westwards, wich came driuing so fast toward the shoarewhere weerid, that wee were forced to weigh, and stood to the ung to far toward the most variety of the land. The Ice followed vs shill: then wee stood to the East side of the Hand: 10 and there wee found both the Hand and our felues encompassed round with Ice. But the winde being Westerly, and a good sliffe gale, it blew the Ice about a mile and an halfe from the Eastern fide: by which meanes wee got betwixt the Ice and the Hand, and flood to the Southward, but faw not any thing in all the Sea faue Ice; fauing close by the Land a little open Sea trending to the South-westward. That way wee stood with our fore top-sayle, and stood one while one way, and another while another way, and could not see open Sea till the fifteenth of the same moneth; at a North-west Sunne wee saw the open Sea: onely a ledge of Ice which began to part infunder, was betwixt vs and it. Toward that place we flood, and intending by Gods helpe to get through, we made provision to defend the ship from the Ice, by hanging Cables ends, and Plankes, and Capitan barres about the bowes of our ship. But for all 20 our fendors, our ship had a great knocke vpon a piece of Ice. About a North Sunne, we got out into the open Sea; with humble thankes to God for our deliuerance.

Snow.

The fixteenth day, the lland did beare North-east and by North, eight leagues from vs: and it did freeze all that day, the wind being at North, which was almost calme. The seventeenth, at noone the Iland did beare North-east and by North, about nine leagues off, the wind Southerly, snowy weather. The same day we saw a sayle, bearing East North-east off vs about 5. leagues. The eighteenth, the lland did beare North about 15. leagues off, the wind being at East and by North, Snow and frofty weather. The nineteenth, at twelve of the clocke at noone the Iland bare North and by East: and we finding the Ice somewhat scattered, and the wind Southerly, put roome toward the Hand, and vpon one piece of Ice we faw fine Seales: one I killed, and one 30 I tooke alive , and brought it aboord our ship. But wee could not come neere the Hand by fixe leagues. The wind came to the West with thicke weather and Snow. The twentieth, at twelve at noone the Hand beare North North-west, about twelve leagues off, We sounded, and had 100.

Snow,

Fine Seales.

fathoms, greenish Oze, faire weather, but cold. The one and twentieth, we faw the ship that wee had seene the seuenteenth day; wee spake A ship of Hull. With them about 12. at noone. The Master told vs he was of Hull. Wee demanded whether he was bound? He told vs, to Cherie Hand, and that there he would make his Voyage. The Hand at this time did beare North and by East about nine leagues off; and it was faire, but cold frostie Frony wether. weather. The 22. 23.24. and 25. dayes, we did beate up and downe in the Ice. The 26. 27. and 28. dayes, likewife wee fayled up and downe in the Ice; having the wind Northerly, and 40 the Iland bearing betweene the North and the North North-east, cold weather. The nine Snow & frost. and twencieth, the Hand beare North nine leagues off, the wind at North-east, snowy weather

26. Scales. The thirtieth day, we flue 26. Seales, and espied three white Beares: wee went aboord for Shot and Powder, and comming to the Ice againe, we found a shee-Beare and two young ones: Mafter Thomas Welden shot and killed her: atter shee was slayne, wee got the young ones, and brought them home into England, where they are aliue in Paris Garden. The one and thirtieth, we beate vp and downe in the Ice, but could not come neere the Land for Ice; the winde was white Beares brought into

on the Ice. Two young

Froft.

The first of Iune, we got within fine or fixe miles of the Hand : but finding very much Ice 50 close by the Land, we stood off againe, the wind being at North-east, cold weather. The second day, we got within three leagues of the Hand: but finding exceeding much Ice round about vs, we flood off againe, the wind at North-east, cold frostie weather. From the second day to the fift, wee fayled first one way, and then another, as the wind and Ice would give vs leave. The wind being at North and by East, and the Iland being betweene the North-west and by North, within fixe leagues and leffe.

The Hall man.

The fixth day, we spake with the Hull man, who told vs, that he was put swentie leagues to the North-west of the Iland, being fast in the Ice. We had the wind Northerly, and frosty weather; the Land bearing North North-west. The seventh and eight, we beate vp and downe in the Ice : the Hand did beare North-west eight leagues off. The winde was Northerly, with 60 No fog in a cold and froftie weather.

The ninth, the Land beare North-west off vs about six leagues off. That day we had the first fogge fince the time of our arrivall, which was the eight of May. Neither loft wee the fight of the Hand about eighteene houres in all this time. This day, about a North-rast Sunne it began to thaw ; and in fixe houres the frow was melted, which lay vpon the Ice aboue fixe inches The first than thicke : which put vs in good hope that the Ice was almost past.

The tenth, we got within fixe miles of the shoare : where I made an attempt to hatte got to the land with the Shallop : but comming within three miles of the shoare, I could get no farther, the Ice was so thicke, and such foggy weather. I made another attempt the same day, and got within one mile of the Land ; but the Ice was so thicke that I could get no farther. The same day wee faw good ftore of Morfes on the Ice and in the Sea.

The eleuenth and twelfth, we plyed vp and downe fayre by the Iland, to fee if wee could get on Land with our Shallop; but the Ice was so close about the Land, that wee could not by any In meanes, This day the wind was at South-east, thicke foggie weather. The thirteenth, we had thicke fogge and calme weather; and when it began to cleere, weehad fight of the Souther Fogges part of the lland, bearing East South-east, about fixe miles off; but it fell thicke suddenly againe. There wee anchored in fortie fathoms, white shelly ground; and rid till ten of the clocke at night : at what time I prepared to goe on shoare, as fast as I could with a Shallop and sixe men. About eleuen of the clocke we put from the Ship, and with great labour got through the Ice to the Hand, by a North-east Sunne.

The fourteenth day, I landed on the Wester side of the Iland, and determined to goe from The Beares thence to the North fide, where wee flew the Beares. The ninth of May I left three men flaine on the with the Shallop, and tooke three men with me. In my journey I found fuch bad way, that I had North see. 20 no ftomacke to goe through ; for where there was no fnow, the ground was fo foft, and without

graffe, that we went up to the anches in dirt; and where the fnow lay, which was in fome holes, three or foure fathoms thicke, it was fo foft, that we flipt each ftep vp to the twift; fo that wee were aboue three houres in going fearce two miles. Whereupon confidering it would bee long before I (hould get ten miles and backe againe, I returned to our Shallop, and found that the men which I left had killed some fowle, which wee sod, and when wee had earen them, I prepared to goe in the Shallop to the North fide. I went close by the shoare; for the Sea was full of Ice. As wee went along by the Cliffes, we got good store of Fowle; which made vs glad and joyfull, because there was no hope to get aboord the Ship that day, nor the next. About a North-west Sun wee got to the place about aid, and found nine Beares, three of them I flew, the other tooke the 30 Sea. Those three that were flaine we flead, and tooke their flesh and salted it in their skinnes; Three Beares which I flowed in the Shallop for feare of a dearth. I had a terce full of falt there, which wee flaine, powdered, in the Shallop for feare of a dearth.

The fifteenth day, when wee had ended our businesse, and eaten some of our Beares sieth, and Possession to fet vp an Enfigne in token of our possession of the Hand, wee prepared to be gone : and about an ken of theria East North-east Sunne the wind came Westerly; which made me thinke, as it proued, that the I and for the Ship would be on the South-east fide of the Iland; and when wee were comming, and almost at Mujessie the North-east point, we saw nine men ; prefently I knew them to beethe men of Hall. Along Company. I came to the East side, where we tooke in drift wood, and a broad stone to make a fire vpon in Drift wood on our Boat. While wee were there, wee efpied our ship vnder her Fore-topfayle, and her Mifen, the Eath fide, 40 We made all the hafte we could, and came to the Coue, where wee made our voyage the Summer laft paft. There likewise I set up a Pike, with a white cloth vpon it, and a letter fignifying our The Cour. possession for the right worshipfull Company trading to Moscome. When I had done, I elpied the Hull mans Boat rowing into the Coue, and a Tent fet vp in the bottom of the Bay. I went thither, and told him we had taken possession there, the eight of May last. He answered, That if the beatls came on shoare, he would kill them if he could, and that there were as good men which wentured in that Ship, as the Company. I told him he durft not answer these words in England, and so departed and got some Fowle. About a South-west Sunne wee stood toward our Ship, having the wind at West South-west, and the Ship bearing from vs South-east about four leagues. I had not failed ten miles, but the Ice was so close and firme, that I could not get aboord, so nor backe againe; for it closed with such force, that it made the Shallops sides cracke, as though they would have met together. Wee laboured very fore to faue our Boat, because it did concerne our lines, and got her into a place where shee lay betweene two pieces of Ice. After this fort we

draue, being not able otherwise to moue till we were aboue eight leagues from the Iland. The fixteenth day, at an East South-east Sun, the Ice began to open. Then, although my Company were in delpure, and fait it was impossible to get out, to worke wee went, and by cutting off Ice, and remouing of it one piece from another, we made way through toward the Land. The neerer to the Land wee got, wee found the more open Sea ; and by a North Sunne wee got on shoare. After wee had given God thankes for our deliverance out of such extreame danger, wee 6c eate some Fowle and Beares slesh, which wee fod under a Cliffe. There wee found nine young They feed on

draue with the Ice till we had loft fight of our Ship, which was about a North fun; and still wee

Foxes, and killed the old one. There also we slept upon the cold Sand, which was not past three sinches thicke, and underneath Ice; and said here till a Court, and Sunne the Suppression land. Nine Foxes rocks, and and underneath Ice; and stated here till a South-east Sunne the seuenteenth day. South-east Sunne the seuenteenth day. The fenenteenth, we went from this place to the Coue, where we found the Hall mans Boat. I made a tilt of the Shallops fayle, and fod fome Beares flesh and Fowle; and stayed about the

Three Mynes

Coue all that day. And vpon an Iland, commonly called Gull-Iland, I found three Mynes of Three Mynos Lead Vre : but having no ht tooles to breake the Rocks, and also because it was in the view of on Gull Hand. the Hall mans Tent, I was forced to let it rest, till the Ships could get into the Coue.

Good Sea

564

The eighteenth day, wee went to the North fide of the Iland, and in our way wee found good Good Sea-coles found on Sea-coales to burne : fome wee tooke with vs to try them, and found them good. And on the North fide I flew two Beares. Then wee shated the bread that was left; and wee had but two cakes to a man : for some of my Company while I was asseepe, or killing of the Beares, had broken open the cheft wherein the bread was, and had conveyed fome away. Our betre was fpent before this time, and we were faine to drinke fnow water.

ent before enis time, and we were table to come in the wind being Westerly, to see if we could espy our 10 Ship; but wee could not, neither could shee come neere the lland for Ice; for all the Sea, as farre as I could fee from the top of an high Hill was covered with Ice, fauing that within a quarter of a mile off the shoare, it was cleere round about once in a tyde.

palle of lee. Another Beare flaine.

The twentieth day, I went to the North fide againe, and flew a Beare. Thus wee spent the time, sometimes on one side, sometimes on the other, neuer staying about one day in one place till the Ship came in ; which was the feuen and twentieth of June, on which day I flew ano-Another ther Beare. I slew seven in all, whose slesh we eate full saverly, forgetting the oyly ranknesse Beare flaine. of it; for hunger is a fauourie fawce.

Their Ship got in the fecondtime.

The feuen and twentieth, our ship came to an anchor on the North side, where we then were: affcone as vve faw her, we needed no bidding to go aboord. When we were come to the ship side, 20 they bad vs vvelcome: but vvhereas vve thought to have releeued our felues, vvee found it farre otherwise; because the Ship had a knocke with a piece of Ice in the Sterne, which brake in the corner of a Planke under the wvater, so that our bread-roome wvas full of wvater, and all our bread foyled, lauing about one hundred weight: which was but a finall quantitie for three and form men. This day a Ship called the Mathew came to an anchor by vs. Then Mailer welder and I The Matthew. vvent on shoare, where vve found one lohn Skinner, Masters mate of the Matthew, with eleven men by him. We set vp our Tent, and told him there vvas no voyage for him to make : but our necefficie vvas such, that vve vvere faine to take foure hundred of bread of them, vpon some condition, which I will not speake of here. The same day were thought to have taken a Copper aboord, which I digged out of the snow; but by negligence it was let fall into the Sea, yetal- 30 terward taken vp againe and carried aboord. The fame day, another Ship called the Mary Margarise came into the faid Coue on the South fide.

The Marie

The eighteenth, I went to the Coue with the Shallop and fixe men, where I found the Marie Margarite; there passed no great kindnesse betweene them and me. Islew three Morses there, two overe lost, the others head I brought aboord. The next day I came aboord our Ship, and we rid on that fide, looking still when any beasts would come on shoare, till the second of Iuly. Then we weighed, and stood to the East side of the Hand; because the wind was at West North-west, and great store of Ice came from those parts. We had not rid one houre to an end, but Logen and Edge, vve faw a Skiffe comming towards vs. In this Skiffe vivas one Josias Logen, and Thomas Edge, Factors in the Paul for the vvorshipfull Company. They told vs that the Paul vvas in the Coue, 40 and the ship of Hull. They weent aboord againe, and when the tyde was spent, we weighed and thought to have anchored neere the Coue; but the wind was so far Easterly, that we could not: so vvee vvent to the Wester fide, and ridde there till the fourth day, where we got Fowle; for in all the time of our being about the Iland, and in the Ice, they were our chiefest food.

in extreamitie

The fourth, we weighed and went to the North fide; where we were troubled with much Ice : The wind was at West and by North, which brought the Ice whole vpon vs; so that we vvere forced to vveigh againe.

A Beare flaine. Another Beare flaine.

The fixth, vve came into the Coue; where Master Welden slew a Beare. The eight day, he flew another Beare; and the fame day I vvent to the North fide, with the Shallop and victuals for the men which kept on that fide. I flayed there till the fourteenth of July : on which day 50 wee had the wind Northerly, with fnow and frost, and the Iland enuironed round with Ice. In this time the Ships Company on the South fide did digge some Minerall Lead. And we caught aboue twentie Foxes, which we did eat as fauerly as if they had beene Venison. The fifteenth day, by a North-east Sunne vve came aboord the Ship, which lay in the Coue,

Snow and Froft. Some Minerall Lead digged. Aboue twentie vvith our Shallop and all our provision that vvas on the North fide. And the Lionelle prepared

Foxes eaten, to goe to Saint Nicolas in Ruffia, as it was appointed before in London, The fixteenth, the wind being North-east brought such store of Ice to the Hand, that it vvas compassed round close to the shoare; and filled the Coue so full, that by no meanes possible the Ships could get out, but ridde ftill that in for five dayes.

The feventeenth, the Ice began to open at the mouth of the Coue, and some were willing to 60 goe out with their Ships; but conetoninelle had like to have brought vs all to great milery : for each man striuing to ride longest in the Coue, supposing that there the Morses would come first Dragers by the on shoare, they found it cleane contrary; for the wind came Southerly, and blew all the Ice from this fide of the Hand, faue that which was in the Coue: which pressed so fore vpon our

Ships, that our Anchors could not hold vs. For the Matthew was put from three Anchors, and droue with that imall tyde, that runneth there within her length of a funken Rocke: but a great piece of Ice on ground vpon the Rocke did keepe her from it. And when the floud came againe, the was driven within halfe her length of the Rockes; fo that they were glad to get molt of their victuals out of her vpon the Rockes, looking each minute when the should split in sunder. And though the rest of the ships did not drive as she did , yet they had many a fore stroke with the Ice. For the Southerly wind caufed a hollow Sea to come in; fo that our ships strooke with such force against the Ice, that wee could hardly stand on our feete in them. Then each man layed to his hand to faue his ship, by putting Plancks and old Cables ends, and bundels of 10 Hoops betweene their ships and the Ice. But they were beaten all to pieces presently. Then we put pieces of Elme Plancke betweene the bowes of the Paul, in which ship I was: Immediately, they also were beaten into small pieces, although they were aboue foure inches thicke. With the stroke that brake the Plancke, the Carpenter taid, the ships side did cracke, and two timbers were broken. Then prefently wee also got out of the ship most of our victuals, and carried it to the shoare. There might you see a fortowfull spectacle. For all the ships, being fine in number, were fo fast in the Ice, that all the men that were in them all , which were one hundred eightie two, could not imagine how to laue one. Among the rest, we made account that the Matthew would finke, ere long : because the Ice had broken nine timbers on one fide, and eleuen on the other: fo that the Greene Sea did come into the ship : and her mayne beame was broken at that 20 inflant likewise. In this fort we continued till the twentieth day following; when we looked still to bee put on the Cliffes with the force of the Ice, that preffed upon our ships to fore, that our Anchors could not possibly hold.

CHAP. 12. Ship endangered by Ice. Many Morfes staine. Their Oile and teeth.

Vpon the twentieth day, it pleafed God to bring the wind Westerly, then the Ice began to open, and to drive out of the Coue by little and little, to our great comforts. But that Ice that did not get cleane out, came backe againe, and ranne round in a Circle; fo that wee had a contimual labor to defend the ships from it, Whereupon we made meanes to get out by long 1 Warps, 1 A warpe, is a as weetermethem. Wee were faine to let flip one Cable , and the Lioneffe one. The Matthew Rope (com had but one Cable and Anchor; but they borrowed one of vs. By a North-west Sunne, all ser yield to the ships got out of the Ice to the Coues mouth; where we stayed for the ebbe. When the ebbe warpe a ship, 30 was come, the Lioneffe departed on her Voyage to Saint Nicholas in Ruffia. And presently the that is, with an Matthew, and the Mary Margarite let faile and got out. Then wee in the Paul fet fayle, and Anchor bent Matthem, and the Mary Margarie rectaine and got out. I then we entitle rame let tayle, and to the Hawfer before our Anchor was up, it got hold upon one of Matthemes Cables, that shee lost, when shee and layd out droue out, and brought vs vp toa Bitter, fo that wee were very neere the Rockes:but wee to hale the thir got off againe, and ride there till a North-weft Sunne the next day.

The one and twentieth day, we weighed and stood to the East side of the Iland, where wee is done when found the Mary Margarite, which had loft her Boat. Streight way we fayled to the North fide, they want wind where we anchored and rid till a North Sunne.

The two and twentieth day, it cleered up of a fogge, which had continued fince the bour. time of our comming out of the Coue. And wee thought it best to fetch the victuals abourd, m A Bitter, is a 40 which we carried on shoare when the ship was like to be split with Ice.

Then Islan Logan and I tooke feuen men more with vs, and came to the Coue on the the Bitts, for Southfide : where wee found abundance of Morfes lying on the Ice, that was in the Coue. when they I flue one of them, and tooke off his head: we could not get to the shoare where our victuals lay, come to Anbut we made a fire vnder a Cliffe in the fame Coue.

The three and twentieth day, wee got to our victuals, and loss went with it to our shippe: about the Bitts but I tarried at the Coue, hoping that the beafts would come on Land when the Ice was gone; (two mayne as they did afterward. There I tarried till the fine and twentieth of July; at what time Tofias squarepieces Logan came to mee with the Shallop, and a Skiffe loden with Caske and other prouision; of Timber, and told mee, that they had flaine five or fixe hundred Morfes on the North fide.

Hee tarried with mee till the seuen and twentieth of July : now seeing no beastes the loose of 50 did come on Land, because the Ice did hang about the Coue, he went to the North fide againe: the ship, to but the same day after he was gone, they began to come on Land.

The next day following, being the eight and twentieth, wee flue about eightie, and tooke Cable vnto) their Blobber and Teeth. Then they began to come on shoare agains the thirtieth day : at what their they may time Master Bonner was come into the Coue to seeke his Anchors. Then his men came on shoare, little vere it and we flue about one hundred and fiftie beaft more. But there rofe a florme at South-east, that cut at case: obrought in such a surge, that it washed aboue sixtie beasts into the Sea; so that most of them therwise, if a were loft.

rere lott.

The next day being the last of July, Master Welden and Master Iones came to the Coue with would runne about twelue men, being all very wearie. For they had lett the Shallop in a Coue on the North- out end tor 60 west fide of the Hand, and came ouer Land. Then to worke wee went on all hands, and placed end, that is alour Coppers. And by the fift day of August we had ended our businesse; and the ship came from together; but the North fide into the Coue.

is faid to bee brought to a Bitter. The Bitter end is that end of the Cable within boord at the Bitter. The

or into a Har-

Pillar wife in

August.

Note.

The fixt of August, I tooke the Skiffe and feuen men to fetch the Shallop to the Coue, that Mafter Welden had left in a Coue, on the North-weft fide of the Iland, the last of July. When I came to the place, confidering I was neere the North fide, where we commonly make our Voycame to the place, commercing a way more than to do for a went thirther, and found about age, and also defired by Mafter Welden, if I could goe, to doe so, I went thirther, and found about fine and fortie as good headed beafts for Teeth, as cuer I faw. Wee had no more Launces to kill the and rottle as good neared pearls for a certified seem at law, which is a more Launces to kill the movimal, but two, I tooke one, and a luttle fellow that was our Cooper had the other swe en m with air, but two, t tooke one, and a mine tank of the first and the celt in lefte then two houres, had not killed past ten but his Lancebrake. Then I she all the rest in lefte then two houres, and wee tooke their Teesh; and the next day by a West Sunne wee came abourd the Paul

th them.

The eight day, wee got the Southermost Point of the Hand : where wee rid all that day. IO Their Skille from their long Boats flerne, and we manned our Boat to fetch her againe: but then their Same from their song transfer but enter the got to the hip of fuch a fogge, that we had like to haue loft both our Boats and men; but they got to the flip

The ninth day, it was calme; but wee had fuch a fogge, that wee could not fee two The mann day, it was cause; out we can a cape; that we could not be two Cables length from the ship. And about eight of the Clocke at night, wee lost our Skiffe

together.

The tenth day, we had a little Wind at North-west and by West. Then seeing no amendment of the weather, wee left the ship of Hull behind with the lland, and about fixe of the ment of the weather, we take any and arrived fafely at London the laft of August, 1609. Bleffed

A Voyage performed to the Northwards, Anno 1603. in a ship of the burthen of fif-tic tunnes, called the Grace, and set forth at the cost and charges of the Wor-Shipfull FRANCIS CHERIE. Written by WILLIAM GORDEN; being the first Voyage to Cheric Iland; which came to my hands since the former (or rather later Voyages) were in

He ship being readie the tenth of Aprill, whereof was Master Stophen Bennet, and for 30 Factor and Ouer-feer Williams Gorden , our Directions from the faid Merchant, were first to proceed to Cola, and there to make sale of such goods as we had, and to take in fuch other as the Countrey of Lappia did affoord, and then to proceed vpon some Discouerie, Wherefore omitting our lourney to Cole, as a matter of small importance, being so well knowne before, after our Affaires ended, we were readie to proceed forward. But our men not being hired thereunto would have refused, if there had not beene made an agreement by meanes of loss as Logar, who was to lye there as Factor for Master Cherie, the Master and my felte, partly with promiles, partly with gitts. And thus fetting forward the fixt of August, 40 from the River of Cola, being determined to have fayled into 80, degrees of latitude, if nothing did hinder vs;or if we did not light vpon some landsour determination was hindered by meanes of meeting with an Iland, and likewile the yeere being farre spent, keeping our course from the West end of Kilden, to the Hands of Ward bouse, which were passed the tenth of August with little wind; then directing our course North North-west, the wind at South-west easis wind, so that the eleventh day we did reckon our felues to have fayled twentie leagues North-west. The twelfth day, it was most part calme and foggie. The thirteenth day, it was cleere, and the wind at South, and we had fayled twentie two leagues North North-west. The fourteenth day, the wind at East, we kept our course and sayled ten leagues, and the same day being thicke and foggie, we had thought wee had seene Land about foure of the clocke in the after-noone, bearing 50 from vs West North-west, and North-west by West, but sayling towards it three houres, keeping still his forme, and not altering till the wind increasing, caused it to fade away (for it was no other then a banke of fogges) after we had fayled three leagues changing our courle, we fayled then fifteene dayes twentie leagues, North-west and by North, still having close weather, that we could not make any observation. The fixteenth day in the morning, at two of the clock, we did see two great high Hils, which did seeme to vs aboue the Clouds, and did seeme very neere, but we found it otherwise for sayling towards it, we found it further then we did expect, for it was fixe of the clocke at night before wee could come neere vnto the Land, where wee anchored in thirtie fathomes. In which time we could not tayle leffe then eighteene leagues North and by West. That night our Master knowing, better what did belong vinto those Affaires, 69 would not fuffer the Boat to goe aland till the morning : which was the feuenteenth day of Auguit, and before our going aland, the Maiter caufed afhanke of Lines to bee that for, to toy for his, and then he and my ielfe with foure of our Company went aland. First, vpon a little fland meere adjoyning, where we had much adoe to get to our Boat againe, by reason of the steepnes

of the Rockes : then we went on thouse vpon the Mayne, where at our comming on Land, wee did fee two Foxes, one White, the other Blacke. Thus foending most part of the day, wee returned aboord our ship without any profit: only one of our men tooke vp a piece of Lead, and I found a piece of a Morfes Tooth, by which we perceined that the Sea Morfer did vie thither, but the time for that yeere was pair, for we did fee none. After our comming aboord, hading haled the Line, we found nothing but one but fish thereon, wherefore prefently weighing Anchor. we fayled West to see if we could have any true observation, the next day which wee had , and found our felues to bee in 74 degrees 30, minutes, The fame day directing our course for London where we arrived the tenth of September, by Gods helpe, in health and fafetie,

## CHAP. XIIIL

Diners Voyages and Northerne Discourries of that worthy irreconcrable Discourrer Master HENRY HVDSON. His Discouerie toward the North Pole, fet forth at the charge of certaine Wor hipfull Merchants of London. in May 1607. Written partly by IOHN PLAYSE one of the Company, and partly by H. HVD SON.

Nue 1607. Aprill the nineteenth, at Saint Ethelburge in Bishops Gate ffreet, did communicate with the reft of the Parishioners these persons Scamen, purposing to goe to fea fouredayes after, for to discouera Paffage by the North Pole tollapan and China. Tenthly, Richard Day. Eleventhly, James Knight, Twelfthly, John Hadfon a Boy. Tentiny, Kentra Lee, Letteniny, Letteniny, Letteniny, Letteniny, Letteniny a Loy, The first of May 1607, we weyed Anchor as Gransfeld; Jado on Tuesday the fixe and twen-tieth day in the morning, we made the Hes of Shotland, and at noone we were in 60. degrees 12. The Hessefminutes, and fixe leagues to the Eastward of them :the Compasse had no variation. We had fixtie four fathomer at our founding, blacke, ozie, fandir, with some yellow shels. Our ship made No variation. more way then we did suppose. On Saturday the thisweth of May, by our observation we were minutes. in 61. degrees 11. minutes, This day I found the Needle to incline 79. degrees winder the Ho-The inclubilrizon. For foure dayes space we made very little way by contrary winds.

On Thursday the fourth of June, we were by our observation still in 61. degrees and 14. mi. Needle. nutes, eight and twentie or thirtic leagues from the Norther part of Shotland : the Land bearing by our Accompt East and by North off vs, I found variation in fine degrees Westerly. The seventh of June, wee were in 63. degrees 25. minutes. The eighth, all the fore-moone 67.degrees 27. we had a fresh gale Southerly; we steered away North and by West, and by observation we were minutes.

in 64. degrees 27. minutes.

The elementh, wee faw fixe or feuen Whales neere our shippe : wee were in sixtie seuen degrees thirtie minutes. About fine of the clocke, the winde came up at North-east and by East; wee steered away North North-west with a fresh gale all the night at East. Thetwelfth, the winde was at East North-east, a stiffe gale, wee steered away as afore, and accounted wee had runne by this day noone thirtie leagues. In the after-noone wee steered away North and by West fifteene leagues, all the night prooued a great fogge with much wind.

The thirteenth, betweene one and two in the morning, we saw some Land on head of vs, and fome Ice: and it being a thicke fogge, we fleered away Northerly, and having much wind wee 10 flood away South and by East, fixe or eight leagues. Our sayle and shroudes did freeze, At eight in the morning it cleered vp, the wind being at North-east and by East, with much wind wee were hardly able to maintayne a fayle. This was a very high Land, most part covered with Snow. The neather part was vncouered. At the top it looked reddish, and underneath a blackish Clay, with much Ice lying about it. The part which we faw when wee cast about, trended East and West: And the Norther part which we saw, trended North-east and by North, and Northeast; and the length which wee saw was nine leagues; wee saw much Fowle. Also wee saw a Whaleclofe by the shoare. We called the Head-land which we saw, Towney Cape; and neere it Young Cape. flandeth a very high Mount like a round Castle, which were called, the Mount of Gods Mercie. The Mount of All the after-noone, and all the Eeuening it rained. At eight in the Eeuening we cast about, and Gods messic. 60 feered all night North and by West, and sometimes North North-west.

The fourteenth, being neere the Land we had Snow. At foure in the morning, the wind vering Northerly, we cast about and stood South-east and by South. This day wee had much wind and raine, we shorted sayle being neere the Land. The fifteenth, in the morning it blowed so much wind at North-east, that wee were not able to maintayne any sayle, wee then strooke a Ccc 2

hull, and let our thip drive, wayting for a fitter wind; this night was very much raine. The fixteenth, was much wind at North-east. The feuenteenth, we let fayle at noone, we steered away East and by South, and East South-east. The eighteenth, in the afternoone a fine gale Southeast, which toward the Eeuening increased, and we steered North-east three Watches, twelve lesgues. The nineteenth we steered away North North-east fixteene leagues. At noone wee had raine with fogge. From twelve to foure we steered North North-east eight leagues, and did nas rame with tugge, a runs twages to be a special property of the whether the Land which we made the thirteenth day, were an lland or part of Greenland. But their the fogge increased we made the thirteenth day, were an lland or part of Greenland. very thicke with much wind at South, which made vs alter our course, and to shorten our sayle, and we steered away North-east. Being then as we supposed, in the Meridian of the same land, 10 haning no observation fince the eleventh day, and lying a hull from the fifteenth to the fevenmaning as controction into the country of the South-west. This day were saw three Whales neere our ship, and hauing steered away North-east almost one watch, but leagues, the Sea was grown cuery way : we inpposed wee were thwart of the North-east part of that Land which we made the thirteenth day, and the current fetting to wind-ward. The reason that mooued vs to thinke forwas, that after we had fayled five or fixe leagues in this Sea, the wind neither increating nor dulling, we had a pleafant and smooth Sea. All this night was foggie with a good gale of wind, westeered away North-east until the next day at noone, and sayled in that course

Land not conered with

The twentieth, all the morning was a thicke fogge with the winde at South : wee fleered 20 North-east till noone. Then we changed our course, and steered away North North-east, hoping for an open Sea in our course to fall with the bodie of Newland. This day at two in the afternoone it cleered up, and wee faw the Sunne, which wee had not feene fince the fecond of this moneth. Haning steered North North-east, two watches and an halfe, fifteene or fixteene leagues wee faw Land on our Larboord, about foure leagues off vs, trending as wee could gheffe North-east and South-west. We steered away East North-east, the wind at South a good gale, Muchdrift lee, but reasonable cleere; wee saw many Birds with blacke backes, and white besses in forme much \*Toloofe,is to like a Ducke : we saw also many pieces of Ice driving at the Ses. We \*loofed for one and went keepeclofeto roomer for another. And this morning about foure, a thicke fogge we faw a head of vs. The one and twentieth, in the morning we steered North-east, and East North-east two wat- to

ches, fine or fixe leagues. Then it grew thicke fogge. And we cast about, and steered North-east and East North-east two watches, fixe leagues, finding wee were embayed. The wind came at \* To tacke the East South-east a little gale: we \* tacked about and lay South. All this night was a thicke fog thip, is to bring with little wind, Eaft we lay with the flemme.

The two and twentieth, in the morning it elected up, being calme about two or three of the clocke : after we had a prettie gale, and we steered away East and by North three leagues, Our observation was in 72. degrees 38. minutes, and changing our course, we steered North-east, the wind at South-east a prettie gale. This morning when it cleared vp, we saw the Land, trending neere hand East North-east, and West South-west, esteeming our selves from it ewelue leagues, It was a mayne high Land, nothing at all covered with fnow : and the North part of that 40 mayne high Land was very high Mountaynes, but we could fee no fnow on them. We accounted by our observation the part of the mayne Land, lay neerest hand in 73. degrees. The many fogs and calmes with contrary winds, and much Ice neere the shoare, held ws from farther Discovery of it. It may bee objected against vs as a fault, for haling to Westerly a course. The chiefe cause that moued vs thereunto, was our defire to fee that part of Groneland, which (for ought that we know) was to any Christian vnknowne : and wee thought it might as well have beene open Sea as Land, and by that meanes our passage should have beene the larger to the Pole: and the hope of having a Westerly wind, which would be to vs a landerly wind if wee found Land. And considering wee found Land contrarie to that which our Cards make mention of; we accounted our labour fo much the more worth. And for ought that wee could fee, it is like to bee a good to Land, and worth the feeing.

On the one and twentieth day, in the morning while we freered our course North North-east, we thought we had embayed our felues, finding Land on our Larboord, and Ice vpon it, and many great pieces of Drift Ice : we steered away North-east, with diligent looking out enery cleere for Land, having a defire to know whether it would leave vs to the East, both to know the bredth of the Sea, and also to shape a more Northerly course. And considering wee knew no name given to this Land, wee thought good to name it, Hold with bope, lying in 73. degrees of

The Sunne was on the Meridian on the South part of the Compaffe, neerest hand, Heere is The Land of to bee noted that when we made The Mount of Gods Mercie, and Tonngs Cape, the Land was 60 Hold with Hope conered with inow for the most part, and extreame cold, when wee approached neerest: But this Land was very temperate to our feeling. And this likewife is to be noted, that being two dayes without observation; notwithstanding, our lying a hull by reason of much contrary wind, yet our observation and dead reckoning were within eight leagues together, our shippe beeing

before vs eight leagues. This night vntill next morning prooued little Winde. The three and a wentieth, in the morning we had an hard gale on head of vs. with much rayne that fell in very great drops, much like our Thunder showers in England; wee tacked about and thood East Northerly with a short fayle, to our feeling it was not to cold as before we had it. It was calme from noone to three of the clocke with fogge. After the winde came vp at East and East South east, we steered away North saft with the fogge and rayne. About seuen or eight of

the clocke, the winde increased with extreame fogge, wee steered away with short sayle East North-east, and sometimes East and by North. About twelve at mid-night, the wind came vp at South-west, we steered away North, being reasonable cleere weather.

The four and twentieth, in the morning about two of the clocke, the Mafters mate thought A mayne high he faw Land on the Larboard, trending North North-west Westerly, and the longer we ranne Land North, the more is fell away to the Welt, and did thinks it to been mayne high Land. This day the wind being Westerly, we steered away North, and by observation wee were in 72 degrees nearest hand. At noone we changed our course, and steered away North and by East, and at our last observation, and also at this, we found the Meridian all Leeward on the South and by West, Westerly part of the Compasse, when we had sayled two Watches eight leagues.

The fige and twentieth, the wind feanted and came vp at North North-weft, we lay Northeaft two Warches 8, leagues. After the wind became variable betweene the North-eaft and the North, we steered away East and by North, and sometimes East, we had thicke fogge. About noone three Granpasses played about our shape. This After-noone the wind vered to the East and South-east, we haled away North and by East. This night was close weather, but small fogge (we vie the word Night for distinction of time, but long before this the Sunne was alway about the Horizon, but as yet we could never fee him you the Meridian North.) This Night being by our accompt in the Latitude of 75 degrees, we faw small flockes of Birds, with 75 Degrees blacke Backes and white Bellies, and long speare Tayles. We supposed that Land was not farre Land not farre off, but we could not diferie any, with all the diligence which we could vie, being fo close wea- off, ther that many times we could not fee fixe or feuen leagues off.

. The fixe and twentieth, in the morning was close weather, we had our wind and held our course as afore. This day out observation was 76. degrees 38. minutes, and we had Birds of the 76. degrees 38. 30 fame fort as afore, and diversocher of that colour, having red Heads; that we faw when we first minutes, made the Mount of Gods Mercy in Greenland, but not fo many. After we fleered away North and by East : two VVatches 10. leagues, with purpose to fall with the Souther part of Newland, accounting our felues 10. or 12. leagues from the Land. Then wee flood away North-east one

VVatch fine leagues.

The feuen and twentieth, about one or two of the clocke in the morning we made Newland, Greenland or being cleere weather on the Sea; but the Land was couered with fogge, the Ice lying very thick Newland discovery all along the shoare for 15. or 16. leagues which we saw. Having faire wind wee coasted it in a uered. very pleasing smooth sea, and had no ground at an hundred fathoms, foure leagues from the shoare. This day at noone, wee accounted we were in 78. degrees, and we stood along the shoare. This 78. Degrees.

40 day was so foggie, that we were hardly able to see the Land many times, but by our account we were neare Useel Hooke. About eight of the clocke this Eeuening, we purposed to shape our zogel Hooke. course from thence North-west. Heere is to bee noted, that although we ranne along neere the shoare, we found no great cold, which made vs thinke, that if we had beene on shoare the place is Temperate temperate. Holding this North-west course, about ten of the clocke at night, we saw great store avec of Ice on head off vs, bearing Wester off vs; which we could not goe cleere off with the forefayd course. Then we tast about, and stood away betweene the South and the South-east, as much defirous to leave this Land as we were to fee it.

The eight and twentieth, was a hard gale of wind all the fore-noone betweene the South and the South-west. We shaped our course , we did it to bee farther from

so the Ice and Land. It pleased God that about twelve of the clocke this night it cleared vp, and we found that we were betweene the Land and the Ice; Vogel Hooke then bearing nearest hand East off vs. Then we tacked about, and stood in for the shoare, having Sea-roome between the Ice and the Land. The nine and twentieth, at foure in the morning the wind at North-east, a pretie gale, we thought best to shorten our way, so we tacked about and stood North North-west, the wind a little increasing. About twelue at noone, we saw Ice a head off vs; we cast about again, and flood away East South-east with very much wind, to that we shortned our tayles for the space of two Watches. Then about eight this Ecuening, we strucke a Hull, and it proued the hardest stormethat we had in this Voyage. The thirtieth, in the morning was stormie; about noone it ceased, at seven in the Eevening it proved almost calme.

60 The first of July, all the fore-noone the wind was at South-east, we stood North-east for the shoare, hoping to finde an open Sea betweene the shoare and the Ice. About moone wee lulywere embayed with Ice, lying betweene the Land and vs. By our observation we were in 78.degrees 42.minutes, whereby we accounted we were thwart of The great Indraught. And to 78.degrees 42. free our felues of the Ice, we fteered betweene the South-east and South, and to the Westward, as minutes.

we could have lea ; And about fix, this Ecuening it pleased God to give vs cleere weather; and we found we were that farre into the Inlet, being almost a Bay, and enuironed with very high Mountaynes, with low Land lying betweene them; wee had no ground in this Bay at an hundred fathoms. Then being fure where we were, we florred away West, the wind at South-tall and calme, and found all our Ice on the Norther shoare, and a cleare Sea to the Southward.

The second, it pleased God to give ve the wind at North-cast, a faire gale, with cleere wetther, the Lee being to the Northward off vs, and the weather shore, and an open Sea to the South wards vader our Lee. We held on our course North-west till swehe of the clocke; having say. led in that course to leagues, and finding the Ice to fall from es to the led in that courie rotagues, and mining the act of rail nomine for a mongh fo huge a quantitiankes to God, who marcellously preferred we from for many daigers, amongh fo huge a quantition of the course of the cou titie of Ice and Fogge. We steered away North-west, hoping to be free from Ice, we had ob-72. Degrees 56. femution 78. degrees 56. minutes, we fell with Ice againe, and trended it as it hay between the West and South South-east. The third, we had observation 78, degrees 33 minutes. This day The degree 33 wee had our throads frozen, it was fearching cold, we also trended the lee, not knowing when ther we were cleare or not, the wind being at North.

The shroudes the Inlet.

minuces.

78.degrees. The end of

A Blacke and o

the Sache.

pen Sea.

The fourth, was very cold, and our shroudes and sayles frozen, we found we were farre in the The incomes and ayles for Inlet. The wind being at North, we beare vp and flood South-South-eaft, and South and South well by Well till ten this night. The fift, was very much wind at North Basterly : at twelve we ftrooke a Hull, hauing brought our felues neare the mouth of the Inlet. 77. degrees 20.

The fixth, in the morning the wind was asbefore, and the Sea growne. This morning we 10 came into a very Greene Sea, we had our observation 77.degrees 30 minutes. This after-noone the wind and Sea affwaged. About four of the clocke we let sayle, and steered North-west and by West, the wind being at North North-east. This day proued the clearest day we had long before. The fenenth, at foure in the morning was very cleare weather, and the fairest Morning that we saw in three weekes before, we steered as afore, being by our account in 78.degrees nearch hand, and out of the Saste. We found we were compassed in with Land and Ice, and were againe entred into a Blacke Sea, which by proofe we found to be an open passage. Now having againe entreu into a source one, without you proof we sould be by East, with purpose to fall with the Southermost part of this Land : which we saw, hoping by this meane, either to defray the charge of the Voyage, or elfe, if it pleafed God in time to give vs a faire wind to the North-eaft, to is 10 tisfie expectation. All this day and night afterward proued calme.

Much Drift-The eight, all the fore-noone proued calme, and very thicke fogge. This morning we saw many peeces of Drift-wood drine by vs, we heated out our Boate to ftop a leake, and mended our riggings. This day wee faw many Seales, and two Fishes which we judged to bee Sea-horses, Many Seales. or Morfes. At twelue, this night we had the winde at East and by South, wee stood away

The ninth, all the fore-noone was little wind at South-east, with thicke fogge. This day we were in amongst Ilands of Ice, where we saw many Scales.

The tenth, in the morning was foggie, afterward it proued cleere, we found we were compaffed with Ice enery way about vs; wee sacked about, and flood South and by Weft; and South 40 South-west one Watch fine leagues, hoping to get more Sea-roome, and to stand for the Northeast, we had the wind at North-west. The eleuenth, very cleere weather, with the winde at South South-eaft, we were come out

of the Blue Sea into our Greene Sea againe, where we faw Whales. Now having a fresh gale of

ken out of Hen.

wind at South South-east, it behooved mee to change my course, and to sayle to the North-east, by the Souther end of Nowland. But being come into a Greene Sea, praying God to direct mee, I Notes.

Russ and Greene feered away North ten leagues. After that, we faw Ice on our Larboord, we fleered away Eaft and by North three leagues, and left the Ice behind vs. Then we steered away North till noone. This day wee had the Sunne on the Meridian South and by West, Westerly, his greatest height was 37-degrees 20. minutes. By this observation we were in 79, degrees 17. minutes, we had a 50 79-degrees 17. fresh gale of wind and a smooth sea, by meanes whereof our ship had out-runne vs. At ten this Ecucumg cleere weather, and then we had the company of our trouble ome neighbours Ice with fogge. The wind was at South South-west. Heere we saw plentie of Seales, and we supposed Beares had beene heere, by their footing and dung vpon the Ice. This day, many of my Compa-

Sick of Beares nie were ficke with eating of Beares fielh the day before vnfalted. The twelfth, for the most part was thicke fogge, we steered betweene South and by East, and South South-east 2. . leagues, to cleere vs of the Ice. Then we had the wind at South, we steered till noone North-east fine leagues. This morning we had our shrouds frozen. At noone by our accompt we were in 80, degrees, being little wind at West South-west, almost calme with thicke fogge. This after-noone we steered away North, and sometimes North-east. Then we faw Ice a head off vs, we cast about and stood South-east, with little wind and fogge. Before we 60 calf about by meanes of the thicke fogge, we were very neere Ice, being calme, and the Sea fetting on to the Ice, which was very dangerous. It pleased God at the very instant to give vs a small gale, which was the meanes of our deliverance, to him be praife therefore. At twelve this night,

it cleared up, and out of the top William Collins our Boat-Iwaine faw the Land, called Newland Newland or

by the Hollanders, bearing South South-west twelve leagues from vs. The thirteenth, in the Morning the wind at South and by East, a good gale, we cast about and which the Holfood North-east and by East, and by observation we were in 80. degrees 23. minutes. This day landers bath we faw many Whales. This fore-noone proued cleere weather, and we could not fee any figne of made a little Ice out of the top. Betweene noone and three of the clocke, we steered away North-east and by Barens, as be-East five leagues, then we saw Ice on head off vs, we steered East two Glasses one league, and could sore is delivenot be cleare of the Ice with that courfe. Then we fleered away South east two leagues ; atter ted, but nei-

we fayled East and by North, and East foure leagues; till eight the next morning. The foureteenth in the morning was calme with fogge. At nine the wind at East, a small nor so exact gale with thicke fogge, we steered South-east and by Exft, and running this courte we found nor first sabeour Greene Seasgaine, which by proofe we found to be freeft from Ice; and our Azure Blue Sea fore is obferto be our Icie Sea. At this time we had more Birds then we viually found. At noone being a wed of Sir He thicke forge, we found our felues neere Land, bearing East off vs ; and running farther we found Willam a Bay open to the Welt and by North Northerly, the bottome and fides thereof being to our Discourres fight very high and ragged Land. The Norther fide of this Bayes mouth being high land, is a finding the small Hand, the which we called Colline Cape, by the name of our Boat-swaine, who first saw it. Whale and In this Bay we faw many Whales, and one of our company having a Hooke and Line over-board Morfe benefit, to trie for Fish, a Whale came under the Keele of our ship, and made her held, yet by Gods mer- they also em-20 cie we had no harme, but the lofte of the hooke and three parts of the line. At a South-well Green Seafter Sunne from the North-west and by North, a flood set into the Bay. At the mouth of this Bay est of Ice, and we had founding thirtie fathoms, and after fixe and ewentie fathoms, but being farther in, we the Blue Sta had no ground at an hundred fathoms, and therefore judged it rather a Sound then a Bay. Be- Icie. tweene this high ragged, in the fwampes and vallies lay much fnow. Heere wee found it hot. Whale danett

On the Souther fide of this Bay, lye three or foure fmall llands or Rockes. In the bottome of this Bay, John Colman my Mare, and William Collins my Boat-swaine, with A Sound is a two others of our company went on shoare, and there they found and brought aboord, a payre of greater and Morfes teeth in the jaw, they like wife found Whales bones, and fome dofen or more of Deeres desperin-Hornes, they faw the footings of Beafts of other forts, they also faw Rote-geefe, they faw much draught then a 30 drift Wood on the shoare, and found a streame or two of Fresh water. Here they found it hot on Bay.

the shoare, and dranke water to coole their thirst, which they also commended. Here we found so, degreet, the want of a better Ship-boate. As they certified me, they were not on the ilioare pair halfe an houre, and among other things brought aboord a Stone of the Countrey. When they went from vs it was calme, but prefently after we had a gale of wind at North-east, which came with the Flood with fogge. We plyed too and againe in the Bay waiting their comming; but after they came aboord we had the wind at East and by South a fine gale, we minding our Voyage, and the time to performe it, fleered away North-east, and North North-east. This inight proued cleere, and we had the Sunne on the Meridian, on the North and by East part of the Compasse, from the

vpper edge of the Horizon with the Croffe-staffe, we found his height 10, degrees 40 minutes, grees 40 minutes, without allowing any thing for the Semidiameter of the Sunne, or the diltance of the end of the his, about staffe from the Center in the Eye. From a North Sunne to an East Sunne, we sayled betweene mid-niele. North and North North-east, eight leagues.

The fifteenth, in the morning was very cleere vveather, the Sunne shining vvarme, but little wyind at East Southerly. By a South-east Summe wee had brought Collins Cape to beare off vs South-east, and we faw the high Land of Newland, that part by vs Discouered on our starboard, eight or ten leagues from vs, trending North-east and by East, and South-west and by West. eighteene or twentie leagues from vs to the North-east, being a very high Mountaynous land, like ragged Rockes with frow betweene them. By mine account, the Norther part of this Land which now vve faw, firetched into \$1. degrees. All this day proued cleere vveather, little \$1. degrees. Wind, and reasonable yvarme.

50 The fixteenth, in the morning warme and cleere weather, the wind at North, This morning we saw that we were compassed in with Ice in abundance, lying to the North, to the North-west, the East and South-east, and being runne toward the farthest part of the Land by vs disco- Landssreeduered, which for the most part trendeth nearest hand North-east and South-west, vvce faw inginto 82.demore Land iowning to the same, trending North in our fight, by meanes of the cleernesse of the grees. vveather, firetching farre into 82. degrees; and by the bowing of the skie much farther. Which when I first faw, I hoped to have had a free Sea bet weene the Land and the Ice, and meant to have compassed this Land by the North. But now finding by proofe it was unpossible, by means of the abundance of Ice compating vs about by the North, and toyning to the land, and They returned

feeing God did bleffe vs with a faire wind to fayle by the South of this Land to the North-taff, to vereturned, bearing vp the Helme, minding to hold that part of the Land, which the Hollarders had discourred in our fight, and if contrary vvindes should take vs, to Harbour there, and to trie what wee could finde to the charge of our Voyage, and to proceed on our Discouerie, as soone as God should bleffe vs with Winde. And this I can affure at this present, that betweene 78. de-

grees and \$\dagger\$, and \$2. degrees by this way there is no passage: but I thinke this Land may bee grees and a superson of the state of the sta Abundance of faw more abundance of Seales then we had feen any time before fwimming in the water. At taw more annual to the state with the state of the state nounce, the may having a time gate or the clocke the Cape beare. North-eaft off vs. From in 31 aggrees and a mater and a south west, with purpose to keepe in the open Sea free from Ice, and layled in that course 16. leagues. At ten this night we steered away South-west, with the wind at North a hard gale, vntill eight the next morning 18, leagues.

The feuenteenth, in the morning a good gale at North: at eight, we altered our courfe, and The feuenteenth, in the morning a good gase at avoisit; see eight, we attend our course, and fleered away South till eight in the Ecuening, and rame 12. leagues. This day proud reasons. ble cleere and warms. The eighteenth, in the morning the wind encreafed at South and by Earl, with thicke fogge. All this after-moone and night proued close weather, little fogge, and

The nineteenth, at eight in the morning the wind at South, with thicke fogge, we fleered South-east 4. leagues till noone: then the wind vered more large; wee steered South-east and by Eaft 4, leagues till foure: then wee vered shete, and steered East and by South Easterly, 15. leagues, till eight the next morning. This day after the morning proced reasonable clerre

The twentieth, in the morning little wind: at eight this morning wee faw Land ahead of vs ynder our Lee, and to weatherward of vs diffant from vs 12. leagues, being part of New 20 Land. It is very high mountainous Land; the highest that we had seene vatill now. As we sayled neere it, we faw a Sound ahead of vs, lying East and west. The Land on the Norther fide of this Sounds mouth, trendeth neerest hand West North-west, and East South-east 12. legues, in our fight being 10, leagues from vs. And the Land on the Souther fide being 8.0r 10.leagues in our fight; a: this time trendeth South South-east, and North North-west; from eight to noone 77.degras.m. was calme. This day by observation we were in 77. degrees 26. minutes. On the Norther side of the mouth of this Inlet lie three llands, not farre the one from the other, being very high mountainous Land. The fartheft of the three to the North-west, hath source very high Mounts like heapes of Corne. That lland next the Inlets mouth, hath one very high Mount on the like heapes or Come, a tax tann near the market mount, many very mgo anomic on the Souther end. Here one of our companie killed a red billed Bird, All this day after the mor- 30 ning, and all night proued calme, enclining rather to heate then cold. This night wee had fome

The one and twentieth, all the fore-noone calme; at foure in the after-noone we had a small gale of wind at South-South-east, with fog ; we steered away East to stand in with the Land, and layled 3. leagues untill mid-night: then the wind came at North-east, we cast about, and fleered South 10. leagues till eight the next morning. The two and twentieth, at eight in the morning much wind at Eaft, and variable, with short sayle wee steered 3. leagues South and by East: then came downe very much wind; weeftrooke a hull. All this after-moone and night,

The three and twentieth, all the fore-noone was very much wind at South, with raine and 40 fogge. At foure this after-noone wee faw Land, bearing North-eaft of vs 6. leagues from vs. Then we had the wind at South South-west; wee steered away South-east, and South-east and by East 4. leagues, the Sea being very much growne. We accounted we had hulled North-west and by North 22. leagues; and North 3. leagues. Then fearing with much wind to be fet on a lee shoare, we tackt about, and made our way good West and by North, halfe a point Northerly,

The foure and twentieth, in the morning much wind as afore, and the Sea growne. This morning wee strooke our mayne Top-mast to eate our ship, and sayled from the last Equening eight to this noone 15. leagues West and by North halfe a point Northerly. From twelue to eight, 6. leagues as afore, with the wind at South and by West: at eight we tackt about with 50 the winde at South South-west, and lay South-east and by East, with much winde, and the

The fine and twentieth, was a cleere morning we fee our mayne Top-mast, we saw Land bearing North of vs, and under our Lee, we fayling South-east and by East. Then the wind scanted: we cast about, and lay South-west and by West a leagues ; till noone. Then it began to ouer-cast, and the wind to scant againe: we cast about, and lay South-east and by South, the wind at Southwest and by West, and sayled in that course 3, seagues till source in the atter-noone. Then the wind featted againe, and we fayled 3. leagues South. Now, seeing how contrarie the winde proued, to doe the good which weedefired this way; I thought to proue our fortunes by the West once againe: and this Eeuening at eight, wee being the latitude of 78. with the better, 60 and from Land 15. leagues, which leagues part whereof beare from the North-east to the East off vs, we steered away West, with the wind at South-east, and cleere weather.

The fixe and twentieth, all this day proued rayne with thicke fog, and an hard gale of wind at East and by North, and East North-east. From the last Ecuening at eight to this moone, wee ranne 25. leagues ! from noone till mid-night 19. leagues, the wind at East and by South; from mid-night till two the next morning, 2. leagues West.

The feuen and twentieth, extreme thicke fog, and little wind at East and by South. Then it proued calme, and the Sea very loftie. Wee heard a great rutte or notic with the Ice and Sea. which was the first Ice we heard or faw fince we were at Collins Cape: the Sea hearing vs West. ward toward the Ice. Wee heaved out our Boat, and rowed to towe out our ship farther from the danger; which would have beene to finall purpose, by meanes the Sea went so high; but in this extremitie it pleased God to give vs a small gale at North-west and by West, we steered away South-eaft 4. leagues till noone. Here we had finished our Discouerie, if the wind had con- Dangeresta-

10 tinued that brought vs hither, or if it had continued calmer but it pleased God to make this ped North-west, and by West wind the meane of our deliverance : which wind wee had not found common in this Voyage. God give vs thankfull hearts for fo great deliverance. Here we found Whales Bay. the want of a good ship-boat, as once we had done before at Whales Bay : we wanted also halfe a dozen long Oares to rowe in our fhip. At hoppe the day cleered vp, and we faw by the skie Ice bearing off vs: from West South-west to the North and North North-east. Then we had a good gale at West, we steered away South will foure 7. leagues. From foure to fix South 4. leagues, and found by the loy skie and our necreneffe to Groneland, that there is no paffage that way : which if there had beene, I meant to have made my returne by the North of Groneland to Danie his Streights, and fo for England. Here finding we had the benefit of a Westerly wind, which 20 all this Voyage we had found feare, we aftered our course, and steered to the Eastward, and ran

South-east foure leagues. From eight this Equening till moone the next day; East South-east 30. leagues. All this day and night proued very cold, by meanes, as I suppose, of the winds com-The eight and twentieth, very cold, the wind at West, not very foggie. At noone this day we fteered away South-east and by East, and by observation we were 76, degrees 26, minutes.

From noone to eight to, leagues. Then the wind scanted to South-east and by South, we steered away East and by North 18. leagues, till the next day noone.

The nine and twentieth, all the fore-moone a thicke fog and wet, the wind at South-east and by East, neerest hand, and raw cold. From noone to soure, wee sayled three leagues East and by 30 North, halfe a point Northerly. Then the wind vered more large, we steered East and by South 8. leagues till twelne at night. At this timet to windward we heard the rutte of Land; which I knew to be fo, by the colour of the Sea. It was extreme thicke fog, fo that we could hardly fee a Cables length from our ship. We had ground 25. fathoms, small blacke peble stones. Wee founded againe, and had ground at 30. fathomes small stones like Beanes, at the next cast no ground at 60. fathomes. I cast about againe, and steered South-west 6. leagues, West and by North two leagues till the next day noone. All this day and night extreme thicke fog.

The thirtieth, all the fore-noone very thicke fog. At noone almost calme : after we had little wind, and fleered North North-west till two: then it cleered vp, so that we could see from vs 2. leagues with the wind at North-west. Then we steered East South-east: after it cleered. At 40 South in the Eeuening, we faw an Iland bearing off vs North-west from vs 5, leagues, and we faw land bearing off vs from vs 7. leagues. We had land likewise bearing off vs from East Southeast, to South-east and by East as wee judged, 10. leagues. Then having the winde at West North-west, we steered South and by East, It presently proued calme till ten this Eeuening: then wee had a little gale at South-west and by West, wee steered away South South-east till twelve this night, and accounted ourselves in 76. from Land 10. leagues: which was the likelieft Land that wee had feene on all the parts of Newland, being playne riggie Land of a meane height, and not ragged as all the rest was that we had seene this Voyage, nor coursed with snow. At twelve this night we faw two Morfes in the Seancere vs, fwimming to Land. From twelve

at night to foure, calme. 50 The one and thirtieth, at foure this morning we had the wind at South-east, we steered South South-west. Then it proued calme, and so continued all the fore-moone. The after-moone wee had the wind at East South-east, we steered South 8. leagues. Then being like to proue much wind, contrarie to our purpole, and finding our fog more thicke and troublesome then before, diuers things necessarie wanting, and our time well nigh spene to doe further good this yeere, I commanded to heare vp for our returne for England, and freered away South South-wett. And this night proved a hard gale of wind at South-east and by East. Wee were thwart of Cheries Cherie lland. Hand the next morning at foure of the clocke, being to windward off vs 5. leagues: knowing we were neere it, we looked out carefully for the same, and it prouing cleere, we saw it , being a very ragged Land on the Wester side, rising like Hey-cockes.

60 The first of August, a very hard gale of wind at East South-east, 'we shorted sayle, and steered away South South-west. This night was very foggie, with a hard gale of wind at East and by South, we fleered by our account 27. leagues: and from eight this Equening till the next morning foure, 10. leagues as afore. All this night was very foggie, wet and raw cold.

The second, in the morning calme with a thicke fog, cold and slabbie weather. About noone

we had a little gale Weft and by North, wee steered away as afore. The third, in the morning calme and cleere weather, with a littlegale Eaft and by South, we fayled South South-west: then wee had the wind at South-east, wee sayled as afore. All this day and night proued close weather, a little fogge at noone, which continued not long. At twelve this night the wind vered to the East and by North, wee held our course South South-west, as afore.

The fifteenth of August, we put into the Iles of Farre, standing in 52. degrees; and the fifteenth of September, I arrived in Tilberie Hope in the Thames.

CHAP. XV.

A second Voyage or Employment of Master Hener Hener on, for finding a passage to the East Indics by the North-east.

written by himselfe.

May.

Lewfoat.

Heir names employed in this action are as followeth: Henry Hadjon, Master and Pilot; Robert ' Inst, the Matter his Mate; Lindayer Arrain; Inne Cooke; I don of done; Philip Stacie, Carpenter; I don Berns; I don Brans; I don Brans; I don of dry, I ames Straten, Michael Epice, Thomas Hilber, Rebord Tomfon, Reduced in this College of the Control of the Con Pilot ; Robers " Inst, the Master his Mate ; Ludlowe Arnall; lobo Cooke, Boatbert Rayner, lobn Hudfon, and Humfey Gilby. The couries observed in this 20 Iournall were by a Compasse, that the Needle and the North of the Flye were

directly one on the other. Aprill.

Anno 1608. the two and twentieth of Aprill, being Friday, we let fayle at Saint Katherines, and fell downe to Blacke wall,

The twentieth of May, at noone by observation we were in 64-degrees 52-minutes, and at this time and place the Needle declined under the Horizon by the Inclinatory 81, degrees, and wee had a smooth Sea, by meanes whereof my observation was good.

The one and twentieth, at night thicke fog, wee fayled North North-east, with the wind at Eaft. The two and twentieth, in the fore-noone the winde at South-eaft, wee fleered North North-east, as afore: in the after-noone little wind and thicke fog; we accounted vs in 67. de. 30 grees, the Sea smooth, the Needle declined 82. degrees, this night was calme and cleere. The three and twentieth, in the morning the wind was Easterly, we flood North North-East, and North and by East. All the fore-noone was foggie: in the after, noone it cleered, and the wind shortned upon vs, we made our way good North all night. The foure and twentieth, the wind at East North-cast, and East and by North, we lay as neere as wee could with a full layle; wee accounted Lowfoot from vs East Northerly, 16. leagues, distant from vs : at foure a clocke this after-noone, wee flood all night, as afore.

The fine and twentieth, the wind at East North east, we flood a way North as we could lie: all this day was cleere weather, and fearthing cold, which cold begunne the one and twentieth day, and then my Carpenter was taken ficke, and to doth yet continue; and three or foure more 40 of our companie were enclining to ticknelle, I suppose by meanes of the cold. All the night it was calme. The fixe and twentieth, cold but cleere weather, the wind betweene Kaft and East North-east, we flood North-easterly till twelpe a clocke at night: then wee had the wind at North-east & North North-east, we stood South-east and East till noone the next day. The seven and twentieth, cold and drie weather, at noone we had the wind North and North North-west; Wee stood away North-east, and East North-east, as we could, and accounted our selues in 69. degrees 40. minutes, and the Needle enclined, having a smooth Sea, neerest 84. degrees. All night we had wind and weather as afore.

The eight and twentieth, drie cold cleere weather; the wind betweene North North-west Sun s. degrees and North, we made our way good East North-east; wee faw the Sunne on the North Meri- 30 35. minutes at dian aboue the Horizon 5. degrees 35. minutes, All this night we had much wind, as afore. The nine and twentieth, a hard gale at North North-west: by account we ranne from mid-night to noone 21, leagues, East North-east. Wee had the Sunne on the Meridian 5. degrees, the latitude 73. degrees 13. minutes, whereby wee found our ship to have out-runne vs. At mid-night the wind came to South-east: we cast about, and stood East North-east. This day partly cleere weather with some snow. The thirtieth, cold cleere weather, the wind betweene North-east, and East and by North; we went East South-east, and observing, were in 73. degrees 50. minutes. The one and thirtieth, cold and cleere weather: from the last day till this day noone, we flood South-east and by South, in the latitude of 72. degrees 45. minutes.

South-east. The second, a hard gale of wind at North-east: towards night, calme with fogge, our course was South-east all day. The third, in the morning we had a sight of the North Cape; Variation well and at a West and by North Sunne, the Cape bore off vs South-west, halfe a point Southerly,

The first of June, a hard gale at East North-East, with snow: we made our way good South 60 being from vs 8. leagues: and observing the variation, I found it to the Westward II. degrees:

and having a smooth Sea, the Needle enclined under the Horizon 84. degrees and a halfe, the Needlesinclineerest I could finde. We had the wind at South-west, and wee stood away North-east and by nation 84, de-East. It was cleere weather, and we faw Norway Fisher-men at Sea.

The fourth, warme cleere fun-shine, we stood away North-east and by East. Now by Gods halfa. helpe our Carpenterrecouered, and made a Mast for our ship-boat, and the companie made a Sayle, we had the Sunne in the light on the North Meridian : his height was 5. degrees 40. minutes. Inclination 23. degrees 21. minutes : Poles height 72. degrees 21. minutes. The fift, in the morning calme weather : wee founded, and had 140, fathoms, fand Oze : here wee faw a fwelling Sea setting North-east and by East, and South-west and by West, with streame-leches: 10 and we saw drift wood. After we had wind ; and we sayled and made our way North Northeast: towards night we founded, and found ground at 150. fathoms, fand Oze. This day cleere weather, and not cold. The fixt, wee had cleere weather, the wind being at East North-East, from the last day till this day noone; we shaped our way on divers courses North and by West,

in the latitude of 73, degrees 24. minutes. We found that our ship had out-runne vs, founding in 160. fathoms: in the after-noone little wind. The fewenth, in the morning the wind at South, after at South South-east: from the last day till this day noone, wee accounted our way from divers courses North-east, 15. leagues. This day was close but cleers weather, and we had a good gale of wind at this time. And three dayes before this, our Cooke and one more of our companie were very ficke. In the morning, we had

20 ground at 150. fathoms, and at night we had no ground at 180. fathoms, which encreated hope. This night we had some snow, which continued foure houres: then the wind came at Northeast and by East with storme; and with short sayle we stood North and by West; here the Needle enclined \$6. degrees. I accounted that we were in 74. degrees and a halfe at neerest hand. This 74 degrees night we faw the Sunne on the North Meridian , his height was 7. degrees 40. minutes, which 30. minutes maketh the Poles height 74, degrees 23. minu es. The eight, from twelue a clocke last night till noone, we accounted our way on divers courses, North and by East: then our latitude was 74. degrees 38. minutes, and we had no ground at 200. fathoms. In the after-noone the wind came at South-east, and South-east and by East. This day and night wee had cleere weather, and we were here come into a blacke blue Sea.

The ninth, cleere weather, the wind came at South-east and by East: from the last day till Sea. this day noone, wee had a good way North-east, in latitude of 75. degrees 29. minutes : then wee entred into Ice, being the first we faw in this Voyage: our hope was to goe through it, we flood into it, and held our course betweene North-east, and East North-east, loosing for one, and bearing roome for another, till foure in the after-noone : at which time we were so farre in and the Ice fo thicke and firme ahead, being in it foure or fine leagues, that wee had endangered vs formewhat too farre; wee returned as wee went in , and with a few rubbes of our ship against the Ice; by eight a clocke this Eeuening wee got free of it. Wee made our way till next day at moone, South-west and by South, 18 leagues: in the middest of this way weehad no ground at 180. fathoms. The tenth, in the morning hafey weather; but at noone it cleered vp, and 40 then we cast about, and stood away North and by East, the wind being at East South-east, two watches, fine leagues: then we had the wind at East, we cast about, and stood South South-east, and made a South way, fixe leagues. The eleuenth, in the morning a hard ftorme at East, and East and by South we strooke ahu'l.

The twelfth, in the morning fog, and all day after cleere weather, the wind at South Southwest, we steered East and by North at noone being in the latitude 75 degrees 30 minutes. From noone till four a clocke, fine leagues East and by North; then we saw Ice ahead of vs, and voder our Lee trending from the North-west to the North and East of vs: We had founding 100, fathom, greenish Oz: . Here we saw divers pieces of drift wood by vs driving, and streame Leeches lying South South-west, and North North-east. We many times saw the like since we saw the North Cape. The thirteenth, cleere weather, the wind at East, we made a South way 6. leagues, two watenes: then we cast about, and made a North way one watch 3. leagues 4: At twelve at night, much wind with fog, we strooke abull and layed our ships head to the Southward. The

fourteenth, in the fore-noone fog, and our shroudes were frozen: the after-noone was cleere The fifteenth, all day and night cleere fun-shine; the wind at East, the latitude at noone 75. degrees 7. minutes. We held Westward by our account 13, leagues. In the after-noone the Sea was affwaged; and the wind being at East we fet fayle, and stood South and by East, and South

South-east as we could, This morning, one of our companie looking ouer boord saw a Mermaid, Mermaide and calling up fome of the companie to fee her, one more came up, and by that time fine was feen, and de-6c come cluse to the thips fide, looking earnefly on the men: a little after, a Sea came and ouertur. feribed. ned her: from the Nauill vpward, her backe and breafts were like a womans, (as they say that faw her) her body as big as one of vs; her skin very white; and long haire hanging downe behind, of colour blacke: in her going downe they faw her tayle, which was like the tayle of a Porpose, and speckled like a Macrell. Their names that saw her, were Thomas Hiller and Ro-

The fixteenth, cleere weather, the wind being at East. From the last day till this day moone, we made our way South and by East 9. leagues; and from noon to eight a clocke in the Eeuening, 6. leagues: then we cast about and stood to the Northwards.

The seuenteenth, cleere weather, the wind at South-east and by East; from the last day till this day noone, our way was North-east and by East, at noone being in the latitude of 74. degrees 40 minutes. At after-noone we founded, and had ground at 86.fathom, greene Oze, and our water whitilin greene: Here we saw Whales, Porpoiles, and the Sea full of Fowles: from noone to mid-night North-east and by East we had the Sunne at lowest, on the North and by East, Easterly pare of the Compasse: latitude 74. degrees 54. minutes. Sounding we had 92. fathoms

The eighteenth, faire weather, the wind at South-east and by East, from mid-night till this day noone, wee fayled North-east and by East, in the Latitude of 75, degrees 24. minutes, and had ground at ninetie fine fathome Oze, as afore. Heere we had Ice in our fight to the Northward off vs. In the after-noone, having little wind at North-east, we cast about and lay East South-east, and at fixe a clocke, had ground at ninetic five fathoms and a halfe Oze, as afore. From noone to twelue a clocke at night, our way was South-east, and South-east and by East, and had the Sunne on the Meridian, North and by East halfe a point Eastward. The Sunnes height was eight degrees 40 minutes. Sounding ninetie fathom. All this day, we had Ice on our Larboord trending : and at this time, from the North-west off vs to the East South-east, I have fome reason to thinke there is a Tide or Current fetting to the Northwards; the course wee 20 held and the way we made betweene this noone and mid-night Observations, doe make mee

Needles inclination 89.degrees and a

Current.

The nineteenth, faire and warme weather, the sea smooth. Here the Needle inclined under the Horizon 89. degrees and a halfe, being in the Latitude at noone of 75. degrees \$2. minutes; Soungrees and a ding wee had ground in an hundred fathom. From twelue a clocke last night till this day at naire, 1175,000 noone, we accounted our way from East and by North to South-east, ten leagues, having Ice alwayes in our fight trending on our Larboord, wee had the winde betweene North, and North North-west. We saw the Sunne at the lowest on the North and by East, halfe a point Easterly, his height was 8. degrees 10. minutes, which maketh the Poles height 74. degrees 56. minutes; Sounding we had ground in one hundred and twentie fixe fathom. From moone to this time, wee 10 accounted our way East and by South, and East South-east, twelve leagues.

The twentieth, faire warme weather, this morning at foure of the clocke, wee had depth one Beares roaring hundred and twentie fine fathom. Heere we heard Beares roare on the Ice; and we faw vpon Store of Seals, the Ice and neare voto it, an incredible number of Seales. We had founding one hundred and fifteen fathom, and after ground at mnetie fine fathomfandie Oze, We had the Sun on the Meridian North and by East, halic a point Easterly; his height was 7, degrees 20. minutes. From twelve a clocke last night, to twelue a clocke this night, our way was made good by our account Southeast and by South, twelie leagues, and South-east, three leagues and a halfe, the Ice alwayes being on our Larboord. The wind this day, betweene North and North-west.

The one and twentieth, at foure a clocke in the morning wee founded, and had one hundred 40 and twentie fathome greene Oze, and the Icebore off vs East, the winde variable; in divers courfes wee made our way good South South-east; our Latitude at noone being 74. degrees 9. minutes, we were haled to the Northward beyond expectation. All this day faire, cleere, and aughings 7.

degrees 40 mi. warme weather, and Ice on our Larboord at a North and by East Sunne; being then at lowest, his height was 7. degrees 40. minutes, which made the Poles height 74. degrees 33. minutes. degrees 33.mir From the last day at noone, till twelve a clocke this night, by account of our ships way, wee made our way good East North-cast, fixe leagues and a halfe; whereby it doth appeare how we were haled to the Northward. Heere wee had ground at one hundred and thirteene fathome, riation of the greene fandie Oze.

night high 7. Juets notes tell of a fudden va-Compaffe, North to the East one point which had

The two and twentieth, faire cleare weather, the winde at West North-west. At eight a 30 clocke in the Morning, we had ground at one hundred and fifteene fathom, greene Oze. From mid-night to noone, our course was North-east and by East, being in the Letitude of 74. degrees 35.minutes, and we found that our ships way, and our observation were not which mad there was carefull heed taken or both. Heere we had Ice a head off vs, trending to the Southdissely before, east; and all day before Ice on our Lasboord. Here we stood South-east fine leagues, then the Ice trended South and by West fixe leagues; we sayled by it, and doubled it by eight a clocke in the Eeuening, and then it bore East off vs. Heere having a smooth sea, the Needle inclined 85, degrees, from eight a clocke to twelue, North and by East Easterly. Then we had the Sunne on the Meridian, North and by East 1. a poynt Easterly. The Sunnes height was 7. degrees 45. minutes, which made the Latitude 74.de rees 43 minutes.

The three and twentieth, in the morning thicke fogge, the wind at North North-west, From 60 mid-night till foure a clocke this morning, we fayled North-east fine leagues, and then we were among the Ice; we cast about, and stood two houres South-west, two leagues, and had no ground at one hundred and eightie fathom. Then we cast about againe, and stood East till eight a clocke

two leagues, and then it cleared up, and we had Ice a head off vs. And from North, we flood to South-east, and our shrondes were frozen. Then till noone wee went East and by South, soure leagues, and were neere Ice on our Larboord, in the Latitude of 74. degrees 30. minutes. In the after-noone the wind being at North, wee ftood two houres and a halfe, fine leagues and a halfe; three houres South South-east, fine leagues; one houre South-east and by South, one league and a halfe ; an houre East halfe a league, which brought eight in the Eeuening alwayes Ice on our Larboard. This after-noone, wee had some snow. From eight a clocke to mid-night, South South-west foure leagues, with Ice as afore. We saw the Sunne at the lowest, North Northeast, his height was 7. degrees 15. minutes, the Poles height 74. degrees 18. minutes,

The foure and twentieth, cleere, but cold and fome frow, the wind betweene North Northeast, and North-east, from mid-night to foure a clocke, wee stood Southward two leagues, and South-east and by East two leagues. And from some a clocke till noone, South-east Southerly nine leagues, founding we had ground in one hundred and fortie fathome. From noone to three a clocke, we stood South-east and by South three leagues; from three to foure, South-west and by South one league; and had Ice from the North-east to the South-east off vs. From foure a clocke to eight, we flood South-west two leagues and a halfe, Southward halfe a league, with Ice neers vs vnder our Lead.

The five and twentieth, cold and cleare, the wind at East South-east; from eight a clocke last night till foure this morning, our way was South and by East, foure leagues and a halfe ; foun-20 ding we had ground in eightie fathome, then we had little wind till noone, at East North-east, and the Sunne on the Meridian, on the South-west and by South point of the Compasse, ere it began to fall, wee were in the Latitude of 72. degrees 52.minutes, and had Ice on our Larboard. and our hope of passage was gone this way, by meanes of our nearenesse to Nona Zembla, and the abundance of Ice. We had from Noone to eight a clocke in the Ecuening, the wind between North North-east, and North-east, we stood South-east three leagues and a halfe, and had Ice on our Larboord, and thoulding fixtie eight fathome.

The fixe and twentieth, faire Sun-finning weather, and little wind at East North-east. From twelue a clocke at night till foure this morning, we flood Southward two leagues, founding wee had fixtie fixe fathome Oaze, as afore. From foure a clocke to noone, South-east and by South 30 foure leagues, and had the Sunne on the Meridian, on the South-east and by South point of the Compasse, in the Latitude of 72. degrees 25. minutes, and had fight of Nona Zembla foure or fue No pallage leagues from vs, and the place called by the Hollanders, Swart Cliffe, bearing off South-eaft, In that wa the after-noone, wee had a fine gale at East North-east, and by eight of the clocke, we had Swar Cliffee

brought it to beare off vs East Southerly, and fayled by the shoare a league from it,

The seuen and twentieth, all the fore-moone it was almost calme; wee being two mile from the floare, I fent my Mate Robers Inet, and John Cooke my Boat-fwaine on floare, with foure o- They goe as thers, to fee what the Land would yeeld that might bee profitable, and to fill two or three thear Caskes with water. They found and brought aboord some Whales Finnes, two Decres Hornes, and the Dung of Deere, and they told me that they saw Graffe on the shoare of the last yeere, 40 and young Graffe came vp amongst it a shaftman long; and it was boggie ground in some places, there are many freames of Snow water nigh, it was very hot on the shoare, and the snow melted apace, they saw the footings of many great Beares, of Deere, and Foxes. They went from vs at three a clocke in the morning, and came abourd at a South-east Sunne; and at their comming, wee faw two or three companies of Morfes in the fea neere vs fwimming, being almost calme. I presently sent my Mate, Ladow the Carpenter, and fixe others a shoare, to a place where I thought the Morfes might come on the shoare, they found the place likely, but found no figne of any that had beene there. There was a Croffe standing on the shoare, much Driftwood and fignes of Fires that had beene made there. They faw the footing of very great Deere and Beares, and much Fowle, and a Foxe; they brought aboord Whale finnes, fome Mosse, Flow-3D ers and greene things that did there grow. They brought also two peeces of a Crosle, which they found there. The Summe was on the Meridian on the North North-eaft, halfe a point Eafterly, before it began to fall. The Sunnes height was 4 degrees 45 minutes, Inclination 22. degrees 32. minutes, which makes the Latitude 72. degrees 22. minutes. There is difagreement betweene this and the last observation; but by meanes of the cleerenesse of the Sunne, the imoothnesse of the Sea, and the neernesse to Land, wee could not bee deceived, and care was

The eight and twentieth, at four a clocke in the Morning our Boat came aboord, and brought two dozen of Fowle, and some Egges, whereof a few were good, and a Whales sinne; and wee all faw the Sea full of Morfes, yet no fignes of their being on shoare. And in this calme, from 60 eight a clockelast Eeuening, till foure this Morning, we were drawne backe to the Northward, as farre as wee were the last Eeuening at foure a clocke, by a Streame or a Tide; and we chose rether so to drive, then to adventure the losse of an Anchor, and the spoyle of a Cable. Heere our new Ship-boate began to doe vs feruice, and was an incouragement to my Companie, which want I found the last veere.

The nine and twentieth, in the morning calme, being halfe a league from the shoare, the Sea

being smooth, the Needle did encline &4. degrees, we had many Morfes in the Sea neere vs. and desiring to find where they came on shoare, wee put to with Sayle and Oares, towing in our Boat, and rowing in our Barketo getabout a point of Land, from whence the Land did fall more Easterly, and the Mories did goe that way. VVee had the Sunne on the Meridian on the South and by VVest point, halte a point to the VVester part of the Compasse, in the latitude of 71. degrees 15. minutes. At two a clocke this after-noone we came to anchor in the mouth of a River, where lieth an Iland in the mouth thereof, foure leagues: wee anchored from the Iland in two and thirtie fathomes, blacke fandy ground. There droue much Ice out of it with a freame that fet out of the River or Sound, and there were many Morfes fleeping on the Ice, 10 and by it we were put from our Road twice this night; and being calme all this day, it pleased

God at our need to give vs a fine gale, which freed vs out of danger. This day was calme, cleere and hot weather: all the night we rode full.

The thirtjeth, calme, hot, and faire weather, we weighed in the morning, and towed and rowed, and at noone we came to anchor neere the He aforefaid in the mouth of the River, and faw very much Ice driving in the Sea, two leagues without vs lying South-east and North-westand driving to the North-west so fast, that wee could not by twelve a clocke at night fee it out of the top. At the Iland where wee rode, lieth a little Rocke, whereon were fortie or fiftie Morfes lying alleepe, being all that it could hold, it being so full and little. I sent my companie ashoare to them, leaving none aboord but my Boy with mee; and by meanes of their necrenesse to the water, they all got away, faue one which they killed, and brought his head aboord; and ere they came aboord they went on the Iland, which is reasonable high and steepe, but flat on the top. They killed and brought with them a great Fowle, whereof there were many, and likewise some Egges, and in an houre they came aboord. This Ile is two flight-shot ouer in length, and one in breadth. At mid-night our Anchor came home, and wee tayld aground by meanes of the strength of the streame, but by the helpe of God, wee houed her off without hurt. In short time wee moued our ship, and rode still all night; and in the night wee had little wind at East, and East South-east. Wee had at noone this day an observation, and were in the latitude of 71. degrees 14. minutes. The first of July, we saw more Ice to Seaward of vs; from the South-east to the North-west, 30

Iuly.

578

Riuet and

driving to the North-west. At noone it was calme, and we had the Sunne on the Meridian, on the South and by VVeil point, halfe a point to the VVeilerly part of the Compasse, in the latitude of 71. degrees 24. minutes. This morning I fent my Mate Eueret, and foure of our companie to rowe about the Bay, to fee what Rivers were in the fame, and to find where the Morfes did come on land; and to fee a Sound or great River in the bottome of the Bay, which did alwaies fend out a great freame to the North wards, against the tide that came from thence : and I found the fame in comming in, from the North to this place before this VVhen by the meanes of the great plenty of Ice, the hope of passage betweene Newland and Nona Zembla was taken away; my purpole was by the Vaygats to pale by the mouth of the River Ob, and to double that way the North Cape of Tartaria, or to give reason wherefore it will not be: but being 40 here, and hoping by the plentie of Morfes wee faw here, to defray the charge of our Voyage; and also that this Sound might for some reasons bee a better passage to the East of Noua Zembla. then the Vargats, if it held according to my hope conceived by the likeneffe it gave : for whereas we had a floud came from the Northwards; yet this Sound or River, did runne fo ftrong, that Ice with the streame of this River was carried away, or any thing elfe against the floud : to that both in floud and ebbe, the ftreame doth hold a ftrong course; and it floweth from the North three houres, and ebbeth nine.

The fecond, the wind being at East South-east, it was reasonable cold, and so was Friday: and the Morfes did not play in our fight as in warme weather. This morning at three of the clocke, my Mate and companie came aboord, and brought a great Decres horne, a white looke of 50 Deeres haire; foure dozen of Fowle, their Boat halfe laden with drift Wood; and some Flowers Herd of white and greene things, that they found growing on the shoars. They saw a herd of white Deere, of ten in a companie on the land; much drift wood lying on the shoare, many good Bayes, and one River faire to see to on the North shoare, for the Morfes to Japel on; but they have no Morfes there, but fignes that they had beene in the Bayes. And the great River or Sound, they certified me, was of breadth two or three leagues, and had no ground at twentie fathoms, and that the water was of the colour of the Sea, and very fair, and that the threame fetteth farongly out of it. At fixe a clocke this morning, came much Ice from the Southward driving upon vs, very fearefull to looke on : but by the mercy of God and his mightie helpe, were being moored with two Anchors ahead with vering out of one Cable, and heaving home the other, and fen- 60 ding off with Beames and Sparres, escaped the danger : which labour continued till fixe a clocke

in the Ecuening, and then it was past vs, and we rode still and tooks pursed this night. The third, the wind at North a hard gale : At three a clocke this morning wee weighed our anchor, and fet fayle, purposing to runne into the River or Sound before I poken of.

The fourth, in the morning it cleered up with the wind at North-west, we weighed and set favle, and stood to the Eastwards, and past over a Reefe, and found on it five and a halfe, fixe, fixe and a halfe, and feuen fathoms water: then we faw that the Sound wasfull, & a very large River from the North-eastward free from Ice, and a strong streame comming out of it: and wee had founding then, foure and thirtie fathoms water. Wee all conceived hope of this Northerly Ri- The River uer or Sound, and fayling in it, wee found three and twentie fathomes for three leagues, and after twentie fathomes for five or fixe leagues, all tough Ozie ground. Then the winde vered more Northerly, and the streame came downe so strong, that wee could doe no good on it: wee came to anchor, and went to supper, and then presently I fent my Mate Inet, with fo fine more of our companie in our Boat, with Sayle and Oares to get wp the River , being pro-

CHAP. 15. Cause of the Ice in Noua Zembla. Costing Sarch, Brunell.

uided with Victuall and Weapons for defence, willing them to found as they went; and if it did continue fill deepe, to goe vntill it did trende to the Eastward, or to the Southwards, and wee rode still.

The fift, in the morning we had the wind at West: we began to weigh anchor, purposing to fet sayle and to runne vp the Sound after our companie: then the wind vered Northerly vpon ws, and we faued our labour. At noone our companie came abourd vs having had a hard rought ; for they had beene up the River fixe or feven leagues, and founded it from twentie to three and twentie; and after brought it to eight, fixe, and one fathome; and then to foure foot in the best: they then went ashoare, and found good store of wilde Goose quills, a piece of an old Oare, and some Flowers, and greene things which they found growing: they saw many Deere, and so did we in our after-dayes sayling. They being come aboord, we presently set sayle with the wind at North North-west, and we stood out agains to the South-westwards, with forrow that our labour was in vaine: for , had this Sound held as it did make thew of , for breadth, depth, fafenesse of harbour, and good anchor ground, it might have yeelded an excellent passage to a more Easterly Sea. Generally, all the Land of Nona Zembla that yet wee have seene, is to Nona Zembla a mans eye a pleasant Land; much mayne high Land with no Snow on it, looking in some pleasant to the places greene, and Decre feeding thereon: and the Hills are partly coursed with Snow, and eye parely bare. It is no maruell that there is so much Ice in the Sea toward the Pole, so many Cause of much Sounds and Rivers being in the Lands of Nova Zembla, and Newland to ingender it besides Ice in those 30 the coafts of Pechora, Ruffia, and Groenland, with Lappia, as by proofes I finde by my travell Seas, which

the coatts of Ferrors, any in these parts: by meanes of which Ice I suppose there will be no nauigable passage this way. gable passage, This Eevening wee had the wind at West and by South: wee therefore came to anchor under Deere Point; and it was a storme at Sea, wee rode in twentiefathomes, Ozieground: I sent my Mate , Ladlow, with foure more ashoare to fee whether any Morses were on the shoare, and to kill some Fowle, (for we had seene no Morses since Saturday, the second day of this moneth, that wee faw them driging out of the Ice.) They found good landing for them, but no figne that they had been there: but they found that fire had beene made there, yet not lately. At ten of the clocke in the Eeuening, they came aboord, and brought with them neere an hundred Fowles called Wellocks; this night it was wet fogge, and very thicke and cold, the winde at

40 West South-west.

The fixt, in the morning wee had the wind ftormie and shifting ; betweene the West and South-west, against vs for doing any good : we rode still and had much Ice driving by vs to the Eastward of vs. At nine of the clocke, this Ecuening wee had the wind at North North-west: we presently weighed, and set sayle, and stood to the Westward, being out of hope to find pasfage by the North-east: And my purpose was now to see whether Willoughbies Land were, as Willoughbie is is layd in our Cardes; which if it were, wee might finde Morfes on it; for with the Ice they Land, sconwere all driven from hence. This place vpon Nous Zembla, is another then that which the makers it fee-Hollanders call Cofting Sareb, discouered by Oliner Brownell: and William Barent fons observation ming to be no doth witnesse the same, It it layd in plot by the Hollanders out of his true place too farre North: other then to what end I know not, vnlesse to make it hold course with the Compasse, not respecting the Newland or variation. It is as broad and like to yeeld passage as the Vaygatt, and my hope was, that by the Greenland (as

ftrong streame it would have cleered it selfe; but it did not. It is for full of Ice that you will und ap.2.) as hardly thinke it. All this day, for the most part, it was fogge and cold.

The feuenth, cleere but cold weather : in the morning the wind was at the North; from the Brunell is to last Equening to this morning, we set faile and kept our course West and by South, sirteene leagues, others Nova from morning to eight a clocke in the Eeuening it was calme : then we had the wind againe at Zembla. North, and we fayled till nine a clocke next morning West South-west, eight leagues; then the wind being West and by South, wee went North and by West, three leagues, and wee had the Sunne at the highest South South-west, in the latitude of 71. degrees 2. minutes. The eight, 6c faire weather; at noone we had the wind at East North-east, we stood North three leagues till foureaclocke: then the wind being at west and by North, wee stemmed North and by West one league and a halfe, till fix a clocke in the Ecuening; then the wind was at North-eaft a hard gale, and wee flood till next day at noone Weft and by North, by account three and twentie leagues; we had the Sunne on the Meridian, South and by Weft, halfe a point necreft Weft, in

the latitude of 70. degrees 41. minutes. The ninth, cleere weather: from this to the next day at noone, we fayled South-west and by West, twelve leagues, and Northward three leagues; and in these courses had these soundings, 41, 42, 46, 48, and 45, fathoms; we had the Sunne South and by VVest, halfe a point to the VVest part of the Compasse. The Sea was lottie; our latitude was 70. degrees 20. minutes.

The tenth, cleere but close weather: from this till next day noone, wee had little wind at West North-west: by account we made our way five leagues North-easterly. Wee had the Sun at the highest on the South and by West point, and a terce Westward, in the latitude of 70. degrees eq. minutes, and I thinke we had a ruftling tide under vs; and in this time had founding betweene fortie fiue and fortie fathomes, white fand. The eleuenth, cleere weather: from this to the next day at noone, little wind at North North-east, and sometimes calme; wee sayled West and by North by account fine leagues; and had the Sunne on the Meridian on the South and by West point 1. West in the latitude of 70, degrees 26, minutes, and found a rustling under vs. This fore-noone we were come into a greene Sea, of the colour of the mayne Ocean, which we first lost the eight of June: since which time wee have had a Sea of a blacke blue colour, which ( both by the last and this yeeres experience) is a Sea-pestered with Ice.

The twelfth, faire weather: from noone to mid-night wee had she wind shifting betweene the North and West; our course was betweene VVost North-west, and South South-west. Then we had the wind at South, we fayled till the next day at noone, West and by North, thirteene leagues: wee accounted our way from the laft day till this day noone Westward, eighteene leagues. This after-noone wee saw more Porpoises then in all our Voyage after. The 20 thirteenth, close weather: in the after-noone having much wind at South, with thort sayle we flood away West and by North, till eight a clocke in the Ecuening: then we had the wind at South, but most times calme till noone the next day : wee stood away as afore, foure leagues, which made in all twelue leagues: we had the Sunne ere it began to fall, South and by West, in the latitude of 70. degrees 22. minutes.

The fourteenth, wee flood West North-west till mid-night, seuenteene leagues: then the wind scanted and came at West, we stood North North-west, one league and a halfe; then the wind being more Southerly, wee fayled West North-west, fine leagues. From the last till this day at noone, our way was out of diners courses North-west and by West, soure and twentie leagues. We had the Sunne beginning to fall at South and by West, in the latitude of 70, de- 30 grees 54. minutes.

The infreenth, faire; but towards night like to be ftormie with thunder, the wind betweene South and South South-east; from this , till the fixteenth day at noone , our course was West and by North, teuen and twentie leagues, and the Sunne then began to fall at South, three quarters of a point Westward, in the latitude of 70. degrees 42. minutes. The fixteenth, faire; our way was from this till next day at noone North-west, twelue leagues, out of diners courses: and we had the wind shifting, sometimes at East, at West South-west, and West and by North; the latitude by a bad observation, 71. degrees 44. minutes. The seventeenth, in the fore-noone faire : the wind being at West and by North. At foure a clocke this morning we faw Land beare 40 off vs, West and South South-west, which was about Ward-bonse: this after-noone wee had a ftorme at West and by North, we layed it to trie till eight a clocke in the Ecuening, and then fet fayle with the wind betweene West North-west, and North-west: our course till the next day at noone, was South-west and by South , twelue leagues : the Cape Hopewell bore off vs South South-west, and we were foure or fine leagues from land.

The eighteenth, gufty, with raine all the fore-noone; then we had the wind shifting till next day at noone from South-South-east to East, and South-east : our course in generall was Northwest, foure and twentie leagues: then did North Kene beare off vs West halfe a point Southward, being from vs foure leagues; and the North Cape in fight bearing West and by North, &c.

The feuen and twentieth, cold with raine and storme; this night we began to burne Candle in the Betacle, which we had not done fince the nineteenth of May: by reason wee had alwaies 50 day from thence till now. The thirtieth, we had the Sunne vpon the Meridian due South, in the latitude of 68, degrees 46. minutes; whereby we found vs to bee afore our thip, ten or twelve leagues, and Lowfoot bore East of vs, but not in fight.

The feuenth of August, I vied all diligence to arrive at London, and therefore now I gaue my companie a certificate vnder my hand, of my free and willing returne, without perswasion or force of any one or more of them : for at my being at Nona Zembla, the fixt of July, voide of hope of a North-east passage, (except by the Vargats, for which I was not firted to trie or proue) I therefore refolued to vie all meanes I could to fayle to the North-west; considering the time and meanes wee had, if the wind should friend vs, as in the first part of our Voyage it See Hakes. 3. had done, and to make triall of that place called Lumleys Inlet, and the furious ouer-fall by Cap- 60 tayne Danis, hoping to runne into it an hundred leagues, and to returne as God should enable mee. But now hauing spent more then halfe the time I had, and gone but the shortest part of the way, by meanes of contrary winds; I thought it my dutie to faue Victuall, Wages, and

CHAP. 16. Master Hudsons third Voyage to Noua Zembla, &c.

Tackle, by my speedy returne, and not by foolish rashnesse, the time being wasted, to lay more charge upon the action then necessitie should compell, I arrived at Granefend the six and twentieth of August.

### CHAP. XVL

The third Voyage of Master HENRIE HYDSON toward Noua Zembla, and at his returne, his passing from Farre Hands, to New-found Land, and along to forsie foure degrees and ten minutes, and thence to Cape Cod, and fo to thirtie three degrees; and along the Coast to the Northward, to fortie two degrees and an halfe, and up the River neere to fortie three degrees. Written by ROBERT IVET of

N Saturday the fine and twentieth of March, 1609, after the old Account, we fet fayle from Amflerdam; and by the feuen and twentieth day, we were downe at the Texel : and by twelve of the clocke we were off the Land, it being Eaft of vs two leagues off. And because it is a journey vsually knowne, I omit to put downe what paffed, till we came to the height of The North Cape of Finmarke, which we did performe by the firt of May (file none) being Tuefday. On which May 5. file

day we observed the height of the Pole, and found it to bee 71, degrees and 46. minutes; and found our Compafie to vary fix degrees to the West: and at twelve of the clocke, the North Cape did beare South-west and by South, tenne leagues off, and wee steered away East and by

After much trouble with fogges, sometimes, and more dangerous of Ice. The nineteenth, being Tuesday, was close stormie weather, with much wind and snow, and very cold: the wind variable betweene the North North-weft, and North-east. We made our way West and by North 30 till noone. Then we observed the Sunne having a slake, and found our height to bee 70. degrees 30. minutes. And the ship had out-runne vs twentie leagues, by reason of the set of the streame of The White Sea : and we had fight of Wardhoufe. Then at two of the clocke wee tacke to the Beals Man Eastward : for we could not get about the North Cape, the wind was so scant ; and at eight of washe the clocke at night, on the one and twentieth, the North Cape did beare South-east and by There South seuen leagues off. And at mid-night Assumption Point did beare South and by East, fine the North

The two and twentieth, guffing weather with haile and fnow, the Sunne breaking out fometimes; we continued our course along the Land West South-west. And at tenne of the clocke at night we were thwart off Zenam. The bodie of it did beare East off vs fine leagues : and the Zenam. course from the North Cape to Zenam, is for the most part West and by South, and West South well fiftie foure leagues.

The three and twentieth, faire Sun-shining weather; the wind at East and by South, and East South-east a wee steered along the Land South-west , and South-west and by West eight leagues a Watch, for fo we found the Land to lye from Zenam to Lofoste. And the differce is fiftie leagues from the bodie of Zenam, to the Westermost Land of Leftore. And from the one to the other, the course is South-west and by West. For the Needle of our Compasse was set right to the North. As tweller of the clocke at night, the bodie of Leftote did beare South-eaft, fixe

The foure and twentieth, faire cleere Sun-shining weather: the wind variable vpon all 50 points of the Compafe, but most vpon the South-east, and sometimes calme. We continued our course West South-west as before, And at eight of the clocke at night, the Souther part of Lofore did beare South-east ten leagues off ys.

The fine and twentieth, much wind at North-east, with some snow and haile. The first watch the wind came to the East a fine gale, and so came to the North-east, the second watch at source of the clocke, and freshed in : And at eight of the clocke it grew to a storme, and so continued. At noone we observed, and made the ship to be in 67. degrees 58. minutes. We continued out courfe South-west, twelue leagues a watch. Ar nine of the clocke, Lofonte did beare East of vs 14. leagues off. And we found the Compaffe to have no variation. The wind increased to a storme: No variations

The fix and twentieth, was a great fforme at the North North-east, and North-east. Wee 60 Recredaway South-west afore the wind with our fore-course abroad: for wee were able to maintayne no more fayles, it blew so vehemently, and the Sea went so high, and brake withall, that it would have dangered a small thip to lye under the Sea. So we skudded seventy leagues infoure and twentie houres. The florme began to ceale at foure of the clocke,

The leven and twentieth, indifferent faire weather, but a good fliffe gale of wind at North

Thunder.

**580** 

No night in

and North-North-east, wee held on our course as before. At noone wee observed and found our heigh to be 64. degrees 10. minutes. And wee perceised, that the Current had hindred vs in Agrear cur-rent ferting to fortic eight houres to the number of 16, leagues to our best judgement, We set our mayne-sayle, rent terming to the North-east. sprit-sayle, and our mayne-top-sayle, and held on our course all night, having faire weather.

The eight and twentieth, faire weather and little wind at North-east, we held on our course South-west. At noone wee obserued the heigth, and were in 62. degrees and 30. minutes. The after-noone was little wind at North North-weft. The fecond watch it fell calme. At foure of the clocke wee had fight of the Iles called Farre, and found them to lye out of their place in the Sea Chart fourteene leagues to farre Westerly. For in running South-west from Leforte, wee Sea Chart rourceme reagues to tast of the season of the se course and observation : and had fight of them fixteene or eighteene leagues off.

The nine and twentrieth, faire weather sometimes calme, and sometimes a gale with the wind varying at South-weft, and fo to the North-eaft. Wee got to the Ilands, but could not get in. So we flood along the Hands. The ebbe being come, we durft not put in.

Streme.

m The Bitts-

ele is a clofe

Their first

for forther

North, they

Schroffters:

The thirtieth faire weather; the wind at South-east and East South-east. In the morning we turned into a Road in Stromo, one of the Hands of Farre, betweene Stromo and Munge-nes, and got in by nine of the clocke : for it flowed to there that day. And affoone as we came in, we went to Romage, and fent our Boat for water, and filled all our emptie Caskes with fresh water, Wee made in end of our Romaging this night by ten of the clocke.

The one and thirtieth, faire Sun-shining weather, the wind at East South-east. In the fore- 20 noone our Master with most of his Company went on shoare to walke, and at one of the clocke they returned aboord. Then we fet fayle.

The first of June, file none, faire Sun-shining weather, the wind at East South-east, We continues on our course South-west and by West. At moone wee observed the Sunne, and found our heigth to be 60, degrees \$8, minutes : and fo continued on our course all night with faire westher. This night we lighted Candles in the " Bittacle againe.

The second mystie weather, the wind at North-east. At noone we steered away West Southplace in which the Compasse west, to find Buffe Hand, discoursed in the years 1578, by one of the ships of Sir Martin Frebefore; to see if it lay in her true latitude in the Chart or no : wee continued our course as before all night, with a faire gale of wind : this night we had fight of the first stars, and our water was an changed colour to a white greene. The Compaffe had no variation.

The third, faire Sun-shining, weathersthe wind at North-east, We steered on our course Southwest and by West, with a stiffe gale of wind. At noone we observed and found our height to bee 18. degrees 48. minutes. And I was before the saip 16. leagues, by reason of the Current that held we to ftrong out of the South-west. For it is eight leagues in foure and twentie hours. We Change of was

accounted our felues neere Buffe lland ; by mid-night we looked out for it, but could not fee ic. The fourth, in the morning was much wind with fogge and raine. Wee fleered away Southrent out of the west by west all the fore-noone, the wind so increasing, that wee were enforced to take in our top-fayle : the winde continuing so all the after-noone. Wee steered a way South-west all the fore-past of the night; and at ten of the clocke at night it was hitle wind; and that was at South,

and so came vp to the South South-east.

The fit, ftormie weather, and much wind at South, and South by East, so that at foure of the clocke in the morning, we tooke in our fore-fayle, and lay a try with our mayne corfe, and tryed away West North-west foure leagues. But at noone it was less wind, and the Sunne fhewad forth; and we observed, and found our heigth to be \$6.degrees 21.minutes. In the aftermoone the wind vered to and fro betweene the South-west and the South-east, with raine and fogge, and so continued all night. Wee found that our ship had gone to the VVestward of our course. The fixth, thicke hasie weather with gusts of wind, and showers of raine. The wind varied betweene East South-East and South-west, wee steered on many courses a West Southwest way. The afternoone watch the wind was at East South-east, a stiffe gate with myst and rame. Wee fleered away South-west, by West eight leagues. At noone the Sunne short forth, and we found the heigth to bee 56, degrees 8, minutes. The fewenth, faire fun-fhining weather all the fore-moone, and calme vntill twelve of the clocke. In the after-moone the wind came to the North-west, a stiffegale. We steered South-west by West, and made a South-west way. At are laced and noone we found the height to bee 55, degrees one minute, and it continued all night a hard gale, ecked to the fayles to en-The eight, formy weather, the wind variable, betweene West and North-west much wind :at large them : eight of the clocke wee tooke off our Bonnets. At noone the Summe shewed forth, and wee obwith reference ferued, and our height was 54. degrees 30. minutes. The ninth, faire fim-thining weather, and litwhetero the maynecourfe, the wind all the fore-part of the day vntill cleuen of the clocke. Then the wind came to the millen courie, South South-east, and we steered away West South-west. At moone we found our height to bee 60 fore courie is such a south-eart, and we neered away went South-went. At moone we found our height to bee vaderhood of 53. degrees and 45. minutes, and we had made our way South by West ten leagues. In the afternoone the wind increased and continued all night at East North-east and East.

The twelfth, faira weather, the wind variable betweene East North-east and South-east, wee freered on our course as before. At foure of the clock in the afternoon the wind came vp at SouthCHAP. 16. Current to the South, Great forme. Variations of the Compafe.

east. And we held our course as before. At moone wer observed and found our height to be 72. degrees 3 c. minutes.

The eleuenth, in the morning was thicke and foggie, the winde varying betweene South South-weft, and North-weft. At foure of the clocke in the morning, wee tackt about to the Southward: At eleven of the clocke the winde came to the North-west, and so to the West North-west. This day we had change of water, of a whitish greene, like to the Ice water to the North-west. At moone it cleered vp, and became very faire weather : wee put out our mayne Noting top-layle: then we observed the Sunne and found our height to be 51 degrees 24 minutes. We Acurent from had fayled many courfes and found our thip gone to the Southward of our account ten leagues, the North. 10 by reason of a current from the North-ward. The Compasse varied on point to the East.

The twelfth, faire Sun-thining weather, but much wind at the Wett : we flood to the South - point Eaft, ward all day, the wind shifting betweene the South-west and the West and by North. Wee made our way South halfe a point West, eight and twentie leagues. Our height at noone was 50, degrees 9, minutes. At eight of the clock at night we took off our Bonets, the wind increasing,

The thirteenth, faire Sun-shining weather: the wind variable betweene the West, and North North-west, We made our way South South-west feuer and twentie leagues. At noone we obserued, and found our height to be 48, degrees 45, minutes. But not to be trufted, the Sea went fo high. In the after-noone the winde was calmer, and weebrought to our Bonets, and flood to the Southward all night with a stiffe gale.

20 The fourteenth, faireand cleere Sun-shining weather: the winde variable betweene the North-west and South-west by West, At mid-inight I observed the North starre at a North-west by West Guardesa good observation 49, degrees 30. minutes. And at noone wee observed the Latitude 48; Sunne, and our heigth was 48. degrees 6. minutes. And I made account we ranne betweene the degrees 6. min two observations evelue leagues. At one of the crocke in the after-moone, were cast about to the nuces. Westward, and stood so all night: the winde increased to a storme, and was very much winde

The fifteenen, we had a great fforme, and spent o ouer-boord our fore-mast, bearing our fore To spend the corle low fet. The fixteenth, we were forced to trie with our mayne fayle, by reason of the vn- Maft, is noterconflant weather. So wee tried four warthes South-east and by South eight leagues and an soul of brea-30 halfe, and two warches fixe leagues! The feuencement, reasonable faire weather: the wind variable betweene Weft South-weft, and Weft North-weft. And a stiffegale of wind, and so great a swelling Sea out of the West South-west, that wee could doe nothing. So one watch and an halfe wee drone North foure-leagues and an halfe, and foure watches and an halfe South and by Bast halfe a point East twelve leagues. The eighteenth, reasonable weather but close and cloudie, and an hard gale of wind, and a great Sea. The winds being at the North-well, wee lay to the Southward, and made our drift South and by West, fine leagues. The after-noone prooned little wind, and the night part calme, The nineteenth, in the fore-moone faire weather and calme, In the morning we fet the piece of our fore maft, and fet our fore corfe,

The one and twentieth, faire Sun-shining weather, but much wind and a great Sea. We split 40 our fore faile at ten of the clocke; then we laid it a trie " with our mayne fayle, and continued " That is, bare On the same a cent in the control of the wind. This day our height was 45, degrees 48 minutes, so more farise. The two and twentieth, very faire Sunifolnine weather, and calme all the after money. The two and twentieth, very faire Sun-finning weather; and calme all the after noone. At fair, &c. noone we made a very good observation, and found our height 44, degrees 38, minutes. At eight Variation,

of the clocke at night wee had a small gale of winde at South-east. And wee steered away West for Nawfound Land. The true Compasse varied one point Haft,

The three and twentieth, thicke weather with much wind and some raine. At eigheof the elocke in the morning, the wind came to the West South-west, and West so stiffe a gale, that we were forcad to take our top layle, and freeted away North North-well vitill four of the clock in the after mone. Then we take to the Southward the winde at Well North-well. Ac eight 50 of the clocke at night wee tooke in our top-fayles, and laid it a trie with our mayne fayle, the

The foure and twentieth, a fiffe gale of wind, varying betweene the West and North Norths west, we tried cill fixe of the clocke; at which time we fer our foresaile, and steered way West and by South by our Compaffeeight leagues in foure watches : and wee tried away South in

The fine and twentieth, faire Sun-shining weather, the wind at North North-west and North, we fleered away West by South by our Compasse till twelve of the clocke: at which time we had fight of a layle, and gaue her chase but could not speake with her. She stood to the Raftward; and we flood after her till fixe of the clocke in the after-noone. Then weetact to the 60 Westward againe, and stood on our course it was faire all night, and little wind sometimes.

The fix and twentieth, all the fore-part of the day very faire weather and hot , but at four of the clocke in the after-noone it grew to bee much winde and raine : the winde was at South South-east. At noone wee observed and found our heigth to bee 44. degrees 33. minutes. At eight of the clocke at night, the wind came to South-well, and Well South-well. Wee fleered

tholelayles without their

North-west, one Watch, and at twelve in the night, to the West, and West and by South, very much wind. So we could lye but North North-west,

The seuen and twentieth, very much winde and a soare storme, the wind Westerly. In the morning at foure of the clocke, wee tooke in our fore-corfe, and layd it a trie with our maynecorfe low fet; and so continued all the day and night, two watches to the Northward. At eight of the clocke at night, we tacke to the Southward

The eight and twentieth, faire fun-shining weather, the wind at West and by South; we lav a trie to the Southward till eight of the clocke in the morning. Then wee fet our fore-corfe, and flood to the Southward a stiffe gale of wind, but faire weather and a great Sea, out of the Westerboord, and fo continued all night.

The nine and twentieth, faire fun-shining weather, the wind at West and by South ; we stood to the Southward vntill fixe of the clocke at night, and made our way South and by East, foure leagues. Then the windecame to the South-west, and wee cast about to the VVestward, and made our way VVelt North-weftall night. At noone, I found the height 43. degrees 6, mie nutes. The variation one point VVest.

The thirtieth, faire fun-shining weather, the winde at South-west and by VVest, we steered North-west and by VVest. And made our way so, by reason of the variation of the Compasse. At noone, I found the height to bee 43. degrees 18. minutes; wee continued our course all night, and made our way North-west and by VVest, halfe a point VVesterly, fine and twentie leagues.

The first of July, close, mystie and thicke weather, but a faire gale of wind at South-west, and 20 South-west by South. We steered away North-west and by West, Westerly, and made our way so, by reason of the variation of the Compasse. At eight of the clocke at night, wee sounded for the Banke of New-found Land, but could get no ground.

The second, thicke mystie weather, but little wind, and that at West, and West and by South. New fundLand At eight of the clocke in the morning, we cast about to the Southward, and when our ship was on flayes, we founded for the Banke, and had ground in thirtie fathoms, white fand and shells, and prefently it cleered : and we had fight of a layle, but spake not with her. In the night we had much Rayne, Thunder and Lightning, and wind shifting.

The third, faire Sun-thining weather, with a faire gale of wind at East North-east, and wee fleered away West South-west by our Compasse, which varyed 17. degrees Westward, This 30 French-mam Fis morning we were among a great Fleet of French-men, which lay Fishing on the Banke; but we spake with none of them. At noone wee found our heighth to bee 43, degrees 41. minutes. And we founded at ten of the clocke, and had thirtie fathoms gray fand. At two of the clocke wee founded, and had fine and thirtie fathoms gray fand. At eight of the clocke at night, we founded againe, and had eight and thirtie fathoms gray fand, as before.

The fourth, at the fore-part of the day cleere, with a faire gale of wind, but variable betweene the East North-east, and South and by East, wee held on our course as before. The after-noone was mystie, the wind shifting betweene the South and the West, till foure of the clocke. Then we tooke in our top-layle and sprit-sayle, and sounded and had no ground in seventie fathoms. The winde shifted fill untill eight of the clocke, then it came to the North North-east, and 40 North-east and by North, and we ficered away West North-west, by our varyed Compasse. which made a West way halfe point North. The Compasse varyed 15. degrees from the North to the West.

The fift, faire fun-shining weather, the wind at North-east and by North, we steered away West North-west, which was West halfe a point North. At noone we found our heighth to be 44.degrees 10.minutes, and founded, and had no ground in one hundred fathoms. The afternoone proved calme fometimes, and fomtimes little wind, vntill nine of the clocke in the night. Then the wind came to the East, and we held on our course. At mid-night I observed and found the height to bee 44. degrees 10. minutes, by the North Starre and the Scorpione heart. The Compaffe varyed 12. degrees.

The fixth, the fore-part of the day faire weather, and a stiffe gale of wind, betweene South South-east, and South-west, wee steered West and by North, and West North-west, The afterpart of the day from two of the clocke, was all foggie and thicke weather; the wind a hard gale, varying betweene South-west and by South, and West and by North, we made our way Northwest halfe a point Northerly, nineteene leagues, vpon many points foure Watches. At night at eight of the clocke, we founded and had no ground at one hundred fathems.

The fenenth, faire fun-thining weather, the wind varying betweene West and by North, and West and by South. At source of the clocke in the morning, we cast about to the Southward, and flood fo sill one in the after-moont. At moone we found our height to be 44. degrees 26. minutes. At fewen of the clocke, we tackt to the Northward. At eight at night, we tackt to the South- 60 ward, and founded, and had nine and fiftie fathoms, white fand.

The eight, in the fore-noone faire weather, but the morning foggie till feuen of the clocke. At foure of the clocke in the morning we founded, and had fine & fortie fathoms, fine white fand, and we had sunne fue leagues South and by West. Then wee stood along one Glasse, and went one league as before. Then we flood one Glasse and founded, and had fixtie fathoms. Then wee take and stood backe to the Banke, and had fine and twentie fathoms; and tryed for Fish, and it Many great takt and thoo docke to the Danke, and the most account of the colocke till one. Code takes, from eight a clocke till one, the fell calme, and we caught one hundred and eighteen great Cooloc Hungary Thou. Many great and after Dinner wee tooke twelue, and faw many great Scoales of Herrings. Then wee had a Scoales of Herrings. gale of wind at South, and it shifted to the West North-west, and we stood three Glasses and rings. founded and had fixtie fathomes, and flood two Glasses, and had two and fortie fathoms, red To found is to flones and shells. So wee founded every Glasse and had severall soundings 35.33.30.31.32. trie the depth

The ninth, faire calme weather, we lay becalmed all day and caught fome Fish, but not much, &c. 10 because we had small store of salt. At three of the clocke in the after-noone, wee had a gale at South-east, and South South-east, and we steered away Westerly, our Compasse was West and by South halfe a point South. At foure of the clocke, we founded and had but lifteene, seuenteene, and nineteene fathoms on a filhing Banke; and we founded euery Glaffe. Then we could get no ground in fine and twentie fathoms, and had fight of a fayle on head off vs. At noone our height was 44 degrees 37 minutes. We flood to the Westward all night, and spake with a French-man, which lay Fishing on the Banke of Sablen, in thirtie fathoms, and we saw two or three more.

The tenth, very mystic and thicke weather, the wind at South-west, a faire gale. We stood to the South-ward, and made our way South-east and by East. At twelve of the clocke we sounded, and had eight and fortie fathoms: againe at two we founded, and had fiftie fathoms. And 20 at fixe of the clocke we founded: and had eight and fortie fathoms on the end of the Banke. Againe, at eight of the clocke at night wee founded, and had no ground in eightie fathomes, and were oner the Banke. So wee stood along till mid-night. The Compasse varyed 17, degrees to the Westward.

The eleventh, very thicke and myflie weather. At twelve of the clocke at night, we caftabout to the Westward, and stood so all day, and made our way West North-west. We sounded at twelue of the clocke, but had no ground; fo we flood to the Westward all the fore-part of the

night, and founded but could get no ground in fiftie or fixtie fathoms till mid-night. Then I founded and had ground at fifteene fathoms, white fand.

unded and has ground at myseus saturation, which course all the morning till eleuen of the clocke; at The twelfth, was very foggi, we flood our course all the morning till eleuen of the clocke; at the course of t 30 which time we had light of the Land, which is low white fandle ground, right on head off vs. Land, being low, white and thou of the control of the contro and had ten fathoms. Then we tacke to the Southward, and stood off foure Glasses: then we tacke fandie. to the Land againe, thinking to have rode vnder it, and as we came neere it, the fog was so thicke that we could not fee; fo wer flood off againe. From mid-night to two of the clocke, we came founding in twelue, thirteene, and foureteene fathoms off the shoare. At foure of the clocke, we had 20 fathoms. At eight of the clocke at night 30 fathoms. At twelve of the clocke 65, fathoms. and but little winde, for it deeped apace, but the nearer the shoare the fairer shoalding.

The thirteenth, faire fun-shining weather, from eight of the clocke in the fore-noone all day after, but in the morning it was foggie. Then at eight of the clocke we cast about for the shoare. but could not fee it; the wind being at South by our true Compasse, wee steered VVest and by 4; degrees

40 North. At noone we observed, and found our height to bee 43, degrees 25, minutes; so we stee. 35, minutes. red away VVest and by North all the after-noone. At foure of the clocke in the after-noone, Sight of Land we founded and had fine and thirrie fathoms. And at fixe of the clocke, wee had fight of the against, and of Land, and faw two fayles on head off vs. The land by the waters side is low Land, and white sandie Bankes rifing full of little Hils. Our foundings were 35.33.30.28.32.37.33. & 32.fathoms.

The four eteenth, full of my fts flying and vading, the wind betweene South and South-weft, we fteered away West North-west, and North-west and by West. Our soundings were 29. 25. 24. 25. 22. 25. 27. 30. 28. 30. 35. 43. 50. 70. 90. 70. 64. 86. 100. fathoms, and no ground. The fifteenth, very mystie, the winde varying betweene South and South-west, wee steered

West and by North, and VVest North-west. In the morning we sounded, and had one hundred fathoms, till foure of the clocke in the after-noone. Then we founded againe, and had seventie 50 face fathoms. Then in two Glaffer running, which was not about two English miles, we founded and had fixtie fathoms, and it shoulded a great pace untill we came to twentie fathoms. Then we made account we were neere the Ilands that lie off the shoare. So we came to an Anchor, the Sea being very smooth and little wind, at nine of the clocke at night. After supper, we tryed for Fish, and I caught fifteene Cods, some the greatest that I have seene, and so we rode all night.

The fixteenth, in the morning it cleered up, and wee had fight of fine llands lying North, and Fine llands North and by VV eff from vs, two leagues. Then wee made ready to fet fayle, but the myst came fo thicke, that we durft not enter in among them.

The seuenteenth, was all mystie, so that wee could not get into the Harbour. At ten of the to clocke two Boates came off to vs, with fixe of the Sanager of the Country, feeming gl.d of our Size Salages comming. VVe gaue them trifles, and they eate and dranke with vs ; and told vs, that there come about were Gold, Siluer, and Copper mynes hard by vs; and that the French-men doe Trade with them. them; which is very likely, for one of them spake some words of French. So wee rode still all day and all night, the weather continuing myslie.

Lead or Pole

The

Variation 13.

July.

The Banke of

fhing on the

A large River.

The eighteenth, faire weather, wee went into a very good Harbour, and rode hard by the shoare in soure fathoms water. The River runneth vp a great way, but there is but two fathoms hard by vs. VVe went on shoare and cut vs a fore Mast, then at noone we came abourd againe, 44. Degrees 10. and found the height of the place to bee in 44. degrees 1. minute; and the Sunne to fall at 2 South South-west Sunne, VV e mended our sayles, and fell to make our fore-Mast. The Harbour lyeth South and North, a mile in where we rode.

The nineteenth, we had faire fun-shining weather, we rode still. In the after-noone wee went with our Boate to looke for fresh water, and found some; and found a should with many Lobsters on it, and caught one and thirtie. The people comming aboord, shewed vs great friend-LODRETS On It, and cought on an an interest of the faire funne flining weather, the windest IO flip, but we could not truft them. The twentieth, faire funne flining weather, the windest IO South-west. In the morning, our Scute went out to catch fresh Fish halfe an houre before day, and returned in two houres, bringing feuen and twentie great Coddes, with two hookes and lines. In the after-noone wee went for more Lobsters, and caught fortie, and returned aboord. Then we effect two French Shallops fall of the Country people come into the Harbour, but they offered vs no wrong, feeing we flood vpon our guard. They brought many Beauer kinnes, and other fine Furres, which they would have changed for redde Gownes. For the French trade with them for red Cassockes, Kniues, Hatchets, Copper, Kettles, Treuits, Beades, and

The one and twentieth, all mystic, the wind Easterly, wee rode still and did nothing, but about our Mast. The two and twentieth, faire Sun-shining weather, the winde all Northerly, 20 we rode fill all the day. In the after-noone our Scute went to catch more Lobsters, and brought with them nine and fiftie. The night was cleere weather.

The three and twentieth, faire fun-shining weather and very hot. At eleuen of the clocke, our fore Mast was finished, and we brought it aboord, and fet it into the step, and in the after-noone we rigged it. This night we had fome little my ft and rayne.

The foure and twentieth, very hot weather, the winde at South out of the fea. The fore-part of the day wee brought to our fayles. In the morning, our Scute went to take Fifh, and in two houres they brought with them twentie great Coddes, and a great Holibut, the night was faire alfo. We kept good watch for feare of being betrayed by the people, and perceived where they

The fine and twentieth, very faire weather and hot. In the morning wee manned our Scute with foure Muskets, and fixe men, and tooke one of their Shallops and brought it aboord. Then we manned our Boat & Scute with twelue men and Muskets, and two stone Pieces or Murderers. and draue the Salnages from their Houses, and tooke the spoyle of them, as they would have done of vs. Then wee fet fayle, and came downe to the Harbours mouth, and rode there all night, because the winde blew right in, and the night grew myfile with much rayne till main night. Then it fell calme, and the wind came off the Land at West North-west, and it began to cleere. The Compasse varyed 10. degrees North-west.

The fixe and twentieth, faire and cleere funne-shining weather. At fine of the clocke in the morning, the winde being off the shoare at North North-west, we set sayle and came to sea, and 40 by noone we counted our ship had gone foureteene leagues South-west. In the after-noone, the winde shifted variably betweene West South-west, and North-west. At noone, I found the height to bee 43 degrees 56 minutes. This Ecuening being very faire weather, wee observed Variation to. degrees toward the variation of our Compaile at the Sunnes going downe, and found it to bee 10. degrees from the North-welt the North to the VVestward.

The feuen and twentieth, faire fun-shining weather, the winde shifting betweene the Southwest, and West and by North, a stiffe gale, we stood to the Southward all day, and made our way South and by West, seuen and twentie leagues. At noone, our height was 42 degrees 50 minuts. At foure of the clocke in the after-noone, wee cast about to the Northward. At eight of the clocke, we tooke in our top-fayles and our fore-bonnet, and went with a short fayle all night, 50

The eight and twentieth, very thicke and mystie, and a stiffe gale of wind, varying betweene South South-west, and South-west and by VVest; we made our way North-west and by VVest, feuen and twentieleagues, wee founded many times and could get no ground. At fine of the clocke, we cast about to the Southward, the wind at South-west and by VVest. At which time we founded, and had ground at feuentie fine fathoms. At eight, weehad fixtie fine fathoms. At degrees to the ten, fixtie. At twelve of the clocke at mid-night, fiftie fixe fathoms, gray fand, The Compaffe varyed 6. degrees the North point to the VVeil.

The nine and twentieth, faire weather, we flood to the Southward, and made our way South and by VVeil a point South, eighteene leagues. At noone, we found our height to bee 42. degrees 56.minutes, wee founded oft, and had these 60, 64, 65. 67. 65. 65. 70. and 75. fathoms. At 60 Variation 5. & night, wee tryed the variation of our Compasse by the setting of the Sunne, and found that it shalfe degrees, went downe 37. degrees to the North-ward of the VVeft, and should have gone downe but 31. degrees. The Compalie varyed 5. 1. degrees.

The thirtieth, very hot, all the fore-part of the day calme, the wind at South South-east, wee

fleered away VVest South-west and sounded many times, and could find no ground at one hunfeered away the defendance of the feered and feuentie fathomes. VVe found a great current and many ouer-falls. Our current had A great curdeceived vs. For at noone we found our height to be 41. degrees 34. minutes. And the current rent and mahad heated vs to the Southward fourteune leagues. At eight of the clocke at night, I founded and ny ouer-fals. had ground in fiftie two fathomes. In the end of the mid-night watch, wee had fiftie three fathomes. This last observation is not to be trusted.

The one and thirtieth, very thicke and mystie all day, vntill tenne of the clocke. At night the wind came to the South, and South-west and South. We made our way West North-west nineteene leagues. Wee sounded many times, and had difference of soundings, To fometimes little Rones, and fometimes groffe gray land, fiftie fix, fiftie foure, fortie eight, fortie seuen, fortie foure, fortie fix, fiftie fathomes ; and at eight of the clocke at night it fell calme, and we had fiftie fathomes. And at ten of the clocke we heard a great Rut, like the Rut of the shoare. A great Rus, Then I founded and found the former Depths; and mistrusting a current, seeing it so still that the ship made no way, I let the lead lie on the ground, and found a tide set to the South-west, and South-west by West, io fait, that I could hardly vere the Line so fast, and presently came an hutling current, or tyde with ouer-fals, which cast our ship round; and the Lead was so fast in the the South-well ground, that I feared the Lines breaking, and we had no more but that. At mid-night I foun- and Southded againe, and we had feuentie fine fathomes; and the strong streame had left vs.

The first of August, all the fore-part of the day was mystie, and at noone it cleared vp. We with over-take go found that our height was 41. degrees 45 minutes, and we had gone nineteene leagues. The afternoon was reasonable cleere. We found a rustling tide or current, withmany ouer-fals to continue ftill, and our water to change colour, and our fea to bee very deepe, for wee found no ground in one hundred fathomes. The night was cleere, and the winde came to the North, and North

North-east, we steered West.

The second, very faire weather and hoe : from the morning till noone we had a gale of wind, but in the after-noone little wind. Atmoone I founded and had one hundred and ten fathomes and our height was 41. degrees 56. minutes. And wee had sunne foure and twentie leagues and an halte. At the Sun-fetting we observed the variation of the Compasse, and found that it was come to his true place. At eight of the clocke the gale increased, so wee ranne fixe leagues that 30 watch, and had a very faire and cleere night.

The third, very hor weather. In the moining, we had fight of the Land, and fleered in with it, thinking to goe to the North-ward of it. So we lent our shallop with fine men, to found in by the shore : and they found it deepe fine fathomes within a Bow shot of the shoare; and they They goe on she shoare; and we found a floud come from the South-east, and an ebbe from the North-west. with a very strong streame, and a great hurling and noyses. At eight of the clocke at night, the wind began to blow a fresh gale, and continued all night but variable. Our founding that wee had to the Land, was one hundred, eightie, seuentie foure, fiftie two, fortie fixe, twentie nine, 40 twentie feuen, twentie foure, nineteene, seuenteene, sometimes Oze, and sometimes

gray fand. The fourth, was very hot : we flood to the North-west two watches; and one South in for the Land, and came to an Anthor at the Norther end of the Headland, and heard the voyce of men call. Then we fent our Boat on shoare, thinking they had beene some Christians left on the Land : but wee found them to bee Sauages, which feemed very glad of our commings So wee brought one aboord with vs, and gaue him meate, and he did eate and drinke with vs. Qur Mather gaue him three or foure glaffe Buttons, and fent him on Land with our shallop againe. And at our Boats comming from the shoare he leapt and danced, and held up this stands, and pointed ws to a river on the other fidesfor we had made fignes that we came to fifth there. The bodie of this 10 Headland lyeth in 41 degrees 49 minutes. We fet fayleagaine after dinner thinking to flaue got

to the Weltward of this Headland, but could not; so we beare up to the Southward of it, & made a South-east way; and the Souther point did beare West at eight of the clocke at night. Our foundings about the Easter and Norther pare of this Headland, a league from the shoare are these at the Bafterside thirtie, twentie seuen, twentie seuen, twentie foure, twentie fine, twentie, The North-east point 17. degrees 18. unmutes, and so deeper. The North-end of this Headland, hard by the shoare thirsie fathomes : and three leagues off North North-weit, one hundred fathomes. At the South-east part a league off, lifteene, fixteene, and senenteene fathomes. The people have greene Tabacco, and pipes, the boles whereof are made of Earth, and the pipes of red Copper. The Land is very fweet.

60 The fife, all mystie. At eight of the clocke in the morning, wee tack about to the Westward and flood in till foure of the clocke in the after-noone; at which time it cleered, and wee had fight of the Head-land againe fine leagues from vs. The Souther point of it did beare West off vs : and we founded many times, and had no ground. And at foure of the clocke we cast about. and at our staying wee had sementie fathomes. Wee steered away South and South by East all

Augus.

lyeth off Eaft

from Cape

Ced into the

The Flees.

night, and could get no ground at feuentie and eightie fathomes. For wee feared a great Riffe, that lyeth off the Land, and steered away South and by East.

The fixth, faire weather, but many times mysling, Wee steered away South South-east, till eight of the clocke in the morning: Then it cleered a little, and wee cast about to the Westward. Then we founded and had thirtie fathomes, groffe fand, and were come to the Riffe. Then wee kept our Lead, and had quicke shoalding, from thirtie, twentie nine, twentie seuen, twentie foure, twentie two, twentie and an halfe, twentie, twentie, ninetcene, ninetcene, ninetcene, eighteene, eighteene, seuenteene; and so deeping againe as proportionally as it shoulded. For we steered South and South-east till we came to twentse fixe fathomes. Then we steered Southwest for so the tyde doth set. By and by it being calme we tryed by our Lead; for you shall 10 haue fixteene or leventeene fathomes, and the next cast but seven or six fathomes. And farther to the Westward you shall have four and five foot water, and see Rockes under you; and you shall fee the Land in the top. Vpon this Riffe we had an obsenzation, and found that it lyeth in 40. degrees 10. minutes. And this is that Headland which Captaine Barthalomen Gofnold discourred in the yeere 1602, and called Cape Cod, because of the store of Cod-fish that hee found thereabout, So we steered South-west three leagues, and had twentie, and twentie foure fathomes, Then we steered West two Glasses halfe a league, and came to sisteene sathomes. Then we steered off South-east foure Glasses, but could not get deepe water; for there the tyde of ebbelaid vson; and the streame did hurle so, that it laid vs so neere the breach of ashoald, that wee were forced to Anchor. So at feuen of the clocke at night, wee were at an Anchor in tenne fathomes: 20 And, I give God most heartie thankes, the least water wee had was seven fathomes and an halfe, We rode still all night, and at a still water I founded so farre round about our ship as we could see a light; and had no leffe then eight, nine, ten, and eleuen fathomes: The myft continued being

The feuenth, faire weather and hot, but mystie. Wee rode still hoping it would cleere, but on the floud it fell calme and thicke. So we rode still all day and all night. The floud commeth from the South-west, and rifeth not about one fathome and an halfe in nepe streames. Toward night it cleered, and I went with our shallop and sounded, and found no lesse water then eight fathomes to the South-east off vs : but we law to the North-west off vs great Breaches.

The eight, faire and cleere weather. In the morning, by fixe of the clocke at flake water wee 30 weighed; the wind at North-east, and ist our fore-layle and mayne top-layle, and got a mile ouer the Flats. Then the tyde of ebbe came, so we anchored against ill the floud came. Then wee fee fayle againe, and by the great mercie of God, weegot cleere off them by one of the clocke this after-noone. And wee had light of the Land from the West North-west, to the North North-west. So we steered away South South-east all night; and had ground vintill the middle of the third watch. Then we had fortie fine fathomes, white fand, and little flones. So all our foundings are twentie, twentie, twentie two, twentie fenen, thirtie two, fortie three, fortie three, fortie fine. Then no ground in feuencie fathomes,

The ninth, very faire and hot weather, the wind a very stiffe gale. In the morning, at four of the clocke, our shallop came running up against our sterne, and split in all her stemme; So we 40 were faine to cut her away. Then wee tooke in our mayne fayle, and lay atrie under out forefayle vntill twelve of the clocke at mid-day. Then the wind ceased to a faire gale, so wee stood away South-weft. Then we lay close by, on many courses a South by West way fifteene leagues; and three watches South-east by East, ten leagues. At eight of the clocke at night, wee tooke in our top-fayles, and went with a low fayle; because we were in an vnknewne sea. At noone we observed and found our heigth to be 38. degrees 39. minutes.

The tenth, in the morning some raine and cloudie weather: the windeat South-west, wee made our way South-east by East, ten leagues. At noone, wee observed and found our height to bee 28, degrees 39, minutes. Then wee tackt about to the Westward, the wind being at South and by East, little wind. At foure of the clocke it fell calme, and we had two Dolphines about 50 our thip, and many small fishes. At eight of the clocke at night, wee had a small tingring gale. All night we had a great Sea out of the South-west, and another great Sea out of the North-east.

The eleuenth, all the fore-part of the day faire weather, and very hot. VVeethood to the VVeft South-west till noone. Then the wind shorted, and we could by but South-west and by South. At noone, wee found our heigth to bee 39. degrees 11. minutes. And that the current had laid vs to the Northward thirtie two minutes contrary to our expectation. At four of the clocks in the after-noone there came a myst, which endured two houres. But wee had it faire and cleere all night after. The Compaffe varied the North point to the V Veft one whole point.

The twelfth, faire weather, the wind variable betweene the South-west and by South, and the North little wind. In the moraing we killed an extraordinary fifth, and flood to the West- 60 ward all day and all night. At moone we found our height to be 38. degrees 12 minutes. And the observation the day before was not good. This noone, we found the Compasse to vary from the North to the West ten degrees.

The thirteenth, faire weather and hot : the wind at North-east. Wee steered away West and

by our Compafie two and twentie leagues. At noone wee found our height to bee 37, degrees 45. minutes, and that our way from noone to noone war Well South-well, halfe a point Southerly. The Compafe was 7 degrees and a halie variation; from the North point

The fourteenth, faire weather, but cloudie, and a fiffe gale of wind, wariable betweene Northeast and South-weit, wee steered away West by South, a point South all day untill nine of the clocke at night; then it began to Thunder and Lighten, whereupon we tooke in all our fayles, and layd it a hull, and hulled away North rill mid-night, a league and a halfe.

The fifteenth, very faire and hot weather, the winde at North by East. Actours of the 10 clocks in the morning we let layle, and flood on our course to the Wellward. At noone wee found our height to bee 37, degrees 25, minutes. Theufver-moone proued little wind. At eight 37-Degrees of the clocke at night, the winde came to the North, and wee fleered West by North, and West North-west, and made our way West: The Compasse waryed 7 degrees from the

The fixteenth, faire finning weather, and very hor, the wind variable betweene the North and the West, wen steered away West by North. Armoone wee found our height to bee 37. 37.Degrees degrees 6, minutes. This morning we sounded and had ground in nirectie fathomes, and in fixe 6 minutes. Giaffes running it shoulded to fiftie fathoms, and so to eight and twencie fathoms, at foure of the clocke in the after-noone. Then wee came to an Anchor, and rode till eight of the clocke at 20 night, the wind being at South and Moone-light, we refolued to goe to the Northward to finde deeper water. So we weighed and stood to the Northward, and found the water to should and

deepe, from eight and twentie to twentie fathomes, The fewenteenth, faire and cleere Sun-shining weather, the winde at South by West, wee Recred to the Northward till foure of the clocke in the morning, then wee came to eighteene fathomes. So we Anchored vntill the Sunne arose to lookeabroad for Land, for wee judged there could not but be Land neere vs, but we could fee none. Then we weighed and flood to the Westward till noone. And at eleuen of the clocke wee had fight of a low Land, with a white fandie shoare. By twelve of the clocke we were come into fine fathomes, and Anchored; and the Land Alow Land was four cleagues from vs, and wee had fight of it from the West, to the North-west by with awhite North. Our height was 77 decrees a commence. Then the mind blance of the rest and out of findic thouse 30 North. Our height was 27 degrees 26 minutes. Then the wind blew fo stiffe a gale, and such a 37 degrees 36. Sea went, that we could not weigh ; fo we rode there all night an hard rode,

The eighteenth, in the morning faire weather, and little winde at North North-east and North-east. At foure of the clocke in the morning, we weighed and stood into the shoare to see the deeping or shoulding of it, and finding it too deepe, we stood in to get a rode; for wee faw as it were three Hands. So wee turned to windward to get into a Bay, as it shewed to vs to the Westward of an Iland. For the three Ilands did beare North off vs. But toward noone the wind blew Northerly, with guits of wind and rayne. So we stood off into the Sea againe all night; and running off we found a Channell, wherein we had no leffe then eight, nine, ten, eleuen, and twelve fathomes water. For in comming our the Barre, wee had five, and foure fathomes and a 40 halfe, and it lyeth fine leagues from the shoare, and it is the Barre of Virginia. At the North end Barre of Virginia. of 11, it is ten leagues broad, and South and North, but deepe water from ninetie fathoms to fiue, nin.

and foure and a halfe. The Land lyeth South and North. This is the entrance into the Kings Kings River. River in Virginia, where our English-men are. The North file of it lyeth in 37. degrees 26. minutes, you shall know when you come to should water or founding; for the water will looke Greene or thicke, you shall have ninetie and eightie fathomes, and shoalding a pice till you come to ten, cleuen, nine, eight, seuen, ten, and nine fathomes, and so to fiue, and foure fathomes and a halfe. The nineteenth, faire weather, but an hard gale of winde at the North-east, wee stood off till

moone, and made our way South-east by East, two and twentie leagues. At noone wee cast Note. 50 about to the Westward, and stood till fixe of the clocke in the after-noone, and went five leagues and a halfe North-west by North. Then wee cast about againe to the Eastward, and stood that way till foure the next morning.

The twentieth, faire and cleere weather, the winde variable betweene East North-east, and North-east. At foure of the clocke in the morning, weecast about to the Westward, and stood till noone; at which time I founded; and had two and thirtie fathomes. Then we takt to the Eastward againe; wee found our height to bee 37. degrees 22. minutes. We stood to the East- 37. degrees 25. ward all night, and had very much wind. At eight of the clockeat night we tooke off our Bon-minutes nets, and flood with fmall fayle,

The one and twentieth, was a fore storme of winde and rayne all day and all night, wherefore 60 wee flood to the Eastward with a small sayle : till one of the clocke in the after-noone. Then a great Sea brake into our fore-corfe and split it; so we were forced to take it from the yard and mend it; wee lay a trie with our mayne-corfe all night. This night our Cat ranne crying from one fide of the thip to the other, looking ouer-boord, which made vs to wonder; but we faw nothing.

A current fem

Ecc

The three and twentieth, very faire weather, but some Thunder in the morning, the winde variable betweene East by North. At moone wee tackt about to the Northward, the winde at East by North. The after-moone very faire, the wind variable, and continued so all night. Our way we made East South-east, till neune the next day.

The four and twestieth faire and hot weather, with she wind variable between the North 10 and the East. The after-moone variable winds. But at fours of the clocks, the wind came to the East, and South-east; fo wee storred away Narth by West, and in three Watches wee went thirteane leagues. At noone our height was 35 degrees 41, minures, being farre off at

The five and twentieth, faire weather and very bot. All the morning was very calme vertill eleuen of the clocke ; the wind came to South-east, and South South-east | fo wee steered away North-west by North, two Watches and a halfe, and one Watch North-west by West, and went eighteene leagues. At noone I found our height to bee 36, degrees 20, minutes, being

The fixe and twentieth, faire and hot weather, the winde variable open all the points of the 20 Compalie. From two of the clocke in the morning wntill noone, were made our way North by East, seuen leagues. In the after-noone the wind came to the North-east, and vering to the East South-east, wee steered away North-west friceene leagues, from noone till ten of the clocke at night. At eight of the clocke at night wee founded, and had eighteene fathomes, and were The Banke of come to the Banke of Figinia, and could not fee the Land. Wee kept founding, and fteered a. way North, and came to eigh: fathomes, and Anchored there ; for the wind was at East Southeast, so that wee could not get off. For the Coast lyeth along South South-west, and North North-east, At moone our height was 37, degrees 15, minutes. And wee found that we were returned to the same place, from whence we were put off at our first seeing Land.

The fenen and twentieth, faire weather and very hot, the winde at East South-east. In the 30 Latitude 37. morning as soone as the Sunne was up, wee looked out and had fight of the Land. Then wee degrect 1 5, mi weighed, and flood in North-west two Glasses, and found the Land to bee the place, from whence wee put off first. So wee kept our loofe, and steered along the Land, and had the Banke Ive all along the sheare; and wee had in two leagues off the sheare, five, fixe, seven, eight, nine, and ten fathomes. The Coast lyeth South South west, and is a white Sandie floare, and theweth full of Bayes and Points. The ftreame fetreth West South-west, and East Northeast. At fixe of the clocke at night, wee were thwart of an Harbour or Riner, but we saw a Barre lye before it; and all within the Land to the Northward, the water range with many Hands in it. At fixe of the clocke we Anchored, and fest our Boate to found to the shoare-ward, and found no lelle then fourt and a halfe, fine, fixe, and feuen fathomes.

The eight and twentieth, faire and hot weather, the winde at South South-west. In the morning at fixe of the clocke wee weighed, and steered away North twelve leagues till noone. The Point of and came to the Point of the Land; and being hard by the Land in fine fathomes, on a fudden wee came into three fathomes ; then we beare vp and had but ten foote water, and ioyned to the Point. Then as foone as wee were over, wee had five, fixe, fenen, eight, nine, ten, twelve, and thirteene fathomes. Then wee found the Land to trend away North-weft, with a great Bay and Rivers. But the Bay wee found shoald; and in the offing wee had ten fathomes, and had fight of Breaches and drie Sand. Then wee were forced to stand backe againe; so we Rood backe South-east by South, three leagues. And at feuen of the closke wee Anchored in eight fathomes water; and found a Tide fet to the North-west, and North North-west, 50 A fmall Shaland it rifeth one fathome, and floweth South South-east. And hee that will throughly Diflop needfull. couer this great Bay, must have a small Pinnasse, that must draw but source or fine soote water, to found before him. At fine in the morning wee weighed, and steered away to the The Norther Eastward on many courses, for the Norther Land is full of shoulds. Wee were among them, Land is full of and once wee strooke, and wee went away; and steered away to the South-east. So wee had two, three, foure, five, and feuen fathomes, and fo deeper and deeper.

The nine and twentieth, faire weather, with some Thunder and showers, the winde shifting betweene the South South-west, and the North North-west. In the morning wee weighed at the breake of day, and flood toward the Norther Land, which we found to bee all Ilands to our fight, and great stormes from them, and are should three leagues off. For we comming by them, 69 had but feuen, fixe, fiue, forre, three, and two fathoms and a halfe, and strooke ground with our Rudder, we steered off South-west, one Glasse, and had fine fathoms. Then wee steered Southeast three Glasses, then wee found seuen fathomes, and steered North-east by East, foure leagues, and came to twelue and thirteene fathoms. At one of the clocke, I went to the top-

# CH AP. 16. Deceisfull freames, Three great Rivers, Salmons, Mullets, Rayes, 591

mast head, and set the Land, and the bodie of the Hands did beare North-west by North; And at foure of the clocke, wee had gone foure leagues Eaft South-eaft, and North-eaft by East, and found but seuen fathoms, and it was calme, so we Anchored. Then I went agains to the top-mast head, to see how farre I could see Land about vs, and could see no more but the Le lands. And the Souther point of them did beare North-west by West, eight leagues off. So weerode till mid-night. Then the winde came to the North North-west, so wee waighed

The thirtieth, in the morning betweene twelue and one, we weighed, and flood to the Eaftward, the winde at North North-west, wee steered away and made our way East South-east. In From our weighing till noone, eleuen leagues. Our foundings were eight, nine, ten, eleuen, twelue, and thirteene fathomes till day. Then we came to eighteene, nineteene, twentie, and to fixe and twentie fathoms by noone. Then I observed the Sunne, and found the height to bee 19. degrees 5. minutes, and faw no Land. In the after-noone, the winde came to North Latinde 39. by West; So wee lay close by with our fore-sayle : and our mayne-sayle, and it was little degrees ; mi winde untill twelue of the clocke at mid-night, then wee had a gale a little while. Then I autes. founded, and all the night our foundings were thirtie, and fixe and thirtie fathomes, and wee went little.

The one and thirtieth, faire weather and little wind. At fixe of the clocke in the mornin we cast about to the Northward, the wind being at the North-east, little wind. At noone it fell 20 calme, and I found the height to bee 38 degrees 39 minutes. And the ftreames had deceived vs. Latitude 38. and our founding was eight and thirtie fathoms. In the afternoone I founded againe, and had necessary but thirtie fathoms. So we found that we were heaved too and fro with the streames of the Tide, Deceitfull both by our observations and our depths. From noone till foure of the clocke in the after-noone, freames, it was calme. At fixe of the clocke wee had a little gale Southerly, and it continued all night, fometimes calme, and fometimes a gale ; wee went eight leagues from noone to noone, North by East. The first of September, faire weather, the wind variable betweene East and South, we steered September.

away North North-west. At noone we found our height to bee 39. degrees 3. minutes. Wee Latitude 39. had foundings thirtie, twentie seuen , twentie foure, and twentie two fathomes . as wee degrees 3, min 3c went to the Northward. At fixe of the clocke wee had one and twentie fathomes. And all the nutes, third watch till twelue of the clocke at mid-night, we had foundings one and twentie, two and twentic, eighteene, two and twentie, one and twentie, eighteene, and two and twentie fathoms. and went fixe leagues neere hand North North-weft.

The second, in the morning close weather, the winde at South in the morning; from twelve untill two of the clocke we feered North North-welt, and Ind founding one and twentie fathoms, and in running one Glaffe we had but fixteene fathoms, then feuenteene, and fo shoalder and shoalder vntill it came to twelue fathoms. We saw a great Fire, but could not see the Land, then we came to ten fathoms, whereupon we brought our tackes aboord, and flood to the Eastward East South-east, foure Glasses. Then the Sunne arose, and we steered away North agains. 40 and faw the Land from the West by North, to the North-west by North, all like bro-

ken llands, and our foundings were eleuen and ten fathoms. Then wee looft in for the shoare, The Landine broken llands, and faire by the shoare, we had seuen fathoms. The course along the Land we found to be North-The course a call by North. From the Land which we had first fight of, whill we came to a great Lake long the Land of water, as wee could indge it to bee, being drowned Land, which made it to rife like llands, from the which was in length ten leagues. The mouth of that Lake hath many floodids, and the Sea breaketh on them as it is cast out of the mouth of it. And from that Lake or Bay, the Land lyeth mouth of the North by East, and wee had a great streame out of the Bay ; and from thence our sounding Norther Bay was ten fathoms, two leagues from the Land. At fine of the clocke we Anchored, being little or Lake. winde, and rode in eight fathoms water, the night was faire. This night I found the Land to Variation 8. 50 hall the Compasse 8 degrees. For to the Northward off vs we saw high Hils. For the day before the Hills. we found not about 2. degrees of Variation. This is a very good Land to fall with, and a plea. L. degrees va-

The third, the morning myslie vntill ten of the clocke, then it cleered, and the wind came to See. The third, the moraning waynes that the South South Court and is very pleafant the South South cash, so were weighed and stood to the Northward. The Land is very pleafant this and a and high, and bold to fall withall. At three of the clocke in the after-moone, wee came to three bold floare, great Rivers. So we flood along to the Northermost, thinking to have gone into it, but we found Three great it to haue a very shoald barre before it, for we had but ten foot water. Then wee cast about to Rivers, the Southward, and found two fathoms, three fathoms, and three and a quarter, till we came to The Northerthe Souther fide of them, then we had fine and fixe fathoms, and Anchored. So wee fent in our ment barrerd.

An excellent 60 Boate to found, and they found no leffe water then foure, five, fixe, and feven fathoms, and re-River. turned in an houre and a halfe. So wee weighed and went in, and rode in fine fathoms, Ozie Latitude 40. ground, and faw many Salmons, and Mullets, and Rayes very great. The height is 40. de. degrees 30 min grees 20. minutes.

The fourth, in the morning as soone as the day was light, wee saw that it was good riding

farther vp. So we fent our Boate to found, and found that it was a very good Harbour; and foure and fine fathoms, two Cables length from the shoare. Then we weighed and went in with our ship. Then our Boate went on Land with our Net to Fish, and caught ten great Mullets, of a foot and a halfe long a peece, and a Ray as great as foure men could hale into the ship. So wee trimmed our Boate and rode still all day. At night the wind blew hard at the North-west, and our Anchor came home, and wee droue on shoare, but tooke no hurt, thanked bee God, for the ground is loft fand and Oze. This day the people of the Countrey came abourd of vs, feeming ground is not tains and Oxer many may have perfectly a specific for Knines and Ready very glad of our comming, and brought greene Tabacco, and gaue vs of it for Knines and Ready. They goe in Deere skins loofe, well drefted. They have yellow Copper. They define Cleathes, come aboord. and are very civill. They have great flore of Maiz or Indian Wheate, whereof they make good 10 Bread. The Countrey is full of great and tall Oakes.

Yellow Cop-Tall Oakese

The fifth, in the morning as foone as the day was light, the wind ceafed and the Flood came. So we heated off our ship againe into fine fathoms water, and sent our Boate to found the Bay, The great Bay and we found that there was three fathoms hard by the Souther shoare. Our men went on Land and 30 minutes, there, and law great store of Men, Women and Children, who gaue them Tabacco at their comming on Land. So they went up into the Woods, and faw great flore of very goodly Oakes, and fome Currants. For one of them came aboord and brought fome dryed, and gaue me fome, which were sweet and good. This day many of the people came aboord, some in Mantles of Feathers, Feathers, Furs, and some in Skinnes of divers forts of good Furres. Some women also came to vs with Hempe. They had red Copper Tabacco pipes, and other things of Copper they did weare 20 about their neckes. At night they went on Land sgaine, so wee rode very quiet, but durft

to the North-Anarrow Riner to the Westward.

The fixth, in the morning was faire weather, and our Master fent Iohn Colman, with foure on Another River ther men in our Boate over to the North-fide, to found the other Rives, being four leagues from vs. They found by the way should water two fathoms; but at the North of the River eighteen, and twentie fathoms, and very good riding for Ships; and a narrow River to the Westward betweene two llands. The Lands they told vs were as pleasant with Graffe and Flowers, and goodly Trees, as euer they had seene, and very sweet smells came from them. So they went in two leagues and faw an open Sea, and returned; and as they came backe, they were fet vpon by two Canoes, the one hauing twelue, the other fourteene men. The night came on, and it began 30 to rayne, so that their Match went out; and they had one man slaine in the fight, which was an English-man, named Iohn Colmon, with an Arrow shot into his throat, and two more burt. It grew fo darke that they could not find the ship that night, but labored too and fro on their Oares. They had to great a streame, that their grapnell would not hold them.

colmen flaine,

The feuenth, was faire, and by ten of the clocke they returned aboord the ship, and brought our dead man with them, whom we carryed on Land and buryed, and named the point after his colmans Point. name, Colmans Point. Then we hoyfed in our Boate, and raifed her fide with waste boords for defence of our men. So we rode still all night, having good regard to our Watch.

The eight, was very faire weather, wee rode still very quietly. The people came abourd vs, and brought Tabacco and Indian Wheat, to exchange for Kniues and Beades, and offered vs no 40 violence. So we fitting up our Boate did marke them, to fee if they would make any shew of the Death of our man; which they did not.

Smages.

The ninth faire weather. In the morning, two great Canoes came abourd full of men; the one with their Bowes and Arrowes, and the other in thew of buying of Kniues to betray vs; but we perceived their intent. Wee tooke two of them to have kept them, and put red Coates on them, and would not suffer the other to come neere vs. So they went on Land, and two other came aboord in a Canoe: we tooke the one and let the other goe; but hee which wee had taken, got vp and leapt ouer-boord. Then we weighed and went off into the channell of the Riner, and Anchored there all night.

The tenth, faire weather, we rode (till till twelue of the clocke. Then we weighed and went ouer, and found it (hoald all the middle of the Riuer, for wee could finde but two fathoms and a 50 cours, and found it (hoald all the middle of the Riuer, for wee could finde but two fathoms and a 50 cours and found it (hoald all the middle of the Riuer, for wee could finde but two fathoms and a 50 cours are considered. halfe, and three fathomes for the space of a league ; then wee came to three fathomes, and foure fathomes, and to to seven fathomes, and Anchored, and rode all night in toft Ozie ground. The banke is Sand.

The eleuenth, was faire and very hot weather. At one of the clocke in the after-noone, wee weighed and went into the River, the wind at South South-weft, little winde. Our foundings

were seuen, fixe, fiue, sixe, seuen, eight, nine, ten, twelue, thirteene, and fourteene fathomes. Then it shoulded againe, and came to fine fathomes. Then wee Anchored, and saw that it was a Good Harbour very good Harbour for all windes, and rode all night. The people of the Country came about of vs, making thew of love, and gave vs Tabacco and Indian Wheat, and departed for that night; but we durit not truft them.

The twelfth, very faire and hot. In the after-noone at two of the clocke wee weighed, the winde being variable, betweene the North and the North-west. So we turned into the River two leagues and Anchored. This morning at our first rode in the Ruer, there came eight and

twentie Canoes full of men, women and children to betray vs : but we faw their intent, and fuffered none of them to come aboord of vs. At twelve of the clocke they departed. They of men. brought with them Oysters and Beanes, whereof wee bought some. They have great Tabacco Oysters and pipes of yellow Copper, and Pots of Earth to dreffe their meate in. It floweth South-eaft by Beanes.

Copper Pipes South within.

The thirteenth, faire weather, the wind Northerly. At seven of the clocke in the morning, as the floud came we weighed, and turned foure miles into the Riuer. The tide being done wee anchored. Then there came foure Canoes abourd : but we fuffered none of them to come into our ship. They brought great store of very good Oysters aboord, which we bought for trifles. IO In the night I fet the variation of the Compaffe, and found it to be 13. degrees. In the after- Variation 13. noone we weighed, and turned in with the floud, two leagues and a halfe further, and anchored degrees.

all night, and had five farhoms foft Ozie ground, and had an high point of Land, which shewed out to vs, bearing North by East fine leagues off vs.

The fourteenth, in the morning being very faire weather, the wind South-east, we sayled vp the River twelve leagues, and had five fashoms, and five fathoms and a quarter leffe; and came to a Streight betweene two Points, and had eight, nine, and ten fathoms: and it trended Northeaft by North, one league: and wee had twelve, thirteene and fourteene fathomes. The Ri-Her is a mile broad : there is very high Land on both fides. Then wee went vp North-weft, a The Riner a league and an halfe deepe water. Then North-east by North fine miles; then North-west milebroad, 20 by North two leagues, and anchored. The Land grew very high and Mountainous. The Very high and River is full of fish.

The fifteenth, in the morning was mifty untill the Sunne arofe; then it cleered. So wee weighed with the wind at South, and ran vp into the River twentie leagues, paffing by high Mountaines. Wee had a very good depth, as fixe, feuen, eight, nine, ten, twelue, and thirteene fathoms, and great store of Salmons in the River. This morning our two Savages got out of a Port and Iwam away. After we were under fayle, they called to vs in fcorne. At night we came to other Mountaines, which lie from the Riners fide. There wee found very louing people, and Very louing very old men : where wee were well vied. Our Boat went to fift, and caught great flore of People.

30 The fixteenth, faire and very hot weather. In the morning our Boat went agains to fishing. but could catch but few, by reason their Canoes had beene there all night. This morning the people came aboord, and brought vs eares of Indian Corne, and Pompions, and Tabacco: which Maiz, Pomple wee bought for trifles. Wee rode fill all day, and filled fresh water; at night wee weighed and bacco. went two leagues higher, and had should water : so wee anchored till day.

The feuenteenth, faire Sun-shining weather, and very hot. In the morning as soone as the Sun was vp, we let fayle, and ran vp fixe leagues higher, and found shoulds in the middle of the Shoulds and channell, and small Hands, but seuen fathoms water on both sides. Toward night we borrowed small Hands so neere the shoare, that we grounded : so we layed out our small anchor, and heaved off againg. Then we borrowed on the banke in the channell, and came aground againe; while the floud ran

40 we heated off againe, and anchored all night.

The eighteenth, in the morning was faire weather, and we rode still. In the after-noone our Masters Mate went on land with an old Sauage, a Gouernour of the Countrey; who carried him to his house, and made him good cheere. The nineteenth, was faire and hot weather: at the foud being neere eleven of the clocke, wee weighed, and ran higher vo two leagues about the Shoalds, and had no leffe water then five fathoms: wee anchored, and rode in eight fathomes. The people of the Countrie came flocking aboord, and brought vs Grapes, and Pompions, which Grapes and wee bought for trifles, And many brought vs Beuers skinnes, and Otters skinnes, which wee Pompions:
Beauers and Hyphans Company and Hyphans Compan bought for Beades, Kniues, and Hatchets. So we rode there all night.

Otters skins.

The twentieth, in the morning was faire weather. Our Mafters Mate with foure men more 50 went vp with our Boat to found the River, and found two leagues aboue vs but two fathomes water, and the channell very narrow; and aboue that place feuen or eight fathomes. Toward night they returned: and we rode still all night. The one and twentieth, was faire weather, and the wind all Southerly : we determined yet once more to goe farther vp into the River, to trie what depth and breadth it did beare; but much people reforted aboord, so wee went not this day. Our Carpenter went on land, and made a Fore-yard. And our Mafter and his Mate determined to trie some of the chiefe men of the Countrey, whether they had any treacherie in them. So they tooke them downe into the Cabbin, and gaue them fo much Wine and Agas vita, that they were . Il merrie: and one of them had his wife with him, which fate To modestly, as any of our Countrey women would doe in a strange place. In the end one of them was 60 drunke, which had beene aboord of our ship all the time that we had beene there; and that was ftrange to them; for they could not tell how to take it. The Canoes and folke went all on shoare: but some of them came againe, and brought ftropes of Beades : some had sixe, seuen, eight,

nine, ten sand gaue him. So he slept all night quietly. The two and twentieth, was faire weather: in the morning our Mafters Mate and foure more

Ece 3

of the companie went vp with our Boat to found the River higher vp. The people of the Countrey came not aboord till noone: but when they came, and faw the Sauages well, they were glad. So at three of the clocke in the after-noone they came aboord, and brought Tabacco, and more Beades, and gaue them to our Mafter, and made an Oration, and shewed him all the Countrey round about. Then they fent one of their co apanie on land, who prefeatly returned, and brought a great Platter full of Venilon, dreffed by themselves; and they caused him to cate with them : then they made him reuerence, and departed all faue the old man that lay abound. This night at ten of the clocke, our Boat returned in alhowre of raine from founding of the River; End of the Ri- and found it to bee at an end for thipping to goe in. For they had beene vp eight or nine leagues, uers Nuiga. ' and found but feuen foot water, and vaconflant foundings.

They returne downe the

Riner.

trees, &c.

Oration,

The three and twentieth, faire weather. At twelve of the clocke wee weighed, and went downe two leagues to a shoald that had two channels, one on the one side, and another on the other, and had little wind, whereby the tide layed va vpon it. So, there wee fate on ground the space of an houre till the floud came. Then we had a little gale of wind at the Well. So wee got our ship into deepe water, and rode all night very well.

The foure and twentieth was faire weather: the winde at the North-west, wee weighed, and went downe the River feven or eight leagues; and at halfe cobe wee same on ground on a banke of Oze in the middle of the River , and fate there till the floud. Then wee went on Storeof Chaft. Land, and gathered good store of Chast-nuts. At ten of the clocke weecame off into deepe

The fine and twentieth was faire weather, and the wind at South a stiffe gale. We rode still, and went on Land to walke on the West side of the River, and found good ground for Corne, Okes, Wal-nut and other Garden herbs, with great flore of goodly Oakes, and Wal-nut trees, and Ober-nut sees, Cheir-nut trees, Ewe trees, and trees of fweet wood in great abundance, and great flore of Slate for houses.

The fixe and twentieth was faire weather, and the wind at South a stiffe gale, wee rode still. In the morning our Carpenter went on Land with our Masters Mate, and foure more of our companie to cut wood. This morning, two Canoes came vp the River from the place where we first found louing people, and in one of them was the old man that had lyen abound of vsat the other place. He brought another old man with him, which brought more fropes of Beades, and 30 gaue them to our Master, and shewed him all the Country there about, as though it were at his command. So he made the two old men dine with him, and the old mans wife: for they brought two old women, and two young maidens of the age of fixteene or feuenteene yeeres with them, who behaued themselues very modestly. Our Master gaue one of the old men a Knife, and they gaue him and vs Tabacco. And at one of the clocke they departed downe the River, making fignes that wee should come downe to them ; for wee were within two leagues of the place

The feuen and twentieth, in the morning was faire weather, but much wind at the North, we weighed and fet our fore top-sayle, and our ship would not stat, but ran on the Ozie banke at halfe ebbe. Wee layed out anchor to heave her off , but could not. So wee fate from halfe 40 ebbe to halfe floud: then wee fet our fore-fayle and mayne top-fayle, and got downe fixe leagues. The old man came aboord, and would have had vs anchor, and goe on Land to eate with him : but the wind being faire, we would not yeeld to his request; So hee left vs, being very forrowfull for our departure. At fine of the clocke in the after-moone, the wind came to the South South-west. So wee made a boord or two, and anchored in fourteene fathomes water. Then our Boat went on shoare to fish right against the ship. Our Masters Mate and Boat-swaine, and three more of the companie went on land to fifh, but could not finde a good place. They tooke foure or fine and twentie Mullets, Breames, Bases, and Barbils; and returned in an houre.

The eight and twentieth, being faire weather, as soone as the day was light, wee weighed at 50 halfe ebbe, and turned downe two leagues belowe water; for, the streame doth runne the last quarter ebbe: then we anchored till high water. At three of the clocke in the after-noone we weighed, and turned downe three leagues, vntill it was darke : then wee anchored.

The nine and twentieth was drie close weather: the wind at South, and South and by West, we weighed early in the morning, and turned downe three leagues by a lowe water, and anchored at the lower end of the long Reach; for it is fixe leagues long. Then there came certaine Indians in a Canoe to vs, but would not come aboord. After dinner there came the Canoe with other men , whereof three came aboord vs. They brought Indian Wheat, which wee bought for trifles. At three of the clocke in the after-noone wee weighed, as soone as the ebbe came, and turned downe to the edge of the Mountaines, or the Northermost of the Mountaines, and 69 anchored: because the high Land hath many Points, and a narrow channell, and hath many eddie winds. So we rode quietly all night in seuen fathoms water.

The thirtieth was faire weather, and the wind at South-east a stiffe gale between the Mountaynes. We rode still the after-noone. The people of the Countrey came abourd vs, and brought

fome fmall skinnes with them, which we bought for Kniues and Trifles. This a very pleafant Small skins. place to build a Towne on. The Road is very neere, and very good for all winds, faue an East Apleasant North-east wind. The Mountaynes looke as if some Metall or Minerall were in them. For the place to build Trees that grow on them were all blafted, and fome of them barren with few or no Trees on a Townsons. them. The people brought a stone aboord like to Emery (a stone vied by Glassers to cut Glasse) it would cut Iron or Steele: Yet being bruifed small, and water put to it , it made a colour like Likelihood of blacke Lead gliftering; It is alfo good for Painters Colours. At three of the clocke they depar. Minerals. ted, and we rode still all night.

The first of October, faire weather, the wind variable betweene the West and the North. In Octobers Io the morning we weighed at feuen of the clocke with the ebbe, and got downe below the Mountaynes, which was feuen leagues. Then it fell calme and the floud was come, and wee anchored at twelue of the clocke. The people of the Mountaynes came abourd vs , wondring at our ship and weapons. We bought some small skinnes of them for Trifles. This after-noone, one Canoe kept hanging under our sterne with one man in it, which we could not keepe from thence, who got up by our Rudder to the Cabin window, and stole out my Pillow, and two Shirts, and two Bandeleeres. Our Masters Mate shot at him, and strooke him on the brest, and killed him. Whereupon all the rest fled away, some in their Canoes, and so leapt out of them into the watet. We manned our Boat, and got our things againe. Then one of them that swamme got hold of our Boat, thinking to ouerthrow it . But our Cooke tooke a Sword, and cut off one of his hands, and 20 he was drowned. By this time the ebbe was come, and we weighed and got downe two leagues, by that time it was darke. So we anchored in foure fathomes water, and rode well.

The second, faire weather. At breake of day wee weighed, the wind being at North-west, and got downe seuen leagues; then the flowd was come strong, so we anchored. Then came one of the Sauges that Iwamme away from vast our going up the River with many other, thinking Treachetle of to betray vs. But wee perceined their intent, and fuffered none of them to enter our fhip, their Sausgen, Whereupon two Canoes full of men, with their Bowes and Arrowes shot at vs after our sterne: Askirmish and in recompence whereof we discharged fixe Muskets, and killed two or three of them. Then 2- flaughter of boue an hundred of them came to a point of Land to shoot at vs. There I shot a Falcon at them, the Sauages. and killed two of them: whereupon the rest sled into the Woods. Yet they manned off another

30 Canoe with nine or ten men, which came to meet vs. So I that at it also a Falcon, and shot it through, and killed one of them. Then our men with their Muskets, killed three or foure more of them. So they went their way, within a while after, wee got downe two leagues beyond that place, and anchored in a Bay, cleere from all danger of them on the other fide of the River, where we faw a very good piece of ground : and hard by it there was a Cliffe, that looked of the A Myne of colour of a white greene, as though it were either Copper, or Silver Myne : and I thinke it to be Copper or one of them, by the Trees that grow voon it. For they be all burned, and the other places are Silver. greene as graffe, it is on that fide of the River that is called Manna-beta. There we faw no people to trouble vs: and rode quietly all night; but had much wind and raine.

The third, was very stormie; the wind at East North-east. In the morning, in a gust of wind 40 and raine our Anchor came home, and we droue on ground, but it was Ozie. Then as we were about to haue out an Anchor, the wind came to the North North-west, and droue vs off agains. Then we shot an Anckor, and let it fall in source fathomes water, and weighed the other. Wee had much wind and raine, with thicke weather; so we roade still all night.

The fourth, was faire weather, and the wind at North North-west, wee weighed and came out of the River, into which we had runne so farre. Within a while after, wee came out also of The great mouth of the great River, that runneth vp to the North-west, borrowing vpon the Thegreat mouth Norther fide of the same, thinking to have deepe water; for wee had founded a great way with of the great Riour Boat at our first going in, and found seuen, fix, and five fathomes. So we came out that way, "".

but we were deceived, for we had but eight foot & an halfe water; and fo to three, five, three, and 50 two fathomes and an halfe. And then three, foure, fine, fixe, feuen, eight, nine and ten fathomes. And by twelve of the clocke we were cleere of all the Inlet. Then we tooke in our Boat, and fet our mayne-fayle and fprit-fayle, and our top-fayles, and fleered away East South-east, and the Coast of the Coast of South-east by East off into the mayne sea : and the Land on the Souther-fide of the Bay or In- Tingaia, let, did beare at noone West and by South foure leagues from vs.

The fift, was faire weather, and the wind variable betweene the North and the East. Wee held on our course South-east by East. At noone I observed and found our height to bee 39. degrees 30. minutes. Our Compaffe varied fixe degrees to the West.

We continued our course toward England, without seeing any Land by the way, all the rest of this moneth of October : And on the feuenth day of November , file none , being Satur-60 day : by the Grace of God we fafely arrived in the Range of Dartmonth in Denonshire, in the yeere 1609.

CHAP. XVII. An Abstract of the Iournall of Master HENRY HYDEON, for the

Discouerie of the North west Passage, begunne the seuenteenth of Aprill, 1610. ended with his end, being treacheroully exposed by some of the Companie.

Aprill 17.

He seventeenth of Aprill, 1610. we brake ground, and went downe from Saint Ka. tharines Poole, and fell downe to Blacke-wall: and so plyed downe with the Ie ships to Lee, which was the two and twentieth day.

The two and twentieth, I caused Master Coleburne to bee put into a Pinke. bound for London, with my Letter to the Aduenturers, importing the reason wherefore I so put him out of the ship, and so plyed forth.

May. The Iles of Oriney.

The second of May, the wind Southerly, at Eeuen we were thwart of Flamberough Head. The fift, we were at the lles of Orkney, and here I fet the North end of the Needle, and the

Note. Farre Ilands 61 degrees 24. Westmany.

Iune.

The fixt, wee were in the latisude of 59. degrees 22. minutes, and there perceived that the North end of Scotland, Orney, and Shotland are not to Northerly, as is commonly fet downe. The eight day, wee faw Farre Hands, in the latitude of 62, degrees 24. minutes. The eleuenth 20 day, we fell with the Easter part of Island, and then plying along the Souther part of the Land. we came to Westmony, being the fifteenth day, and ftill plyed about the mayne lland, vntill the last of May with contrary winds, and we got some Fowles of divers forts.

The first day of Iune, we put to Sea out of an Harbour, in the Westermost part of Island, and fo plyed to the Westward in the latitude of 66.degrees 34. minutes, and the second day plyed and found our selues in 65. degrees 57. minutes, with little wind Easterly.

The third day, wee found our felues in 65. degrees 30. minutes, with winde at North-eaft, little before this we fayled neere some Ice.

Graneland.

The fourth day, we faw Groneland ouer the Ice perfectly, and this night the Sunne went downe due North, and rose North North-east. So plying the fift day, we were in 65. degrees, 30 fill encombred with much Ice, which hung vpon the Coaft of Groneland.

The ninth day, wee were off Fredithers Streights with the winde Northerly, and plyed vnto the South-westwards untill the fifteenth day.

Streights.

The fif: eenth day, we were in fight of the land, in latitude 59. degrees 27. minutes, which was called by Captayne lobn Danis, Defolation, and found the errour of the former laying downe of that Land : and then running to the North-westward untill the twentieth day, wee found the ship in 60. degrees 42. minutes, and saw much Ice, and many Riplings or Ouer-fals, and a strong A current West Areame setting from East South-east, to West North-west.

Defelation.

The one and twentie, two and twentie, and three and twentie dayes, with the winde variable, we plyed to the North-westward in fight of much Ice, into the height of 62. degrees 40

East entrance into the Streights.

The foure and twentie, and fine and twentie dayes, fayling to the West-ward about midnight, wee faw Land North, which was fuddenly loft againe. So wee ranne still to the Westward in 62. degrees 17. minutes.

Iuly.

The fift of luly, wee plyed up voon the Souther fide, troubled with much Ice in feeking the shoare vntill the fift day of July, and we observed that day in 59 degrees 16. minntes. Then we olved off the shoare againe, vntill the eight day, and then found the height of the Pole in 60. degrees no minutes. Here we saw the Land from the North-west by West, halfe Norther-Defrepresseles. ly vnto the South-west by West, covered with snow, a Champaigne Land, and called it, De-

growne Sea.

We still plyed up to the Westward, as the Land and Ice would fuffer untill the eleventh day; when fearing a storme, we anchored by three Rockie Ilands in vincertayine depth, betweene two and nine fathomes; and found it an Harbour vnsufficient by reason of lunken Rockes, one of which was next morning two fathomes aboue water. Wee called them the Iles of Gods Mercies. The water floweth here better then foure fathomes. The Floud commeth from the North, flowing eight the change day. The latitude in this place is 62. degrees 9. minutes. Then plying to the South-westward the fixteenth day, wee were in the latitude of \$8. degrees 50. minutes, but found our felues imbayed with Land, and had much Ice : and we plyed to the North-westward vntill the nineteenth day, and then wee found by observation the height of the Pole in 61. degrees 24. minutes, and faw the Land, which I na- 60.

Wold with Hope, med, Hold with Hope. Hence I plyed to the North-westward still, vntill the one and twentieth day, with the wind variable. Heere I found the Sea more growne, then any wee had fince wee left England.

The three and twentieth day, by observation the height of the Pole was 61, degrees 33, mi-

nutes. The fine and twentieth day, we faw the Land; and named it Magna Britannia. The fixe Magna Britan and twentieth day, wee observed and found the latitude in 63. degrees 44. minutes. The eight and twentieth day, we were in the height of 63. degrees 10, minutes, and plyed Southerly of the West. The one and thirtieth day, plying to the Westward, at noone wee found our felues in 62. degrees 24. minutes.

The first of August, we had fight of the Northerneshoare, from the North by East to the West Angus. by South off vs: the North part twelue leagues, and the Wester part twentie leagues from vs: and we had no ground there at one hundred and eightie fathomes. And I thinke I faw Land on the Sunne fide, but could not make it perfectly, bearing East North-east. Here I found the latio

10 tude 62. degrees co. minutes.

The second day, we had sight of a faire Head-land, on the Norther shoare six leagues off, which I called Salisburies Fore-land : we ranne from them Well South-welt, fourteene leagues : In the mid-way of which wee were fuddenly come into a great and whorling Sea, whether caufed by fore landmeeting of two streames, or an Ouer-fall, I know not. Thence fayling West and by South fe- A great and uen leagues farther, we were in the mouth of a Streight and founded, and had no ground at one whurling Seas uen leagues farther, we were in the mouth of a Streight and rounded, in the paffage in this A Streight hundred farthomes; the Streight being there not about two leagues broad, in the paffage in this A Streight Wester part : which from the Easter part of Freeium Danis, is distant two hundred and fiftie into the deep

The third day, we put through the narrow pallage, after our men had beene on Land, which great Mercies. 20 had well observed there, That the Floud did come from the North, flowing by the shoare five fathomes. The head of this entrance on the South fide, I named Cape Worfenbolme; and the head Cape Wolfenon the North-wester shoare, I called Cape Digs. After wee had tailed with an Easterly winder boing. West and by South ten leagues, the Land fell away to the Southward, and the other Iles and Cape Dig. Land left vs to the Westward. Then I observed and found the ship at noone in 61. degrees 20.

minutes, and a Sea to the Weitward.

30

A larger Discourse of the same Voyage, and the successe thereof, written by ABACYKPRICKET.

Ebegan our Voyage for the North-west passe; the seventeenth of Aprill, 1610. Thwart of Sheper, our Mafter fent Mafter Colbert backe to the Owners with his Letter. The next day we weighed from hence, and stood for Harrich, and came thicker the eight and twentieth of Aprill. From Hawich we fet fayle the first of May, along

the Coast to the North, till we came to the Iles of Ortney, from thence to the Iles of Fare, and Ortney, from thence to Island : on which we fell in a fogge, hearing the Rut of the Sea ashoare, but faw Farrelles. not the Land whereupon our Master came to an Anchor. Heere we were embayed in the South- Island. east part of the Land. Wee weighed and stood along the Coast, on the West fide towards the The South east 40 North: but one day being calme, we fell a fifting, and caught good ftore of fift, as Cod and Ling,

and Butte, with fome other forts that we knew not. The next day, we had a good gale of wind at South-west, and rayfed the Iles of Westmonie, where the King of Denmarke hath a Fortreffe, Westmanie by which we passed to rayle the Snow Hill foot, a Mountayne to called on the North-west part Hand. of the Land. But in our course we saw that samous Hill, Mount Hecle, which cast out much Mount Hecle fire, a figne of foule weather to come in short time. Wee leave Island a sterne of vs, and met a coffethout fire, Mayne of Ice, which did hang on the North part of "flord, and stretched downe to the West, A mayne of which when our Master law, he stood backe for Island to find an Harbour, which we did on the North-west part, called " Derefer, where wee killed good store of Fowle. From hence wee " Or Direferd.

put to Sea againe, but (neither wind nor weather feruing) our Mafter flood backe for this Harbour againe, but could not reach it, but fell with another to the South of that, called by our 50 Englishmen, Loufee Bay : where on the shoare we found an hot Bath, and heere all our Englishmen Loufee Bay. bathed themselues : the water was so hot that it would scald a Fowle.

From hence the first of lune, we put to Sea for Groneland, but to the West wee faw Land as The first of we thought, for which we beare the best part of a day, but it proued but a foggie banke. So wee lune, gaue it ouer, and made for Gronland, which we rayled the fourth of Iune. V pon the Coast thereof hung good store of Ice, to that our Master could not attayne to the shoare by any meanes. The Land in this part is very Mountaynous, and full of round Hils, like to Sugar-loanes, coursed with fnow. We turned the Land on the South fide, as neere as the Ice would fuffer vs. Our course for the most part was betweene the West and North-west, till we rayled the Defolations, Hand of Defoto which is a great Hand in the West part of Groneland. On this Coast we saw store of Whales, lation. and at one time three of them came close by vs, to as wee could hardly thunne them : then two

passing very neere, and the third going under our ship, wee received no harme by them, prayfed bee God. From the Defolations our Master made his way North-west, the wind being against him, who

elfe would have gone more to the North : but in this course we saw the first great lland or Mountayne of Ice, whereof after we faw store. About the latter end of June, we rayled Land to the North of vs, which our Mafter tooke to bee that Hand which Mafter Danis fetteth downe in his Chart. On the West side of his Streight, our Master would have gone to the North of it. but the wind would not fuffer him : so we fell to the South of it, into a great Rippling or ouerfall of current, the which ferteth to the West. Into the current we went, and made our way to the North of the West, till we met with Ice which hung on this Iland. Wherefore our Mafler casting about, cleered himselfe of this Ice, and stood to the South, and then to the West. through store of sloting Ice, and vpon the Ice store of Seales. We gained a cleere Sea, and continued our courle till wee meete Ice; first, with great llands, and then with store of the smaller 10 fort. Betweene them we made our course North-west, till we met with Ice againe. But, in this our going betweene the Ice, we law one of the great Ilands of Ice ouerturne, which was a good warning to vs, not to come nigh them, nor within their reach. Into the Ice wee put ahead, as Iland of Ice obetweene two Lands. The next day we had a florme, and the wind brought the Ice fo fast your vs, that in the end we were driven to put her into the chiefest of the Ice, and there to let her lie, Some of our men this day fell ficke, I will not fay it was for feare, although I faw small figne of

The storme ceasing, we stood out of the Ice, where wee faw any cleere Sea to goe to: which was sometime more, and sometime lesse. Our course was as the Ice did lye, sometime to the North, then to the North-west, and then to the West, and to the South-west : but still inclo- 20 fed with Ice. Which when our Master saw, he made his course to the South, thinking to cleere himselfe of the Ice that way : but the more he strone, the worse he was, and the more inclosed. till we could goe no further. Here our Malter was in despaire, and (as he told me after) he thought he should neuer haue got out of this Ice, but there have perished. Therefore hee brought forth his Card, and shewed all the company, that hee was entred aboue an hundred leagues further then euer any English was : and left it to their choice, whether they would proceed any further: yea, or nay. Whereupon, some were of one minde, and some of another, some wishing themany had been. felues at home, and some not caring where, so they were out of the Ice : but there were some who then spake words, which were remembred a great while after.

Discontents.

There was one who told the Master, that if he had an hundred pounds, hee would give foure 30 fcore and ten to be at home : but the Carpenter made answere, that if hee had an hundred , hee would not give ten woon any fuch condition, but would thinke it to be as good money as ever he had any, and to bring it as well home, by the leave of God. After many words to no purpole, to worke we must on all hands, to get our felues out, and to cleere our ship. After much labour and time spent, we gained roome to turne our ship in, and so by little and little, to get cleere in the Sea a league or two off, our course being North and North-well.

In the end, we rayfed Land to the South-west, high Land and coursed with Snow. Our Ma-Defire promotes. ster named this Land, Defire promotes. Lying here, wee heard the noyle of a great over-fall of a tyde, that came out of the Land : for now we might fee well, that wee had beene embayed before, and time had made vs know, being fo well acquainted with the Ice, that when night, or 40 foggie, or foule weather tooke vs, we would feeke out the broadest Hand of Ice, and there come to anchor and runne, and sport, and fill water that stood on the Ice in Ponds, both sweete and good. But after we had brought this Land to beare South of vs, we had the tyde and the current to open the Ice, as being carried first one way, and then another : but in Bayes they Iyeas in a pond without mouing. In this Bay where wee were thus troubled with Ice, wee faw many of those Mountaynes of Ice aground, in fixe or seven score fathome water. In this our course we faw a Beare vpon a piece of Ice by it felfe, to the which our men gaue chase with their Boat : but before they came nigh her, the tyde had carried the Ice and the Beare on it, and joyned it with the other Ice : so they lost their labour, and came abourd againe.

profit on the Difference of Tydes and Ice about 100.

Exercises of

We continued our course to the North-west, and rayled Land to the North of our course, to- 50 ward which we made, and comming nigh it, there hung on the Eastermost point, many Ilands of floting Ice, and a Beare on one of them, which from one to another came towards vs, till she was readie to come aboord. But when the faw vs looke at her, the cast her head betweene her hinder legges, and then dived vnder the Ice : and fo from one piece to another, till she was out of our reach. We flood along by the Land on the Southfide ahead of vs, wee met with Ice that hung on a point of Land that lay to the South , more then this that we came vp by : which when our Master saw, he stood in for the shoate. At the West end of this lland (for so it is) we found an Harbour, and came in (at a full Sea) ouer a Rocke, which had two fathome and an halfe on it, and was so much bare at a low water. But by the great mercie of God, we came to an Anchor cleare of it; and close by it, our Master named them, the Iles of Gods Mercie. This is an Har- 60 bour for need, but there must be care had how they come in. Heere our Master sent me , and others with me, to discouer to the North and North-west : and in going from one place to another, we sprung a Couey of Partridges which were young : at the which Thomas Woodbonse shot, but killed only the old one. This Hand is a most barren place, having nothing on it but

Hes of Gods Partridges.

A dangerous

plashes of water and riven Rockes, as if it were subject to Earthquakes. To the North there is a great Bay, or Sea (for I know not what it will prove) where I iaw a great Hand of Ice aground, betweene the two Lands, which with the Spring-ride was fet affoat, and carried into this Bay or Sea to the North-westward, but came not backe againe, nor within fight. Here wee tooke in tome Drift wood that we found ashoare. From hence we flood to the South-woft, to double the Land to the Weft of vs. through much

floting Ice: In the end wee found a cleere Sea, and continued therein, till wee rayfed Land to the North-west. Then our Master made his course more to the South then before : but it was not long ere we met with Ice which lay ahead of vz. Our Mafter would have doubled this los to the North, but could not; and in the end put into it downe to the South-west through much

Ice, and then to the South, where we were embayed agains. Our Mafter from to get the shoare, but could not, for the great store of Lee that was on the coast. From out of this Bay, we stood to the North, and were foone out of the Ice : then downe to the South-west, and so to the West. where we were enclosed (to our fight) with Land and Ice. For wee had Land from the South to the North-west on one fide, and from the East to the West on the other : but the Land that was to the North of vs, and lay by East and West, was but an Hand. On we wene till we could goe no further for Ice: fo we made our thip fast to the Ice which the tide brought vpon vs , but when the ebbe came, the Ice did open, and made way; fo as in feuen or eight hours we were cleere from the Ice, till we came to weather; but onely fome of the great Hands, that were car-20 ried along with vs to the North-west.

Hauing a cleere Sea, our Master stood to the West along by the South shoare, and rayled three Capes or Head-lands, lying one aboue another. The middlemost is an Iland, and maketh a Bay Three Capes; or Harbour, which (I take) will proue a good one. Our Mafter named them Prince Honries Prince Honries Cape, or Fore-land. When we had layd this we railed another, which was the extreme point Cape. of the Land, looking towards the North: woon it are two Hills, but one ( about the rest ) like an Hay-cocke; which our Mafter named, King James his Cape, To the North of this, lie cer- King James his taine Hands, which our Master named, Queene Annes Cape, or Fore-land. Wee followed the Cape. North shoate still. Beyond the Kings Cape there is a Sound or Bay, that hath some Hands in Cape. it : and this is not to be forgotten, if need be. Beyond this , lieth some broken Land, close to

20 the Mayne, but what it is I know not : because we passed by it in the night.

Wee flood to the North to double this Land, and after to the Weff againe, till wee fell with Land that ftretched from the Mayne, like a shewer from the South to the North, and from the North to the West, and then downe to the South againe. Being short of this Land, a florence tooke vs, the wind at West, we stood to the North, and raised Land : which when our Master faw, he stood to the South againe; for he was loath at any time that wee should see the North shoare. The storme continuing, and comming to the South shoare againe, our Master found him. Note. felfe shot to the West, a great way, which made him muse, considering his Leeward way. To the South-west of this Land, on the Mayne, there is an high Hill, which our Master named Mount Charles. To the North and beyond this, lieth an Hand, that to the East hath a faire head, Mount Charles

40 and beyond it to the West other broken Land, which maketh a Bay within, and a good Road may be found there for ships. Our Master named the first, Cape Salfbarie.

When we had left this to the North-east, we fell into a Rippling or Ouer-fall of a Current, which (at the first we tooke to bee a Shoald: but the Lead being cast, wee had no ground. On we passed still in fight of the South shoare, till we raised Land lying from the Mayne some two leagues. Our Mafter tooke this to bee a part of the Mayne of the North Land; but it is an Iland, the North fide firetching out to the West more then the South. This Iland hath a faire Head to the East, and very high Land, which our Master named Deepes Cape: and the Land on Deepes Cape. the South fide, now falling away to the South, makes another Cape or Head-land, which our Worlands Mafter named, Worfenhams Cape. When wee were nigh the North or Hand Cape, our Mafter Cape. 50 fent the Boat ashoare, with my selfe (who had the charge) and the Carpenter, and divers others.

to discover to the West and North-west, and to the South-west : but we had further to it then we thought; for the Land is very high, and we were ouer-taken with a storme of Raine, Thunder and Lightning. But to it we came on the North-east fide, and vp we got from one Rocke to another, till we came to the highest of that part. Here we found some plaine ground, and saw some Deere ; as first, foure or fiue, and after, a dozen or sixteene in an Herd, but could not come Deere, nigh them with a Musket shot.

Thus, going from one place to another, wee faw to the West of ws an high Hill about all the reft, it being nigh vs : but it proued further off then we made account; for, when wee came to it, the Land was so steepe on the East and North-east parts, that wee could not get vnto it. To 6c the South-west we saw that wee might, and towards that part wee went along by the side of a Store of south

great Pond of water, which lieth vader the East fide of this Hill : and there runneth out of it and grafe. a streame of water, as much as would drive an over-shot Mill; which falleth downe from an Sorell and high Cliffe into the Sea on the South fide. In this place great ftore of Fowle breed, and there is Scuruy grafe, the best Graffe that I had seene since we came from England. Here wee found Sorell , and that

which wee call Scurny-graffe, in great abundance. Paffing along wee law formeround Hills of flone, like to Graffe cockes, which at the first I tooke to be the worke of some Christian. Wee paffed by them, till we came to the South fide of the Hill; we went vuto them, and there found more; and being nigh them, I turned off the vppermost itone, and found them hollow within, and full of Fowleshanged by their neckes. Then Greene, and I, went to fetch the Boat to the South fide, while Robert Billet and hee got downe a Valley to the Sea tide, where wee

Our Mafter ( in this time ) came in betweene the two Lands , and shot off fome Peeces to call we aboord; for it was a fogge. Wee came aboord, and told him what we had feene, and percan ve account; our as was a reger fixed in this place, telling him what refreshing might there bee had : 10 but by no meanes would he flay, who was not pleased with the motion. So we left the Fowle, and loft our way downe to the South-west, before they went in sight of the Land, which now beares to the East from vs , being the same mayne Land that wee had all this while followed. Now, we had loft the fight of it, because it falleth away to the East, after some fine and twenty or thirty leagues. Now we came to the shallow water, whereweth wee were not acquainted fince we came from Island; now we came into broken ground and Rockes, chrough which we passed downe to the South. In this our course we had a storme, and the water did should space, Our Mafter came to an anchor in fifteene fathoms water.

Wee weighed and flood to the South-east, because the Land in this place did lie so, When we came to the point of the West Land (for we now had Land on both fides of ws) we came to 20 an anchor. Our Master sent the Boat ashoare, to see what that Land was, and whether there were any way through. They foone returned, and shewed that beyond the point of Land to the South, there was a large Sea. This Land on the West side, was a very narrow Point. Wee weighed from hence, and stood in for this Sea betweene the two Lands, which (in this place) is not two leagues broad downe to the South, for a great way in light of the East sheare. In the end we loft fight thereof, and faw it not till we came to the bottome of the Bay, into fixe or feuen fathomes water. Hence we flood up to the North by the West shoare, till wee came to an Iland in \$2. where we tooke in water and ballaft.

Discord? see Relations fol-

From hence wee passed towards the North : but some two or three dayes after (reasoning concerning our comming into this Bay, and going out ) our Mafter tooke occasion to reviewed to matters, and to displace Robert Inet from being his Maie, and the Boat-swaine from his place, for words spoken in the first great Bay of Ice. Then hee made Robert Billet his Mate, and Wile lowing. Leas Wilfox our Boxt-(waine. Vp to the North wee flood, till we raifed Land, then downe to the South, and vp to the North, then downe againe to the South: and on Michelmsfel Day, and Bay. came in, and went out of certaine Lands; which our Mafter fets downe by the name of Michelmsfel. maffe Bay, because we came in and went out on that day. From hence wee stood to the North, and came into shoald water; and the weather being thicke and foule, weecame to an anchor in feuen or eight fathome water, and there lay eight dayes: in all which time wee could not get one houre to weigh our anchor. But the eight day, the wind beginning to cease, our Matter would have the anchor vp, against the mind of all who knew what belonged thereunto. Well, 40 to it we went, and when we had brought it to a peake, a Sea tooke her, and cast vs all off from the Capstone, and hurt divers of vs. Here wee lost cur Anchor, and if the Carpenter had not beene, we had loft our Cable too : but he (fearing fuch a matter) was ready with his Axe,

From hence we flood to the South, and to the South-west, through a cleere Sea of divers founding, and came to a Sea of two colours, one blacke, and the other white, fixteene or feuenteene fathome water, betweene which we went foure or fine leagues. But the matt comming, we tooke in our Top-sayles, and stood afore the wind with our Maine-sayle and Fore-sayle, and came into fine or fixe fathomes, and faw no Land for it was darke. Then we flood to the East, and had deepe water againe, then to the South and Southwest, and so came to our Westermost 50 Bay of all, and came to an anchor neerest to the North shorae. Our went our Boat to the Land that was next vs, when they came neere it, our Boat could not flote to the shoare it was so shallow : yet ashoare they got. Here our men saw the footing of a man and a Ducke in the snowy Rockes, and Wood good store, whereof they tooke some and returned aboord. Being at anchor in this place, we faw a ledge of Rockes to the South of vs, some league of length; It lay North and South, couered at a full Sea ; for a strong tide setteth in here. At mid night wee weighed, and stood to goe out as we came in; and had not gone long, but the Carpen er came and told the Master, that if he kept that course he would be voon the Rockes : the Master conceiued that he was past them, when presently wee ranne on them, and therestucke fast twelve houres : but ( by the mercy of God ) we got off whurt, though not wnscarred,

Wee flood wo to the East and rayled three Hills, lying North and South: wee went to the furthermost, and left it to the North of vs , and so into a Bay, where wee came to an anchor. Here our Mafter fent out our Boat, with my felfe and the Carpenter to fecke a place to winter in : and it was time; for the nights were long and cold, and the earth concred with Snow. Ha-

uing frentthree moneths in a Labyrinth without end, being now the last of October, we went Last of October downe to the East, to the bottome of the Bay : but returned without speeding of that we went ber. for. The next day we went to the South, and the South-west, and found a place, whereunto we brought our ship, and haled her aground : and this was the first of November. By the tenth November the thereof we were frozen in : but now we were in, it behooned vs to have care of what we had; reach frozen for, that we were fure of ; but what we had not, was vncertaine.

Wee were victualled for fixe moneths in good proportion, and of that which was good : if our Mafter would have had more, he might have had it at home and in other places. Here we were now, and therefore it behould vs to to fpend, that wee might have (when time came) to bring vs to the Caper where the Fowle bred, for that was all the hope wee had to bring vs home.

IC Wherefore our Master tooke order, first for the spending of that wee had, and then to increase it, by propounding a reward to them that killed either Beaft, Fish, or Fowle, as in his Iournall you have feere. About the middle of this moneth of November, dyed John Williams our Gunner: John Williams Gad pardon the Matters uncharitable dealing with this man. Now for that I am come to speake dyeth. of him, out of whose ashes (as it were ) that wnhappy deed grew which brought a scandall vpon all that are returned home, and upon the action it telte, the multitude ( like the dog ) running after the stone, but not at the easter : therefore, not to wrong the living, nor flander the dead, I will (by the leave of God) deliner the truth as neere as I can.

You shall understand, that our Master kept (in his house at London) a young man, named Hen-

20 rie Greine, borne in Kont, of Worthipfuli Parents, but by his leud lite and conversation hee had Hony Greens loft the good will of all his frinds, and had spent all that hee had. This man, our Master would bad conditions have to Sea with him, because hee could write well : our Master gave him meate, and drinke, and lodging, and by meanes of one Mafter Venfou, with much adoe got foure pounds of his mother to buy him clothes, wherewith Mafter Venfon would not trust him : but faw it laid out himfelfe. This Henrie Greene was not fet downe in the owners booke, nor any wages made for him. Hee came first abourd at Granefend, and at Harwich should have gone into the field, with one Wilkinson. At Island the Surgeon and hee fell out in Dutch, and hee beat him a shoare in English , which set all the company in a rage; so that wee had much adoe to get the Surgeon aboord. I told the Master of it, but hee bade mee let it alone, for (faid hee ) the Surgeon had a tongue that would wrong the best friend hee had, But Robert Inet (the 3C Mafters Mate ) would needs burne his finger in the embers, and told the Carpenter a long tale

when hee was drunke ) that our Mafter thad brought in Greene to cracke his credit that should displease him : which words came to the Matters eares, who when hee understood it, would have gone backe to Island, when he was fortie leagues from thence, to have fent home his Mate Robert Inet in a Fisher-man. But, being otherwise perswaded, all was well. So Henry Greene stood vpright, and very inward with the Master, and was a feruiceable man every way for manhood: but for Religion he would fay, he was cleane paper whereon he might write what hee would. Now, when our Gunner was dead, and (as the order is in fuch cases ) if the company fland in need of any thing that belonged to the man deceased, then is it brought to the Mayne Maft, and there fold to them that will give most for the same : This Gunner had a gray cloth gowne, which Greene prayed the Mafter to friend him so much as to let him haue it, paying for it as another would give : the Master faith hee should, and thereupon hee answered some, that fought to haue it, that Greene should have it, and none else, and so it refled.

Now out of feafon and time, the Master calleth the Carpenter to goe in hand with an house Green conon shoare, which at the beginning our Master would not heare, when it might have beene done, spiracies The Carpenter told him, that the Snow and Frost were such, as hee neither could, nor would goe

in hand with fuch worke. Which when our Mafter heard, hee ferreted him out of his Cabbin to strike him, calling him by many foule names, and threatning to hang him. The Carpenter told him that hee knew what belonged to his place better then himselfe, and that hee was no House Carpenter. So this passed, and the house was (after) made with much labour, but to no end. The next day after the Master and the Carpenter fell out, the Carpenter tooke his Perce and Henry Greene with him, for it was an order that none should goe out alone, but one

with a Peece, and another with a Pike. This did moue the Master so much the more against Henry Greene, that Robert Billet his Mate must have the gowne, and had it delivered voto him; which when Henry Greene faw, he challenged the Masters promile : but the Master did so raile on Greene, with so many words of diffrace, telling him, that all his friends would not trust him with twenty shillings, and therefore why should he ! As for wages he had none, nor none should haue, if he did not please him well. Yet the Master had promised him to make his wages as good, as any mans in the ship; and to have him one of the Princes guard when we came home. But you So fhall fee how the deurl our of this fo wrought with Green, that he did the Mafter what mischiefe

hee could in feeking to differedit him , and to thrust him and many other honest men out of the Theirhand Ship in the end. To speake of all our trouble in this time of Winter (which was so cold, as it la winting, med the most of our Company, and my selfe doe yet feele it ) would bee too tedious.

But I must not forget to shew, how mercifully God dealt with vs in this time : for the

Store of Pate

O:herFowles

space of three moneths wee had such store of Fowle of one kinde (which were Partridges as white as milke) that wee killed aboue an hundred dezen, besides others of sundry sorts: for all was fifth that came to the net. The Spring comming, this Fowle left vs, yet they were with vs all the extreame cold. Then in their places came divers fore of other Fowle, as Swanne, Geele, Duck, and Teale, but hard to come by. Our Mafter hoped they would have bred in those broken grounds, but they doe not : but came from the South, and flew to the North, further then we were this Voyage; yet if they be taken short with the wind at North, or North-west, or North-east, then they fall and stay till the winde serue them, and then siye to the North. Now in time thele Fowles are gone, and few or none to bee leene. Then wee went into the Woods, Hilles, and Valleyes, for all things that had any shew of substance 10 in them, how vile focuer : the mosse of the ground, then the which I take the powder of

Milerable diet a post to bee much better, and the Frogge ( in his ingendring time as loathiome as a Toade) was not spared. But amongst the divers sorts of buds, it pleased God that The man Woodbonfe brought home a budde of a Tree, full of a Turpentine substance. Of this our Medicinable Surgeon made a decoction to drinke, and applyed the buddes hot to them that were troubled with ach in any part of their bodies; and for my part, I confesse, I received great and present case

A Sauage.

About this time, when the Ice began to breake out of the Bayes, there came a Sauage to our. Ship, as it were to see and to bee seene, being the first that we had seene in all this time : whom our Master intreated well, and made much of him, promising vnto himielse great matters by 20 his meanes, and therefore would have all the Knives and Hatchets (which any man had)to his private vie, but received none but from lohn King the Carpenter, and my felfe. To this Sauage our Maiter gaue a Knife, a Looking-glaffe, and Buttons, who received them thankefully, and made fignes that after hee had flept hee would come againe, which hee did. When hee came, hee brought with him a Sled, which hee drew after him, and vpon it two Decresskinnes, and two Beauerskinnes. Hee had a scrip under his arme, out of which hee drew those things which the Mafter had given him. Hee tooke the Knife and laid it vpon one of the Beauer skinnes, and his Glasses and Buttons vpon the other, and so gaue them to the Master, who received them; and the Sauage tooke those things which the Master them to the Marter, who recently the many them to the Marter thewed him an Hatchet, 30 for which hee would have given the Mafter one of his Deere skinnes, but our Mafter would haue them both, and so hee had, although not willingly. After many fignes of people to the North, and to the South, and that after so many sleepes he would come againe, he went his way, but neuer came more.

Turke,

F.fhing.

Now the Ice being out of the Sounds, so that our Boat might go from one place vnto another, a company of men were appointed by the Master to go a fishing with our net; their names were as followeth : William Wilson, Henry Greene, Michael Perce, John Thomas, Andrew Moter, Bennet Mathewes, and Arnold Lodlo. These men, the first day they went, caught fine hundred fish, as big as good Herrings, and some Troutes: which put vs all in some hope to have our wants supplied, and our Commons amended : but these were the most that ever they got in one day , for many 40 dayes they got not a quarter fo many. In this time of their fishing, Henry Green and William Wilfon, with some others, plotted to take the net and the shallop, which the Carpenter had now set vp, and so to shift for themselues. But the shallop being readie, our Master would goe in it himfelte to the South and South-west, to fee if hee could meete with the people; for, to that end was it fet up, and (that way) wee might fee the Woods fet on fire by them. So the Mafler tooke the Sayue and the Shallop, and so much victuall as would serue for eight or nine daves, and to the South hee went. They that remained aboord, were to take in water, wood, and ballaft, and to haue all things in a readinesse against hee came backe. But hee set no time of his returne; for he was periwaded, if he could meet with the people, hee should have fiesh of them, and that good flore: but hee returned worse then hee went forth. For, hee could by no meanes meete with the people, although they were neere them , yet they would fet the 50 woods on fire in his fight.

Being returned, hee fitted all things for his returne, and first, delivered all the bread out of the bread roome (which came to a pound a piece for euery mans share ) and deliuered also a Bill of Returne, willing them to have that to shew, if it pleased God, that they came home: and he wept when hee gaue it vnto them. But to helpe vs in this poore estate with some reliefe, the Beate and Savue went to worke on Friday morning, and flayed till Sunday noone: at which time they came aboord, and brought fourescore small Fish, a poore reliefe for so many hungry bellies. Then we wayed, and flood out of our wintering place, and came to an Anchor without, in the mouth of the Bay: from whence we wayed and came to an anchor without in the Sea, where our bread being gone, that ftore of cheefe we had was to ftop a gap, whereof there were fine, whereat the company grudged, because they made account of nine. But those that were left, were equally dissipant of nine. ded by the Mafter, although he had counsell to the contrarie: for there were some who having it, would make haft to bee iid thereof, because they could not gourne it. I knew when Henrie

Greene gaue halfe his bread, which hee had for fourteene dayes, to one to keepe, and prayed him not to let him have any vntill the next Munday : but before Wednelday at night, hee never left till hee had it againe, having eaten up his first weekes bread before. So Willow the Boatfwaine hath eaten (in one day) his fortnights bread, and hath beene two or three dayes ficke for his labour. The cause that moued the Master to deliner all the Cheese, was because they were not all of one goodnesse, and therefore they should see that they had no wrong done them that every man should have alike the best and the worst together, which was three pounds and a halfe for

The wind feruing, we weighed and stood to the North-west, and on Munday at night ( the In eighteenth day of lune) wee fell into the Ice, and the next day the wind being at Weil, we lay there till Sunday in fight of Land. Now being here, the Master told Nicholas Simmes, that there would be a breaking vp of chefts, and a fearch for bread, and willed him (if hee had any) to bring

it to him, which hee did, and deliuered to the Mafter thirty cakes in a bagge. This deed of the Mafter (if it bee true ) hath made mee maruell, what should bee the reason that hee did not stop the breach in the beginning, but let it grow to that height, as that it ouerthrew himfelfe and many other honest men : but there are many denices in the heart of man , yet the counsell of the Lord

Shall Stand.

Being thus in the Ice on Saturday, the one and twentieth of Iune at night, Wilson the wilson's Green, Boatswayne, and Henry Greene came to mee lying (in my Cabbin) lame, and told mee that they their wickedao and the reft of their Afficiates, would shift the Company, and turne the Master, and all the sicke nesses. men into the shallop, & let them shift for themselves. For, there was not fourteen daies victual left for all the Company, at that poore allowance they were at, and that there they lay, the Master not caring to goe one way or other; and that they had not eaten any thing thele three dayes, and therefore were resolute, either to mend or end, and what they had begun they would goe through with it, or dye. When I heard this, I told them I maruelled to heare fo much from them, confidering that they were married men, and had wives and children, and that for their fakes they should not commit so foule a thing in the fight of God and man, as that would bee; for why should they banish themselues from their native Countrie ! Hemy Greene bad me hold my peace, for he knew the worst, which was, to be hanged when hee came home, and therefore of the two 30 he would rather be hanged at home then flarted abroad : and for the good will they bate me, they

would have mee flay in the Ship. I gave them thankes, and told them that I came into her, not to forfake her, yet not to hurt my ielfe and others by any fuch deed. Henry Greene told me then, that I must take my fortune in the Shallop. If there bee no remedie (faid I) the will of Go p

bee done.

Away went Henry Greene in a rage, swearing to cut his throat that went about to disturbe them, and left Wilfon by me, with whom I had some talke, but to no good : for he was so periwaded, that there was no remedie now, but to goe on while it was hor, least their partie should faile them, and the mischiefe they had intended to others, should light on themselves. Henry Greene came againe, and demanded of him what I faid, wilfon answered, He is in his old fong, ft:ll pati-

40 ene. Then I spake to Henry Greene to stay three dayes, in which time I would so deale with the Mafter, that all should be well. So I dealt with him to forbeare but two dayes, nay twelve hours; there is no way then (fay they) but out of hand. Then I told them, that if they would fray till Munday, I would inyne with them to share all the victuals in the ship, and would instifie it when I came home; but this would not serve their turnes. Wherefore I told them , it was some worse matter they had in hand then they made shew of, and that it was bloud and revenge hee fought, or else he would not at such a time of night undertake such a deed, Henry Greene (with that)taketh my Bible which lay before me, and fware that hee would doe no man harme, and what hee did was for the good of the voyage, and for nothing elfe; and that all the rest should do the like. The like did Wilfon fweare.

50 Henry Greene went his way, and prefently came Iner, who because hee was an ancient man, Robett Part, Sen I hoped to haue found some reason in him ; but hee was worse then Henry Greene, for hee sware plainely that he would instifie this deed when he came home. After him came lobn Thomas, and Michel Perce, as birds of one feather : but because they are not living, I will let them goe, as then I did. Then came Moter and Bonnet, of whom I demanded, if they were well aduled what they had taken in hand. They answered, they were, and therefore came to take their oath.

Now, because I am much condemned for this oath, as one of them that plotted with them, and that by an oath I should bind them together to performe what they had begun, I thought good heere to fet downe to the view of all, how well their oath and deedes agreed : and thus it was, Ton shall sweare truth to God, your Prince and Countrie: you shall doe nothing, but to the glory of Oath abused.

60 God, and the good of the action in hand, and harme to no man. This was the oath, without adding or diminishing. I looked for more of these companions ( although these were too many) but there came no more. It was darke, and they in a readineffe to put this deed of darkneffe in execution. I called to Henry Greene and Wilfon, and prayed them not to goe in hand with it in the darke, but to flay till the morning. Now, euerie man (I hope) would goe to his rest, but wic-Fff 2

ter (pared.

kedneff: fleepeth not ; for Henry Greene keepeth the Master company all night (and gaue mee brea i, which his Cabbin-mate gaue him) and others are as watchfull as he. Then I asked Henrie Greene, whom he would put out with the Mafter ! he faid, the Carpenter lobn King, and the licke men. I faid, they should not doe well to part with the Carpenter, what need socuer they should haue. Why the Carpenter was in no more regard amongst them, was; first, for that he and lobn King were condemned for wrong done in the victuall. But the chiefest cause was, for that the Matter loued him, and made him his Mate, vpon his returne out of our wintering place, thereby displacing Robert Billet, whereat they did grudge, because hee could neither write nor read. And therefore (laid they) the Mafter and his ignorant Mate would carry the Ship whither read. And therefore (and they) the sales are the Matter forbidding any man to keep account or reckoning, having taken the Matter pleased, the Matter forbidding any man to keep account or reckoning, having taken the Matter pleased, the Matter pleased of the Matter from all men what souer served for that purpose. Well, I obtained of Henrie Greene and Wisson, that the Carpenter should stay, by whose meanes I hoped (after they had satisfied themselves) that the Marter, and the poore man might be taken into the Ship againe. Or, I hoped, that some one or other would give some notice, either to the Carpenter John King, or the Master; for so it might have come to paffe by fome of them that were the most forward.

Now, it shall not bee amisse to show how we were lodged, and to begin in the Cooke roome: there lay Benner and the Cooper lame; without the Cooke roome, on the steere-board side, lay Thomas Wydboufe ficke; next to him lay Sydrack Funer lame, then the Surgeon, and lobn Hudfon with him ; next to them lay Wilfon the Boati waine, and then a Arnold Lodlo next to him: in the Gun-roome lay Robert Inet and John Thomas; on the Lar-board fide, lay Mithael Bute and A- 20 dria Moore, who had never beene well fince wee loft our Anchor; next to them lay Michael Perce and Andrew Moter. Next to them without the Gun-roome, lay lobn King, and with him Robert Billet: next to them my felfe, and next to me Francis Clements : In the min-fhip, betweene the Capftone and the Pumpes, lay Henrie Greene and Nicholas Simmes. This night lobn King was late vp, and they thought he had been with the Master, but he was with the Carpenter, who lay on the Poope, and comming downe from him, was met by his Cabbin-mate, as it were by chance, and fo they came to their Cabbin together. It was not long ere it was day : then came Bennes for water for the Kettle, hee role and went into the Hold: when hee was in they flut the Hatch on him ( but who kept it downe I know not ) up vpon the Deck went Bennet,

In the meane time Henrie Greme, and another went to the Carpenter, and held him with a 20 talke, till the Master came out of his Cabbin ( which hee soone did ) then came lohn Thomas and They bind the Bennet before him, while Wilfor bound his armes behind him. He asked them what they meant? they told him, he should know when he was in the Shallop. Now Inet, while this was a doing, came to lobs King into the Hold, who was prouided for him, for he had got a fword of his own, and kept him at a bay, and might have killed him, but others came to helpe him : and so he came vp to the Master. The Master called to the Carpenter, and told him that he was bound; but, I heard no answere he made. Now Arnold Lodlo, and Michael Bute rayled at them, and told them their knauerie would shew it selfe. Then was the Shallop haled up to the Ship fide, and the poore, ficke, and lame men were called vpon to get them out of their Cabbins into the Shallop. The Master called to me, who came out of my Cabbin as well as I could, to the Hatch 40 way to speake with him : where, on my knees I befought them, for the loue of God, to remember themselues, and to doe as they would be done unto. They bad me keepe my selfe well, and get me into my Cabbin ; not suffering the Master to speake with me. But when I came into my Cabbin againe, hee called to meat the Horne, which gaue light into my Cabbin, and told mee that Inet would overthrow vs all; nay (faid I) it is that villaine Henrie Greene, and I spake it

Now was the Carpenter at libertie, who asked them, if they would bee hanged when they came home : and as for himfelfe, hee faid, hee would not flay in the Ship vnleffe they The Carpen- would force him: they bad him goe then, for they would not ftay him: I will (faid hee) fo I may have my cheft with mee, and all that is in it : they faid, hee should, and presently they 50 put it into the Shallop. Then hee came downe to mee, to take his leave of mee, who perswaded him to flay, which if he did, he might so worke that all should bee well : hee faid, hee did not thinke, but they would be glad to take them in againe. For he was so perswaded by the Mafler, that there was not one in all the fhip, that could tell how to carrie her home; but (faith he ) if we must part ( which wee will not willingly doe, for they would follow the ship ) hee prayed me, if wee came to the Capes before them, that I would leave fome token that wee had beene there, neere to the place where the Fowler bred, and hee would doe the like for vs : and so (with teares) we parted. Now were the ficke men driven out of their Cabbins into the Shallop; but Iobn Thomas was Francis Clements friend, and Bennet was the Coopers, fo as there were words betweene them and Henrie Greene, one faying, that they should goe, and the other swea- 62 ring that they should not goe, but such as were in the shallop should returne. When Henrie Greene heard that, he was compelled to gine place, and to put out Arnold Lodie, and Michael Bate, which with much adoe they did.

In the meane time, there were some of them that plyed their worke, as if the Ship had beene

entred by force, and they had free leaue to pillage, breaking up Chefts, and rifling all places. One of them came by me, who asked me, what they should doe. I answered, hee should make an end of what hee had begun ; for I faw him doe nothing but sharke vp and downe. Now, were all the poore men in the Shallop, whose names are as followeth; Henrie Hudson, John Hudson, Thenames of Arnold Lodlo, Sidrack Faner, Phillip Staffe, Thomas Woodbonfe, or Wydhonfe, Adam Moore, Henrie the company King, Michael Bute. The Carpenter got of them a Peece, and Powder, and Shot, and some Pikes, exposed in the an Iron Pot, with some meale, and other things. They stood out of the Ice, the Shallop being fall to the Sterne of the Shippe, and fo ( when they were nigh out, for I cannot fay, they were cleane out ) they cut her head fall from the Sterne of our Ship, then out with their Topfayles, and towards the Eaft they flood in a cleere Sea. In the end they tooke in their Top-Lyles,

righted their Helme, and lay vnder their Fore-fayle till they had ranfacked and fearched all places in the Ship. In the Hold they found one of the veffels of meale whole, and the other halfe fpent, for wee had but two; wee found also two firkins of Butter, some twentie seven piece of Porke, halfe a bushell of Pease, but in the Masters Cabbin we found two hundred of bisket Cakesa a pecke of Meale, of Beere to the quantitie of a Butt, one with another. Now, it was faid, that the Shallop was come within fight, they let fall the Main-layle, and out with their Top-fayles, and five as from an Enemy.

Then I prayed them yet to remember themselves ; but William Wilfon (more then the rest) would heare of no such matter. Comming nighthe East shoare they cast about, and stood to the West and came to an Hand, and anchored in fixteene or seuenteene fathome water. So they sent the Boat, and the Net atheare to fee if they could have a Draught : but could not for Rocks and great stones. Michael Perfe killed two Fowle, and heere they tound good store of that Weede, Liftfieht of which we called Cockle-graffe in our wintering place, whereof they gathered flore, and came a- the Shallops board againe. Heere we lay that night, and the best part of the next day, in all which time we faw not the shallop, or ever after. Now Henrie Greene came to me and told mee, that it was the Companies will, that I should come up into the Masters Cabbin, and take charge thereof, I rold him it was more fit tor Robert Inet: he faid, he should not come in it, nor meddle with the Mafters Card, or Iournals. So vp I came, and Henrie Greene gaue me the Key of the Mafters Cheft, and told me then, that he had laid the Mafters best things together, which hee would vie himfelfe when time did ferue : the bread was alfo deliuered me by tale,

The wind feruing, we flood to the North-east, and this was Robert Billets course, convrarie to Robert Inet, who would have gone to the North-west. We had the Easterne shoare still in fight, and (in the night) had a flout gale of wind, and flood afore it, till wee met with Ice, into the which we ranne from those to thicke, till we could goe no further for Ice, which lay so thicke ahead of vs (and the wind brought it after vs afterne) that wee could not ftirre backward, nor forward : but to lay imbayed fourteene daies in worle Ice, then euer wee met to deale withalle for we had beene where there was greater store, but it was not so broad upon the water as this: for this floting Ice contained miles, and halfe miles in compasse, where we had a deepe Sea, and a Tide of flood and ebbe, which fet North-weft and South-east. Heere Robert Inet would have gone to the North-welt, but Robert Billes was confident to go through to the North-east, which he did. At last, being cleere of this Ice, he continued his course in fight of the Easterne shoare, till he raifed foure Ilands which lay North and South: but we passed them fixe or seven leagues, Foure Hands the wind tooke vs fo short. Then wee stood backe to them againe, and came to an Anchor betweene two of the most Northermost. We sent the Boat ashoure, to see if there were any thing there to be had, but found nothing, but cockle Graffe, whereof they gathered flore, and fo return ned aboard. Before we came to this place, I might well fee, that I was kept in the ship against Henry Greenes minde, because I did not favour their proceedings better then I did. Then hee began (very fubtilly) to draw me to take vpon me to fearch for those things, which himselfe had folne: and accused me of a matter no lesse then Treason amongst vs, that I had deceived the The wicked

so company of thirtie Cakes of bread. Now they began to talke amongst themselves, that Eng. flee where Lond was no fafe place for them, and Henry Greene I wore , the shippe should not come into any none pursucula place (but keepe the Seastill) till he had the Kings Majesties hand and Seale to shew for his fafetie. They had many deuices in their heads, but Henry Greene in the end was their Captaine, and so called of them.

From these Ilands we flood to the North-east and the Easter Land still in fight : wee rayled those Ilands, that our Master called Rummes Ilands. Betweene these Ilands and the shallow ground to the East of them, our Master went downe into the first great Bay. We kept the East shoare still in our fight, and comming thwart of the low Land, wee ranne on a Rocke that lay under water, and strooke but once; for if shee had, we might have beene made Inhabitans of that 6c place: but God fent vs foone off without any harme that wee faw. Wee continued our courfe and rayled Landa head of vs, which ftretched out to the North : which when they law , they faid plainly, that Robert Billet by his Northerly course had left the Capes to the South, and that they were best to seeke downe to the South in time for releife, before all was gone : for we had Small flore left. But Robert Billet would follow the Land to the North, faying, that he hoped in

A Rocke.

Note.

July 27 .

Sauages,

God to find somewhat to releeue vs that way, as soone as to the South. I told them that this Land was the Mayne of Worsenhome Cape, and that the shallow rockie ground, was the same that the Master went downe by, when he went into the great Bay. Robert Inet and all said, it was not possible, vnlesse the Master had brought the ship ouer Land, and willed them to looke into the Masters Card, and their course how well they did agree. We stood to the East, and left the mayne Land to the North, by many small Hands into a narrow gut betweene two Lands. and there came to an Anchor. The Boat went ashoare on the North fide, where wee found the great Horne, but nothing elfe. The next day wee went to the South fide, but found nothing Cockle graffe, there, faue Cockle graffe of which we gathered. This graffe was a great releefe vnto vs.for without it, we should hardly haue got to the Capes for want of victuall. The wind seruing we should out, but before we could get cleane out, the wind came to the West, so that we were constray. ned to anchor on the Nor h fide.

The next day, wee weighed and doubled the point of the North Land, which is high Land. and so continueth to the Capes, lying North and South, some fine and twentie or thirtie leagues. To the North we stood to see store of those Fowles that breed in the Capes, and to kill fome with our shot, and to fetch them with our Boat. We raised the Capes with joy, and bare for them, and came to the Ilands that lie in the mouth of the streight : but bearing in betweene the Rockie Iles, we ranne on a Rocke that lay vinder water, and there stucke fast eight or nine houres. It was ebbing water when we thus came on, so the floud set vs affoat, God guiding both wind and Sea, that it was calme, and faire weather : the ebbe came from the East, and the floud from the West. When wee were affoat, wee stood more neere to the East shoare, and there 20

The next day being the feuen and twentieth of July, we fent the Boat to fetch fome Fowle, and the ship should way and stand as neere as they could: for the wind was against vs. They had a great way to row, and by that meanes they could not reach to the place where the Fowle bred:but found good flore of Gulls, yet hard to come by, on the Rocks and Cliffes, but with their Peeces they killed some thirtie, and towards night returned. Now we had brought our ship more neere to the mouth of the Streights, and there came to an anchor in eighteen or twentie fathom water, vpon a Riffe or shelfe of ground : which after they had weighed their Anchor, and stood more neere to the place where the Fowle bred, they could not find it againe, nor no place like it: but were faine to turne to and fro in the mouth of the Streight, and to be in danger of Rockes, 30 because they could not find ground to let fall an Anchor in, the water was so deepe.

The eight and twentieth day, the Boat went to Digges his Cape for Fowle, and made directly for the place where the Fowle bred, and being neere, they faw feuen Boates come about the Easterne point towards them! When the Sauages saw our Boate, they drew themsclues together, and drew their leffer Boats into their bigger : and when they had done, they came rowing to our Boat, and made fignes to the West, but they made readie for all assayes. The Sauages came to them, and by fignes grew familiar one with another, fo as our men tooke one of theirs into our Boate, and they tooke one of ours into their Boate. Then they carried our man to a Coue where their Tents stood toward the West of the place, where the Fowle bred : so they carried him into their Tents, where he remayned till our men returned with theirs. Our Boat went to 40 the place where the Fowle bred, and were defirous to know how the Sauages killed their Fowle: Sauages man- heshewed them the manner how, which was thus, They take along Pole with a snare at the ner of fowling, end, which they put about the Fowles necke, and so plucke them downe, When our men knew that they had a better way of their owne, they shewed him the vie of our Peeces, which at one shot would kill seuen or eight. To be short, our Boat returned to their Coue for our man, and to deliuer theirs. When they came they made great joy, with dancing and leaping, and flroking of their brefts: they offered divers things to our men, but they only tooke fome Morfes Teeth, which they gave them for a Knife, and two glaffe buttons : and to receiving our man they came aboard, much rejoycing at this chance, as if they had met with the most simple and kind people

of the World. And Henry Greene (more then the reft) was so confident, that (by no meanes) we should take care to fland vpon our Guard : God blinding him fo, that where hee made reckoning to receive great matters from these people, he received more then he looked for, and that suddenly by being made a good example for all men : that make no conscience of doing euill, and that we take heed of the Sauage people, how simple soeuer they seeme to be.

The next day, the nine and twentieth of July, they made hafte to be ashoare, and because the fhip rid too farre off, they weighed and flood as neere to the place where the Fowle bred, as they could : and because I was lame, I was to go in the Boat, to carrie such things, as I had in the Cabbin of enery thing fomewhat : and fo with more hafte then good speed (and not without swearing) away we went, Henry Greene, William Wilson, John Thomas, Michael Perse, Andrew, 60 Moter, and my felfe. When we came neere the shoare, the people were on the Hils, dancing and leaping : to the Coue we came, where they had drawne up their Boates: wee brought our Boate to the East side of the Coue, close to the Rockes. Ashoare they went, and made fast the

Boat to a great stone on the shoare, the people came, and every one had somewhat in his hand to barter : but Henry Greene twore they should have nothing, till he had Venison for that they had fo promised him by signes.

Now when we came, they made fignes to their Dogges (whereof there were many like Sanages Mongrels, as bigge as Hounds) and pointed to their Mountaine, and to the Sunne, clapping their dogges, hands. Then Henry Greene, John Thomas, and William Wilfon, flood hard by the Boate head , Min chael Perfe, and Andrew Moter were got up upon the Rocke, a gathering of Sorrell : not one of them had any weapon about him, not fo much as a flicke, faue Henry Greene only, who had a piece of a Pike in his hand : nor faw I any thing that they had wherewith to hurt vs. Henry Sauages tree 10 Greene and William Willon had Looking-glaffer, and lewes Trumps, and Bels, which they were chericshewing the people. The Sauages standing round about them, one of them came into the Boats head to me to thew me a Bottle : I made figures to him to get him afhoase, but he made as though he had not vinderstood me, whereupon I stood vp, and pointed him ashoare. In the meane-time, another stole behind me to the sterne of the Boat, and when I faw him ashoare, that was in the

Wherefore I cast vp my head, and fave the Sauage with his Knife in his hand, who strooke at my breft ouer my head : I cast vp my right arme to faue my breft, he wounded my arme, and strooke 20 me into the bodie vindermy right Pappe. He strooke a second blow which I met with my left hand, and then he strooke me into the right thigh, and had like to have cut off my little finger of the left hand. Now, I had got hold of the ftring of the Knife, and had woond it about my left hand, he striuing with both his hands, to make an end of that he had begunne, I found him but weake in the gripe (God enabling me) and getting hold of the fleene of his left arme, to bare him from me. His left fide lay bare to me, which when I faw, I put his sleeue off his left arme into my left hand, holding the string of the Knife fast in the same hand; and having got my right hand at libertie, I fought for somewhat wherewith to strike him (not remembring my Dagger at my fide) but looking downe I faw it, and therewith strooke him into the bodie, and the

head of the Boat, I fate downeagaine ; but fuddenly I fawithe legge and foote of a man by mee.

Whiles I was thus affaulted in the Boat, our men were fet voon on the shoare. Iohn Thomas Trecherie iust and William Wilson had their bowels cut, and Michael Perfe and Henry Greene being mortally to vaiuft Trays 20 wounded, came tumbling into the Boat together. When Andrew Moter faw this medley, hee tors. came running downe the Rockes, and leaped into the Sea, and fo swamme to the Boat, hanging on the sterne thereof, till Michael Perfe tooke him in, who manfully made good the head of the Boat against the Sauages, that preffed fore vpon vs. Now Michael Perfe had got an Hatchet, wherewith I faw him ftrike one of them, that he lay forawling in the Sea. Henry Greene crieth Greene flaine, Coracio, and layeth about him with his Truncheon : I cryed to them to cleere the Boat, and Andrew Moter cryed to bee taken in : the Sauages betooke them to their Bowes and Arrowes, which they fent amongst vs, wherewith Henry Greene was flaine out-right, and Michael Perfe received may wounds, and fo did the reft. Michael Perfe cleereth the Boate, and puts it from the shoare, and helpeth Andrew Moter in: but in turning of the Boat, I received a cruell wound in 40 my backe with an Arrow: Michael Perfe and Andrew Moter rowed the Boate away , which when the Sauages faw, they ranne to their Boats, and I teared they would have launched them, to have followed vs, but they did not, and our ship was in the middle of the channell, and could

Now, when they had rowed a good way from the sheare, Michael Perfe fainted, and could row no more; then was Andrew Moter driven to stand in the Boat head, and wast to the ship, which (at the first) law vs not, and when they did, they could not tel what to make of vs, but in the end they flood for vs, and so tooke vs vp. Henry Greene was throwne out of the Boat into the Sea, and the rest were had aboard, the Sauage being yet aline, yet without sense. But they died all there Wicked and that day , William Wilfon (wearing and curfing in most fearefull manner : Michael Perfe lived wretchedend two dayes after, and then died. Thus you have heard the Tragicall end of Henry Greene and his of wretched
Mares, whom they called Cantaine, these source heard the policy has been all the ship wicked men. 50 Mates, whom they called Captaine, these foure being the only lustie men in all the ship.

The poore number that was left, were to ply our ship too and fro, in the mouth of the streight, for there was no place to anchor in neere hand : besides, they were to goe in the Boate to kill Fowle, to bring vs home, which they did, although with danger to vs all. For if the wind blew, there was an high Sea, and the eddies of the Tydes would carrie the (hip so neere the Rockes, as it feared our Master, for so I will now call him. After they had killed some two hundred Fowle, with great labour on the South Cape, wee stood to the East: but when wee were fixe or seuen leagues from the Capes, the wind came up at East. Then wee stood backe to the Capes againe, and killed an hundred Fowle more. After this, the wind came to the Well, fo wee were driven to goe away, and then our Master stood (for the most) along by the North shoare, till he fell in-60 to broken ground about the Queenes Fore-land, and there anchored. From thence wee went to Gods Mercies, and from thence to thole Hands, which lye in the mouth of our Streight, not feeing the Land, till we were readie to runne our Bosprite against the Rockes in a fogge. But it cleered a little, and then we might fee our felues inclosed with Rockie Hands, and could find no

608

ground to anchor in. There our Master lay atrie all night, and the next day the fogge continuing, they fought for ground to anchor in, and found fome in an hundred and odde fathomes of water. The next day we weighed and flood to the Eaft, but before wee came heere, we had put our felues to hard allowance, as halfe a foule a day with the pottage: for yet we had some meale Mistrie pursu- left, and nothing else. Then they beganne to make triall of all whatsoeuer: wee had flayed our Fow le, for they wil not pull : and Robert Inet was the first, that made vie of the skins by burning of the Feathers: to they became a great dish of meate, and as for the garbidge, it was not

After we were cleere of these Ilands, which lie out with two points, one to the South-east. After we were cure or one.

After we were no way through, we con- 10 and the other to the North, making a Bay to the fight as if there were no way through, we con- 10 tinued our course East South-east, and South and by East, to raise the Defelations, from thence to finance our course for Ireland. Thus we continued divers dayes: but the wind comming against vs. made vs to alter our courfe, and by the meanes of Robert I not who perfwaded the company, that they should find great reliefe in Namfound Land, if our Country-men were there, and if they were gone before we came, yet should we find great store of bread and fish lest ashoare by them; but how true, I gine God thankes, we did not trie. Yet we flood to the South-weft, and to the West, almost to fiftie seuen degrees: when (by the will of God) the winde came up at Southwest. Then the Master asked me, if he should take the benefit of this wind, and shape his course for Ireland. I faid it was best to goe, where we knew Corne grew, and not to feeke it, where it was caft away, and not to be found. Towards Ireland now wee flood, with profeerous winds for 20 many dayes together: then was all our Meale (pent, and our Fowle reftie and dry: but (being no remedie) we were content with the Salt broth for Dinner, and the halfe Fowle for Supper. Now went our Candles to wracke, and Bennet our Cooke made a melle of meate of the bones of the Fowle, frying them with Candle-greafe, till they were crifpe, and with Vineger put to them, made a good dish of meate. Our Vineger was shared, and to euery man a pound of Candles deliuered for a weeke, as a great daintie. Now Robert Inet (by his reckoning) faith, wee were within fixtie or feuentie leagues of Ireland, when wee had two hundred thither. And fire our course was so much the longer, through our euill steeredge: for, our men became so weake, that they could not fland at the Helme, but were faine to fit. Then Robert Ivet dyed, for meere want, and all our men were in despaire, and said wee were 30

Robert I uets

paft Ireland, and our last Fowle were in the steep-tub. So, our men cared not which end went forward infomuch as our Mafter was driven to looke to their labour, as well as his owne: for fome of them would fit and fee the fore-fayle, or mayne-fayle flie vp to the tops, the sheetes being either flowne or broken, and would not helpe it themselves, nor call to others for helpe, which much griened the Mafter. Now in this extremitie it pleased God to give vs fight of Land, not farre from the place, our Mafter faid he would fall withal, which was the Bay of Gallows, and we fell to the West of the Derses, and so stood along by the coast, to the South-west. In the end, there was a joyful cry, a layle, a layle, towards which they flood, then they law more, but to the neerest A fayle of Fowy we stood, and called to him : his Barke was of Fowy, and was at anchor a Fishing : he came to vs. Bere Hauen in and brought vs into Bere Hauen. Here we stayed a few dayes, and delt with the Irish, to supply 40 our wanes, but found no reliefe: for in this place there was neither Bread, Drinke, nor mony to be had among ft them. Wherfore they adulfed vs to deale with our Country-men, who were there a fishing, which we did; but found them so cold in kindnesse, that they would doe nothing without present money, whereof we had none in the Ship. In the end, we procured one lobn Waymoust, Master of the Barke that brought vs into this Harbour, to furnish vs with money, which hee did, and received our best Cable and Anchor in pawne for the fame. With this money, our Master with the helpe of lohn Waymouth, bought Bread, Beere, and Beefe.

Now, as wee were beholding to Waymouth for his money, so were wee to one Captaine Taylor, for making of our contracts with Waymouth, by whose meanes hee tooke a Bill for our Cable and Anchor, and for the mens Wages, who would not goe with vs, vnlefle Waymouth wold paffe 50 his word for the same : for they made shew, that they were not willing to goe with vs for any wages. Whereupon Captaine Taylor swore hee would preffe them, and then, if they would not goe, hee would hang them.

In conclusion, wee agreed for three pound ten shillings a man, to bring our Ship to Phimosale, or Dartmouth, and to give the Pilot five pound : but if the winde did not ferue, but that they were driven to put into Briffor, they were to have foure pound ten shillings a man, and the Pi-They arrine at lot fixe pound. Omitting therefore further circumstances, from Bere Hauen wee came to Phmonth, and so to an anchor, before the Castle: and from Plimonth, with faire winde and weather without stop or stay, wee came to the Downes, from thence to Gramsfend, where most of our men went a hoare, and from thence came on this fide Erith, and there stopped : where our Master 60 Robert Billet came aboord, and so had mee up to London with him, and so wee came to Sir The-

> For a smuch as this report of Pricket may bappely bee suspected by some, as not so friendly to Hudson, who returned with that Companie which had so cruelly exposed Hudson and his, and therefore may sceme

CHAP. 18. Widhouses Letter and notes, Articles agains Inet, erc.

to lay beauter imputation, and rip up occasions further then they will believe ; I have also added the report of Thomas Widhouse, one of the exposed Companie, who aferibeth those occasions of discord to Iver. I take not on mee to sentence, no not to examine; I have presented the Enidence init as I had it : let the Bench censure, hearing with both eares that which with both eyes they may see in those, and these notes ; to which, I baue first prefixed his Letter to Master Samuel Macham.

After Macham, I heartily commend mee unto you, &c. I can write unto you no newes, though Malter Macham, I hearthy common mes only jum, Get a cast write only you no newes, though I have seen much, but such as every English Fisherman haunting these Coasts can report better Io then my felfe.

Weekent our Whit funday in the North-east end of Island; and I thinke I never fared better in Eng. land then wee feasted there. They of the Countrey are very poore, and line miserably : yet we found there- Ilanders in store of fresh Fish and daintie Fowle. I my felfe in an after-noone killed so much Fowle, as feasted all poore. our Compunie, being three and tmentie perfous at one time, onely with Partridges; besides Curlue, Plauer, Mallard, Teale, and Goofe. I have frene two hot Batbes in Illand, and have beene in one of them. Wee are resolved to trie the uttermost, and lye onely expecting a faire winde, and to refresh our selves to anord the Ice, which now is come off the West Coufts, of which wee have seene whole Ilands, but God bee The couse of thanked, have not beene in danger of any. Thus I defire all your prayers for us. From Itland this thir. their flay as tierb of May, 1610.

A note found in the Deske of Thomas Wydowfe, Student in the Mathematickes, hee being one of them who was put into the Shallop.

He temb day of September, 1610. after dinner, our Master called all the Companie together, to heare and beare witnesse of the abuse of some of the Companie (it having beene the request of Robert luet ) that the Mafter (bould redreffe fom: abufes and flanders, as bee called them, against this I-30 uet : which thing after the Mafter had examined and heard with equitie what hee could fay for hims selfe, there were prooued so many and great abuses, and mutinous matters against the Master, and action by luct, that there was danger to have suffred them longer : and it was fit time to punish and cut off farther occasions of the like mutimies.

It was prooned to bis face, first with Bennet Mathew our Trampet upon our first fight of Island, and bee confest, that bee supposed that in the action would bee man-flanghter, and prous bloodse to some. Secondly, at our comming from Illand, in bearing of the companie, bee did threaten to turne the head of the Ship bome from the attion, which at that time was by our Mafter wifely pacified, hoping of a-

Thirdly, it was deposed by Philip Staffe our Carpenter, and Ladlie Atnold, to bis face upon the boly 40 Bible, that hee per waded them to keepe Muskets charged, and Swords readie in their Cabbins, for they Should bee charged with shot erethe Voyage were over.

Fourtbly, wee being peffered in the Ice, bee had v fed words tending to mutinie, discouragement, and flander of the action, which eafily tooke effect in these that were timorous; and had not the Master in time presented, it must easily base overstrowne the Voyage: and now lately becing imbayed in a deepe Bay, which the Master had desire to see, for some reasons to himselfe knowne, his word tended altogether to put the Companie into a fray of extremitie, by wintering in cold : lefting at our Mafters hope to fee Bantam by Candlemasse.

For these and diners other base standars against the Master, bee was deposed; and Robert Bylot, who had hered him felfe honeftly respecting the good of the action, was placed in his stead the Masters Mate. Alfo Francis Clement the Bossion, as this time was put from his Office, and William Wilfon, a man thought more fit, preferred to his place. This man had bajety carryed himselfs to our Muster and

Also Adrian Mooter was appointed Boatsons mate: and a promise by the Master, that from this

dar luats mages should remaine to Bylot, and the Beat sous overplus of mages should bee equally divided betweene Willon and one lohn King, to the owners good liking, one of the Omnag Masters, who had very well carryed themselnes to the surbarance of the businesse.

Alfo the Master promised, if the Offenders yet behaved themselves benceforth honestly, bee would bee ameanes for their good, and that bee would forget immries, with other admonition?

These things thus premised touching Hudfons exposing, and Gods inst judgements on the Ex-6c polers, as Pricket hath related (whom they referred as is thought, in hope by Sir Dudley Digger his Master to procure their pardon at their returne) I thought good to adde that which I have further received from good Intelligence, that the Ship comming aground at Digges Iland, in 52. degrees 44. minutes, a great flood came from the West and set them on floate : an argument of an open pallage from the South Sea to that, and confequently to these Seas. The Weapons and

The Discouries of M. M. NICOLO, and ANTONIO ZENI, gathered out of their Letters, by FRANCISCO MARCOLINO: whereto is added Q VIRINO bis Ship-wracke.

They are related by Mafter Haplait in his 3.vel pag 131.

Frieflands

N the yeere 1380. Mafter Nicola Zono being wealthy, and of a haughtie spirit, defiring to see the fashions of the world, built and firmished this wife fashions of the world, built and firmished this wife fashions of the world, built and firmished this wife fashions of the world, built and firmished this wife fashions of the world, built and firmished this wife fashions of the world, built and firmished this world the world defiring to fee the fashions of the world, built and furnished a Ship at his owne charges, and passing the Straits of Gibralter, held on his course Northwards, with intent to fee England and Flanders. But a violent tempeft affailing him at Sea, hee was carried live knew not whither, till at laft his Ship was carried away vpon the He of Frisland; where the men and most part of the goods were faued,

In vaine seemes that deliuerie, that deliuers up presently to another Executioner. The Handers like Neptanes, hungry groomes, or his base and blacke Guard, set vpon the men whom the Seas 20 had spared : but heere also they found a second escape, by meanes of a Prince named Zuchmit. Prince of that and many Ilands thereabouts : who being neere hand with his Armie, came at the out-crie, and chafing away the people, tooke them into protection.

This Zichmui had the yeere before given the overthrow to the King of Norman, and was a great adventurer in feates of Armes. He spake to them in Latine, and placed them in his Mauie. wherewith hee wonne divers Ilands. Nicolo behaved himselfe so well, both in saving the Fleee by his Sea-skill, and in conquest of the Hands by his valour, that Zichmun made him Knight and

Sain: Themes

After divers notable exploits, Nicolo armed three Barkes, with which hee arrived in Engrone-Land: where hee found a Monafterie of Friers of the Preachers Order, and a Church dedicated to 30 Saint Thomas, hard by a Hill, that cafteth out fire like Vefamus and Etna. There is a Fountaine of hot water, with which they heate the Church of the Monaftene, and the Friers chambers. It andthe frange commeth also into the Kitchin so boyling hote, that they vie no other fire to dreffe their meate; effects thereof. and putting their Bread into braffe Pots without any water, it doth bake as it were in an hot Ouen. They have also small Gardens, which are covered over in the Winter time, and being watered with this water, are defended from the violence of the Frost and cold, and bring forth Flowers in their due seasons. The common people aftonished with these strange effects, conceiue highly of those Friers, and bring them presen: s of Flesh and other things. They with this Water, in the extremitie of the cold, heate their Chambers, which alto (as the other buildings of the Monafterie) are framed of those burning stones, which the mouth of the Hill casts foorth. They cast water on some of them, whereby they are dissoluted, and become excellent white Lime, and so tough, that being contriued in building, it latteth for euer. The rest, after the fire is out, serue in stead of stones to make walls and vaults, and will not dissolve or breake, except with some

Their Winter lasteth nine moneths : and yet there is a faire Hauen, where this water falleth into the Sea, not frozen : by meanes whereof there is great refort of wild Fowle and Fish, which they take in infinite multitudes. The Fishers Boates are made like to a Weauers shuttle, of the akinnes of Fishes, fashioned with the bones of the same Fishes, and being sowed together with many doubles, they are so strong, that in soule weather they will shut themiclus within the fame, not fearing the force either of Sea or winde. Neither can the hard-hearted Rockes breake these yeelding Veffels. They have also as it were a Sleeve in the bottome thereof, by which with 50 a subtill device, they convey the water foorth, that soaketh into them. The most of these Friers fpake the Latine tongue.

A little after this, Nicolo returned and dyed in Friesland, whither his brother Antonio had before reforted to him, and now fucceeded both in his goods and honour; whom Ziebmin employed in the Expedition of Effortland: which happened upon this occasion. Sixe and twente yeeres before, foure Fisher-Boates were apprehended at Sea by a mightie and tedious storme; wherewith after mathy dayes, they were brought to Effortland, aboue a thousand miles Well from Friefland: vpon which, one of the Boates was caft away, and fixe men that were in it, were taken and brought to a populous Citie; where, one that spake Latine, and had been cast by chance wpon that Iland, in the name of the King asked them what Country-men they were; and under- 60 flanding their case, hee acquainted the King therewith. They dwelt there five yeeres, and found it obee an Iland very rich, being little leffe then Ifeland, but farre more fruitfull. One of them faid nee faw Latine bookes in the Kings Librarie, which they at this prefent doe not under-

CHAP. 18. Canibals of Drogio. Icaria. Zichmuis Citie. Quirino.

fland. They have a peculiar Language, and Letters or Characters to themselves. They have mines of Gold and other Mettals, and have Trade with Engroneland. They low Corne, and make Beere and Ale. They build Barkes (but know not the vie of the Compaffe) and have mamy Cities and Castles. The King sent these Fisher-men with twelve Barkes Southwards, to a Country which they call Drogio .: in which Voyage ekaping dreadfull tempelts at Sea, they prois, encountred with Caribals at Land, which decoured many of them. Thele Fifters thewing them the manner of taking Fish with Nets, escaped , and for the presents which they made of their Fish to the chiefe men of the Country, were beloned and honoured. One of these (more expert it feemeth then thereft) was holden in fuch account, that a great Lord made warre with their Lord 10 to obtaine him: and so premyded, that he and his companie were fent vnto him. And in this order was her fent to fine and towentie Lords, which had warred one with another to get him, in thier cene yeeres space : whereby hee came to know almost all those pares; which, he said, was a great Countrey, and (as it were) a new World. The people are all rude, and voide of goodneffe :

they goe naked, neither have they wit co cover their bodies with the Beails skinnes which they take in Hunting, from the vehement cold. They are fierce, and eace their enemies, having divers Lawes and Gouemours. Their laing is by hunting." Further to the South-weft, they are more quall, and have a more temperare ayre : They have

20 Cities and Temples dedicated to Idols, where they facrifice Men, and after rate them; and have also some vie of Gold and Silner.

Hee fledde awey fecretly, and conveying himfelfe from one Lord to another, came at length to Drogio, where hee dwelt three yeeres. After this time finding there certaine Boates of Ellotiland, hee went thither with them : and growing there very rich, furnished a Barke of his owne, and returned into Friesland where hee made report whto his Lord of that wealthy Countrey. Zichmei prepared to fend thither : but three dayes before they fet foorth, this Fisherman dved. Yet taking some of the Marriners which came with him in his flead, they prosecuted the Voyage and encountred after many dayes an Hand; where ten men of divers Languages, were brought vnto them, of which they could vinderstand none, but one of I falend. Hee told them, that the Hand was called loaris, and the Knighes thereof called loars, defectided of the ancient pedigree of Dedalus, King of Scots, who conquering that Iland, lefe his Sonne there for King, 30 and left them those Lawes, which to that present they retayned. And, that they might keepe their Lawes inuiclate, they would receive no Stranger. Onely they were contented to receive one of our men, in regard of the Language, as they had done those ten Interpreters.

Ziehmai fayling hence, in foure dayes descried Land, where they found abundance of Fowle. and Birds egges, for their refreshing. The Hauen they called Cap Trin, There was a Hill, which burning, catt out moake : where was a Spring, from which iffued a certayne water like Pitch. which ranne into the Sea. The people of small stature, wilde, and fearefull, hid themselves in Caues. Ziehmei built there a Citie, and determining to inhabite, sent Antonio backe againe, with the most of his people to Friesland.

This Historie I have thus inserted at large, which perhaps, not without cause in some things, Airah.Ortel. 40 may feeme fabulous; not in the Zem, which thus writ, but in the relations which they received Charto. from others. How focuer, the best Geographers are beholden to these Brethren, for that little Hak wolds. knowledge they have of these parts; of which none before had written: nor since have there Baters.

#### The Ship-wracke of Master PIERO QVIRINO, described by CHRI-STOFORO FIORAVANTI, and NICOLO DI MI-CHIEL\*, who were present there : beere contracted.

T semeth to bee a convenient dutie to make a memoriall, and not suffer to bee buryed in obli- in Remuse, 1 uion, that most lamentable, and cruell Voyage full of innumerable and extreame miseries, Tem 2. Out of which befell a Venetian Ship, wherein wee carryed about feuen hundred Buttes of Wine, Spices, heere added Cottons, and other Merchandiles of great value, furnished in Candia with threescore and eight diversannotamen, to goe towards the \* West. The Master whereof was Master Piero Qunmi, a Venetian tion Gentleman, in the yeare 1431. Who after many troubles ", misfortunes, and wants befalne "The Italians him, after his departure from Candia towards the West, on the fixth of November, in the fore- call the fayling faid yeere of the Lord, by chance came into the mouth of the Channels of Flanders, and went into the Medi-60 farre beyond them, by a florme from the South, towards the North-west, about one hundred and Leuintoe fortie miles, running still upon the Iland of Vseni, where, by agreement, wee Christo. East; and ? foro Fioramanti, and Nicolo Michiel, fay, that at noone wee founded the bottome of the thence int cean, and these parts the Ponent or West. \* These are particularly related by Quirino the Patron or Owner. They lost their Rudder on a Rocke, not farre from Cales in Spaine, and were faine to make thither to repaire it and other diaft. is followed.

\* There is also the relation hereof by Dui rino hamicife. extant tooe. ther with this

Sea with the Lead, and found our felues in fine and fiftie fathome of water, and afterward toward the Euening wee founded, and found our felues in ninetic fathomes and more, but the fforme and turie of the windes was fo great, that it brake fine of the hinges off our rudder.

On the twelith, in the morning, the florme not ceasing, but increasing every houre more and more, beat vpon our weake rudder with fo great violence and furie, that it broke away all that held it, in such fort, that it hung on the one side, where, for the last remedie, wee fastened a great Cable vnto it, with the which, for three dayes wee drew it after vs, not being able to doe it otherwife, in which time in our judgement, wee thought wee had runne two hundred miles and

Afterward we tooke away the two Rudders, and with many pieces of Timber we made an other, which might rather be called a shadow then a true Rudder, and wee put it in his place to guide and direct the ship. But it could not endure longer, then tell the six and twentieth of Nonumber, when the violence of the Sea carried it all away : fothat then wee remayined deprined of all hope of government and direction. On the fourth of December, the furie of the winde grew to outragious againe, that it carried away all this third fayle, and to being spoyled and bereft of Sayle and Rudder, we went at adventure vntill the eight day, alwayes wandering, not knowing by any meanes how to prouide for our lafetie. Afterward the winde alwayes increasing from the East, and with so great violence and furie, that the Sea beganne to fwell so high, that the waues seemed Mountaynes, and farre greater then we had cuer seeme before, with the carknesse of the extreame long night, so that we seemed to goe in the bottomlesse 20 depth of Hell: whereby you may imagine how great the auguilhand trembling of our hearts was, because although we were living, yet at that inflant wee seemed to bee dead, expecting death euery houre, which we saw present : In this darknesse the Heaven was sometimes seene to open with the lightnings and fudden flashes of fire so bright, that they tooke away the fight of our eyes, And sometimes we seemed to touch the starres, the ship mounted so alore, and then againe we faw our felues buried in Hell, infomuch as being all afformshed, we had loft our firength and force. And being in this miferable cale we did nothing elfe, but with pittie behold one anothers& running with fo great violence for many houres, in the end a furge of the Sea came ouer the thip under the wind with such furie, that the water entred into it, filled it almost halfe full, whereby being now much weakened, it was readic to finke, and turned up the Keele, And fure 30 ly that was the last houre, and our end, and truly we had beene swallowed up of the Sea, if our Lord Islus Christ had not beene, who forfaketh not them that religiously call upon him, who put such power and strength into our afflicted minds, that seeing the ship in so dangerous a case, full of water, as it could not be cast out by any humaneforce, we determined to cut downe the mayne Mast, and cast it together with the mayne Yard and Tackling into the Sea, and so wee did, whereby the ship being disburdened, pauled awhile, and we then taking courage, beganne and whether the major state of the state of they agreed to make readie the Boat and the Sciuffe, with that lettle prouision of victuall which was remayning, equally parted. And the Patron laid, With your confent I command you Ni- 42 colo di Michiel the Notary, that you fet downe in a note the names of those that are willing to enter into the Schiffe and Boat : so prefently he gave him fortie five persons in a note, who were willing to enter into the Schiffe, which was capeable but of one and twentie men only, and therefore it was necessary to cast Lots who should goe therein ; and so it was done, and they prepared it, and fet it in order, and did the like to the Boate, into the which the Master They leave the with fortie feuen men entred. The one and twentie perions to whom the lot fell , entred the Schiffe, and a rate was given them according to the proportion of the victual which was remayning of Bisket, and also of Frifoppi, three hundred pound weight, of Cheefe of Candia eightie pounds, of dried Bacon eight pounds, of Tallow to trim their Schiffe fortie pounds, of Oyle about two pound waight and no more : but belides wee bestowed there 50 feuen Corrattells of Tyrian Wine, which is a kind of Matuafic, for the Pinnasse or Schiffe would hold no more. In like manner fortie seuen men, reckoning the Master, entred into the Boate or Pinnaffe, vnto whom rateably fell their proporcion of victuals, adding thereto a little Greene Ginger in Sirrope, and Sirrope of Limons, with some small quantitie of Spices, which wee had taken. We were (in our judgement) distant from the neerest lland or Land about fine hundred miles or more, from the point of Land to Lee-ward of the North part, and we fayled with these Conserves in a quiet and calme Sea, that little time of the day together with our one and twentiecompanions, comforting our felues in that which we had feene the beginning of fo faire

a fortune. But when the night came, a darke mitt rofe, which was a token of the euill successe and end, which our companions of the Schiffe were to have, of whom we had now loft the fight, so that we never faw them any more. The ninteenth day, the morning appearing, and not feeing any token of the Schiffe, it made vs suspitious of their death, whereupon our mindes were much troubled, doubting what might befall them, because the windes raged in such manner, that a wave of the Sea mounted with the

great violence into the Pinnafle, behinde the Poope, where wee Christopher and Nacholm were let downe, that through the force of the furie thereof, two flayes were battered and bent, which left a token of vnlupportable trouble and griefe, by meanes that the Pinnasse was more charged with the weight of the water, then with her owne burthen. Wherefore to remedie it, wee ranne all to lade it out with our hands, and being confirmined through feare and necessitie, for the freeing of her, wee were faine to cast out all that, whether with water or without, which came most fie and ready to our hands. The Pinnaffe becomming drie againe, prefencly in this storme, wee agreed to cast ouer-boord the greatest part of the Wine, and wee found our selves in fo great extremitie, that if wee would tafte thereof to comfort our troubled lenfes, no more then one gob-To let of Wine apeece fell to every mans share for the whole day; and who so would drinke more;

was confray ned to take the Sea-water : and this measure and quantitie of Wine held out eight dayes, and no more. And after ward being dricento greater necessitie, wee brought our selves to a greater extremistie, by reftraguing our proportion to halfe a goblet a day, and hone of ve could iccurrely fleepe,

for the divers doubts and dangers, wherein wee alwayes prefently flood. Wee continued energy day and night, foure or fixe of vsacthe Helme; and those that were at the Pumpe; flood alwayes from and voright changing their couries, where wee endured cold beyond comparison faste Great Frollies. greater then that, which not many yeeres ance was in Finder, when all the Channels were fro- Venice zen, fo that from Margara to Venice, not onely Men and Women, but Oxen, Horfes, Carts,

20 and Waggons, went ouer voon the Ice in great multitudes, to the admiration of all the people, because that Region is (without comparison) much colder then the Countrey of Italy. Now consider what our case was, being without Clothes to court valand not having any thing to eate, or drinke, or other necessary ching for the maintenance of mans life, except a few Frifoppi which were left, and the nights one and twentie hours long, and Hodarke. Through the which cold, Exgrams cold wee began to lofe the feeling of our feete, and by livele and little, elecold becomming more vehement, possessed the whole body, procuring a dogged and waking appetite and hunger, so that every one long to redecours that which was his to a context, and what lieses the had next at hand, wherefoener hee could finde it, as well as hee mighe, with that weake and little ffrength which hee had remay ning. Afterward, death feating vpon them, you might fee them fhake the 30 head, and fall downe preferrely dead.

In the which Difeafes, of feuen and fortie men (which wee found in that eafe) fixe and ewen. The death of tie yeelded up the ghoft, and it was not any wonder, confidering wee could not have any fulc- fix and twee cour, may, it is a distince miracle that any one remayind alies. And thole few of we that are re-tie, mayning, live onely to commend to memorie, and highly to exalt the great power of God. Those fixe and twentie dyed, from the three and twentieth of Becamber with the fifth of fanuity, now one, now two, and fometimes more, in one day, whom we buryed in the Sea.

Theone and thirtieth of December, our Wine being wholly spent, and having seene the cruell and lamentable experience of our fixe and twencie Cohipanions, who died with drinking of the Sea-water, necessities gaue vs a good stomacke, that is to say, to take our owne water to 40 quench our thinft. Now, there were some of the companier seedingly troubled with giddinesse: Great thirst. for, wanting the abundant plentie of Wine, they were not the to indure thirlt, nor to expell it, but they accounted it a great fauour to bee able to obtayen of their companions, whereof there were some who denyed it to their denost friend; tolkere te to etientiglues. It is true, elus some of vs warily mortified it, by mingling a little simbe of greent Ginger; or Limone therewith, which by chance we had remayning During this time, whill the fifth of Ianuary, we were

every house more accustomed to greater extremities. 11: 21 The third of January, 1421, wee had fight of the first Land, which game we great hope, al- Sight of Land; though it so fell out, that it was very farredistant, whose wee law certayne Rockes towerherward conered to the top with infinite heaper of Snow, so the which the winder being ton so trary, we were not able to approach with the faylor, and munit lefter with Dares, because

our armes were exceedingly weakened a wherefore wer think to come heere them with the winde, but passing beyond them through the ourrent of the weter, wee lost fight of them altogether. And after difficult escape from the Rockes, fayling forward towards a very high Rocke, wee

had fight of a Valley icitrated betweene the two next Mountaynes, into the which defiring to enter about the fourth hours of the night; the cruell and outing out windes would not fuffer vs. Notwithstanding, inflamed through an exceeding great defire to got on Land, wee tooks cons rage and firength, and (through force of the Qures, and the kelpe of God) entred into the layd Valley, at a point of Land in the leaft doubtfull and dangerous place, as it were at the vary bea 60 ginning and entrie thereof, in the which as frome as they perceined the Pinnaffe to touch wpon Hor from for

the fand, fine of our companie being more defirous of drinke, then of any other refreshing and recreation, leaped into the water without any regard, althought it were very deepe, and went qualidanker their way toward the Snow, and to glurred themselves therewith, that it was an incredible

thing. And afterward, they brought a great quantitie thereof vato vs, who remayned in the Pinnsife, to defend it from the beating of the Sea, of the which wee also with great greedinesse. received without meafure.

And sunning according to our judgement, as wee had runne in this Pinnaffe for eighteene dayes, from the day that weedeparted from the ship, votill this fixth of Ianuarie, sayling alwayes betweene the North-east and the East, and not with leffe winde then after fixe miles an houre, wee had runne about two thousand fine hundred miles and more, without ener feeing any Land.

On the fixth of Ianuary, at the time of the folemne day of the Epiphane, nineteene of vs went on land in this desolate and drie place, called the Hand of the Sames, in the Coaft of Names, 10 fubicet to the Crowne of Democres, leaving two other to looke to the weake Pinnafe, that it might not bee broken with the beating of the Sea. And being landed there by meanes of an Oare, we endeauoured to kindle fire, and with a tynder boxe and fleele to firike fire, wee retired is his Map of our felues into the closest place from the winde, and at the fight of the fire, nature thereby receiued a little ffrength.

Finding this Hand not inhabited, and feeking to goe in the Pinnaffe to another Hand five miles and Ruftere in off, shee so leaked, that part of vs landing, as it were all in the water, and some of vs vp to the 74.degrees, but middle in shallower water, wee strong to draw her on land, and despairing to bee ener able to goe in her againe, wee determined to fit her in such fort, that shee might ferue our turne to couer vs. after the best manner that wee could. Wee broake her into two parts : and of the greater 20 wee made a shelter, or Cottage for thirteene of vs, and of the lesser a shedde, capable of size men, under the which wee entred couring them with part of our fayles, and with the reft, and the cordage of the tayd Pinnaffe, wee made continual fire to preferue our lines.

Now being veterly destitute of all sustenance of meate and drinke, wee went wandring vpon the Sez shoare, where Nature gaue vs food to maintayne life, with certrine Perewinckles or Shel-fifth and Barnacles. And of thefe, not as many nor when wee would, but in very fmall quantitie. And remotting the Snow in some places, wee found a certayne Herbe, which together with the Snow wee cast into the Caldron, and when wee thought it was boyled, wee cate not. This is off it. Nor could wee fatisfie our felues therewish, and thus wee lined for thirteene dayes together, with small charitie amongst vs, by reason of the great scarcitie of all thinges and extreame famine, leading rather a brutish life, then the life of men.

Continuing in this rude and homely kinde of life, it happened, that through the intollerable wants foure of our companions of the greater retiring place, failed even where the affiicted Mafter was, with those remedies and flender comforts for their foules and bodies : fo that you may thinke their bodies remayning opere vato ve, who being very weake had loft all our firength, wee were not able to remous them two yardes out of fight : and yet I will fav Foure dyc and more, that wee had no fooner taken the frozen or wasse water in our mouthes, but prefently Nature of it felfe cast it wp againe, wee not beeing able to abstaine from it, nor almost to stand

The cold fession of the yeers had brought we to such necessitie, that ( to warme vs) wee food 40 close thronged, in such fore, that wer feemed (as it were ) to bee fewed together. Wherefore I entred under the fayles, which coursed both our Cottages round about downe to the ground, the franke not being able to iffue foorth, which proceeded (as I thinke) from the Pitch which was within certaine peeces of the Pinnesse, which we burned, so that our eyes were swolne that Milerable cold wee could not fee : neuerthelesse wee indured all, that wee might bee warme. And our garments which wee neuer put off, were full of vermine, and the Lice fwarmed in fuch number. that taking them from our backen, wee cast them by whole handfuls into the fire, and they had entred into the field in such manner through the skinne, even to the bones, that finally they Abundance of brought a young man of our company (that was a Notarie) even write death, so that hee was Lice.

A thing of most manifest example, to abase and abate our pride, and hought inesse of minde.

Now concord fayling smong vs, cuery one vied his owne proper adule, whereupon part of our companie wandring through the Sourge and va-inhabited place, came to the knowledge of a folitarie and ancient settring place made by the Shepherds beretofore, for the time of their abode, and it was feated on the highest part of the Coast of the fayd Hand towards the West, distant from ours about a mile and a halfe. Vnto the which, fixe of the companie of the number of those eight, which were found in that first and greater retiring place, determined to remouse themselves to that new-found solutarie habitation, for their less inconvenience leaning the other two, their other companions alone, in an abandoned and forfaken place, as well because they were not able to smuell, as also for that wee were altogether viable to conduct them.

It came to passe, that those sime through the gracious goodnesse and gift of God, found an exceeding great Fift, to the which I know not what name to give, whether Whale, or Por

Great weake-

CHAP. 18. Hunger good fance. Ilands of Saints and Rustene.

piffe of the Sea, which were are to thinke was fent from the Diuine and excellent bountie to feed vs. And confidering that wee faw it call up by the Sea upon the shoare, shead, fresh, good and great, and at the time of our io great necessitie, wee rendred thankes vnto our most gracious Lord God, who at that time would fuffayne our fo weake and dileafed bodiesa with that foode, appealed peraduenture through the prayers of some vigilant and denone foule.

With this Fifh, wee fedde our felues for nine dayes fufficiently. And as it happened those very nine dayes were foremp: fluous with windes, rayne and fnow, that by no meanes the cruell

forme would have fuffered vs to goe one pace out of our Cottage.

The miraculous Fith being ipent, the furious tempelt was fomewhat affwaged, wherefore not having wherewith to maintayne life, like Wolves that oppressed with famine, goe to feeke out other places of abode, wee arose out of the Cottage, and went wandring through the delete Rockes to finde any succour to sustayne our life with Perewinckles of the Sea and Barnacles; with the which were were of necessitie to bee contented, although they were very little thinges, and so wee maintayned our selues vntill the last of lanuary, 1431. 1432 in Fe. and therefore were were leane, pale, afflicted, and but halfe aline. In which time raine accounts finding certayne dung of Oxen foorched and dryed with the cold and winde, (whereof wee gathered every day to make a fire) wee certainely knew that place to bee frequented by Oxa en : which thing gaue vsallured hope of some good end, and through this perswation wee indu-

20 red part of our grieuous cares and forrowes. In the end the houre came, wherein our benigne Creator and most gracious Lord, purposed to conduct his little flocke fo much afflicted, into the Hauen of their fafetie : and it was in this manner. Two young Heifers of a Fisher-man neere vnto this Iland within fine miles, beeing IleofRakmi firayed the former yeere from the place where hee vied to dwell, and neuer understanding any newes of them within the yeere, nor having any hope to finde them againe, on the very first day of February, 1421, at night, one of the Sonnes of the Said Fisher-man of Rustene ( for to the faid Hand was called) being of the age of fixteene yeeres, dreamed that certainly the two Heifers were escaped, and gone up to the lland of Saines distant from them, where wee were lodged, at the point of the Well part, vpon the which no man durft ever goe at the low 30 water. Whereupon the Sonne who had fuch a vision or dreame, prayed the Father, and an

elder Brother of his, that they would accompany him to goe to feeke them. And fo, all three in a Fisher-boate tooke their way towards the fayd lland, and came to the point where wee were, and the find young men landing there, left their Father to looke to the Boate, and having ascended a little voon the Cliffe, they saw a smoake arise in the ayre, from their retiring place which they had formerly vied. Whereupon through feare and aftonishment they maruelled, and that not a little, how, whence, and by what meanes it might come to passe. Wherefore, they stood a long time much amazed. And desiring to know the cause, they began to talke one with another. And although wee perceived the novie, and heard the voyce; yet wee could not conceine whence it should bee, but rather indged it to 40 bee the crying of Crowes, then the voyce of men. And wee were the rather induced there-

unto, because some few dayes before, wee had seene (vpon the miserable Carkasses of our eight companions cast to the winde) multitudes of Crowes, that rene the ayre with their crokings feeding themselves voon them : whereupon wee thought it could bee no other.

But continuing from good to better, the voyces of the children of God fent to faue vs. wee cleerely perceined that they were the voyces of Men, and not the crying of Fowles. And at that instant Christophore Fioramanti arose out of the Cottage, and seeing the two young striplings, crying with a loude voyce came towards vs, saying, Reioyce, behold two come to feeke vs. Whereupon, inflamed with an earnest desire, wee rayled our selues on our feete, going rather with the heart then with the feete, and drawing neers vnto them, wee perceived that through the fudden and extreame strangenesses of the matter, they were afraid, and their countenances began to waxe pale. But contrarily wee cheered our felues, and being comforted with an affired hope, thewed with actions and gettures of humilitie, that wee came not to offend them in any wife. Divers thoughts came in our mindes, whether wee should detaine one of them or both, or whether one or two of vs should goe with them. The first decomination was against vs, because weeknew not with whom, nor with how many wee had to doe, for that wee understood not them, nor they ws,

But being aduised by the holy Ghost, wee went downe to their Boate, in the best and most amiable manner that wee could, where the Father was, who expedied them : and when he saw vs, hee also remayned aftonished and amazed. In this meane space, wee looked whether there 6c were any thing in their Boate to fuccour our necessities, to maintayne life : but wee found nothing there. So, they moved through pitie, feeing ws affamished, by fignes and actions which wee made vnto them, were contented to carrie with them Ghirardo da Lione, a Sewer, and Cola di Otranto, a Marriner, who had some kritowledge, and were able to speake the French and the high Dutch, leaving vs in great hope of present safetie and helpe.

Thei:

Their Boate comming to Ruftens with our two companions, all the people flocked together, and feeing the countenance and habite of our companions, aftonished at so great and strange a matter, they demanded among them felues, whence, & how such like fellower as these appeared, or from what place they landed : and that they might be the better advertised, they attempted to speake vnto them in divers Languages, but in the end an Almaine Prieft of the Order of the Preachers, spake with one of the said companions in the high Dusce, and by that meanes, they were certified what wee were, from whence, and how wee had arrived there. The which matter the morning following, which was the second day of Februarie dedicated to the glorious Mother of Christ, the faid Priest published to all the people of Rustene, exhorting them, that through our misfortune, they would bee mooued to pitie and to helpe vs, according to to

In this meane space, through the Catholike remembrance of the Almaine Priest, on the third day of February, 1431. at the very instant of the day of Saint Biagio, the curteous and pittiful Inhabitants of Ruffene came vnto vs with great plentie of all fustenance, which they vie for their prouifion, to feed vs and preferne vs, being defirous to conduct vs to their kinde habitations, torefresh our weake bodies. And so wee were guided and received into Rustene vpon the saydday, where wee had great reftoratives, which were rather hurtfull for vs, through the exceeding abundance thereof, because wee could never satisfie our selues with eating, and our weake stomackes not being able to indure it, it made our hearts to grieve, so that wee thought wee

There were remayning in the first and greater of our two retiring places, two of the companie which were impotent and weake, who knew nothing of this our so miraculous succour. Wherefore giving these Catholike Countrey people notice of them, and likewise of the other eight that were dead and unburied, affembling themselues together, they went with the Priest linging Pialmes and Hymnes, as well to burie those eight that were dead, as to conduct to the Hauen of safetie the two that were remayning behinde, and arriving at the Iland of Saints, they performed a worke of mercy to the eight that were dead, to the which number, one of the two remayning was added, whom they found dead. Now imagine, how the other could continue being deprined of companie and all humaine fuftenance, and yet hee was brought to Reftene with some little shew of life, where, at the end of two dayes hee departed this tran- 30

Eleuen of vs being come to Rustew, wee landed and went into the house of our Guide, Hoft, and Lord, as hee and the rest desired, whereinto our most prudent Master, Master Piero Quirini entring, ving his wisedome and discretion, performed an action of exceeding great humilitie, as foone as hee faw the companion of our Conductor and Sergeant Major, declaring by femblance that hee would acknowledge her to bee the Mistresse of the house, hee cast himselfe downeat her feet; but shee refused and listed him vp from the ground, embracing him and bringing him to the fire, and with her owne hand gave him somewhat to eate.

In this Iland there are twelue little Houses, with about one hundred and twentie persons, for Rushese descrit the most part Fishermen, and they are by nature indued with understanding to know how to 40 make Boates, Buckets, Tunnes, Baskets, Nets of all forts, and every other thing necessarie for their vse and trade. And they are very curteous one toward another and serviceable, desirous to please rather for loue, then for hope of any gift or good turne to bee done them againe. Fishes called Stock-fifth, in all their payments and battering, are vied in itead of coyned money, and they are all as it were of one bignesse and measure, of the which every yeere they drie an infinite flead of many number in the winde : and in the time of May fraight themselves with them, carrying them through the Realmes of Denmarke, that is to fay, Sweden, Denmarke, and Norway, being all Subsect to the King of Dacia: where they barter and exchange the faid Fifh, for Leather, Cloathes, Iron, Pulse and other things, whereof they have scarcitie.

Few other things for maintenance of life are found there, except Fifth, yet at certaine times, 50 they have some small quantitie of Beefe, and Milke of Kine, of the which, with Rice, and I know not what other mixture, they make Bread of a naughtie taffe. Their Drinke is fowre Milke, displeasing vnto them, who have not beene accustomed thereunto. They vie also Ale, that is to fay, Wine drawne out of Rie. Wee eate of the Plaice or Halibut fifth, which are exceeding great, so that you would not beleeve it. Wee saw some of them somewhat longer then sixe seete of the common Venetian mealure, about two foote broad vpon the Chine, and more then three quarters of a foote in thicknesse: a wonderfull thing to bee spoken. They cloath the men with redde Hides, and likewise blacke, able to defend them from the water, and they vse cloathes very course, of azure, redde, and ash-colour, brought from Demmarke, of small price and

Their drinke Halibus very

> These Countrey people vie much to frequent the Church, because they are very denout, and yeeld great reuerence to the worship and service of God. Avarice, is as it were altogether extinguished, for, they understand not in any fort, nor know not what thing of anothers may become theirs, but by barter : and therefore they vie not to locke Doore, House, nor Win

dowes, nor any Cheft for feare to bee robbed, but onely by reason of the wilde Beafts.

The Inhabitants of this place both young and old, are of fo great simplicitie of heart, and o. Simplicitie. bedient to the Commandement of God, that they neither understand, know, nor imagine in any Thus the Ital wife, what Fornication, or Adulterie may bee : but vie Marriage according to Gods Commaning regard of dement. And to give you a true proofe hereof I Christophere fay, that we were in the house of their differing our forefaid Hoft, and flept in one and the fame Cottage, " where hee also and his Wite flept, icaloufie, and successfuely in one Bed neere adjoyning, were their Daughters and Sonnes of ripe age toge- which searly ther, neere to the which Beds we also slepe, almost close adjoyning to them : fo that when they Permits the went to fleepe, or when they arole, or when they firipped themlelnes naked, and wee in like or Brother to

to manner, we indifferently faw one another, and yet with that puritie, as it wee had beene little fleepevader children. But I will tell you more, that for two dayes together, out faid Hoft, with his elder the lame roofe Sonnes arole to goe a filling, even at the time of the most delightfull houre of scepe, leaving his with the Mo-Wife and Daughters in the Bed, with that securitie and puritie, as if he had properly left them in Quiria. in the armes and embracements of the Mother, not returning to his home in leffe time then the laith in the fpace of eight houres.

The Inhabitants of this Hand, especially the elder fort, are found so wnited in their wils to be, their hou-

the will of God, that in every casualtie of naturall death, which befalleth Father, Mother, of timber in Husband, Wife, Children, or whatforger other Kinfman, or Friend, when the houre of their round forme paffage vinto another life appeareth, preferrely without any griefe of heart and complaining, they with one light an affemble themselves together vnto the Cathedrall Church, to thanke and prayle the Heavenly in the top, Creator, who hath permitted such an one to line so many yeeres, and at that present, as his crea- which in winture vouchfafed to call him, or her into his gracious fauour, and neere voto him : and at the appointed house they cause them to be washed cleane, to have them pure and neate, as they were portable cold borne. Whereupon rejaycing and contenting themselves with his infallible will and pleasure, is covered they give him prayle and glorie, not shewing any passion either in words or gestures, as if proper- with shinnes of ly they had but flept. Surely we may fay, that from the third of February 1431. vntill the four-which cast a teenth of May 1422, which amounteth to an hundred dayes and one, we were within the circuit of Paradile, to the reproch and shame of the Countries of Italie.

There at the beginning of May we saw great varietie and alteration. First, their women vie dren after 30 to goe voto the Bathes, which are very neare and commodious, as well for puritie, as for the foure dairsold cuitome they obserue, which they hold agreeable vnto Nature : they vie to some forth of their the same for houses starke naked, as they came out of their Mothers wombe, going without any regard to the snow to fall their way, carrying only in their right hand an heape of graffe, in manner of a broome, as they on them, that fay, to rub the tweat from their backe, and the left hand they hold voon their hip, for eading it they may bee as it were for a shadow to couer their hinder parts, that they should not much appeare : where hardned for the cold. having twice seene them, we passed away by them, as easily as their owne people, the Countrey From the fire was fo cold, and the continual feeing of them, that it caused vs to make no account thereof. On of Febr. to the the contrary part, these very women were seene on the Sunday to enter into the Church in long 14-of May, it and comely Garments. And that they might not by any meanes be seene in the face, they we are almost alway. 40 on their head a thing like a compleat Motion with a Gorget, which hath an hole to fee through figurements are at the end, like the hole of a Pipe, through the which they behold within that, no further off of courie half from their eyes then the hole is long, so that they feeme to have it in their mouthes to pipe : and of London, &c. worse then that, they can neither see nor speake, volesse they turne themselves a yard or more, more then of from the hearer. I thought good to note these two extreame varieties, as worthy to bee vn. Eunerall. derstood.

From the twentieth of Nonember, vntill the twentieth of February, the night continueth Long nig and lasteth there about one and twentie houres or more, the Moon neuer wholly hiding her bodie Quaino laith, or her rayes at leaft. And from the twentieth of May vntill the twentieth of August, either the months night whole Sunne is alwayes feene, or elie his beames never faile.

In this Countrey there is infinite plentic of white Birds, in their Language called Mazi, but behe of the we called them Cockes of the Sea, which by nature connerfe, and willingly abide where men Moone: and inhabit, whether they find them in Barkes or on the Land. And they are fo domesticall and three others tame as House-doues are with vs.

In this Iland, and in the Countries of Succia, we saw very white skins of Beares as white light at leaft of as Armelins, much longer then twelue Venerian feete. Wee abode in Ruftene three moneths and the Sunne, eleuen dayes, expecting a fit time to paffe with our Hoft into Sueden , with his viual fraight of Brids, Mari. Stock-fish, which is in the time of May, when these Countrey people depart, carrying with They returned them infinite plentie thereof through the Realmes of the aforefaid King of Dacia.

On the fourteenth day of May 1432. came the houre fo much defired, to turne our faces to-60 wards our amiable and beloued Countrey, as our minde and defire alwayes was, and leave the charitable place of Rustene, which was the last succour and refreshing to our miseries. So wee tooke our leave of our Domesticall friends of the House, and of our Mistresse and Hostesse, to whom in token of our loue we left, not that whereunto we were in dutie bound, but what wee had remayning ; and that was certayne small trifling things of little value in our opinion, as

great laftre.

no fate cnamers, rowing more commenced by the from Railens, wee found certaine Relikes of 10 the plankes and ribs of our Skiffe, whereby we plainly knew, that our companions which were in it, were perished and drowned, the first night that they departed from vs. The nine and twentieth of May 1432, we arrived with the faid Barke at Trondon, vpon the

Tronden. Saint Olans.

Coaft of Normey, the Princely Seate of the King of Denmarke, where the Honourable bodie of glorious Saint Olaus resteth. There wee stayed ten dayes to waite for passage, and a fit time for our Voyage: but not finding it, because we would lose no more time; wee tooke leane of our beloued Hoft, his Sonnes and the reft, to proceed on our journey by Land.

Vollina.

The ninth of June we departed from Trondon, travelling on foot, going towards Vastena, aplace Subject to the King of Demmarke, within the Province of Sweden, where the check-bone and part of the bone of the head of Saint Bridges remayneth. Being there, wee understood by the Pene 20 tians, that the Inhabitants for the reurrence of their glorious King Saint Olam, vinto whom (as they well knew) our Signierie of Venice did great fauour in his going and returning from his Voyage to Hierufalem, were disposed with deeds to provide for vs by their counsell, helpe and money. And firit, they aduised vs not to goe the direct way into Dacia, by reason of the dangers of wilde beafts, which might befall vs, but to addreffe our felues zo goe directly to Stiebins. borgi, to find out a valiant Venetian Knight called M. Gionan Franche, from whom wee should receue fauour and helpe in plentifull manner, for loue of our Countrey, although the way were thirtie dayes iourney, quite contrary to our direct way. On the eighteenth day we came to the Court of the faid Canallier CM. Gionan Francho, an Honourable Baron, and highly efteemed of the Crowne of Dacis, where (with great joy) we found our two straggling companions.

Venetica Knight.

The valorous Knight being now informed of our comming, with a cheereful countenance declared well vnto vs how great the loue of his Countrey was, and especially knowing the calamitie and penurie of vs his Countrey-men, and being eafily able to releeue it. And therefore he could not sufficiently satisfie himselfe in honouring, clothing and feeding vs, but gaue vs money for our necessities, and furnishing vs afterward with good Horfes, in his owne proper person, together with his only Sonne M. Maples, with an hundred and twentie Horles of his owne Seruants he accompanied vs many dayes journeyes through his Territories, trauelling alwayes at his owne charge. Afterward, vpon his limits and bounds wes tooke our leave to depart, thanking him with the most reuerent and kind speeches that possibly we could. Whereupon he being departed, left vs for our Guide, his faid sonne M. Maphee with twentie servants on Horie- 40 backe, who kept vs company vnto Vastena, the place from whence about fortie dayes before we had departed, vnto the which place, for the anoyding of two monethes trauell, wee were faine to returne : fo that on the thirtieth day of July wee entred into Vallera, where wee abode vntill the second of August, being alwayes accompanied, and our charges borne by the said

On the second of August, we tooke our leave of the foresaid M. Maphee, yeelding him such thankes as we could. And being departed from him wee went to Lodefe, where wee arrived the eleventh of the faid moneth; in which place we found two passages, the one for England, and the other for the Low Countries : and there we voluntarily divided our felues into two parts,

Quirine faith when he fee foot on Eng. med to bee Hell and te-Hee came to where a Benehim fixteene

The two and twentiech of August 1432. we Christophere Fiorausme, one of the Councell of 50 the vnfortunate ship, together with Girardo da Lione, the Sewer, and Nicolo di Michiel of Venice the Notarie, now Writer of this present Discourse, departed from the other eight of our companions, they going towards London and we to Venice, by the way of Rostoch', pretending to goe to Rome for a Pardon: and after many troubles and molefations, paffing over Mountaynes, Valleyes, Rivers, sometimes on foot, and sometimes on Horse-backe, through the helpe of the Omnipotent God, we came vnto our so much defired Countrey of Venice, on the twelfth of October, 1432. Safe and found, leaving the faid Grardo da Lion at Vafenech, who from thence went wnto his Countrey : and those that went into " England were these; Master Francesco Quirini, Sonne of Mafter Iacomo a Venetian Gentleman, being Merchant of the vnhappie ship. Matter Piero Gradenico, Sonne of Matter Andrea, of the age of eighteene yeeres, a young Mer- 60 chant, Bernardo da Cagbire, Pilot of the ship, whose Wife being young, aswellebrough the long don, where he delay of time passed, as for that it was many times certainly reported, that the said ship with all them that were therein, were in great dauger, and no token at all appearing to the contrary, moneths, &c. being adulfed more halfily, then you mature confideration, as is the manuer of needle women,

Lamberts per- Frieflanders, and the Inhabitants generally of those North-easterne parts, three Ships of whom, on of in the yeere 787. landed in the West parts, slew the Reene of Beerbtricke King of the West Sanons, and were by the Countrie people forced backe to their Ships. Ann, 795. 2 few Ships of them made the like affay in Sostland, and foone after fome of them entred Tynemouth Hauen, in the 60 North part of England, and returned with the spoyles of the Churches of Hereenes and Tyumouth. Mat. Welmings. This was in the yeere 800. Thirtie three yeeres after, in the reigne of Egbere, they were beaten at Danmeth, but spoyled Sheeper, with murthers and robberies, entring Thomes with thirtie fine

CHAP. 19. Danes fooyling, massacre, reuenge. Hocktide Canutus, S. Olauc.

fayle. The next yeere they preuailed in battell against King Egbert, and after that loyned with the Wellomen to inuade and destroy this Kingdome, but were both chased by the victorious power of the King ; and An. 836. another hoalt of them was beaten. Another Fleet of thirtie foure Ships landed at South-Hamton, An. 838. and flew Duke Ethelbelm: after which they proceeded with continuall incursions (two Hydras heads still succeeding, when any English Hercules had cut off one ) that it breeds horror to read or thinke of the spoyles, rapes, fires, murthers, barbarisme, heathenisme, desolation and defiruction, which they brought every where with them. And although Aifred, Edward, and Adelftane somewhat healed the Land of that pestilence; yet in Etheldreds time such a mortall relapse happened, that first he charged the people with an insupportable tribute of Danegelt, arifing to 48000, pounds yeerely ( euen after the account of those times) and Danegelt con-

Ao buying herewith nothing but perfidie on their part, and beggerly on his, by the aduice of one Ha. traued till Edna the Generall of his Armie, he wrote Letters to all places, that on Saint Brices day ( which is wardth: Conthe morrow after Saint Martins night, the Danes not having digested that drunken solemnitie 4. 1012. should be all massacred, which accordingly was effected on man, woman, and child, not sparing those which fled to the Altars. A few in London escaped, and caused Sweyne with a Danifo Army and unspeakable crueltie to repay that butcherie. Erbeldred fled with his wife and children into Normandie (the feed of a new Conquest) for that Swanus \* hauing made the sheepefold a shambles \* This Swanus, Normanate (the seed of a new Conquery in that Smann had and she had and she pheardlesse, proclaimed himselfe King of England, which Canatas or Canata and his two or Suene had and she pheardlesse, proclaimed himselfe King of England, which Canatas or Canatas and his two

fonnes, Harold and Hardioannes, held after him fome thirtie yeeres fpace.

And fuch was the Danifo tyranny, that every Dane was filled Lord Dane, and had at his commandement the wines, daughters, and the whole houshold where hee became. But after the death of Hardicanness, that title was turned into the reproachfull terms of Lurdane, and the day of his death " (as the Roman Fagalia ) was celebrated with open pastime and feathing in the " A 1042. freets, called Hockids or Hockids, as it England (then abblutely freed) made a mocke or Bostati have footne of her enemies. Cannins by treason of Endring Streams obtained the Kingdome, first as particularly as the complete of the complete forme of her enemies. Cannets by treaton of Easting Streens obtained the Kingdome, ner as partpublisficaner with Edmund Ironfide, and after his death the whole by other perfidie, flaying Easting brother
thing in the of King Edmand, and lending Edmands two lonnes, Edward and Edmand, to the King of Sweden firet the we to be there made away. But hee hating fuch cruelcie, fent them to Salomon King of Hangary to men alfolinbring vp, where Edmand dyed, and Edward married Agaiba daughter of Honry the Emperour, by dinginch, or bring up, where Edmana dyed, and Edmana married Against under the Emperiodicty whom hee had Adam Athling, and Margaret married to Malcolm King of Scots (the mother them to load 30 of Mand wife to Henry the first) and Christine a Nun.

Camutus dittiedet the Kingdome into foure parts, of which hee referued Welt Satonie to him- Ireday fort-felte, East England hee committed to Earle Tartill, Mercia to Duke Edvice, and Northimberland nicht after to Earle Erice. Soone after, he caused Duke Edrike (which treachetously had advanced him to the Crowne) to bee flaine, (a suft reward of treason ) and then bansshed Earle Tarkill and Earle Brike picking quarrell with them (weary of any stalking horses) the former of which was presently after his landing in Denmarke flain. And now did Canutus feeke to win the favour of the English by building and endowing Monasteries, making good Lawes, and marrying Emma the relict of King Ethelred. Thus having Demmarke by inheritance, and England by conquest & treachery, his ambition pext aimed at Sweden, where first he had the worse, but after compelled VIf and Esplaf the Kines of that Countrie to composition with him, Earle Godwin, the Generall of the English, pro-

uoking and animating the English to recouse their priftine glory, and by folid vertue to our come question see them, who had our come their new Lord, subole fortune had subjected the English. Thus Come den. 4.1044. tus pressiled by Godwines policie and English valour, they by night without the Kings know-ledge, or affistance of the Danish Armie, assaulting and ouerthrowing the Smedens: hee, the next day, miffing the English, and fearing they had turned to the Enemy, till giving the onset with his Danes voon the forfaken Campe of the Enemy, he found there nothing but carkaffes and spoyle.

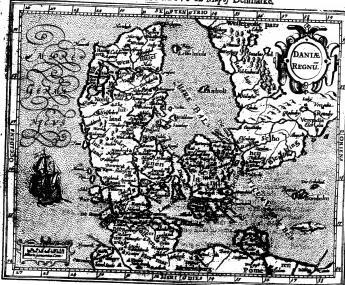

Anno 1027. having intelligence that the Norwegians contemned their King Olans for his Saint Clans fimplicitie, he fent great fammes of Gold and Silver to the Grandes of Norman, to corrupt them, and caused them to reject Olane, and to choose him for their King. For percerted with gifts they fent him word to come to them, whom he foodld find readie to entertayne him. An. 1028. he went with a fleet of fifty fayle to Norway, and expelled Olane, Subjecting that Kingdome to himselfe. Olane which had beene the King, Doctor, Preacher and Apostle of the Norwegians, (as Florileons ftileth him) the fonne of Harald King of Norway, was flayne, Anno 1030. and cruelly butchered by his treacherous Norwegians with an Axe or Hatchet, for difanulling their Pagan superstitions, and hee since is there superstitiously worshipped for a Saint, whom then trayteroufly they permitted not to reigne or breathe. The same yeere perished at Sea, or (as some fay) was flayne in one of the Orcades, Earle Hacun, whom Camerus fearing had banished in co-

6c lour of fending him Embaffadour. His greatnesse (having to wife his listers daughter) made him grow suspicious: And according to the deuotion of that time. Anno 1031. Canutas or Caute went to Rome on Pilgrimage, and there made magnificent Offerings, and obtayined divers Immunities of the Emperous and Pope, After his returne he inuaded the Scots, and ouercame King Malcolme with two other

Komifb Pileri-

Kings. He going from Rome to Denmarke, tent a Letter to his English Subjects thus beginning: Canstus Rex totius Auglia, & Danemercia, & Norreganorum, & partis Suamerum, Acthelinathe amige a proto Metropolitano & Alfrico Eboracensi Archiepiscopo omnibusque Episcopie & Primatibus & voti Anglorum genis, tam nobilibus quam plebeijs, salutem. ## HONDIVS bis Map of Denmarke.

Canatus before his death fet his Sonne Suams in possession of Norway, and Hardecametus his Sonne over the Danes. Harald and Hardecapatus divided England betwixt them after his death. Anno 1035 and Harald dying, Anno 1040, that quarrell was ended; and soone after, by the others death the Danish Empire in England; the small space of King Edward interceding that, and 60 another Conqueit of the Normans, detcended also of like Northerne, namely of Normegian Originall, Canutus his Daughter Cunilda was married to Henry the Emperour, and being accused of Adultery, against a Giantly Champion appeared in her defence a childish English Dwarsse which ferued her, who flue the Giant and presented his head to the Ladie, who thereupon disorced

herfelfe, and became a Nunne. Suesa King of Narray after fine yeares deceafed, and Countar his

ill gotten English and Normegian wings were quickly not only pulled but out of.

The English had occasion of further intusion to and from Narroys. For Samus decosing the Norwegians choic Mapus the Sonne of Saint Olear for their King; which when Hardece Histria Dan natus understood (as the Densel Storie fet forth by Erpold Lindonbruch testifieth) her numeded Normay with his English and Danish forces, where he and Magnus came to composition than the Suruiuour should enjoy both Kingdomes. When Hardesmase was dead, Sasse the Sonne of the Samuson means easy and Magnus King of Normey Sought with Samus to obtayne his coSecond Implimenanted Kingdome of Dommer's, and outcame him, Samu fied into Sweden, and there also Expedition intill the death of Magnus, after which he recovered his Danie's Scepten. Elevenium written than to improve Poneme from to King Edward the Confessor, intresting his side with a Natis against Adequate Earle Gedwire counfelled to lend fitte ships, but Earle Legisite and the people resisted; and Magnes with a great Nauie fought with Same, and expelled him his Kingdome, which here ifter recourred.

Harald Harnager the Sonne of Samuel King of Normay and Brother by the Mothers fide to Cameral and the state of the st mord death) insaded England with a great Nauis a of three hunding Sips, and discomfitted a Treath
20 the Earles Edwine and Moreor nears Torks; but fine dayes after Harald then King Conne of organism. Earle Godwin) flue his Brother Tosts and Harnagre at Sampwel Bridge, permitting his Sonne O-Lane to returne youn conditions to Norwey. But whiles he connected the spoyle to his owne prolass to returns upon comments to everythe the transfer of the transfer of the better le with priling per vic, he gain the dight to the English can a few days after in the battayle with priling Earle of Normandie, they were lefte zankous of his cause, where a new Norman period beganner from 187, to those Northerne quarrels having had no other end but this succession.

I shall not need to adde what sollowed (the Normes Acts in Italie, Paleiline and other places I have handled elle-where) little occurring of Mars, but Marcanio, of which I have by me wid for La. cest name namers enerwhere recomming to transpose to the Resigner of Hammor Hammer, the Ring 6.6.5.t. of Narmay, for mutuall Tufficke betwire both their fibigids. It is remarkable that the Northerne humour of fpoile, daughter and bloud continued whiles they were Pagans, and expired in manner with their Paganilme both in Namegian and Dance: as if God would first by them 30 punish the vices of those times, and withall conquer the Conquerours, with the Religion of the Note. punish the vices or those times, and withhis conquer true conquerous, with the Rengion of the conquered and by to fittingse a way being the Horetheant Whole dey this way of destroying to faluation. Since that time, the State of Normay, Mand and other parts hath decayed in stumbers of hipping, courage of man, and other measure of Earthby growneds. Somewhat we for Elifornius fake, I will adde of Manham Pan's an Englishmen his Voyage and the Constant of the Con

In the years 1947. Matthew Paris recorders, that can the day of Saint Olass, a famous Saint Ma.Parisp.981 in the Regions and Hands of Norway, Hanne was crowned King, and folemnely anointed at in the Kegnon and Mannar of Ayrang, reserve was a trouved a larg, and a resulting a mounter of Reggley the Billing of Sadies thin Legate (from the Pope) in their parts. For the horseur 40 whereof the faid King game the Pope 1 your, Markes feeting, beside it immalable Giffs which the Legate himselfe had; and see hundred Markes thy him externed (faith our Author) from the Pope the Church of that Kingdome. The King also receiming the Croffs for the Holy Land Expended in Control, obtayoed of the Pope the third part of the Ecolefiafticall Revenues of the Kingdome gave dere towards his charges. Which Lewis the French King knowing , writ in friendly termes to Ha- friends to all con, to beare him company in the faid Expedition offering him full power (in regard of his Sea Emglomes. skill) ouer his Nauie, and ouer the Fronce Army. This Letter was carried by our Authour Ma-offers. skill) our nis raune, and our ne rrows Army. I ms Lever was carried by our Authors & Mar-thors Fair, to whom King Eleon answered that he gass great thamber to that drouge King; but knew in part the nature of the Frameh. & as faith the Poot, Camuly, profiles Ampaisans subvive orit, and I say, Omney, Superior, Ampaires comfairs orit. May people as impositions in indifferent, and impazient of wrongs, which might occation irreparable change; and therefore it is fearer for 9 each to goe by himselfe. But I have written to the King for quite passage therow his Country, and warminous as need remained. The Kinsa Antwers there and Leven Borness were all helps. and prouifions as need required. The Kings Answere thereto and Letten Patents were also deliuered to him by this our Author in this forme,

Ludonicus Dei gratia Françorum Ren., minerfe aminio & fidelibus fine, Ballierie, Miliaribus, & His Lette. Prepsjest, al ques prafentes litera permencina fabateno. When the King of Normey had read this (for hee is a diferent, and modest, and well learned man) hee rejoyced much, and was gratefull to the bearer, respecting him with Royall and M.Parhis veybountifull gifts. Thus writeth Matthew Paris of himselfe, and his employment. The cause of age to Navag. his going into Norway he further relateth, that King (mito (or Cammins ) having founded a fa- John Abbie.

Monkes igno-

runt of their owne order.

mous Monastery of Saint Bennet, of Holm in Norway Cof which title and order hee had founded another in England) is happened that the faid Abbie, with the appurtenances was almost ruined by an impious Abbat, who forfaking his Order, and flealing away privily the Seale of the Chapiter, either fold, or by forged writings fraudulently engaged almost all the possessions thereof. wherein hee had the Sacriff, the keeper of the Seale, his copattner, both in this fugitive apoffacie and treacherie. Heerespon the Archbishop of Nidrofia, in whose Diocesse the said Abbie was fituate, leifed the fame and the appurcenances into his hands, alledging that the Monkes had only the habite, but were altogether ignorant of Monastike order, and Saint Bennets rule, some of them also theenes and fugitines. The Monkes appealed to the Pope (which canfed the Archibishop to fulpend his proceedings) and the Prior recovering somewhat, and gathering together a summe of money, west to the Roman Court, where the Abbat had beene a little before, and intangled by writings the faid house in fine hundred markes; which caused the Prior to returne frustrate and full of griefe. But in his way, hearing that the faid Abbat was dead, in the Abby of Saint Alban in Selio ( in Norway ) he and the Conent made choice of an Abbat, and this Prior, with another Monke, and three hundred markes in mony, together with the Kings letter, being fent to Matthew Paris to take paines for their freedome, it was procured happily that the temporal ties of the faid house were freed from the Campines (the Popes Viurers) then refiding at London, within one yeeres space. But their Spiritualities were much maimed, they by bribes purchasing delayes, left the Archbishop should take possession of the Hand which wholly belonged to the Abby, and of it also, expelling the Monkes.

Now the Cardinall B thop of Sabine then comming Legate into Normay, the Monkes fought to him for fuccour, and hee counselled them to go and perition the Pope to provide them of an Instructor and Reformer, and he would write in their behalfe.

The Abbat therefore and Prior went with Letters from the King and Legate to the Pope, who gatte them leave to chuse any man of whatsoever Region or Monasterie to be their Influder. They answered the next day, that all the World had not Monkes of that Order living in more composed order then England, nor England any comparable by report, to Saint Albans: of which House they defired Marthew to be their Reformer, of whose wisdome and faithfulnes they had had experience; a man also almost familiar and friendly to their King, and able by his meanes to order the rebellions and varuly. Hereupon the Pope gaue them this Briefe to the Ab- 30 bat of Saint Albans.

Innocentius, &c. Dilecto Filio Abbati Santi Albani in Anglia Ordinis S. Beneditti, &c. Cum fient ex parte dilecti filij Abbatis Monasterij de Holm, Ordinie S. Benedicti Nistorsiensis Diocesis, fuit propositium corum nobis; idem Monasterium propter Pradecessorium suorum negigentiam, sit in bis qua ad Monasticum Ordinem periment desormations; nec innuniam in illis partibus aliquis qui statuta és observantia einsem Ordanis bene sciat: Nos ad supplicationem einsem Abbatis, discretionen tuam rogamus, attenius & bortamus per Apostolica tibi scriptamandentes, quaterus discitum siram Fratrem Mattheum Monachum tuum, que dicitur probata vita acreligionse experta, ad idem Monasserium ut dicham Abbatem & Monaches suos in regularibus disciplinas & flatutis que ad cundem ordinem pertinent, informet & informat, transmittere pro dinina & Apostolice sedis ac nostra renerentia non postponus. Dasmo Lugduni, &c. Hereto the Abbat obeying, and Matthew to his Abbat, the businesse luckily succeeded, and Monkerie both in that of Holio, and other Norwegian Monasteries

I might here shew 1 the great stirres which in the first Ages after the Conquest the Norme-

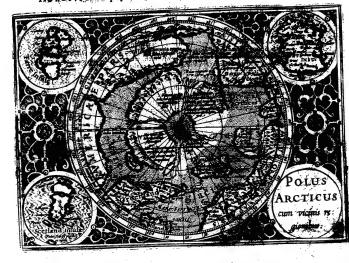

King Haralds

Ben; 4.

gians have caused in Ireland, Wales, Man, Anglesoy, the Hebrides, and Oreades : as also of Haraid (whom the Conquerour flue) his two fonnes and daughter fleeing to Snene King of Denmarke, who gave the daughter in Marriage to Ieruflaus, or Waldembrus King of Ruffe : and of Nicolas de Lynna, a Franciscan Frierand Mathematician of Oxford, before mentioned, of whom Jacobus Curren faith in his Journall that he learned of a Priest who had descended of those which King Arthur had left to people the Hands of Norway, Anno 1364, that in the yeare 1360, the faid Frier had come into those Hands, and proceeding further by Art Magicke, had described 50 a See pag. feq. those Agride parts(as the " Map presents) with fourt Whirl-pooles or In-draughts, Yea (as Master Frier of Lime. Des addeth) at the Northerne Hands, the Record whereof at his returne he gaue to the King of England the Booke being called lonentie fortunata or fortuna, concavering a description from fiftiefourg degrees to the Pole. I might also adde out of Thomas of Walfingham, the Trauels of House Earle of Darbie, (afterwards Henrie the Fourth, King of England) into Proffic and Lettow, or Lithuania, where by his helpe especially was taken Vilna the chiefe Citie (Shirpalle the King of Lettor, having fled thither for refuge) his Colours being first advanced on the walls, fourethousand flaine, of which the King of Polands Brother, and three thousand captived. Also T. of wedlick. I might adde the Voyage of Thomas of Maddfocke Duke of Glocefler, fonne to King Edward the Third, along the Coalts of Denmarke, Norway, and Scotland. Other Letters likewife of King Edward the Second to Haquin or Hacon, King of Namay in behalfe of English Merchants there arrested : with Entercourles betwirt the English and the Dutch Knights in Liefland. But hauing only briefe mentions of these, and them or the most of them recorded by Master Haklayts

industrie before, I doe here but Index-wife referre the Reader thither. I rather choose to give new things and rare : and fuch may feeme these Notes which Anno 1609. I writ from the mouth of Maiter George Barkeley.

# HONDIVE by Map of the Arctike Pole, or Northerne World.

## CHAP. XX.

A briefe Memorial of the great Tranells by Sea and Land, of Master GEORGE BARKLEY Merchant of London, in Europe, Afia, Africa, and America, and their Ilands.

Eing a childe, he was transported into the East Countries, and the first place of his landing was Schagen, from thence vnto Elfenore, a Towne as bigge as Brent. Schagen, where the Danifb Custome is taken; and where he hath scene at one time Elsenore. the Dane making flay of all thipping fourteene dayes, for oftentiation to a for-right Nobleman, futen hundred Gyle. From theuce to Coppenhagen, thence to Proposed the Coppenhagen and the Coppenhagen and the Coppenhagen theory is not the Coppenhagen that the Co Bornbolme, thence to Danske, a Towne fubject to the Pole, being in continual Danseit.

buildings, if by any meanes they may fortifie themselves against the Hilles over-looking the 60 Towne, a Rill running betweene, whence they have their fresh water they spare no time Sunday nor other. There lyeth here in the Sea by casting up of fands a long Iland called Frifta mering, where alongit, as on Samaiden , is gathered by the Danske Officers there, and here by the lewes, that farme it of the Pole, Amber, cast vp by the Sea in great abundance, pieces as bigge as Ambers a pecke, more or leffe. The Bores that find it and gather, have fo many firkins of fome other sale,

means commoditie and it they keepe and fell it, they dye for it. Hee hath feene one piece of Amber taken up, in the middeft whereof was to be feene through the transparent Ambera Frog in fimilitude and full proportion : (Mafter Vaffall, his brother, a friend of mone, told me of a piece of Timber in the ketle of alsay, where by occasion of a liner, one cutting none inches within the Timber and the Ketle of alsay, where by occasion of a liner, one cutting none inches within the Timber and the same of the same the next time. One here in his Net drew vp a company or heape of Swallowes as bigge as a bushell faffned by the legs and bills in one which being carried to their flowes, quickned and flew, and comming againe fuddenly in the cold Aire dyed-

From Danike he went to Marienberg, a Towns also standing on the Vitle, whereby it runne hin another channell, and betwikt both these makes an Hand wherein stands Nerdeich, which Iland is compafied with a wall to fortifie it against the comming downe of the Pattle in the Spring at the thaw of the snowes, &c. This wall feemeth in some places as high as Paules Steeple, and other-where as high as Paules Church, where yet it hath fometime beene ourrflowne : full it is of Hoffes and Villages belonging to the Lords of Danske,

Marienberg is a free Towne for Religion (Danke then profeshing only Lutheran) faue certayne Friers and Nunnes lining in Cloyiters closely. There a Lauber as when he preacheth must make an end at his houre, and then a lefuit preacheth to the Rom, Catholikes as long, the former Durch Enights both company, and Preacher being ausyded of himselfe, or by force. It was built by the Kreizeberne (Dei-parini milites) Knights of the Croffe, who having loft their footing in the Hely Land, by confent of the Empire affaulted and conquered Pruffia, being in this Conquest fixtie foure

# Hondivs his Map of Borvssia, or PRVSSIA.

yeeres, who after carried themselues so tyrannously, that the people yeelsded themselues to the Pule, and destroyed the Kreiztherms, saue those that made a head about the North parts, with

whom after some doubtfull fights, was made a league, that This Order should cease; Their Captayne should be married, and should have seventie two Townes in Profits, to him and his Heires Wales, and in defect of fuch Heires to returne to the Pole. His Townes are not adjoyned together, but the Poles Townes betwixt. Kinning fourge is the Dukes Court.

Thence he went to Elbing, a faire Towne, where our Trade is now for Flaxe, which was before at Danske, thence removed for their infolencies. Here our men only pay Custome : others are free, and this they did voluntarily, and have in this respect very much authoritie among ft

To the Lords there : the Towne ftill flourisheth with buildings, &cc. Thence he went to Branfperg, (the Poles Towne) where is a Colledge of Isluites : From this Branfperg. place to Kinning Berg, and thence to Libs in Carland, thence to Samaiden, and thence to Rica, or Rigue. Rie in Liefland alfo. (This Rica is voider the Pole) thence to Derpt, and thence to Remel. At Derpt he went to schoole three yeares : it is vnder the Pole. Limenia is exceedingly diffracted betwirt

HONDIVS bis Map of LIVONIA or LIEFLAND.

the Sweden, Ruffe, and Pole. King Stephen recovered part from the Ruffe, who before had partly 60 killed, and partly carried captine the Handicrafts men, in such desolate manner, that the Townes are ruinate, the stone walls of Houses and Churches standing with trees of great bignesse growing through their vncouered roofes; the Woods (whereof they have excellent flately) being ftrowed with bones of dead carkaffes; and himfelfe did once in one of those Woods eate Honey our of a Mans skull wherein a swarme of Bees were, and bred as it hanged on a Tree. Idolatry.

Marriage.

October.

The Momesfer are almost Salnadors, retaining still their old superstitions, as to worship the Sun, or the first Beast they meet with, and especially they have in religious reckoning their Dease. unjoy the first bear they piece without or the Greener, is a company of Trees, which it is religious to To Into winton they can be seen a Marin Telefor Dope, who breaking a bough was swelled a yeere together as big as his skinne would hold. Heere at Marriages and Burialis they pray, but years organic arong a sus same in thus. The man and his Bride are fet fireding on a Horis, and blinded; and to led into Se-leam, there taken downs and married by their Rites; then fer ypagaine, blinded as before, and conneyed with their company, and Mulicke to their house, singing Kojóku Kojóku Coniku. scamoha: there taken downe and had to bed, still blinded till the next mor-

They mourne when one is borne, reioyce and make merry at death. Their mourning (in Curland) is then, and when they walke alone, or fetch wood, Terow, peron peron, masculine base: the words themselves understand not, but thinke it to have remained fince that Babylongh Towre, 10 When the Momefes die, they are buried in their Leanes, with their knife vinder their arme, and their coate hanging over the grave. The Momefer are very ignorant, and aske who learne the Hares in the woods their prayers. At Rie the women have a thing of Red veluet on their heads, made like a Ship with the keele vpward, at each end a lock of hayre. The women of the Saes differ in their fashion of attire each City from other, a pleted Petti-

Hospitalitie,

core, with a damaske Vpper body, a veluet Square on their heads, and thereon a Cloke, &c. The maid vincouered, if the haue had a child and refute to goe couered, the is brought to the Pillory, her. haire cut off, and there nayled, and a Kerchiefe put on. Here and in Norway, and in White Kuffa, &c. strangers pay fighing for entertainment, but salute, six downe, and expect the Hosts expences. Their bed they mult bring with them, which is commonly a Beares skin, or elfe they there 30 haue a locke of straw. To offer money is a difgrace, which yet might seeme to arise of the basenesse of the coyne. Their houses are all of Timber beames laid square, and others laid on them in notches, fo till they come to the roofe, which they couer with flraw, divided in two roomes; the inner being the Parlour or floue, where they have as it were one Ouen over another: the middle hearth being of stones set grate-wife, the fire is put in on the Back-fide or Hal-side, & there also the Sinke ifficeth. Before that mouth in the Stone is set a vessell of water, which, when they will have the heat exceeding, they beformkle on those hor stones. A fire lasteth a day, at night they renew it. Sometimes the old Prufess on the borders of Curland, according to their old heathenish Rites do facrifice their Priest in fire.

Pribus.

Letta,

Vilna

From Derpt hee went to the Peibus, whereinto runne seventie two Riversmaking a great 40 Lake full of Fish. In the Perbus betweene Plaske and Name, the Ships (whereof are many, and Yome an hundred Tunne, with one Maft) are fowed together with Ofiers, having no from worker, called Boidacts. They goe to Markets in Sleds, where comming to a walled Towne, and wairing the opening of the Gates, the Sled is drawne in formetime, with his Mafter fitting a before starke dead with cold. Thence he went to Name, which runneth out of this Lake, where the River being twice fo bigge as the Thames, hath a fall a mile steepe on a Rocke. Here the Sweden (as is reported) made a Bridge ouer with the bodies of Ruffer, as the Ruffe had done before with his owne people about 40000, hence to Inanograd. These 40000, were onely bearded men slaine, &c. not women or children; these hee dashed by the heeles, the dryed braines whereof hee hach feene on the wals, &c. thefe all out of two Townes, Narwe and Iwano-50 grod. The Cattle of Imanograd is fo fortified, that it must bee thrice conquered before conquered, and built in a yeere, of Stone, which none elfe is in Ruffia. Hence hee went to Teraflane, where he and his companion were apprehended by the Ruffes, for travelling without licence, and as they came at any Towne, blinded, and after some feares sent thence into Letto, or Lithuania: passing through Woods full of Bears, Beares, &c. none hurtfull but en luxe, a kind of ounce or Cat-amountaine, with a tayle a handfull long, spotted, as big as a Dogge, in forme like a Cat, which would from off a tree leap on Trauellers and kill them. Here they came to the Weild or Vilna, the chiefe Citie where the old Dutcheffe a Calminift ( whom therefore they called the English Queen) kept her Court. Her two fons being fummoned to the Parliamene in Poland, went garded with 30000. Here they viually steale their wines; a man viewing one to his content comes with 60 his company to the place where the dwels, and lies in ambush till night when the comes forth to make water, and then they catch her, and on a Sled carry her away, &c. her friends not knowing what is become of her perhaps a moneth, and yet know what to suspect because of the custome. Their Churches are thin, and in the Villages they have a Croffe of Wood, with a Pentife, and a

HONDIVS bu Map of LITHVANIA.

CHAP.20.

Crucifixe, and there say they their prayers once perhaps in a quarter, having a Priest come to them, or they goe to him in their Church twenty miles off. They worship also a Snake , which they keepe vp in their houses, saying, they have reason for it, because it keepes their children: these Snakes goe often into the Woods, and thence returne, and before the fire vomit vp milke, which the men eate. Here they hunt the Vrochs, and other beaths. When the Lord will hunt, his Tenants or Slaues (as they are heere, and in Sweden, Poland, &cc. ) doe make fires in the Woods, Hunting, bringing the beafts into a corner, & there they affault them. From Valua he went to Grodno in the Maje, where are the best Poles fouldiers, & they are Roman Catholikes. From hence to Craconia. From thence to War Jonia, where is a Bridge (couered ouer with a Pentice, where toll is paid, twice to long as London Bridge) over Fiftula, which foone after he was passed over, brake, and there were drowned many Polongh Gentlemen that came thither to the Parliament at that time there To this Parliament came a Tartar to fue for his two daughters, taken captine by the Christians:

but not speeding he returned; and with him went our Author Master George Berkley, and stayed

60 ters, he would have bestowed one on him, &c. if he would have lived with him, and he faid he ne-

ner lived in all his lite fo pleafantly as with these Tariars. Hee returned into Poland againe. In

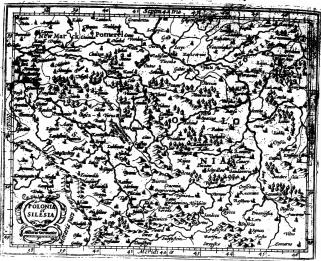

Poland all are Gentlemen and Slaues. Punifinable it is not for their Gentlemen to keepe Concu-

bines, whose children they bring up as their other, saue that they doe not inheric. There is

freedome of religion. So many Cranes feathers as they weare in their Hats, fo many Tartars or Hhh 3

with him fixe moneths. This Taxtar lived with his hord of about a thoufand housholds of a His going into kindred. They fowed a three square graine (Totarke) had cattle, hued a texle, enery day hunting; Tartria. these worshipped Mahomet. Their manner is to make sudden Inrodes on the Christians, and prey on them, who therefore are readie for such affaults : the Polonib Gentleman at dinner hauing his two Peeces by him, and his Seruing-men, which are Souldiers with their Peeces also, when the Christians make head against them, they cannot most what find them. They are refolute, and wil ride with their Bowes in face of a Peece, If this Tartar could have gotten his daugh-

HONDIVS his Map of POLONIA.

Two kes are holden to be flaine by them. No Townes very strong but Commension built within a Rocke, the light let in atholes. The Tarke went open it but could not win it.

The Polanders had a great murraine of beafts attributed to the lewes: two lewes comming to a 40 woman offered her mony for some of her milke, she answered, her child but then sucked, they left their glaffe there, promifing to fetch it anon and to fatisfie her; her husband meane while comming home and feeing so strange a thing as a glasse, asked from whence it came, and why ; being answered two lewes had left it there for milke for a medicine, bid her fleet Cowes milke and fill the glasse : which the lewes receiving, and having entertained a Boy, caused him to climbe up one of the Ladders which there stand together with their three square gallowes made of stone, with woodden rafters croffe, and to poure it into the mouth of one of the dead men(which there alway hang after execution) his mouth, who presently cryed like a beast, as the boy reuealed, and they thereupon cryed they were cofined : a murren followed which should have been a plague. Many lewes executed for it ; which yet the lewes faid to bee a pretence for their money. The sa Iewes that farmed the Custome at Samaiden in Carland, killed a Polonys Merchant without punishment, beating out his braines for delaying to open his packe. Hee returned out of Poland into Pruffia to Torne, the first place obtained by the Kreizberne, where they built a Castle about an Oake which standeth there still, but is dead. Thence along the Viftle (where the Poles have their Maks, &c. with wares three miles together tyed downe the streame) to Dantzike; thence into Pomerland farre more barren then Pruffia, to Caffubia, Cofilin, Colberg. Thence to Statim, every way exceeding pleafant and good. Thence to Refleck in Mackelberg. Thence to Labeck, a fairer Citie then Danske, fo to Oldfloe, to Hamberg, to Brome, to Limenberg, to Mansuelt, to Bamberg , and thence through Bohemia into Silefia, to Brefilaw, where hee went to schoole three yeeres : whence into Polonia againe, and thence to Pruff. Thence home into England.

Torne.

Hee went againe iuro Normey to Nilme, Bafme, &c. It is a barrenfoyle, as being nothing but Rockes and Valleyes: the Rockes are coursed with graffe, and the ground betweene they digge and fow with Corne, which yet is not able to farisfie the Country. The difference between the course with the country. The difference between the country to the difference between the country.

Gentlemen and Bore, is in his command; being otherwise, as raggedly apparrelled as hee, with twentie patches on his breech, and barefoot in winter.

To write pacines up in precent active the chiefe Citic. These now "under Dake Charlet, hold warre" "When he with their King, yet all chings passing vider himams, but so having the Polet, that chough of an-was there, other Nixton, neither the long attire, not there there Garb, or hooked Sword can pass, listing various mong the Bores for sufficient of being Polet and the rather because they were made believe that chie Pole was ayded against them by the Torser that were man-eater. They are strong in shipping and had guess the Dame the outershrow at the battle at Brundshun, had he not been safisted by the Lubreters with money, &c. One allo of whole Ships with a shot fired and blew up the Admittal of the Sweden. The Lubreters therefore pay no custome to the Dames, and for their

cofts hold Borabolas till they be litisfied out of the Reusen was thereof.

In Swedom (as in Firelland and other those Countries) the Lord holds the other his Tenants as Villaines and Slaues, and at his pleasure hips their Hories and Daughters to Roself, and there fells them; a bothell and halfe a Collose of Sair for a woman, which yet is of perfen and complexion very comely, and very able to doe works. He came againe to Legands; and thence to Funland, where hee was with an English Captains in a Cattle; and thence into Lissenis, and fo in-

to Ruffia, &c. Beides those his Easterne trauels, he hath bin in our neerer neighbor places, as in Belgies, France, mauells. Spaine, Portugal, de and paffed to the West ladies by the Hands of Cape Verd: in three of which S. S. Ant on Vincent, Lucie, the Inhabitants cannot profper nor live long, faue in those llands which yet are vnkind to other forrainers. He hath also beene in Guinea, in Barbary, in the Straits, at Caribage, where the old ruines remaine, and the stones of Marble, &c. worth the bringing home, in Italy, Slauonia, Morea, at Venice often, at Ferrara, Padua, Mat. Angele, thence to Fermo, Langue to Loretto (where he visited the Ladie of Loretto ) it is one street, walled about, the Temple faire. and in the Temple of our Ladies house, inscriptions innumerable of divers languages, affirming it to have fled the Turkes conquelts from Inry into Sclamonia, and from thence also hither. Here forfooth it was placed in a piece of ground belonging to two Brethren, which because of this new quest and request could not agree on the proprietie : and to amoyde further suite, in the night it was found remound to a vacant place by the high-way, and there this Temple built whither refort Pilgrimes in troopes, as to a Mart from divers Nations. The ftreet on one fide all Innes, on the other makers of Images, Beades, and such other holy bables heere sanctified by touch of Madonne.

The Temple is banged about with Monuments of ther exploits, vpon vowes consciued in diffrest of Warres, Diffeafes, &c. here hang the old Swords, &c. There are two Veffres of incredible wealth, and Priefs of diuers Nations for their proper Pilgrimes. The Houfe low and means builded with white Brickes, fuch as in Barbarse they burne in the Sun. There are two roomes, in one whereof the Chimney where the a effed hed meate, and her diffee, &c. In the other her felle, or flatue with a Childe, aloft of blacke colour: to whom one whole office it is, on a falfe like a Musket-reft doth lift vp Beades, &c. by her touch to bee hallowed. The Fronth Queene fent 40 her a Prefert to hang about her necke, which prefent would pull her in precess by the weight. It is round, two foot in diameter made like a Sunne, in the center a Carbuncle, the reft. fet with Diamonds, the rayes pointed with orient Pearles, the Brickes (miscoloufy) cannot be remoouch, to which end they report of a Bishops superflictious steale: who was not able to passe

Trauelling in diuers places of Italy, Rome, Sc. hee returned by the Alper, from Fenies to CMefre, thence to Treufe, to to Serasaile, a Towne of Blade-fmither, which with Wafer-workes grinde and hammer their Mettals: thence ty the Alper by a patings for marrow cut out of the Rocke, that fometime the Horfe hoofe hung ouer, it beeing a fleepe mile high, a Riuter running voder. Thus to Baffl, thence backer or Twoil.

After all ibefe transls in the fearts of Europe better known, and those others in the more unknowne, 
50 and in Africa and America, hee much offeiling the Vingimis befines and effectually that of Bermudal, 
went this hir to order publishe affirers. At adore all this (as you have beard) went in place of Cape 
Afrechants to the End Indress, and being Capeaine of the English House at Bantam, there analthence 
transled to his long home. This I thought goad to add to the former relations, which I received many 
yeers since from his owne sounts, being my loning and familian friend, and for a general Transler by 
Sea and Lond, in hote and odd Countries of the old and new world, not easily matchable. Had bee lined, 
I would have better perfected these solves, in the Deads less less them from the world his memory; I rather chusing to give the world tops of world his 
from the world his memory; I rather chusing to give the world tops of world where 
the notion to have them with him, or by resuming and ilsusfrating to make them name. The best illustration seems that of Mappers, some of which out of Hondiums I have added.

CHAP

CHAP. XXI.

Collections out of MARTIN BRONIOVIVS de Biezerfedea fent Am. balladour from STEPHEN King of Poland, to the Crim Tartar : Contagning a Description of Tartaria, or Chersonesus Taurica, and the Regions Subject to the Perecop or Crim Tartars, with their Customes primate and publike in Peace and Warre.

almost to Occacon. In the way are the Rivers Triftener, Berfad, Olfank, Sauran (whence they are called the Fields of Sauran) a stone Bridge and Bathe sometimes belonging to Vitoldius, Great Duke of Lestonania, ruines and graues, Sinanod Riveret, the strong rockie Ile Probite, a good re-Duke of Latheans, tumes and grants, someone and May and lune, vie there and in the other fuge for ours against the Tasters (the Breflavens in May and lune, vie there and in the other and with the Discost Constant Runs the creater and the Left. 20 many Ilands of Bogm to fish, armed with their Pieces) Certeina River the greater and the leffe. and that of Capeacles, and Hancocriens (the Tarter; call it (ham) and the Lake Berezania. That Long miles in Field is fiftie miles, or as they call it feuen dayes journey to a speedse traueller, from Braston to Oczacow. There are wilde Beafts, Bisonts, Elkes, Horles, Harts, Rammes with one horne, Goates, Swine, Beares : which ten yeeres fince were fayd to bee killed with the sharpnesse of the Winter, and huge heapes of their bones are found in the fields. They had also innumerable herds of Horses, Turkish and Tartarian; Kine and Sheepe which fedde there, by the bordemorie, Sharpe winter, rers of Russia, Volsinia, Kiew, Podolia, and Moldania, not long since destroyed. The hills called Mogili, are teltimonies of Burials and Warres. The Field is fertile, rich of pasture and pleasure.

those pares: Band in the reft of this

# HONDIVS bis Map of TAYRICA CHERSONESVS.

Passing ouer Prus or Hieras, a River of Moldania, you come to Stepanonetia or Iassi, chiefe Towne of Valachia; or righter to Pritum Technia, a Towne and Fort of the Turkes, not long fince Part of Mo da. Towns of Valactia; or righter to Pritim Teconia, a Towns and For to the Interspect to fine unit or the low-tortified on the Neffer; and there are found some Moldanian passages in the Neffer, right into er Valactia, calthe champaines. It diffufeth it felfe into the Lake Vidono or Obidono (to called, as some fabulou- led sometimes fly concerne of Omdam) and foone after difembokes into the Enrine Sea, ouer against Bialogrod Beffaribia. (named by the ancients Moncastrum) not long fince taken by the Turkes, from the Valachian or Like Vidowin Meldenine Princes, & holden by them. In the very mouth of Types or Neglet, bearing name of New Neglet, before my same start of the Neglet of Types of Neglet of the Neglet of New Neglet of Neglet of New Neglet of New Neglet of Neglet of Neglet of Neglet o phinfa on the left hand of the Rauer.

After followeth Beribonesses with deepe and large ditches neere the Sea, washed by the Lake Beribonesses where fometimes was a good Port. Advigeli hath three Ditches, many fait Lakes nigh the Sea, Advigeli. where many Cozak relort and often kill each other in mutuall warres and quarrels, which Damina berewhere many occur and occur and occur and can being in another water and quarters with rankes at terrible to Trauchers. Then follow Domnina Delnia, and the Lake Beremainia, and the Bay Careman. Strate placeth five hundred furlongs in the Sea, from the mouth of Tyras the Luca, Hand Leuca facred to Achilles.

Oceanous called antiently Olbia, Olbis, and Olbispolis, is feated on Borifbenes or the Carcenise Oceanide Bay ; fometimes builded by the Meletsens : the Tower is of Stone, the Towne but meane, is fub. iect to the Turkes. Borifthener or Neper; a deepe, wide and fwitt ftreame, runneth from the Boriffhener or North into the Bay, and neere to Ocaaconia into the Enxine. Fouremiles higher Bogm empties Belsi.

20 it felfe into Borifthenes. There the Turkes exact Cultomes. The Istomus betwint Borifthenes and The 12thmus. the Sea, is a dayes journey, over fandie plaines, with Hills, Lakes, Salt-pits; with Decres, Beares, Goates, wilde Swine well flored. It is extended to Perceptia aboue thirtie miles in length, con- Their hou'es taining Medowes, Rivers, and Tarrarian Cottages (which they call vinft) made of small pieces of and pastures wood, daubed with mud or myre and dung of beatts, and thatched with reed. The Tarters line progress. not in them in Summer and Autumne, but in April begin their progresse, with their wives, children, flaues, and houses which are round, covered with clothes, fearthy commodious for foure or fine men, carried on two-wheeled carts, with one or two Camels or Oxen, together with their houshold. They carry with them Carnels, Horses, Flockes, and Herds innumerable, leauing othere in commodious pastures. They goe towards Perecopia, and fometimes into Taurica, or Taurica or Don.

30 ouer against Perscopie, to Offen or Azaph, as the Turker call it , a Towne by the Don ( Tanais, a great and swift River) fornetimes fortified by the Greeker, and fince by the Gennois; where the Turkes now have a Garrison, and a Commander. They Hway travell into the Ifthmu, or the large Plaines which are betwirt Boriftbenes, and the Lake Meetis, and the Ponike Sea, where they find best pastures. In October the raines, colds, and perpetuall windes force them to returne to their Cottages. For they are afraide of our Nizonian Cozats, which paffe downe the ftreame in Boats, and the Gunners , which then make incurfions on them. Neper is frozen ouer in Winter. Ptolemer calls that Ishmus, Zenos Chersonesius, and Strabo writes that the Roxans and Revo-lans (whom we call Russians) pattured those Fields twinkt Tanats and Burishbenes (describing their life like that of thefe later Tartars)

40 Perecopia (antiently called Eupatoria, Pompeiopolis, Holy Grone, Achilles Race, Gracida, Hera- percona clea) is feated in the confines of Taurica, or the Scythian Cherfonefus, the Towne obscure and fmall, the Tower of flone, not well fortified; in which the Taxar Chans have their perpetual Palatine or Beg, which keepeth the Marches and passages of Borisbenes and Don, with all the borders, and is Generall Lieutenant over all the Tartars in the Playnes adioyning. Strabe writes that there was a deepe Ditch made, whence the Towne had, and ftill in the Tartarian and Turkilb language hath the name. When Sachinhgieres raigned there (heè ouerthrew the Nagay Tar. tars at Perecopia with a memorable victory) there were fenenteene ftone Forts raifed in that Ditch, some of them of the Skuls of the flayne, and the ditch repayred. Heere the Tariars keepe continuall Guard, permitting no Stranger thence to paffe without the Chans Letters. And there so in occasions of Warres is their principall affembling.

Collow is feuen miles distant on the right hand, on the shore, where the Chan hath a perpetual Coffie. garrifon. Ingermenum is hence twelue miles or more: it hath a frone Fort, a Temple; and Vaults Ingermanum. under the Cattle and oner against it, with wonderfull Art cur in the stone, being situate in a great and high Mountaine; and therefore the Tarker give it the name of the Fantis. It hath heene a wealthy Towne. Ouer against it the Promontorie trendeth fome turkongs broad, and three or foure miles long. There appeare evident figures in the Runie Mountaines, that the ancient Greetes thence cut huge ftones and carried them by Ships to build Cherfona a Citie in those cherfara. times famous, as the Greeke Christians Rill report. The Heraclians of Pomen fent thicker a Colony. The Fort of Ingermenum was also built by the Greeker, as appeareth by Greeke Interiptions

6C and Scutcheons therein : and thorow all the Isthmus to the walls were fumptuous buildings, and innumerable Wells digged. There were also two great High-wayes or Causies of Stone, There were many good Vineyards and Girdens, now called Belbec, and postessed by Greeke Christians, or Italians, and Iemes, and a few Turkes. Of the ruines the Turkes and Turtars make great Stalls and Enclotures for their beafts. This Cheronefus, Corfunum, or Cherfons the Turker called Sari

Germenum, or Tellew Tower of the colour of that Tract; whereof admirable runes remaine to tellifie the quendam iplendor. There are channells or conduits of hewen stone vnder ground foure miles to the Citie walls, still containing cleere water. From a place where is a Village of note, and not farre off, neere the Sea is a Greeke Monastery of Saint George, with anniversarie denotion frequented of the Greekes remaining in Tauries with great concourie. The Citic hath noe beene inhabited these many ages; the Walls and Towers sumptuously built are yet seene entire. But the Turks carry thence excellent Marble, and Serpentine Columnes and great stones by Sea, for the vie of their publike and private buildings. Of the Temples the very ruines, are viterly ruined, and the houses lye buried in that Monument and Selfe-sepulchre.

ined, and the noutes tye ourted in that automated by large, but without roofe, and the ornaments to The walls of a Greeke Monafterie remayne very large, but without roofe, and the ornaments to spoyled. The Russian and Polonian Chronicles relate that Volodomir, great Duke of the Russian or Kiess, carried thence two doores of Cormibian Braffe, and some artificial Greeks Images which Bratefant he fecond King of Poland translated from Kom to Gnefins, there yet in the great Church to be feene. Voladimir tooke that Citie from Iohn Zemifen the Good instrumpelant Emperour : but after, marrying Anna the fifter of Emperour Bafilina, and being baptized in that Monastery after the Greeke Rites by a certayne Patriarch, hee restored it, as is still relaced by the Christian remainders in those parts. Before the Citie was the Promontorie Parthenium with a Temple and Image of that Goddeffe, and other Antiquities by Strabo related,

The Citie B4-

That which the Greekes called Iamboli, the Turkes have filed Balachei, as the Towre of files, in regard of the plentie in that Sea, It was fortified in a high, great and stonie Mountayne by 20 the Genusie, whiles the proud cowardly Grecians which held that part of Taurica quartelling amongst themselues, lost it to them. There they had a notable Port, a strong and sumptious Fortreffe; and there the Towres, houses and walls with the Genusis Entignes and Inscriptions, Iveruined. It is now inhabited of a few Greekes, lewes and Turkes, and frequented by fewer Merchants and strangers by Sea.

Marcopia stretcheth further to the Mountaynes, and Woods, and is not so neere the Sea : it Mongara Gity. hath had two Caffles, Greeke Temples and Houses sumptuous, with many cleere Rils running out of the Rone : but eighteene yeeres after that the Tarkes had taken it (as the Grocke Christian) assirme) it was destroyed by a sudden and horrible fire. Neither hath any thing remayned of note but the higher Fort, in which is a goodly Gate, adorned with Greeke writing and store of 30 Marble, and a high house of stone. Into that house the Messengers of the Muscowites are by the barbarous Cheese sometimes thrust, and there endure hard keeping. There remaynes the Greeke Church of Saint Conflantine, and another meane one of Saint George. One Greeke Priest and some Iswes and Turkes dwell there; Oblinion and Ruine hath denoured the rest; nor are there men or Stories of the quandam Inhabitants, which I with great care and diligence enery-where fought in vaine. An old Priest which I saw there, said that a little before the Turkes besieged it, two Greeke Dukes of the Imperial bloud of Contlantinople or Trapezond, there refided, which were after carried aliue into Conflantinople, and by Selim the Tarkifo Emperour flame. In the Greeke Churches on the walls are painted Imperiall Images and Habits. The Tower and Citie Marcopia is nigh to Cerceffigermenum a new Turkilb Fort taking name from Cerceffinm; but the 40 Turkes, and Turkers, and Greekes also have now lost the name. The Greeke Dukes are faid to have there committed much wickednesse. And in that stony Hill whereon it is seated, it hath houses cut with admirable Artifice in the Rocke, which still for the most part remayne entire, although the place be become wooddie. A Temple adorned with Marble and Serpentine Pillars, now laid prolitate on the ground, teffifie the quendens glorie.

The Palaces or Houles of the Chans reach vnto the Mediterranean Taurica (as Strabe calsit.)

It hath a famous Towne, and a principall Store-house, called Baccasara, wherein he perpetually resideth. That Towne is situated betweene two Mountaynes, and a little River flowes betweene, whereof the Towne is named. There is a stone Moscbe, and the Chans Sepulchres built within the Townes Liberty of the Christians ruines. Not farre also from that Towne there is a Mahometan Monasterie, and very many Tartarian Graves curiously rayled out of the Grecian 50 ruines. In the further end of that Towne, there is another Towne called Salaticum, adorned with faire buildings by the Turkes there inhabiting. The Royall Seate or Mansion of the Chans is sumptuously garnished by the ancient Tartaran Princes with Houses, Temples, Sepulchres, and exquisite Baths. When the Princes with their Wines, oft give themselves to ease, passimes. pleasures, and recreation, they go thither. For that place or Region is commodious for huntings, it hath Orchards, Vineyards, Gardens, and many flore of good grounds, and it is watered with Chrystaline streames. There are Mountaynes and store of Woods, wherein are seenevery many ruines of Houses, and large Forts and Cities, yet they remayne desert, and are of few or none inhabited.

Almaffaray at the meeting of the River Alma, is a house of the Kings , where he is woont 60 not often to reside, because he lives not there so commodiously, as in other places, and cannot lodge there with his Court : for there is only one base Village. There are some more obscure bordering Townes and Fortreffes, where they are woont to maintaying their Wives. Also not a few

Castles where the Sultans, the Chans brothers, or their fonnes and wines perpetually dwell. That part of Cherfonefan, which the Chan with his Tartars possesse from Percepta, toward the Percepta Fenne or Lake to the Cite (Frances , is cultivated, plaine, champson, feetile, and plentfull of (France, graffe; but toward the Sea and the Palace of the (Law, and his Townes, Caffee, and Villages, the Countrey is Mountaynous, woodie, well husbanded, and very fruitfull. The Mountaynes in that Coast are huge and remarkable. But the greatest is the highest of all, and hath in the top a Lake of no small quantitie. And although I did not ascend it , yet it is well discerned many miles off, and demonstrates no ordinary height and greatnesse. Plentie of Rivers and no small ones runne from thole Mountaynes. Also they have much fifth, but not of any greatnesse (for the River is shallow) yet very favourie and daintie. But because the Tartars doe not often feed on 10 fift, the Christians only and our ftrangers when they come thither take paines to catch them. There is also abundance of delicious Fowles; which sometimes Christian or Tarkill Gunners are woont to feeke after, feldome our ftrangers. There is much game of Harts, Goates, Boares, and Hares meere the Sea under the Tartars and Turkes. Oftentimes also the Chan himselfe is wont to hunt fome dayes there, but more often he goes into the champion with Turkifo and Tar-

tarian hunting Dogges. Sortaffus is a Tartarian Village adjoyning to the Chans Regall Mansion, wherein the Latton Suraffate 02 and Muscous Ambassadors doe often lodge; it is spacious and delightsome. But when Tourica or the Poninfula beganne fubieft to the Chan; Dominion, divers Italian Gentlemen Gomes after Capha was taken by the Turkes, or Turter Princes, having their Charters written and fealed of their right and proprietie (which I have feene among them) they held that Village with speciall Priviledges, or purchased it with that Gold which they carried with them out of their Countrey, or with their feruice to the Chaus. In going Ambassador to Christian Princes, it was permitted them to build a Catholike Temple in that Village, wherein I sometimes entred while I abode there. There was in that Temple one Prieft a Franciscan Fryer, whom those Christians had then redeemed with their money from Turkib flauerie.

Cremans, or as the Tarans call it Crimans, is a Citie and a Castle much while in the antiquitie, Cremans. magnitude, and height of the wall, amplemente and renowme, to the other Cities of Taurica; It is whike the Mediterranean (for to Prelamie cals it) perhaps this was called by Ptelamie Taphres, but by Plinie Taphra. Now in thefe latter times before the comming of the Genees into Tamres, 30 it seemes to have beene husbanded and inhabited by a great Mahameton Nation, who remound thither out of Asia. For there are seene ancient Moscher or Mahameton Temples not only in the Citie it felfe, but alfo beyond the Citie very many with Chaldaiche Characters engrauen in great flones. There are very few Turkifb or Turar Inhabitants, yet the Grukes are fewer, who report this, that their Ancestors have constantly delivered, that that Citie was whilome dwelt in by the Perfias Nation, and that it was a quouden noble and excellent Store-house of Mechanick Mysteries. A man may certainly conjecture by the ruines and largenesse of the place that it hath beene a famous Citie and a great Colonie of people. The Tartars are now vulgarly nomi- crim Tartars nated from that place Crims. They have a Mint in that Citie. In the Towre which is the great why so called 40 test in the Citie, the Chars wives are alway kept and spend their lives.

Sidagios of the Greekes, but Sudacum of the Genoes, was called a Caftle and Citie. The Tartars Sidagios or Suare viterly ignorant of it. In aloftie rockie and spacious Mountaine standing neere the Sea in the top of it, it hath a higher Towre, a second indifferent, and a third of baser esteeme. The Greekes or Italian Genees founded their Castles environed and fortified with Walls and Towres. There are seene innumerable Grecies Churches, and seeme but few, as though they were Chaps pels, not a few undemolished, but very many are ruinated, and lye ouerturned in the dust. The

haughtie diffentious and idle Greekes being overthrowne and weakened by the Isalian Geners, loft

that Citie. There are seene no contemptible fignes of the Geness much more illustrious then those of the Greekes.

But it is evident by the ruines, that it was once a famous place, & fo it is reported by the Greek, 50 Christians, of whom there are a very few Relikes. Moreouer, many Christians have erected a multitude of Temples which they report to have beene some hundreds. There are three great Catholike Churches, Houses, Walls, Gates, and faire Towres with Arrace and Ensignes of the Genees, are seene in the lower Castle. I heard from a certayne Metropolitane a Greeke and an honest man, who then came thither from the Greeier Iles to visit their Priests , and entertayned mee, That when the most barbarous Nation of the Turks had belieged that Citie with a great Armada, it was valiantly and manfully defended by the Genees : but when the Genees could no more hold out the daily fiege and famine, neither could longer fustaine the violence of such a great Armie of Turkes, tome hundreds, or, as hee auductied, about a thousand stout-hearted men conveyed themselves into the greatest Church which yet abides entire, and some dayes hardly and couragiously preferuing themselues in the lower Towre, into which the Tweet toreably entred, hauing made a notorious and memorable flaughter of the Turkes, at the length they were all flaine in that Temple. The doores and windowes of that Temple being stopt vp with a wall by the Turkes, the flaine bodies lye vinburied to this day. I was prohibited by the Saniak of Capha forme-

times a Turke, that I should not enter into that Temple. The Custome of the Cicie is not meane: it hath very fruitfull Vineyards and Orchards, which doe extend about two miles, now manuted by Caphaes, Turkes, Irwes, and Christians : For the best Wine of all Touries growes there: all that tract abounds with pleasant Rivers, which runne downe from the highest and middle Mountaynes and Woods, which are there very frequent.

Having now passed over those upper Cities, and at the last Sudace, also as farte as Theodolia. which the Italian Genoes call Capba, the banke of Taurica is in Longitude a thousand furlongs, craggie, mountaynous, and tempestuous with Morth windes. Before the Citie the Promontorie that is there seene, doth hang out into the Sea on the South-side toward Paphiagonia, and the Citie Assaftrum, and Strabe relates, that it is called of the Greekes, Orinm and Oxon, the 10 Rammes forehead. And there is another Promontorie Carambis of the Paphlagonians opposite to it, whereby the Emrine Sea is divided into the double Sea, and Empire straightens them both. Strabe fayth, that Carambis is diffant from the Citie of the Cherenfitay , two thousand fine hundred furlongs, but from the Rammes forehead, a farre leffer quantitie. Behind that hilly Countrey, as Strabo calls it, hee affirmes the Citie Theodofia to bee founded, and that it hath large Fields notable for fertilitie, and a Hauen able to receiue a hundred Ships, and that that Limit was affigned to the territorie of the Boffborines and Tourikes.

Capha or Theodofia, is the excellenteit and best defensed Citie of all Taurica. It was built by the Italian Genoes, and is placed by the Sea. It hath a Hauen alway frequented. It is perforceous, that in the times of the Genoes, it was a wealthy and populous Citie. But after it was taken 20 from she Genees by the Turkes aboue a hundred yeeres fince, the Italian Christians were brought into such a straight, that there are but a very few and obscure remaines of them left. The Citte hath in a manner loft her priftine iplendour. The Romish Churches of Christians are demolished, the Houses cast downe, the Walls and Towers, wherein are seene many tokens of honour of the Genoer and Latine inscriptions, are fallen. Onely two Catholiche Temples and two Armenian remayne whole, in which it is granted them of the Twice, after their owne custome to maintaine their proper Priests, and to bee present at their publike denotions. It is replenished with Tarket, Armenians, lewes, but very few Italian and Greeke Christian inhabitants : Now also it is famous ouer all that part of Taurica for Nauigation and the Hauen. It hath almost innumerable Vineyards, Orchards and Gardens. Men layle often to Capba, from all the bordering and remote L. 30 lands of Greece, but oftner from the Citie Conftantinople; for with a prosperous winde they come thither by Ship, in the space of two dayes or little more. The Petigoren Prouince, or Colchis is inlarged, as farre as the Caffism or Horam Sea, and is

Idolaters.

much subject to Mountaines and very large Woods, which are now seene in these Confines. It is a very free people, and hath many brave Commanders, to whom all the Nations and Families obey. Moreover they professe themselves Christians, and it is manifest in the time of the Genoes very many of them were Christians, but now wanting Priests and Churches, they onely retayne the opinion of Religion. Most and the greatest part of them are Idolaters, amongst themfelues rapacious and cruell, but to Strangers hospitall and free-bearted. The Parents, although they bee of the more Noble or of the Ruftickes, fell their owne Children, their Sonnes 40 for Slaues, their Daughters for Wives to the Turkes and Turturs, also to many Christians, and those which they are wont to steale secretly among themselves, they sell closely beyond the Sea to barbarous ftrangers after a more then barbarous manner.

Betweene Perecopia, Cremum, and Customa, are Townes on the North. Taurica or the Peninsula is exceeding plaine, not very hilly, and altogether champaine. It hath a very fertile foyle, in great part flonie, but great scarcitie of good water. Yet there are found in diners places very many extraordinarie deepe Fountaynes or Wells of a wonderfull profunditie and difficultie, in times pail digged and made by the elder Greekes, or those great and antique Nations, who inha-

bited the Peninfula before the Greekes.

Sak Lake.

From Perecopia the space of a mile, there is a great Lake congealed naturally of admirable Salt, 50 from whence the pureft and beft Salt is continually gathered, as if it were frozen; it hath many other Salt lakes. In certayne commodious and in very many places, in Mountaynes and Groues are found in great number, ancient huge Grecies ruines of Caffles, Cities, Temples and Monafteries, which while they have many ages beene destitute of inhabitants, by reason of their antiquitie, haue loft their names. All Taurica or that Paninfula, from the West and North is plaine and champaine, and hath few Townes, many Villages; extends in length the fumme of fiftie miles. But from the South and East, it is mountaynous and wooddie, and hath every where maruellous high, large, stony Mountaynes. In which, betweene Cremum and Capba, it is reported that veynes of Gold and Silver, and the best Iron, were whilem found by the Inhabitants. It hath a very fruitfull ground, Floods, delightsome Rivers, Fishes, Meadowes, Pastures, abundance 60 of wilde Beafts, Harts, Goates, Boares, Beares, Vineyards, Orchards, Territories, Champaines, Townes, Villages, Hamlets, many and large Granges. Taurica or the Peninfula, is spread in Latitude after a fort into a circle; in some places, the distance of one or two dayes journey, but in most places about the quantitie of one.

The Cattles and Sea-cities, and the rest of all the Peninfula, which are described in their order, with many Villages and Hamlets of Greeke Christians, except the Holds and Sea-townes. and many leffe suspected walled Townes in Perecopia and Casilonia, and a few Villages of Greeke Christians, are subject to the Turkish Emperour, and all obey his behests, and are kept with a fure Garrison. The Peninfula, which lyes in the middle from the East and South against Perscopies, hath a milde winter and temperate ayre. For in the end of December is the beginning of winter, but in the midft of Februarie the sharpenesse of winter, which is more snowie then cold, or fubicat to Ice, neither yet doth that endure about three dayes together, neither continues it any longer then to the beginning of March. Therefore about the beginning of the Spring, and al-Io way in a hot Autumne the ayre is very contagious.

In Bratislania, the Sauranen, Oca aconien, and Bialodogroden . Plaines are fituate betweene Hipanis or Bagus, Tyra or Nefter. From the North toward Neper or Berifthener and Bogas, are fomewhat plaine and champion grounds, but from the West towardes the River Nester and Prath or Hierafus, more wooddie and hilly. Podolia, Camenecia, and Moldania betweene the freames Nefter and Prath, every where border on the middle Tachain and Bialon gred, which is by the Lake Usdono or Obidono, and the Eurine Sea, on the West confine on the Plaines, and on the Euxine Sea, on the South Bralogrod, Kibia, and the River Danubins. Oczacomis hath on the North Borifthenes, (into which Bogus there dischargeth it selfe ) and spatious Plaines, on the South the Enrine Sea, and the overflowing Salt meere Berezania, from the Weil

20 the adioyning River Nester. Further, that Continent which is betweene Occaconia and Borsstbenes in the fashion of an Ile, hath into the West Boristhenes, as though it were betweene Boristhenes, the Fen Meets, and the Enxine Sea; on the North the Rivers Tameis or Domme, on the South the Enxine Sea, and that Ishmus or Continent, but beyond Oczaconia and Borishenes, as far as Perecopia, that Continent is verie narrow in many places; but beyond Perscopia to the Caftle Offonum, a ranke foyle, and all champion and plaine : For in that neck of Land almost all the Perecopian and Offemen Tartars feed their blockes and Cattle, and line there all Summer and Autumne. That Continent or Illimus from Oczaconia, as farre as Offonum, for there it is limitted, is firetched out in Longitude, as is manifest out of the Tartors Diaries more then a hundred miles, but in Latitude 30 not after an equall manner. For it is larger, as well beyond Perecopia, as toward Oczaconia, or

The Taurican or Cherfone fon Tartars, who are now called Percopen or Crims, doe certainely feeme by the ancient Writers of the Schythians to have been the lanelgenfes, and to have had their original and appellation from Rbs, or the River Folgs. Moreover between the famous, deepe, and great Rivers of the North Tansis, or Don and Boriffbenes, it manifelly appeare that they paffed by little and little into the Plaines, and a hundred and fixtie yeeres fince, or very little more to have come into Taurica or the Peninfula.

The stocke of the Chans, or of their Tartar Princes was anciently called Cyngis race, from cyngis. whom was Locbionus a certaine Chan, of whom all the Chans take their originall. Hee was the Locbion,

40 first Emperour of Taurica or Chersonesus in Taurica, or the Peninsula. They have procreated the Sirinen , Bachinien , Manguten , and other Kinaziy or Dukes , from whom are the Caiacei, who are the Chans Counsellours and chiefe Officers, who also marry the Chans daughters and fifters. The Vlani, which are anciently descended of the Chans bloud, and (if the lawfull posteritie faile) fucceed in the Regall Throne. It is very true that the Murstes are the noblest of each, now also their posteritie remaine & other warlske Tartars; of whom it is certaine he had divers Hords, of some ten thousand a piece in his company passed into Taurica, or the Peninsula with him.

The Chans predectfors fincerely and constantly much esteemed the Grecian Chiefetaines, who inhabited at Mancopia, and Ingermene, and the Italian Genoes, who dwels at Iambold and Capia, as also the other people they found in the Peninsula, with whom they had friendship, peace, and so league, vntill they were ouercome by the Turkes, and confumed in warre : they had also many

yeeres common mony which I have feene there,

But Selim, Emperour of the Turkes, compelled and fubiugated Mechant Gererius Chan to his Selim, Empire. Those Nations being weakned, almost all the Castles and Cities of the Martime Penin- Gery Chan. fals, being taken and possessed: Sachmates the Prince of the landgen Tartars put him to flight, with a fingular and memorable slaughter having destroyed his Armie of a hundred thousand. Sachmates. Since which time the Chans acknowledge, as chiefe, the Empire of the Turkes. The Viceroyes, or Princes of the Tartars of Taurica, or the Peninfula are constituted by them, they receiue thence a Banner, and giue their fonnes and brothers Soldans for perpetuall pledges to

60 Notwithstanding, after the ancient custome of their Nation, they make a Galga or successor The Galba or to the Empire(as the French doe their Dolphines) the brother or eldeft fenne and more fufficient, heyre appawho hath the greatest sway in peace and warre, but the Chans themselves perpetually depute and rant. elect them, but with the approbation of the Tartar Nobles. And if also any diffention or war be raifed betweene the Soldans or the Chan about the Empire, the Turkifb Emperour neglects not to

dispatch the Soldans pledge, with an Armie and Standard into Taurica or the Peninsula: and it is fufficient for him to be Prince, the Chan and Sultan being appealed or forced to goe away by warre, for which cause he hath alwaies many Innizaries in Tanrica, or the Peninsula.

Election of the The election of the Chans, after the ancient custome of the Nation , did whilelome confist in the free fuffrages of the Dukes, Murfies, and nobleft Tartars. Furthermore, for their frequent difcord and hidious warres which were occasioned by the Nogaian Tartars bordering on Tamica, or Sachibgiereim. the Poninfula about the Empire, Sachibgiereim and Dealetigereius, being Chans over the Tartars. having by tubtiley deftroyed the more noble and potent Tartars, and caft them into fetters, began absolutely to domineere over the Tartars, and by force to draw the election to their posteritie, the Emperour of the Turkes ayding them.

But if the Chas will not conftitute his brother Galga, but his owne fonne, as it often fortunes, by reason of those discords and reciprocall butcheries among themselues, hee circumuents craftily and fubtilly all the Soldans brothers, and couertly makes them away. Yet most of them siye to the Tarke, of whom they are bountifully entertained and comforted, and

receive a perpetuall stipend of him.

The Soldans younger formes of the Chans are educated and tutered by the Tartars, or more noble Marfies, lest that when they are at mans effate, by reason of their pluralitie, diffentions, or warres might arise : for each Chan acknowledge a supreme Dominion, and when they are growne vp, those that are fit are fet oner certaine Tartar troupes, and allure many voluntary Tartars vnto them, notwithstanding they make leaders of the Rogaien Tar- to tars, and remunerate with monyes and horses most of their parents, whom they esteeme more speciall and substantiall. Very often also through feare of treacheries or seditions among themfelues, being ayded by their Gardians fauour, they flye vinto the Christian or bordering Princes of their people.

The Chan hath Attalike Councellours, whom they fo terms from the care of their women, pa-

Attalici.

Hamiati

rents, or their wives, by whom those Sultans also are continually from their youth educated and provided for : hee hath Hamiatts, who are the Agents for exotick Princes affaires with him, and also perpetuall Court Officers. But especially hee conuocates to him the Dukes, Coracei, Vlani, and the nobler Mursi, and alwayes vieth to confult with them in weightie affaires. Hee hath principall and meet men Ministers of his Court, whose service hee veeth in his Ambassages, and in his divers other necessary businesses and imployments, who also are exalted to Counsellours and Court Officers. He alwayes maintaines those who are chosen out of the more renowned and illustrious Tartains youth, who are conversant in his Court by moneths interchangeably, and when they are made fit, are honoured with those dignities. Yet hee is chiefly and most delighted with the Cercesins, Nogaiens and Petogorens, who are very industrious, valiant, bold, and warlike. On the principall hee bellowes honourable gifts and annuall penfions, and of these his Court is alwayes replenished. In the Princes Court, the better reputed and nobler Tartars, are very richly and civilly decked, not to pride or superfluous laxurie, but for necessitie and decencie. For they are fo inriched by the lazie cowardife, and especially by the irreligious impiety of the neighbouring Christians, through making often inrodes, and getting rich booties, that the greater nobler of them in private wealth and domestick splendor, are little inferiour to the Tiokes. They 40 may have as many women by the Mahometicall Law as they will, and for the most part, they buy wines of the Petigorens, which although they fustaine and maintaine, not proudly, but very comely and civilly according to the countrey guife, but those by whom they have iffue very hodrabite letters nourably and gorgeously. They deliver their formes in their infancie to be instructed in the Arabike Letters, but they keepe not their daughtersat home, but commit them to the neerest in bloud to be prouided for. They place their fonnes growne to mans age in the Chans or Sultans

feruice, their mariageable daughters in wedlock to the more honourable and nobler Tartars

or Turkes.

Religion.

Those Tartars are Mahometans, and have Priests and Mosches, they vie the Chaldack or Arabike Letters, which they have received somewhat corrupted from the Tirks, although before they 50 came into Taurica or the Peninfula, they feeme to have beene a fauage and brutish Nation, and of very fauge conditions, which now also is very perspicuous by the rusticks : for they wanted then altogether those Lawes, Rites, Letters, and Manners. But the Tartars being taught by the Turks humanitie, and that falle worthip, the more nobler now generally practife hospitality.

Government and Lawes. The Cadi and Begs.

they plead their owne

Law or Iustice, is administred in the Towns or Cities of the Chan & other Sultans among the Tartars after the Mahometane Law. There are alwayes presbiterall Cadi or Judges in the Villages. Begi or Iustices, who heare and decide particular injuries: but causes of life, bloud, theft, which we call Criminall, or of Land, which we call Civill or Officiall; the Chan himfelie decideth with his Counfellours. In refoluing of which they need no Lawyer, nor vie tricks of law, calumnies, exnor Lawyers: culations nor procraft marions. The Tartars or Strangers, of meane condition, lay open them- 60 selues very freely their wrongs before the Judges and Chan, of whom they are alwayes heard and speedily discharged, for at any time any may have accesse to him. When hee comes in publike, men of the basest degree are not excluded, but being scene of the Chan are examined, to wit,

if they have any fuit, that they relate it. For they doe not onely performe great obedience to the Lawes : they adore and venerate their Princes in Gods fleed. All spiritual Indges (after Mahomets Law) are accounted among them for Saints, men of all equitie and integritie, fidelinie and opinion. The Princes and Magistrates execute and dispatch what focuer is bidden or com- Greet peacemanded suddenly and faithfully, with alacritie, promptnesse, and great feare. They are far from ablesesse to controueries, oriminations, inflices, vnneceffary and personal brawlings, enuy, hatred, filthy ex- the shame of ceste, luxury, and ambition in their victuals and array. I abode their nine moneths, neither Gospellers. heard I Criminall or Civill Act to have happened among them, or any composition by reason of enmitie.

10 In the Princes Court they weare not, nor at home Swords, neither Bowes nor any other No daily reweapon; except Wayfarers and Trauellers, to whom they are very courteous and friend- of weapons, ly. They are alwayes secure from Spoylers ; but except they keepe perpetuall watch , they are leffe tate from High-way-theeues, and Night-robbers, who feale nothing from them but

their Horses. Although they have a rich foyle, yet very few Gentlemen, or Plebeians provide for the houf. hold effate, for many neither till nor fow their ground : they abound with Horses, Camels, Oxena Kine, Sheepe and Flockes of all Cattle, and thereof line. Yet the Gentlemen have bread. fleft, meate, diftilled \* wine and Methoglin ; but the rufticks want bread, but vie stampt Millet, \* Agrante. and macerated with milke and water, which they vulgarly call Caffa, for meate ( and for drinke Meatand 20 they vie Mares milke) and cheefe. They feed on Camels, Horfes, and Oxen vnprofitable for drinke.

burthen , and kill them when they are about to dye , fometimes eatesheeps fiesh. The Gentlemen dwell not in the Plaines, but in the Villages of Tauries or the Penm (ula. They which are neere Woods liue in them, although many doe not possesse proper Villages; yet they have peculiar Lands and Manors. They vie the Ingarian, Ruffian, Moschonian, Valachian, or Moldanian Slanes. flaues, which they keepe, and whereof they have great plentie, as beafts to every worke. Their houses are of Timber, much after the Turkish fashion : but the Greeke Christians, who are in a few Townes, labour and till their grounds as beafts. The Tartars ferue the Chan or Tartarian Nobles, being hired at no price, but onely that they may have meate and appearell : but the reft . and the greatest part of them are alwayes idle. In the Cities or Townes are very few Merchants : but 3c some few practise Mechanick crafts, and some Merchants or Artificers are found there, either Merchants

Christian Slaves or Turkes, Armenians, Iewes, Cercessiums, Petigorens, (which are Christians) Phylistius, or (jugans, men of obscure and lowest degree. Those Tartars, which live in the Plaines beyond Percepia, or in the Peninfula have no woods, every where digge Wells. They vie in flead of Wood Beafts dung, which their Bond-mengather in the Fields, and dry in the Sunne and houfes of the same forme, whereof mention is made in the former description. Those Tartars, which are Slaves and Subjects of the Chans, Sultans, and other Noble-men, are drudges, and alwayes Tana flaves, keepe and pasture their Lords innumerable Herds of Cattle; and although they goe from place to place, into the Plaines and Pastures, in severall Streets, Hamlets, Townes, or Villages, by separated troupes (or hords ) whereof they beare the Names, and of their Masters, so that men ao may eafily find there, those Tartars Slaves which they seeke to buy.

The Char hath alwayes by the leagues and agreements, an annuall Donatine of the King of Tributes Polonia, the great Dukedome of Litsania, the Palatine of Moldania, and Cercafian, and Nogaien Embaffidors. Tartars, The Legats, Orators, Meffengers, Truchmen of those Princes come to him yeerely, whom fometimes he entertaines benignely and bountifully, but fometimes receives, mifutes, and detaynes a great while after a more then brutish manner. When therefore they come into Perecopia, one of the Chans men meets them in the Summer, in the Medow or Plaine, where they rest under a Tent: in the Winter they are opportunely and commodiously conuaved into the Village of Alma, or Bacchafanium more fafely bordering on the Towne of the Kings Palace, But Alma after they are lodged there, they are faluted by the Counfellours or Servants of the Court in the to Chans name, which procure them refreshing or victuals, two oxen, or one, some sheep, bread, wine,

and barley, not liberally, but in a kind of hospitalitie, and moderately sufficient for once. But when they are called to the Chan, hee heares them, the Soldans, Tuians, Vlans, Marzies, chiefe Counfellours, and many other Ministers of his Court and principall Tartars being present, they are conducted onely by one man to the Chans gate, but are brought in by two Counsellours. When as therefore they are entred in, they reuerence the Chan, after the ancient custome of the Nation, and having faluted him on bended knees declare their meffige, and are admitted to eate with him. They are honoured with cups and goblets gilded and emboffed with gems, filled with Mead or Methegline reached from the Chans hand, after the order of that people, in figue of clemencie and beneuolence, which they drinke on bended knees. And when they are dispatched, 60 the Chan inuites them againe to a Feast. The Feast being ended, they goe backe a little from the Palace doores, and are rewarded with Silke Vests wouen with Gold as low as the anches, prepared after the guife of the Nation, with one Horse or two, not seldome with Captines of their

owne people. And so attired with those Vests they returne agains to the Chan, and render

thankes to him for his hospitalitie and liberalitie, and having saluted him, depart from the Ban-

ket. Sometimes a small provision is procured for them by one of the Chest men in his Domis nions when he takes his sourney, and he is conuayed by him as farre as Boriftbenes.

The Turkyb Emperours have made that authoritie conflant to the Chan, in Tamica, or the Baffa of Capha, Peninfula, to that when the Baffa of Capha, or the Sansak dye, he rules all the Segniories in the Pea ninfula, vntill the Turke hath lent thither another Saniak, or whom he will preferre ouer Capba. The Chan hath a common Custome-house with the Turke, at Percepia, Casionia, Capha, and other Cities of Taurica, or the Peninfula, which are of the Turks & Empire. Hee demands annually a contribution of the Tartars, Armenians, lewes, Gercasians, Petigorens, and Grecian Christians, of whom he hath very few in his Dominion; the Turkes are only excepted : euery day are paid for a perpetuall shpend out of the Turkes Exchequer twentie fine Dollers to the Chen, twelve to Dollers and a halfe to the Galea, to the Soltan pledge two and a halfe, and to the fame Hoftage, Villages, and ample Farmes neere Adrianople, called Ianboln, are given by the Tarke. To the Dukes, Caiaks, Vlans, and Murzies, and many others which take pay, are given conftant wages according to each of their estates. Notwithstanding the Chan alwayes payes every yeere to the Turky Emperour Captines taken in warre of both lexes, the most excellent and precious Furs, and also baser, Butter and Salt, wherewith Taurica or the Poninsula abounds. And into whatso. euer warre he shall bee sent or called, he may refuse, neither may hee wage warre with any, but the Duke of Moscho, without the Emperour of the Turkes leave or knowledge. The Chan exacts annuall pecuniarie Rents from the better fort of Captiues taken in warre, three pieces of Gold; of the raskalitie one Doller, and a tenth of them; but from each of the Fountaines, which 20 are many in his Dominions, in the Plaines of Taurica, or the Peninfula, one Horse of the Tarrars: but any necessitie enforcing the Chan, all the Tartars decree a certaine contribution to him. The

Warres.

Tartars Nobles, alwayes at home, and in warre also, yeeld him sustenance of divers forts; for hee neither tills nor fowes. Hee hath alwayes proper Herds of Horfes , Camels, Oxen, and infinite Flockes of Sheepe. Hee hath a peculiar money of base Copper, which is coyned in Crimum, a Towne of his Dominion , round money, whereof tenne are esteemed at a Turk ile Silver Afper. which makes one Polonian Groat or leffe. But I being present, there were flamped greater Copper money filuered ouer, which was valued at fine Afpers. In coyning it he hath a great and plentifull gaine ; for in three or foure yeeres, of the fame money, which is carried by all the Tartors of Strangers into the Mint, new invented money is alway stamped. For in all Taurica, or the Pe- 30 ninfula, it is lawfull for none ( Tartar or ftranger)even in the Cities of the Tarkes Dominion, vnder a capitoll punishment and confiscation of goods, of what estate soener hee bee, to exchange Turkib pieces of Gold, or the Doller of Strangers, or the Turkes Silver Afper into Turter covne of the other value. Neither is it lawfull to buy with Gold or Silver coyne, but Tartarian, which all frangers ( none excepted ) perpetually receive by the Chans Edick.

When the Chan is about to go to any war, he first fignifies to all the Tartars of his Dominions by the Seruitors of his Court, and commands them that they prepare themselues for war, within three ( or at the most ) in foure weekes, and that they provide for themselves victualls for three or foure moneths. That fuftenance is carried in Leather-bags, and those Bags among the Gentlemen are carried on Horles. And they carrie with them food of Millet parched in the fire, or 40 flamped, or ground; for they have Mills, and thereof fleeped in water, the most make meate or drinke. They carry Cheefe and Flesh, and Mares-flesh dried in the Suntthey cut them in pieces boyled or drie, and taking out the bones put them in Sackes. They line with Mares-milke and Cheefe, and fowre milke, which they tempering with a certaine Art, hold an excellent food. The Chan hath only one Chariot with him for any danger of ficknesse; also a few Camels, where on is carried for his owne person Aquanita, or some other provision wherewith he is easily satisfied. But the Tartars fenerally fet meat before him and his Courtiers, the gentlemen(yet very few of them) not feldome carry a little drie bread, and a little Aquanita on Camels, or in lighter Carts,

Manner and Art of warre.

But after the Chan hath determined any warlike Expedition, he prepares very speedily some exercifed men in an indifferent number, and chooseth them sometimes Tartars, but more fre- 50 quently Cercefians, Petigorens, and those which are accounted spies of Regions and Provinces of other Princes, and expert Way-leaders, they verie well know each particular passage of Places and Borders, and Fords of Rivers. And when they come into the Marches , they goe into the necre confining circuits, and each in fundrie places view all things, and diligently feeke for Captines, which when they have intercepted, they returne with them speedily to the Chan, of whom, vling interrogatories, the Char quickly is acquainted with the estate of those Prouinces where his skouts haue beene. Forthwith therefore hee assignes the day of progresfion to the Tarrars, wherein hee stirres alone, and premiseth speedily some servants of his Court, through all that Hord or Prouince. They constraine and inforce to goe to warre and follow the Chan all Tartars and Christians of his government, men and youth, if they can but lit on horses (be- 60 fides impotent old men and children) who although they want Armes and Hories, yet are accommodated by the welthier in hope of spoyle. But in eight, or at the vtmost in tendayes after the Chang departure, al of them follow him into certain new defined places, which are beyond Perecopor toward Borisi benes, the Galga, Soltans, Dukes, Murzies, & the most approved valiant and chiefe

Warriours and Souldiers, being gathered and convocated together: and they being called to his Councell, first the later Capriues and privie Searchers also are examined, at length they suddenly confult of the featonablenetic of time, places, occasion of well ordering the matter, and whether the warre be then commodiously to be profecuted. And mutuall confent and counsell being made and determined; yet none of these things is confusedly disulged to the multitude.

From the same place therefore the Ministersof the Court of the Chan, Galga, and Soltans 20ing before the companies of the Dukes, Marzons and other Tartarian Nobles (which they lead and rule according to the ancient claime of their kindred, and call them by various appellations in their Language) the Chan mours the Armie vnder the Entignes, following in a meane order To after the ancient custome of the Nation: but after they have fet foot in their enemies Land, againe he fends before a certaine number of the most experienced and skilfullest Espials. They goe before the Atmie, and ien I backe to the Char whatioeuer Countreymen or others they shall take and meet with; from whom hee may bee certified of the condition and armie of the enemies. But when the Chan is certainly informed that no armie of enemies comes out against him, he againe makes a Campe-councell with his Nobles and Peeres, how farre and wide he ought to endamige his enemies Dominions. Then at length he goeth flowly forward in a perfect order with all his Hoaft, and commands upon penaltie of their heads to kill all the obuious Rustickes, left 20 after they should be taken by the Tarrars, they should peraduenture make an escape, and certific his enemies of his bands to the hurt of his men. Moreouer, they kill not women nor children, nor lay hold on them, nor dare lay hands of any of the prey, left his armie should be furcharged

with it, and cause some stay in his proceeding. But when the Chan comes with his armie to the Castles, Townes, Villages, Hamlets and manured places, he elects ten, or at the most fifteene thousand Souldiers with their Dukes . Marzons, and chiefe of his Court, and most notable, best tryed, and principall men of Armes of all his Hoall, and leaves them in his owne jurifdiction in his flanding Campes, or in the fiege of fome Fortrefle; then he makes ready the Galga, other Solians, Dukes, Marzons, and the reft of the Armie, which then is mustred some thousands. And that Armie being spread abroad in divers bands, ouer each of which the best esteemed and ablest men are made Captaynes, is extended in longitude more then ten miles, and in latitude as much. And as they affemble among them-20 felues at the farthest in feuen or eight dayes, but at the foonest in three or foure running about in troupes through divers places, and leading straying preyes, and wasting with fire and Sword whatfoeuer they meet with, returne to the Campe : but if they come not backe at the prefixed day to the fortified Campe, they waite not for them, but all the Armic with wonderfull celeri-

tie moue in their arrayes, out of the standing Campe.

And when as then also the Chas is truly signified that no Armie pursues him, he prouides for places not medled with by his troupes, an Armie of fome thoulands of selected Horsemen, and as yet vnwearied. He employes as many more also in ambulbes in divers places neere the Townes and Caffles obvious to the Tarters, left that Armie might without delay fall into the lying in waite on any of their companies. But if he bee certified by his Scouts of any numerous hoaft of 40 Enemies, he neuer commics the matter to an univertal fight, but goes forward flowly and cauteloufly with his bands: but if the Chan be certainly affored that the Troups of his Aduerlaries are many and valiant, he retires a little, and feekes for the better husbanded and peaceabler places, and with wonderfull agilitie in his precipitious flight, spoyles them with fire and sword, and intends to returne home with the bootie that hee had hastily driven away. But if then hee hopes his enemies cannot ouertake him, he marcheth with his Armie, yet not too fecurely, almost in the order to his confines.

But affoone as the Chan is entred into his Borders, he takes the tenth of the principali Cap. The Chans times throughout all the Armie. But the Captaynes of companies, and they which have brought rentha greater number of captines, cull out of each Band the principall for themselves. The other Tortars of the promifeuous multitude divide the Prifoners among their troupes. Notwichitan-50 ding before they come to that partition, they first satisfie all those which running about by Bands haue loft Hories, Garments, or any thing elfe. They fell to the Tartars both Noble and

Ignoble captines, if they shall appoint no price whereby they may free themselves, because the Chambeing vitiated with the Merchants giftshath feta great value on them.

The condition of captiues is very milerable among the Tarters, for they are grieuously oppreffed by them with hunger and nakednesse, and the Husbandmen with stripes, so that they rather desire to dye then to line. Many of them moned with the present calamitie, and follie, tell the Tarters that they are Gentlemen, and have wealthy and rich parents and friends. They promife of their owne accord a great and almost inestimable ransome, which the barbarous, im-60 pious, couetous, hungry, and cruell Nation feekes almost daily to increase with all kind of sub-

tilties and Examinations, tyes them in fetters, vieth them therefore more hardly. But when they understand that an Agent of their people is come to the Chan, they meete him with their captines, of whom sometimes they require the price fallly nominated by themselues, or some-

Manner of redemption.

times promifed by the Prifoners: but the Agent who wel knowes the craft and deceitfulnesse of the Tartars, finds fault with the captives foolifhnesse, and tell the Tartars that they are neither noble nor rich, and that they knew not, nor will euer be able to pay the price, and as though they were neither moued with Pietie nor Religion r. ject them. Yet the Agent is diligent that they be inscribed in the Catalogue, and if they have a purpose to ransome any with their own mony, they hold it expedient to luborne lewes or Tarters, and other Merchants being corrupted with mony : by whom, being as it were neglected and rejected by the Agent, they are releated at a far easier rate. Nothing therefore is more frequent to the captines, then to promise and offer to the Tarters this price, for which they are fold to the Turkes, lewer, and stranger Merchants, and others beyond the Sea, or a little more, or twice so much, if they bee able to per- Ie forme it: but if they cannot learne of the Ruftickes or others what they are, as the Tare says are for the most part, went often to enquire of their captines, they are content with little. Neither doe they fell them to ftrangers, but rather to the Agent of their Nation : but if they are not redeemed by the Agent, they command them to write to their Parents or Kinffolke. Also many captures are delivered with the exchange of Taria captures, in providing for and freeing of whom , the Tartars exhibite and shew farre greater pietie , friendlineffe and care, then our Christians. For difrepecting all price, they first demand their Tarter captines in exchange of ours, which often promifing the same and not able to performe it, wie to bring upon themselues a farre greater discommoditie. For they aske of them almost an vnuslusble fumme, wherewith they prize their Tartars, which when they are not able to pay, 20 they fell them to barbarous Nations ouer the Sea for perpetuall flaues, for as great a price as they can, and very often at an excessive rate, or if the Tantars are wealthy, they condemne them to

The Chan hath all his Tartar Armie gathered of Horsemen, except some hundred Gunners Imizaries, Footmen, which are either Turbif Auxiliaries, or fome of his owne which he maintaynes. He is accustomed to carrie with him some smaller Ordnance to warre. From Tauries or the Peninfula the Perecopens, and Crims, Offoniens, Nogariens, Cerceffians, are Tributaries and Souldiers for aide, the Duke of the Cerceffians, Petigorens are Stipendaries and Mercenaries, and are wont to goe voluntaries to the Chans warres. The Occasioniens and Bialogradeus, also they who by the continual couenants which they have with the Tarkil Emperour, fometimes allo 30 the Debrusen Tartars and Inhabitants of Dannbins, by the command of the Emperour of the Turkes follow him to warre. All that Hoaft collected out of those Turkers, is wont to make the number of a hundred and twentie thousand, sometimes also thirtie thousand more, but not feldome to exceed that Summe, I have bin truly informed by many credible Christians, which often follow the Chans warres, and by some captined Gentlemen of our Nation, who have many times feene his Armie.

All have according to their vie Tartarian Horles, neat, excellent, flomackfoll, fwift, and indifferent good and commodious to vndergoe great labours. The Chan, most of the Solians, and Tartar Nobles vie in warre Turkih, Caramanian, Arabian, and other Asian, Tartarian, and the best Out-landish Horses. The swiftest Horses are accounted among them at a great and almost ine- 40 stimable price. They alwayes feed them Summer and Winter in the Plaines of Taurica or the Peninfula, but very often as farre as the Rivers Borifibenes and Tanais: the Gentlemen nourish at home very few Horles, only for their vegent occasions, not for any arrogancie or luxurie. They feldome put their lades and unprofitable Horses for riding in the Waggon, for they doeall their bufineffe with Camels and Oxen.

Their Armes.

The Tartars vie their ancient weapons, a two-edged Sword, or Tartarian Cymiter fomewhat long, and a Turkift Dart, or a Perfian, shorter and broader of the best Iron, and well wrought; a peculiar Tartarian Bow, along Arrow, and swift; a Quiver, sometimes a short Speare after the old guize of their people. They goe with Brest-plates and Helmets, and in Persian or Mosconian Armes, wherewith they abound being enriched by the spoyle of Christians. They 50 haue ancient Saddles and Bridles after the custome of the Nation, very fitting, not for pride or superfluitie : the Nobles have them prepared very elegantly, strongly and compendiously for their vie. But most in the Tartar Armie are altogether vnarmed and cowards, and they carrie with them to warre by reason of their great Hoast, almost an infinite number of Horses. For a Store of Hor- Tartar even of the bafest condition will scarcely be content with one or two Horses, but three, foure, and more, which he may have alwayes readie with him at his hand. Therefore the Armie of the Tartars is made so numerous, great and terrible, which when it is seene afarre off, is decmed by our men almost an infinite and innumerable Hoast.

Now when the Tartarian Armie is come into their enemies Country, the Tartars ranke not themselues in bands or troupes, but all set forward and proceed leisurely. They dispose many 60 Watchmen in all parts throughout their companies, which they make greater or leffer for their Flight fayard. Supply, but after that the foremost of them have described their enemy, they counterfeit a flight, that they may more easily allure them into those troupes, which they have laid in ambushments,

and so ouer-charge him. But when they espie a great Armie of enemies, they make a retraite quickly and speedily to their Armie, Rankes, and Banners.

There is great celeritie in conflictuting and governing their troupes, feeing that they are not ruled onely by the advertizements of the Generals and Prafects of their Regiments, but also by Their Dift. the thew of Whips, as is the long continued practice of the Nation ; and they are subject to to pin

a becke, that they are very eafily brought into their Ranges, when focuer it is necessary.

The Chan is alwayes for tified in warre, with a band of frome thousands of noble and coura. His strength. gious Tortors in number, some hundreds of Institution, Footmen, and some small Ordnance. In The principall, the Chams Regiment a very great white Maret tayle, and a piece of Greene and Red Salke of Engine a Maret tayle and the Tortol Emperour is carryed before on a great Pike for the Standard. There appears in the

troupes of the other Tartars, many Ancients and Enlignes of various colours.

The more famous Souldiers, and they which are notable in reputation, dexteritie and warlike Prowes, and have archieved in warre some Noble Sprudee and Enterprize, are greatly honoured by the Chen, Soldens, Kimiazons, and Maraons. And that refpect is had to thom, shat nourse up the common the common that the with sensy me great base for and footh liberrietis, as he can flew them, but allo is to mindful of their deligns and membershire he stig over them and indeficient or the common that more noble Marious. That dignitie among the Tarters in the greatest and Hereditary, for they going to warre able and experienced men which possesse the place, are dignised by the Clear, 20 with the glorie of leading the Troupes. The Chan also frees some Tarrar captives wish the permutation of captines, and in ranfoming others be largely powers out his owne Treasure, and willingly comforts them as he is able.

### CHAP. XXII.

#### DITHHAR BLEFERNS his Voyages, and Hifterie of Island and Groenland.

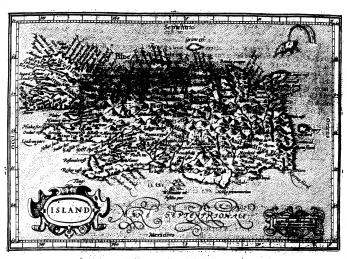

N the yeere 1565. \* two Hamburg Merchants thips determined to fayle to a Hepabli Iffand, the Mariners, by an ancient cultome, defirous to have a Minister of Gods thed this Book Word with them, commend this care to the Ministers of the Church of Ham- dame 1607. burg, and intreat them to prouide them a Minister. One Doctor Panton of Etzen was then Superintendent of the Church of Hamburg. While therefore I flayd at Hamburg, expecting my Library from Roffeeb, I entred into some familiariste with Paulus, and the rest of the Ministers. This Office was bestowed vpon me, which I vndertooke the more willingly, because I had a longing defire to know strange things, and divers Countries, yeelding to their perswasion. Taking thip therefore the tenth of Aprill, wee sayled voon the Coust of England and Sectland, and passing beyond the Ilands Oreades, in number fifteene, whereof the

most part lye vnmanured for the barrenesse; Foron and Hitland are inhabited : Here wee law a very high Rocke, which in the top representeth the head of a cooled Monke , where also there is a fafe Harbour against all winds, and this Monke delivereth many from prefent dangers. The fourteenth of June we descryed Island, which feemes afarre off, like winter clouds. The next day we attayned the Land and Haven of Haffenefords toward the South,

Ifeland is a rough, hilly and fnow ie Land, which is supposed to bee twice bigger then Sicilia: it is thought to be a hundred leagues in length, which also Olans Magnus testifieth in his eleventh Booke. It hath the name of the perpetual Ice, and coldnesse of the Ayre, which is there most tharpe: for eight whole moneths it is troubled with fee: It burneth not withfranding with heat and inward fire in many places. The extremitie of cold increaseth this heate in the bowels of 50 the earth, which cold continueth the greater part of the years (a few Summer mounths excepted) and so bindeth the pores in the vpper part of the Earth, that it can have no free venc. And this Iland hath fo great a Latitude from the Aquator, that the Arctick Circle divides it in the middeft, that is to fay, fixtie fine degrees and a halfe. The Hands called Ebude, are object to the North part of this lland. But whether that be of thefe, which Ptolomie, and ancient Writers call Thule, or rather I feland, that great Iland, I dare neither affirme, nor altogether denie, because there is no Iland found where Prolemie fet Thule. Now, the later Writers make another manner of longitude about Scotland, and the bordering Hands, then Prolemie ever thought.

I will draw the Descent of this Nation from their first originall, following the truth of the Island Chronicles. In the yeere of Christ 900. in the time of Alebrand Bishop of Brane, cer-60 tayne of the Nobilitie of East Frifia, and of the Countrey of Breme, definous to discouer thrange Countries toward the North, fet fayle from Wefer, and passing beyond the Oreader, found this Hand almost in the vemost skirts of Europe, yet habitable, but full of Snow : which they called Heland, for the coldnesse and roughnesse thereof. And when they had fayled further towards the North about two hundred leagues, they found another Hand, which (by contraries)

# HONDIVS his Map of ISLAND.

they named Groneland. Endeaucuring to fayle further towards the North, through the frozen Mifts ordinary or congealed Sea, being long hindred by the Ice, at length with great labour getting out, they in those Seas. fell into whirle-pooles of the Sea, and thicke darkenesse.

See of Illand originall the

In these whirle-pooles and darknesse, this Fleet (one onely Ship excepted) perished. They that were preferred, after many long labours and perils, fayling through the Tartarian Sea, came oniginall the next Chapter.

Antiquisies Land. And when the Inhabitants had hid themselves in secret places, by reason of the great are often my- heate and foorching of the Sunne, they faw Gold, and other precious things fet heere and there, Rical, ormythis without a guard. And when they had carryed away afmuch as they would, and hafted to the cal & fabulous Ship, they faw some pursue them with Dogs of strange bignesse. One, who was hindred and laden with a prey that bee could not estape; was torne in peeces of the Dogges. The rest, after long fayling, shunning these Whirle pooles, arrived in Musiconia, thence by the Balticke Sea returning voto Breme, they brought backe thefe tidings to Alebrand the Bishop, with part 50

Much about this time, the Normerians, by example of the Helnetians in Iulius Cafars time, are supposed to have come out of Norwey, who then long time possessed that part of France, which now.alfo is eall Normandie. And when they had performed great attempts by Sea and Land against the Britaines, they did not onely scoure the Sea by hostile incursions, but also expelled the Saracens, who at that time came into Italy, and fought to feat themselves in Calabria and Apulia. After they brought Colonies Northward into Hisland, Feron, and Island: which way, they learned of the Bremians, by meanes of the Nobilitie of Frifia aforefaid. And even the very proprieties their speech doth testifie, that they came out of Norway: for the pronunciation of the I falanders doth agree with the antient Inhabitants of Norway. For vpon the Sea coalt of Nor-60 men, especially where the famous Hauen and Citie of Bergen is, by reason of the refort and familiantie with the Germaines and Dones, the Language is changed.

### CHAP. 22. Iseland Bishops, Reformation of Religion, Tadde Bonde.

Of the Iselanders Religion.

N the yeere of Christ 1398. Woldemarus, the second of that name governed the Danish King. dome, whereunto Norway was added, whose posteritie held it, vntill Ericus Duke of Pomerania, and Christopher Banar. Vnto this Waldemarns all the Aritoian Colonies obeyed, fo that now, under that Woldsmarus, the I folunders were first instructed in the Christian Religion, when before they had worthipped ftrange Gods. And when almost all Christian people, in that lamentable darkeneffe and title of a Church, as it were by Witchcraft deceiued, were detayned in most deepe bonds of superstition ; it could not bee but they, who were furthest removed from the focietie of Learned men, and dwelling vader an vaciuill and barbarous Climate, should fall into most foule Idolatrie, when sometimes (as hereafter shall bee declared) they had Deuils to serue them, as familiar as domesticall servants. But after Luber began to bee knowne, Christianus the The Christian King of Demairke procured purer Doctrine to himselfe, and purged the Churches in the King- care of King dome of Denmarke, Norway, and all the Ilands subject voto him; fending Ministers into Ifeland, Christian, to fow the feede of the Gospell there. Hee fent a Printer also out of Demarke, to let forth the Bible, the common places of Philip Melantilion, the Workes of Vibanus Regins and others, in the vulgar Tongue, to the Paltors who were ignorant of the Latine, as at that time almost all of them were. And also sent for fit and apt young men out of Iseland, whom hee maintayned in the Haffnian Vniuerlitie at his owne costs, and gaue them charge over Churches

King Woldemare, as soone as they should professe Christian Religion in Iseland, ordayned them two Bilhops, one in Scalbolden in the East part, and another in Hollen in the West, whose Suc. Two Bishops ceffours at this day retayne nothing but a shadow, and a bare Title, for they have no other reve- in Ifeland. mues but Butter and Fish. But when that reformation (whereof I spake) was made by King Christian in the Churches of Isaland, one of the Bishops in Scalbolden, conspiring with the people, reiects the Doctrine of the Gospell, and making a rebellion they kill the Kings Lieutenant. The yeere following, which was 1535, the King fent a Noble man of the Order of Knighthood, one Paul Hitfelt (whom I faw an old man in Demmarke) furnished with a Fleet, Souldiers, and Municion into the Iland. The feditious being flaine, hee renueth the reformation of the

charge of the Church and Hand.

The greatest man in Iseland at that time was one Tadde Bonde. Hee, after the Kings Armie Tadde Bondie was departed, conspiring with the principall men (whom by his Authoritie hee drew to take was departed, computing with the party and perfect of the Ilanders to follow. They his part) revolted from his Allegiance, and perfect of the Ilanders to follow. They meete together in a place called Waloe, and conspiring to rebell, and cast off the Kings Subjection, they impart their counsels together, and Tadde had his possitions not in one place, and many retayners, and for these causes hee thought they could not easily bee suppressed. The Bishop who dwelt in the East, had a speciall care to acquaint the Kings Lieutenant with all that was done (for the Lieutenant was ablent in the Weit part of that Iland) and the Bishop hated Tadse a long time. For in that first Rebellion, hee had fallly accused him to the Lieutenant as guiltie, and au-

3C Doctrine of the Gospell, and returneth into Demmarke, leaving a certayne Noble man to take

thor of the Rebellion. This acculation onely brought great and extreame calamitie v pon him. The Lieutenant being certified what was done, hee perswadeth by fit instruments, some of the Complices of the faction, to continue in their Allegiance, propounding rewards and punishments. Then many of them when they faw the greatnesse of the danger, leauing him, came humbly to the Lieutenant, and begge pardon, and obtayne it. Tadde therefore is adjudged an Enemie, both of the King and of his Countrey, they promife therefore by an Oath and giving of their Faith, that they will purfue him.

Then hee, through feare of the danger, with a few of his Domestickes which hee had gatheso red together, kept himselfe at the foote of Hekelueld, but being circumuented they were all flaine, and hee taken. They that tooke him, brought him to the Bishop, to commit him to Prifon, but hee refused to receive him. Therefore they draw him to another certains man, of those who had the chiefe place in Iustice, neither would hee receive him, fearing the hatred of the people. There was at that time there a certayne Ifelander, Ionas by name, a man of courage. I know (fayth hee) to whom I will commit him, that will diligently keepe him, and foorthwith hee flew him and buryed him. And to the Sedition was appealed. And from that time vntill this day, the Word of God is taught among it Barbarous men, after the manner of the Couteffion of Augusta.

The Life and Manners of the Iselanders.

IN the whole Iland, there are three forts of men, who are held in any reckoning and account: Three forts of for the common people, by reason of the scarcitie of Ships wherewith they fish, make them. People. felues flaues to the richer. Of those three forts, the first is of them whom they call Lofbmaders,

Ale to his mouth, drinking off it as if hee had had but one small measure,

the whole Hand.

one, to often doth he thanke him, with his head discourred, and this they doe one to the other, as

By night the Mafter of the house, with all his family, his wife and children lye in one roome, Lodging. covered with a cloth made of Wooll which they make. And the like clothes they lap vnder them, without straw or hay put wider. All of them make water in one chamber-pot, with the which in the morning they wash their face, mouth, teeth, and hands; they alledge many reasons thereof, to wit, that this makes a faire face, maintaineth the strength, confirmeth the finnewes in the hands, and preferueth the teeth from patrifaction. If Cattle perish in the waters or fnow (which often commeth to paffe ) they fay, they are killed of God, and are accounted among the delicates. And it happened in the yeere 1964, in a place called Ackermiffe, that in the month of lanuary some Kine strayed in the darke, and the fogge was so great, and the depth of fnow, that they could not be found. In the moneth of April they were first found vntainted, and without any euill fmell, and being distributed among the neighbours, some part was brought to the Governour, with whom I lived at that time, which was not lawfull for him to despife, yet he

commanded it to bee given to the poore. In the Winter time, before and after the Solfinium, when the Sunne declineth, and being in Sagitarius, Capricornus, and Aquarius, it departeth from them, neither doth it afcend about the Long night. Horizon, while it touch Prices, therefore they have no light but of the Moone and Starres. In like manner about the Summer Solftimm, when the Sunne afcendeth to Gemini, Cancer, and Leo, it never goeth downe under the Horizon, therefore at that time they have no Night. In the Winter time, they keepe their Beds many dayes, and exercise themselves in the game of Chesse, Chesse,

the invention wherof is due to Xerxes the Philosopher: the meane while the fervants bring them 30 their meate dressed to their beds. They keepe Lampes of the oyle of Fish continually burning, others burne Tallow candles.

In the moneth of Februarie, as foone as the Sunne afcends about the Horizon by little and little the dayes grow longer, then they begin to Fish, whereof there is so great plentie, that it is scarce credible, for the Fishes which for three whole moneths swamme in the darke, as soone as they fee a fish of Tinne faitened to an Iron, they ranne to it in schooles, that they are not onely drawne vp by the jawes, but wherefoeuer the Iron toucheth them. Having taken them, they plucke out the bones, and lay vp their bowels, and make Fat or Oyle of them. They heape vp their Fish in the open ayre, and the puritie of the ayre is such there, that they are hardened one-

40 ly with the winde and Sunne, without Salt, better furely then if they were corned with falt. And if they kill any Beafts, they preterue the flesh without stinke or putrifaction, without salt, hardened onely with the winde.

Of the wonderfull standing Pooles, Lakes and Fountagnes in Isoland.

IN divers places almost throughout the whole Hand are Bathes and scalding Fountaynes, which Hot Bathes I flow out in great abundance. This water as foone as it begins to coole, hath a Sulphurie fub-Hance in the top thereof. In these scalding waters, wherein I could scarfe dippe my finger, red Diue-doppers are seene afarre off, if you come neerer, they vanish, if you depart, they appeare againe, fo all day long (if any please) they play boe-peepe with men. Whether they bee Dine- Dinesdoppers.

50 doppers indeed, I leave it to others to decide. At the West of this Iland, there is a buge smoakie Lake, and very cold, which turneth all Sconcemaking things that are cast into it into itones, and that in few dayes, and (which is worthy of great ad- water. miration) if you put afticke vpright into the botcome, the lower part which is flucke into the earth, hath the relemblance and hardneffe of Iron after two dayes, that which was in the water hath the hardnesse and show of a stone, the upper part which remayned about the water, keepeth his wonted forme : And I twice proved the truth of this thing, but when I put the lower Note.

part (which represented Iron) to the fire that it might melt, it burned like a Coale. There are two Fountaynes of most different qualitie, in a place youn the Sea coast, which is called Turlocks Hauen, the one cold, the other hot; their Fountaynes by pipes are drawne into 60 one place, and tempered for bathing, they make a most wholesome Bath. Not farre from these Fountaynes, there is a certaine other Fountayne, which bubbles foorth liquor like Wax, which French diseases

notably cureth the French difease, which is very common there. Not farre from the Hauen Haffnefords, there is a cleft in a Rocke like to a Fountayne of vn-

deth alwayes at the Table, watchfull if any becken; to him that beckeneth thee gives the chamber-pot under the Table withher owne hands; the rest in the means while grunt like Swine, least any noise bee heard. The water being powred out, hee washeth the Bason, and offereth his feruce to him that is willing, and hee is accounted vacuill who abhorresh this fashion. They Louing entertaine them that come voto them with a kille, and they behold and looke each on other, if wormes, paraduenture they may fee Lice creeping on their garments, which greatly trouble them for want of linnen : if thy fee any, each taketh them from the other, and as often as he taketh away

Both Sexes in Ifeland have the fame habite, fo that by the garments you shall not easily di-

strength of body which they have. If aw an I felander, who easily put an Hamburg Tunne full of feerne whether it bee Man or Woman. They want Flaxe, except it bee brought vnto them by our Countrey-men. The Women-kinde there are very beautifull, but ornaments are wanting,

that is to fay, Men of luftice : for Loch in their language, fignifieth Law. These men administer

They are in the place of Nobles, and as every one of them is richeft in Shipping, and Cattle, so

hee hath most Fishers, and followers. This onely power they know. The third fore is of Bi-

shops and Ministers of the word of God, of the which many are found every where throughout

There are many of the Iselanders very proud and high minded, especially by reason of the

Inflice, and there are many of them, but twelve of them onely have the yearely charge of Inflice.

ces cach yeare All men obey their Judgement and Decrees. Another fort is of them, who are called Bonden:

The whole Nation of the Islanders is much given to Superfittions, and they have Spirits fami-Superstition liarly ferging them. For they onely are fortunate in Fishing, who are raised up by night of the and Witchcraft. Deuill to goe a fifning.

And although the Ministers of the Gospell vie all diligence in diffwading them from this im-Night Rauens, pietie ; yet this wickednesse hath taken roote, and sticketh so deepely in their mindes, and they are so bewitched of Sathan, that they can admit no found Doctrine and Dehortation. Yea, by the Deuils meanes, if you offer them money, they promife prosperous wind and performe it, which 20

I know, as hereafter shall bee spoken. The like Olaus Magnus wreteth of the Finlanders in his third Books. They hold Ships also by inchantment almost immoueable, and that in a prosperous wind. Sweet factifice And truely it is a wonder that Sathan fo sporteth with them. For hee hath shewed them a refor the Deuill, medie in flaying of their Ships, to wit, the Excrements of a Maide being a Virgin : if they annount the Prow, and certaine planckes of the Ship, hee hath taught them that the Spirit is put to flight, and driven away with this tinke.

In the rest of the carriage of their life, they thus behaue themselues. The Parents teach their male Children (euen from their child-hood) letters and the Law of that Iland, fo that very few men are found throughout the whole lland, but they know Letters, and many Women vie our letters, and have also other characters, with the which they expresse some whole words of 30 theirs, which words can hardly bee written with our letters. They give themselves to hardnesse, and fishing from their Infancie; for all their life confists in Fishing. They exercise not Husbandrie, because they have no Fields, and the greatest part of their foode consisteth in Fish, ynsauerie Butter, Milke and Cheefe. In flead of Bread they have Fish bruited with a Stone. Their Drinke is Water or Whay. So they live many yeeres, without medicine or Phylitian. Many of them

live till they bee one hundred and fiftie yeeres old. And I faw an old man who fayd hee had Anoldman or then lived two hundred yeeres. Nay, Olaus Magnus in his twentieth Booke fayth, that the Ifelanders live three hundred yeeres.

The greater part of Ifelanders hath neuer seene Bread, much lesse tasted it. If our men at any time fell them Meale or Corne, they mingle it with Milke, and lay it vp for a long time, as de- 40 licates for Nobles. They call this fauce or mixture, Drabbett.

The Germaines that trade in Ifeland have a place in the Haven of Haffenefords fenced by Nature, where vnder Tents they fet their Merchandise to sale, as Shooes, Garments, Glasses, Knives, and fuch kinde of Merchandile of no price. The Ifelanders have Oyle molten out of the howels of Fishes, knowne to our Tanners and Shoomakers: they have Fish, Brimstone, white Foxe skinnes, Butter and other things. They barter all these for our Commodities, nor is the

bargaine ratified, before they bee well stuffed with our Meat, Wine or Beere, together with their Wives and Children whom they bring with them, how many foeuer they have. Comming into the Hauen, they have their Daughters with them which are marriage-able:

they after they have inquired of our companie, whether they have Wives at home, or not, they promise a nights lodging for Bread, Bisket, or any other trifling things. Sometimes the Parents 50 weeld their Daughters freely, even for a whole moneth, or as long as they stay. If shee proove with Child by that lying with her, the parents loue their Daughter better then before, and the Child being borne, they bring it vp fome yeeres, while either the Father returne, or they give it to their Sonne in law that (hall bee, for a Dowrie with their Daughter, who doth not despite it, because it is borne of the Germaine blood. It any Virgin have familiaritie with a Germaine, fliee is honoured among them, and therefore flee is fought of many Suiters. And the time was before this, that Whoordome, which was without the degrees of Confanguinitie and Affinitie, had no Infamie. And although Preachers crie out against it, and the offenders are severely puniflied, yet they hardly abiliaine.

They lay not vp Wine and Beere which they buy of our Countrey-men, but quaffe it vp 60 Drinking and house by house by course one with another, and that freely or for nothing. While they drinke, they fing the heroicall acts of their ancestors, not with any certaine composed order or melodie, but as it commeth in every mans head. Neither is it lawfull for any one to rife from the Table to

measurable depth. If you looke into it, you cannot see the water, but if you cast in a stone, halfe an houre after you shall heare it falling, as if it fell into brazen Vessels, and forthwith the water arifeth, and it is filled to the top of the Wels brimme, and it is a most cleere water, which notwithstanding no man dare touch, nor taste, neither doth it flow out, but so long after, as the ftone which is cast in, finketh to the bottome. There is another Lake in the middle of the lland, which cafteth forth a peftiferous fume, infomuch as it killeth Birds flying ouer it with the poy-

### Of the wonderfull Mountagnes in Island.

Here are three Mountaynes in Island very admirable, the one is called the Mountayne of the Croffe, the other Snenelflockell. These two pierce the cloudes with their height, whose heads, or tops no man euer faw, nor are they euer feene without Ice and Snow; in those, Lightnings and horrible Thunders are daily heard, when neuerthelesse, in the neighbouring Valleyes the Aire is faire and cleere, as in Summer time. The third Mountayne lyeth on the North of the Hand, and not very high, but it hath burned very many yeeres; with what fire or matter, it is vnknowne; but seeing Brimstone is digged out of the Earth throughout the whole Land, it seemeth, that the Salphurie matter is sometime inflamed. This Mountayne is not farre from the Sea, and the Sea on one fide beates vpon it : it is called Heela, fometimes it caffeth forth flame, fometimes fierie water, then blacke ashes and Pumis stones, in so great abundance, that it darke. 20 neth the Sunne. No man also can dwell neere it by fixe mile, neither are there any pastures about it. Sometimes bold men, and fuch as regard not their liues, cast stones into the hollow places; for sometimes there is a wonderfull calme in the Mountayne; of pecially when the Westerne wind blowes, it caffeth backe the stones stung into it with an horrible noyse and found; the common people thinke the foules of the damned to be tormented heere : it is certayne that diuers and horrible spirits are observed in this Mountayne and about it; for if a Battaile be fought in any place, the Islanders, especially they that sayle and fish in the Sea neere to Heela, know the day of the Battaile fought, although they know not where it be done : for they fee (as they report) wicked spirits going forth, and returning, and bringing soules with them. And such a storie is reported all I fland ouer.

Heela a bur-

Purga:orie.

A Fisherman fayling by Hecla, met with another ship, both had a prosperous wind, and when (after the manner of Saylers) he was demanded who hee was and of what place, hee answered, that hee had the Bishop of Breme in hisship, whom hee would conuay to Heela: and it was men, or illuse knowne that the Bishop dyed the same day, which not with standing, I would not set downe ons of Deuils, to truth. If any perish by Sea, or otherwise dye, sometimes leauing their Friends and Acquain-Animinous an Animinous and Ani so be witched of Satan, that they thinke them the foules of the departed.

But because no man that is well in his wits, will thinke that Hell is in this Mountayne, yet it may be demanded, whence the Hill hath this matter, whereby it should bring forth formany 40 yeeres flames, so many ashes, and such abundance of Pumis stones ? For wee see the most follid and firme bodies, and all things to be confumed by fire and for that cause some thinke, that it shall come to palle that these shall once be extingished? for the cause fayling, they deny that any effects can follow. But heere (what I thinke) I will freely speake, yet sauing other mens judgements. It is manifest by watry Meteors, that there is a continuall generation of water, by the vapours gathered together in the cauties of the Earth; which issueth forth by Fountayns; but the efficient and materiall causes abiding perpetually, the effects also continually remayne: so also in the bowels of the Earth, there are certayne places, which by their owne nature draw vnto them a hote and dry exhalation, and that it relolues it into flames, after, and Pumis flones, which may eafily be done in this Mountayne, by reason of the Sulphur matter, which is found in 50 Island throughout the whole Land. And as Fountaynessend forth more abundance of water in the Winter time, then in the Summer, nay, some of them are dry, because matter failes; sois it with this Mountayne : for sometimes matter failing, it hath neither slames, nor smoke, and all is quiet, whereby it appeareth that the matter and efficient cause faile. However it bee, I know this, that no man may come to the foot of the Mountayne without danger and feare, as hereafter shall be declared.

The same yeere I was in Island, the nine and twentieth of November, about midnight in the Sea, neere Hecla, there appeared a flame, which gaue light to the whole Iland, fo that all of vs aftenished, wondred, and carefully expected the issue thereof: the elder sort and such as were skilfull in this matter, faid, that this light came from Hecla: an houre after, the whole Iland 60 trembled, as it should have beene moved out of the place : after the Earthquake followed a horrible cracke, that if all warlike Ordnance had beene discharged, it had beene nothing to this terrour. It cannot be thought, much leffe expressed by word , how horrible it was. Wee thought that the whole frame of the World would fall, and that the last Day was at hand : but it was

knowne afterwards that the Sea went backe two leagues in that place, and remayned dry. About the beginning of July, at a certayn time of the years great flore of Ice fuldenly floteth to the Iland about Hecle, and there goes a rumour through the whole Iland, may it is believed, that the damned foules are tormented in this Ice by courfe, in the Flame, in the Mountayne, and Another wellafter in the Ice. This Ice for three whole moneths fwimmeth only about Hetla. If you take 2- der. ny part of this Ice out of the Sea, and wrap it in a linnencloth, and lay it vp in a Cheft, it remayneth follong vnmelted, as it swimmeth in the Sea; but if the Ice in the Sea vanish, which fuddenly in one night happeneth, this appeareth not , nor leaneth any figne of moyflure in the linnen cloth, which is not a hard thing for Satan to doe, to take away the Ice without moyflure, To coincrease their incredulitie. Olasse Magents maketh monion of this Ice in his sienemb Bodge.

But because I determined to fearch out all chings diligently, I fayled nor without great feare wato this Ice, and I observed, that this Ice was violently cast against the Rockes by force of the winds, and so made a mournfull found afarre off, as if milerable howlings were heard there. Hereupon the Islanders thinke the foules of the damned are tormented in this Ice.

### Of the Riches of the Manders.

Haue faid that Island was a rough and snowie Countrey, and besides, it is full of Rockes and flones; and formly, that there is not a field in the whole I and : they have not fo much as Gardens, wherein they may have Pot-herbes or Pulse : they know no kinde of Corne nor Apples, Peares, nor Cheries, nor any fruit of Trees. And, which is almost incredible, they neither Mofruits vie Bread nor Salt, yet they are well liking , and ftrong. There is no Citie in the whole Hand: they feldome have two or three dwellings together. They have their Cottages on the Sea fide for fishing, and under ground by reason of the fierce windes.

There is no lone of money among them, for wares are changed for wares. Brimftone groweth Barest. on the South part, and almost throughout the whole lland, which is digged out in great abun- Brimstonel dance: they fell this stuffe purged for a small price. Mines of Gold or Silver, nor of any other mettall they have none. They vie Iron, but fuch as is brought wnto them. You shall scarfe finde a man, who hath not Iron Nayles in a Bagge, wherewith Horfe-shooes are fastened.

All their houses are under ground, for they have no matter for building. There is not a tree in the whole Iland , except the Birch-tree , and that in one place, which also excee- Birch-tree. deth not the flature of a man in length, and that by reason of the vehemencie of the winds, that it cannot grow higher. This Birch-tree after the Summer Solftinium beginnes first to bud, the leaves have a most iweet smell, and of so fragrant a favour, that the Germones put them in their Tents, and voon their meats for a fingular delight. Yet sometimes great abundance of Firetrees from Tartaria, or elie-where carried by force of the waves and the Ice, arrived in Island. The chiefe vie of them is in building Cabbins under the ground; you shall fearly find a house out of the earth, by reason of the strong winds, which sometimes overthrow Horses and their Ri-Great winds ders. They have great plentie of Butter, for the tatnes of the graffe: for the Ifland graffe is fo fat. 40 that Oxen after a certaine time are to be driven from the Pastures, left they burft. And it is of fo pleafing a fent, that our men lay it vp in their Chefts with fingular care for their garments.

The most part (for scarcitie of Vessels) lay their Butter aside in the corners of their Houses, (as we doe Lime or other matter) and that without Salt. They have domesticall cattle, as kine; but many of them are without hornes. Al their Horses are amblers & very fit for carrying of burdens. Their kine, They have very great sheepe, they keepe not a Hogge nor a Hen, for want of graine, if fodder or horses, and They have very great theepe, they keepe not a riogge not a riet; to want or gland, it roots to the have falle them in the Winter, they feed their cattle with fish. They have rough Dogs bred with Dogs of more out tayle and eares for their pleafure, which they fell deere and greatly esteeme, when not withstanding they offer their children to any that will aske them, and that freely. Besides, this Iland children. hath white Foxes, and huge Beares of the same colour. They have no Birds but water-fowle, Beares and 50 whereof there are divers kinds and forts found there, vnknowne vnto vs. Crowes fometimes Fores. White Crowes are changed white; and excellent Falcons, and some among them white, which being taken and gotten, with the great coft of the Spaniards and Portugals, are also carried away in great number, which thing was done, while I was in /fland, to my great profit. Ifland also hath white Partridges. There are also every where through the whole Hand most pleasant Rivers, which yeeld Rivers,

the Inhabitants fish in great plentie, Salmon Trowts, and Sturgeons. There is one only bridge in all the Iland, made of the bones of a Whale. They that goe from one part of the Iland to another Whale-boneby the Continent, have no way which they may follow, for the folitarinesse thereof: but as Say - bridge. lers in the Sea, fothey by the helpe of the Load-ftone performe their journeyes. The depth of the Trauell by lers in the Sea, to they by the neipe of the Load-trone performe their journeyes, the dependent companie.

Sea neere I fland is very exceeding. In these gulfs there are Whales of wonderful bignes, and many Whales, 60 Sez-monfters which cannot bee killed or taken of men , the Ice only through the force of the winds dasheth them against the Rockes, and killeth them. I saw such a Monster cast vpon the sheare dead, whose length was thirty ells, his heigth more then a very long Warlike Pike.

A Whale being dead or killed, the Inhabitants make Buildings and Dwellings of the Huge Whale bones thereof with great dexteritie and skill, they make also seates, benches, tables, and other

Note. Orca.

vtenfils, smoothing them to that they feame like luory. They that sleepe in these houses, and said alwayes to dreame of shipwrack. And although it bee a huge and fearfull creature, and sauce great ffrength, yet notwithstanding oftentimes he is not onely withstood, but our come of his capitall enemie (not fo great) which is called Orea; this fift hath the shape of a ship turned apa fide-downe, and vpon his backe very sharpe and long sinnes, wherewith hee woundern the loft of the belly of the Whale, and killeth him, and the Whale to feareth this fifth, that in fhunning him, he often dasheth himselfe against the shoare.

A Sea-mon-

The Ifeland Sea bath a Monster also, whose name is vnknowne. They judge it a kinde of Whale at the nift fight, when hee shewes his head out of the Sea, hee so scarreth men that they fall downe almost dead. His square head harh flaming eyes, on both sides senced with long 10 hornes, his body is blacke, and befer with blacke quills; if he be seene by night, his eyes are ficry, which lighten his, whole head, which he putteth out of the Sea, nothing can either bee painted or imagined more tearfull. Olans Magnus maketh mention of this Monfter in his twentieth Booke, and faith, that it is twelue cubits long. Such a Monster at that is me tore in pieces with his teeth a Fisher-boate, wherein there were three Fisher-men, so that they were drowned, one of them, who held in his hand a little cord, wherewith hee vied to draw the hooke, and the fiffes, laid hold of the board which floted in the Sea; so he was saued getting out of the bottom vpon the planke and iwam foorth, and declared this to the Kings Gouetnour in my prefence, adding moreover that he was faued from heaven, that he might get maintenance for hischildren, who otherwife were readie to perish with hunger, when the other two though married, yet were 20.

Harfal another

Another Monster alio is often there seene and taken, of ten or twelve elles long, it is called Haefal, it is all fat; it is taken after a wonderfull manner: they have a very long pike wherunto they fasten an Iron with a forked point, that it cannot goe backe, vnto the statica cord of a maruailous length is fastned; they sticke this speare in the Monster, which swimmeth vnto it for prey , perceining a man in the little boates; as foone as the Monster teeles himselfe strooken and wounded, forthwith he hides himselte in the Deepe, and there (his bloud being pow-

Dog-fifh.

red out) dyes, afterward the Fishers draw him to the land by the long cords fastned to the speare. Besides, it hath divers Sea Monsters : a Dogge sish, which putting his head out of the Sea barketh, and receiveth his whelps (porting in the Sea agains into his belly, while they come to more growth. It hath Horfes and Kine, and what not? and it is a marvell, how skilfull Nature fports, 30 in expressing the shape of all earthly Creatures and Fowles in the Sea. Neither should any man perswade me that these things are true, although ten Ariffoeles should affirme them vnto me, vn-Leffe I had feene most of them with mine eyes. Let no man therefore prefently cry out, that what he knowes not is fabulous.

Note.

The men of Labeck, Hamburg, and Breme, were often wont to goe to this Iland, and leave their feruants in the winter lodgings; but now it is prouded by the Kings authoritie, that no Germaine, either by reaton of trading or learning of the language, leave his fervants there in the winter; but vpon what occasion this came to passe, the matter standeth thus. In the yeere of White; but spoin was a Citizen of Hamburg, one Coveradus Bloom, left by an other in Ifeland in the winter lodgings with the Bilhop in Scalbolden, for trading and learning of the tongue: the 40 Bishops fishers find a whole Vnicornes horne in the Ice, brought out of Groneland (as it is thought) where yet at this day Unicorns are faid to be, & thinking it to be a Whales tooth, nor did the Bi-Imas Pools and Shop beleeve otherwise, they bring it to their Master, who gave it to Comadus begging it; he being somewhat craftie, lold it after at Antwerp for some thousands of Florins. When this thing came to the King of Denmarks cares, he forbad that no Germaine should winter in Ifeland in any cause.

Sea-fifb. See

### Of the indgement of the Iselanders.

Here is a most pleasant place almost in the midst of the Iland, you would say it were a Paradife in the Spting time, where fometimes there was a high Mountaine, which burned with inward fire, as Hecla doth at this day; which matter after it was confumed, made a Plaine, but 50 the Rocks which were erected about the Mountaine, stand yet, therefore this place is so fenced by Nature, that they that enter it, must goe one by one. This place is famous for two great falls of water, where two Rivers from the highest Rocks cast themselves steepe downe one against the other, with an aftonishing and horrible dashing of the waters against the Rocks. These Riuers meete together in the middle of the field, and by a great whirlepoole are swallowed up into the ground.

Heere yeerely the nine and twentieth of Iune, the Inhabitants who have any controversie, meete together: for in no other place or time Iustice is administred: after they are entred, standings are placed by the Gouernours guard, who admit all that defire to come in, no man hath libertie to goe out, without the confent and authoritie of the Governour. When they are come 60 thither, the Gouernour offreth his Charter to bee publikely read, whereby hee procureth credit to his Office, and having spoken before somewhat of the Kings goodwill, and his owne towards the Handers, he exhorteth them to communicate Iustice vnto all, without respect of persons, hee

atter departe: h, and keepes himfelte in his Tent, having heard a godly Sermon, the twelve men, whom they call Lachmaders, as it were men of Iutlice, hit downe on the ground, each of them Monner of hath a Booke in his hand, contayning the Law of that Iland, written in the vulgar tongue. Ac- rials and cufation and answer being made, they goe apart into seuerall places, euery one reades ouer his sutes. Booke diligently, going atterwards againe to his place, without Scribe, without replication or doubling, and juglings of fuch brabling Lawyers, they conferre of the fentence and pronounce it : If any thing bee worthy of deliberation, it is brought to the Gouernour for confultation and for his honours fake, when not with landing they leave no power of deciding it to him.

There are many acculations of There and Adulteries, they make no question of their Bonds, of Io their Fees, their Hereditarie fields, or any fumme of money : there are no controueries there. These twelue men, ouer which one is chiefe, are greatly honoured amongst them. These doe determine, and diligently inquire of all publike Controverses. If there bee any wicked Act committed that yeere, if Murther bee committed any where, if Theft, if Adulterie, if Cartle be flot- Sentence and len away (which vieth oft to bee done) then thefe men fet downe the punishment. They that execution. are condemned to dye, are beheaded: the rest, who are any way to bee punished, they burne with a marke, this punishment with them is most grieuous : for they are marked in the forehead; they that are in marked are accounted in the number of wicked men : others are beaten with roddes : and I faw when the Pather and the Sonne for theft (for they were Cattell sealers) were held Captines, that the Father was compelled to beate his Sonne with roddes, and hee after-

20 wards beheaded.

### of Groneland.

Seland by Nature is formewhat long, it hath Norway on the East, the Orcades and Scotland on the South, Groneland on the West, and the Hyperborean or Congealed Sea vpon the North. Although I purposed to passe ouer Groneland with filence, yet seeing I touched vpon the Land, and faw fome few things, I thought it was to bee added. There was in a certaine Monasterie in Ifeland called Helgafiel, a certayne blinde Monke left (for the Abbot of the Monasterie had conuerted the Reuenues to the Kings vie) who lived miferably there : hee was borne in Groneland, of 30 a darke complexion and broad face. The Governour commanded him to bee brought vnto him, that hee might know some certaintie of the state of Groneland. Hee Layd, there was a Monasterie of Saint Thomas in Groneland, into the which his Parents thrust him when he was but young, and after that, hee was taken out by the Bishop of Groneland, when hee was thirtie yeeres of age, to faile with him into Norway, to the Archbishop to Nidrofia (or Dronten) to whom the Ifeland Bishops are subiect: in his returne hee was left in a Monasterie by the Bishop, whose Countrey Groneland was: this was done (as hee fayd) 1546. Hee faid, that lland was called Groneland, Antiphrastically. For that it isldome or neuer waxeth greene, and that there is so great cold there throughout the whole yeere, except lune, luly and August, that being clothed and couered with Furres, they could scarfe bee warme; and that they had at home certayne round 40 peeces of wood, which being continually mooued with the feete, kept their feet warme. Hee

fayd, it aboundeth as Ifeland doth with Fishes, and that they had Beares and white Foxes, nay Their Pienies Pigmies, and Vnicornes, and that day did not appeare, till the Sunne had runne through Psfees. are Bealts and This Monke told vs maruellous strange things: that there was in the Monasterie of Saint The Valcornes, mas (where hee lived) a Fountayne, which fent forth burning and flaming water, that this wa- Fifnes.

ter was conneyed through pipes of stone, to the seuerall Cells of the Monkes, and that it made them warme, as Stoaues doe with vs ; and that all kinde of meates might bee boyled in this Fountayne and fierie water, no otherwise, then if it had beene fire indeed. Hee added moreouer, that the walls of the Monasterie were made of Pumice stones, out of a certagne Mountayne (not farre from the Monasterie) like to Hecla: for if yee powre these burning Waters vpon the SC Pumice stones, there will follow a slimie matter, which in stead of Lime they vie for Morter.

After the Gouernours conference with the Monke, I came privatly vnto him, to demand certayne particular things touching the Pigmies and other things; hee had little skill in the Latine tongue, hee vnderstood mee speaking Latine, but answered by an Interpreter. Hee sayd, the Pigmies represent the most perfect shape of Man, that they are hairy to the vetermost joynes of Pigmies, our the fingers, and that the Males haue beards downe to the knees. But although they have the men boue nor fhape of men, yet they have little fenfe or understanding, nor diffine speech, but make shew of teene such. a kinde of hilling, after the manner of Geele; that his Abbot kept two of them in his Monasterie, male and female, but they lived not long, and that they were vnreasonable Creatures, and line in perpetuall darknesse. That some say, they have warre with the Cranes, that Of this the

He affirmed, that the same maner of food was in Greneland, as in Ifl and, to wit, of fish but not of win am this cattle, because they have no cattle, & that the country is not populous. Forthwith from Island be and the next gins the Hyperborean Sea, which beats upon Groneland, and the Country of the Pigmies, which at this day is called Nona Zembla, & there the frozen Sea hath a Bay which is called the White Sea, light.

Kkk 2

653

or Mare Album, and there are there certayne passages whereby they sayle into the Schytbian O. or can, if they can for Ice. And the Gouernour had the King of Demurkes Ship, furnished with dail, it trey can to be a fact of the blook for the basis of these passages, and short cut into the Kingdome of China, liee affected this commendation, that hee might open thefe paffages and Lie virto the Kingdome of China by the Tartarian Sea, which had often beene attempted by c.

The Authors Voyage tor Discouerie.

The last day therefore of March, in the yeere 1564, hee commanded that Ship to sayle to those places, and mee also together with them, being willing of mine owne accord: and enjoyned me to marke diligently the scituation of the places, and what some wee met with worthy of fight to marke unigenity on a trouble of the foreign and four men, as well Danes as fielenders, and the 10 or report. Wee were in the Ship threefcore and four men, as well Danes as fielenders, and the 10 twentierh day of Aprill wee arrived at a certayne Promontoric of Graneland, and when wee found no Hauen, to the which wee might fafely commit our felues, and letting downe the lead, wee had founded the depth of the Sea, it was fuch as wee could not anchor there, and the abundance of Ice was so great, that it was neither lafe nor possible to sayle neerer to the Rocks s foure and twentie therefore of vs armed, with great labour and danger went on thoare in our Skiffes among whom I allo was) to trie whether wee could finde a harbour, and what kinde of men Groneland had. In the meane time, the great Ship floated in the Sea and Ice, in a great calme, halfe of our companie abode in the shoare to keepe the Skiffe; another part (and I with them) ranne abroad to discouer: they that were left on shoare to keepe the Skiffe, going hither and thirther, found a little man dead with a long beard, with a little Boate, and a crooked Hooke of 20 the bone of a Fish, and a leather cord : foure fish Bladders were bound vnto the Boate (as is supposed) that it should not bee drowned, whereof three were sunke and fallen flat : This Boate (because it was very valike ours) the Gouernour sent to the King of Denmarke. Olaus Magnus in bus first Booke writeth, that there is a Rocke in the middest of Iseland and Grone-

In Sir Thomas Smiths Hall in Londents a

land, called Hutilocke, which wee layled by and that there they bane Ships of leather, which bee sellifeeth hee faw, but it was not fuch an one: but Petrus Bembus in his fenenth Booke, in the Venetian Historie, describeth a Ship, which was like unto this, where bee writeth thus : Whole a French Ship kept ber cour fe not farre from Britaine, fine tooke a Boate built of Ofiers the middeft being cat out, and the fo-Lonsonts a kind of Boare lid barks of Trees toyned together, wherein there were fewen men of a middle flature, somewhat darks cokind of soare to range of a large and broad face, marked mits frange fearer and violet colour; thefe had their par- 30 o: bathe lowed mants of Eifnes skinnes full of foot, they bere a painted Crowne of reede women in, as it were with feuen Scalesskins, eares they did ease raw Floib, and drumbe Blood, as wee doe Wine; their freech could not bee underflood. fixe of items and, one young man was brought aims to the Aulercos, where the King was.

It is not unlikely to bee true, that this Ship with these seum men were driven out of Grone-

land, into the Britaine Ocean : feeing the description of Bembus his Ship agreeth with that found in

A Beare.

Wee wandred in the meane feafon, in a Land vnknowne vnto vs, which was coursed with Snow and Ice, wee found neither footing of men, not any habitation, nor fit Port, but the Sea was closed and fenced on every side with craggie Rockes. Yet we met with a great white Beare, which neither feared vs, nor could be driven away with our cryes, but came full vpon vs, as to 40 his certaine prey, and when hee came neere vnto vs, being twice shot through with a Gunne, hee flood boit vpright withhis fore-feetas a man flandeth, till hee was shot through the third time, and so fell downe dead : his Skinne was sent to the King of Denmarke. We agreed among st our felues before wee went on shoare, if wee found a fit Harbour, or else had need of their helpe, that wee should plucke up our standerd, which wee carried out with us for that purpose, and that they, if they would call vs backe, should figuifie the same with their Ordnance. A tempest arising in the meane while, the Master of the Ship gives vs a signe to returne, by the discharging of a piece of Ordnance, and calls vs backe vnto the Ship: all of vs therefore returned with great labour after three dayes unto the Ship with the Beares skinne; wee sayled therefore to the other fide of the Iland toward the North, to the Countrey of the Pigmies or Nous Zern- 50 bla, that by the mouth of the White Sea, wee might come into the Scythian, or Tartarian Sea, from whence (they say) there is a passage to the Kingdome of China, and Cashay; but beeing hindred by the Ice, wee could not paffe the mouth of that Sea : therefore without doing any thing, wee returned into Ifeland the fixteenth of lune.

The Authors

T fayd before, that the Ifelanders the nine and twentieth of Iune yeerely came together almost in the middle of the lland to ludgement, and after our returne, the Gouernour went thither, and I with him. Some of the next inhabitants of Hecls then came to Iudgement, whom the Gouernour inuited twice or thrice to dinner and supper. These men while they were at supper, reported wonderfull things of the Mountayne Heels, and other things; I was foothwith in- 60 flamed with a defire to fee and heare all. Wherefore the Gouernour commended mee to thefe men, that they should bring mee thither, and commanded all things should be she wed me, which they knew there worthy to bee seene. This Governour was a Dane, a Noble man, and excellent. ly well learned : to this man furely I am much bound for his great liberalitie towards mee, in

CHAP. 22. The Authors furuey of Hecla, and ficknesse thereupon.

that he caused me to be conveighed at his charge to divers places of the Hand, where any notable thing was to be feene. I accompanied with two Islanders, and a certaine Dane, who carried prouition, and a Tent on Horfe-backe, fpent foure whole dayes, while we go through rough places, Hilly and desolate vato this Mountayne. For some Miles about Hecla, all was fell of blacke ashes and Pumis stones. The Islanders admised me that I should goe no neerer, leading away the Horfe, which they had lent me;

I, because I purposed to see, and search out all things diligently; accompanied with the Dane. came neerer, as though I went to climbe the Hill, and although at the first tight we were afraid. vet I would not leave off my purpose, and by reason of my young yeeres, not understanding Io the danger, I went through the after and Pumis stones alone to Hecla, leaving the Dane, There was there at that time a wonderfull calme, fo that I faw neither fire nor fmoke. But behold finddenly in the bowels of the Earth, a great noyle was heard, after this, followed flames of a greene colour, which had almost killed me with their Sulphurie and filthy stinke, so that I scarle efcaned to my fortaken horses and companions. Vpon that sudden assonishment I fell into a sickneffe, and vehement cogitation, feeing these horrible flames were alwayes present before mine eyes: infomuch that my Illand companions were compelled to carry me away unto their house, with whom I lay ficke two whole monethes : while in the meane time the Dane returned to the Gouernour, and to the Hamburgers, and acquainted them with my flate. I lived miferably among it the Barbarians, ficke and voknowne; they had Bisket which I fleeped in Milke, and 20 and fo for that time, I indured hunger, while (being ftronger) I might returne to the Gouernour.

The Hamburgers, by reason of the time of the yeere, least they should loose the opportunitie of fayling, desparring now of my returne, set fayle (for they depart before the foure and twentieth of August, lest being hindered after by the Ice, they cannot get out) yet with speciall care commended me to the Gouernour (if at any time I did returne) leaving Bisket, Wine, and Beere, The Gouernour hath a dwelling fit enough for the manner and fashion of this Countrey, on the South of this Hand, not faire from the Hauen of Hafnefordt, the place is called Beffede. I was Hafnefordt, brought hither of the Islanders, to the Gouernour, who, for our common studies, entertayned His abiding me willingly and honorably. But although wee were plentifully furnished with all necessaries, there two winvet being very wearie of that life in such darknesse, I expected the ships out of Germany the ters.

30 next yeere with great defire.

There grew then warre betweene Ericus of Suetia, and Fredericke the Second King of Den. marke; which was continued with great courage for ten yeeres after. The Lubekers were Conforts and Confederates of Warre vnto the Dane. So most part of the Cities on the Sea-coaft, vpon the Balthicke Sea, hindred or intangled with this Warre, intermitted their fayling into Mand this yeere, therefore wayting in vaine, I must stay. The yeere following, when I had wayted till the end of Iune, all hope of returning into Germany that yeere was taken away, and which was worfe, the yeerely thip came not from Denmarke: and bread and Wine failed vs almost foure monethes.

There lay Portugals at anchor at that time in Island in a small ship; who came thither to fowle, 40 they caried away excellent Falcons, and white ones among them, in great number. I thought good rather to croffe ouer into Portugall with them , then to wayte another yeere, either for Danes or Germanes. And when they gave the Governour his Custome, he dealt with them in my behalfe concerning the charge, that I might passe with them, and he liberally paid the charges, and honorably fent me away with a worthy Prefent. Not far from the Kings house, there was a certayn Minister, lonas by name, he familiarly faluted me before I departed for the time I was in Island, I had some familiaritie with him, to whom also Heft my Bookes when I departed; he for friendships sake, knit three knots in a handkerchiefe, and promised me a prosperous wind, say ing, if by chance the winds at any time grow contrary at Sea, open these knots, and then remem- His Nauisatiber me. When therfore about the twentieth of September we had fayled, and now Spaine was in onson the 50 our view, there was fo great a calme, that we felt not a breath of wind, and that for three whole Goalt of Afridayes. In this calme my friends promise came into my minde, and I defired to proue it. I loosed 64, &c. hec the first knot, by and by, after one houre, there arose a very prosperous winde, but blowing very his Presace, gently, I vntye the second and the third, forthwith a Tempest beganne more and more to grow, which I have fo truly that after two dayes we ridde in the River Tagus, which beateth upon Liftone.

Extracts of ARNGRIM IONAS \* an Islander, bu Chrymogaa or Historie of Island : published. Anno Dom. 1609.

> of Island, the Situation, Discouerie, Plantation and Language.

famous man , Gudbrandus Thorlacius , now Bishop of North Island, hath hitherto shewed : who

Sland is an Iland of the North, compafied about with the huge Ocean : whose Gosmographicall latitude towards the North, to wit, at Hola, the Episcopall Seat of North Island, is 65. degrees, and 44. minutes : and the longitude 23. degrees and 30. m:nutes, or thereabouts : for I will not precifely affirme the fame. by reason of that scruple, arising from the Paralaxis of the Moone in the obseruation of the Eclipses to be doubted : which only way of finding out the longitude, that most 20

hath imported vnto vs this longitude and latitude of his Sea : and was the first, that I know, Authors which among our Countreymen, who hath delivered any certaintie in Writing, concerning this matter. And furely, that which at this day, and to from the first entrance of Inhabitants, beareth the many things of his Countrey. name of Island, (while as yet it remayned barren and defolate) had divers names allotted orgi-

uen vnto it from divers Discouerers : whereof three are mentioned.

For first of all it was called Swalandia. For a certaine Pyrate called Naddocus, going towards the Farensian Ilands (commonly called Farenar, for the multitude of Egges) was brought vnto the shoares of East Island, through a Tempest, not farre from the Mountayne Reidarfiall, (so called afterward) to the Bay Reidarfiard: who afcending the Mountayne, and beholding the bor-dering Countrey farre and neere, found it all Defert. And departing from the Coast about Autumne, he perceived the higher tops of the Mountaynes to bee courted with exceeding much Snow; and therefore, as the prefent cafe required, he called the Iland Snalandia, that is to lay. The Snowie Countrey Another following him, one Gardarus the fonne of Susuarus a Sussian borne, perswaded

found it, who arrived also neere the Easterne shoare, and from thence being carried about the

Iland, he abode in the Bay of North Mand called Skialfands, and wintered there in the yeere of

Christ 864. and called the name of the Hauen, Husawich, from the wintering places, or houses

built there. But the Spring beginning, Gardarus being about to depart into Norway, the ship

there was a certayne Mariner called Natrare: from whom also this hauen had the name of Narfa-

rawicke. Moreover, Gardarus returning to his friends, called that new Countrey Gardarsholme,

Boat was driven away by a tempest, into an Hauen neere vnto the former, and in the same Boat 40

Gardar fecond through the report which Naddocus had brought concerning Suclande, went to feeke it : he

A.D.864.

Flece third

as it were, the Iland of Gardarus, neglecting the name of Snalanda. Moreouer, the defire also of vifiting a Countrey newly discouered, possessed many. For the third also, one Floco, and he a most famous Pirate purposing to visit Gardar shoime, fet sayle out of an Hauen of Norman, which lyeth neere the watch-towre or rather Pharms Flokawards, lituate in the limits of the Prouinces of Hordaflandia, and Rogalandia : and passing by Hietlandia, (mifnamed by some Schetlandia) called a certayne Hauen by the name of Flokawogur, and there the deepest part of the Sea (where Geirbilds the daughter of Floco by chance was drowned) was caled Gerbildarwata, from her : no otherwise then that Sea was called Helleftontus, wherein by 10 misfortune Phryxus loft his lifter Helle. There was yet no vie of the Mariners Compafic: wherefore Floco leaving Hietlandia, tooke certay ne Ravens vnto him : and when hee thought hee had fayled a great way, he fent forth one Rauen, which flying aloft, went backe againe to Hietlande, which the faw behind. Whereupon Floco perceiuing that he was yet neerer to Hietland then other Countryes, and therefore couragiously going forward, he sent forth another Rauen : which because she could see no Land, neither before nor behind, light into the ship again. But lastly, the third Rauen was fent forth by Floce, and having for the most part performed his Voyage, through the sharpnesse of her quicke sight attayning the Land, which the Mariners desired, she speedily flew thither: whose direction Floco following, beheld first the Easterne fide of the Iland, as his Predeceffors did : and from theree directing his course to the South, found a very wide and open 60 Bay twelve Islandist miles broad, betweene the two Promontories or high Lands, afterwards called Renkanes, and Snafelfnes. And hearing by accreayne Mariner (whom he had with him) a See borne, named Faxe, that the Bay they now met with , was the huge mouth of a River or

CHAP. 23. S. 1. Island fo salled of Ice, It is not Thule, Length and breadth,

Floud; Floce to reprove the folly of Faxe, supposing so huge a Bay of the Sea to be the mouth of a River, called the name of the Bay inclosed betweene the torefaid Promontories, Faxan, which fignifieth the month of Faxa. This Bay, by reason of the multitude of Hauens, was afterwade called Hafnafiordur : which name Hafnafiordur at this day is more specially vied of a most safe Hauen of the same Bay.

After this, Floco fayling along the West side of the Iland, entred somewhat within the Bay Breidaford, remaining in a certaine Hauen of the Prouince Bardestraund, called Watnsfierdier (for I vie the names given them afterwards ) and there preparing wintering places, he lived very commodioully and well with fifth of divers kindes, wherewith that Bay doth abounds But has 10 uing the Spring time here very wntemperate through cold, hee found a Bay (which entreth this

pare of the Land on the North) to be filled with Ice of the Sea, which wee call Gronelandif Ice. The name From which Ice, Floco deuised the third name for the lland, and called it Ifand. Moreover also Ifandos Ica Floce turning to the South fide , passed another Winter in Island : and returning into Nerway (from the Rauens, which hee vied in fread of the Mariners Compasse) he allotted it the furname

of Rafnaflokes And I fland furely obtained these names consequently from the finders, or discouerers thereof. Randis not For as touching the fourth, Thule, imposed vpon this Land by some, I cannot bee perswaded to Thule,

20 beleeue, it is true; chiefly by this argument; That Thyle, or Thule among the ancient Writers, was often in the mouth and writings not onely of Pliny in his fecond booke of Natural Histories 75. Chapter and fourth booke, and fixteenth Chapter (and Pliny flourished about the eightieth yeere of Christ) and of him who was more ancient then Pliny, Pythias Massilien is : bu. also of Pub. Vargilins, who lived not above fourteene yeeres after Christ : but Island, till the yeere of Christ 874. remained altogether desert, as hereafter I shall speake. Thule therefore, which Vogil faid fhould ferue Augustus (Geor. 1. tibi fermiat vitima Thule : where even every child knoweth that Thule is Synecdochically ipoken, for the Inhabitanes of Thule) not onely inhabited in the times of Augustus and Vergil, but alio knowne to the Romanes, is not Island, which many ages after began firit to be inhabited, Besides, Plinie himselfe kemeth in the later place recited to reckon Thule with the Hands of Britaine: for , faith hee, Vhima omnium qua memorantur eft Thule: to Thate further wit, of the British llands, for hee speaketh of them. It is likely also that Forgil meant the same, of the British who said Thule was the last, in the place before recited and likewise, Penning toto dinifer orbs lies.

30 Britannos: that is to fay, the last. Let me yet vrge the same argument further, from the age of Claudianns Alexandrinus, and Pub. Papinius Statius, farre more ancient then he. For Claudianus about the yeere of Christ 390, writeth thus concerning the successe of the Gerick Wars atchieued by Theodofins. Famaque ingrantes succinsta panoribus alai,

Secum cuncta trabens, à Gadibus vique Britamann Terruit Oceanum : & nostro procul axe remotam Infolito Belli, tremefecit murmure Thulen.

Then blackwing'd Fame Feare girt, frights all the World with Warre, From Cades to Britaine, from Our World shakes Thale farre,

But did Report and Fame cause Island not inhabited, and desert to tremble ? And Station more ancient by three hundred yeeres then Claudian, in his third Booke Sylms, writeth thus:

Quanquam etfi golidas irem manfurus ad Artes,

Vel (uper Hefteria vada saligantia Thules. Though I should dwel in Artike frosts,

Or mystic shelves of Thales West coasts.

You heare, not onely a flight report of Thule came to Stations eares, but that the shallow places, quicke fand, or shelues found in approching to the Hand were sufficiently knowne vnto him, by 50 the often relation of Nauigators: of which fort in the circuit of Island, there are none that I know, \* The Author

which experience speaketh; but in comming to the Hands of Britains they are very ordinarie proceedeth in this disputation and common, as they fay. The Longitude thereof from the East vnto the West, hath not hitherto beene expressed by a then our Rea-

my certains or affored measure that I know, nor yet the Latitude from North to South; der perhaps faue that in an ancient Codicall or Writing I found that the Longitude was twentie dayes jour- would permis ney : and the Latitude (where it is broadeft) foure dayes, but the journeyes, as elfewhere, fo alto vs. The learney : and the Lattrude (where it is broaden) from edayes, but the commyes as elewiners, to also ned an evidence with vare not alike, (yet here I vnderfland "Pyngmanuficid twentie, in the Authors own unit where hand-writing it is Dagledor) nor is it expressed whether of Horie-men or Foot-men. But the find enough: Go Latitude it felfe is not euery where the fame; by reason of Bayer on both fides, to wit, from the and more yet South and North entring the Land it felfe with vnequall diffances. The Easterly bound is in Ortelius his South and North entring the Land it lette with vinequal distances. The Landity boths this factor of the Promontory Sua-felloues lyeth more toward and I bestrum, and I bestrum,

who prouch out of Pampenius, Pielemeus, and Processus, that illend is not Thuis but(at the name founds) Tylemer's, a Region in Names, or all Seastle, of which that is part, fill retaining the name.

the South-well) but the North bound is Langanes, and the South Reikranes. The Iland alio from the foure quarters of the World, is duided into North, South, East and West, and the Promontorie Langanes divideth North Island from East Island; fromWest Island, the Bay Rutafiorder: trom South Island, the vast and luge deferts of rough, and inaccessable places extended the whole length of the Hand. But South Island, opposite to the North, through these rough and inaccessable places lying betweene the River loculfu, running through the deferts of Solfeimasande, divideth from Falt / fland : from West / sand alio, a famous River, named Albis, emptying it selfe into the Bay Borg ar ford: So that, if it pleafed me to represent the lland in humane shape, East Island should have the proportion of the head. The two more famous Promontories Langanes and Reitranes or bounds; the one Northerly, the other Southerly(as hath been (aid)) should serve in stead of armes, 10 And the deferts extended the whole length of the Hand should make the backe, or backe bone: then North and South Island, the shoulders with the sides ; the two opposite Bayes Borgarfiords. and Ratafiordar, the one on the South, the other on the North, should dunde the forepart about the short ribs, from both the thighes or hips. But West Mand should resemble the rest of the parts of a mans bodie, from the forepart about the short ribbes : which the Bay Breidifiordur commine in from the West, should contract and straighten into the right and left foot,

The Circuit.

The circuit also of the Iland, is no more certainely knowne; yet an ancient rumour and opinion (as in another place where it is noted) reckoneth one hundred and fortie foure Nornegian miles(as Ithinke) that is to fay, two hundred eightie eight Germane miles, Chytresu accounting the Normegian mile, to equal two Germane miles, fayling from one Promontorie to the other, not by 20 the Bayes : whereof North Island is esteemed to have cleven, East Island, twentie one, South Mand fixe, and West Island seventie.

" Harald Hare. figre finding many pattie Princes made an abfolere Monarchy of

Haraldus Pulcricomus ' Iwaying the Scepter in Normay, much neglected the chiefe Nobilitie of Normay : which the Normegian Historie letteth downe at large, yet particular Histories of noble Families expulied by Pulcricomus, more largely profecute the fame, as hereafter wee purpose to write. For Pulcruomus not contented with Kingly authoritie, or chiefe soueraignetie, that is to fay, with the right of Lawes, Magistracie, and appeale of Warre and Peace, challenged Normay, wher- all vnto himfelte, by the right of a proprietarie. Infomuch, as very many choic rather to leave their Countrey and rich inheritances, then to exchange their Generolitie for flauerie and trifought to free bates for they thought it altogether vnworthy and ill beseeming their owne valour and their 30 ancestours. Hence, for the most part arose mutuall injuries against the King, or the Kings parries; and hence takers; as murdering of the Kings friends, allyes, or faction; then the exercises both at Sea and arote the plan- Land were rapines and robberies. From these noble Families therefore, refusing the violence of ration of island Harald, this our Island, with the neighbouring Ilands began first to be inhabited, and that almost

A.D. 874.

In the yeere of our Redemption 874 a certaine Inhabitant of Norway, one Ingulfus, going out of his Countrey , following the steps of Naddocus , Gardarus , and Floco mentioned before, was made Standard-bearer of the Inhabitants which were to bee conveyed into Mand, and that upon this occasion. Ingulfus was famous for his parentage and riches, whose father, called Orne, which fignifieth an Eagle, was Duke of Fyrdafilee in Norway; the fifter of Ingulfus was 40 Helga, a Virgin indued with all womanly ornaments, and his coufin germaine Leifus; who for a notable fword, which through his fingular warlike proweffe he got in Ireland, was named Hiorleifus. For Hir is a Sword. Moreouer, at that time among the Nobilitie of Norway, there were three naturall brothers, Hallftenn, Holmsten, and Herstenn; the sonnes of Atlas , or Atlantes, a certaine Baron of Norway: who bore certaine prime grudges to the forelaid Ingulfus and Hiorleifus; which prefently after brake forth into cruell and bloudie flaughters. For when by chance they feasted together, after the manner of that age, they injoyned every one to make some solemne Vow. Herstenus therefore first vowed, that he would take Helga, Ingulfus fifter to wife, or marrie none. Then presently Ingulfus vowed, that hee would admit none into his Fathers Inheritance with him, laue only Hierlesfus: meaning thereby that his fifter Helgs, by his confent should marry none but Hierleifus (contrary to the vow of Hersteins for the marrying of her only.) After that Helmstenus vowed, that if he were chosen Arbitrator betweene the aduerse parties, he would by no meanes be compelled, to suffer an viniust sentence. And so the rest after them. Not long after succeeded the Vow of Ingulfus, for Histories us tooke his Coulin Germane Helga to wife. For at that time the Marriages of Coulin Germanes were lawfull. From hence arole the extreame hatred, and enmitte of Herstenus, against the forelaid Hierleifus, and Ingulfus : who therefore joyning with his Brother Holmstenn, with fixe ships filled with Souldiers, let vpon Hiorleifus vnawares, having but three ships only, preparing his Voyage into forceine Countreyes. Whose violence Hiorleifus a long time, and stoutly sustayning, holpen by a certayne friend comming in the meane-while, having flaine Herstenus got the upper hand, But Holmitemus providing for himfelfe by flight, and not a little exasperated and grieved through the violent 60 death of his Brother, after some few monethes, came with an armed power to Ligalfus and Hiorleifusto surprize them suddenly at home. Whereof they being certified by Spies, receive him with an armed force, and kill him. Halftenus the third brother, wifer then the reft, who

quarrells ca-

conforted not with the vinjust routes of his Brethren, remayined yet aline; to whose arbitrement Ingulfus with Hierleifus commit the whole matter to be determined, holding him mindfull of his Vow, concerning equitie not fo be violated. Halstenns therefore pronounceth his brother Herflenus to be justly flame: But not Holmftenus who compelled through bitter griefe, defired to reuenge the death of his brother, by any flaughter what focuer. For killing therefore of him, he commanded them both to be banished out of the Prounce of Fyrdafille. They readily obey his award. to whom they willingly committed the centure, & with a purpose to leave their Countrey, they fell their Lands and Poffessions for mony and Merchandizes, and conceine in their minds a worthy actempt of planting a strange people in a strange Country and that not to gratific Halftenns (with whom through this agreement they returned into fauour; with whom they might otherwise cally have contended in strength) but also for feare of Pulsyscomes himselfe, raging against his Countrey, and innocent Countreymen, for the obtayning (as hath beene faid) not only of the Monarchie, but Pampella, of all their Poffethons : nor was that to bee doubted, concerning the violence and oppression of Harald: for in the Historie of Haquinus Adalstenius his succeeding Sonne is is exprelly read, that he was contented with Kingly authoritie, and restored to every

one their owne, which his Father vajuftly challenged vato himfelfe. Is was the weere of Christ 870. wherein Ingulfus with Hierleifus hist visit Island, but they inhabit it not prefently, but foure yeeres after, in the yeere 874, as hath beene faid; bringing ma- Iffand firth in-

ny Families thither. Moreover Inguifus comming within view of the Hand, cafteth the postes of the houses which 30 he had in Norway into the water, after the manner of Ethniekes accounting it for an Oracle, that that place was fatally chosen for his Habitation, which the postes cast out vpon the shoare Superficion: should note or signifie. That custome many of the Norwegians retayned by turning op the ground. But Ingulfus arrived not where he cast in the postes, but at the Promontorie of the South shoare (alle-where erromoully, the West shoare) called by his name Ingalfhofde. Yet notwithstanding wanting the postes of the houses three whole yeers, at length he found them in that place, which is named Reychiarwich, and there he erected his Habitation. But Hiorleifus more estranged from Ethnick Superfiction, seated himselfe in the Promontorie Huleifihofda; foralled likewise from his Ethnick superstrion, seated similates in the Promontorie exiting said in seates in the wine from its rame. There he built great houses one of one hundred twentie six, and another of one hundred signal and an illuminated the said signal and an illuminated signal thirtie fine feet long : who, the first yeere being ended, began to till the ground and sow feed. ciently fairer 30 In which worke, when he had exercised ten feruants or slaues, which her brought with him out houses then In Which Worke, which is me activated to the state of the

Wood, he was deceitfully flaine by thefe flaues lying in ambush : together with some other lage was then companions which he tooke with him : the Servants aswell ravishing the Wives as spoyling the in vie. goods of the flaine; and flying into the Ilands not very farre distant from the shoare : which after Hiorleifus slain. goods or the name; and my no westmasjar, because they were of Ireland. The Normegians call the Westmasjar, because they were of Ireland. The Normegians call the Westman. Irilb, Englifb, and Scots Weltmen, that is, men of the West : feeing those Countries are diffant

cruell death of his deere friend and allyes. But Inguifus found and possessed Island altogether barren and desolate; on every side beset Woods. with very thicke Woods, and scarsly fertile of any but Birches, so that hee was faine energwhere to open the Woods with the Axe, for journeyes and habitation. Yet in the meane foace. we might gather by certayne fignes, I know not what Mariners had fometimes touched vpon certayne shoares of the Countrey, but not inhabited them. For Ingulfus found little facting Bels and Belsand wooden Croffes, and other things made by the workmanthip and arte of the Irib and Groffes.

Britaines: but no tokens of culture, or habitation. Whereupon it is likely, that Irib, or Scottifb Fishermen (as also the English at this day) accustomed to fish neere Island; as sometimes it com-

meth to paffe, went ashoare, and so by chance left facring Belle and Croffs, the Vtenfils of Chri-

itian Religion. For at that time the Irifb were instructed in Christianisme as they fav. And

those whosever were the ancient Islanders, they called Papa, or Papas: from whom, as feemeth

from Norway, to the West. Ingulfus pursuing these Murtherers, set vpor them suddenly, and de-

ftroyed them every man in the same Ilands, being much grieved in minde for the vntimely and

probable to me, the Iland of East Island called Pagey, derived the name; because they were often wont to touch there : or their Monuments (fuch as I fayd) were chiefly found there. This fide of Illand, to fich as fayle from England, Ireland, and Scotland, is most exposed towards the North-west. Moreouer, what and from whence these Papa, or Pappa came, I cannot fufficiently speake : vnlcfle peraduenture from the Ilands of Scotland, whereof one is named Pappa, and another Westrapappa. as we may see in the Mappes : vnto which conjecture let every 60 one give what credit he pleateth. Furthermore, very many of the Normegians, afterwards boldly following the steps of Ingulfus going into Island, with their wines and children, and great mula titudes of their Kindred and friends, restored themselves to libertie, Whose names and large Families are recited in the Chronicles; as by the fecond Booke is underflood. Befides, it is there

recounted what coasts, what shoares, what middle-land places every one possessed and at what

time; and allohow the first Inhabitants gaue name to Straights, Bayes, Hauens, narrow time and attoriow the mat annuousness gate manne to orange so, payer, caucins, marrow firaights of Laud, Ferryes, Clyffes, Rockes, Mountaines, Hills, Vallies, rough and inacceffible Places, Fountaines, Floods, Rivers, Villages, Farmes or Habitations : whereof at this day Die Frices, countednes, riouss, riouss, riouss, riouss, riousses, dippoing it would bee tedious, especialhany are yet reasons as an extensive and a service of the service of the description of the lytical fortaine Reader, I have here omitted; applying my felfe rather to the description of the Insabitants, who in fixtie yeeres space so replenished with their multitudes, the habitable

Chap. 3. Of the lane guage of the Nation. If inders only retaine the ancient Gottifb

Concerning the language of the Hunders, the matter it selfe speaketh, that it is the Novegian; I lay, that old and naturall speech, derived from the ancient Gorballs, which onely the gran; I say, that old and natural spectus, desired from the addition of the letters of which toggies to we will first speake somewhat and afterwards in the Chapter following there shall be a short

And furely that language feemeth to have double letters : to wit, the Old, and New. The New, which commonly wee vie at this day, are common almost to all Europe together with Two kindes of Va. Which, when they first began to be vied is not certainely knowne. Surely as yet, some eroffes written in ancient letters, are yet feene among our Country-men, which letters also many yeeknow, and both reade, and write: and this naturall language it felfe is contained in the fame, nothing at all changed. Moreouer it feemed good to mee, thus to prefent the name and finge of the ancient Characters, such firely as was offered vato mee, placing the New of Commaps of the absent Contacting that many as was officed vinto meet, placing one frew or com-mon ouer against them, expressing the validitie thereof, adding allo the agreement and differe 10 pancie of ours, with those of Vibbila, the Bishop of the Gother: whom Ishames Theoderat, and Johannes Ifrael, brethren and Citizens of Francofort, report to have innented these letters by whose relation hee agreeth with vs in all chings, saue where the disagreement shall bee noted here. Moreouer alfo, I thought it not amiffe to let downe in writing the letters of certaine other Nations, to some of our Country letters, out of the same Francofust copie, which the Types or Fi-

Here wee see twentie one Characters, but the ancient numbred onely fixteene. And the third M., they would not acknowledge for theirs ; because at of the Greeke, that is to 62 fay 11. or d., (as they would haue it) they might write it in their language with diffinet letters. But the fourth A from the eighteenth, they diffinguish with some point, or an outrthwart line, almost thus . cotherwise it is altogether the same in shape and name, Tr, but d. Stanging ty, that is to fay, pointed Tyr, as 10 . Com, k, and pointed kom 10 . g. So Is pointed for e.

### CH AP. 22. S. 2 Letters and Grammer of Illand. First Northerne Inhabitants. 650

but Plaffar refembleth B. with both the bellies open about and beneath. Befides there the reft are numbred fixteene, as I faid. For they reckoned the Diphehongs to the Syllables.

Moreoner, it retained the last new Conforant of the old Alphabet, changed in name, but not in shape , which is p. This being fet after a vowell in the same syllable, bath the found of d. as Blan for Blad, which is a leafe : which kind of writing was more vivall with the ancient but at this day is almost growne out of vie : but being fet before a vowell, it hath a peculiar force and pronundation, not altogether Th, but founding fomewhat more grofly, as it were Teb, putting forth the tongue almost between the fore-teeth : as parthat is to fay, then In times past it had the name of Paff: at this day it is called Pari, or Thorn, if you purp, for the and therefore it cannot be written or pronounced at all, but by it felfe.

They also of later time write the Comforant f. after this manner g. The Moderne Writers also dee sometmes appirate L.W.R.the ancient very feldome and almost never : as Histor in old time Lour, that is a thing. Histor in times palt fas also fometimes at this day | Kniffer ; that is to fay, a Knife, Hruste, mold time Rutur, that is to fay a Ram. In like manner fometimes lod, and Uaf, or land w. Conforants : as Hul, that is, a Wheele: Hualw, that is, a Whale : which also I thinks the ancient did concerning fod, and Vaf.

In Vowels and Diphthongs, as also abbreviations proper to this language, the varietie is farre and greater, which I purpose not to touch. Moreouer also, the due handling of the letters, as of the rest of the Etymologie and Syntaxis of this tongue, would bee the copious matter of a peculiar worke, especially if any would adde the Poetrie, purposing to write the Grammer of the Islandish tongue, which would bee no more difficult, then that wee have feene done, concerning the Germane and French tongue, besides others.

About the yeere of the Lord 1216, one of our Country-men wrote in his Country language, Illand Gramconcerning the letters of the proper, or mother tongue : where hee affirmeth thefe ancient Cha- marian. racters to be peculiar to this language, and handleth them both, as well new as old after a legitimare and due manner of tractation, by his definitions and divisions of the letters into Vowels and Consonants, and of the five Litine Vowels, maketh eighteene of his language, distinguished in sound and pronunciation: He divident the Consonants haturally into halfe Vowels, and Mutes, and those into Liquids and Firmes, these into open and that; performing the part of a pretie Lo-20 gician. And in delivering the force and pronunciation of the letters, hee artificially assumeth for every definitionall the Influments of framing the voyce, as well the lungs and throat, as the auxiliary parts of the mouth and tongue. The letter p, also, he calleth the, peraduenture in imisation of the Greeke Theta (which almost, as we said, although not altogether it expresses) or Tas of the Hebrewes, which Hebrew letter, if th. or t. of the Latines rightly expresse, as is reported by fome, Than shall come nothing neerer to our p. then Theta. The same Country-man of ours, from absolute letters, proceedeth to fet downe in writing, the figures of the word and sentence in the Mother tongue, and illustrate them with examples of our language, retaining the Greek titles of the Figures, or names of Epizensis, Anadoplosis, &c.

And from this Writer of our Country, we received the Types of the old Alphabet : for there Norws of whom 40 are Historicall fragments yet extant, concerning Norse the Name-giver of Norway, and founder Norway is of the Kingdome, and thole Toparchi, or little Kings, whom hee vanquished before hee obtained named. the Monarchie.

#### ò. II.

A discourse of the first Inhabitants of the Northerne World, Supposed to be Giants expelled from Canaan. Of the Islanders Honfes, Fewell, Victuall.

Oreoser concerning fome of the ancestors of Norsu: among whom his father Porre. Chop.a. of the kist (whom they call Thorres) King of Gestand, Findand, and Kanesians! an excellent Prince thabitation of this age, from whom the moneth of the cld Normagians, and now Hunders hat the de North de North name of Thorre, which in the Intian Calender beginneth the 10.11.12.13.14.15.01 16. parts of the of January: for it hath a mousable beginning after the manner of their Calender. And feeing King world. Therre this month accustomed to facrifice vnto his gods; the Knenones instituted yerely facrifices Therre.

in the fame month to him, being dead, as to a certaine god, in token of an happy yeere, which they began with the winter, after the maner of the old Lacedemonians; & called the fame month Porre, 60 of Thorrowno otherwise then the Lacedemonius gave divine honor to Lycurgus being dead, building a Temple in memory of him, where hee was honoured for a god; to whom his familiar friends instituted fet Feating-dayes, and solemne assemblies which remained a long time, and the daies wherein the affemblies were celebrated, they called Lycargide: concerning which matter looke Cragine in his third booke of the Common-wealth of the Lacedemonians.

Of the Ancestors also of Norm, all are mentioned even to his Great-grandfather, who was Fermetus King of Finland: Moreover, one of the three fonnes of Fermetus, and therefore Great vacile of Norse, called Logie, which fignifieth a flame; who for the excellencie of his beautie was called Halogie, that is to fay, an high or excellent flame. Hee was Monarch of the Halongie. enfian Prouince, bordering vpon the Prouince of Nidrofia.

Goe also the daughter of Thorro, by the lister of Norms, is there recorded, for recourse of whom, being ftolne away (as Cadmus was fent by his father Agenor to fecke his daughter Europa) Norms was fent by his father Thorro: which, that it might more happily succeed, Thorro instituted new facrifices to the Gods, in the moneth next following the former (afterwards called Thorra) and intituled the same moneth with the name of Gos, after the name of his daughter 10 Goe : which name of the moneth likewife the /flanders that now line doe yet retaine. Furthermore, ancient Histories make mention of Garas, the naturall brother of Norus : as also the nepbew of Garns, named Cylum, having the fourragns authoritie in Succia, in whole time Odmus happened to come (others call him Orbinus ) Standard-bearer of the After Immigration, made in the foure and twentieth yeare before Christ was born, which we mentioned before : and Gylanu hada father called Generus , and an Vncle Benerus, the founes of Gorns; from Benerus, the Hauen neces the Citic Nidrofie, is named Beitflod,

## I thought good to exhibit these things in a Table.

Fermetse King of Finland, Kare. The same also is Agire. That is to say, the Winde, for Signification Paleon, bonoured in the number of the Godzaf. fread of Falcon after death (as

From this Norm , Haraldon Pulcriconnus is the twelfth of them that descended from the right Line, whom some make the first Monarch The said After immiof Norwey, but amiffe, being ignorant of Antiquitie: feeing hee was gration happened in the third Restorer of the Monarchy of Norway: for betweene him and the time of this Gylai, co Norms, Hemneus the fonne of Odinus "obtayned the Monarchy alfo,

This Odina is faid to have made his plantation with his After follow-Crs. about for and twentic yeeres before Christ was borne\_

Earth-bred or Land-fprung had their originall in that

These (I say) besides many other things, are the manifest tokens of the Inhabitants of the Northerne World, farre more ancient then the immigration of Odinus: of whose original notwithflanding, there is not one word. But because it is most repugnant to a Christian man, knowing the Bookes of Mofes concerning Originals, to affirme themselves to be Antecheme, as both others, but especially the Granges did concerning their Ancestors (yet with better leave then the rest of the people of Europe: who next to the Chailers, Egyptians, and Ienes, might worthily boaft of Antiquitie in comparison of other people.) It were better truly to confesse the vaknown originall of Ancestors, then to be carried away with the opinion and error of Earth-bred men: 60 left furely wee should heare some fuch thing, as sometimes one wittily vpbraided the Grecions with, fo much boafting by reason of their pretended selfe-criginall, to wie, that Moses the Law giver of the lewes, was more ancient then the Gods of the Gracians,

In the meane space, because through the onely confession of ignorance or doubt, truth doub

Giants first Inhabitants of the North, &c. C HAP.23.

not to foone appeare; tomewhat is to be alleaged touching the proposed question: that the historicall Reader may haue fome thing here which hee may either confuse or confirme. Wee are therefore by probable reasons to inquire, who were the first inhabitants of the Northerne World, and from whence they came: then, when they began to inhabit this our World: that from hence some coniecture may artie concerning the original of the language. And that I may here acquit my felte without circumstances; I thinke the first inhabitants of the Northerne nere acquire my sone Williams, nay, mere Giants; men that inhabited the mountaines Giants firft inof an luge and iometimes a monitrous body, and of monitrous and exceeding firength; and that hibbers of the they were the posteritie and remnant of the Canaanites, expulsed from the Territories of Pale- Northerne 10 ftms, about the yeere of the World 2500. by losse and Caleb removing into Palestina through parts of the Hona, about the year of the World even until those times, or World, Gods pleasure and direction: and that this Countrey of the World even until those times, or Their original

peraduenture longer, remay ned altogether not inhabited. For thus Saxo Grammaticus argueth in the Preface of his Dania. But (fayth he) the flones of exceeding bignesse fastened to the Tombes and Caues of the ancient, testifie that the Countrey of Den- Along dismarke was formetimes troubled with the inhabiting of Giauts. But if any doubt, that it was done by courte of the monstrous strength; let him looke up to the high tops of certaine Mountaines, and say, if he know Authorico monitrous livengin; let tim tooke up to the tight up to the tops thereof? For every one that confiderate there have bin this Miracle, shall perceine that it is beyond common opicion, that the simple labour of mortalitie, or v- Giaris, tofuall force of humane strength Scouldraffe so huge a weight (bardly, or not at all moneable open the mitted,

20 Plaine ground) to fo bigh a top of mountaynous sublimitie. This Saxo writeth, who shall be a sufficient Author voto vs concerning the first Inhabitants of Denmarke, that is to Gay, his owne Countrey. So concerning Norway and Succia, and the bordering Countreyes, as whatsoeuer is most ancient; fo it most resembleth a Giant-like disposition and nature. Whereof examples are to be taken out of Histories, which would be tedious Giants in the here. For that I may omit ancient examples, those things are knowne of late memory to have time of Harbeene done : Concerning the Giant Doffro, inhabitant of the Mountayne Doffrafiall in Nor- aldus Hareway; and Foster-father of Haraldus Pulcricomus King of Norway. Also concerning Dunubo fayre and since who lived in the time of Droffon : from whom the Bay Boddick or Bothnicke : in time pail was

called Dumbshaff, who in a Sea-fight, encountring eighteene Giants alone, fent twelve of them 30 first to Hell before he himselfe was slaine. Of thirrie Giants at once destroyed by fire. by Dumber Sonnes left, in reuenge of their Fathers death. There is yet a later example of certayne Giants of Norway, destroyed by authoritie of Olans Triggo King of Norway, about the yeere of Christ 995. But the latest in the yeere 1338. Magnus the Sonne of Ericus, being King of Nor- 1338, 2 Giane Christ 995. But the latest in the yeere 1338. Magnus the sonne of Essen, being hing of Norreportedons,
way, that a Giant of fifteene Cubits was flaine by foure menias it is found recorded in the ChroCubits. nicles. Hereunto adde, that a certayne Prouince of Normay, or bordering vpon Finnauchia, in ancient time was called Rifalande, that is to fay, the Land of Grants (for En Refe, and Refe, fignifie a Giant) from whence lotum Heimar, that is, the habitation of Giants is not farre diffonant (whereupon as yet, En Ist, is fail to be a Giant) that I may fpeake nothing heere of Istumland: by which name, that which at this day is called Intland, was fometimes called by our Countrey Intland.

40 men, and very many other also, the Land of the Cimbri, or Chersonesus: the same name also being given it of Kemper, that is, fighting Giants of Nephilbeimar, and Karnephill, elfe-where, and peraduenture by others shall be spoken, as also of the Gotthes, and Gotts (peraduenture also letts) and fuch like others. Moreouer, the remnant of the Giants came into Island, whose Names, Habitations, worthy Acts and Enterprizes, are fufficiently knowne, and before our eyes. Sceing therefore Giants first inhabited this our World; it is demanded, when, or whence they came?

Gilb. Genebrand. Chronol. Lib. 1. The first Age, fayth hee, ( from the Creation of the World unto the Floud) seemeth to have beene passed and spent within the mid-lands of the World, and that ther came not to the borders of Alia, Airica, and Europe. Bodinus fayth, that Mofes wrote the

50 Hiftorie of the whole World (he meaneth inhabited) euen to the yeere of the World, 2470. And Genebrand againe, Lib.1. Chronol. pag.18. As the first Original of Manhind was in Acmenia, Melopotamia, Chaldea, and Syria: and men before the Floud dwelt only there: fo other Countreyes themselnes, were first inhabited after the Flond. Also Gonebrand fayth yet turther, wild. pag.35. Before three thousand yeeres (for bee wrote in the yeere of Christ 1597.) almost all Estope was emptie, that is, about the yeare of the World 2541. Which is chiefly to bee vinderstood of the Northerne World, if of the rest of Europe, But hee faid , almost , not altogether , that hee might not take away the migrations of the Nations then presently beginning after the yeere of the World 2500. wee doe not therefore tye the time (wherein this further Europe began to bee inhabited) to the yeere of the World 2500. But wee fay, that that troublefome time wherein 60 the Nations (and among them the Giants of Coman) were cast out of their places and dwellings, and compelled to feek new habitations, even in Emope, happened in this yeere; as was propoled by vs in the beginning. And that Europe received her Inhabitants from hence, among the

The ancient / Jander seeme to have beene ordayned for great frugalitie, wherein first there habitations or buildings are briefly to be touched, next their food and manner of apparell : and

For first as touching their habitations, the Islanders have followed the first and most ancient 19 Separate dwelmanner of dwelling. To wit, not by Cities and Townes; but as Tacina speaketh of the Gramones of his time, they dwelt alunder, as a Field, as a Fountayne, as a Wood, as an Hill, or Valhonest of the tune, tuny over a student, as a kind, as a commayire, as a wood, as an rill, or via-ley, Shoare, or Bay of the Sea pleafed them: Not only initiating here the example of the first Age of the World, but also of the latter Age as the people of Ashew and Laconia, in the begin-ning dwelt by Villages (as they write) not together or by Cities: and as in the time of Tackur, about the yeere of Christ 120 with the Grammer there was no vic of Mortar nor Tyles: (whereupon any man may rather judge the like concerning the Northerne World) fo, nor after, (whereupon any man may sause; punge the macroneering one southerne womay is, nor area, with the Islanders, but they built their houses with Timber and Turffe. Nor farely was it momentany worke which lasted but a while, nor yet deformed in shew, the walks were foundtimes made only of Turffe, foretimes of rough Stones, adding Turffe in flead of Mottar; which at 4 terwards they coursed with workmanship of plankes, as also the rastering it selfe; especially in more notable buildings. And so you might see the Roofe with the walls before mature old age ouer-growne with greene graffe energy years, for you must widerstand, that the Roofe and walls were concred with greene Turfe, Windowes were made in the Roofe, feldome in the walls, and certaine Roofes not very high, firch as is reported the building of houses with the Easterne people was wont to be. The Inhabitants had flore of Timber, cast ypon the shoare by the swelling of the water of the Sea; through the minatulous testimonie of Gods Proudence, confide ring their Woods at home yeelding plentic, at thinks only of Birches, were not fufficient for their huge houles: which yet were a great helpe also; with those which the Inhabitants, as off as they would, fetched out of bordering Norwy, and peradosneare also out of Grandand: for the 90 Iftendars tayled yeerely to both a long time. Euery one therefore had the houles of their Vallages almost joyning together on their ground : besides the stalls of their Herds, seated somedistance from the houles themselves. Also certayne piles of field, not altogether joyning together, to awoid the danger of fire : peraduenture also certayne store-houses, which being folicary, might

Some maintayned their fires with home-growing Wood : others with clammic Turfe (as I thinke H. Ismiss aprly calleth it) whereof there are two kindes with vs : the one foft and frongie, growing vader the superficies of the Earth; which wee call Sourder: Another more houges growing range and appearance of the metal; winter wee may very well call digged Turfe, by the opinion of the same shoras because it as taken out of the deep Opinion of the same shoras is the country of the deep Opinion of the same shoras is the same of the deep Opinion of the same shoras is the same of the deep Opinion of the same shoras is the same of the deep Opinion of the same shoras is the same of the same of the same shoras is the same of the same of the same shoras is the same of the same short is the dust in a second of the same and winder the same of the same o Benero or Turte-fewel in of the Germanies call it Tarff: the innentor whereof in the Orchades a certayne Orchadeshan Duke is faid to become Einarus the Sonne of Rangunaldus a Norwegian Duke of Mare, in the

time of Pulericomus King of Norway, who was therefore called Torffeinarus. He had a brother talled Rolfno, whom Crantzins nameth Rollo, who possessed part of France, afterwards called Normandie of the Normans, or Normegians. The Inhabitants chiefly wanted fewell to expell the diffemper of cold, betides other vies fufficiently knowne : especially in the Winter time, Stones when Hot-houses and Chimneyes are in vse, heaped together of Rocks and stone, through which the flame might eafily breake forth; which as foone as through the force of the fire they were throughly heat, and when the Hot-house began now to leave smoking, the cold parts of the Chimney were befprinkled with hote glowing stones : by which meanes heate vieth effectually to disperse it selfe throughout the whole house, which also is very well so preserved by the wall,

to and Roofe couered with Turfe. Yet left the Islanders might seeme through meere pouertie or want of knowledge, to have yfed rule buildings and poore houses; I can cal to remembrance certayne houses of an hundred and Gresser house twentie fixe foot long, and some of one hundred thirie sue, as I have before declared concerning to in standard in the buildings of Ingulfus: and some of one hundred and twentie seet in length, and sixtic feet old times, broad : whereof we shall hereafter speake; some also, whose hollowed rafters, and boarded feeling of the walls carued by art, report the ancient Histories, of worthy and memorable Acts. They therefore inclosed their habitations built after this manner, with certayne spaces of fruitfull fields orday ned for tillage, which spaces through toylesome labour, they atterwards compaffed about with a banke cast vp, to keepe out the Heards of cattle. Moreouer, sufficient huge 20 pastures were assigned to every Farme or plot of ground, divided by certayne limits, or inclofures from others, whereof we shall speake in the eight Chapter. And enery Farme or Habitation for the most part, and in like manner every plot of ground received the name from the first Founders: sometimes also from some other: so Mountaynes and Rivers as hath beene advertized before; fo that by this meanes the places themselves, even by their names only declared to all pofteritie their first Inhabitants, and improust.

I proceede from buildings to their victuals, and tillage of the field and ground, which part- victuals and ly succeeded well to the first Inhabitants, to procure Corne and fruit from thence : but I know Husbandry. not whether every where alike. Yet in the meane space, that Hierleifus mentioned before, exercifed his flaues in tillage of the ground and one Gunnerus of L. darenda, fowing his Seed, was ently in viet 30 wounded by the enemie on the ball of the cheeke : and likewife Hofebuldus Huitarneffede bufily imployed in fowing the Seed, was flame. Hence from the fields there are proper names of cer-

tayne places. Hence came that Law concerning the gathering together, and carrying of Corne after Haruest (whese they speake of the services which the Lawyers call pradual.) All which are manifest tokens of the tillage of the ground, amongst the first Islanders : which also,

euen vnto this day, I heare, is practited by some Inhabitants of South Island, but with

leffe increase: the ground and temper of the Ayre degenerating from the first goodnesse thereof after fo many Ages : peraduenture also the care of the Husbandmen beeing leffe diligent, may bee the cause; since Corne comming from forreigne parts began more to be in vie; And because that tillage of the ground seemed in the beginning either not vied of all, or lesse 40 fruitfull for Corne, and all manner of graine; a peculiar manner of tillage of the ground prefently began : whereby they compafied with dunge those fields or spaces, which I said they inclosed within their owne circuit, especially with kowes dunge, at the mowing of the best hay, to the intent they may the betterfeed the Heards; and especially the Kine, that they might yeeld the more plenty of Milke. Which tillage of the ground is yet retayned : and they only exercife thefame for the most part, almost by mid-land Inhabitants: feeing such as dwel your the Sea-coast live most by fishing: whither also those more remote or mid-land people veerely fend their Seruants to fifh, Both Plaines, that is to fay, the ground and the Sea, was to bee ploughed after a fort by the Illanders, for the comforts of life. To whom besides insteed of victuals, Sheep, Oxen . Swine and Kiddes, fufficiently abounded : and also fiftes of diners kindes , besides So Sea-fish out of the Flouds, Lakes and Rivers, they met with every where to that they Beaffer

might take them as it were out of a certayne weele, especially in that Age : also Milke and White-meate, with goodly plentie of Butter from the Heards of cattle. Besides Fowle in great number, some tame, as Hennes and Domesticall Geese, or Fowle of another kind liuing in the open Ayre, wandring also solitarily in Mountaynous places: which the poffeffors marked in the feet, that every one might more eafily demand his owne. They had others also not tame, which they tooke by certayne ginnes : as Geese and Duckes of the Medow, Partridges, and Swannes and very many Sea-fowle, whose names and properties I doe not know. But Fowle of either kind tame or wilde, they either prefented their Egges or themselves, Gr both, for the vie of men. Besides the naturall Drinke or pressed Whay of Milke (where-60 of the great plentie is fo much the better, as the Milke is more excellent : fo that halfe an Drinker

cunce of water mixed with an ounce of Whay, doth not wholly diminish the taste thereof; but Whay. that is relisheth more of the Whay then of the water) they also boyled Barley Flowre, formetimes adding thereto the Honey Combe , or Water mingled with Honey : fometimes Mead. also a Liquour made of certayne Berries growing heere. Moreoner, the ancient Islanders, Ale.

Romes and

Fewell.

brought in drinke made of Corne, from forreigne parts, as also all manner of graine, and other brought in triange manager come, and other come, wherewith they yearely visited as their pleasure, Denmarke, Norway, Suecia, Scotland, Saxonie, England, and Ireland.

Terr presence, seemmore, a wormy, when you would be a worked by surface and the furely with Our ancient sparners wanted not content and content and and are with our miferable sparing, whether we respect the number of the guests, or the time of the Banour miletane sparing, whether we respect the number of the guests, of the same of the pan-quest exhibited. For Theodorus and Thornaldus, brethen, and Citizens of Historia of North Illand, folemnizing the Funerals of their Father Hialta, made a Banquet for fourteene dayes together, of twelue hun led persons, presenting the men of better note with some gift. And an Inhabitant of Weit fland, furnamed Olass Pa, with his two brethren, were at the charge to banquet nine bundred men, euen for fourteene dayes face; not sending the chiefe men away 10

I find money was not vitall with the Islanders, I meane, those of ancient time: butilizer was weighed by the ballance: and bartering of Merchandizes was very commonly vied. Moreour, Rings of Gold, and Bracelets, were both often fent for tokens of remembrance from Superiours to private men, or from one friend to another.

#### è. III.

# Of their Politie, and Religion in old times.

Chap.6. Of their Corr mon-wealth & Religion.

He Islanders going about to establish an Aristocratic, or State of Nobilitie (considering they dwelt scattered in the Countrey, and not together) first duided their Citie into Fourths or Tetrades, named from the foure principall quarters of the World, and diffinguished besides by setting of bounds (such also as was

the Geographicall partition of the Iland it selfe, mentioned before at the end of the first Chapter) diuided into North , East , South , and West quarter. And againe, they diuided the Fourths into Thirds, except the North quarter : For this, as it was larger then the reft, was parted into Fourths. But these Thirds they subdivided againe into their parts: forme Tenths and others formewhat otherwife. For the which not finding a fit name, I have retayned the proper name of the Country, that which with them is Hrepper, wee may counterfor. ly call Reppa: vnto the which also we may imagine no vnapt Etymon, from the word Repo. For here was the first affilia or sospionia of them that executed any publike Office, for equitie elther of opinion and jungement, and the equall ballancing of mindes, to be preferred in the reft of the Magistrates, worthily ought to begin there, valesse any would rather thinke they had respect heere vnto Reed, that is to say, Coards, with the which the diuision was made, after the most ancient manner of the Hebrawes themselues. Euery Reppa regularly contayned twentie Inhabitants at the least (for oftentimes it contayned more) limited by a certayne increase of the wealth of their Family, under which they might not be reckoned to the poorer Repres; to the

Seats of Inflice and Re-

Idols,

Per and Thers day. Freir Nierdur and As. Same that Wa. Saxen ftorie. Deuil) made

Moreouer in euery Third, as also in the Fourths of the North Tetrade, (which Iurisdictions 40 in times past they called Pyng, at this day also Sylla berad) they appointed three more famous places confectated to the Seat of Inflice and Indgements; besides also dedicated to Ethnicke Sacrifices, which they call Hoff: we call them Holy Places, and Temples. Euery Chappell after the manner of this Countrey was sumptuously built : whereof wee reade of two, of one hundred and twentie foot long. One in the Iurisdiction of Walbdall of North Island: the other in Rialarnes of South Island: and this surely fixtie foot broad. Moreover, every such holy place had a kind of Chappell adjoyning. This place was most holy. Heere stood the Idols and Gods made with hands, upon a low stoole or a certayne Altar; about which the cattle which were to be facrificed voto them, were orderly placed. But the chiefe and middlemost of the Gods was Impier, by them called Por, from whom these Northerne Kingdomes yet call Thorrday Thorf. 50 dagb. The rest of the Gods were collateral vnto it; whose certayne number, and names I have not heard. Yet in the ancient forme of oath (whereof mention shall be made hereafter) three besides Thoras, are specially noted by name : Freyr, Nierder and As: whereof the third, to wit At, I thinke to be that famous Odinus, not accounted the last among those Estimicke Gods (of whom I made mention before) Synecdochically called At : because hee was the chiefe of the people of Afia, who came hither into the North : for in the fingular number they called him At, which in the plurall they called Efer, or Efer. This Odions, as aforeised, for his notable knowledge in Deuillish Magicke; whereby like another Mabonet, hee affected Sorcery(which a Dumnitie after his death, was reckoned among the number of the Gods: from whom at this day, Wadnesday, is called Odens Dagur, the day of Odinus: whereupon peraduen-60 ture, I shall not vraptly call Odin Mercurie, as Ther Impiter. Yet the ancients honoua God, Wednesday, or red Odm in the place of Mars: and such as were slaine in the warres, they lay were sacrifixed to Odin. And the companions, or Sonnes of Odin were Freyr and Noveline : who

CHAP.23. S. 3. Ethnike rites and bumane facrifices . Deuill-circle. Christianitie. 665

through the same artes which their Father or Prince Odinus practited, obtayned an opinion of Diumitie. I haue before aduertifed you, that chiefly in the North Countrey, Kings, after their death, are honoured for Gods. But the worthipping of them hath not yet come wnto the Illenders: wherefore we will speake nothing of them in this place. Privation we wan a peace inclining a second Temples, flood an Altar credted, coursed The Altar.

aboue with Iron, that it might not be hart with fire, which mult bee continually there. A Caldron also or braien vessell was see voon the Altar, to receine the bloud of the lacrifices, with an Holy water holy water flicke or iptinkle, to bedew the flanders by with the bloud of the facrifices.

Belides, on the Altar a filter Ring was kept (or of copper) of twentie ounces, which being Holy Ring. anomized with the bloud of the facilities, they who executed any office pertaying to Juffice, being now readie to take their oath, religiously handled while they were sworne. Foure-footed beaits, for the most part, were appointed for lacrifices; to bee converted to the food of the Sa- Sacrifices,

crificers. Although in the meane space, I finde (a lamentable matter) that the blinde Ethnicky in the forefaid place of Ridames vied also humane facrifices: where at the doore of the Temple, was Humane inhuvery deepe Pit, wherein the humane lacrifices were drowned; which Pit was called Blothell mane facrifices de, from the Sacrifice

Also in West Island, in the Prouince of Thornshing: in the middle of the Market place there was a round circle, into the which, men appointed to be facrificed to the Gods, were gathered: Deuill-circle who being violently smitten against an exceeding great stone set there, were cruelly slaine. The indignitie whereof, that those is reported to have declared many ages after, by the bloudy co-

lour, which no shower of raine, or water, could eurr wash away. An abominable crueltie surely, yet not wanting examples, derived even from the most ancient times. I omit those of later time, and found in the neare bordering Countries, as the humane factifices of the French, whereof CL cere pro Fonteio, speaketh : and also the custome of nearer bordering Countries. I doe not mention the Roman factifices : among which, Laperea Valeria, appointed to be factificed, was delinered from preient death by an Eagle. Let the maps walking, and facrificing of noble Virgins of the Greeter, not be remembred: with whom Helena was likewife freed from imminent perill of facrificing, by the benefit of an Eagle. But who is it, that can be ignorant of Benbennon or Gebennow of the Hebrewes, and their crueltie farre greater then this, exercised not woon flaues or guiltie

now of the Hebrews, and their cruentic rare greater ten this, exercises not voon states or guitte persons, but even voon their dearest children? Concerning which matter I chought good to set of the converted words of Chrispah, Adricomus Desphus, Gobornow, faith he, was a place so the fab.

not is of Cruislem over on aims to East, water the Measurague of Ossess, news the Fabous of the Fabre, made pleased, idee Tempe. In this 1949 fined a Pauline, and the brash did of Modoch, committy wrongs in the Samp of a King, bellow within; whose beat resembling a Cally, the other parts as much that arms spritched from to survive address: who through the cohemon has af the International Calls and the Calls of th burned amidit these curfed embracements: For when by the fire put under in the concanity of the Idell, we reca amous two processing to the most wicked person, with merchale creative, delucred their deory field the case all first, then the most wicked person, with merchale creative, delucred their deory field then, to mit, bow Somes and Dangbars to be borned within the fe detfiable embracements. But that crueltie, and those facrifices of Saturas seeme not to have continued long with the was called Ge-Islanders: and furely, they were vied no where elle, fame in the two places affigned. Nor yet of bests and Toall the Inhabitants of that Prouince, where it was exercised. For it is reported of Harleifen, the companion of Luguifus before mentioned, that he altogether abhorred the worthipping of Idols.

So And Helys alfo turnamed Biols, defeended from the Barons of Norwey, an inhabitant of the Protince of Rislarues favoured the Estimick Religion but a little : for he received an Irish man, a bamithed Christian, into his neighbourhood; one named Ormulfus, with his families (which came with him :) and did not onely receive him, but also permitted him to build a Church confecrated to Saint Columbe, in the Village of Escuberg. A yong man also of the same Province, called Base destroied that most accurred Temple of humane facrifices with fire, and burned all the Gods, although afterward it was repaired by the Proprietors.

Moreouer, Torchillus furnamed Mane (it may bee because hee honoured the Moone, called More, and the rest of the Starres , with more Religion then the rest) a man of a very vpright life, and famous among the Nebilitie of Island, a little before the agonie of death, caused him-60 felfe to bee fet forth ouer against the Surne, and openly admiring the workmanship of Heauen, and the whole World, commended his Soule departing when he was readie to die, to that God who created the Sunne, and the rest of the Starres. He lived about the yeere of Christ 970. The who creates the state, and the feet in the states. He must not a project continued. As of fame, or the like may be reported of very many others, while Ethnicishney continued. As of fallers a certain inhibition of South Island: who, because hee followed not the worthip of Hallers a certain inhibition of South Island: who, because hee followed not the worthip of

Idols, was called Godleus, that is to fay, as was also his sonne Helge. The publique Offices, fome of them are diffinguisted from hence; others have their original Chap. 7. The publique Onace, some or them are unanigument from hinner; there is not their original. Of Magiltrates from tome other place. These which are taken from hence, are a Reprogram (that I may denie Of Magificate from tome owns place. Those varieties are the partition into Repensed Products, and Courts.

2 word) and the administration of Products, to with the partition into Repensed Products, the partition into Repensed Products. a word) and the auminitiation of a rount value of some kinds of government loyated with it. For ended as it were in funding faces, but both had fom kinds of government loyated with it. For ended as it were in funding present, but outstrond come alone or government, my ned with it. For a swell the Repp. 2021 (for 10 I may call the Masters of Repp.) as the prominciall Governous, proaswers the appropriate the production of the production of the production of the production of the public claimed Allembires, effablished Indgements (every one in their Court) and pumished the guiltie: ctames parenties, enguines tougenesses (easy one matter court, and pulmes are guite: whereby it is entired that they also vied the Law of Appeals in forren Caules (for in their own, whereby it is canonic tractiney and vice one has to appear an auton mane for in their own, even primate men had libertic of Appeale) for that I need not doubt that the Appealog allo were euen printer men nan inversie of a ppears, or that a the trade for cooker that the arpragge and were comprehended wider the Title of a Magnifrate. Pig only the time of the from doore to doore: The 18. chapter of the fame; and the first is to 127, 50 using as in meeting from the time of begging, 69-30. Leaft any vinder a feigned thew of vertue, three years, max months are the sames, Allo, Altera let de cinfmod mendicis impans coffendis; a so tiemficam coronidam fore; similar, depublis, cap, 33, to wir, Left living from doore tamp: non-common new twomans and present the various in parents, which afterwards should be a borden to the Commonwealth. Also, a third Law, De yellow menders non alenda; titul, de menders con. 39. 63, (not repugnant to the commandement of the Apolile, Her that laboured not, its bonner 39.03a (not repugnant to the command of the sporter), saw sus toporard nos, is summer eats, 2. Thef. 3.) and of not receiving them, fo much as into their house, cap. 45. of the fame: agricuous penaltie being inflicted, if any offended against this kaw; in the same place.

By which Decree, what other thing I pray you is mean, then the cultome of the Atheniese by which beere, who come the stronger inquired of the particular Citizens, by what are co in times part; among whom the exception inquartu or the particular citizens, by weat art every one lived; and provided to have them called in question, who gave themselves to filthy nery our nute; and produced to the ching, I fay, then what was meant by the Decree of the 40. Majittenfa, who forbad them to enter their Citte, who knew no are whereby to fuffaine their Magnusors, who torous them to enter the a three more no at the whother they gave no place to the cand tetrany mount present extend empressable or unnotate axes: they gave no place to Players, counterfeit lefters, laughing Companions, fawey Scotlers and Jugglers, To conclude, Prayers, connections sections, sungaming companions, sewery societies and suggests. In concluse, What other thing, then what the Decree of Solon meant, who orday ned a Law, that the children should owe no chanks nor fauour to their parents, by whom they had beene instructed in no honelt arte toget their lining . The ancient World had fo great and webement protocations no nonert arts tages with our Countrimen, which in this laftage (ah, too degenerate) you may vario versus; chem wantous Sountenment, which me the samage (1), on tegenerate, you may finde wanting with griefe; all these Constitutions being taken away. Wherefore the number Ende wanning wan grees, an unce communicons orang cases away. Wherevore the number as drading (that I may vie the word of Paul) is more abundantly increased, that it to say, of them, who being void of all discipline, line infamous to themselues, and grienous and trouble- 50 them, who design out at a supplier, the talking and fithy alleness; and grievous and trouble-fome to their common Countrey, in slothfull and slithy alleness; innerting and changing that order instituted by God himselfe. The care of which thing, if the Magistrate would yet under-

Inerdinare

The second meanes and way of preuenting pouertie, was a Law or E.lict, concerning those who defined to be admitted into a Represe become Citizens of Represe. For none was to be receiued into a Reppe, vnlesse hee had first gone vnto the solemne assembly of that Reppe, and defied that he might be admitted; which they might not infly denie, valeffe to one connicted of their, or otherwise of some other crime, or so poore, that therefore hee was vnsite for the Report, and that hee could not fuffaine himfelfe and his family without the common almes of the beggers, But if any could not be prefere at this affirmbly, her was bound to intreat leaue of colabitation 69 of flue inhabitants, haming lands of their owne, and next vnto him, whom here was about to goe vario. If any of honest same and rich in abilitie, would notwithstanding goe into the Report without demanding lease, he retayned his habitation, but yet was excluded from the Law and primiteiges of the Represe. But if any wicked and dishonest person had through himselfe in without leave (although he had lawfully hired void and emptie land from the Lord and Owner therof ) the fame was to be expelled by force : Traise de Reppis cap. 48. To the fame purpose appersaineth that Edict concerning fernants taken out of the Rep. cap. 47. of the fame.

The third Statute against pouertie was, concerning the restitution of private losse in the title recited before cap. 47. Whereofan example shall be given, first in houses by chance confumed by fire : and those of foure forts. For if a Store-houle, Kitchin, Bed-chamber, or Bed, and Chappel had been burned; the loffe received was to be valued within fourteene dayes, by five of the next neighbours, as well of the house it selfe, as of the most necessary things contained therein : as of the prouition of victuals, apparell, and houshold-stuffe daily vied onely, properly belonging to the Malter of the family, excluding other mens goods, as treasures, and other things more precious: because a man might bee a sufficient Citizen of Reppes without these. Then the halte part of the loffe valued by the whole Reppe, was to bee reftored within an appointed time, by Subfidies contributed in common, according to the abilitie of every Inhabitant. Another example of this liberalitie enjoyned by the Lawes, is, concerning Cattle deftroyed by the Murren or Rot : for if the fourth part of any mans Cattle, or more dyed, the loffe likewife being valued within fourteene dayes after the Murren ceased, was to bee relected by common supplies for the halfe part, as the former was. But concerning both, there was a crution added, that this benefit should not be performed the fourth time; least any thing through too much carelefnesse, and retchlesse negli-

gence, should procure damage to himselfe, De Reppis cap. 47. 48. The other part of the Office of the Reppagesi was imployed about the care of the poore, concerning the maintaining of such with certaine contribution of almes as were now become beggers, either through fickneffe or age, or other casualties not in their owne power : and also concerning the excluding of others, who should not appertaine vinto the almes, and divers cases thereunto belonging. This almes was either private or publike. Private, for the which a law was Lawes of made concerning the receiving of the beggers, into the number of their family by their kindred, Almes. or coulins, one or more, inabled by a certaine increase of wealth limitted by law, and to bee maintained by certaine lawes, according to the degree of hereditarie fuccession: For as any was next to the inheritance of the begger, if hee possessed goods, so was hee accounted the first that should sustaine him. But the next degree failing, or the same being poore, or not having where-30 with to maintaine himfelte and his, besides that begger, that necessitie was imposed vpon the se-

cond, or third degree of kindred,&c. to be releeved.

Publike almes was, as often as the kindred or confins of the beggar failed, they lived by the helpe and reliefe of the Reppes: every one was to bee maintained in his Repp; whereof there are prescript constitutions of lawes, to wit, what beggars should belong to what Ropp, and what not; and concerning the driving away and expelling of them by processe of law, who appertaine not thereunto. Therefore the Reppagegi partakers of a publike Office limited with these bounds, proclaimed affemblies : Some furely both in time and place, flanding, or ordinary : others not franding or extraordinary; that is to fay, as often as any new matter came pertaining to their charge to bee determined. Also private men might call extraordinary assemblies, to wit, they 40 who had any cause worthy of an assembly and indgement. But the figure and token of having an

affembly (after the thousand yeere, when they had now sworne to the Christian Faith, peraduenture before Impiters Hammer and battle Axe, Hamor pors) was according to the religion of that time, a woodden Croffe, which every Inhabitant carryed to his neighbour at the day, place, and occasion of the affembly proclaimed, of which figne intermitted or neglected, a certaine pemalrie was inflicted. There therefore the Reppagogi, concerning the matters appertaining to their charge, confulted according to equitie and right, determined them, and punished the guiltie: There the guiltie person, if the innury were private, was cited into the Court of Iustice by him that was injured, even without publike authoritie (which also wee reade was vsed by the Spartames:) but if the injury were publike (or if the partie injured in a private offence would not cite the guiltie person, or could not) then was see cited by some of the Rappagogi. Private men also had libertie and power to sue the Rappagogi negligent in their Office, or otherwise injurious:

wherea penaltie of money fell to the Citizens of the Reppes: all which, and other things here belonging are handled, in codice legum de Reppagogis, cap. 43. And concerning the inferiour Magi-firates, that is to say, the Reppagogi onely, to wit, the first species of the Civill Magistrate.

Nowfolloweth the superiour Magistracie, which is diftinguished into Governours of Provinces, and Iuftices. They were each of them Gouernours in every Province (which before I called Thirds, to wit, of every Tetrade) executing as well the publike Offices of the Courts of Iustice, as of holy my fteries : or they were Interpreters of the Law, and matters of Religion : (although afterward the interpretation of the Law belonged more to the Iustices.) As with the Romanes, oc the Adiles also vsurped part of the Pratorian Iurisdiction, Among the ancient Hebrewes also the High Priests : also among the Romanes the High Priests were facrificers. Whereupon Horatins carm, lib. 2. Ode 22. Victima Pontificum fecures cernice singit.

Thefe Gouernours therefore, in that they had the charge of holy Mysteries, were Priests in that they had to doe with the Court of Iuflice and Iudgement, they were Iudges : we call them

Noble-men in this place, and the state of the Common-wealth governed by their overfight, an Noble-men in this pace, and the trace of the common regard, governously their overright, an Aristoratie. The lame are called by our Country-men Godar, and Haffgodar; from the Church Arillocatie. The lame are caused by our country-incut or was, and a supplement; from the Church or Temple (which is Hoff) as it were Ouer-feers of the Church, and their Office or Dignitie or Temple (which is Hoff) as it were Ouer-reers to the Charlet, and their Once or Dignitic was called Godord; to wit, their name being next derived from their Elbwick gods, which they calwas called 0-00074510 wit, their name being usas defined from their account gous, which they called God: that even by the name it felfe, they (who almost represented the Name and Office of the Red God: that even by the name it sensythey two annotate presented the twane and United the Gods) might bee put in minde of the Vertues, Wisdome, and Inflice, &c. requifite in fuch a

And that they might thew themfelues fuch, I suppose the same place was appointed to judge-And that they might mere various ments of the feate of fulfice, which was ordained for Sacred Mysteries; to wil, at the forelist ments of the react of numer, which was obtained to a supplier. And also therefore, because the place of holy Mysteries, was religiously thought fitter 10 I emples. And also therefore, because the place of many my intries, master ground inought there for in gazate, or the taking of good counsell, whereof there is effectall whe in the Court of Inflice. for in Sudde, or the taking or good counter, whereor there is especially we little court of tustice.

Moreouer, the Promociall Governours had their two-fold affemblies, as the Rappagest had, yette-Moreouer, one production of the state of the ly or ordinary meetings, and proclaimed to extraordinary, any ascending equilibrium tor-mer affemblies, containing many dayes oid. Kampb.cap. 8. Torn. Lot.) and that, as it is likely, mer attemptes, containing many uses a survey and a survey faid of Appendix, as it is nikely, aftempted by fome figure of helding a meeting as we have already faid of Appendix; which fineanembled by some ugge or notating a meeting as we have already and or Appagates: which luc-ly, what it was in times past, is not well knownes valefic it were that, which afterwards, and by, what is much afterwards, and yet remaineth in vie; the forme of a Normegian axe of Wood, carried about after the fame manyet remainets in ves the tomore a very remained and a little before, of the woodden croffe. This toner, among the prountestal Guardian our language, which fignifieth a mellage,

en of the mulciant Court, is caused one in our ranguage, which names in a menage.

Moreoust, surry one paid some yearsly tribute or reusenue to the Temples; whereof the Guar- 40 Moreouer, energy one paid some yearest tribute or revenue to the a empires: whereof the Church was the Collector; for speaking of holy mysteries pertaining to dian or Unerteer of the Church was the Control of Presanges, may mynteries pertaining to the Church, I call enery Noble man fo. To him also came the penaltie of the Temple, and Court the Church, I can enery require must be, a to aim and came the penante of the 1 emple, and Court of Juffice prophaned: who likewife ought to maintain the Temple, or keeps it in repractions, of lattice propagate 1 who the write ought to maintaine the a timple, or keepe it in reparations, at his owne charge. Laffly the necessity, and specially care to amend and make good what sower at its owne curry. Leaving the through a managed one with Proxince, or to forefee and preuent it being imminent, wing the halpeof the Prouncials, lay wholly you him: for hat, for the definying of Theene and publique Robthe frouncists my windry your min; so that, on the destroying of a freetestand publique Kob-bers, you may finde fome who were prodigall of their owne life. Contrarily, it is a lamentable pers, you may muse a me was were prouged to the party where they make a great conference to cale, now at this day we see it canty more conserved pairs, where every make a great conscience to condemne a notorious Theefe by the Law, or any other considered once or twice of any capitall consense a novement in seet by the latter, to say the consense of Provinces. The Nameto, 10 crine, much more to put nun to ucati. I have alse the closerhours of crounices: I he exempted, less or Indices follow. The Nemophase was the other kinde of the superior Magistrate, somewhat later then these: of which fort, in the whole auncient Citie of Island (for we yet definbe what lazer then there: or which nore, in the whole sumbletic line of spans (for we yet dekinbe it) at one and the fame time, there was onely one: who of pronouncing or delivering the Law, 10) at one and the name time, where was onesy one. Who is propositioning or delinering the Law, was called Loginson and Log Loginson. For the Commonwealth began not finddenly, but by little. was called Legisland and Legislands or the Communication organized mannering, one by urtile and little to be framed: therefore the Prominciall Lawes were first, of the like meaning, though another to be trained to the fame, before they had them compact, and gathered into one peraturenture not every where the tame, before they mentioned and generical into one body; which when they attained for the callody and preferration of the fame, they admitted body: which when they accuracy is an arrange of the state, they somittee trustic and wife men, whom I call Namphylacu; and whose Office I shall very well describe in trust and whe men, whom a cart at omy a men a man whole since I man very well describe in the words of D. Nieslane Cragins, declaring the Office of the Sporten Nonephylaces. The Office of the Nomophylaces (and D. Cragins L. a.cap. 6. de Repub. Lacedom.) was, as we precede by the 40 of the Nomophylaces (faith D. Cragus Li. 2.Cap. 6.de Kepun. Lacedum.) was as we precinc by the matter is soft- in the tempts of the Common-matter is soft- to the tempts of the Common-tempts and that they found not softer them to be shoughted, thought, when they makes more by any. Marcount, they indecoured that the force of the Lames might not grow one spoty, or the many thereof the force of the states which has they compiled the Magistrates to the offen defined from the compiled the Magistrates to the offen defined from the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates to the offen defined to the compiled the Magistrates the ten con 100 (compensative congress messores of the appropriate of course, of persons of some anneal dansferior, we may being thefe very sens were the interpreters of Lawes, of persons on thing dansifully fet downer, or hardly understood, blood come on differentiation. This [ration writteth: the fame descripting fee description to surely control to the feet of surface to surface to the feet of the fee wants account a sure of the Nobility, of changing, or renewing Lawes, and also inlarging them, as then white terror and counterfours; the content of the people being added. Therefore the No. maphyless or chiefe luthress, tooke nothing away from the forme of an Ariffernie: but were, 30 mappyment of contract numbers, toons around a map around to the Law, armed with publique authority for this purpole, in whole power alio] the custody of the Booke of the Lawes re-

But I dure proceeds no further with our Author in his Law Suites and Courts, left I be therein Dist. to the process and redown deloies. THE FOURTH BOOKE.

#### CHAP. I.

30 A Voyage fet forth by the Right Worshipfull Su THOMAS SMITH, and the rest of the Muscouie Company, to Cherry Iland : and for a further discouerie to be made towards the North-Pole, for the likelihood of a Trade or a passage that way, in the Ship called the Amitie, of burthen seuentie tuns ; in the which I IONAS POOLE was Master having fourteene men and one boy: A.D.1610.

HE first of March 1609. I wayed at Black-wall and went to Granefend. The third day I went downe to the Noore-bead. The ninth, wee wayed and put out to Sea (bleffed bee God :) and day, by the fifteenth day I was in the Bay of Roffe, on the Coast of Norway, in Latitude 65. degrees : at what time the wind came Northerly, and blew extreame herce, with great store of Snow and Frost. The fixteenth day, wee had the like weather and winds, to that wee could not maintaine a \* mayne-courfe, and \* The Mainwe loft fome of our Beere. The fenenteenth day, we had Snow, fayle without and all the Beak-head was fo laden with Ice , that it feemed a a Bonnet.

firme lumpe, and the wind at North, which blew so fierce that we could not maintaine a "fore-course, and draue vsbacks". The Foreto the altitude 63, degrees, 56, minutes. The fforme continued to exceeding violent, that I The Forewas faine to spoone before it fortie eight houres, and the same wind and weather continued till Bonnit the twentie one day, and in that time wee were driven as farre to the Southwards as Shottland. Andbeing faire by the Land, and feeing no likelihood of faire weather, I got a Fisher-man to conduct mee to a good Harbour, called Hamer found, not to much to efohew the stormy weather, conduct mee to a good Harbour, called Hamer found, not to much to elonew the normy weather, as to ftop fome leakes, and so amend our rackling. I carryed in Shortland till the twelfth of Shotland. April 1610, at which time the wind was Southerly. The former wind came to the North at midnight, with great store of Snow, which froze as fast as it fell : which wind continued 60 till the fourteenth at noone. At two of the clocke it came to the East north-east, and I flood to the Northwards, after many fformes, much cold, Snow, and extreame Frofts. I had North Cape fight of the North-cape the fecond day of May. Then I flood towards Chery Hand, the in 71 degrees winde being at West North-west. The third day at noone, the Cape bare South South-east; 20,minutes. fearenteene leagues off, we had much Snow with Froft. The fourth day, it was thicke weather May the us-

Chen Hand. Ice.

with great flore of Snow and Froft, the winde at North-west and by North. The fift day, it with great tore of show and riots, the winde at North North-eaft. The fixe day, at twoof the clocke in the was faire weather, the winde at Aroth Profitness a managery of the I held my courie toward Chery lland, horaning, a mee with rate to the second of the clocke, I faw the Ice fo thicke, that I could not possibly the winds using as South as a major win stock, as there sayle, and founded, but had no ground get through it. Then I flood to the Welf wards with a floor sayle, and founded, but had no ground get introgen in a next intoon to the view water many and a state of the clocke it began to cleere up, and I thoole into the Ice finding it featered in fome places; and at twelve at noone, I found the Pole elegated about the horizon 74 degrees 7 minutes, and founded, but had no ground at one hundred and featentie fathomes. From twelter till foure, I ran North North-west two leagues, and of May wee of ted and requestive rationnes, from twenty that country, and the founded, and had a hundred and fixtie fathomes. Then Chery Island did beer, as I sudged, North 10 founces, and not a numerous and instant automates, a new control and wester, as a magen protein. North-west, about fifteene leagues off or more: from foure till eight it was calme, at eight of the clocke the winde came Southerly, and I stood towards the lland and found the Le so thicke, that the Ship had no roome to wend, and withall fuch a fogge that I could not fee one Cables length; in which time the Ship had many a knocke, but thankes be to God, no harme was done. By twelue of the clocke, the fewenth day, I got out of the Ice and lay a hull till the North

Sunne, at which time it began to be cleere weather : then I fet faile, and stood to the Eastwards, The eight day it was very foggie, the winde at North and by East, with Snow and Frost: I flood to the Kastwards, in hope to get the Easter end of the Ice, and so to Chery Island; and I ranne into a Channell betweene two firme bankes of Ice, and could finde no way through, but 10 lay in the Ice till the ninth day at a South Sunne. Then I observed, and found the Ship in the altitude 74. degrees and 17. minutes, the winde being at North North-west, very faire weather,

grees-30,mi-

I failed in the abouefaid Ice, one while one way, and another while another, in hope to finde fome opening towards the Iland : but which way focuer I flood, I faw all the Sea courred with Ice. At a South Sunne, the tenth day, I observed both with my Astrolabe and Crossestaffe, and 74. degrees 15 found the Poles height 74. degrees and 15 minutes: and the variation 13 degrees and 30 minutes the North point Westerly: by a North Sunne I got out of the Ice into the open Sea, and to write. each courfe, way, and winde, with all other accidents, would be too tedious: but the thirteenth day of May, at midnight, I founded, being in very thicke Ice, and had a hundred thirtie eight 10 The Lyoneffee fadoms; there prefently I espied the Lioneffe standing into the Ice, I kept her company till eight The Lyonette of the clocke at night, and then I fleered as followeth, from eight aboue faid, till twelte at noone: The fourteenth day I failed North-well and by North twelve legges, the winde at South South-east, thicke foggie weather: from twelve till foure at night, I failed scaven leagues North, the same winde and weather with raine. And by the fifteenth day at foure of the clocke in the the faire winds and weather; at what time morning, I had failed North twentie seaten leagues, the same winds and weather; at what time I supposed, that I was not farre from land, because I see great store of Sea-Foule about the Ship: at eight of the clocke I founded, but had no ground at a hundred and fortie fathome : very foggy weather : likewife I founded at twelve of the clocke at noone; no ground at a hundred thirtie fine fathomes, where I met with Ice and great store of Fowle, as before, winde at South, and 40

I stood through the Ice, till eight of the clocke at night, holding no course by reason of it, at which time I founded, and had mintie fine fathom greene oze, the weather being all one, and very much Ice from eight, till ten of the clocke, I sayled North, one legaue and a halfe, and had senentie fise fathoms rockie ground. From ten till twelve at midnight I sayled North one league and a halfe, and founded, and had thirtie seven fathoms, the wind being at South, with great flore of raine and fogs, and abundance of Ice round about, but something broken. Then I stood off Weft and by South, and tooke in all the Sayles, except the fore-faile and maine top-faile; and at one of the clocke the fixteenth day founded, and had fortie fathomes oze: likewife I founded at two of the clocke, and had fiftie two fathomes: I could neither perceine Current nor Tide in all this time, and it did raine as fast as I have commonly seene in England: then I stood to the Eastwards, and at three of the clocke sounded, and had fortie fathomes ozer and thus I failed among the Ice East and East and by South, and East North-east, keeping no certaine course, by reason of the Ice, and had these depths following, 30. 20. 19. 16. and fifteene fathomes, and then I faw the Land within two leagues and leffe ofme, bearing betweene the South and by East, and the North-west: then I stood in East and by South, supposing to have found a harborough within a ledge of rocks that lay off a low point, which feemed like an Iland, and flanding in, I found depths, 10. 9.8.7.6.7.4. and three fathomes, flanding in it a should bay, and full

Then I fleered a way North-west and by West, and had fix, seizen, eight, and ten fathome foule ground; this part of this Land is foule ground a great way off, therefore come no neeter this place then ten fathome, and that will carry you cleere of all dangers that I could fee. Towards noone it cleered up, and I did looke the Meridian altitude of the Sunne, which was 34. degrees and 20. minutes, the declination being 21, degrees and 10. minutes North, the Equator

As Cobodines

must bee 13. degrees and 10. minutes aboue and beneath my Horizon. The Complement being 76. degrees and 50. minutes, the Poles height. Likewife I found by true observation the Com- 46.degrees 50 paff. to vary 15. degrees, and before I had tayled foure leagues I faw a Sound that lay Eaft and minutes Pole by South in, the winde comming to the East South-east; then I sent the Skiffe on land in the Variation 16. mouth of the Sound, because I supposed I had seene Morfes on the land, but they proued Rocks. deeres. I followed into the laid Bay with the thip, but flanding in I had a fliffe gale of winde off the The North shoe e, which draue abundance of Ice out of the Sound, through the which I enforced the ship, in point westerly.

hope there to have found an Harbour; in turning in I found thefe depths, thirtie fine, thirtie, Rockes twentie, and eighteene fathoms. The Boat came aboard about a North-well Sunne and the men twentie, and eighteene fathoms. The Boat came aboard about a North-well Sunne and the men twentie, and eighteene fathoms. The Boat came aboard about a North-well Sunne and the men twenties are the sunne and lying on the Ice, but none on land, and they brought a piece of a Decres horne aboord, therefore Hornfound. I called this Sound Horne Sound, and a Mount that lyeth foure leagues to the South of it, the Mufcons Muscomy Companies Mount, because it was my first landfale. Then finding no benefit here to bee had, nor Hauen for the ship, I stood to Sea, and sayled For these pla-

North-weit and by North foure leagues at midnight it blew very hard, and I flood to the Weff- ces fee Captain wards with a fhort fayle, and fayled foure leagues West by eight of the clock the seuenteenth adges Map. day. Then I stood to the Landwards, the winde being at South South-west thick weather : and three leagues from me I faw a Point, which I named the Ice Point , because there lay abundance Ice.point. of Ice voon it. Then I faw another Point beare North North-west fine leagues off, which I named Bell Point , because of a Hill formed like a Bell on the top , and to the Northwards of Bell Bell point.

30 Point goes in a great Bay with two Sounds in it, the one lieth in East South-east, the other Northeast and by East; the last Sound you can hardly discerne, by reason there is a long Hand lying in the mouth of it. But the going into the faid Sound is on the North fide, yet there is an Inlet under Point-partition, but very narrow and full of Rocks, and an exceeding firong Tyde fetteth Point partiin there. This day I found the weather very warme and farre temperater then I have found it tion at the North Cape at this time of the yeere: this place lying in 77. degrees and 25. minutes, and The agreem the Cape in 71. degrees and 20. minutes; this place being to the Northwards of the Cape 6.de. Peratei grees and 5. minutes : and note, two leagues to the Southwards of Bell Point is a ledge of Rocks three miles off the shoare, and come no neerer the shoare then fifteene fathom : vpon the North fide of the Bay is low land, which I named Lowneffe Hand. I called the North Sound Lowe Sound. Lowneffe He.

30 Into the Bay I turned, the winde at East North-east faire weather; turning in I had no leffe Lowsound, then fortie fathoms close by the shoare, and in the middest no ground at fixtie fathoms, and being neere the Poins that parteth both the Sounds , the winde increased with raine. Then I faw the Sound frozen over from tide to fide, and vpon the Ice a Beare and great store of Mohorses, but The Sounds the winde blew so extreme hard, that the Boat could not row to windwards, to trie if we could season. kill some of them. The sogs and raine continued till ten of the clock the nineteenth day, at Very thicke which time the raine ceased, and it did freeze with snow and winde and fogs, as before.

From twelve at mid-night the nineteenth day, till foure in the morning the twentieth day, I fayled three leagues South-west and by South, then I found the Ice thicker then before. It was

very thick fozs, with winde, froft, and fnow, and cold, that I thinke they did ftriue here which Extranne cold of them should have the superioritie. I pur into the Ice aforefaid in hope to get through, and af-weather. ter many a fore stroke with the ship in it, I got through at a South-west Sunne, at what time it began to befaire weather. Then I flood through the Ice towards the land againe, in hope that that land would proue worth the labour and travell; and going to let the mayne top fayle, it was frozen as hard as euer I faw any cloath in all my life time, so that all my company could ve- Sailes frozen. ry hardly let it; and whereas I supposed, and have often faid, that this climate is not so subject to foggs in May and Iune, as it is in Iuly and August, it is contrarie; for I have not seene the Sunne on the Meridian these fine dayes, nor seene it at all in fixtie houres: I had not failed three leagues North-east, when it was as thicke as it was before with Frost and Snow: yet I stood shill

50 towards the Land. The twentie one, I faw the Land at an Eaft Sunne, and flood towards it, and at a South and by West Westerly, I observed the Sunne, and found the Meridian altitude of it 33, degrees 30. minutes, the declination being 21. degrees 76. minutes, &c. the altitude of the Pole was 78. degrees 26.minutes. The winde at North North-east : cold frostie weather : This place I called the Black-point lie : I called a point (that lyeth foure leagues to the North-welt of Black-point) Cape- Black-point fte Black point lie : I called a point (that syeth total traggers of the storage it was covered with Ice, cold, and to the South-east of Black point is a great found, which because it was covered with Ice, Cape-cold. I called lee-found, and standing neerer to the shore, I could not fee any Sound or Harbour open; Icetherefore I determined to fland to the Northwards to feeke what good might be done that way to profit the Merchants, and also to get some Wood, for we had but little left. I sounded at the

6c Black-point, and had twentie three fathomes streamy ground. At two of the clocke I stood off, and at midnight flood to the shore againe, cold weather with frost, the winde at North and by East. The two and twentieth day, at an East Sunne, I was faire by the Land, betweene Capecold and Black-point, a league off where it fell calme, and I founded there, and had twentie eight fathoms, where I tried for Fish, but could take none.

Note.

No fift.

lare paffage.

The three and twentieth day, at an East North-east Sunne, I was within three leagues In e tirce and ewenteen one, at an eather, and I tooke the Sunnes height at twelte of the of Capecota: and say it was rate measure, and a concerne studies length at a weather of the clocke, and found it to be 32, degrees 30, minutes, the declination being 22, degrees 13 minutes, the declination being 22 degrees 13 minutes. ctocke, and tomas it to be \$1.00 gives 30. minutes, the occurrence occurs 21. urgrees 13 minutes, the diffiance of the Pole from my Zeneth, was 11. degrees 17. minutes, the community of the pole from my Zeneth, was 11. degrees 17. minutes, the community of the pole from my Zeneth, was 11. degrees 17. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes, the community of the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. minutes and the pole from my Zeneth was 11. degrees 19. degree 19. degre Fair weather, plement thereof being 78, degrees and 43, minutes, the Poles alriande. All this day it was plements energy using 700 usgress are 430 minutes, the same and the place Cope, celd, if carme at the coremous, watthe tunions receive, and removes a manufacture of the core and it had false with it this day, or the like, I should have guen it another name. Here I thied to take fill, but could perceiue none, I tem, there is a point that beareth from Cope-cold North & by Weft inspect come precess none, remained to a pour second, and Black point, are all one lland. At Which I caree energeranate title en ann, and one cann, and one come, are at one tinned. At fixe of the clocke at night, the winde came to the North North-weff, then I determined to IO view the lee-found better; but comming neere it, I perceived it packeful of Ice, fo that I could fee view the recooning execution comming means and I fee any open water in it. At a North Sun, no end thereof at the Top-mail-head, neither could I fee any open water in it. At a North Sun,

the wind came to the North-east, and by North, then I stood to the Northwards, as before. The foure and twentieth day, at a North-east Sunnethe wind came to the South-well, fairg weather and warme. At a North north-east Sun, I tooke the Meridian Alkitude, which was eleuen degrees about the Horizon, and by working accordingly, I found the eleuation of the Pole aloue the Horizon, to be 78.degrees, 37. minutes. The fine and twentieth day, at an East-fouth. acoust the roman, so to consequence, some many and it being calme I founded fortis fine fathoms, where I proud for fifth, but could find none, and within one league of the fhoare I had In silithis land fine and thirtie, and thrite fathome fireamy ground. Ara South-east Sume, the Bost came 10 by the lea side aboord laden with Wood, and some Whales fins. The men told mee there was great by the real nate of Morfes in the Sea, about the shoare side, and about thirtie on Land. Immediately 1 fent 15 good mare. Hore or Andres memore, about the money and about children of action. Immediately 1 tent of Dinfewood, my Mate. Nabolae Woodcorf, with the Bost on Land againe, to fee if they could kill any of the but non-growth here, faid Mohories, and allo to fearch what other thing they thould hap to find that might procede-non-minimal Moreover I was considered the all the Deck and the Deck and the Constitution of the Constitution neficiall. Moreouer I was certified, that all the Ponds and Lakes were vnfrozen, they being Freih-water, which putteth mee in hope of a milde Summer here, after so sharpe a beginning as I haue had, and my opinion is fuch (and I affure my felfe it is 60) that a paffage may be affooreat-Hope of a Potayned this way, by the Pole as any vnknowne way what society, by reason the Sundoth give a great heat in this climate; and the Ice, I means that that freezeth here, is nothing so hoge as I
